SITE

changes we have addressed:

1. **Revised field layout** - reduces retaining walls, improves field accessibility and supervision

2. **Reuse of existing west parking lot** – storm water impact reduction, pavement and earthwork volume reduction, high density parking is retained

3. **Storm water treatment** – single facility (low maintenance), cost savings

4. **Keep shot and discus on site and javelin remains off site** – reduces retaining walls and allows space for pond

5. **Changed track from a 'wide' track to a 'narrow' track (still regulation size)** – reduces retaining walls

6. **Change softball and soccer fields from synthetic turf to natural grass** – cost savings (phase II)

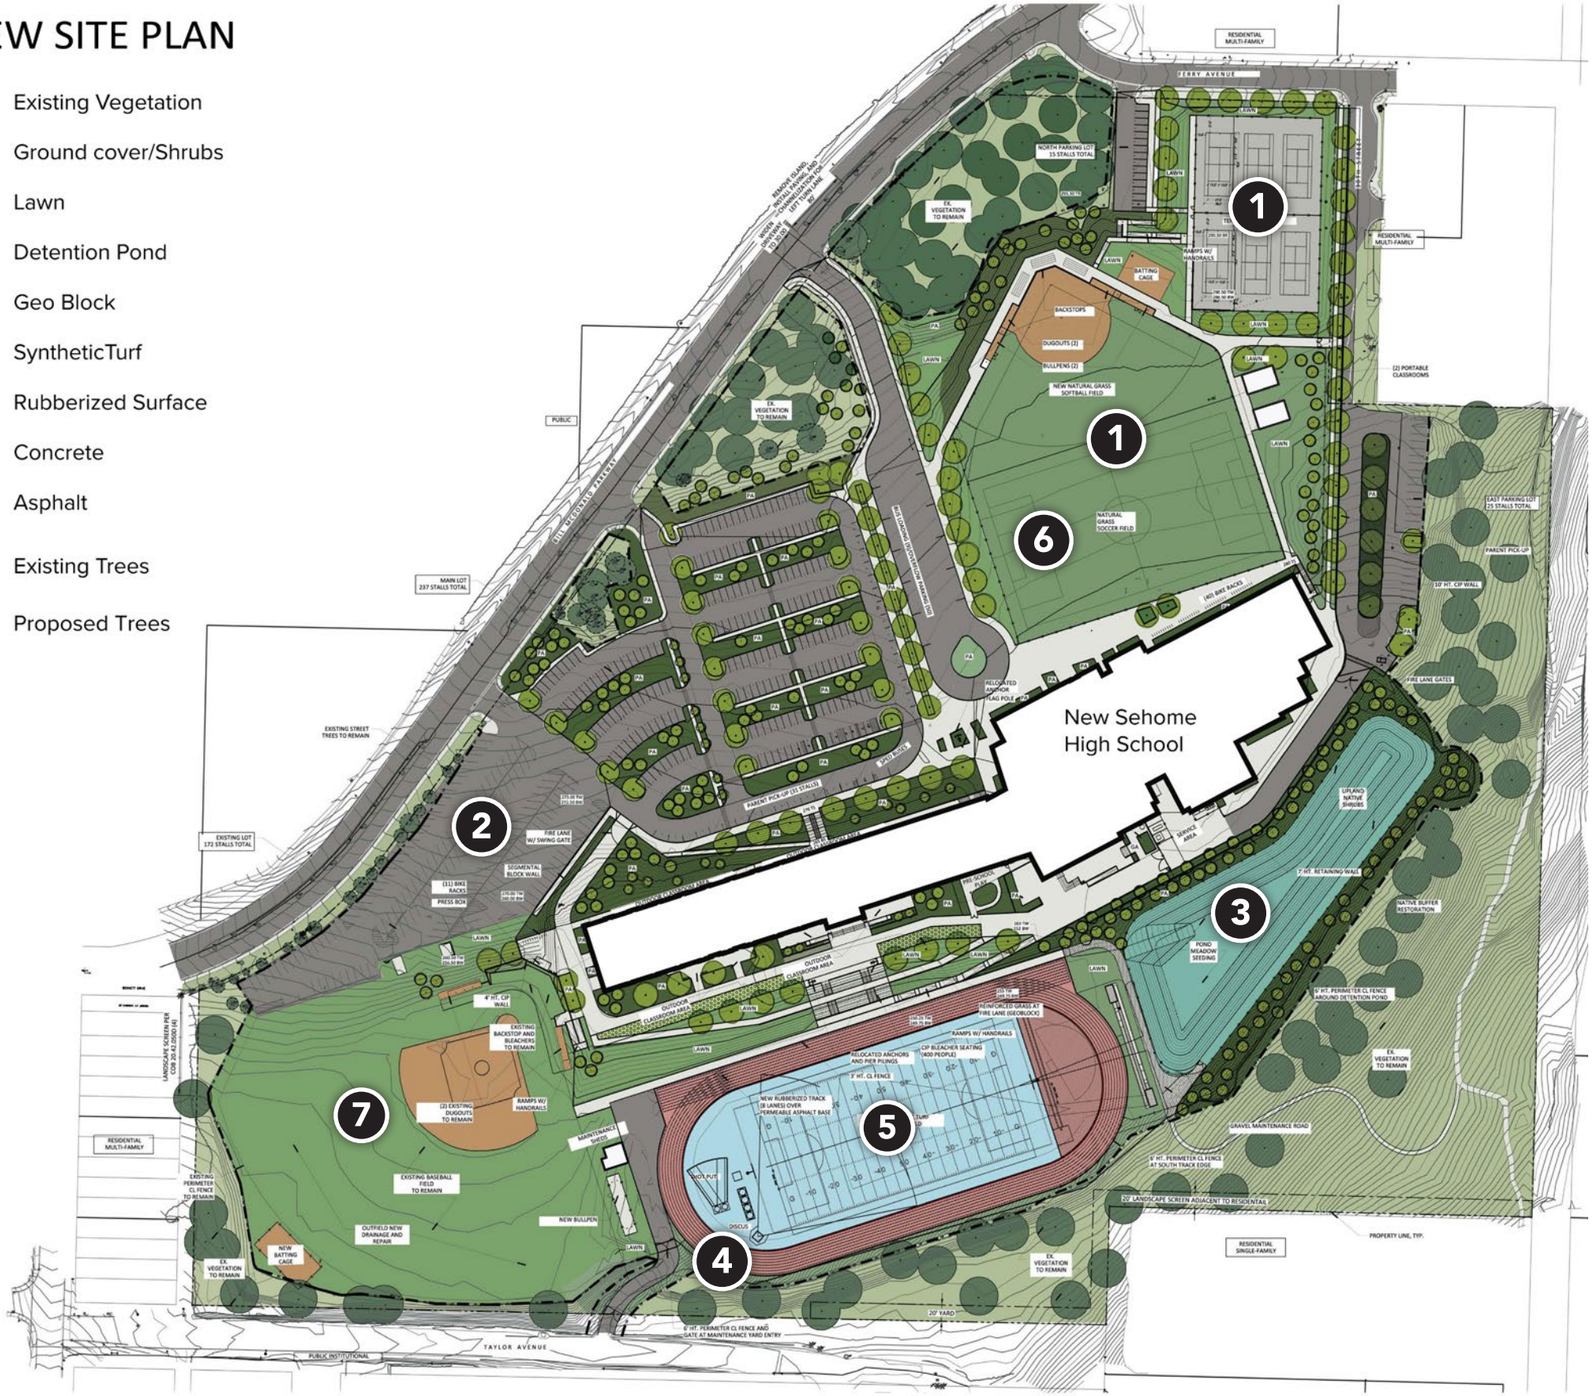

7. **Baseball field remain as-is, but correct existing drainage issues** – the field has historic significance and the district is happy with its current use. Cost savings (phase II)

⚠ **Field lighting is not included at all fields** except for football, but provisions are made for future lighting (phase II)

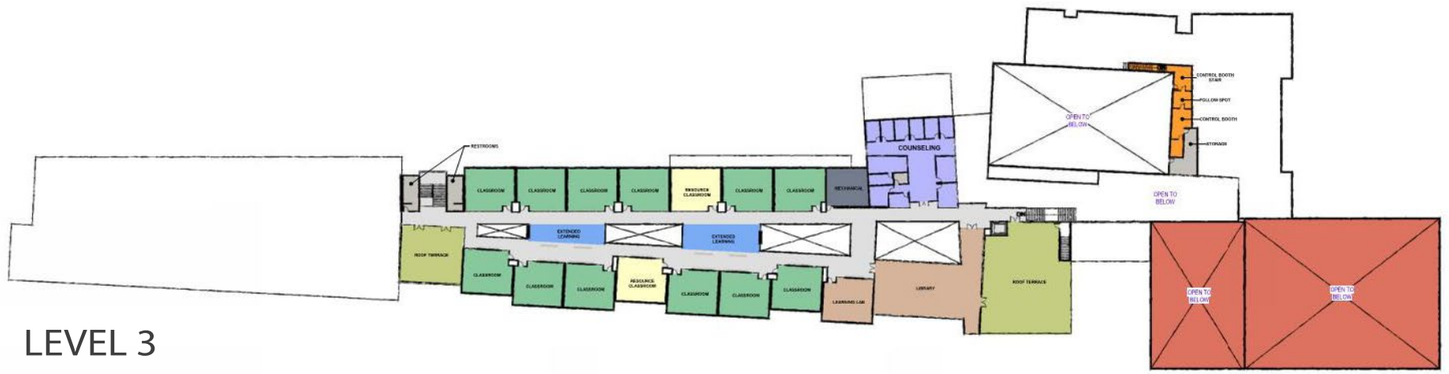

⚠ **Central Kitchen off-site** – increases available site area, significantly reduces retaining walls, improves site circulation

NEW SITE PLAN

- Existing Vegetation
- Ground cover/Shrubs
- Lawn
- Detention Pond
- Geo Block
- SyntheticTurf
- Rubberized Surface
- Concrete
- Asphalt
- Existing Trees
- Proposed Trees

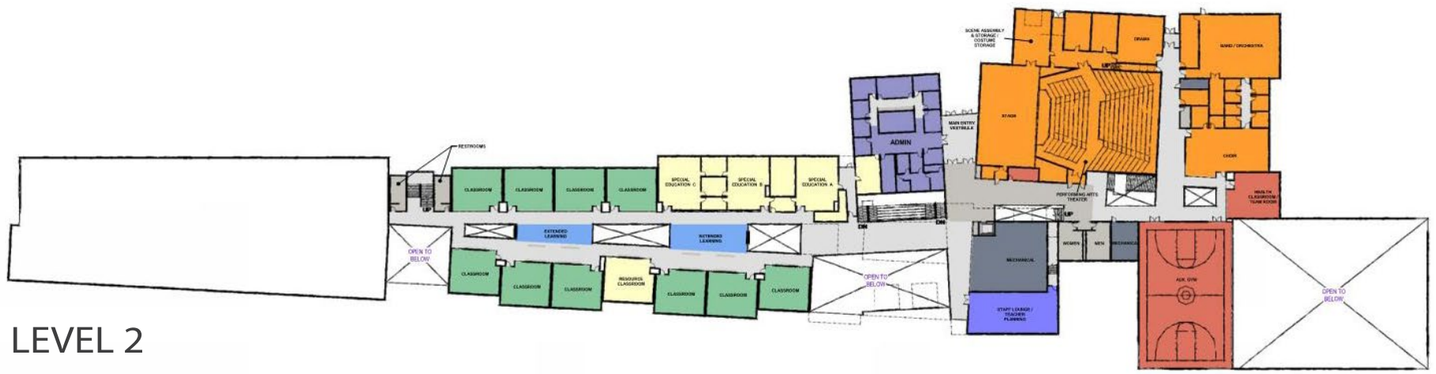

BUILDING

changes we have addressed:

1. **Three story to two story structure** – interior space is more unified, improves accessibility and supervision, cost savings

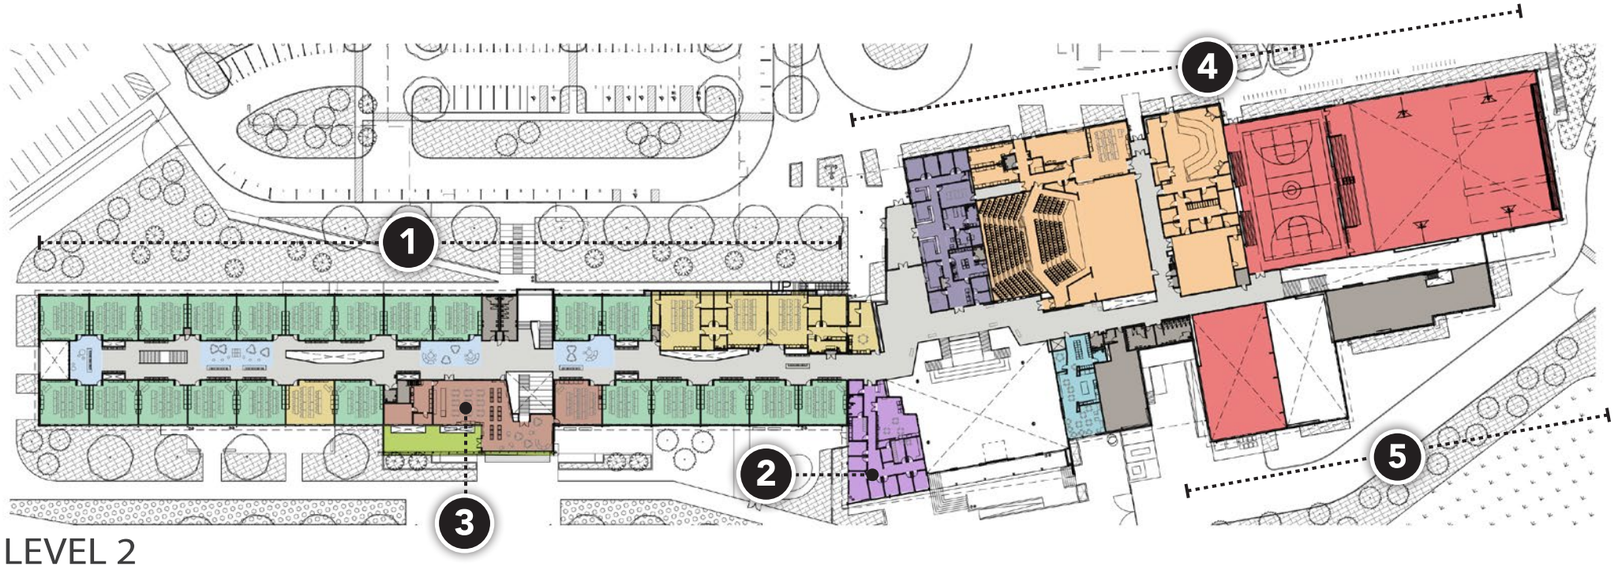

2. **Counseling centrally located**

3. **Library located at the Student Hub** (epicenter of the academic wing)

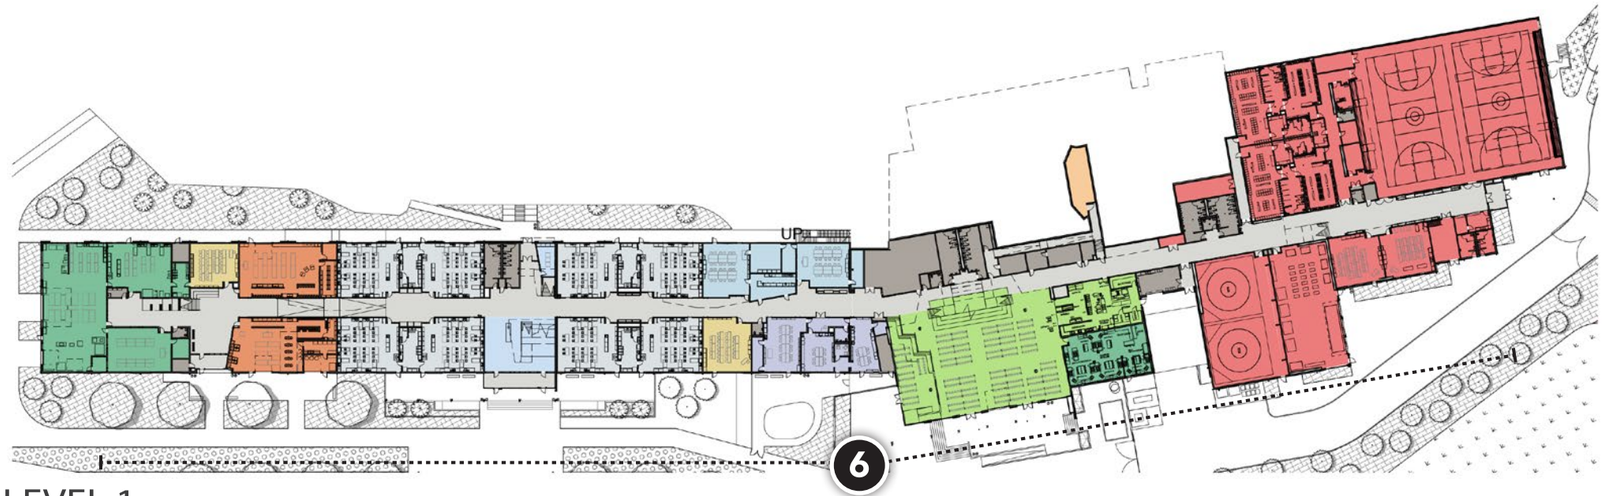

4. **10 degree rotation at the public sector of the campus** – reinforces the public/private separation, emphasizes main entry, forces views from both ends of the building to the central hub, reduces retaining walls on the east side of the site, provides a closer adjacency to the playfields

5. **Public Area layout** – constructability, relocates the aux and main gym closer to playfields, opens up room for service yard and deliveries, weight room is isolated for sound

6. **Removed angled corridors** – constructability
