

Thurston High School Math Pathways 2026 - 2027

Students are encouraged to select +1 math courses based on the pathway that is **best aligned to interests and future college/career goals**. Students should consult their high school counselor or college advisor to read the course catalogs of their intended institutions for more specific degree requirements.

Courses marked with a "Z" designation on the college course number ensures this course will transfer for the same credit at any public university or community college in Oregon.

***Currently, there is a three-year pathway to Calculus following the required Core 2 courses. Students should consult with their counselor and math teacher to discuss options to reach Calculus by senior year, as appropriate.*
