

PRESS RELEASE

SANTA MARIA, CA • 5.4.2026

FOR IMMEDIATE RELEASE

Santa Maria High School AP Environmental Science students recently took a field trip to Diablo Canyon Nuclear Power Plant.

The Saints learned how the Diablo Canyon Power Plant generates clean, safe, and reliable energy and discussed the plant's important role in helping California transition to a decarbonized and more climate-resilient economy. They also explored diverse career opportunities at the facility and learned about scholarship programs available through PG&E and enjoyed the beautiful lands surrounding it.

“Diablo Canyon also provided a pizza lunch for the students and explained in depth scholarship and job opportunities. This was a very special opportunity for our students to get to see an active nuclear power plant, especially in advance of the AP exam which covers this topic in detail. We all walked away having learned a lot and hope to be able to visit again in the future!” – Science Teacher Morgan Kavanaugh.
