

## Prediction Essay

My predictions are for the future as what 2026 is going to be like.

Transportation I predict will be similar to today's except for faster cars which will go upto 100 miles per hour on the highway. Trains will run on a single rail and travel about 120 miles per hour. Planes will be like jets today and fly about as the jets now do. Boats will be a slower way of transportation, like it is today. Just a little faster.

Education will be at a higher level and be more interesting. Schools then will be able to afford more materials which will be better.

Energy will be mainly hydroelectric in most towns and cities.

Government and Laws won't be as strict as they are now. People in most states will be aloud to smoke joints. And the traffic laws will change in speed limits. Governments will not change much at all.

Religion will branch out even more and most churches will have more parties.

Recreation will be run by electricity like trains, cars, dolls, etc. Outdoors will have electric merry-go-rounds and some that are not.

Are city will have tall apartment buildings. The main part of town will have been moved closer to the north part by the lake.
