|    | <b>Language</b>            | <ul style="list-style-type: none"> <li>Learn another language, through classes, online tutorials, immersion opportunities or apps like <a href="#">duolingo</a>.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|    | <b>Social Interactions</b> | <ul style="list-style-type: none"> <li>Play an outdoor game or board game with your friends or family weekly.</li> <li>Reflect on this activity. What was your favorite aspect of this activity? What did you learn about others?</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|   | <b>Math &amp; Nature</b>   | <p><b>Math - Nature Math</b></p> <p>Head outside this summer and explore your local park, the woods, or even your own backyard to find natural math activities! Find tree stumps and count the rings and compare tree ages.</p> <p>Measure the diameter and circumference of tree stumps to observe the approximate size of stumps compared with the age of the tree. Or if you can't find any stumps, measure diameter and circumference of trees, and estimate their height. As an added bonus, not only will your child practice fascinating math in nature, but will be <a href="#">studying natural science</a> as well! Click on the above link for more fun nature math activities!</p> |
|  | <b>Art</b>                 | <p><b>Art - Study Famous Artists</b></p> <p>Many famous artists, like Andy Warhol or Pablo Picasso, had signature styles that even your child can try to emulate! This summer study a favorite famous artist. View paintings and observe the style to replicate! For instance, Andy Warhol created pop art of ordinary products or everyday celebrities, often in different neon colors. Replicate the style by viewing paintings and creating a project using similar colors or products! Check out our collection of bright and fascinating <a href="#">art worksheets</a> to experiment with colors and characters.</p>                                                                     |
