

BASIC SCHOOL REPAIRS TO SUPPORT STUDENT AND TEACHER SUCCESS

Mt. Diablo Unified School District (MDUSD) is committed to preparing every student for success in the modern economy, whether they choose to pursue a four-year college degree, attend a vocational school, or enter the workforce directly. MDUSD schools prepare students for college and careers by offering dual enrollment with community colleges, partnering with local businesses to offer internships and ensure lessons are relevant to the real world, offering the only International Baccalaureate in the county, an award-winning robotics program, and more. These opportunities ensure that all graduates have the technical knowledge and specialized skills needed for future success. To maintain this standard, our schools require modern, reliable facilities that serve as a strong foundation for student readiness.

Aging Schools Require Urgent Repairs and Upgrades

Many MDUSD schools were built decades ago and now require urgent repairs and significant updates. Currently, students learn in outdated classrooms that don't support modern instructional methods. Air conditioning, heating, and electrical systems frequently break down, and some school facilities contain asbestos and other hazardous materials. These aging conditions can create distractions and concerns that interfere with the learning process and preparing for students' future. By addressing these critical infrastructure needs now, the District can allow students to focus on their education and help to attract and retain high-quality teachers.

Outdated electrical panels, like this one at Mt. Diablo High School, are well beyond their useful life

A Potential Local Solution for School Repairs & Upgrades

To ensure MDUSD students can learn in safe, up-to-date environments, the District is considering placing a bond measure on the November 3, 2026 ballot. The measure would provide **\$529 million** in locally controlled funding and cost **\$38 per \$100,000** of assessed value (not market value) to provide dedicated funding to address high-priority projects, including:

Removing hazardous materials like asbestos from older school sites

Ensuring clean, safe drinking water at every school site

Updating math, science, and engineering labs and technology

Improving safety and security systems

Providing up-to-date career technical education to ensure students are prepared for college and careers

Upgrading outdated and inefficient heating, cooling, and ventilation systems

Fiscal Accountability and Local Control

To ensure transparency, the potential measure would be subject to the following accountability measures:

All funds would be controlled locally and could not be taken away by the State

By law, money could not be used for administrators' salaries or benefits

An independent citizens' oversight committee and mandatory annual audits would ensure all funds are spent as promised

A detailed project list outlining the specific use of funds would be required
