Terracon Project No. NB257123 | EnviroStor Case No. 60003799

Dear Ms. Holcomb:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed revised Preliminary Environmental Assessment (PEA) report for the above-referenced subject property (hereinafter known as the 'site'. This PEA report has been updated to address comments provided by the DTSC in your *DTSC Conditional Approval Letter*, dated April 1, 2026. If there are any questions regarding this report or if we may be of further assistance, please do not hesitate to contact us.

Sincerely,
Terracon Consultants, Inc.

1.0 Introduction

This Preliminary Environmental Assessment (PEA) Report has been prepared on behalf of the Alameda Unified School District (AUSD) for their Wood Middle School campus located at 420 Grand Street in Alameda, Alameda County, California. The Wood Middle School campus began redevelopment activities in November 2024, with project completion projected for Summer 2026.

This PEA report is being submitted in accordance with the October 2015 revision of the Preliminary Endangerment Assessment Guidance Manual set forth by the California Department of Toxic Substances Control (DTSC, 2015) and to address the environmental impacts identified through subsurface investigations completed at the project site from 2025 through 2026.

The DTSC Conditional Approval Letter for the Site Characterization of Hexavalent Chromium report, dated April 1, 2026, requested that specific Human and Ecological Risk Office comments be addressed in this PEA. This PEA addresses those comments by applying DTSC Human Health Risk Assessment Note 3 Screening Levels as the primary screening criteria, USEPA Regional Screening Levels where DTSC screening levels are not available, and San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels for total petroleum hydrocarbons, as discussed in Section 8.1 and presented in the analytical summary tables. The individual and cumulative hazard quotient and cancer risk calculations are presented in Section 9.4 and the attached risk calculation tables. In addition, consistent with DTSC's recommendation to combine OU-1 and OU-2 for evaluation of hexavalent chromium, this PEA evaluates the combined main school campus area as Exposure Scenario #2 and presents the corresponding 95% upper confidence level calculation in Section 9.5 and the attached ProUCL output.

1.1 Report Purpose and Objective

The purpose and objective of the PEA Report is to assess the presence of hazardous substances or materials that exist at the project site that could pose a risk to human health or the environment. The PEA investigation was designed to provide data necessary to evaluate the type and general extent of impacted materials at the Wood Middle School, the site. Work included the collection of soil for the determination of Chemicals of Potential Concern (COPCs) at the site, as well as the development of a Conceptual Site Model (CSM).

1.2 Site Description and Proposed Redevelopment

The Wood Middle School campus is located at 420 Grand Street in Alameda, Alameda County, California, and consists of an approximately 13.5 acre area comprised of Assessor Parcel Number 74-1250-1-3 and portion of 74-1250-1-2, and roadway easement that extends onto APN 74-1250-1-4.

Redevelopment of the Wood Middle School campus began in November 2024 and is scheduled for completion in Summer 2026. The campus redevelopment includes three new school buildings, asphalt-paved playground and parking lot areas, concrete-paved and landscaped courtyard areas, and an access roadway along the northern portion of the site with entrances off of Grand Street and Otis Drive.

The location of the site is depicted on Exhibit 1 of the attachments, which was reproduced from a portion of the United States Geological Survey (USGS) 7.5-minute series topographic map. The existing site layout and features are depicted in Exhibit 2 (Site Diagram), and Exhibit 3 depicts the proposed future development. The Exhibits are included in attachments to this PEA.

2.0 Project Overview

2.1 Site History

Based on the site history provided in ACC Environmental Consultants' (ACC) Phase I Environmental Site Assessment (ACC Project No. 3007-171-00, dated August 16, 2024, (ACC 2024c), the site and adjoining properties consisted of a portion of the San Francisco Bay from as early as 1895 and were part of the South Shore Reclamation Project in the 1950s, which included the import of fill material for the site and surrounding areas. The site and adjoining properties were developed with the existing school property, residential neighborhoods, and open spaces in the 1960s and have remained relatively unchanged through the present.

2.2 Physical Settings

Physical Setting Information		Source
Topography		
Site Elevation	Approximately 15 feet above mean sea level (msl).	USGS Topo Map, Oakland East, Oakland West, Hunters Point, and San Leandro, California Quadrangles, 2021 (ACC 2024c)
Topographic Gradient	Relatively flat area with a general gradient towards the south.	
Closest Surface Water	Artificial lake, approximately 300 feet north of the site; San Francisco Bay located approximately 1,400 feet southwest of the site.	
Soil Characteristics		
Soil Type and Description	Soils at the site consist generally of approximately 0 to 20 feet below grade surface (bgs) of loose to dense sandy fill underlain with a layer of soft clay and organic material (Bay Mud or similar marsh deposits).	Geotechnical Investigation, Miller Pacific Engineering Group, Project 1911.028, dated September 28, 2023
Geology/Hydrogeology		
Formation	Artificial fill (af)	National Geologic Map Database, Geologic map and map database of the Oakland metropolitan area, Alameda, Contra Costa, and San Francisco Counties, California, 2000 (1:50,000)
Description	Man-placed deposits of soil, rock, and construction debris used to raise or level ground surfaces for development.	
Estimated Depth to First Occurrence of Groundwater	Groundwater was measured at depth of 5 to 6 feet bgs in on-site geotechnical borings.	Geotechnical Investigation, Miller Pacific Engineering Group, Project 1911.028, dated September 28, 2023
*Hydrogeologic Gradient	Not known - may be inferred to be parallel to topographic gradient (primarily to the south).	

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

2.3 Environmental Concerns

Based on the findings of ACC's Phase I ESA, the following environmental concerns were identified in connection with the site:

Environmental Concern	Description
Historical Buildings	Several historical buildings were noted in the historical documents. Based on the age of the structures, soil in the vicinity of the structures have the potential to be impacted with lead, asbestos, pesticides, and polychlorinated biphenyls (PCBs) associated with building materials.
Pad-Mounted Transformer	One concrete pad-mounted transformer will be replaced as part of the modernization scope. Transformer equipment has historically contained PCB-containing fluids.
Historical Fill Material	Fill material was utilized in the site development as part of the South Shore Reclamation project in the 1950s. The unknown origin of the fill material was noted as an environmental concern

2.4 Previous Investigations

The following summarizes previous investigations completed at the site. A summary of boring locations completed at the Site are included in Table 1 of the attachments.

2.4.1 Initial Investigations

ACC Environmental Consultants (ACC) prepared a Phase I Environmental Site Assessment (ESA), dated May 14, 2024 (ACC 2024a), for an approximately 16.3-acre area that included the site and the northeastern adjoining temporary school campus (former Donald D Lum Elementary School) and baseball field. Based on the findings of their ESA, ACC indicated the site and adjoining properties consisted of a portion of the San Francisco Bay from as early as 1895 and were part of the South Shore Reclamation Project in the 1950s, which included the import of fill material for the site and surrounding areas. The site and adjoining properties were developed with the existing school property, residential neighborhoods, and open spaces in the 1960s and have remained relatively unchanged through the present. Based on the site history, ACC identified the unknown origin of the regional fill material and the potential for hazardous building materials, including lead-based paint, to be present in the existing structures that were developed in the 1950s-1980s as environmental concerns for the site.

In response to the findings of their Phase I ESA, ACC conducted several rounds of field investigation to evaluate the environmental concerns identified.

ACC's *Phase I Environmental Site Assessment Addendum Sampling* ('Addendum Sampling') (ACC 2024b) included 22 soil borings advanced throughout the site and the northeastern adjoining baseball field associated with the former Lum Elementary School campus. Sampling locations completed within the Wood Middle School campus boundary included the following:

Boring ID	Assessment Purpose	Total Depth (ft bgs)
ACCB7	Fill Material	4
ACCB10	Fill Material	4
ACCB11	Fill Material	4
ACCB12	Former Structure (1958) and Fill Material	4
ACCB13	Fill Material	4
ACCB14	Fill Material	4
ACCB15	Current Structure Constructed 1965	0.5
ACCB16		0.5
ACCB17		0.5
ACCB18		0.5
ACCB19		0.5
ACCB20		0.5
ACCB21		0.5
ACCB22		0.5

Sample locations completed around the existing structures were collected from approximately 0 to 0.5 feet bgs and submitted for laboratory analysis of lead by EPA Method 6010.

Sample locations completed to assess the fill materials were advanced to 4 feet bgs. Two soil samples were collected from each boring at approximate depths of 0 to 0.5 feet bgs and 3.5 to 4.0 feet bgs. Soil samples collected to assess the fill material were submitted for analysis of:

- Total Petroleum Hydrocarbons (TPH) by EPA Method 8015;
- Volatile Organic Compounds (VOCs) by EPA Method 8260;
- Semi-VOCs (SVOCs) by EPA Method 8270;
- Organochlorine Pesticides (OCPs) by EPA Method 8081;
- Polychlorinated Biphenyls (PCBs) by EPA Method 8082; and,
- California Administrative Manual (CAM) 17 Metals by EPA Methods 6010/6020

ACC summarized the sampling results compared to DTSC Screening Levels (Human Health Risk Assessment [HHRA] Note 3, dated June 2020, revised May 2022):

- TPH as gasoline (TPH-g) and PCBs were not reported above laboratory reporting limits in the samples analyzed.
- TPH as diesel and motor oil (TPH-d and TPH-mo) were reported up to concentrations of 20 milligrams per kilogram (mg/kg) and 70 mg/kg, respectively.
- Toluene was the only VOC reported above laboratory reporting limits. The maximum concentration of toluene was reported as 0.0055J mg/kg.
- OCPs and SVOCs were reported below respective DTSC SLs.
- In general, the metal concentrations were reported below respective DTSC SLs. Arsenic was reported up to 9.1 mg/kg, which is above DTSC SLs, but within the regional averages of the San Francisco Bay Area (Duvergé, 2011), established up to 11 mg/kg.
- Lead was reported in one boring, ACC18, at a concentration of 200 mg/kg, which exceeded the DTSC SL of 80 mg/kg. Boring ACC18 was located on the southwestern portion of the site, adjacent to an existing structure.

ACC recommended the removal of the lead-impacted soil and the development of a Soil Management Plan (SMP) and an Environmental Health & Safety Plan (EHASP) to be implemented during removal.

- Phase I Environmental Site Assessment Addendum Sampling (Rev 1)
  Wood Middle School Modernization Project
  420 Grand Street, Alameda, CA
  Prepared by: ACC Environmental Consultants
  Dated: August 16, 2024

In response to DTSC comments on the May Addendum Sampling Report, ACC revised their report (ACC 2024d) and conducted additional soil sampling for analysis of asbestos and PCBs around the existing structures and transformer equipment, respectively. The additional soil samples were not reported with detectable concentrations of asbestos or PCBs. ACC's recommendations were consistent with their May 2024 report.

2.4.2 Lead-Impacted Soil Investigations

The following work was completed to address the reported lead concentration in boring ACC18.

ACC prepared a *Technical Memorandum for Addressing Lead-Impacted Soil*, dated November 18, 2024 (ACC 2024e), which summarized soil analytical results from step-out sampling conducted in the vicinity of boring ACC18. Fifteen step-out borings were completed around ACCB18 and soil samples were collected from the surface, 1.0 foot bgs, and 2.0 feet bgs. The soil samples analyzed were reported with lead concentrations up to 66 mg/kg, below the residential DTSC-SL of 80 mg/kg. ACC recommended the excavation of soils surrounding the sample located for an area of approximately 100

square feet (ft²) and 1 foot in depth to remove soils with lead concentrations of 80 mg/kg. ACC prepared the *Soil Investigation Work Plan (Rev 1)*, dated February 13, 2025 (ACC Project No. 3007-171.03) (ACC 2025b), which was approved by the DTSC Case Manager, Lisa Holcomb, by email on February 14, 2025.

Soils in the vicinity of ACC18 were excavated on May 19, 2025. The fieldwork was summarized in Terracon's *Supplemental Site Investigation for Lead-Impacted Soil*, dated July 25, 2025 (Terracon 2025d). The excavation work was completed by Professional Asbestos & Lead Services, LLC (PALS) and overseen by Terracon. At the completion of excavation work, the excavation was approximately 22-feet by 15-feet in area and 1-foot in depth. Soil samples were submitted for analysis of lead, with the maximum concentration reported as 37 mg/kg, below the DSTC SL of 80 mg/kg. The excavated soils totaled approximately 13 cubic yards and were off-hauled from the site on July 21, 2025.

The DTSC issued an approval letter, dated September 11, 2025 (DTSC 2025c), indicating no further investigation related to lead was needed for the site.

2.4.3 Chromium Speciation

The DTSC issued a comment letter, dated January 7, 2025 (DTSC 2025a), related to their review of the Phase I ESA Addendum and Tech Memo documents issued by ACC in 2024 (ACC 2024c and 2024d). The comment letter included a request to complete additional sampling and analytical testing for the speciation of chromium, specifically, provide analysis for hexavalent chromium. ACC's *Soil Investigation Work Plan (REV 1)* (ACC 2025b) included six proposed borings for collection of soil samples for hexavalent chromium analysis. The remaining sections of this PEA will include a summary of the work related to the soil sampling and hexavalent chromium analysis completed at the site.

2.4.4 Operable Units

Based on the projected construction schedule in May 2025, the Site was designated into three operable units (OUs) for assessment purposes:

- OU-1: Roadway on the northern portion of the Site;
- OU-2: Main school campus; and,
- OU-3: Track and field area on the southeastern portion of the Site.

The Roadway construction was initially proposed to be completed between June and August 2025; however, due to construction delays, the Roadway was completed in Spring 2026. The Roadway area underwent an approximate 1 to 3-foot cut of soils as part of the redevelopment in late 2025.

For the purposes of this PEA, the OU designations were utilized in boring identification conventions. Additionally, the OU areas are utilized in discussions of the human health screening evaluation in Section 9 and associated risk assessment in Section 9.4.

3.0 Apparent Problem

Apparent problems for the site were evaluated based on the findings of the Phase I ESA and previous investigations completed at the site (Section 2.4). The following section assesses the potential sources of contamination that may be present at the site. Where the potential sources of contamination are confirmed for the site, the associated chemicals of potential concern (COPC) are summarized.

3.1 Hazardous Building Materials

Structures developed prior to the 1990s have the potential for use of hazardous building materials, including lead-based paint, PCBs, and asbestos, which are considered chemicals of potential concern (COPCs) for the site.

3.2 Undocumented Fill Material

The site and adjoining properties consisted of a portion of the San Francisco Bay from as early as 1895 and were part of the South Shore Reclamation Project in the 1950s, which included the import of fill material for the site and surrounding areas. Due to the unknown origin of the fill material, there is a potential for it to be contaminated with hazardous chemicals and heavy metals.

Using the Department of Toxic Substances Control (DTSC) *Fill Advisory Clean Imported Fill Material* (DTSC 2001), the following COPCs are identified in connection with the undocumented fill material: TPH, VOCs, SVOCs, OCPs, PCBs, CAM 17 Metals, hexavalent chromium, and asbestos.

3.3 Naturally Occurring Asbestos

Naturally occurring asbestos is most often found in ultramafic rock formations. An ultramafic rock unit is mapped by the California Geological Survey approximately 6 miles east of the site. Although the site is located within 10 miles of a possible naturally occurring asbestos rock unit, there is no potential for erosional deposition from this outcrop to have affected the project site. The ultramafic rock outcrop is located along the Hayward Fault, near San Leandro, and is located within a separate watershed from the site; therefore, naturally occurring asbestos associated with the nearby ultramafic rock unit does not constitute a COPC for the site.

3.4 Methane and Hydrogen Sulfide Gas

Based on a review of the CalGEM Well Finder website, the site was not identified within an oil/gas field. Additionally, based on a review of the State Water Resources Control Board's (SWRCB's) database GeoTracker, landfills were not identified near the site. Sources of methane or hydrogen sulfide gas have not been identified in the vicinity of the site. Based on this information, methane and hydrogen sulfide gas are not considered COPCs for the site.

3.5 Radon

Radon is a naturally occurring radioactive gas produced through the natural decay of uranium to stable lead. It is odorless, tasteless, and invisible. Elevated concentrations of radon can be found in soils and rocks containing uranium, granite, shale, phosphate, and pitchblende. Locations of these materials are highly unpredictable. Elevated levels of radon may also be found in soils containing certain types of industrial wastes, such as the by-products from uranium or phosphate mining. Radon can accumulate inside structures at concentrations that may pose risks to human health. Indoor radon levels are influenced by building construction and the concentration of radon in the underlying soil.

Terracon reviewed the United States Environmental Protection Agency (US EPA) Map of Radon Zone (EPA 2014) to identify the potential for average indoor radon concentrations for the site. The study indicated Alameda County is located in EPA Zone 2, which has a predicted average indoor screening level between 2.0 and 4.0 picoCuries of radon per liter of air (pCi/L). The EPA recommends a guideline action level of 4.0 pCi/L for annual average indoor radon concentrations in residential properties. The action level is based on an exposure of 18 hours per day for 40 years. Based on this information, radon gas is not considered a COPC for the site.

4.0 Conceptual Site Model

4.1 Conceptual Site Model Overview

The CSM summarizes the identified potential primary releases, release mechanisms, and impacted environmental media; the potential secondary release mechanisms and contaminated environmental media; potential exposure pathways; and potential receptors associated with the COPCs and their potential distribution at the site resulting from current and historical site uses. The CSM was developed utilizing information obtained through ACC's Phase I ESA (ACC 2024c) and analytical data collected from the PEA fieldwork.

The preliminary CSM with exposure pathways is presented in Appendix A.

The Potential Primary Release Mechanisms have been identified to include hazardous building materials and undocumented fill material. Based on the site's use as a school, these Potential Primary Release Mechanisms are evaluated for their potential impacts on current and future on-site students, staff, construction workers, and area residents. The CSM excludes an evaluation of terrestrial and aquatic habitats because the site does not provide suitable habitat for federally or state-listed protected species. The biological evaluation is discussed further in Section 10.

The CSM reflects conservative screening-level assumptions and incorporates exposure pathways concluded to be complete or potentially complete based on site-specific data and regulatory coordination. Groundwater and soil vapor pathways were evaluated and concluded to be incomplete for the purposes of this PEA, consistent with coordination with DTSC toxicology staff.

4.2 Potential Primary Release: Hazardous Building Materials

The site was historically developed with school structures constructed between approximately 1958 and 2016. Buildings constructed prior to the 1990s have the potential for lead-based paint (LBP), PCBs, and asbestos to have been utilized in the building materials. Therefore, lead, PCBs, and asbestos are identified as COPCs.

Potential Primary Release Mechanism:
The Potential Primary Release Mechanism for the release of LBP, PCBs, and asbestos includes chipping and flaking, mechanical weathering, and scraping of the building exterior from maintenance activities.

Contaminant of Potential Concern:
The COPCs identified associated with the hazardous building materials include lead, PCBs, and asbestos.

Potential Primary Contaminated Environmental Media:
Based on the identified Potential Primary Release Mechanism for LBP, PCBs, and asbestos, surface soils along the former building perimeters are identified as the potential primary environmental media that would be impacted by a release. Transformer equipment and associated PCB use is discussed further in Section 4.3.

Potential Secondary Release Mechanisms and Potential Secondary Contaminated Environmental Media:
Potential Secondary Release Mechanisms for releases to surface soils are identified to include leaching to deeper soils, leaching to groundwater, and vaporization from soil and/or groundwater impacts.

Lead, PCBs, and asbestos have low solubility and almost no volatility at Earth's surface conditions. Transport from irrigation water or stormwater is considered limited. Surface waters are not present at the site or within 300 feet northwest of the site. Groundwater at the site has been measured at depths ranging approximately 5 to 6 feet bgs (Miller Pacific, 2023); however, groundwater at the site is considered brackish and not of beneficial use. The school receives domestic potable water and landscape irrigation from a municipal supply.

Potential Exposure Route
Soil: Lead, PCB, and asbestos deposits into shallow soils are assumed to have low transportability, with transport mechanisms limited to direct contact and ambient air/dust that would result in potential dermal contact, ingestion, and inhalation.

Based on the analytical data collected as part of previous field investigations, discussed in Section 2.4 of this PEA, lead was identified in soils at concentrations exceeding the residential SL in one soil sample; however, the area was excavated, and the lead-impacted soil was removed. PCBs and asbestos have not been detected above laboratory RLs in soil samples collected from the site. Therefore, the potential exposure pathways for soil to potential receptors are identified as follows:

Potential Exposure Pathways for Soil			
Potential Receptor	Dermal Contact	Ingestion	Inhalation
Students	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway
Teachers	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway
Site Construction Workers	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway
Area Residents	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway

Groundwater: Lead, PCBs, and asbestos have low solubility. The school receives domestic potable water and landscape irrigation from a municipal supply; therefore, potential dermal contact or ingestion of potentially impacted groundwater is considered an incomplete pathway for on-site students, teachers, and area residents. Construction workers may encounter groundwater during future construction and/or subsurface work. Therefore, the following potential exposure pathways for groundwater to potential receptors are identified as follows:

Potential Exposure Pathways for Groundwater		
Potential Receptor	Dermal Contact	Ingestion
Students	Incomplete Pathway	Incomplete Pathway
Teachers	Incomplete Pathway	Incomplete Pathway
Site Construction Workers	Potentially Complete Pathway	Potentially Complete Pathway
Area Residents	Incomplete Pathway	Incomplete Pathway

Soil Vapor: Lead, PCBs, and asbestos have almost no volatility at Earth's surface conditions. Therefore, soil vapor exposure is considered an incomplete pathway for potential receptors.

4.3 Potential Primary Release: PCB-Containing Transformer Fluid

Electrical transformer equipment has historically utilized polychlorinated biphenyl (PCB) containing fluids.

Potential Primary Release Mechanism:
The Potential Primary Release Mechanism for the release of PCBs would include mechanical failure and resulting leaks from the transformer equipment.

Contaminant of Potential Concern:
The COPCs identified associated with the electrical transformer equipment are PCBs.

Potential Primary Contaminated Environmental Media:
Based on the identified Potential Primary Release Mechanism for PCBs, surface soils along the pad-mounted transformer equipment are identified as the potential primary environmental media that would be impacted by a release.

Potential Secondary Release Mechanisms and Potential Secondary Contaminated Environmental Media:
Potential Secondary Release Mechanisms for releases to surface soils are identified to include leaching to deeper soils, leaching to groundwater, and vaporization from soil and/or groundwater impacts.

PCBs have low solubility and almost no volatility at Earth's surface conditions. Transport from irrigation water or stormwater is considered limited. Surface waters are not present at the site or within 300 feet northwest of the site. Groundwater at the site has been measured at depths ranging approximately 5 to 6 feet bgs (Miller Pacific, 2023); however, groundwater at the site is considered brackish and not of beneficial use. The school receives domestic potable water and landscape irrigation from a municipal supply.

Potential Exposure Route

Soil: PCB deposits into shallow soils are assumed to have low transportability, with transport mechanisms limited to direct contact and ambient air/dust that would result in potential dermal contact, ingestion, and inhalation.

Based on the analytical data collected as part of previous field investigations, discussed in Section 2.4 of this PEA, PCB was not identified in soils at concentrations exceeding the residential SL in soil samples collected around the transformer equipment. Therefore, the potential exposure pathways for soil to potential receptors are identified as follows:

Potential Exposure Pathways for Soil			
Potential Receptor	Dermal Contact	Ingestion	Inhalation
Students	Incomplete Pathway	Incomplete Pathway	Incomplete Pathway
Teachers	Incomplete Pathway	Incomplete Pathway	Incomplete Pathway
Site Construction Workers	Incomplete Pathway	Incomplete Pathway	Incomplete Pathway
Area Residents	Incomplete Pathway	Incomplete Pathway	Incomplete Pathway

Groundwater and Soil Vapor: PCBs have low solubility and volatility. Based on the absence of PCBs in soil samples, the following potential exposure pathways for a release of PCBs from the transformer equipment to groundwater and soil vapor to potential receptors are identified as follows:

Potential Exposure Pathways for Groundwater		
Potential Receptor	Dermal Contact	Ingestion
Students	Incomplete Pathway	Incomplete Pathway
Teachers	Incomplete Pathway	Incomplete Pathway
Site Construction Workers	Incomplete Pathway	Incomplete Pathway
Area Residents	Incomplete Pathway	Incomplete Pathway

4.4 Potential Primary Release: Undocumented Fill Material

The site and adjoining properties consisted of a portion of the San Francisco Bay from as early as 1895 and were part of the South Shore Reclamation Project in the 1950s, which included the import of fill material for the site and surrounding areas. The origin of the fill material is unknown.

Potential Primary Release Mechanism:
The Potential Primary Release Mechanism is identified as the unknown fill material brought on-site to fill in the site to the existing grade. Based on the unknown source of the fill material, there is the potential for impacts to be present.

Contaminant of Potential Concern:
Based on the unknown origin of the fill material, the following COPCs are identified: TPH, VOCs, SVOCs, OCPs, PCBs, CAM 17 Metals, hexavalent chromium, and asbestos.

Potential Primary Contaminated Environmental Media:
Soils classified as fill were identified in geotechnical borings completed at the Site (Miller Pacific 2023) at depths ranging up to 20 feet bgs. Soil is considered the potential primary contaminated environmental media.

Potential Secondary Release Mechanisms and Potential Secondary Contaminated Environmental Media:
Potential Secondary Release Mechanisms for releases from soil are identified to include leaching to groundwater and vaporization from soil and/or groundwater impacts. Therefore, Potential Secondary Contaminated Environmental Media associated with the undocumented fill material include groundwater and soil vapor.

Groundwater at the site is present at depths of approximately 5 to 6 feet bgs. VOCs, hexavalent chromium, and to an extent, TPH and SVOCs, are soluble and can be transported through surface irrigation water and stormwater, which are considered potential pathways. Furthermore, VOCs have the potential for transport through groundwater and off-gassing into soil vapor.

OCPs, PCBs, CAM 17 Metals, and asbestos have low solubility and transport from irrigation water or stormwater is considered limited.

Potential vapor intrusion and groundwater exposure pathways were evaluated qualitatively as part of this PEA. Based on the absence of VOCs, SVOCs, and TPH in soil at concentrations exceeding applicable residential screening levels, and considering the limited mobility of the metals detected, these pathways are not considered complete exposure pathways under current or reasonably anticipated future land use conditions.

Potential Exposure Route

Soil: The potential exposure pathways for the COPCs associated with the undocumented fill material in soils are identified to include direct contact and ambient air/dust that would result in potential dermal contact, ingestion, and inhalation.

Based on the analytical data collected as part of the field investigation, TPH, VOCs, SVOCs, OCPs, PCBs, and asbestos were not identified at concentrations exceeding residential SLs. Of the metals analyzed, the following were reported at concentrations exceeding respective residential SLs: arsenic and hexavalent chromium.

Based on the soil analytical data, the potential exposure pathways for soil to potential receptors are identified as follows:

Potential Exposure Pathways for Soil			
Potential Receptor	Dermal Contact	Ingestion	Inhalation
Students	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway
Teachers	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway
Site Construction Workers	Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway
Area Residents	Potentially Complete Pathway	Potentially Complete Pathway	Potentially Complete Pathway

Groundwater:
Based on the absence of TPH, VOCs, SVOCs, OCP, PCBs, and asbestos in the Potential Primary Contaminated Environmental Media (soil), the potential for these analytes to be present in groundwater is considered an incomplete pathway for potential receptors.

Arsenic and mercury have limited solubility in groundwater. Hexavalent chromium is more readily soluble in groundwater. The school receives domestic potable water and landscape irrigation from a municipal supply; therefore, potential dermal contact or ingestion of impacted groundwater is considered an incomplete pathway for on-site students, teachers, and area residents. Construction workers may encounter groundwater during future construction and/or subsurface work. Therefore, the following potential exposure pathways for groundwater to potential receptors are identified as follows:

Potential Exposure Pathways for Groundwater		
Potential Receptor	Dermal Contact	Ingestion
Students	Incomplete Pathway	Incomplete Pathway
Teachers	Incomplete Pathway	Incomplete Pathway
Site Construction Workers	Potentially Complete Pathway	Potentially Complete Pathway
Area Residents	Incomplete Pathway	Incomplete Pathway

Soil Vapor:
Based on the absence of TPH, VOCs, SVOCs, OCP, PCBs, and asbestos at concentrations above residential SL in the Potential Primary Contaminated Environmental Media (soil), the potential for these analytes to be present in soil vapor is considered an incomplete pathway for potential receptors.

The reported metals have almost no volatility at Earth's surface conditions. Therefore, soil vapor exposure is considered an incomplete pathway for potential receptors.

5.0 Sampling and Analytical Plan

Previous site investigations were summarized in Section 2.4 of this PEA. A formal PEA Work Plan was not prepared; however, the following work plans were prepared for the Site and were reviewed and approved by the DTSC:

Work Plan	Date of DTSC Approval
Technical Memorandum for Addressing Lead-Impacted Soil, prepared by ACC, dated November 18, 2024	Comment Letter, dated January 22, 2025
Soil Investigation Work Plan, prepared by ACC, dated February 13, 2025	Email authorization to proceed, dated February 14, 2025.
Work Plan for Site Characterization of Hexavalent Chromium, prepared by Terracon Consultants, Inc., dated May 30, 3025, revised July 22, 2025	Email authorization to proceed, dated July 24, 2025.
Work Plan Addendum for Site Characterization of Hexavalent Chromium in OU3, prepared by Terracon Consultants, Inc., dated January 29, 2026	Comment Letter, dated March 16, 2026

The preparation of this PEA was requested by the DTSC in their *Comment Letter* dated March 16, 2026 (DTSC 2026a).

The following summarizes the sampling and analytical plan completed for the Site relating to the sampling fieldwork completed in 2024 through 2026. A summary of sample locations completed for the Site is provided in Table 1 of the attachments.

REC / Site Concern	Area of Potential Concern	No. of Borings	Boring IDs	Analysis
Undocumented Fill Material	Throughout Site	13	ACCB7, ACCB9, ACCB10, ACCB11, ACCB12, ACCB13, ACCB14, ACCB25, ACCB26, ACCB27, ACCB28, ACCB29, ACCB30	TPH VOCs SVOCs OCPs PCBs CAM 17 Metals
Hexavalent Chromium in Undocumented Fill Material	Throughout	52	ACCB7b, B-7D, B-7-10N, B-7-10E, B-7-10S, B-7-10W, ACCB10b, ACCB11b, ACCB12b, ACCB13b, ACCB25, ACCB26, ACCB27, B-27D, B-27-10N, B-27-10E, B-27-10S, B-27-10W, ACCB28, B-28D, B-28-10N, B-28-10E, B-28-10S, B-28-10W, ACCB29, B-29D, B-29-10N, B-29-10E, B-29-10S, B-29-10W, ACCB30, OU1-01 through OU1-10, OU3-01 through OU3-11	Hexavalent Chromium
Lead-Based Paint	Building Perimeters (Existing and Former Structures)	28	ACCB7, ACCB9, ACCB10, ACCB11, ACCB12, ACCB13, ACCB14, ACCB15, ACCB16, ACCB17, ACCB18, ACCB19, ACCB20, ACCB21, ACCB2, CSB01 through CSB06, CSS01 through CSS07	Lead
Asbestos	Hazardous Building Materials, Fill Material	14	ACCB7A, ACCB9A, ACCB10A, ACCB12A, ACCB14A, ACCB21A, ACCB23A, ACCB25, ACCB26, ACCB27, ACCB28, ACCB30	Asbestos
PCBs	Pad-Mounted Transformer, Hazardous Building Materials, Fill Material	15	ACCB, ACCB9, ACCB10, ACCB11, ACCB12, ACCB13, ACCB14, ACCB23A, ACCB24A, ACCB25, ACCB26, ACCB27, ACCB28, ACCB29, ACCB30	PCBs

The field investigation is discussed further in Section 6.

6.0 Field Investigation

6.1 Summary of Field Investigations

Several field investigations have been completed on the Site from 2024 through 2026. The following summarizes the field investigations, including the overseeing environmental consultant, purpose of the investigation, and borings completed.

Date(s) of Fieldwork	Environmental Consultant	Purpose	Borings Completed On-Site	Sampling Method
April 11, 2024	ACC	Assess the potential for lead around the perimeter of current and former structures; assess fill material	ACCB7, and ACCB9 through ACCB22	Direct Push Drilling
August 1, 2024	ACC	Assess for asbestos within the fill material and assess for PCBs around a pad-mounted transformer	ACCB7A, ACCB9A, ACCB10A, ACCB11A, ACCB12A, ACCB14A, ACCB21A, ACCB23A, ACCB24A	Hand Auger
March 3, 2025	ACC	Assess for hexavalent chromium within the fill material	ACCB7b, ACCB10b, ACCB11b, ACCB12b, ACCB13b, ACCB25, ACCB26, ACCB27, ACCB29, ACCB29	Direct Push Drilling
May 19, 2025	Terracon	Assess lead in soils following excavation around ACCB18	CSB01 through CSB06 and CSS01 through CSS07	Grab
August 4 and 7, 2025	Terracon	Assess for hexavalent chromium throughout Site	OU1-01 through OU1-10, B-7D, B-7-10N, B-7-10E, B-7-10S, B-7-10W, B-27D, B-27-10N, B-27-10E, B-27-10S, B-27-10W, B-28D, B-28-10N, B-28-10E, B-28-10S, B-28-10W, B-29D, B-29-10N, B-29-10E, B-9-10S, B-29-10W	Direct Push Drilling
April 1, 2026	Terracon	Assess for hexavalent chromium throughout Site	OU3-01 through OU3-11	Hand Auger

ACC = ACC Environmental Consultants

Where fieldwork was completed using a drill rig, a boring permit was obtained from the Alameda County Department of Public Works (ACDPW) prior to fieldwork. Fieldwork completed by Terracon was conducted in general accordance with Terracon's DTSC-approved Site-Specific Environmental Health and Safety Plan (EHASP) (Terracon 2025e) and where applicable, the Community Air Monitoring Plan (Terracon 2025d).

6.2 Soil Borings and Soil Sampling

Fieldwork was completed on the dates provided in Section 6.1 under the oversight of a California-licensed Professional Geologist (P.G.).

Soil samples were collected from the soil borings at intervals summarized in Section 5. Soil samples were extracted by hand from either the hand auger bucket and/or acetate

liners collected from the direct push drilling (DPT) rig using new disposable gloves and placed directly into laboratory-supplied glassware. For boring locations advanced with the DPT drill rig during the Augst 4 and 7, 2025 sampling event, the acetate liners were cut at the approximate intervals, covered with a Teflon sheet, and a tight-fitting plastic cap at both ends. Non-disposable sampling equipment was cleaned using a non-phosphate detergent wash and potable water rinse before the project began and before collecting each soil sample.

Each sample container was labeled with the project number, date, time, boring number, and sample number. Immediately after sampling, the containers were placed in a chilled cooler and subsequently transported to a California State-accredited laboratory, following chain-of-custody procedures. Laboratories utilized for this PEA included McCampbell Analytical of Pittsburg, California, and SunStar Laboratories of Lake Forest, California.

At the completion of boring activities, soil cuttings and neat cement were used to backfill the soil borings in accordance with ACDPW guidelines.

7.0 Laboratory Analytical Methods

The chain-of-custody forms in Appendix B indicate the sample names, dates and times collected, containers, and the requested target analytes and analytical methods.

Based on the area of concern, soil samples were analyzed for the following:

REC/Site Concern	Laboratory Analytical
Hazardous Building Materials	■ Lead by EPA Method 6010; ■ PCBs by EPA Method 8082; and, ■ Asbestos by CARB Method 435.
Pad-Mounted Transformer	■ PCBs by EPA Method 8082.
Undocumented Fill Material	■ Total Petroleum Hydrocarbons (TPH) as gasoline range organics (TPH-GRO), diesel range organics (TPH-DRO), and motor oil organics (TPH-MORO) by Environmental Protection Agency (EPA) Method 8015; ■ Volatile Organic Compounds (VOCs) by EPA Method 8260; ■ Semi-volatile Organic Compounds (SVOCs) by EPA Method 8270; ■ Organochlorine Pesticides (OCPs) by EPA 8081; ■ Polychlorinated Biphenyls (PCBs) by EPA Method 8082; ■ California Administrative Manual (CAM) 17 Metals by EPA Methods 6020/7471; ■ Asbestos by CARB Method 435; and, ■ Hexavalent chromium by EPA Method 7199.

Data packages were checked for completeness upon receipt from the laboratory to ensure that data and quality assurance/quality control (QA/QC) information requested

were present. Data quality was assessed by considering holding times, surrogate recovery, method blanks, matrix spike, matrix spike duplicate recovery, and method reporting limits. Based upon our interpretation of quality control information provided by the laboratory, it is our opinion that the overall dataset is qualified as usable for the purposes of this PEA.

8.0 Data Evaluation

8.1 Screening Criteria

Soil analytical results were compared to the Department of Toxic Substances Control (DTSC) Screening Levels (SLs), established in June 2020, revised in April 2025 (DTSC 2025b). The following potential exposure scenarios were considered for this Site:

Residential Land Use: This SL category is used for comparison for sites where unrestricted future land-use is sought. Unrestricted land uses may include residential, K-12 schools, health care, day care centers, and other sensitive purposes. The SLs for the residential land use category incorporate assumptions of long-term, frequent exposure of children and adults in a residential setting. These SLs are appropriate for unrestricted use of a property, such as a school.

Commercial or Industrial Use: This SL category assumes working-age adults are regularly present at the site. The direct-exposure assumptions in these SLs assume shorter, less frequent exposure for receptors compared to residential land use receptors.

The DTSC-SLs were used as the primary screening levels; however, where DTSC-SLs were not established for a given analyte, Terracon substituted the Environmental Protection Agency (EPA) Regional Screening Levels (RSLs), published November 2024 (EPA 2024).

Terracon notes the DTSC SLs and EPA RSLs do not have established screening levels for TPH. Therefore, for TPH-GRO, TPH-DRO, and TPH-ORO analytical results (TPH results), Terracon compared the TPH results to the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs), published July 2025, revised January 2026 (revision 4, SFBRWQCB 2026).

For the purposes of the analytical results discussion, the following is noted for clarity:

- The DTSC-SL, EPA RSLs, and SFBRWQCB ESLs have both cancer-risk and/or non-cancer risk criteria established for a given analyte. For the purposes of this discussion, the lower screening threshold for a given analyte will be used to

evaluate if the concentration exceeds the screening level, and a distinction between cancer and non-cancer screening levels is not discussed. The analytical summary tables included as attachments to this report include both cancer and non-cancer screening criteria for reference.

- The following discussion will utilize 'screening level' and/or 'SL', but will not state the publishing agency (DTSC, EPA, or SFBRWQCB). The SLs used will follow the established criteria discussed above. The analytical summary tables included as attachments to this report include a reference to which published screening criteria are used.

8.2 Soil Analytical Results

8.2.1 Hazardous Building Materials – Lead, Asbestos, and PCBs

According to the *Phase I Environmental Site Assessment Addendum Sampling (Rev 1)* (ACC 2024c), lead analysis was completed for 34 borings with 47 discrete soil samples throughout the Site; asbestos analysis was completed for 14 soil borings with 24 soil samples within the footprint of existing and former structures; and, PCB analysis was completed for 15 borings with 28 soil samples. Asbestos and PCBs were not detected above laboratory reporting limits (RLs) in the soil samples analyzed.

Lead was reported below the SL of 80 mg/kg in 35 of the soil borings. One soil sample, ACCB18-0.5, was reported with 200 mg/kg of lead, which exceeded the residential SL of 80 mg/kg. An approximately 22-foot by 15-foot by 1-foot in depth area was excavated around ACCB18, and confirmation soil samples, CSB01 through CSB06, and SCC01 through CSS07, were collected from the excavation area. The confirmation soil samples were reported with lead concentrations up to 30 mg/kg. The excavation and confirmation sampling work was completed in general accordance with the *Technical Memorandum for Addressing Lead-Impacted Soil* (ACC 2024e) and the *Soil Investigation Work Plan (Rev 1)*, dated February 13, 2025 (ACC Project No. 3007-171.03) (ACC 2025b), which were approved by the DTSC Case Manager, Lisa Holcomb, by email on February 14, 2025, and summarized in the *Supplemental Site Investigation for Lead-Impacted Soil* (Terracon 2025b), which was approved by the DTSC on September 11, 2025.

8.2.2 Pad-Mounted Transformer

According to the *Phase I Environmental Site Assessment Addendum Sampling (Rev 1)* (ACC 2024d), PCB analysis was completed on 30 soil samples, including two duplicate samples, collected throughout the Site. PCB analysis was included for borings completed to assess the hazardous building materials and undocumented fill material. The sampling for PCBs included sampling around a former pad-mounted transformer on the southern

portion of the Site. PCBs were not detected above laboratory reporting limits (RLs) in the soil samples analyzed.

8.2.3 Undocumented Fill Material

Fourteen (14) borings were completed throughout the Site to assess the regional fill material utilized in the development of the Site. From the 14 soil borings, 29 soil samples, including one duplicate, were collected and submitted for laboratory analysis of TPH, VOCs, SVOCs, PCBs, OCPs, CAM 17 Metals, and asbestos. Additional assessments were completed to evaluate on-site soils for hexavalent chromium, which is discussed further below.

Various detections of TPH-DRO, TPH-ORO, VOCs, SVOC, and OCPs were reported in the soil samples; however, the reported concentrations were below respective SLs for residential and industrial land use exposure. TPH-GRO, asbestos, and PCBs were not detected above laboratory reporting limits in the samples analyzed.

Of the detected metals, arsenic and mercury were reported at concentrations exceeding respective residential SLs.

Arsenic
Arsenic was reported at concentrations ranging from 1.8 to 9.1 mg/kg, which exceeds the residential SL of 0.032 mg/kg and the commercial/industrial SL of 0.13 mg/kg. According to the *Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region*, prepared by Dylan Jacques Duvergé, dated December 2011 (Duvergé 2011), average arsenic concentrations in the greater San Francisco Bay area range from 0.61 mg/kg up to 11 mg/kg. The reported concentrations of arsenic from the Site are within the established regional average.

Mercury
Mercury was detected above laboratory RLs in 8 of the 29 soil samples analyzed, ranging from 0.1 mg/kg to 0.7 mg/kg. The reported concentration of mercury in ACC30-4.0 (0.7 mg/kg) exceeds the residential SL of 0.67 mg/kg, but is below the commercial/industrial SL of 2.9 mg/kg.

Prior to April 2025, the residential SL for mercury was established at 1.0 mg/kg, and step-out sampling around ACCB30 for mercury has not been completed. Based on the historical information summarized in ACC's Phase I ESA (ACC 2024a), the area of boring ACCB30 was located in an area of the Site that has been utilized as a parking lot adjoining the existing school structure, with no known history relating to the use or handling of mercury. The soil sample collected within the same boring at the 0 to 0.5 foot bgs interval was reported with 0.049 mg/kg of mercury, below the residential SL.

The presence of mercury in sample ACC30-4.0 at concentrations above the residential SL appears anomalous relative to the remaining data set and history of the Site. The average mercury concentration between the 8 sample detections is 0.2 mg/kg. Based on the isolated nature of the reported concentration in ACCB30-4.0, the absence of a surface exceedance, and the absence of an identified Site source, the mercury result does not appear to represent a discrete release or a condition requiring additional investigation. If future intrusive work excavates soil from the vicinity and depth interval of ACCB30-4.0, the soil should be managed in accordance with applicable soil management procedures.

Hexavalent Chromium

Soil sampling and analysis for hexavalent chromium were initially completed in March 2025 in borings completed by ACC Environmental (ACCB7b, ACCB10b through ACCB13b, ACCB25 through ACCB30). From the 22 soil samples collected during the March 2025 sampling event, hexavalent chromium was detected above laboratory RLs in 10 of the soil samples analyzed, ranging from 0.15 J mg/kg to 0.9 mg/kg. Based on the initial results, Terracon prepared the *Work Plan for Site Characterization of Hexavalent Chromium* (Terracon 2025b) and *Work Plan Addendum for Site Characterization of Hexavalent Chromium in OU3* (Terracon 2026b) to further evaluate hexavalent chromium concentrations within the main school campus area (referred to as OU1 and OU2) and a track and field area outside of the redevelopment area (OU3). Additionally, step out and, where appropriate, step down sampling was completed for borings ACC7b, ACC27b, ACCB78b, and ACCB29b. Terracon notes that the roadway on the northern portion of the Site underwent grading in September 2025, which removed approximately 1 to 3 feet of soil from the top of the entire roadway area. Soil samples collected from the upper six inches of soil in the area (ACCB25-0.5 and ACCB26-0.5) are no longer representative of Site conditions and are excluded from the discussion.

A total of 110 soil samples were collected for hexavalent chromium analysis. Two surface samples from the graded roadway area, ACCB25-0.5 and ACCB26-0.5, were excluded because those soils were removed during Site development and are no longer representative of current Site conditions. The remaining 108 representative samples included 32 detections above laboratory reporting limits and 12 concentrations exceeding the residential SL of 0.3 mg/kg. The maximum representative concentration was 0.9 mg/kg in sample ACCB29-0.5, located within a landscaped area between the main school campus and the track and field. None of the reported concentrations exceeded the commercial/industrial SL of 6.2 mg/kg.

8.3 Quality Control/Quality Assurance and Data Validation

Quality control/quality assurance (QC/QA) of analytical data was maintained using the following methods and procedures:

- Established reporting limits (RLs) with the laboratory that meet data quality objectives (DQOs) established by the DTSC SLs, EPA RSLs, and SFBRWQCB ESLs;
- Laboratory QA/QC controls, such as laboratory control standard (LCS), matrix spike (MS), and matrix spike duplicate (MSD);
- Collection of samples in laboratory-provided containers;
- Chain-of-custody protocols;
- Storage and transportation of soil samples in secured chilled containers; and,
- Decontamination of reusable sampling equipment.

Any discrepancy in the laboratory QC/QA is notated in the laboratory reports, which are included as Appendix B.

No other discrepancies or data failures are noted, and the data is considered to substantially meet DQOs.

8.4 Summary of Results

Based on the findings of this investigation, COPCs associated with the hazardous building materials, lead and asbestos, and pad-mounted transformers, PCBs, do not appear to be of concern based on the absence of detected concentrations above residential SLs. The documented fill material does not appear to be impacted with TPH, VOCs, SVOCs, OCPs, or PCBs at concentrations exceeding respective residential SLs.

Of the metals analyzed for the fill material soil samples, arsenic, mercury, and hexavalent chromium were reported at concentrations exceeding respective residential SL in one or more soil samples.

The reported concentrations of arsenic range from 1.8 to 9.1 mg/kg, which exceeds the residential SL of 0.032 mg/kg and the commercial/industrial SL of 0.13 mg/kg; however, it is within regional averages for arsenic up to 11 mg/kg (Duvergé, 2011).

Mercury was reported to exceed the residential SL of 0.67 mg/kg in one soil sample, ACC30-4.0 (0.7 mg/kg).

A total of 110 soil samples were collected for hexavalent chromium analysis; two surface samples from the graded roadway area were excluded as no longer representative, leaving 108 representative samples, with 32 detections and 12 reported concentrations greater than the residential SL of 0.3 mg/kg. The maximum reported concentration was reported as 0.9 mg/kg in sample ACCB29-0.5, located between the main school campus and the track and field.

9.0 Human Health Screening Evaluation

A Human Health Screening Evaluation (HHSE) presented below is based on the analytical results from the PEA sampling and detected concentrations relative to the screening criteria outlined in Section 8.1.

9.1 Contaminants of Potential Concern

Based on a historical review of the site, the identified COPCs included asbestos, TPH, VOCs, SVOCs, OCPs, PCBs, CAM 17 Metals, and hexavalent chromium.

Based on the analytical results presented in this PEA report, asbestos, TPH, VOCs, SVOCs, OCPs, PCBs, and metals antimony, barium, beryllium, cadmium, total chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc were not reported in concentrations above respective DTSC SLs for residential (unrestricted) land use and do not represent a COPCs. Terracon notes that lead was detected in one soil sample, ACCB18-0.5 above the residential SL of 80 mg/kg; however, the area of lead-impacts was removed, documented, and approved by the DTSC in 2025 (Terracon 2025c).

Metals arsenic, hexavalent chromium, and mercury were reported at concentrations exceeding residential DTSC SLs in soil samples analyzed and represent COPCs for the site.

9.2 Exposure Pathways

Exposure pathways at the site include:

Contaminants of Concern	Medium	Exposure Scenario	Exposure Pathway
Arsenic, Hexavalent Chromium, Mercury	Soil	Exposure to soil during earthwork activities, including future environmental investigations and/or construction work.	Dermal contact, ingestion, inhalation
	Groundwater	Groundwater was encountered at depths of approximately 5 to 6 feet bgs in geotechnical borings completed at the site (Miller Pacific 2025). Groundwater at the site is considered brackish and not of beneficial use. The school receives domestic potable water and landscape irrigation from a municipal supply. No direct exposure pathway to groundwater at the site exists.	Direct exposure to Construction / Maintenance Workers
	Vapor	Sources for potential vapors were not identified for the site.	Not a complete pathway

For the purposes of the Risk Assessment, discussed further in Section 9.4, Terracon notes that the development of the Site includes both paved and non-paved areas, which provide different exposure pathways relative to soil. These different exposure pathways are defined as follows:

Exposure Scenario #1 – Sitewide
Under this exposure scenario, the Site is treated as a whole without distinction between paved and unpaved areas. This exposure scenario provides an assessment of the COPCs relative to the entire Site and may be used to provide an evaluation for future construction worker safety.

Exposure Scenario #2 – Main School Campus
Under this exposure scenario, data collected from the areas of the Main School Campus will be utilized and data collected from the track and field will be excluded. The Main School Campus development includes reduced exposure to soils through the use of hardscape and landscaping materials.

Exposure Scenario #3 – Track and Field
Under this exposure scenario, data collected from the track and field areas of the Site (OU3) will be utilized and data collected from the Main School Campus will be excluded. The track and field area also includes a school garden. These areas are considered separately due to the more direct exposure to soil for students and staff relative to the paved areas of the Site.

9.3 Potential Receptors

The Wood Middle School campus has been undergoing redevelopment from November 2024 and is scheduled for completion in July 2026. Future on-site receptors will include AUSD staff, students, and third-party contractors, such as maintenance and utility workers. Potential off-site receptors include persons occupying the adjoining residential neighborhoods.

Groundwater was encountered at depths of approximately 5 to 6 feet below ground surface during geotechnical investigations. Groundwater at the Site is considered brackish and is not used as a potable water source; the Site receives potable water from a municipal supply. Direct exposure to groundwater is therefore not considered a complete exposure pathway for students, staff, construction workers, or area residents. Construction workers may encounter groundwater during future deep excavation, utility work, dewatering, or other intrusive activities; therefore, construction worker exposure to groundwater is considered potentially complete if groundwater is encountered and should be managed through appropriate construction controls, health and safety procedures, and water management practices.

Potential vapor intrusion was evaluated based on soil analytical results and site conditions. In the absence of TPH, VOCs, or SVOCs in soil at concentrations exceeding residential screening levels, vapor intrusion is not considered a complete exposure pathway.

Based on a review of the United States Fish & Wildlife Service – National Wetlands Inventory map, bodies of water are not present on-site. The closest surface water is an artificial lake, located approximately 300 feet north of the site and the San Francisco Bay located approximately 1,400 feet southwest of the site.

Based on a review of the National Oceanic and Atmospheric Administration (NOAA) Sea Level Rise Viewer, the Site is not mapped within low-laying areas and or in the projected area of impact for the 3-foot sea level rise by 2100.

9.4 Risk Assessment

The following presents risk assessments relative to the three Exposure Scenarios defined in Section 9.2. Terracon utilized the maximum reported concentration for a given COPC within each Exposure Scenario and evaluated the associated hazard quotient and cancer risk, where applicable.

The hazard quotients were calculated using the maximum concentration divided by the non-cancer endpoint SL listed. The cancer risks were calculated by dividing the exposure point concentration by the cancer end point SL listed and multiplying by 10^{-6}.

The following total hazard quotient and cancer risk values were calculated for each Exposure Scenario and are presented in the attachments to this PEA:

Exposure Scenario #1 – Sitewide
Total cancer risk was calculated to be 2.88E-04 for a residential land use scenario, which was in excess of the point of departure of 1.0E-6 for excess lifetime cancer risk. Primary COPCs contributing towards excess cancer risk include arsenic (98.79%) and Chromium VI (1.04%).

The total hazard index (non-cancer risk) was calculated to be 2.47+01 for a residential land use scenario, which exceeded the hazard index threshold of 1.0E+00 for non-carcinogenic effects. Primary COPCs contributing towards excess non-cancer risk include arsenic (89.7%), mercury (4.22%), lead (2.32%), and cobalt (1.35%) in soil.

Exposure Scenario #2 – Main School Campus
Total cancer risk was calculated to be 2.86E-04 for a residential land use scenario, which was in excess of the point of departure of 1.0E-6 for excess lifetime cancer risk. Primary

COPCs contributing towards excess cancer risk include arsenic (99.3%) and Chromium VI (0.54%).

The total hazard index (non-cancer risk) was calculated to be 2.47+01 for a residential land use scenario, which exceeded the hazard index threshold of 1.0E+00 for non-carcinogenic effects. Primary COPCs contributing towards excess non-cancer risk include arsenic (89.7%), mercury (4.22%), lead (2.32%), and cobalt (1.35%) in soil.

Exposure Scenario #3 – Track and Field
Total cancer risk was calculated to be 9.07E-05 for a residential land use scenario, which was in excess of the point of departure of 1.0E-6 for excess lifetime cancer risk. Primary COPCs contributing towards excess cancer risk include arsenic (96.47%) and Chromium VI (3.31%).

The total hazard index (non-cancer risk) was calculated to be 7.44+0 for a residential land use scenario, which exceeded the hazard index threshold of 1.0E+00 for non-carcinogenic effects. Primary COPCs contributing towards excess non-cancer risk include arsenic (91.76%), lead (2.86%), cobalt (2.86%), and vanadium (1.03%) in soil.

9.5 Statistical Evaluation for Hexavalent Chromium

A total of 110 soil samples were collected for hexavalent chromium analysis; two surface samples from the graded roadway area were excluded as no longer representative, leaving 108 representative samples for statistical evaluation. Of the 108 representative samples, hexavalent chromium was detected above laboratory reporting limits in 32 samples, and 12 reported concentrations were greater than the residential SL of 0.3 mg/kg. Terracon used the USEPA's ProUCL Software to calculate a 95% upper confidence level (95% UCL) for hexavalent chromium at the Site utilizing the three Exposure Scenarios defined in Section 9.2. Where hexavalent chromium concentrations were not detected by the laboratory, the laboratory reporting limit was utilized as the detected value.

Exposure Scenario #1 – Sitewide
Using the 108 sample results collected from throughout the Site, the 95% UCL for hexavalent chromium for the Exposure Scenario #1 is calculated to be 0.22 mg/kg.

Exposure Scenario #2 – Main School Campus
Exposure Scenario #2 represents the combined OU-1 and OU-2 roadway and main school campus area evaluated in response to DTSC's April 1, 2026, Conditional Approval Letter. Using 58 soil sample results collected within the vicinity of the Main School Campus, the 95% UCL for hexavalent chromium for Exposure Scenario #2 is calculated to be 0.20 mg/kg.

Exposure Scenario #3 – Track and Field
Using 50 soil sample results collected within the vicinity of the track and field, the 95% UCL for hexavalent chromium for Exposure Scenario #3 is calculated to be 0.28 mg/kg.

Copies of the 95% UCL calculations are included in the attachments.

10.0 Ecological Screening Evaluation

An ecological risk assessment was performed to identify potential habitats that may be affected by the site COPCs. This evaluation is based on the criteria outlined in DTSC's PEA Guidance Manual, dated January 1994, revised October 2015 (DTSC 2015).

10.1 Site Characterization

The Wood Middle School campus is located at 420 Grand Street in Alameda, Alameda County, California, and consists of an approximately 13.5 acre area comprised of Assessor Parcel Number 74-1250-1-3 and portion of 74-1250-1-2, and roadway easement that extends onto APN 74-1250-1-4. Following completion of the school campus redevelopment in Summer 2026, the Site will comprise four school buildings, asphalt-paved playground and parking lot areas, concrete-paved and landscaped courtyard areas, and an access roadway along the northern portion of the site with entrances off of Grand Street and Otis Drive.

The site and its topographic environment are shown on the United States Geological Survey (USGS) Topographic Map included as an attachment to this PEA. The closest surface water, according to the topographic map, is a manmade pond located approximately 300 feet north of the site and the San Francisco Bay located approximately 1,400 feet southwest of the site. Wetlands, streams, springs, ponds, or other water sources are not mapped on the National Wetlands Inventory (US Fish & Wildlife 2025) for the site.

Additionally, Terracon reviewed the United States Fish and Wildlife Service (USFWS) Information for Planning and Conservation (IPaC) database for potential threatened and endangered (T&E) species that may be present at the site. Various T&E species were identified in the area of Alameda in which the site is located; however, since the site has been developed since the 1950s, the presence of T&E species is not likely.

10.2 Ecological Screening Evaluation Results

Based on the results of this informal biological assessment, it is Terracon's opinion that the project site does not provide suitable habitat for federal or state listed protected

species based on the historically developed nature of the site and absence of Wetlands. Therefore, it is Terracon's opinion that the proposed redevelopment of the school would have no effect on federal or state listed species or suitable habitat.

11.0 Community Profile and Public Participation

Public notification is required prior to the onset of field work; however, fieldwork completed between 2024 to 2026 were not conducted under a PEA Work Plan and did not require notification.

This PEA report was submitted to DTSC simultaneously with a required 30-day public review and comment period. The AUSD made the PEA report available for public review and comment under Option A, separate from California Environmental Quality Act (CEQA) review.

In conjunction with the submittal of this PEA report to the DTSC, the AUSD published a notice in the local newspaper and posted a notice at the school site stating the district's determination to make the PEA available for public review and comment pursuant to subparagraph A 17213.1(a)(6) of the California Education Code.

Following the publication date of the PEA report, May 18, 2026, a 30 calendar-day comment period commenced in which the public was provided the opportunity to review the PEA report and submit written comments.

Key contacts for the Wood Middle School site PEA were posted as follows:

The following review schedule was completed:

Action Item	Projected Schedule
Submittal of PEA Report to DTSC	May 18, 2026
Start of Public Notice Period	May 19, 2026
Date of Public Hearing	May 26, 2026
Completion of DTSC Review Period and Receipt of DTSC Comments	June 17, 2026
Completion of Public Review Period and Receipt of Public Comments	June 18, 2026

12.0 Conclusions and Recommendations

As part of this PEA and the findings of ACC's Phase I ESA (ACC 2024c), RECs and environmental concerns were identified for the site to include:

- Hazardous building materials, including lead-based paint, PCBs, and asbestos;
- Pad-mounted transformer; and,
- Undocumented fill material.

Field investigations have included the collection of soil samples for discrete analysis of TPH, VOCs, SVOCs, OCPs, PCBs, CAM 17 metals, hexavalent chromium, and asbestos. Based on the findings of this assessment, Terracon concludes the following:

- TPH-DRO, TPH-ORO, VOCs, SVOCs, or OCPs were not reported above respective SLs for residential land use in the soil samples analyzed.
- Asbestos, TPH-GRO, and PCBs were not detected above laboratory reporting limits in the soil samples collected from the Site and are below respective residential SLs.
- The reported concentrations of arsenic ranges from 1.8 to 9.1 mg/kg, which exceeds the residential SL of 0.032 mg/kg and the commercial/industrial SL of 0.13 mg/kg; however, is within regional averages for arsenic up to 11 mg/kg (Duvergé 2011).
- Mercury was reported in one soil sample, ACCB30-4.0, at 0.7 mg/kg, which marginally exceeds the residential SL of 0.67 mg/kg and is below the commercial/industrial SL of 2.9 mg/kg. The surface sample from the same boring, ACCB30-0.5, was reported at 0.049 mg/kg, below the residential SL. No known Site-specific source of mercury was identified in the vicinity of ACCB30, and the reported concentration appears isolated relative to the remaining data set. If future intrusive work excavates soil from the vicinity and depth interval of ACCB30-4.0, the soil should be managed in accordance with applicable soil management procedures.
- Hexavalent chromium has been analyzed in 108 soil samples collected from throughout the Site. Of the 108 soil samples, hexavalent chromium was detected above laboratory RLs in 32 of the samples.
    - The maximum reported concentration was reported as 0.9 mg/kg in sample ACCB29-0.5, located between the main school campus and the track and field. Twelve (12) of the reported detections were greater than the residential SL of 0.3 mg/kg and none of the reported detections of hexavalent chromium have exceeded the industrial SL of 6.2 mg/kg.
    - Based on the Site history, uses of hexavalent chromium Statistical evaluations for hexavalent chromium give the following 95% UCL Calculations based on exposure scenarios:
        - Exposure Scenario #1 – Sitewide: 0.22 mg/kg
        - Exposure Scenario #2 – Main School Campus: 0.20 mg/kg
        - Exposure Scenario #3 – Track and Field: 0.28 mg/kg
- Lead was reported in one soil sample, ACCB18, exceeding the residential SL of 80 mg/kg; however, soil in the vicinity was excavated and removed under direction of the DTSC in 2025 (Terracon 2025c).

The CSM identifies dermal contact, ingestion, and inhalation (respirable dust) as the primary routes of exposure to the identified metals for students, school campus staff, and future construction workers.

The risk calculations presented in Section 9.4 were completed using the maximum reported concentration for each COPC within each exposure scenario and are considered a conservative screening-level evaluation. This approach is useful for identifying the primary contributors to calculated risk and hazard; however, the final lines of evidence for the Site also consider the nature and spatial distribution of the reported impacts, Site history, exposure assumptions, and statistical evaluation of the data set. The historical review did not identify industrial operations or other Site-specific uses associated with the handling, storage, or disposal of arsenic-, hexavalent chromium-, or mercury-containing materials or waste. Reported arsenic concentrations are within published regional background ranges for the San Francisco Bay Area. Hexavalent chromium was detected above the residential SL in individual samples; however, the 95% UCLs calculated for the Sitewide, Main School Campus, and Track and Field exposure scenarios are below the residential SL of 0.3 mg/kg. Mercury was reported above the residential SL in one sample at a marginal concentration and does not appear to be associated with a known Site source or broader pattern of impact. Lead-impacted soil previously identified near ACCB18 was excavated, removed, and addressed under DTSC direction. In addition, TPH-GRO, asbestos and PCBs were not detected above laboratory reporting limits, and TPH, VOCs, SVOCs, and OCPs were not reported above applicable residential screening levels. Based on these multiple lines of evidence, the reported COPC concentrations are interpreted to reflect area-wide fill conditions rather than a discrete release at the Site.

Based on the findings of this PEA, Terracon concludes that the presence of the COPCs at concentrations exceeding residential SLs are consistent with an area-wide condition associated with fill material utilized in the formation of the City of Alameda. Considering the Site's history, the absence of an identified discrete release, the limited and isolated nature of mercury, the completed removal of lead-impacted soil, the absence of PCBs/asbestos and organic constituents above applicable screening levels, and the hexavalent chromium 95% UCL results, Terracon concludes that no further investigation is warranted for the Site.

Notes:

[1] Values in Black = Department of Toxic Substances Control (DTSC) Human Health Risk Assessment (HHRA) Note Number 3, DTSC-modified Screening Levels (SLs) for soil, published June 2020, revised April 2025.

[2] Values in Blue = Where a DTSC SL is not established, the Environmental Protection Agency (EPA) Regional Screening Levels (RSLs), published November 2024, are used.

-- = Screening Level not established by the DTSC or EPA

Concentration reported above the Residential SL for Direct Exposure Human Health Risk Levels, Cancer Risk

Concentration reported above the Residential SL for Direct Exposure Human Health Risk Levels, Non-Cancer Hazard

Concentration reported above the Commercial / Industrial SL for Direct Exposure Human Health Risk Levels, Cancer Risk

Concentration reported above the Commercial / Industrial SL for Direct Exposure Human Health Risk Levels, Non-Cancer Hazard

mg/Kg = milligrams per kilogram

Bold value indicates a detection

<Value = Analyte not detected above the laboratory reporting limit (RL)

ND = Not detected abobve the laboratory RL

B = Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.

J = Result is less than the reporting limit, but greater than the method detection limit. The reported concentration is an estimated value.

P = Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.

Table 5 Continued - Summary of TPH, VOCs, and SVOC Analytical Results

Notes:

[1] Values in Black = Department of Toxic Substances Control (DTSC) Human Health Risk Assessment (HHRA) Note Number 3, DTSC-modified Screening Levels (SLs) for soil, published June 2020, revised April 2025.

[2] Values in Blue = Where a DTSC SL is not established, the Environmental Protection Agency (EPA) Regional Screening Levels (RSLs), published November 2024, are used.

-- = Screening Level not established by the DTSC or EPA

Concentration reported above the Residential SL for Direct Exposure Human Health Risk Levels, Cancer Risk

Concentration reported above the Residential SL for Direct Exposure Human Health Risk Levels, Non-Cancer Hazard

Concentration reported above the Commercial / Industrial SL for Direct Exposure Human Health Risk Levels, Cancer Risk

Concentration reported above the Commercial / Industrial SL for Direct Exposure Human Health Risk Levels, Non-Cancer Hazard

mg/Kg = milligrams per kilogram

Bold value indicates a detection

<Value = Analyte not detected above the laboratory reporting limit (RL)

ND = Not detected abobve the laboratory RL

B = Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.

J = Result is less than the reporting limit, but greater than the method detection limit. The reported concentration is an estimated value.

P = Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.

<Value = Analyte not detected above the laboratory reporting limit (RL)

ND = Not detected abobve the laboratory RL

B = Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.

J = Result is less than the reporting limit, but greater than the method detection limit. The reported concentration is an estimated value.

P = Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.

Table 7 - Summary of Hexavalent Chromium Analytical Results

Notes:
1) All concentrations reported in milligrams per kilogram (mg/kg)
2) Hexavalent Chromium analysis completed by EPA Method 7199
Bold value indicates a detection
<Value = Analyte not detected above the laboratory reporting limit (RL)

	Soil in the area of this boring removed as part of Site development and value no longer representative of Site conditions
	Concentration reported above the Residential SL for Direct Exposure Human Health Risk Levels, Cancer Risk = 0.3 mg/kg
	Concentration reported above the Commercial / Industrial SL for Direct Exposure Human Health Risk Levels, Cancer Risk = 6.2 mg/kg

Calculations

Exposure Scenario #1 – Sitewide
Exposure Scenario #2 – Main School Campus
Exposure Scenario #3 – Track and Field
95% Upper Confidence Level for Hexavalent Chromium

Exposure Scenario #1 - Sitewide

52	Gamma ROS Statistics using Imputed Non-Detects											
53	GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs											

54	GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)										
55	For such situations, GROS method may yield incorrect values of UCLs and BTVs										
56	This is especially true when the sample size is small.										
57	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Laboratory Analytical Reports and Chain of Custody Forms

McCampbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 2404942

Report Created for: ACC Environmental Consultants, Inc.

7977 Capwell Drive , Suite 100
Oakland, CA 94621

Project Contact: Kim Bunting
Project P.O.:
Project: 3007-171.01; Wood M.S Soils

Project Location: 420 Grand St Alameda
Project Received: 04/12/2024

Analytical Report reviewed & approved for release on 04/24/2024 by:

Jennifer Lagerbom
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2404942

Project: 3007-171.01; Wood M.S Soils

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range
SPK Val	Spike Value

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2404942

Project: 3007-171.01; Wood M.S Soils

SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

B	Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
N	Collection date and/or time not provided
P	Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.
a2	Sample diluted due to cluttered chromatogram.
a9	Reporting limit near, but not identical to, our standard reporting limit due to variable Encore, Terracore, or Solid sample weight.
e2	Diesel range compounds are detected; no recognizable pattern
e6	One to a few isolated peaks present in the TPH(d/mo) chromatogram
e7	Oil range compounds are detected.
h2	Silica-gel (EPA 3630) cleanup
h5	GPC (EPA 3640) cleanup
h7	Copper (EPA 3660B) cleanup
h8	Charcoal clean up (MAI)
h9	Size Exclusion Gravity Cleanup

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F5	LCS/LCSD recovery is outside of acceptance limits; however, the data is acceptable based upon the TNI allowable marginal exceedances.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Cont./Comp. = Containers /Composites

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2404942 A

Project: 3007-171.01; Wood M.S Soils

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range
SPK Val	Spike Value

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

* The Reporting Limit represents the lowest amount of analyte that the laboratory can confidently detect in the sample, and is not a regulatory level. The Units for the Reporting Limit are the same as the Units for the Final Results.

Kevin Poon

Kevin Poon, Laboratory Supervisor, Hayward Laboratory

Analytical results and reports are generated by SGS at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by SGS to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by SGS. The client is solely responsible for the use and interpretation of test results and reports requested from SGS. SGS is not able to assess the degree of hazard resulting from materials analyzed. SGS reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. Any modifications that have been made to referenced test methods are documented in SGS Standard Operating Procedures Manual. Sample results have not been blank corrected. Quality control and sample receipt condition were acceptable unless otherwise noted.
Note* Sampling data used in this report was provided by the client as noted on the associated chain of custody form.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2408191 A

Project: 3007-171.02; Wood MS

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range
SPK Val	Spike Value

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2408191 A

Project: 3007-171.02; Wood MS

SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

NOTES: *** STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).**

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Cont. / Comp. = Containers /Composites

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

-Added 9-13-24-

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

"When Quality Counts"

Analytical Report

WorkOrder: 2410K34

Report Created for: ACC Environmental Consultants, Inc.

7977 Capwell Drive , Suite 100
Oakland, CA 94621

Project Contact: Kimberly Bunting
Project P.O.:
Project: 3007-171-.02; Wood Middle School

Project Location: 420 grand st Alameda
Project Received: 10/25/2024

Analytical Report reviewed & approved for release on 11/01/2024 by:

Christine Askari
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

McCampbell Analytical, Inc.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2410K34

Project: 3007-171-.02; Wood Middle School

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2410K34

Project: 3007-171-.02; Wood Middle School

SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

S08-2.0		10:57	1			X
S010-0.0		11:21	1			X
S010-2.0		11:28	1			X

Analysis Requested columns: EPA 1633 - PFAS Perfluorinated Alkyl Substances; EPA 6020 - CAM 17 Metals; EPA 6020 - Metals (ICP-MS)*; EPA 6010 - Metals (ICP-OES)*; EPA 7199- Hexavalent Chromium; EPA 8015/8021 TPH Multi Range Gas, Diesel, and Motor Oil; EPA 8015 - TPH as Diesel + Motor Oil *Without Silica Gel; EPA 8015 - TPH as Diesel + Motor Oil *With Silica Gel; EPA 8081B / EPA 8082A Pesticides + PCBs; EPA 8151- Herbicides; EPA 8260D - VOCs; EPA 8270E - SVOCs; Metals STLC extract & hold; Metals TCLP extract & hold; PCBs

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

*MAI will default to E6020 for metals analysis except for Boron by E6010.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Comments / Instructions

Relinquished By / Company Name	Date	Time	Received By / Company Name	Date	Time
Davis Leach / ACC	10/24/24	1:30	MAI	10/25/24	1050

"When Quality Counts"

Analytical Report

WorkOrder:	2503158
Report Created for:	ACC Environmental Consultants, Inc. 7977 Capwell Drive , Suite 100 Oakland, CA 94621
Project Contact:	Kimberly Bunting
Project P.O.:	
Project:	3007-171-04; AUSD Wood M.S Soil Sampling
Project Location:	420 Grand St. Alameda
Project Received:	03/04/2025

Analytical Report reviewed & approved for release on 03/11/2025 by:

Jena Alfaro
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current regulatory standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2503158

Project: 3007-171-04; AUSD Wood M.S Soil Sampling

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2503158

Project: 3007-171-04; AUSD Wood M.S Soil Sampling

SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

*MAI will default to E6020 for metals analysis except for Boron by E6010.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Custody seals intact on shipping container/cooler?	Yes	☐	No	☐	NA	☑
Custody seals intact on sample bottles?	Yes	☐	No	☐	NA	☑
Shipping container/cooler in good condition?	Yes	☑	No	☐		
Samples in proper containers/bottles?	Yes	☑	No	☐		
Sample containers intact?	Yes	☑	No	☐		
Sufficient sample volume for indicated test?	Yes	☑	No	☐		

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes	☑	No	☐	NA	☐		
Samples Received on Ice?	Yes	☑	No	☐				
(Ice Type: WET ICE)								
Sample/Temp Blank temperature			Temp: 4.3°C		NA	☐		
ZHS conditional analyses: VOA meets zero headspace requirement (VOCs, TPHg/BTEX, RSK)?	Yes	☐	No	☐	NA	☑		
Sample labels checked for correct preservation?	Yes	☑	No	☐				
pH acceptable upon receipt (Metal: <2)?	Yes	☐	No	☑	NA	☐	pH Lot#:	HC446507
							Lot Expiration:	1/31/2028
UCMR Samples:								
pH tested and acceptable upon receipt (200.7: ≤2; 533: 6 - 8; 537.1: 6 - 8)?	Yes	☐	No	☐	NA	☑		
Free Chlorine tested and acceptable upon receipt (<0.1mg/L) [not applicable to 200.7]?	Yes	☐	No	☐	NA	☑		

Comments: Method METALSMS_TTLC_W for sample 2503158-012A needs additional preservative in Lab to achieve a pH less than 2; sample will be held for a minimum of 16 additional hours.

"When Quality Counts"

Analytical Report

WorkOrder: 2503131

Report Created for: ACC Environmental Consultants, Inc.

7977 Capwell Drive , Suite 100
Oakland, CA 94621

Project Contact: Kimberly Bunting
Project P.O.:
Project: 3007-171.04; AUSD Wood M.S Soil Sampling

Project Location: 420 Grand St. Alameda
Project Received: 03/04/2025

Analytical Report reviewed & approved for release on 03/13/2025 by:

Jena Alfaro
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current regulatory standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2503131

Project: 3007-171.04; AUSD Wood M.S Soil Sampling

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Glossary of Terms & Qualifier Definitions

Client: ACC Environmental Consultants, Inc. **WorkOrder:** 2503131

Project: 3007-171.04; AUSD Wood M.S Soil Sampling

SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

B	Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.
S	Surrogate recovery outside accepted recovery limits.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.
a9	Reporting limit near, but not identical to, our standard reporting limit due to variable Encore, Terracore, or Solid sample weight.
c1	Surrogate recovery outside of the control limits due to the dilution of the sample.
c2	Surrogate recovery outside of the control limits due to suspected matrix interference.
c16	The internal standard recovery is below the lower limit. The target analyte(s) were Not Detected (ND); therefore, the data is reportable.
e2	Diesel range compounds are detected; no recognizable pattern
e7	Oil range compounds are detected.
h2	Silica-gel (EPA 3630) cleanup
h5	GPC (EPA 3640) cleanup
h8	Charcoal clean up (MAI)
h9	Size Exclusion Gravity Cleanup
k10	CARB 435 Exception 1 - No asbestos detected. The limit of quantitation (LOQ) = 0.25%.

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD is out of acceptance criteria.
F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F5	LCS/LCSD recovery is outside of acceptance limits; however, the data is acceptable based upon the TNI allowable marginal exceedances.

Case Narrative

Client: ACC Environmental Consultants, Inc.
Project: 3007-171.04; AUSD Wood M.S Soil Sampling

Work Order: 2503131
March 11, 2025

Percent Moisture

In accordance with SW-846, 8000, percent moisture is reported as:

[Moisture Weight (g)] / [Sample Wet Weight (g)] x 100

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Analysis Requested

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

*MAI will default to E6020 for metals analysis except for Boron by E6010.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Comments / Instructions

Chain of Custody (COC) Information

Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Sample IDs noted by Client on COC?	Yes ☑	No ☐	
Date and Time of collection noted by Client on COC?	Yes ☑	No ☐	
Sampler's name noted on COC?	Yes ☑	No ☐	
COC agrees with Quote?	Yes ☐	No ☐	NA ☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes ☐	No ☐	NA ☑
Custody seals intact on sample bottles?	Yes ☐	No ☐	NA ☑
Shipping container/cooler in good condition?	Yes ☑	No ☐	
Samples in proper containers/bottles?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes ☑	No ☐	NA ☐
Samples Received on Ice?	Yes ☑	No ☐	
(Ice Type: WET ICE)			
Sample/Temp Blank temperature	Temp: 4.3°C		NA ☐
ZHS conditional analyses: VOA meets zero headspace requirement (VOCs, TPHg/BTEX, RSK)?	Yes ☐	No ☐	NA ☑
Sample labels checked for correct preservation?	Yes ☑	No ☐	
pH acceptable upon receipt (Metal: <2)?	Yes ☐	No ☐	NA ☑

UCMR Samples:

pH tested and acceptable upon receipt (200.7: ≤2; 533: 6 - 8; 537.1: 6 - 8)?	Yes ☐	No ☐	NA ☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L) [not applicable to 200.7]?	Yes ☐	No ☐	NA ☑

Comments: Sample 2503131-013A with method SW8260D (VOCs) was received unpreserved. Sample 2503131-013A with method SW8260D (TPH-gas) was received unpreserved.

Notes and Definitions

QM-07	The spike recovery and/or RPD was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
