19 and older must go to Health Department.

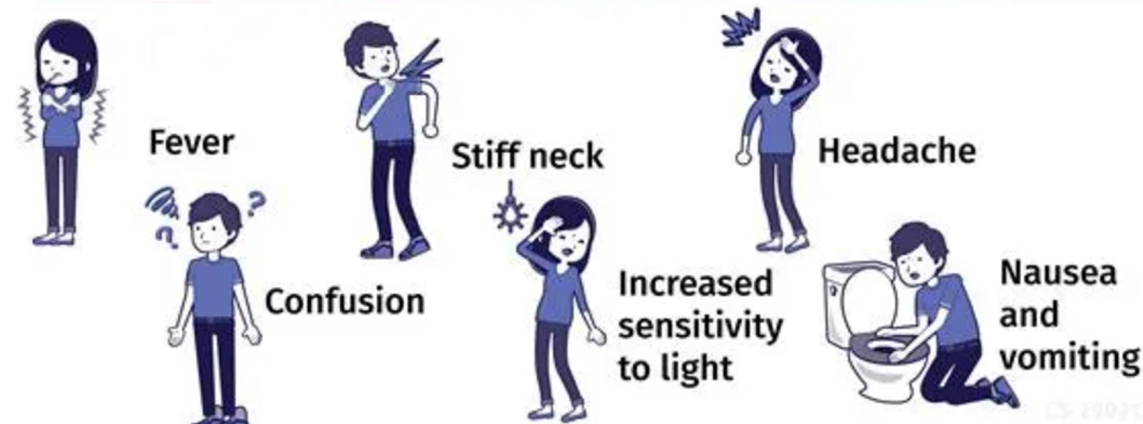

Immuniztion Requirements for College

Meningitis is an inflammation of the covering of the brain and spinal cord, and can be caused by viruses, parasite, fungi, and bacteria. Meningitist caused by bacteria is the most likely to cause serious, long-term complications. It is an uncommon disease that requires urgent treatment with antibiotics to prevent permanent damage or death. For more information please visit the Texas Department of State Health Services Meningitis Information for Students & Parents Website

WHAT IS MENINGITIS? Meningitis is an inflammation of the covering of the brain and spinal cord. It can be caused by viruses, parasites, fungi, and bacteria. Viral meningitis is most common and the least serious. Meningitis caused by bacteria is the most likely form of the disease to cause serious, long-term complications. It is an uncommon disease but requires urgent treatment with antibiotics to prevent permanent damage or death.

Bacterial meningitis can be caused by multiple organisms. Two common types are *Streptococcus pneumoniae*, with over 80 serogroups that can cause illness, and *Neisseria meningitidis*, with five serogroups that most commonly cause meningitis.

Meningitis: Very serious, very quickly

The infographic features six illustrations of people exhibiting symptoms of meningitis. A woman has a fever, a man has a stiff neck, a woman has a headache, a man is confused, a woman is sensitive to light, and a man is vomiting into a toilet.

Seek medical attention immediately if you or your child has meningitis symptoms.
