Prediabetes

Know the risk. Make the change.
Live your life.

Mercy's Diabetes Prevention Program

If you're at risk for Type 2 diabetes, you can make small but meaningful changes that will reduce your risk and help you live a happier, healthier life.

Your life is our life's work.

What is prediabetes?

Prediabetes is a condition preceding the onset of diabetes. It occurs when blood sugar levels are higher than normal, but not high enough for a diagnosis of Type 2 (adult onset) diabetes.

Most Americans who have prediabetes do not know that they are in danger of developing Type 2 diabetes.

The risk of developing Type 2 diabetes can be reduced greatly - or eliminated altogether - by adopting healthy habits like better diet, more exercise and weight loss.

Mercy can help.

Are you ready to take the next step?

Program participants must

- Be 18 years of age or older
- Have a Body Mass Index (BMI) of >25
- Have been diagnosed with prediabetes either by blood test or by a qualifying risk score OR by a previous diagnosis of gestational diabetes

For more information, call **479.338.4103**

Mercy Clinic Cardiology - Springdale

4600 Mercy Lane, Suite 240 Springdale, AR. 479-338-4400.

[Mercy Clinic Cardiology - Springdale | Mercy](#)

Mercy Clinic Cardiology is instrumental in helping patients manage a variety of conditions – from heart attacks to congestive heart failure, to life-threatening irregular heart rhythms. Mercy Clinic Cardiology also performs life-saving diagnostic procedures, such as cardiac catheterization, pacemakers and automatic implantable cardioverter defibrillators (AICD), and therapeutic procedures, including angioplasty, and stent placements.
