Boston, MA 02109

RE: Essex Elementary School Project
Preliminary Design Program Submission

Dear Veatriki,

Please accept the Module 3 Preliminary Design Program submission for the Manchester Essex Regional School District's Essex Elementary School Project. As the OPM, we have reviewed the package to ensure it meets the requirements established by the MSBA. We look forward to your feedback and to working with you as we move toward the final evaluation of the proposed alternatives in the Preferred Schematic Report.

Sincerely,

Christina Dell Angelo MCPPO
DORE + WHITTIER

3.1.1 – INTRODUCTION

The purpose of the Preliminary Design Program (PDP) is to define the programmatic, functional, spatial, and environmental requirements of the educational facility necessary to meet a District's educational program. The PDP also requires the design team perform a review and investigation to clearly define the existing building deficiencies. During this phase, the design team also reviews the District's educational program to identify the programmatic space needs for the school project. Understanding the space needs, along with the evaluation of existing conditions and consideration of the site development requirements, allows the design team to form a series of alternatives upon which the most educationally appropriate and cost-effective solutions will be considered by the Building Committee and moved forward into the Preferred Schematic Report (PSR) phase for further consideration.

To begin this process, the Manchester Essex Regional School District, MERSD, (District) submitted their Statement of Interest (SOI) for Essex Elementary School on or about April 13, 2023. At their, December 13, 2023, meeting the Board of Directors (Board) of the Massachusetts School Building Authority (MSBA) voted to invite the MERSD into the MSBA's Eligibility Period. On March 4, 2024, the Board of Directors of the Authority voted to invite the District to commence the Eligibility Period thereby, initiating a 270-day period for the District to complete preliminary requirements including, but not limited to, the formation of a School Building Committee and the certification of a design enrollment agreed upon with the MSBA. At their December 13, 2024, meeting, the Board voted to invite the District to partner with the MSBA to conduct a Feasibility Study for Essex Elementary School. The necessity for the project was first identified in the SOI, summarized below, and detailed within in section 3.1.4 – Evaluation of Existing Conditions of this Preliminary Design Program (PDP) report.

These deficiencies have been identified as direct problems that the District seeks to correct in order to provide the best possible educational experience for all their students.

FACILITY DEFICIENCIES

The Essex Elementary School, located at 12 Story Street Essex, Massachusetts, was originally constructed circa 1958. A southern addition consisting of a media center and gymnasium with locker rooms was added in 1975. The total facility as it stands today is approximately 53,036 gross square feet and is located on the site of approximately 9.75 acres. The school is a single-story courtyard building with a half-level change accessible via ramps between the 1958 and 1975 portions of the school. There is a portion of the basement that is occupied for school activities that has level access discharge due to site topography.

Essex Elementary School is the only elementary school in Essex, MA and one of two elementary schools in the Manchester Essex Regional School District. The school's current enrollment is +/-200

students from grades Kindergarten through 5th grade with an average class size of 17 students. During the fall of 2025, representatives from the architect, civil engineer, landscape architect, structural engineer, mechanical engineer, electrical engineer, plumbing engineer, audio/visual, theatre, foodservice, technology, hazardous materials and geoenvironmental consultants toured the site and building to complete a visual assessment of the site, building structure, envelope, and systems; there was no destructive testing conducted as part of this assessment.

The building is mostly a single story rectangular shaped footprint with a central courtyard. The site is mostly flat except for the east side of the building which steps down to reveal an at grade occupied portion of the basement. There is a central main entrance at the northern side of the building facing Story Street, to the east is the main office and admin space and to the west is the cafetorium and kitchen. Corridors on both the east and west side of the building wrap around the courtyard and house the two academic wings of the building. At the southern end of the building the corridors ramp down to the 1975 addition that houses both the media center and gymnasium.

The lower-level houses classrooms that once functioned as the art room but in recent years have been converted to project rooms and OT / PT spaces. There is also storage as well as the building's server room located in the basement. The northeast corner of the basement houses the electrical rooms as well as building maintenance storage. Beyond the electrical rooms is a subbasement that houses the buildings boiler room. There is no accessible access to the boiler room. The rest of the basement is mostly unoccupied space that houses mechanical equipment as well as pipe chase for sanitary and HVAC piping.

Most of the egress doors have stairs or ramps and do not satisfy accessibility. Where exterior ramps are provided, they are mostly wood and are nearing the end of their useful life

While many accommodations were made over the years, many aspects of the existing building are not accessible or code compliant. Toilet rooms have been moderately adapted for accessibility; however, this effort is not comprehensive due to building limitations. Many of the smaller in-room toilets do not meet modern accessibility requirements and do not have the space to accommodate such alterations.

The existing building envelope exhibits signs of distress with cracked masonry and deteriorating soffits and overhangs. The 1958 portion of the building has original windows that are well past their useful life and should be replaced with modern energy-efficient windows systems. Repeated issues with the exterior walls in the 1975 additions, most notable the southern gym wall, have resulted in water infiltration and years of constant repairs to interior paint and other finishes. Multiple past repairs have been unsuccessful in addressing these wall issues.

The existing interior finishes are mostly original. Although the District custodians have maintained the facility well, the finishes show signs of their age and in most locations are at the end of their useful life. Suspected Asbestos Containing Materials and Lead Base Paint have been identified within the building complex. These conditions are documented within this Hazardous Materials Consultant's report. This report is included within the Appendix.

The existing HVAC system has been well maintained over the years, though a majority of the building HVAC indoor air handling unit, terminal equipment and ductwork distribution systems are originally installed equipment that's approaching their life expectancy.

Most of the electrical distribution systems are original to the building and although functioning, have far outlived their intended useful life. Upgrades such as an emergency generator and fire alarm system have been completed and are in fair condition. The power distribution system has had some upgrades, but the majority is original and in poor condition. The interior lighting fixtures have been upgraded since the renovation in 1975 and at present are mostly LED sourced linear utility type strip lighting that are high glare and not ideal for classroom or office installations. All exterior lighting are new LED type fixtures, however products installed vary from door to door and are low quality, high glare fixtures for which the existing wiring was also reused.

The plumbing systems are mostly original to the building and approaching 70 years of use rendering the systems obsolete and beyond their useful life. The building is not protected by a fully automatic sprinkler system. The existing kitchen hood is not equipped with an integral fire suppression system.

Refer to section 3.1.4 – Evaluation of Existing Conditions for a full report on the facility's existing conditions and recommended actions.

MSBA INVITATION TO FEASIBILITY STUDY

The MSBA Board of Directors invited the District to conduct a Feasibility Study on December 13, 2024. A copy of the MSBA Board Action letter is included in Appendix 3.1.8.2 of this report.

DESIGN ENROLLMENT

As a result of a collaborative analysis with the MSBA of enrollment projections and space capacity needs for the proposed project, the Feasibility Study will investigate and evaluate potential alternatives which include a design enrollment of 165 students for Grades K through 3 plus 30 student PreK, a design enrollment of 250 students for Grades K through 5 plus 30 student PreK and a design enrollment of 515 students for Grades K through 5 plus 60 student PreK. A copy of the Design Enrollment Certification letter is included in Appendix 3.1.8.3 of this report.

CAPITAL BUDGET STATEMENT

The Manchester Essex Regional School District Capital Budget Statement is included in Appendix 3.1.8.4 of this report.

The preliminary design program comparative total project cost estimates range from $45 million to $95 million. The Manchester Essex Regional School District has three student enrollment options

being studied on two potential sites. This resulted in a total of 7 potential design options being submitted in the MSBA's preliminary design program. The PDP comparative cost estimates are listed below with additional estimating details provided by PM&C and AM Fogarty included within this PDP submission.

OPTION	SCOPE	CONSTRUCTION COST	TOTAL PROJECT COST
A0.1	CODE UPGRADE / BASE REPAIR	$37m	$45m-50m
A0.2	CODE UPGRADE / BASE REPAIR	$37m	$45m-50m
A1.1	ADD/RENO	$63m	$75m-80m
A1.2	ADD/RENO	$73m	$90m-95m
A2.1	NEW CONSTRUCTION	$68m	$80m-85m
A2.2	NEW CONSTRUCTION	$76m	$90m-95m
B1.1	ADD/RENO	$55m	$70m-80m

The current base reimbursement rate from MSBA for the Essex Elementary School project is 31% (of eligible project costs). Depending on the preferred solution ultimately selected, it is estimated that additional incentive points will be received. The following are the incentive points being considered: High Efficiency Green School Program, Best Practices for Routine and Capital Maintenance, and Renovation/Re-use of Existing Facilities. The full value of any ineligible costs are shared regionally between Manchester-by-the-Sea and Essex using a combined Equalized Valuation (EQV) and population-based assessment methodology established by the Regional Agreement.

Although a budget has not been formally approved, the School Building Committee has reviewed and approved the PDP comparative cost estimates for a total project budget in the range of $45 million to $95 million based on the different student enrollments and design options that meet the educational program. The School Building Committee understands that the values contained within this Preliminary Design Program Submission are subject to adjustment as a preferred option is selected and the design progresses.

TARGET BUDGET

At this time, the target budget is considered as a target range due to the fact that the District has not selected the preferred option or enrollment, refined the gross square footage of the program/design, and finalized the project location or limits of the project on the campus. However, based on the comparable-probable cost analysis, the total project budgets for all options including Code Upgrade/Base Repair, Addition/Renovation and New Construction range are between $45 million to $95 million depending on the final preferred option, total gross square footage of the program, student enrollment, and extents of the site and site improvements. Please note that these values are subject to change as the project moves forward into the Preferred Schematic Report phase. The Comparative Probable Cost Analysis is included in Appendix 3.1.8.11 of this report.

PROJECT DIRECTORY

A project directory with contact information for representatives of all District stakeholders, School Building Committee (SBC), Designer, and OPM is included in Appendix 3.1.8.5 of this report.

PROJECT SCHEDULE

An updated project schedule is included in the Appendix 3.1.8.6 of this report. In summary, the critical milestone dates currently proposed are as follows:

- SBC vote to submit Preliminary Design Program: January 6, 2026
- Project Team submits Preliminary Design Program to the MSBA: January 15, 2026
- SBC vote to submit Preferred Schematic Report (PSR): April 28, 2026
- Project Team submits Preferred Schematic Report to the MSBA: April 29,2026
- MSBA Facilities Assessment Subcommittee Presentation: May 13, 2026, or May 20, 2026
- MSBA Board meeting to authorize Schematic Design: June 24, 2026
- SBC vote to submit to the Schematic Design submittal to the MSBA: August 25, 2026
- Project Team submits the DESE submittal to the MSBA: August 27, 2026
- Project Team submits the Schematic Design submittal to the MSBA: August 27, 2026
- MSBA Board meeting to approve Project Scope and Budget Agreement: October 28, 2026
- Manchester -by-the Sea - Town Meeting October / November 2026
- Essex - Town Meeting October / November 2026
- Projected Town vote for PS&BA and full funding of the project: November / December 2026

Appendix Documents Cited

The following appendices are referenced within the Essex Elementary School Educational Program and provide supporting documentation for the educational vision, programmatic assumptions, policy framework, and operational considerations described herein. Appendices are lettered and ordered to align with their first appearance in the narrative.

Appendix A: ***Educational Visioning Final Report***
Documents the district's educational visioning process and guiding principles informing instructional practice and facility design.

Appendix B: ***MERSD Regional Agreement***
Establishes governance, grade configuration requirements, and statutory obligations of the Manchester Essex Regional School District.

Appendix C: ***MERSD Elementary Task Force Recommendations***
Summarizes prior district analysis and community findings related to elementary configuration and neighborhood school models.

Appendix D: ***Configuration Scenario Operational Impact***
Identifies operational considerations associated with alternative grade-span and site configuration options as part of the MSBA Feasibility Study.

Appendix E: ***Strategic Plan Overview & District Improvement Plan***
Outlines district priorities, core values, and improvement objectives guiding instructional and organizational planning.

Appendix F: ***Grade-Level Curriculum Guides***
Provides grade-level curriculum frameworks supporting the instructional program described in this Educational Program.

Appendix G: ***Special Education Program Review***
Presents findings related to special education service delivery, inclusion practices, and alignment with district support structures.

Acknowledgements

Educational Visioning Team

The District completed one site visit, two large group, and two small group visioning sessions with Consultant Michael Pirollo. The Educational Visioning Team included the following members of the school district, parents, community members, and local board members:

- Pamela Beaudoin, Superintendent
- Gordon Brewster, Essex School Building Committee
- Taylor Clary, Essex Elementary Grade 4 Teacher
- Allison Collins, Director of Student Services
- Michelle Cresta, Director of Operations & Finance
- Christina Dell Angelo, OPM, Dore & Whittier
- Danielle Demetri, Essex Elementary Grade 4 Teacher
- Emily Dwyer, Essex Elementary Grade 1 Teacher
- Jeff Elliott, Architect, JCJ
- Kim Field, Essex Elementary Grade 4 Teacher
- Jake Foster, School Committee / Parent
- Nicole Grasso-Correnti, Essex Elementary School Nurse
- Heather Leonard, Director of Curriculum & Instructional Technology
- Gillian Mackay-Smith, Essex Parent
- Fawn Pelligrino, Project Manager, JCK
- Patty Roundy, Essex Elementary School Paraprofessional
- Rachelle Russo, Essex Elementary Kindergarten Teacher
- Maggie Safrine, Essex Elementary Administrative Assistant

Educational Program Development Team

This Educational Program was developed collaboratively by the following individuals through an iterative process of review, community feedback, and cross-district collaboration to ensure alignment with MERSD's mission, educational vision, and long-term strategic priorities.

Primary Authors

- Pamela Beaudoin, Superintendent of Schools
- Heather Leonard, Director of Curriculum & Instructional Technology
- Allison Collins, Director of Student Services
- Kim Provost, Essex Elementary School Principal
- Michelle Cresta, Director of Finance and Operations

- Michael Pirollo Educational Planner, MLP Integrated Design

Introduction

The educational program at MERSD is guided by a shared philosophy that places students at the center of all decision-making and instructional design. Our approach reflects a deep belief in cultivating curiosity, integrity, and intellectual engagement while nurturing the social-emotional well-being essential to learning. We value inclusivity, collaboration, and equity—ensuring every student is seen, supported, and challenged to reach their fullest potential.

Our classrooms are communities of active learners where authentic experiences connect knowledge, skills, and character. Instruction emphasizes inquiry, creativity, and problem-solving, encouraging students to think critically and act responsibly as empathetic global citizens. Through strong partnerships among educators, families, and the broader community, we strive to create learning environments that honor the uniqueness of each child while preparing them to thrive in a complex and interconnected world.

MERSD proudly works to educate each child from his/her own readiness level in order to facilitate the intellectual, social and emotional growth process. There are many measures of success, and we are committed to helping each individual child achieve his/her potential. In addition to a robust core curriculum that balances high expectations for student achievement with the needs of the whole child, we offer specialty programming and a variety of learning opportunities, such as: elementary world language; Integrated Pre-Kindergarten; specialized learning programs for students with dyslexia, autism spectrum disorders, and developmental delays; STEM coursework in coding, engineering, project based environmental studies, FIRST Robotics, Project Adventure; award winning arts and music programs; and, state champion athletic teams.

In collaboration with Mike Pirollo from My Learning Place Integrated Design, Inc., MERSD engaged in a two-day Educational Visioning workshop. Through this process, teachers, community members, and administrators gathered to learn how the organization of physical space within a school can support our educational goals both now and in the future. Through a series of collaborative exercises, we uncovered common themes that will serve as guiding principles for our design team, JCJ Architecture.

> **Student-Centered & Active Learning:** Spaces that empower students as active learners—engaged in inquiry, creation, problem solving, and authentic experiences.
>
> **Flexible Learning Neighborhoods:** Adaptable, multi-use environments that support varied groupings, collaboration, movement, and differentiated instruction.
>
> **Well-Being & Environmental Connection:** Learning environments that support emotional regulation and belonging while providing purposeful access to outdoor spaces that enrich wellness, play, and environmental learning**.**

Community Hub & Shared Identity: A school that reflects Essex's character and serves as a gathering place for students, families, and the broader community—supporting learning and connection throughout the day.

These design principles support our district's core values and commitment to active, student-centered learning—promoting collaboration and creativity, and empowering students to be the doers and leaders of their own learning. They reflect our goal of creating a learning environment that captures the energy of children, supports multiple modes of engagement, and provides flexible pathways for students and teachers to work together. It is our hope that the design process will yield an educational facility that is timeless in style but flexible and adaptable to the ever-evolving curriculum and instructional program, while continuing to serve as a hub of the community with spaces for small, large, and whole-school gatherings. (*Appendix A: Educational Visioning Final Report*)

Grade and School Configuration

The Manchester Essex Regional School District (MERSD) provides a high-quality public education for students from the towns of Manchester-by-the-Sea and Essex, serving approximately 1,190 students in grades Pre-Kindergarten through Grade 12 during the 2024–2025 school year. The district is organized as a two-town regional system with two elementary schools—Essex Elementary School and Manchester Memorial Elementary School, that feed into a shared Middle and High School campus. This configuration allows MERSD to maintain strong community connections at the elementary level while providing a cohesive, unified educational experience for all students as they progress through the district.
Regional Agreement Requirements for Grade Configuration

The District operates under a Regional Agreement between the towns of Manchester-by-the-Sea and Essex, which establishes several requirements that directly influence grade-level configuration and facility planning. The Agreement mandates that the District shall provide a comprehensive Kindergarten through Grade 12 education program and maintain at least one elementary school facility in each member town. It further guarantees that all pupils in elementary grades—defined as at minimum Kindergarten through Grade 4—must be provided the opportunity to attend school in the town in which they reside. While the Regional School Committee holds authority to designate grade spans beyond this minimum, any change that alters longstanding grade assignments or materially affects the programmatic use of facilities requires formal Committee action and, in many cases, amendment of the Regional Agreement. Amendments require majority approval in both member towns through Town Meeting, ensuring transparency and broad community consent. Collectively, these provisions affirm MERSD's historical neighborhood school model and provide a framework for considering future adjustments based on educational need, enrollment patterns, and facility capacity. (Appendix B: *MERSD Regional Agreement)*

Current Elementary Configuration

Essex Elementary School (EES) serves students from the town of Essex in Grades Kindergarten through Grade 5. During the 2024–2025 school year, EES enrolled approximately 215 students across these grade levels. Students in Essex who require integrated preschool programming are served through districtwide early childhood programs located at Manchester Memorial Elementary School.

The Educational Program described in this document is based on a PreK–5 configuration at Essex Elementary School, which aligns with current grade span organization and instructional practices. Where applicable, the plan identifies considerations that would differ under alternate configuration scenarios.

EES operates under a single-classroom teacher model, in which one teacher provides core instruction across all subjects, supported by a collaborative team of specialists in reading, mathematics, special education, and social-emotional learning. Instructional design is grounded in a student-centered, inclusive approach, ensuring that all children learn in environments that promote academic rigor, creativity, and belonging.

Inclusion is a cornerstone of the MERSD philosophy. Students with disabilities are educated in the least restrictive environment, receiving push-in supports within general education classrooms whenever possible and pull-out instruction when individualized services are required. This model reflects the district's belief in the power of collaborative, flexible teaching structures that enable differentiation and maximize access to the full curriculum for every learner.

Historical Context and Task Force Findings

The district's current planning process builds on extensive prior study and community engagement. In response to the aging condition of both Essex and Memorial Elementary Schools, MERSD conducted a Facilities Needs Assessment (Habeeb & Associates, 2013) and subsequently formed the Elementary Configuration Task Force in Fall 2013. The Task Force—comprised of residents, parents, educators, and town officials—was charged with exploring whether the district should maintain its neighborhood school model or transition to a unified elementary configuration.

The group reviewed architectural analyses, demographic data, operational costs, and stakeholder feedback through surveys, interviews, and community forums across both towns. Three primary options were studied:

- **Option A:** Renovate and/or expand each school while maintaining neighborhood K–5 schools.
- **Option B:** Create an early education center (PreK–2) at one site and a Grades 3–5 school at the other.
- **Option C:** Construct a single, unified elementary school for all district students on a new site.

After months of analysis and outreach, the Task Force concluded that the neighborhood school model best meets the educational and community needs of Manchester and Essex. Key themes emphasized by stakeholders included:

- Neighborhood K–5 schools serve as community anchors, promoting civic engagement and walkability.
- Smaller schools allow for stronger relationships between staff, students, and families, supporting academic and social-emotional growth.
- Families expressed a strong preference for local access to elementary education within their town of residence.
- While operational efficiencies were discussed, research and peer-district comparisons revealed no significant cost savings associated with consolidation.

These findings, presented to the School Committee in 2014, continue to guide district planning for facility improvement and educational continuity. The conclusions of the Elementary Configuration Task Force remain foundational to MERSD's current Feasibility Study, affirming the educational and community value of maintaining two neighborhood-based elementary schools. (*Appendix C: Elementary Task Force Recommendations*)

Configuration Constraints Defined by the Regional Agreement

The Regional Agreement establishes specific requirements that must be upheld in any future facility or grade-span scenario:

- **Local Access to Elementary Education (Minimum K–4)**
  Students in elementary grades—at minimum Grades K–4—must be guaranteed the opportunity to attend school in the town in which they reside.
- **Requirement to Maintain Elementary Schools in Both Towns**
  The District must operate and maintain at least one elementary school facility in each member community.
- **Assignment Flexibility for Specialized Programming**
  Students with special needs may be served outside their home school as required to meet individualized services.
- **Location of Shared Facilities**
  Any schools serving students from both towns must be located within the geographical limits of the District.
- **Amendment Process for Changes to Grade Configuration**
  Material changes require a Regional Agreement amendment, approved by majority vote at Town Meeting in both Manchester and Essex.

These constraints ensure that grade-span planning remains aligned with statutory requirements, governance structures, and community expectations.

Feasibility Study and Configuration Options

As part of the ongoing MSBA Feasibility Study, MERSD is revisiting potential grade-level configurations and site options to ensure that long-term solutions align with both educational goals and fiscal responsibility (*Appendix D: Configuration Scenario Operational Impact*). The current options under consideration build upon the foundation established by the 2013–2014 Task Force:

Feasibility Study Essex Elementary Student Enrollment Configurations to be Studied		
Grades PreK–3 165 Students *Sited in Essex w/ Grades 4 & 5 integrated into Memorial*	Grades PreK–5 250 Students *Sited in Essex*	Grades PreK–5 515 students *Sited at Manchester Memorial with all Essex & Manchester students in one school*
SC Program Vote / Redistricting		SC Program Vote / Redistricting
SC Vote to Amend Regional Agreement		SC Vote to Amend Regional Agreement
Essex & Manchester Town Meeting Vote to Approve Regional Agreement Amendment		Essex & Manchester Town Meeting Vote to Approve Regional Agreement Amendment
Essex & Manchester Town Meeting Full Project Vote & Debt Exclusion Vote		

1. **PreK–3 Configuration (Essex-based)**
    - Approximately 165 students housed in Essex.
    - Grades 4 and 5 transition to Manchester Memorial.
    - Divides Essex elementary students across two sites.
    - Requires School Committee vote, Regional Agreement amendment, and approval in both towns.

Under a PreK–3 configuration, Essex students would transition to Manchester Memorial beginning in Grade 4. To accommodate this shift, Memorial would require four Grade 4 classrooms (currently three) and five Grade 5 classrooms, necessitating the reclamation of three general classrooms presently used by other grade levels, shared instructional spaces, or programs. In this model, the project room may need to be repurposed for world language instruction or special education services. Full implementation would require the utilization of approximately 16–18 general education classrooms at Memorial, reducing scheduling flexibility and limiting the school's ability to absorb future enrollment variability.

Under this scenario, the District would need to split both the ACE and RISE specialized programs between buildings, placing the lower elementary cohorts at Essex and the upper elementary cohorts at Memorial. This division decreases programmatic efficiency, reduces opportunities for staff collaboration, and introduces scheduling and supervision challenges. Co-located staffing, shared therapeutic spaces, and interdisciplinary collaboration are integral to effective delivery of services; splitting programs diminishes these advantages and increases operational complexity.

While core instructional practices would remain consistent, shifting Essex students at Grade 4 introduces additional complexity for school culture, family engagement, and social-emotional development. Memorial's curriculum and community programming are grounded in

partnerships with local agencies and civic organizations, and successful integration would require intentional planning to support belonging and continuity of experience. Typically, peer communities merge in Grade 6 as students transition to middle school. Advancing this convergence to Grade 4 compresses developmental readiness and would necessitate programming to support relationship-building, family onboarding, and shared identity development.

Splitting Essex's elementary cohort across two buildings also introduces operational burdens. Transportation needs increase, daily drop-off and pick-up become more complex for families with multiple children in different grade spans, and scheduling coordination becomes more challenging. While extended-day calendars and specials schedules can be managed equitably, daily logistics represent a meaningful shift in family experience.

2. **PreK–5 Configuration (Essex-based)**
    - Approximately 250 students housed in Essex.
    - Maintains the current neighborhood school model.

This configuration preserves existing instructional structures and maintains neighborhood school identity. Students remain connected to their community for the full elementary span, supporting social-emotional development, family engagement, and continuity of services. Grade-level staffing remains co-located, supporting collaborative planning, interdisciplinary teaming, and effective implementation of specialized programming.

3. **Unified PreK–5 Model (Manchester Memorial Site)**
    - Approximately 515 district elementary students in a single expanded building.
    - Requires multiple Regional Agreement amendments, dual Town Meeting votes, and debt exclusion approval.

Of the alternative proposals, full consolidation at Manchester Memorial aligns most directly with existing program delivery and maintains the current PreK–5 grade structure. This model would provide access to all grade-level teams for collaborative instructional work and support coherence in curriculum implementation. However, associated impacts include increased transportation for Essex families, concentrated traffic on Lincoln Street, and the relocation of tennis courts, which are used regularly for both school and community programming. Neighborhood circulation patterns and site capacity would require further study to ensure safety and accessibility.

Because this option would create a single elementary school serving approximately 515 students, the leadership team would require the addition of an assistant principal to support instructional leadership, staff evaluation, student services coordination, and supervision of daily operations. The scale of the program would also increase the number of classroom teachers and

related service providers at this site, necessitating expanded common planning spaces and collaboration areas.

Should this configuration be pursued, the District would need to develop comprehensive culture-building strategies to support the merger of two school communities. Subsequent District Improvement Plan cycles (particularly 2028–2031) would prioritize belonging, transition support, and community integration. School Improvement Plans would correspondingly emphasize climate, communication, and conditions for learning as students and families adapt to a unified environment. Identifying a leadership team experienced in organizational change will be essential.

A significant design challenge associated with this configuration is the need to maintain the neighborhood or cluster instructional model in a facility originally constructed to serve only one town. Grade-level teams would need to be grouped in multi-classroom "neighborhoods," supported by adjacent small-group rooms, breakout spaces, and shared instructional resources. While this is feasible, it poses complexity within the current footprint. Alternatively, space could be organized into lower-school (PreK–2) and upper-school (3–5) wings if this structure better aligns with an addition or renovation strategy.

District Core Values and Strategic Alignment

All configuration planning aligns with MERSD's core values:

- **Student-Centered Learning** – placing students at the heart of decision making.
- **Student Achievement** – maintaining high expectations and equitable access to rigorous learning.
- **Equity and Inclusion** – fostering belonging and opportunity for all learners.
- **Family and Community Partnerships** – engaging parents and towns as active partners in student success.
- **Responsible Use of Resources** – ensuring fiscal stewardship and long-term sustainability.

These principles ensure that facilities planning reflects both educational priorities and the character of the two-town district. *(Appendix E: Strategic Plan Overview & District Improvement Plan)*

Space Implications: The grade configuration selected will directly shape the design and organization of learning environments at Essex Elementary School. Regardless of the final model, the facility must support flexibility, collaboration, and inclusion across grade levels.

Class Size Policies

The Manchester Essex Regional School District (MERSD) adheres to the philosophy that small class size is essential to supporting student-centered, hands-on, and differentiated instruction. Research and district experience have consistently demonstrated that maintaining small, balanced class sizes enables teachers to build strong relationships with students, tailor instruction to individual learning needs, and promote active engagement in the learning process.

To support this philosophy, the MERSD School Committee has established class size benchmarks that serve as the foundation for scheduling, staffing, and facility planning. These benchmarks ensure equitable access to resources and consistency across grade levels while reflecting the distinct developmental needs of students as they progress from early childhood through the upper elementary years.

MERSD Elementary Class Size Benchmarks

Grade Level	Class Size Benchmark
Kindergarten	17–19
Grade 1	17–19
Grade 2	18–20
Grade 3	18–20
Grade 4	19–22
Grade 5	19–22

These benchmarks are used as the first building block of the scheduling process, guiding annual decisions about staffing, classroom allocation, and cohort organization. MERSD's scheduling and enrollment practices are designed to maintain educational quality and consistency even as small shifts in population occur.

Developmental Design Alignment

The district's class size philosophy directly informs the educational and architectural design of its elementary facilities. Learning environments are organized around three developmental groupings:

- **PreK–K:** Classrooms support exploration, play, and growing independence through flexible open space, zones for small-group activity, and safe, visible connections to outdoor learning areas.
- **Grades 1–3:** Classrooms emphasize active, connected learning environments with flexible groupings that encourage collaboration, literacy development, and foundational academic skills.
- **Grades 4–5:** Spaces are designed to support increased independence, problem-solving, and leadership opportunities through collaborative work zones and cross-grade interaction.

Planning and Flexibility

Essex Elementary School maintains twelve core K–5 academic classrooms within the elementary program, with two sections per grade as a baseline for planning and an occasional need to add a third section due to enrollment bubbles. Grade-level enrollment patterns fluctuate annually due to demographic variation, resulting in cohorts that, at times, may require three sections. These "bubble classes" advance through the grades together, creating potential variability in the number of classrooms needed at each level.

While enrollment can fluctuate from year to year, MERSD's historical patterns demonstrate the importance of maintaining sufficient core classrooms to preserve consistent cohort sizes as students advance through the grades. The design of the new facility must therefore include enough general classrooms to accommodate occasional enrollment bubbles without exceeding local class-size benchmarks or disrupting instructional groupings. Although MSBA space guidelines provide a baseline allowance for classroom count, maintaining one additional core classroom beyond the recommended minimum is necessary to ensure adherence to local class-size expectations, cohort continuity, and equitable access to high-quality instruction.

This additional instructional capacity supports master schedule efficiency, prevents oversized sections in bubble years, and allows specialist and intervention services to be scheduled equitably across grade levels. Moreover, it strengthens the district's ability to implement a Multi-Tiered System of Supports (MTSS) by increasing flexibility for small-group instruction, targeted intervention, and temporary instructional groupings without displacing existing classroom programming.
By aligning the facility design with educational expectations, MERSD will ensure that class-size benchmarks remain attainable and that every student continues to experience a personalized, engaging, and developmentally responsive learning environment throughout their elementary experience.

School Scheduling and Methodology

Essex Elementary School (EES) operates on a five-day schedule designed to provide consistent instructional time, predictable routines, and equitable access to enrichment and student support services. The schedule is structured around clearly defined instructional blocks that preserve uninterrupted time for core academic learning while ensuring students have access to specialists, movement, and social-emotional development opportunities.

Daily and Weekly Structure

The student day runs from 8:25 a.m. to 2:55 p.m. (a total of 6 hours and 30 minutes, or 390 instructional minutes). The schedule ensures balanced time across all subjects while allowing teachers flexibility to adjust pacing and grouping based on student needs.

Each grade level includes six 45-minute specialist blocks per week. Specialist subjects—Wellness/Physical Education, Visual Arts, Music, Library, Technology, and World Language (not currently running)—are strategically placed to support both student enrichment and teacher collaboration. With the planned reintroduction of World Language (projected Fall 2027) the Specialist subject rotation will be reevaluated with the intent of maintaining six blocks per week.

Scheduling Methodology

The EES schedule is built upon core instructional blocks that guarantee sufficient time on learning in literacy, mathematics, science, and history/social studies. These blocks are protected in the master schedule to maintain instructional continuity across the school and alignment across the district. Once instructional blocks are established, specialist periods, lunch, recess, and common planning times are layered in to create a cohesive daily rhythm. This approach allows for sustained, high-quality instruction and predictable transitions for students.

All classrooms in grades PreK–5 are self-contained, giving teachers flexibility to extend or shorten lessons based on formative assessment and student engagement. This design supports MERSD's philosophy of student-centered, differentiated learning, emphasizing responsive teaching and strong relationships.

Student Support

MERSD implements a Multi-Tiered System of Support (MTSS) to ensure that all students receive proactive, evidence-based instruction and intervention. MTSS provides a comprehensive structure that offers a continuum of supports organized into three tiers of increasing intensity:

- Tier 1: High-quality, differentiated core instruction for all students.
- Tier 2: Short-term, targeted support to address academic and social emotional skill gaps within or outside the classroom setting.
- Tier 3: Intensive, frequent, and explicit focused interventions for students in need of more support and instruction.

Interventions are designed to be delivered within or adjacent to the classroom by teachers and interventionists using research-based programs aligned to student data. Continuous progress monitoring informs instructional adjustments and ensures timely, responsive support.

Currently, the physical layout of the existing Essex Elementary School limits the efficiency of this system. Students often travel across the building to access shared intervention rooms or work at tables within active classrooms. These settings can create distractions, reduce instructional time, and isolate intervention from core learning routines.

The new facility will address these limitations by incorporating localized breakout spaces adjacent to classrooms. These areas will:

- Bring supports directly to students, minimizing transition time;
- Normalize small-group instruction and flexible learning for all students, including those receiving MTSS, MLL, and special education services;
- Provide private, well-equipped environments for targeted instruction and assessment; and
- Strengthen collaboration between classroom teachers, specialists, and support staff.

This approach reflects MERSD's commitment to inclusive, equitable, and accessible learning environments that respond to individual student needs.

Illustrative Weekly Time on Learning

Content Area	Approximate Weekly Time Allocation
Social-Emotional Learning & Morning Meeting	5 × 15 min
Literacy (Reading, Writing, Word Study)	K–2: 5 × 90 min + 4 × 25 min 3–5: 5 × 90 min
Mathematics	5 × 75 min
Science / Social Studies	K–2: 5 × 45 min 3–5: 4 × 70 min + 1 × 45 min
Specialists	6 × 45 min
Lunch / Recess	5 × 45 min

Specialist Programming

Students participate weekly in a range of specialist classes that enrich the academic program and foster creativity, movement, and inquiry:

- Wellness / Physical Education (twice weekly)
- Visual Arts
- Music
- World Language (when offered)
- Library
- Technology
- Instrumental Music (individual or small-group pull-outs)

Instructional Coherence and Collaboration

The EES schedule balances student learning needs with teacher collaboration. By aligning specialist blocks across grade levels, teams share common planning periods to analyze data, coordinate MTSS supports, and plan interdisciplinary instruction.
This structure reflects MERSD's strategic priorities of Authentic Learning, Social-Emotional Wellness, and Inclusive Culture, ensuring that daily practice embodies the district's mission of rigorous, responsive, and relationship-based instruction.

Space Implications: The EES scheduling model and instructional philosophy have direct implications for the design of the new facility. The emphasis on protected instructional blocks, flexible grouping, and integrated student supports requires spaces that are adaptable, interconnected, and conducive to both focused and collaborative learning.

Grade-level classroom neighborhoods should be organized to promote seamless transitions between instructional settings. Each cluster of classrooms should include:

- Small breakout rooms for Tier 2 and Tier 3 MTSS interventions, English Learner instruction, and small-group special education support;

- Shared collaboration areas that support flexible grouping, cross-class projects, and team teaching;
- Teacher planning and prep spaces located within the neighborhood to foster collaboration among general educators, specialists, and interventionists;
- Visibility and accessibility that enable supervision, inclusion, and smooth student movement between spaces.

Specialist areas such as Art, Music, Wellness/PE, and Technology should be located to balance student access, acoustic separation, and cross-disciplinary connections. Their adjacency to grade-level neighborhoods will reduce transition time while maintaining dedicated zones for creativity, movement, and exploration.

By incorporating localized intervention spaces and shared instructional zones, the new Essex Elementary design will reduce lost learning time, strengthen inclusion, and create a learning environment that fully embodies MERSD's vision for student-centered, equitable, and future-ready education.

Teaching Methodology & Structure

MERSD blends progressive pedagogy with time-tested practices. Instruction is differentiated based on formative assessment and delivered through whole-group, small-group, and individual learning with "anywhere, anytime" technology access. Multi-Tiered Systems of Support (MTSS) provide timely interventions and extensions across academic and social-emotional domains. Universal Design for Learning (UDL) practices ensure equitable access.

The Manchester Essex Elementary Schools employ a broad range of teaching methodologies that balance progressive practices with proven traditional approaches. Our curriculum and instructional program are designed to support our mission, vision, and core values.

Organization of the School

Essex Elementary School is organized to support student-centered, inclusive, and developmentally responsive learning experiences. The current model is structured around grade-level classroom cohorts, with students grouped by grade and supported by classroom teachers, specialists, and student services staff. As the district plans for the renovation or replacement of the building, the future vision shifts toward multi-grade learning neighborhoods that create more flexible pathways for collaboration, targeted instruction, and peer-to-peer interaction. These neighborhoods are designed to harness the natural energy of young learners and promote student agency by supporting a full range of engagement types—student-to-student, student-to-teacher, and teacher-to-teacher—within a purposefully interconnected environment.

Primary student learning experiences are organized within two instructional wings: a PreK–3 wing supporting early childhood and early elementary development, and a Grades 4–5 wing supporting

upper-elementary readiness for middle school. Each wing is intentionally designed to create space for small-group collaboration, quiet individualized work, and whole-school community experiences, allowing students to experience both intimate learning environments and shared celebrations that build belonging.

Within these wings, learning neighborhoods will serve as shared environments that extend instruction beyond single classrooms. These spaces will include visually connected commons areas, flexible furnishings, and transparent sightlines that allow teachers to supervise while enabling students to engage in hands-on, project-based learning. Neighborhoods support cross-grade partnerships, integrated service delivery, and access to community partners—all of which align with the district's instructional vision and project goal of creating environments where students take active ownership of their learning through meaningful collaboration.

To strengthen access to academic and social-emotional support, the new design integrates small-group rooms and breakout spaces directly adjacent to classrooms. These areas support MTSS intervention, multilingual learner instruction, special education services, quiet testing environments, and teacher-student conferencing. This configuration reduces transition time, increases privacy for assessment, and keeps students meaningfully connected to Tier 1 instruction. It also normalizes flexible movement and access to support, reinforcing instructional equity.

The school is led by a Principal and supported by an Administrative Assistant, School Psychologist, Special Education Team Chair, School Adjustment Counselor, and School Nurse. This interdisciplinary team coordinates academic, behavioral, and mental-health supports and serves as a central resource for students, staff, and families. Locating these roles within a shared office suite in the new facility will enhance communication, privacy, and timely response to student needs.

Staff collaboration is supported through common planning time three times per month, cyclical data meetings, and shared prep periods. These structures enable teams to analyze student learning, align instructional strategies, and adjust supports based on data. Teachers, specialists, and interventionists collaborate to design flexible grouping structures and enrichment cycles that promote personalized learning.

The new Essex Elementary School should be designed to remove structural barriers that currently limit timely access to academic and social-emotional supports. By embedding small-group rooms, sensory spaces, and collaboration zones directly within each learning neighborhood, the building itself becomes an extension of the district's Multi-Tiered System of Support. This approach minimizes transitions, reduces distractions, preserves valuable instructional minutes, and normalizes differentiated learning as part of school culture. Thoughtful spatial organization ensures that every student can access targeted support, enrichment, and opportunities for connection within a coherent, flexible, and inclusive environment—advancing MERSD's commitment to equitable outcomes for all learners.

Curriculum Delivery Methods and Practice

The Essex Elementary School employs a broad- range of teaching methodologies that strive to balance the best of progressive methodology with tried and true approaches. Our curriculum and instructional program are designed to support our District mission, vision and core values. To that end, we provide a rigorous core curriculum that is grounded in a rich program of experiential and exploratory learning experience, designed to utilize an interdisciplinary approach, and to create connections between learning and the real world. It is our intent that through this process we can create deeper more meaningful learning as well as expose students to a broad range of experiences that may help them to identify areas of interest or strength and form the foundations for the development of individual pathways to success.

Administrative & Academic Organization

Overall, MERSD elementary level curriculum and instruction is delivered through heterogeneously grouped inclusive classrooms in which the elementary classroom teacher is responsible for the delivery of all core content instruction. All classroom lessons are differentiated based on formative assessment data and whole group, small group, and individual work is integrated into all lessons with an increasing number of lessons relying on anywhere, anytime access to technology. In addition to general differentiated instruction, students receive a variety of support services that are provided through inclusion and push-in services whenever possible.

Academic Program Description & Space Needs Considerations

The curriculum program titles may change over time, our educational philosophy and methodology will continue to require that future program considerations will also be based on differentiated, hands-on, and experiential learning strategies that require space for movement, demonstration, and small group work. We have provided summaries of each of the core content and program areas, and grade level curriculum guides. (Appendix F: *Grade-Level Curriculum Guides*). Through the Education Visioning process we identified the following principles that guide our practice and align with our District Core Values as well as our District and School Improvement Plans. (*Appendix E)*

English Language Arts / Literacy

The English Language Arts program is grounded in evidence-based instructional practices aligned with the science of reading and the Massachusetts Curriculum Frameworks. Instruction is explicit, systematic, and intentionally sequenced, with rich text experiences that integrate reading, writing, speaking, and listening across multiple genres. Students engage in authentic literacy tasks that develop comprehension, written expression, oral language, and academic vocabulary. Writing is embedded as a daily practice across content areas and revisited through drafting, conferencing, and revision cycles.

Multi-tiered systems of support allow for targeted small-group and one-to-one instruction driven by ongoing data analysis and progress monitoring. The Wonders 2020 program serves as the district's core literacy resource and has been rated "Meets Expectations" by DESE's CURATE and highly by EdReports. In grades K–1, teachers use the multisensory Heggerty curriculum to build foundational phonemic awareness skills, supported by Wonders decodable texts that reinforce early reading behaviors. As students progress, instruction expands to complex texts, writing across genres, and collaborative discourse.

All classrooms promote student choice through diverse classroom libraries stocked with trade books representing a wide range of topics, genres, reading levels, and perspectives. Choice-based reading fosters motivation, independence, and a love of literacy. Speaking and listening are developed through partner work, small-group dialogue, shared reading, presentations, and collaborative discussions.

ELA instruction requires flexible, student-centered learning environments that support multiple instructional modes— whole group lessons, systemic instruction in foundational skills in whole group and small groups, reading and responding to complex text, conferencing, small group targeted skill development, writing instruction, oral language development, and independent literacy work. Classrooms should provide defined areas for classroom libraries, conferencing, and small-group instruction, along with adaptable furniture that can be easily reconfigured for different activities. Transparent sightlines and proximity to adjacent breakout spaces allow for small-group intervention, coaching cycles, and interdisciplinary collaboration. Writable surfaces, access to digital projection, and student devices support drafting, revision, shared publishing, and presentation.

Collectively, these design features create a literacy-rich environment that fosters communication, collaboration, and engagement—key components of MERSD's instructional philosophy—and ensure that every student can access the individualized support necessary to become a confident, capable reader and writer.

Mathematics

Mathematics instruction at Essex Elementary School is grounded in the MA Curriculum Frameworks and promotes hands-on, learning designed to build conceptual understanding and confidence in mathematical thinking. We seek to center student discourse and encourage students to view themselves as problem solvers who value and enjoy mathematics while engaging in the Standards for Mathematical Practice. Teachers employ a variety of manipulatives, visual models, and flexible groupings to support conceptual development through exploration, discourse, and application. Current instructional methodologies include the use of vertical non-permanent work surfaces that allow students to share thinking visibly, take intellectual risks, and learn from peer strategies.

Flexible instructional spaces are essential to support this approach. Classrooms must accommodate whole-group mini-lessons, small-group explorations, partner tasks, and mixed-ability collaborative work. Adequate storage for concrete manipulatives, games, consumable resources, number tools, and formative assessment resources is necessary to ensure materials are accessible and consistently incorporated into daily instruction. Technology integration, including projection tools and digital platforms, supports problem solving, data exploration, and real-world applications.

Design Considerations: To effectively support high-quality mathematics instruction, classroom and neighborhood spaces should include:

- Flexible layouts that enable rapid transitions between whole-class instruction and multiple small-group breakouts.
- Adjacent breakout rooms for targeted intervention, enrichment, assessment, and conferencing aligned with MTSS tiered supports.
- Adequate, organized, and easily accessible for students storage for manipulatives, math tools, and instructional materials.
- Vertical non-permanent work surfaces (e.g., whiteboard walls) to promote mathematical discourse, sense-making, and visibility of student thinking.
- Writable table surfaces and access to digital projection to support modeling and student demonstrations.
- Robust device access and reliable wireless connectivity to support simulations, interactive tasks, and digital fluency and access to adaptive online learning.

Collectively, these design features create an environment that fosters deep conceptual understanding, student agency, and positive math identities—key priorities within MERSD's instructional philosophy.

Science

Science education at Essex Elementary School builds real-world connections by centering learning around phenomena-based instruction, emphasizing hands-on inquiry, experiential learning, and the integration of engineering and environmental literacy. In grades K–2, students engage with the Mystery Science curriculum, which introduces foundational scientific thinking through investigations, observations, and modeling. In grades 3–5, students use the KnowAtom program, which deepens conceptual understanding through inquiry and applies discipline-connected engineering design processes. Across all grades, students design experiments, construct prototypes, test variables, and revise their thinking based on evidence, fostering curiosity, persistence, and creativity.

Instructional approaches require learning environments that support whole-group lessons, collaborative small-group investigations, and long-term project work. Students regularly use scientific tools, manipulatives, large amounts of consumables through inquiry and

experimentation, technology platforms, and engineering materials that must be accessible, storable, and safely managed. Project work is iterative and often spans multiple days or weeks, making secure storage and flexible space essential for preserving student learning over time.

Environmental awareness is a central tenet of MERSD's vertically aligned K–12 environmental literacy strand. At Essex Elementary, gardens, a greenhouse, and outdoor learning areas provide opportunities for interdisciplinary projects. Partnerships with local organizations expand field-based learning and connect students to authentic environmental stewardship. Additional outdoor spaces support both science instruction and social-emotional well-being, offering settings for quiet reflection, observation, and nature-based exploration.

Looking ahead, MERSD plans to deepen its Science, Technology, Engineering, as well as Digital Literacy/Computer Science programming to support enhanced integration across STEM learning at the elementary level. To build on and deepen the work currently taking place, we aim to expand hands-on, interdisciplinary learning opportunities; however, the current physical setup of the building creates barriers to fully implementing these experiences due to limitations in space, storage, safety, and support for longer-term project work. Students will engage in design thinking and interdisciplinary problem solving that draw on science, mathematics, and engineering concepts. As this program grows, facilities will need to support increasing complexity, providing durable work surfaces, tool storage, electrical access, and zones for project iteration.

Design Considerations: STE instruction is primarily delivered within classrooms, as the current project space is inadequate for this purpose, which limits full implementation of our current curriculum. In the future STE lessons will occur in both classroom and dedicated project spaces that should be intentionally designed to support applied hands-on learning. Science and engineering instruction at Essex Elementary requires learning environments that are flexible, durable, and intentionally equipped for hands-on investigation. Classrooms and shared STEM spaces should include:

- Access to sinks, counter space, and water sources to support experimentation, safe cleanup, and material handling.
- Durable, non-slip, easy-to-clean flooring appropriate for spills, tools, and frequent reconfiguration.
- Generous storage, including closed cabinets, open shelving, mobile bins, and secure areas for in-progress lab work.
- Distributed electrical access along perimeter walls and within work zones to support microscopes, robotics systems, sensors, and testing equipment.
- Flexible furniture and large work surfaces that accommodate multi-student collaboration and prototype building.
- Clear sightlines to promote safe supervision and facilitate co-teaching and coaching.
- Space for long-term investigations so materials can remain set up without disrupting other routines.

- Adjacency to outdoor learning areas to support field observations, environmental data collection, and nature-based inquiry.

To accommodate the expansion of elementary Technology & Engineering, a shared project space that can accommodate hands-on project based learning is recommended, featuring:

- Ventilation and safety equipment, including eyewash access and protected storage for tools or low-grade consumables.
- Zones for design, construction, and testing aligned with the Engineering Design Process.
- Appropriate flooring and durable worksurfaces able to withstand adhesives, cutting tools, and moisture.

  Collectively, these design features remove current spatial limitations—such as limited sink access, long travel distances, and insufficient storage—and allow students to engage deeply in authentic STEM experiences. The result is a science and engineering program that fosters investigation, encourages persistence, and prepares students with the habits of mind essential for future learning.

History / Social Studies

The History and Social Sciences program at Essex Elementary School is designed to help students develop as civic-minded, responsible members of society who understand and appreciate both the diversity and commonality of human experience. Instruction is inquiry-based and project-oriented, emphasizing relevance, engagement, and interdisciplinary connections. Students learn to ask compelling questions, analyze primary and secondary sources, construct arguments supported by evidence, and communicate their thinking in a variety of formats.

At the elementary level, MERSD uses DESE-vetted resources to build a coherent, vertically aligned program aligned to the Massachusetts History and Social Science Framework. In Grades K–2, teachers implement the Private i History Detectives curriculum as a foundational resource, which introduces core disciplinary concepts through developmentally appropriate investigations, artifacts analysis, and community-based inquiry. In Grade 5, MERSD has begun implementing Investigating History, a DESE-endorsed program that emphasizes source analysis, civic discussion, and writing from evidence. A phased rollout of this program in Grades 3 and 4 is scheduled for the 2026–2027 school year, ensuring consistent instructional design across the upper-elementary grades.

Across all grade levels, units integrate history, geography, civics, and economics to deepen students' understanding of culture, community, and the ways societies change over time. Students explore the roles of individuals and groups in shaping history, build empathy and perspective-taking, and engage in collaborative projects that connect past and present. Activities may include community interviews, map making, simulations, and service-learning experiences, creating authentic connections to students' lives.

Effective implementation of an inquiry-based, project-oriented model requires:

- Flexible instructional spaces that support whole-class discourse, small-group collaboration, and interdisciplinary project work.
- Writable surfaces, breakout rooms, and access to digital resources to facilitate research, drafting, peer feedback, and revisions.
- Technology integration that supports digital research, primary source analysis, and multimedia presentation tools.

These design features enable teachers to differentiate instruction, promote active learning, and foster the civic discussion, analysis, and collaborative problem solving outlined in the History and Social Science Framework.

By engaging students in meaningful investigations rooted in real-world contexts, Essex Elementary's History and Social Sciences program cultivates curiosity, empathy, and an emerging sense of agency. Students learn how community systems work, why diverse perspectives matter, and how their voices contribute to a stronger, more equitable society—reflecting MERSD's commitment to developing thoughtful, informed, and compassionate citizens.

World Languages

The World Language program at Essex Elementary School will introduce students to world languages, begin to build skills to develop fluency and proficiency, while fostering curiosity about global cultures and communication. Instruction emphasizes listening and speaking in the early grades and gradually builds toward reading and writing proficiency. Lessons integrate songs, stories, games, movement, and role-play to make language learning engaging and developmentally appropriate. Cultural exploration helps students build empathy, perspective-taking, and global awareness—supporting MERSD's mission to develop responsible, connected citizens prepared to thrive in an increasingly interconnected world.

Although elementary World Language instruction is not currently offered due to historic budget constraints, the district is committed to restoring this specialist course at the elementary level as part of the long-term academic program. When implemented, instruction will be delivered by a certified World Language teacher and scheduled as part of the specialist rotation.

Aligned with the Massachusetts Curriculum Framework for World Languages, the elementary program will use a proficiency-based approach that builds student skills across the domains of communication, cultures, connections, comparisons, and communities. Students will develop foundational vocabulary, language structures, and cultural knowledge through authentic listening and speaking tasks, while making meaningful connections to peers, community, and global contexts. Over time, experiences at the elementary level will serve as a bridge to the district's vertically aligned 6–12 World Language pathways.

To support interactive and engaging language learning, instructional spaces should include:

- Flexible furniture arrangements that accommodate movement, pairing, and small-group dialogue.
- Projection and audio systems that allow students to hear authentic models of target-language pronunciation and intonation.
- Breakout areas for partner practice, conferencing, and oral proficiency tasks.
- Access to digital tools for multimedia exploration, cultural immersion, and linguistic comparison.

The design of these spaces should reflect the program's emphasis on active participation, communication, and collaborative learning. By introducing multiple languages and cultural perspectives early in students' educational careers, Essex Elementary builds strong foundations in global citizenship, cultural competency, and lifelong language learning.

Academic Support Programing Spaces

Essex Elementary School's approach to academic support reflects the Manchester Essex Regional School District's commitment to providing equitable access to high-quality learning opportunities for every student. The academic and social-emotional supports offered at EES are delivered through a comprehensive Multi-Tiered System of Support (MTSS) and aligned with the district's core values of student-centered learning, inclusion, and wellness.

EES's support model integrates explicit social-emotional learning (SEL) instruction, targeted academic intervention, and environmental features that promote readiness to learn. These systems work together to ensure that each child's cognitive, emotional, and behavioral needs are met within a supportive and inclusive school community.

Social-Emotional Learning and School Climate: EES emphasizes the importance of developing the whole child—fostering emotional intelligence, empathy, and self-regulation alongside academic achievement. The school incorporates multiple evidence-based frameworks and practices that build emotional awareness and a strong sense of belonging:

- **RULER:** Explicit instruction in recognizing, understanding, labeling, expressing, and regulating emotions.
- **Responsive Classroom:** Daily community-building routines that create safe, joyful, and engaging classrooms.
- **Second Step:** Structured lessons in anti-bullying, emotion management, decision-making, and collaboration.
- **Culturally Responsive Teaching:** Emphasizes academic achievement, cultural competence, and sociopolitical awareness through ongoing professional learning and reflective practice.
- **Individual and Group Counseling Services:** Targeted supports that strengthen coping, communication, and problem-solving skills.

Environmental supports for SEL are woven into the fabric of the school design. Sensory paths, calming nooks, natural light, and outdoor learning extensions will promote emotional regulation and readiness to learn. These physical features will be located within each learning neighborhood and will reinforce instructional practices such as RULER and Responsive Classroom by linking the emotional environment to the physical environment.

Multi-Tiered System of Support (MTSS): MERSD's vision for MTSS is to ensure that all students experience high-quality, inclusive instruction across both academic and social-emotional domains. MTSS provides a proactive and systematic framework that allows educators to identify, monitor, and respond to student needs before they escalate into more significant challenges. The model is organized across three tiers of support:

- **Tier 1:** Core instruction designed to be universally accessible and differentiated to meet diverse learning needs.
- **Tier 2:** Targeted, small-group interventions for students requiring additional reinforcement in specific skill areas.
- **Tier 3:** Intensive, individualized supports tailored to students with significant or persistent learning or behavioral needs.

Implementation depends on collaboration, continuous data collection, and progress monitoring to ensure that interventions are responsive and evidence based. Student progress is reviewed regularly to determine instructional adjustments, resource allocation, and the need for additional support.

Interventions are delivered by classroom teachers, interventionists, and specialists both within and adjacent to the classroom, ensuring that supports remain connected to core instruction. Research-based programs are selected and differentiated based on assessment data and aligned to each tier of support.

Currently, the configuration of the existing Essex Elementary School poses challenges for effective intervention delivery. Students often transition long distances across the building to access shared instructional spaces or receive services at small tables within active classrooms. These conditions can create distractions, limit privacy, and reduce instructional time.

The new school design will address these barriers by incorporating localized breakout spaces within each classroom neighborhood. These spaces will:

- Bring supports directly to students, reducing lost time and improving instructional continuity.
- Normalize flexible, small-group learning for all students, including those receiving MTSS, MLL, or special education services.
- Provide quiet, well-equipped environments for focused intervention, assessment, and conferencing.

- Strengthen collaboration between general education teachers, interventionists, and support staff.

This integrated model reflects MERSD's ongoing commitment to inclusive, data-informed, and student-centered instruction, ensuring that every learner has the opportunity to succeed within their classroom community. By creating space for flexible small-group instruction, student collaboration, and teacher conferencing within each neighborhood, the design strengthens our goal of positioning students as active leaders in their learning, supported by environments that adapt to multiple modes of engagement.

Space Implications for Academic Support

The design of the new facility must reflect MERSD's educational philosophy by incorporating flexible learning environments that support student agency, small-group collaboration, and movement. These goals require spaces that enable multiple types of engagement, including quiet reflection, hands-on exploration, peer collaboration, and teacher-facilitated conferencing. Thoughtful adjacency between classrooms, breakout rooms, and shared learning spaces will allow students to work as leaders within their learning community.

Each grade-level neighborhood should include:

- **Localized breakout spaces** directly adjacent to classrooms for small-group and one-to-one instruction aligned with MTSS.
- **Dedicated calming and sensory zones** to support regulation and readiness for learning.
- **Collaborative work areas** for staff to analyze data, plan interventions, and coordinate services.
- **Visibility and proximity** that promote supervision, inclusion, and minimal disruption during transitions.

As we adjust our intervention and student support services to go to students in their learning spaces, the adults providing support will shift from a classroom to a group office. This will provide our support staff, including Math Specialist, Reading Specialist, Instructional Coaches, MLL teacher, and Title 1 staff, to have a location for planning and peer collaboration in a centralized office location while ensuring student supports are provided at point of learning locations. Shared resource rooms for counseling, speech-language therapy, occupational therapy, and other related services should be centrally located within the instructional core to ensure accessibility and collaboration. Design features such as natural light, acoustic control, and flexible furnishings will enhance the effectiveness of these learning environments.

By embedding support spaces within classroom neighborhoods and aligning the physical environment to instructional practice, the new Essex Elementary School will model MERSD's vision of a responsive, inclusive, and future-ready learning community—one that supports every child's academic growth and emotional well-being.

Student Guidance & Support Services

The Manchester Essex Regional School District is committed to fostering the academic, social, emotional, and physical well-being of all students. Essex Elementary School provides a comprehensive network of guidance and health services that emphasize prevention, early intervention, and responsive care. These supports are integral to the district's whole-child philosophy and are aligned with state and national best practices.

Counseling and Guidance Services

EES provides a range of counseling and adjustment services to promote emotional health, social development, and student success. Counseling programs are designed to build resilience, foster self-awareness, and support students in developing positive relationships and coping strategies. Services include:

- Individual and small-group counseling to address social, emotional, or behavioral needs.
- Screenings, consultation, and crisis intervention in collaboration with teachers and families.
- Classroom-based lessons and community-building activities that reinforce SEL instruction and promote a positive school climate.
- Collaboration with external mental health providers and community agencies to ensure continuity of care when needed.

The school psychologist and school adjustment counselor play key roles in delivering these services. Their work supports both individual student needs and broader school-based initiatives related to mental health, inclusion, and positive behavior support.

To ensure accessibility and confidentiality, counseling and psychology offices should be located within or adjacent to the main office suite, allowing for seamless coordination with the principal, nurse, and administrative staff. Each office should be large enough to accommodate individual meetings or small groups of 6–8 students in a private, welcoming environment conducive to therapeutic work and group discussions.

Health Services

Health Services at Essex Elementary School operate under the comprehensive framework established by the Massachusetts Department of Public Health (DPH) School Health Manual, which provides the roadmap for ensuring compliance with state regulations and promoting student wellness. The goal of the Health Services program is to appraise, protect, and promote student health and to ensure that each child is ready to learn each day.

Core functions include:

- Preventive care through screenings, immunization monitoring, and disease prevention.
- Care coordination with families and community healthcare providers to ensure continuity of services.
- Emergency response and first aid for illness or injury during the school day.

- Health education and counseling to build student understanding of wellness and self-care.
- Support for attendance and engagement, ensuring that students' health needs do not become barriers to learning.

The health suite will provide both semi-private and private areas to address a wide range of daily needs—from first aid to medical assessments and confidential consultations. The design will include:

- A dedicated nurse's office with exam space, cot areas, and secure medication storage.
- Separate areas for rest, isolation (when required), and confidential health assessments.
- Access to handwashing stations, refrigeration, and basic medical equipment for screenings and routine procedures (such as vision and hearing tests).
- Proximity to the main office suite and administration, allowing for efficient communication and student supervision while maintaining privacy.

The health suite will be equipped with modern tools and designed to meet all Massachusetts DPH mandates, ensuring compliance with state guidelines while providing a calm, child-friendly environment that supports student safety and well-being.

Space Implications for Guidance and Health Services

To deliver high-quality guidance and health services, the counseling and health suite should be designed as an integrated component of the main office area, supporting collaboration between student support staff and building administration.

- Counseling and psychology offices should each provide space for individual and small-group work, equipped with soft seating, acoustic privacy, and access to natural light.
- The health suite should include both public-facing and private areas, including waiting space, examination areas, isolation rooms, and secure medical storage.
- Proximity to the main entrance and administrative offices will allow quick access for emergencies while maintaining privacy for students receiving care.

This configuration ensures that guidance and health services are centrally located, accessible, and aligned with the district's vision for a safe, healthy, and supportive learning environment. Together, these spaces will foster physical and emotional well-being and strengthen the school's ability to respond proactively to the diverse needs of its students.

Teacher Planning

Manchester Essex Regional School District (MERSD) recognizes that the quality of instruction is strengthened by providing teachers with dedicated time and collaborative spaces to plan, reflect, and

refine their practice. At Essex Elementary School (EES), teacher collaboration is a cornerstone of the instructional program and a key driver of continuous improvement in student learning.

Collaborative Planning and Professional Practice

EES teachers engage in collaborative planning cycles that bring together classroom teachers, specialists, and interventionists to analyze data, design instruction, and monitor student progress. Grade-level teams meet daily to review formative assessment data, plan differentiated lessons, and coordinate intervention and enrichment activities. These ongoing conversations ensure that instruction remains responsive to the needs of individual learners and aligned to district goals for student achievement and inclusion.

Every teacher has common planning time five days per week, providing the opportunity for regular collaboration within and across grade levels. In addition, extended Wednesdays are built into the district calendar to allow for professional learning, curriculum development, and interdisciplinary collaboration. This structured time supports the district's teacher-centered model of continual improvement—one that values reflection, shared practice, and innovation in teaching and learning.

Through these structures, teachers work in grade-level and cross-disciplinary teams to design flexible grouping models, intervention cycles, and project-based learning experiences. Data analysis is used to inform decisions about instructional pacing, resource allocation, and support services within the Multi-Tiered System of Support (MTSS) framework.

Planning Spaces and Collaboration Environments

To support professional collaboration, the new Essex Elementary School will include adult-friendly common workspaces located within or near grade-level neighborhoods. These spaces will provide comfortable, technology-equipped environments where teachers can plan, meet, and engage in professional dialogue.

Design considerations include:

- Shared work areas for grade-level teams and specialists to collaborate on lesson planning and data review.
- Dedicated spaces for professional development sessions, department meetings, and full staff gatherings.
- Access to technology and instructional materials that support data-driven decision-making and resource sharing.

By embedding collaboration and planning spaces within the instructional core, MERSD will ensure that teachers have immediate access to colleagues, resources, and student data—promoting a culture of professional learning, continuous reflection, and instructional excellence.

Space Implications for Teacher Planning: The design of the new Essex Elementary School must reflect the district's commitment to collaboration, professional learning, and instructional coherence. MERSD is committed to implementing current, research-based instructional practices and supporting the ongoing professional growth of educators. Through the district's embedded coaching model, instructional coaches provide in-the-moment feedback, modeling, guidance, and targeted support to strengthen classroom practice and improve student outcomes. Because this coaching model is integrated into the academic day, teachers require adult-friendly spaces that are intentionally designed to support professional dialogue. These spaces should comfortably accommodate small groups, provide reasonable privacy for observation debriefs and data discussions, allow access to digital resources, and be located in close proximity to classroom neighborhoods to support efficiency and instructional continuity.

These spaces should include:

- Team planning rooms with technology access for data analysis, lesson design, and virtual collaboration.
- Flexible meeting areas that can accommodate both small-group discussions and larger professional learning sessions.
- Storage and resource areas for curriculum materials, student data binders, and shared instructional tools.
- Sound-mitigating finishes and natural light to create comfortable, productive work environments.

In addition to neighborhood-based collaboration zones, a centralized professional workroom or staff commons should be included to support all-staff meetings, professional development, and interdisciplinary work. The inclusion of these adult-centered learning environments ensures that collaboration—an essential component of MERSD's instructional model—is embedded into the daily rhythm of school life.

This design approach underscores the district's belief that supporting teacher collaboration directly enhances student learning outcomes, aligning physical space with MERSD's culture of continual reflection, shared leadership, and professional growth.

Professional Development

Manchester Essex Regional School District is committed to cultivating a culture of continuous improvement through high-quality professional learning. Instructional growth is supported through ongoing coaching cycles, collaborative planning structures, curriculum review processes, and data-informed reflection. Teachers participate in regular collaborative teams that examine formative assessment data, refine instructional strategies, and strengthen alignment across grades.

Extended Wednesdays are built into the district calendar to provide dedicated time for districtwide professional learning, team-based curriculum development, and interdisciplinary collaboration.

Continual curriculum reviews ensure vertical alignment and support ongoing implementation of evidence-based practices and high-quality curriculum. Instructional coaching in literacy, mathematics, and student services provides teachers with embedded opportunities to reflect on classroom practice, analyze student progress, and receive real-time feedback.

Educators transitioning between grade spans or instructional roles receive targeted support, including mentoring, observation cycles, and specialized training aligned to their new assignments. When programmatic changes impact licensure or instructional models, the district offers retraining and certification pathways to ensure staff are fully prepared. Professional development prioritizes inclusive practices, Universal Design for Learning (UDL), social-emotional learning, multilingual learner supports, and culturally and linguistically sustaining practices—all central to MERSD's vision for equitable access.

The new facility will reinforce professional learning by providing flexible collaboration spaces, technology-equipped meeting rooms, and areas for demonstration, reflection, and coaching. By aligning physical design with instructional priorities, Essex Elementary will continue to foster a collegial environment where educators grow together, innovate, and respond to student needs.

Pre-Kindergarten Program (Integrated)

The Manchester-Essex Regional School District (MERSD) currently operates a district-wide integrated preschool program housed at Manchester Memorial Elementary School. As established during the Memorial Building Project, two preschool classrooms were constructed at Memorial, with an additional two classrooms to be included in the future renovation or replacement of Essex Elementary School. This expansion will fulfill the district's long-term goal of providing equitable Pre-K access in both communities, ensuring that all families with three- and four-year-old children have the opportunity to participate in high-quality early learning within their town.

The preschool program serves approximately 30–40 students, including both tuition-paying peers and students with disabilities, fostering an inclusive environment that supports social, emotional, and academic growth for all learners. Enrollment is currently limited by space; however, demographic projections indicate a potential capacity of 45–75 students once the additional classrooms become available. The district has transitioned to a five-day, full-day model for three- and four-year-olds (8:30 AM – 2:55 PM) to better meet family needs and to provide extended opportunities for play-based learning, early literacy, and social development.

The Manchester-Essex Regional School District Preschool is an integrated early-childhood program where children of all abilities learn socially, intellectually, and physically within a developmentally appropriate and nurturing environment. Students with identified special needs receive speech and language, occupational, and physical therapy within the classroom as part of the daily curriculum and through individualized instruction. Students without special needs, known as peer pals, serve as role models while learning at their own pace. This purposeful mix of peers and students with disabilities fosters empathy, social awareness, and a strong sense of self-worth for all children.

Play is an essential focus of the program, as children learn about their world through exploration, discovery, and collaboration. Because the preschool is part of the Manchester-Essex Regional School District, children not only acquire foundational academic and social skills for entering kindergarten but also develop an early sense of belonging and familiarity with the district community.

Pre-K Curriculum and Instructional Model

The MERSD integrated preschool program follows a developmentally appropriate, play-based curriculum aligned with the Massachusetts Guidelines for Preschool Learning Experiences. Instruction is organized around whole-group and center-based learning, with six structured centers that promote early literacy, numeracy, fine- and gross-motor development, and social-emotional growth through purposeful play. Within this environment, children are encouraged to explore, investigate, question, and take appropriate risks in their learning. Teachers provide opportunities for communication, creativity, and problem solving through a balanced schedule of child-initiated and teacher-guided experiences. Speech, language, and motor development are embedded within daily routines, and learning experiences are individualized based on each child's needs and interests.

Classrooms are designed to support this model through purpose-built features such as child-height sinks, accessible bathrooms, and adjacent outdoor play areas that extend learning beyond the classroom walls. The environment includes sound panels and amplification systems to support students with hearing impairments, as well as dedicated storage, cubbies, and flexible furnishings that allow teachers to adapt the space for whole-group, small-group, and independent activities.

The program incorporates applied behavioral analysis (ABA) methodologies to support students with autism and other developmental disabilities, ensuring that all children can access the curriculum in a structured and supportive way. In addition, related services—including speech-language pathology, occupational therapy, and physical therapy—are integrated throughout the school day and delivered through a combination of whole-class, small-group, and individualized sessions.

Peer pals benefit equally from this inclusive model, learning alongside their classmates with special needs. Through shared play, communication, and collaboration, they develop empathy, cooperation, and confidence. The result is a supportive, language-rich environment that nurtures curiosity, independence, and a lifelong love of learning.

Space Considerations: To support the integrated preschool model, the new Essex Elementary School should include two dedicated Pre-K classrooms, each designed for up to 15–18 students. Classrooms should be flexible, welcoming environments that accommodate a range of developmental and instructional needs while ensuring accessibility and compliance with ADA standards.

Each classroom should include:

- Flexible, reconfigurable space to support six small-group learning centers, circle time, and whole-class instruction.

- Child-scaled design features such as low sinks, accessible bathrooms, and cubbies for personal storage.
- Separate areas for meals/snacks, art projects, and play, including a tiled section for messy activities and a carpeted area for circle time and movement.
- A designated quiet zone within one of the learning centers for reading, calming, or independent play.
- Space for individual and small-group therapies, or adjacency to therapy rooms within the same building to minimize transitions.
- An adjacent sensory or de-escalation room to support regulation and individualized needs.
- Ample classroom storage, including shelving and a large closet to minimize visual clutter and maintain organization.
- Sound-mitigating finishes, carpeting, and amplification systems to accommodate students with hearing impairments.
- Accessibility features, including wheelchair access and ramps, to ensure barrier-free movement throughout the preschool and school building.
- Direct access to a secure, developmentally appropriate outdoor learning and play space with shade, varied surfaces, and handicapped-accessible equipment designed for physical, sensory, and social development.

The addition of an after-school daycare program is under consideration and should be factored into the design for future flexibility of use.

Together, the preschool classrooms in Manchester and Essex will form a unified, inclusive early learning system that nurtures the district's youngest learners and ensures equitable access for families across both communities.

Kindergarten Program

The Essex Elementary School Kindergarten program is a full-day, non-tuition program that provides a developmentally appropriate bridge between early childhood education and the formal academic experience of the primary grades. The program emphasizes cooperative learning, exploration, and play as integral components of early academic and social development. Instruction is designed to nurture curiosity, creativity, and foundational skills in literacy, numeracy, and social-emotional learning while fostering independence and confidence in young learners.

Classrooms are designed to support a variety of instructional approaches, including whole-group lessons, small-group collaboration, and individual exploration. Each space must provide ample room for movement and flexible grouping, allowing students to engage in hands-on, inquiry-based learning throughout the day. To accommodate the wide range of activities characteristic of early learning, significant built-in storage is essential for organizing instructional materials, manipulatives, and creative play resources.

In keeping with best practices for early childhood education, each Kindergarten classroom should include a child-sized restroom and an area for creative free play, along with distinct spaces for large- and small-group instruction. Classrooms should also include a gathering area for shared instruction, such as a carpeted circle space or small amphitheater-style tier, that allows students to come together for stories, discussions, and group learning experiences. Multiple breakout areas are also necessary to support differentiated instruction, literacy stations, and small-group work.
The design of Kindergarten learning spaces should reflect the program's emphasis on active engagement and community, providing a safe, welcoming, and flexible environment that supports collaboration, creativity, and the developmental needs of young learners.

Lunch Programs

Essex Elementary School provides both breakfast and lunch service aligned with district wellness policies and designed to support student health, nutrition, and readiness to learn. Breakfast is offered each morning to ensure students begin the school day nourished and prepared to engage academically, supporting focus, stamina, and emotional regulation. Lunch is paired with integrated recess blocks—typically totaling 45 minutes per day—which promote movement, peer interaction, problem-solving, and social-emotional skill development. Multiple recess opportunities throughout the day reinforce students' ability to return to learning calm, focused, and ready to participate.

Food services at Essex Elementary are delivered through a contracted, on-site cooking model that complies with all state and federal nutritional guidelines. The district's long-term goal is to increase the amount of scratch cooking and incorporate more fresh, whole foods; however, the current age and condition of the kitchen infrastructure limits the type and variety of meal options available to students and staff, constraining menu flexibility and restricting the ability to expand healthy, freshly prepared offerings.

A renovated or newly constructed facility would provide a modern kitchen and streamlined serving area capable of supporting expanded breakfast service, increased scratch cooking, improved cold and dry storage, and more efficient traffic flow through the serving line. Updated infrastructure should include adequate electrical capacity, food-preparation workstations, durable stainless-steel surfaces, commercial dishwashing equipment, and clearly defined circulation patterns that support reliable, efficient service. Adjacency to composting, recycling, and waste-management areas will support environmental sustainability goals.

In addition to serving students, the cafeteria and kitchen function as valued community assets. Local organizations use the space for community breakfasts, civic programming, and intergenerational events. The kitchen must therefore be accessible, secure, and equipped to facilitate weekend and evening community use while maintaining appropriate separation from academic areas. Because the school also serves as a potential emergency sheltering location, the kitchen should be designed to support extended

meal service, power resiliency, and safe food handling during emergency operations, with sufficient generator-backed electrical capacity and walk-in refrigeration space.

The cafeteria should be designed for efficient meal service and student flow, with seating and acoustics that create a positive dining experience. Adjacency to outdoor spaces can support smooth transitions between eating and recess, while flexible design will allow the space to function as a hub for community gatherings.

Sensory-Considerate Dining Environment

To support the diverse sensory needs of all students, a sensory-considerate dining option should be included within the cafeteria design. This space, contained within a portion of the allowable MSBA dining guidelines, will provide a quieter, lower-stimulation environment for students who may experience sensory overload in a traditional cafeteria setting.

The sensory-considerate dining area will:

- Feature muted lighting, reduced noise levels, and calming color palettes to create a soothing atmosphere.
- Incorporate sound-dampening materials and spatial separation from high-traffic areas to minimize auditory distractions.
- Provide flexible seating arrangements, allowing students to eat in small groups or independently based on their comfort and regulation needs.
- Align with the school's commitment to inclusive design and social-emotional learning, ensuring that every child has equitable access to a positive and comfortable mealtime experience.

This space is not a separate program, but rather an extension of the school's universal design for learning and whole-child wellness philosophy. By proactively addressing sensory needs, the school can foster belonging, independence, and improved readiness for learning throughout the school day.
Together, these improvements will strengthen nutrition access, promote social connection, support community resilience, and advance MERSD's commitment to caring for the whole child.

Technology Instruction Policies & Program Requirements & Library

Technology instruction at Essex Elementary School is grounded in the belief that digital literacy, information fluency, and responsible technology use are essential competencies for all students. Digital tools and computer science concepts are intentionally integrated into library/media programming and core academic content, allowing students to apply technology skills in authentic, interdisciplinary contexts. Instruction emphasizes research and inquiry, ethical use of information, data privacy, media evaluation, and digital citizenship, preparing students to navigate increasingly complex digital environments.

Classrooms are equipped with interactive display boards, audio amplification systems, document cameras, and 1:1 student devices, enabling teachers to differentiate instruction, provide real-time feedback, and extend learning beyond the physical classroom. Students engage with age-appropriate applications that foster creativity, collaboration, and problem solving while developing proficiency in navigating digital resources and communicating effectively online. Multi-tiered supports and assistive technologies further promote equitable access to curriculum and align with inclusive instructional practices.

The goal of the Technology program is to develop critical thinkers, responsible digital citizens, effective problem solvers, and creative collaborators who can adapt to evolving tools and platforms. Students learn to evaluate information sources, create digital products, engage in collaborative digital environments, and practice safe, ethical online behavior. Instruction builds foundational computer science skills through introductory coding, engineering design, robotics, and iterative problem solving, supporting early exposure to computational thinking and design principles.

Because technology is integrated across the instructional day, the building must provide strong wireless connectivity, electrical capacity for device charging, and the bandwidth necessary to support hundreds of devices simultaneously. Charging stations, access to outlets, and reliable network infrastructure must be distributed throughout classroom neighborhoods and shared learning areas to ensure uninterrupted access to digital tools.

Learning Commons

Currently we have separate Library and Technology specials that frequently work together on interdisciplinary projects. As part of our District and School improvement efforts, we will be reimagining our specialist programming with the goal of increasing integration through a unified model—an approach that will bring both programs together in a shared, flexible space. The curriculum will blend traditional library experiences—such as literature appreciation, research instruction, and access to print media—with opportunities for design thinking, computational thinking, and collaborative project work. Lessons encourage students to apply transferable skills to real-world challenges and reinforce the district's instructional focus on inquiry, creativity, and collaboration. A current key limitation to this vision is the lack of a dedicated common area that can support joint instruction and project work.

Looking ahead, the Learning Commons will function as the academic and social hub of the school—a flexible, interdisciplinary space that combines library services, digital media resources, engineering and maker tools, and collaborative project zones to support research, creativity, inquiry, and hands-on learning. Intentional adjacency to visual arts classrooms and project spaces will support natural crossover between technology, engineering, design, and the creative process. These connections reinforce MERSD's commitment to learning that is active, iterative, and expressive, preparing students to design, build, test, and reflect through multiple modalities.

The Learning Commons and adjacencies will include flexible zones for:

- whole-group instruction,
- small-group collaboration,
- independent exploration,
- digital fabrication and prototyping,
- robotics and coding,
- multimedia production,
- project-based learning,
- visual arts studio space
- and exhibition of student work.

Durable work surfaces, embedded storage, and open shelving will support materials management and long-term project builds. Access to digital fabrication tools as well as engineering materials and art-making resources will allow students to move fluidly between design, construction, and reflection.

Furnishings and Presentation Features

To support diverse instructional and student-driven learning experiences, the Learning Commons will incorporate:

- moveable tables on casters,
- soft seating and modular furniture,
- quiet reading nooks,
- portable whiteboard partitions and writable surfaces,
- digital display boards for showcasing student work,
- and a small-scale amphitheater or stepped seating area for presentations, performances, and read-alouds.

These features will allow teachers and students to rapidly reconfigure the space for collaborative projects, independent reading, small-group instruction, and interdisciplinary work. Quiet reading areas will remain accessible throughout the day for unscheduled visits and independent inquiry.

Visibility, Supervision, and Infrastructure

Glass walls, open sightlines, and transparency between adjoining spaces will support visual supervision and communicate that making, tinkering, coding, reading, and creating are core elements of school culture. Seamless technology infrastructure—including robust wireless networks, ceiling-mounted access points, ample outlets, and collaborative displays—will ensure reliable access to digital resources throughout the school.

By integrating literacy, engineering, technology, and the visual within a central, flexible hub, the Learning Commons will create a vibrant, future-ready learning environment that reflects MERSD's vision for interdisciplinary, student-centered education and lifelong curiosity. The flexibility of these zones supports student-to-student and student-to-teacher collaboration, creates opportunities for exhibitions and

community gatherings, and extends learning beyond the school day—all key goals of the district's vision for this facility.

Learning Commons Staffing and Scheduling

The Learning Commons at Essex Elementary School will be staffed by certified Library Media Specialist, Digital Literacy Computer Science Specialist, and Visual Arts Specialist. Instruction will be delivered through a hybrid scheduling model that balances fixed lessons with flexible access for independent research, small-group inquiry, and interdisciplinary project work. Students may visit the Learning Commons individually, with peers, or as part of scheduled classroom integration.

The Learning Commons will maintain consistent hours during the school day and may be available beyond school hours to support extracurricular enrichment, family engagement events, and community programming. A flexible booking system will allow teachers to reserve instructional zones, project areas, and maker resources. This balanced model ensures that the Learning Commons serves simultaneously as an instructional classroom, collaborative learning space, and independent reading hub.

Visual Arts

The visual arts program nurtures creativity, imagination, and self-expression through exploration of a wide range of media including paint, clay, ceramics, ink, recycled materials, and emerging digital tools. Guided by state standards, the curriculum is vertically coherent and intentionally structured to develop student competency in Creating, Presenting, Responding, and Connecting—the four artistic domains defined by the Massachusetts Arts Frameworks. Students study influential artists, artistic movements, and contemporary makers, connecting visual art to social context, cultural perspectives, and other areas of the curriculum. Critique routines and reflection practices emphasize process, growth, and creative problem-solving, helping students see themselves as confident creators.

Instruction in the visual arts is highly hands-on and exploratory, requiring spaces designed to safely support diverse media and techniques. Art studios should include:

- Durable, easy-to-clean work surfaces suitable for wet and dry media
- Multiple large, multi-height sinks for washing brushes, palettes, and tools
- Adequate storage for supplies, student portfolios, and works-in-progress
- Ventilation and a dedicated kiln room for ceramics coursework
- Flexible layout to support whole-group demonstration, small-group creation, and independent studio work

Technology integration enhances instruction through access to instructional videos, projection and camera-fed demonstrations, digital design software, and documentation of student process. Proximity to the innovation/learning commons hub will support STEAM integration and interdisciplinary projects.

Visibility into art spaces—through interior windows or display glazing—showcases active making and reinforces MERSD's commitment to vibrant, visible learning. Ample display areas throughout corridors

and shared spaces celebrate artistic achievement and provide authentic audiences for student work, contributing to a positive school climate and sense of belonging.

Collectively, these programmatic and spatial elements allow the visual arts to flourish as a core contributor to creativity, critical thinking, and whole-child development within the Essex Elementary experience.

Performing Arts

Music and performing arts are integral to the Essex Elementary experience, fostering creativity, confidence, collaboration, and community connection. Students participate in general music classes weekly, where instruction emphasizes active engagement—singing, listening, improvising, moving, playing instruments, and responding to music. Through these experiences, students develop foundational skills in creating, performing, responding, and connecting, consistent with the Massachusetts Arts Curriculum Frameworks.

In addition to general music, students may pursue instrumental lessons through a pull-out instruction model and can participate in before- or after-school ensembles—including band, chorus, and musical theatre opportunities. These programs nurture self-expression, discipline, and teamwork while building cultural appreciation and artistic literacy. A highlight of the performing arts experience is the annual cross-district Fifth Grade play, which brings together music, drama, staging, and public performance, serving as a capstone celebration of students' growth.

Instruction is grounded in principles of multiple intelligences, recognizing that music supports learning across cognitive, social, emotional, and motor domains. Performing arts experiences strengthen confidence, public speaking, and the ability to collaborate—skills that extend well beyond the stage.

To support high-quality music and performing arts instruction, the school requires:

- A dedicated general music classroom with flexible seating, movable furniture to allow for dance space, appropriate acoustic treatment, and storage for instruments and instructional materials.
- A large performance and rehearsal space suitable for chorus, ensemble work, and dramatic presentations, equipped with adjustable lighting and sound amplification.
- A small lesson or practice room for instrumental pull-outs, individual coaching, and sectional rehearsals.
- Music and performance spaces located near each other to support smooth transition between practice and performance locations.
- Sound isolation to minimize disruption to adjacent academic areas.
- Digital technology for recording, playback, and multimedia integration.

Display and exhibition areas throughout the building will allow students to share their artistic accomplishments with authentic audiences, reinforcing pride and community engagement. Collectively, these programmatic and spatial features ensure that music and performing arts remain central components of a whole-child approach—developing students who are tuneful, artful, expressive, and confident contributors to their school and community.

Physical Education and Wellness

Physical education at Essex Elementary is delivered within a comprehensive wellness model that integrates physical activity, foundational health concepts, and social-emotional skill development to address the needs of the whole child. Students participate in wellness classes twice weekly, with the curriculum emphasizing lifelong healthy habits, fitness, nutrition, motor development, and self-care. Instruction targets refinement of fundamental movement patterns, coordination, and personal fitness through small-sided games, dance and rhythm, gymnastics, and individual skill progressions. These experiences promote teamwork, sportsmanship, and self-regulation, reinforcing learning that occurs in the classroom.

Beginning in the 2025–26 school year, the district will undergo a comprehensive curriculum review to align its health and physical education programming with the Massachusetts Comprehensive Health and Physical Education Frameworks. This work will strengthen vertical alignment, update instructional practices, and support a continuum of developmentally appropriate health and wellness instruction across PreK–12.

A signature component of the District's wellness model is Project Adventure, a K-12 experiential learning strand that builds cooperation, trust, communication, conflict resolution, leadership, goal setting, and creative problem-solving. These activities promote resilience and support students' social-emotional learning competencies. To fully implement this curriculum, the school requires space for low, medium, and high challenge elements, both indoors and outdoors, along with appropriate safety zones, storage, and structurally supported anchor points.

To meet program needs, the gymnasium should include:

- Adequate ceiling height for climbing elements and rope activities
- A divider (sound-attenuating) wall to create two simultaneous teaching stations
- Padded perimeter walls and resilient athletic flooring to support safe movement
- Storage for a wide array of athletic and expeditionary equipment
- An adjacent PE office for supervision, planning, and student support

A regulation-sized basketball court is recommended to support district athletic programming, youth recreation leagues, and community events. This will allow Essex Elementary to continue serving as a practice and competition site for junior varsity, recreation league, and middle school basketball while strengthening community use and reducing scheduling pressure across the district.

Outdoor learning spaces should include:

- Fields for athletic skills practice, PE classes and small games
- A turf surface to extend playability during inclement weather
- Low/medium/high challenge elements for Project Adventure
- Safe circulation pathways for running and movement-based activities

Together, these features ensure that the physical education and wellness program supports the physical, emotional, and social development of all students, fosters healthy lifestyle habits, and aligns with district priorities around whole-child learning, teamwork, and resilience.

Special Education Programs

The special education program at Essex Elementary School serves students with a wide range of learning needs, the majority of whom qualify as moderate special needs students and access a combination of inclusion and pull-out services. The moderate special needs program provides both classroom-based supports and separate instruction delivered individually or in small groups of up to eight students for reading, written language, and mathematics. Currently, moderate special education teachers and the speech-language pathologist share a classroom divided into instructional zones, with one small room available for quieter, separate instruction.

As of FY2025, the moderate needs team consists of three special education teachers, one full-time, and one part-time teaching assistant. To effectively meet student needs, separate instructional spaces are required for teachers to deliver targeted instruction in quiet, acoustically controlled environments. At least two of these spaces should accommodate up to eight students, a teacher workstation, and technology access, while two additional rooms should support small groups of up to four students. All spaces should be located in close proximity to grade-level classroom neighborhoods to support inclusion and efficient transitions.

Because special education enrollment fluctuates with student need and demographic shifts, flexible instructional spaces are required to ensure continuity of programming even as cohorts expand or contract across developmental stages. Locating service delivery spaces adjacent to general education classrooms reduces travel time, protects instructional continuity, and supports discreet movement for students receiving higher-tier interventions.

MERSD is deeply committed to ensuring that every student has access to an inclusive, high-quality education within the least restrictive environment. Essex Elementary School offers a continuum of services that combine in-class supports, targeted interventions, and specialized separate programming designed to meet a range of academic, social, emotional, behavioral, and communication needs. Each program provides individualized instruction while fostering integration within the general education setting, consistent with the district’s values of inclusion, collaboration, and equity.

Maintaining robust, high-quality in-district programming is central to both student outcomes and long-term fiscal responsibility. By providing specialized services within the district, MERSD reduces reliance on out-of-district placements and minimizes the need for specialized transportation, one of the most unpredictable and costly components of special education finance. Beyond operational efficiency, locating specialized programming in-district strengthens students' relationships with peers, fosters continuity of school culture, and supports meaningful inclusion in extracurricular and community-based learning. These benefits reinforce the district's commitment to serving students in the least restrictive environment while ensuring equitable access to comprehensive supports close to home. *(Appendix G: Special Education Program Review.)*

Academic and Communication Enhancement (ACE)

The Academic and Communication Enhancement (ACE) program serves students in grades K–5 with complex language-based learning disabilities who require a structured, language-rich environment and intensive instructional support. The program is designed to be organized into two cohorts—lower elementary and upper elementary—each serving six to eight students with two teachers. Instruction combines small-group and one-to-one tutorials emphasizing reading, writing, mathematics, oral communication, and language comprehension. Lessons follow a sequential, multisensory structure and incorporate assistive technologies to promote independent access to grade-level content.

This interdisciplinary staffing model requires proximity to shared therapy spaces to support collaboration among special educators, speech-language pathologists, reading specialists, and occupational therapists. Co-location enhances supervision, fosters consistent communication supports, and increases the efficiency of scheduling related services.

Space Considerations: ACE requires one dedicated classroom for each cohort with adaptable layouts for small-group instruction and conferencing. Each classroom should include writable surfaces, acoustic control to support focused language instruction, and an adjacent breakout or therapy room for speech-language and reading interventions. Ample storage for instructional materials, manipulatives, and assistive technology is required. Locating ACE in proximity to the RISE cohort supports collaboration among specialized staff and facilitates shared use of sensory and therapy resources.

Reaching Independence in Supported Environments (RISE)

The RISE program serves students in grades K–5 with developmental disabilities or genetic disorders who require highly individualized academic, behavioral, and communication support. The program is designed to be organized into two cohorts—lower elementary and upper elementary—each serving six to eight students with two teachers. Instruction is delivered through small-group and one-to-one tutorials, emphasizing functional academics, communication, life skills, and social-emotional development. Students receive consistent support across the school day, including transitions, lunch, and recess, to reinforce skill generalization.

The program is staffed by an interdisciplinary team that includes a certified special education teacher/board-certified behavior analyst, registered behavior technicians, an occupational therapist, a

speech-language pathologist, and a physical therapist. Students participate in social skills groups, daily living instruction, and specialized case management, and receive ongoing collaboration between home and school.

Increasing numbers of students with autism and complex learning profiles—especially at the preschool and primary levels—highlight the continued necessity of specialized instructional environments and intentionally designed sensory-supportive spaces as students progress through the continuum of services.

Specialized Program Components include:

- Self-contained and inclusion opportunities aligned to the Massachusetts Curriculum Frameworks
- Applied Behavior Analysis (ABA) principles embedded across instructional domains
- Specialized reading and math methodologies (Reading Mastery, Reading Milestones, Visualizing and Verbalizing, Number Worlds, Do the Math)
- Social Thinking and Circles curricula to promote social understanding
- Assistive technology that supports communication and independence
- Consistent data-driven decision-making and progress monitoring

Space Considerations: RISE requires two dedicated classrooms—one for each cohort—with defined areas for academic instruction, sensory regulation, and life-skills practice. Each classroom should include:

- An adjacent breakout or therapy room
- Adaptive restroom facilities
- Low-stimulus lighting and acoustic control
- A kitchenette or food-prep area for daily living skills

Direct access to outdoor learning areas and safe circulation paths supports experiential learning and safe movement during sensory breaks. Co-location with ACE will enable shared therapy resources, coordinated staffing, and efficient scheduling.

Accessibility and Specialized Supports

Essex Elementary has historically served students with hearing impairments and other physical challenges. The new facility must continue to incorporate:

- Sound-field amplification systems in instructional spaces
- Sound-attenuating panels in targeted rooms
- Assistive listening devices
- T-coil or compatible hearing loop systems (where applicable)
- All instructional and public spaces must be fully accessible, with:
- Barrier-free circulation
- Elevator/lift systems
- Accessible restrooms
- Adaptive playground equipment

The current building's split levels and stair configurations create mobility barriers. A renovated or rebuilt Essex Elementary must eliminate these limitations and embody universal design principles, ensuring that every student can participate fully in all aspects of school life.

Design Priorities Across Programs
To ensure successful delivery of specialized instruction, the new facility should include:

- Small-group rooms adjacent to classroom neighborhoods
- Sensory and calming spaces accessible without long transitions
- Therapy rooms for OT, PT, and speech-language services
- Secure storage for adaptive and communication devices
- Quiet testing environments for standardized assessments
- Flexible circulation patterns that support discreet movement

As part of the Essex Elementary building project, specialized programming—including Preschool, ACE, and RISE—will be intentionally located at Essex to align program cohorts, strengthen interdisciplinary staffing, and minimize unnecessary transitions between buildings as students progress through the continuum of services.

These investments reflect MERSD's commitment to inclusive practice, equity of access, and the delivery of high-quality specialized instruction within the least restrictive environment.

Technology / Vocational Programs

Aligned with Technology Instruction Policies & Program Requirements)

Technology instruction at Essex Elementary builds upon the district's broader Technology Instruction Policies and Program Requirements by ensuring that digital tools, resources, and learning experiences are embedded throughout the instructional day. The program is intentionally designed to provide both dedicated instruction, where foundational digital skills, coding concepts, and responsible online behavior are explicitly taught, and integrated instruction, where students apply these skills within core subjects such as literacy, mathematics, science, and social studies. This balanced approach ensures that students receive focused skill development while also experiencing authentic, real-world application across the curriculum.

Students engage in dedicated Digital Literacy and Computer Science (DLCS) instruction as well as integrated technology use within core curriculum areas. The program is designed to build strong foundations in digital literacy, research, critical thinking, and problem solving, ensuring that students develop the skills needed to navigate an increasingly complex digital landscape. Students have hands-on opportunities with a variety of technology tools and platforms, including introductory coding, robotics, multimedia creation, and collaborative virtual environments. This integrated approach emphasizes creativity, communication, teamwork, and responsible engagement as digital citizens.

A dedicated technology instructional space within the Learning Commons will support both quiet, independent exploration and active, project-based collaboration. will support both quiet, independent exploration and active, project-based collaboration. This environment will allow students to engage deeply in computational thinking, engineering concepts, and design practices, while also providing opportunities for small-group instruction, guided inquiry, and iterative prototyping. Instruction includes explicit guidance in safe and ethical online behavior, helping students understand appropriate communication, information evaluation, data privacy, and cyber-safety expectations.

Technology access within classrooms includes interactive display boards, audio amplification systems, and sufficient space and electrical capacity for 1:1 device charging carts. Flexible access to shared devices allows students to create, research, communicate, and problem solve as part of everyday learning. As technologies continue to evolve, the school's infrastructure must support adaptable use of new tools, platforms, and applications.

To sustain continuous, high-quality access, the building must be equipped with a robust network infrastructure and building-wide wireless coverage capable of supporting hundreds of devices simultaneously. Reliable bandwidth, device management systems, and network security will be essential to ensure seamless instructional use and equitable access. Together, these elements create a technology-rich learning environment that empowers students to explore new ideas, innovate collaboratively, and develop the digital literacy and problem-solving skills necessary for future academic and workplace success.

Transportation Policies

Transportation to Essex Elementary School will include a combination of bus, car, bicycle, and walking routes, reflecting the diverse needs of students and families within the district. Arrival and dismissal procedures will be designed to ensure safe, efficient, and predictable traffic flow. Designated bus loops will allow for streamlined boarding and unloading, while clearly marked carline procedures will reduce congestion and maintain separation between vehicle traffic and pedestrian pathways. Safe and accessible walking and biking routes will be integrated into the site plan, encouraging healthy habits and supporting students who live within proximity to the school.
Adequate parent pick-up and drop-off areas will be located near the gymnasium and cafeteria wing to minimize congestion in academic corridors and maximize student safety. Outdoor circulation areas will be designed to provide clear sightlines, age-appropriate supervision, and minimal conflict between cars, buses, and pedestrian traffic. Bicycle racks, crosswalks, and appropriate signage will help promote safe active transportation options.

In addition, the site should include a dedicated Pre-K drop-off zone that minimizes exposure to high-volume traffic areas and allows families to escort students directly to the early childhood entrance. This area will provide short-term parking for strollers and car seats, allow space for adult-to-adult handoff,

and ensure that early learners are not navigating busy corridors or long exterior walks during peak arrival times.

This dedicated circulation pattern aligns with early childhood best practice, which emphasizes predictable, developmentally appropriate transitions, minimized exposure to high-volume traffic areas, and opportunities for direct adult-to-adult handoff. By reducing travel distance and complexity at arrival and dismissal, the design supports young learners' regulation, safety, and readiness to engage in instruction as soon as they enter the building. The separation of Pre-K circulation from older student traffic also decreases sensory overwhelm and supports individualized pacing for students who may require additional time or assistance during transitions.

The transportation plan emphasizes accessibility and equity by ensuring that all students—regardless of mobility needs or geographic location—have consistent, reliable, and safe transportation to and from school. Walkways, curb cuts, and boarding zones will be designed to meet ADA requirements, and transportation services will be coordinated to support students with specialized needs.
Together, these strategies create a school site that is safe, efficient, welcoming, and responsive to the full range of transportation needs within the Essex Elementary community.

Functional & Spatial Relationships and Key Programmatic Adjacencies

The design of the new Essex Elementary School will embody MERSD's commitment to student-centered, inclusive, and collaborative learning. Functional and spatial relationships will be organized to support the district's instructional philosophy—fostering flexibility, connection, and equitable access to high-quality learning environments for all students.

The building will be structured around grade-level classroom neighborhoods, each designed to promote a sense of belonging while encouraging movement, collaboration, and cross-grade interaction. Adjacencies between core classrooms, small-group rooms, and shared learning spaces will strengthen instructional alignment, collaboration, and community cohesion across grade levels.

Classroom Neighborhoods and Small-Group Learning

Each neighborhood will include a cluster of classrooms with direct access to small-group rooms and shared collaboration spaces, supporting inclusive instruction, the district's Multi-Tiered System of Support (MTSS), and flexible grouping structures. These localized breakout areas will allow for differentiated learning and strengthen opportunities for students to lead, collaborate, and engage in hands-on work with increasing independence. By providing multiple pathways for interaction—student-to-student, student-to-teacher, and teacher-to-teacher—the design reinforces our commitment to dynamic, active learning environments.

Early Learning Adjacencies

The Pre-Kindergarten and Kindergarten classrooms will anchor the lower-elementary neighborhood, featuring direct outdoor access, age-appropriate restrooms, flexible play areas, and sensory spaces that foster exploration and independence. These classrooms will include child-height fixtures, built-in storage, and adjacent therapy or small-group rooms to support integrated services for students with special needs. Early learning spaces will set the tone for the school's design—nurturing curiosity, creativity, and belonging.

Specialist and Experiential Learning Spaces

Specialist classrooms will provide environments purpose-built for creativity, experimentation, and interdisciplinary learning:

- Science spaces will include sinks, counter space, waterproof/non-slip flooring, and multiple outlets, designed to support inquiry, safe circulation, and technology integration.
- Visual Arts rooms will feature a kiln room with proper ventilation, multi-height sinks, drying racks, and storage cabinets, with ample natural and adjustable lighting for studio work and student exhibitions.
- Music instruction will occur in a large movement-oriented classroom with risers, instrument storage, a small lesson room, and acoustic treatments to ensure sound quality and reduce noise transfer. The music area will be located near the stage or multipurpose gathering space to support performance-based learning.

The Library/Media Center will serve as a literacy and innovation hub, connecting students to both print and digital resources. Centrally located for easy access, it will include flexible furniture, research zones, and media-creation technology. The library will also serve as a collaboration space for interdisciplinary projects and whole-school programming, aligning with MERSD's emphasis on inquiry, communication, and technology integration.

Physical Education, Wellness, and Community Gathering Spaces

The Gymnasium and Wellness Suite will include a regulation gym floor with padded walls, seating for wellness instruction, Project Adventure installations, and accessible storage. An adjacent office for physical education staff will provide proximity for supervision and instructional planning. The gym will support both daily instruction and community use, reflecting MERSD's belief that schools serve as centers of community engagement.

A flexible cafetorium or multipurpose space will serve as the heart of school gatherings, accommodating assemblies, performances, and family events while maintaining appropriate separation from instructional areas for security and acoustics. This space supports the district's goal of providing a shared, large-scale school community environment where students and families can gather in small, large, or whole-school groupings, reinforcing the school's role as a hub of community connection.

All shared spaces will be designed with universal design principles, ensuring accessibility for individuals with mobility, sensory, and physical challenges. The building's design will reflect MERSD's core value of inclusion—ensuring every student and community member can engage fully in the life of the school.

Teacher Collaboration and Professional Spaces

As outlined in the Teacher Planning section, collaboration is central to MERSD's instructional model. To support this, each classroom neighborhood will include teacher collaboration rooms and professional work areas that are easily accessible from instructional spaces. These areas will provide technology access for data analysis and lesson design, flexible seating for team meetings, and storage for shared instructional resources.

A centralized professional workroom or staff commons will support all-staff collaboration, professional development, and interdisciplinary planning. These adult-centered environments will be designed for comfort, productivity, and reflection, emphasizing that supporting educator collaboration enhances student learning and aligns with MERSD's culture of continuous improvement.

Functional Organization Summary

The organization of Essex Elementary School reflects the district's guiding priorities:

- **Student-Centered Design:** Learning neighborhoods that foster inclusion, flexibility, and belonging.
- **Collaborative Culture:** Adjacencies that promote teamwork, co-teaching, and shared resource use.
- **Community Connection:** Central gathering and performance spaces that unite students, families, and the broader community.
- **Future Readiness:** Specialized, technology-rich environments that support interdisciplinary, hands-on learning.
- **Universal Access:** Spaces designed for safety, comfort, and full participation by all members of the school community.

Together, these functional and spatial relationships create a cohesive, flexible, and connected learning environment that harnesses the energy of children, fosters student leadership, extends learning beyond the traditional school day, and supports the school's role as a vibrant hub for the community.

Supervision and Shared Space Utilization

Shared breakout rooms, collaboration zones, and project spaces will be scheduled through a digital reservation system to ensure equitable access across grade levels. Interior glazing and transparent sightlines allow staff to supervise students working independently or in small groups without leaving core instructional areas. Learning neighborhoods are intentionally compact, minimizing travel and promoting safety. This design normalizes flexible grouping and student agency while preserving continuous instructional oversight.

Security & Visual Access Requirements

Student safety is a top priority for the Manchester-Essex Regional School District, and the design of the new Essex Elementary School will reflect contemporary best practices in school safety, supervision, and emergency response. The district maintains a comprehensive emergency operations framework that is reviewed annually in collaboration with local law enforcement, fire officials, town emergency management personnel, and district leadership. Annual audits and developmentally appropriate drills ensure that protocols remain current and aligned to state requirements. The district's Medical Emergency Response Plan (MERV) was most recently submitted to the Massachusetts Department of Elementary and Secondary Education in September 2025 and will continue to be updated annually.

During the school day, the building will maintain a single, controlled point of entry, improving upon the current model through the addition of a secure, double-door vestibule. Visitors will be required to verify identity and purpose through a staffed reception desk and electronic access-control system before gaining entry to instructional areas. Credentialing, screening, and check-in procedures will reinforce a layered approach to access control while maintaining a welcoming environment for families and community members.

The building will include zoned access, allowing Essex Elementary to safely support community use during evenings and weekends. Access will be granted only to designated program areas—such as the gymnasium, cafeteria/kitchen, multipurpose/performance spaces, select restrooms, and the Learning Commons—while academic wings remain locked and isolated through controlled door hardware. Adjoining access-control points will allow school leadership to initiate partial or full lock-out configurations based on operational needs.

A comprehensive digital surveillance system will monitor critical public areas, entrances, major circulation corridors, parking lots, playgrounds, pedestrian walkways, and perimeter access points. Camera feeds will be accessible to school leadership and district safety teams and, when appropriate, interoperable with local law enforcement during emergency events. Exterior perimeter access roads will enable emergency vehicles to reach multiple sides of the building, improving response times for medical, fire, or security incidents. To support emergency response, the facility will include Knox Boxes (secure key storage systems) for Essex police and fire personnel, ensuring rapid access during urgent situations. Clear signage and multiple egress points will assist responders and enhance evacuation safety.

Classroom neighborhoods will be designed with clear sightlines to reduce isolated or concealed areas. Lockable classroom doors with age-appropriate hardware and remote lockdown capability will support swift protective action if needed. Emergency notification technology, two-way communication systems, and integrated access control will align with district safety protocols.

Site circulation will reinforce safe movement patterns by locating parking, bus loops, and parent pick-up/drop-off areas near the main entry, allowing staff to maintain continuous visual oversight during arrival and dismissal. Clearly delineated pedestrian pathways and accessible routes will support walkers, bicyclists, students with mobility needs, and families using strollers or adaptive devices.

These architectural and operational strategies will create a welcoming, developmentally appropriate environment that balances physical safety with the district's commitment to positive school culture, student belonging, and community partnership. The school will remain both secure and accessible—supporting learning, family engagement, and civic activity—while embedding multiple layers of safety that protect students, staff, and community members every day.

Typical Day & Week in the Life of a Student

A typical day at Essex Elementary School reflects the district's commitment to student-centered, developmentally responsive learning that nurtures the academic, social, and emotional growth of every child. The day begins at 8:25 a.m. with Morning Meeting, a daily community-building routine that strengthens relationships, sets a positive tone for learning, and reinforces social-emotional skills aligned with MERSD's Vision of the Graduate.

Following Morning Meeting, students engage in a Literacy Block that blends whole-group instruction, small-group, small group conferencing and systemic instruction in foundational skills, reading, and writing and opportunities for independent practice. Instruction emphasizes authentic reading, writing, and speaking experiences that develop critical thinking and communication skills.

After a brief movement and snack break, students transition to Mathematics, where lessons build conceptual understanding through hands-on exploration, inquiry, and problem-solving. Students work collaboratively and independently using manipulatives, visual models, and technology to strengthen reasoning and perseverance.

Midday includes lunch and recess, essential times for play, social connection, and physical well-being. In the afternoon, students participate in Science or History/Social Science experiences that promote curiosity and exploration through project-based investigations and inquiry learning. These lessons connect to real-world phenomena and help students understand their roles as informed, engaged citizens.

Sample Student Schedule

Time	Activity
8:25 AM	Arrival & Morning Meeting (community-building, SEL focus)
8:45 AM	Literacy Block (whole group mini-lesson; small-group guided reading/writing; independent practice)
10:15 AM	Movement/Snack
10:30 AM	Math (concept lesson; manipulatives; small-group practice/centers)

11:45 AM	Lunch & Recess
12:30 PM	Science or History/Social Sciences (hands-on investigations or inquiry projects)
1:15 PM	Specialist (e.g., PE, Art, Music, Library/Research, Technology)
2:00 PM	SEL/Closing Circle; Intervention/Enrichment as scheduled
2:55 PM	Dismissal

Each day also includes a specialist class—such as Art, Music, Physical Education, Library/Research, or Technology/Engineering—that supports creative expression, movement, and interdisciplinary learning. These experiences expand student engagement and reinforce the district's belief in educating the whole child through multiple pathways of learning and success.

The day concludes with a Closing Circle, during which students reflect on their learning, celebrate accomplishments, and set goals for the next day. Teachers also provide targeted intervention and enrichment as part of MERSD's Multi-Tiered System of Supports (MTSS) framework, ensuring that every learner is appropriately challenged and supported. Dismissal at 2:45 p.m. concludes a day intentionally designed to balance rigor, engagement, and belonging.

Week in the Life of a Student

Across the week, the Essex Elementary schedule provides a balanced, integrated learning experience aligned with MERSD's strategic priorities: Authentic Learning for Every Student, Social-Emotional Learning, and Inclusive Culture. Instructional time is intentionally distributed among literacy, mathematics, science, history/social science, and SEL, ensuring coherence across disciplines. Students participate in six 45-minute specialist blocks each week, providing consistent opportunities to explore the arts, movement, research, and technology. Within this structure, intervention and enrichment blocks are embedded to provide targeted Tier 2 and Tier 3 supports based on progress-monitoring data and student need.

This approach reflects MERSD's commitment to differentiation, collaboration, and continuous growth, ensuring that every student engages in meaningful, connected learning experiences that promote curiosity, confidence, and compassion. The weekly rhythm fosters both academic achievement and a strong sense of community, embodying the district's mission to empower students as capable, creative, and caring learners prepared to thrive in an ever-changing world

Week In the Life Overview

Activity	Locations	Benefit
ELA (Literacy)	Classroom; Breakout rooms; Learning commons	Reading/writing foundations; differentiation
Mathematics	Classroom; Small-group rooms; Project labs	Fluency, modeling, problem-solving
Science	Project areas; Maker spaces; Outdoor zones	Inquiry, engineering, authentic investigation
Social Studies	Classroom; Collaboration zones; Presentation areas	Civic learning, culture, and research skills

PE (2x)	Gym; Fields; Movement zones	Fitness, coordination, readiness for learning
Visual Arts	Art studio; Project zones; Display corridors	Creative expression, reflection, belonging
Music	Music room; Practice room; Performance space	Rhythm, ensemble, confidence
Library	Learning commons; Breakout rooms	Digital citizenship, inquiry, reading
Technology	Maker spaces; Robotics rooms	Computational thinking, prototyping
Outdoor Learning	Outdoor classroom; Gardens; Trails	Environmental literacy, sensory regulation
Intervention (MTSS)	Small-group rooms; Support spaces	Targeted instruction and enrichment
SEL & Community	Classroom meeting areas; Commons	Belonging, empathy, conflict resolution

Space Implications

The daily and weekly rhythm of instruction at Essex Elementary underscores the need for flexible, adaptive spaces that support a full range of learning experiences—from active collaboration to quiet reflection. Classrooms should accommodate whole-group instruction, small-group collaboration, and individualized learning, with movable furniture and integrated technology to enable seamless transitions throughout the day.

The schedule's emphasis on project-based and inquiry learning in literacy, mathematics, science, and history/social science highlights the need for breakout areas, distributed book nooks, and shared project spaces within grade-level neighborhoods. These areas will allow students to engage in investigations, hands-on projects, and interdisciplinary collaboration beyond the classroom setting.

Frequent integration of social-emotional learning and movement calls for access to outdoor learning areas, calming spaces, and flexible furniture configurations that can shift between active engagement and restorative practices. Specialist spaces—such as art, music, physical education, library and technology—should be centrally located and easily accessible from classroom neighborhoods to support the flow of the daily schedule and interdisciplinary learning.

Finally, spaces designed for intervention and enrichment must be embedded within or adjacent to classroom neighborhoods, providing visibility, accessibility, and proximity for small-group instruction and individualized support. These design features will ensure that the Essex Elementary School facility fully supports the district's vision of authentic, inclusive, and student-centered learning for every child.

Play, Movement, and Multi-Use Indoor Community Space

MERSD is committed to play as part of a comprehensive educational program. Multiple daily recess opportunities provide practice in communication, negotiation, cooperation, sharing, problem solving, and self-regulation, reinforcing classroom learning and supporting overall well-being (per AAP guidance). Play supports creativity, peer connection, physical development, and the acquisition of critical social-emotional skills.

Recess promotes social and emotional learning and development for children by offering them a time to engage in peer interactions in which they practice and role play essential social skills. This type of activity, under adult supervision, extends teaching in the classroom to augment the school's social climate. Through play at recess, children learn valuable communication skills, including negotiation, cooperation, sharing, and problem solving as well as coping skills, such as perseverance and self-control. These skills become fundamental, lifelong personal tools. Recess offers a child a necessary, socially structured means for managing stress. By adapting and adjusting to the complex school environment, children augment and extend their cognitive development in the classroom.
(American Academy of Pediatrics)

At Essex Elementary, students enjoy multiple recess periods that promote social interaction, creativity, and physical activity. The school currently provides age-appropriate playgrounds, a grass playing field, and a large blacktop area that can be cleared for winter recess, ensuring consistent outdoor play opportunities throughout the year. However, coastal climate conditions, seasonal precipitation, cold extremes, and saturated fields limit outdoor access during significant portions of the school year.

Future design considerations include differentiated play structures for younger and older students, accessible play that is ADA compliant and allows all peers to participate in play together, a plowed and accessible area for winter months, and a covered outdoor space for use during inclement weather. The outdoor play space should support skill development and application across gross motor, fine motor, creativity, collaborative teamwork, and exploration/curiosity, while fostering a connection to sense of place. In addition, a flexible indoor movement room is necessary to maintain equitable access to recess and active play when outdoor conditions are unsafe or unavailable.

Play and movement are essential components of healthy child development and are deeply embedded within the instructional and social-emotional framework of Essex Elementary School. Research and experience both reinforce that students learn best when they have frequent opportunities to move, collaborate, regulate, and explore through active, developmentally responsive engagement. At the elementary level, play supports executive functioning, builds problem-solving skills, strengthens peer relationships, and provides critical outlets for sensory regulation.

In order to maintain consistent access to movement, particularly during indoor recess periods, the school must be supported by spaces designed to host safe and structured play during times when outdoor environments are unavailable. The primary gymnasium is regularly scheduled for instructional delivery of the physical education curriculum and wellness programming, leaving limited availability for concurrent indoor recess blocks, student movement breaks, and grade-level common activities. Without an additional dedicated space, these needs place competing demands on the master schedule, risking reduced access to mandated instructional minutes and increased dysregulation in common areas.

For students receiving specialized services, access to indoor movement spaces is not a convenience — it is a therapeutic requirement. Occupational therapy, physical therapy, adaptive movement, gross-motor

development, and sensory regulation activities are integral to many students' Individualized Education Programs (IEPs). These services benefit from access to equipment that must be safely stored and deployed in environments that allow climbing, stretching, balance, full-body movement, and fine-motor practice. The primary gym is often acoustically and socially overstimulating for these students and is rarely available during high-volume instructional blocks. A smaller multi-use movement room provides a quieter, developmentally appropriate space that can support individualized instruction, reduce stigma, and meet the requirements of 603 CMR 28.03 regarding appropriate instructional environments aligned to the least restrictive setting.

Beyond recess and therapeutic programming, flexible interior space plays an important role in supporting the school's whole-child approach. Grade-level community meetings, author visits, robotics demonstrations, STEAM showcases, family engagement nights, student leadership assemblies, and project-based learning exhibitions require space that is sized appropriately for small- and medium-group gatherings. The primary gym, while suitable for large events, is often too large, too loud, or acoustically reflective for younger learners, students who experience sensory sensitivities, or programs that rely on spoken word and presentation. A smaller multi-use space offers improved acoustics, moderated lighting, and a more age-appropriate scale.

As a community hub, Essex Elementary also extends learning beyond the traditional school day. Before- and after-school programming, enrichment activities, youth recreation, town partnership initiatives, and intergenerational programs benefit from access to a community-facing space that can be separated from academic neighborhoods while maintaining safe, secure entry. During evenings and weekends, the flexible multi-use room provides the community with an adaptable venue that supports recreation, meeting space, and connection without compromising the security of the instructional core. This zoning strategy aligns with MSBA guidance that supports separation of community access from instructional spaces for safety and operational efficiency.

The design response to these needs is a smaller, flexible indoor gym/large-group movement room located adjacent to specialist neighborhoods and accessible to occupational and physical therapy staff. The room should include acoustically absorbent surfaces, durable and impact-resistant flooring, storage for therapeutic and gross-motor equipment, and sufficient ceiling height to support climbing structures, movement circuits, and fitness activities. By distributing access to movement opportunities across the day, this space also reduces behavioral challenges, increases readiness to learn, and supports transition routines that lower sensory load.

Without this secondary movement space, Essex Elementary would face frequent scheduling conflicts; limited access to recess during inclement weather; reduced availability of therapeutic environments; and fewer meaningful opportunities for grade-level collaboration, community partnerships, and student showcases. These constraints would disproportionately affect students with disabilities, younger learners, and those who rely on movement to self-regulate. Including a smaller indoor multi-use gym

ensures that the school's learning environment remains developmentally attuned, instructionally flexible, operationally efficient, and community responsive.

Extended Day / Community Programs

Essex Elementary School plays a central role in the civic life of the community, extending well beyond the regular school day. The district operates a before-school program called the Breakfast Club, providing safe, reliable care and supervision that supports smooth morning transitions for families. After-school programming is offered through a combination of district-run enrichment activities, school-based student clubs, and on-site YMCA childcare services. Together, these offerings promote social development, creativity, physical activity, and academic support in a structured, nurturing environment.

Looking ahead, a new or renovated facility should anticipate the potential future development of an Essex Parks & Recreation program that could function as a partner to Essex Elementary, similar to the existing relationship between Memorial School and Manchester Parks & Recreation. The Memorial School building project intentionally included dedicated space for after-school and summer programming; planning for analogous capacity in Essex would ensure equitable access to recreational enrichment across both towns.

During non-school hours, key areas of the building — including the gymnasium, cafeteria, library, and outdoor fields— are regularly used for athletics, community recreation, cultural events, concerts, intergenerational programming, and civic gatherings. Essex Elementary also serves as the venue for annual and fall Town Meetings and hosts community breakfasts and other municipal events. This extended use reinforces MERSD's belief that schools are vital public resources and centers for lifelong learning.

The gymnasium is heavily utilized by local youth sports programs and is currently the home site for junior varsity, recreation league, and middle school basketball. To continue supporting these programs safely and effectively, the new or renovated facility should include a regulation-size court with appropriate clearances, resilient athletic flooring, adequate spectator space, accessible restrooms, and storage for athletic equipment. These features will allow for league play, practices, and weekend community athletics while reducing scheduling pressure across district facilities.

To balance community access with student safety, the design of the new or renovated building will ensure that community-use spaces are located near a secure, controlled entry and can be fully sectioned off from academic wings during after-hours use. Access controls, visibility features, and strategic circulation patterns will allow evening and weekend programming without opening classroom neighborhoods or student support spaces.

The school's enrichment program extends student learning through authentic, hands-on experiences that build curiosity and interdisciplinary connections. In partnership with the Essex PTO and the

Spaulding Education Fund, students engage in visiting-artist workshops, STEM demonstrations, author talks, music residencies, and experiential programming. These activities occur at both grade-level and whole-school scales, typically hosted in flexible gathering areas sized for large groups.

To support these functions, the new or renovated facility should include a multi-use performance and assembly space equipped with audiovisual technology, stage lighting, acoustic treatments, and secure storage. Such a venue will accommodate assemblies, celebrations of learning, enrichment events, and community programming while enabling smooth transitions between instructional and extracurricular experiences.

The Manchester Essex Regional School District's Middle High School athletics program currently faces significant limitations due to the absence of a local track facility. As a result, despite having enough student participation to merit its own independent track and field team, the District must participate as part of the Gloucester High School track program in order to access a regulation track for practices and competitions. This cooperative arrangement creates transportation challenges, reduces program autonomy, and limits the District's ability to provide consistent, developmentally appropriate training schedules for student-athletes.

Developing a combined turf field and perimeter walking/running track at the new or renovated Essex Elementary School would directly address these needs while expanding athletic access across grade levels. The facility would also serve as a dedicated training venue for the Middle High School cross country team, providing a reliable surface for interval work, pacing practice, and conditioning. Currently, cross country training relies on a mix of sidewalks, roadways, and open spaces—settings that can present safety and supervision challenges. A purpose-built running loop would significantly enhance safety, consistency, and coaching effectiveness.

Across the district, athletic field capacity is limited and highly scheduled, resulting in teams practicing late into the evening—sometimes until 9:00 PM. These late schedules are not optimal for student health, sleep, academic readiness, or social-emotional wellbeing. Additional rectangular field space would relieve scheduling pressure, increase access, and allow for safer, more developmentally appropriate practice times.

Approximately 70% of Manchester Essex Middle High School students participate in athletics, underscoring the importance of facilities that promote engagement, teamwork, wellness, and belonging. Currently, all interscholastic competitions—except baseball—take place in Manchester. Establishing a competition-capable venue in Essex would increase geographic equity and better integrate Essex students into the district's after-school athletic life.

In addition to school athletics, a turf field and track would support youth sports, recreation leagues, and community programming. A perimeter track would provide safe, accessible activity space for older adults, families, and residents—supporting intergenerational fitness and reinforcing the school's role as a

community hub. Synthetic turf provides reliable playability during inclement weather, reducing cancellations and minimizing field closures due to overuse. Paired with a regulation track, the facility would increase capacity for practice and competition, reduce reliance on off-site partners, and enable year-round conditioning.

A combined turf field and track at Essex Elementary would:

- Enable Manchester Essex to operate an independent track and field program
- Provide a dedicated training facility for cross country
- Reduce reliance on cooperative agreements and transportation
- Improve scheduling equity across teams, seasons, and age groups
- Reduce late practice times, supporting student health and academic readiness
- Expand youth sports and community recreation opportunities within Essex
- Strengthen Essex's connection to district athletics
- Provide an accessible walking track for older adults and families
- Enhance community resilience, serving as a potential emergency support asset

Strategically located, well-lit, and adjacent to parking, this facility would expand regional athletic capacity while exposing Essex Elementary students to healthy role models and active lifestyles each day. This investment aligns with MERSD's commitment to the whole child, promoting physical wellness, social connection, equitable access, and authentic community engagement.

EXECUTIVE SUMMARY

In the fall of 2025, members of the Manchester Essex Regional School District participated in a series of Educational Visioning sessions facilitated by Educational Planner Mike Pirollo and Educational Consultant Paul White from MLP Integrated Design, Inc., in collaboration with JCJ Architecture. Each session was part of a collaborative process designed to inform the Essex Elementary School Feasibility Study and pre-design process. Through interactive workshops and reflective discussions, participants engaged in a step-by-step process aimed at capturing high-level thinking around the following:

- Educational, Architectural, and Community Priorities
- Developmental Needs of PreK–5 Learners
- Vision of Teaching and Learning, Including Practices, Strategies, and Structures
- Vision of Learning Environments that Best Support Student Growth

Through this process, participants shared rich insights about what students need to thrive, how teaching and learning can best support their development, and how the school's physical environment can be designed to align with these goals. The following summary captures the key outcomes and themes that emerged, reflecting the community's aspirations for an educational experience that is responsive, inclusive, and future-focused.

Guiding Educational Principles

The guiding principles emerging from this visioning process emphasize:

1. Students as the Doers and Leaders of Their Own Learning
2. A Learning Environment that Captures and Supports the Energy of Children
3. Flexibility in Space and Practice to Support Collaboration and Engagement
4. A School that Serves as the Hub of the Essex Community
5. Seamless Connections Between Indoor and Outdoor Learning
6. Spaces that Promote Comfort, Belonging, and Accessibility for All Learners

Developmental Considerations & Impacts

Participants reflected deeply on the developmental characteristics of PreK–5 learners, emphasizing the need for environments that balance structure and independence, movement and focus, and social connection and quiet reflection.

They identified major shifts across the early childhood and elementary years, calling for varied and flexible spaces that respond to differences in readiness, regulation, and learning style. PreK and early elementary learners benefit from warm, nurturing environments scaled to their size and independence, while upper elementary students thrive when given opportunities for leadership, autonomy, and peer collaboration.

Movement, sensory regulation, and access to nature were identified as essential to supporting cognitive growth and emotional wellbeing. Participants emphasized that space should not limit engagement—

outdoor classrooms, small breakout areas, and calming zones are as critical to learning as traditional classrooms.

Access, Engagement, and Belonging

Stakeholders envisioned Essex Elementary as a community-centered school where learning extends beyond the classroom walls and across the full day. The facility should support before- and after-school enrichment, family and community gatherings, and integrated partnerships with local organizations such as the library, senior center, and Parks & Recreation. Participants underscored the importance of connection and continuity, valuing relationships that grow across years and across grade levels. Cross-age collaboration, buddy systems, and leadership roles for older students were seen as ways to foster belonging and a shared sense of community.

Teaching, Learning, and the Vision of the Future School

Across all sessions, participants described learning that "sticks" as hands-on, active, joyful, and relevant, learning that connects to real-world experiences and allows students to take ownership. Educators emphasized practices that promote curiosity, critical thinking, and creativity through collaboration, inquiry, and problem solving. The school should enable flexible teaching models, including team-based instruction, project-based learning, and small-group intervention, supported by adaptable spaces and shared professional areas for teacher collaboration. A future Essex Elementary School should celebrate curiosity and encourage risk-taking within a safe, supportive, and inclusive environment.

Design & Physical Space Implications

Participants envisioned a building that reflects Essex's character and values—inviting, connected to nature, and sized for community. Key design implications include:

- Flexible learning neighborhoods that support varied groupings, collaboration, and movement
- Transparency and visibility to promote safety, connection, and shared learning
- Calming and sensory-friendly spaces integrated throughout the school for all learners
- Strong indoor-outdoor connections, with direct access to outdoor learning and play
- Community-scaled gathering spaces for small group, large group, and whole-school events
- Environments that foster comfort, pride, and ownership for students, staff, and families

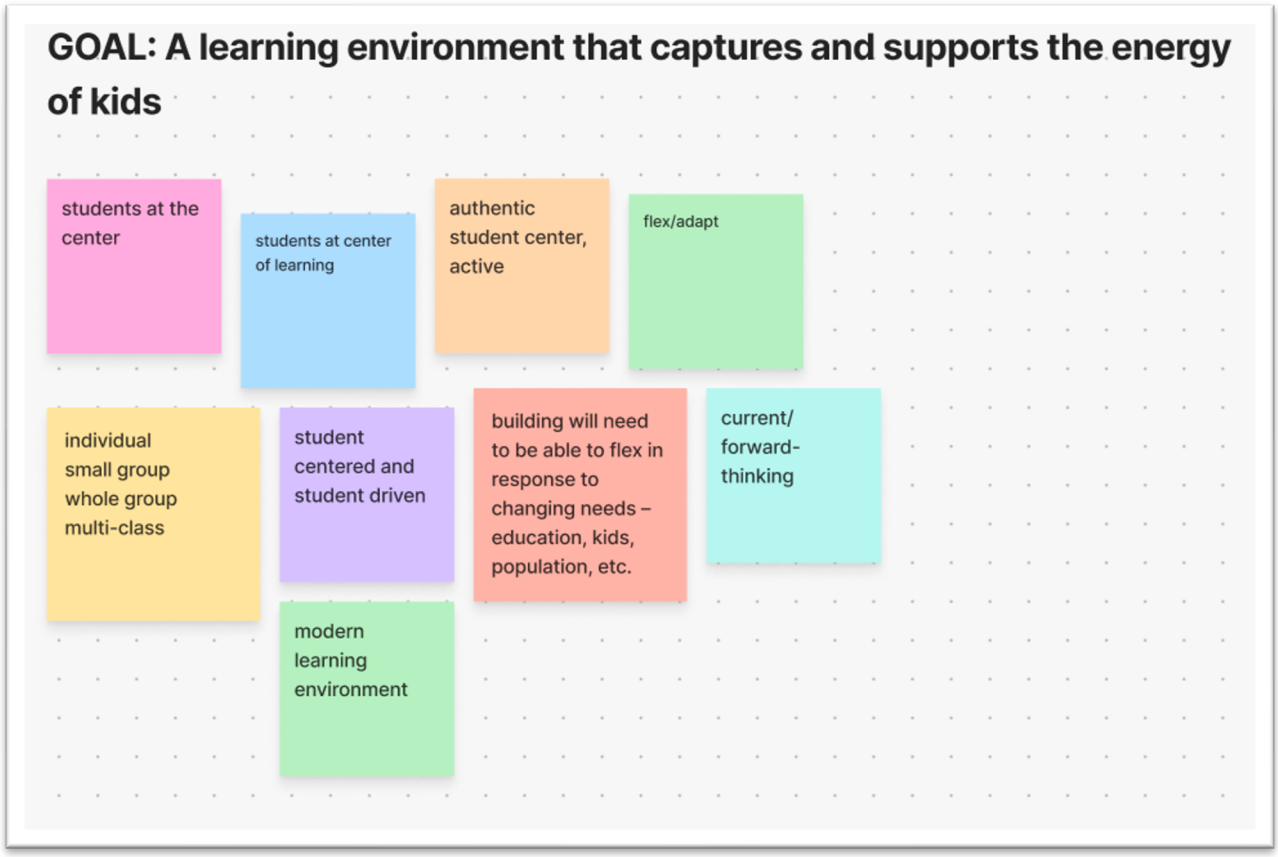
Community Vision

Ultimately, the community envisions Essex Elementary School as a joyful, flexible, and future-ready learning environment, one that celebrates the unique energy of children, strengthens community identity, and honors the developmental journey of every learner.

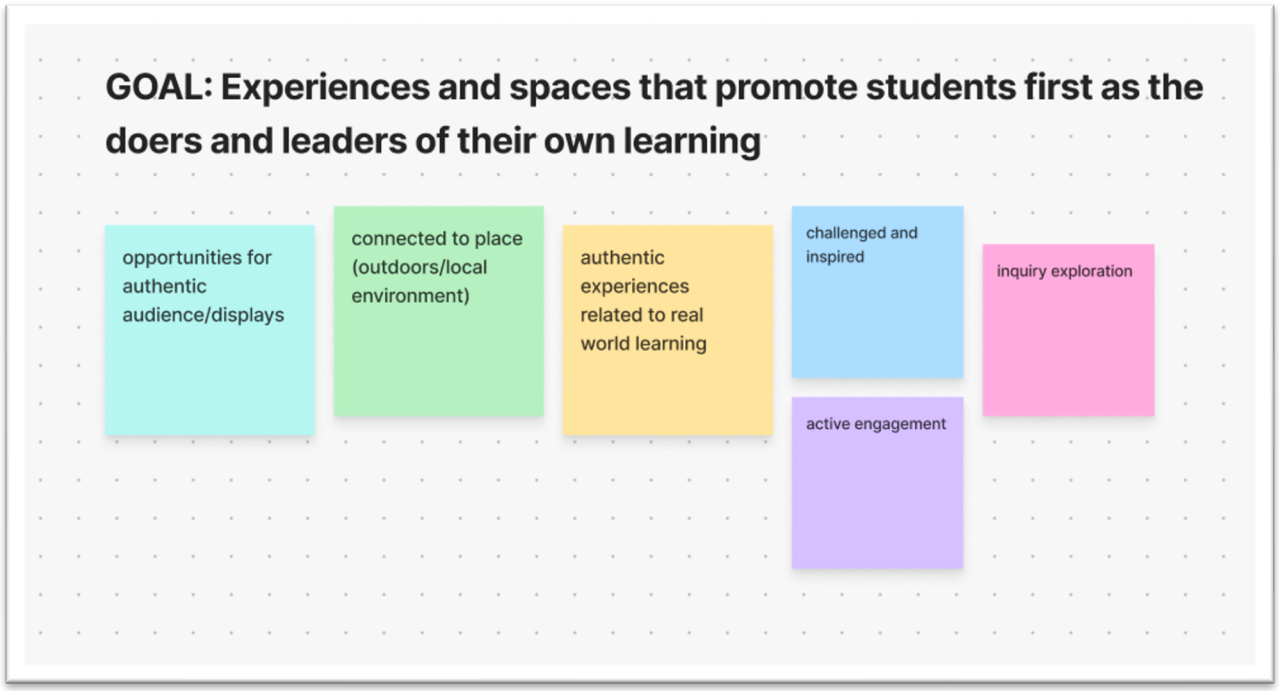
The future Essex Elementary will be a hub for learning and connection, designed to nurture curiosity, confidence, and belonging. It will reflect a shared belief that students learn best when they are engaged, supported, and inspired by an environment that grows with them, academically, socially, and emotionally.

Launch & Priority Mapping Overview

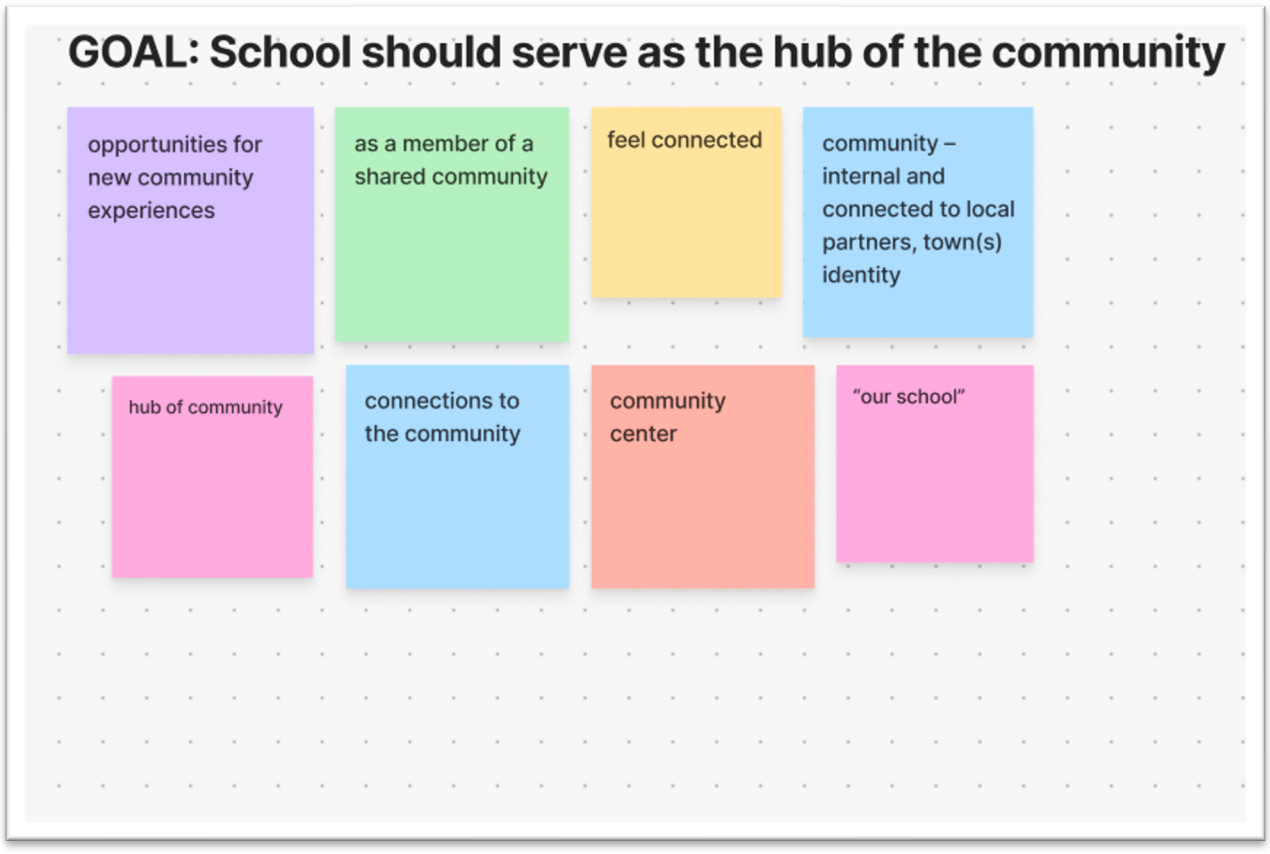
On September 16, 2025, members of Manchester Essex Regional School District attended a meeting with Educational Planner Mike Pirollo from MLP Integrated Design, Inc., along with JCJ Architecture. This meeting was part of the visioning effort for the Essex Elementary School building project. The goal of the meeting was to identify educational, architectural, and community goals and priorities.



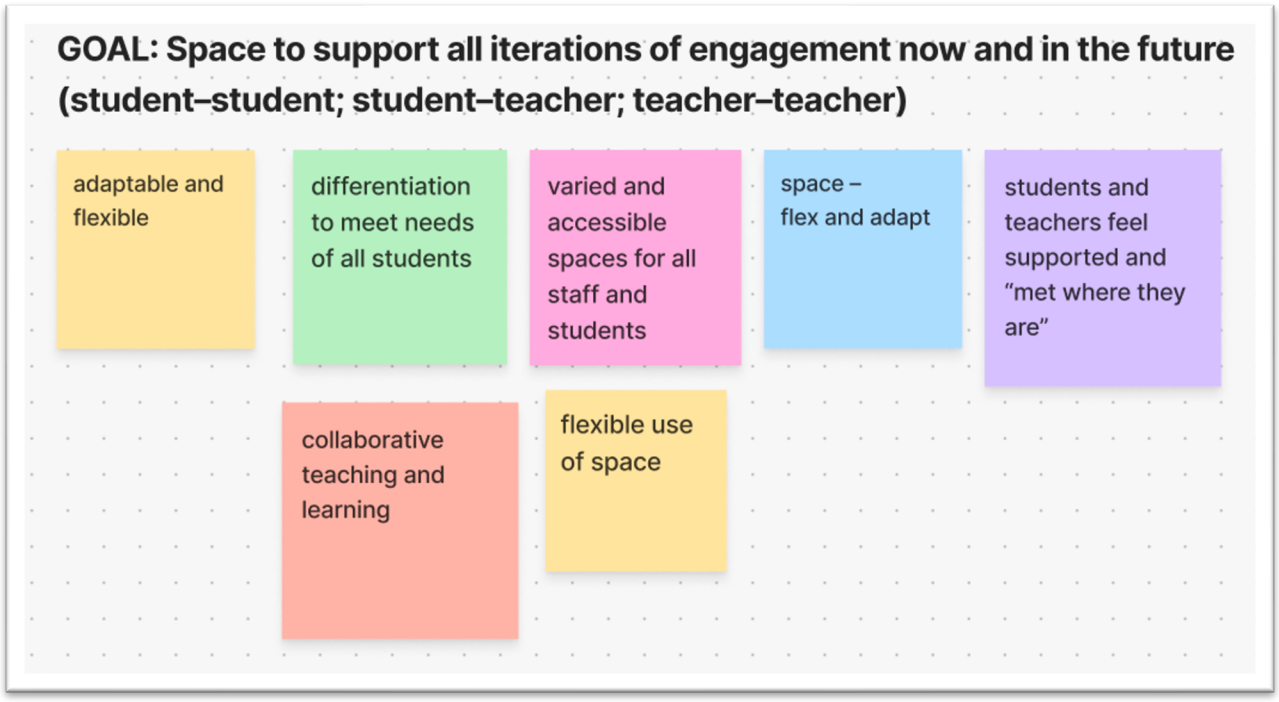
Part 1 - Educational, Architectural, and Community Priorities



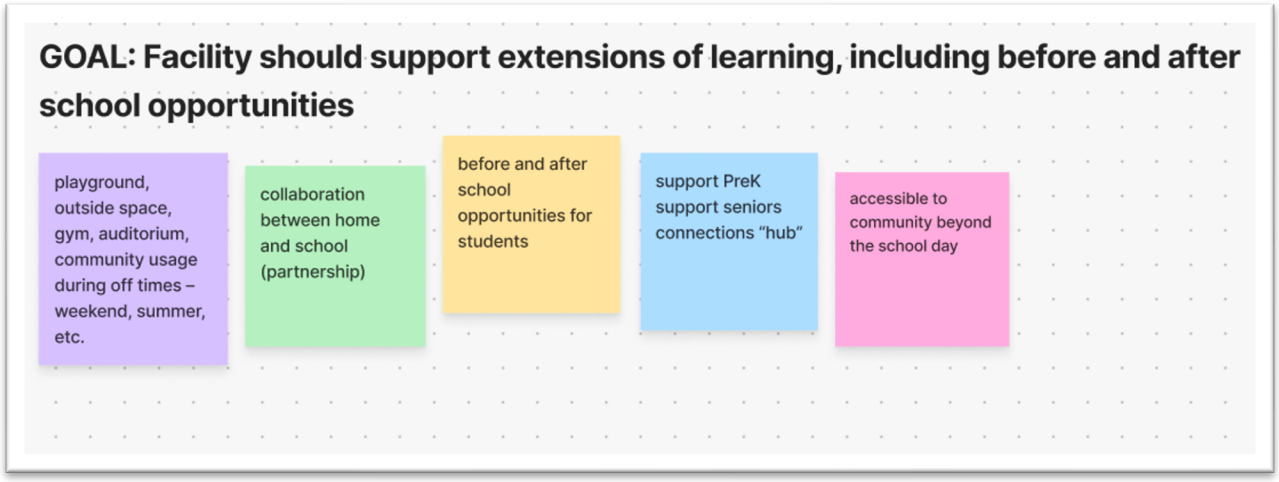
In Part 1, participants were asked to identify educational, architectural, and community priorities on individual sticky notes. After sharing their individual responses, participants grouped and categorized like-ideas to identify overarching project goals and considerations as documented below:



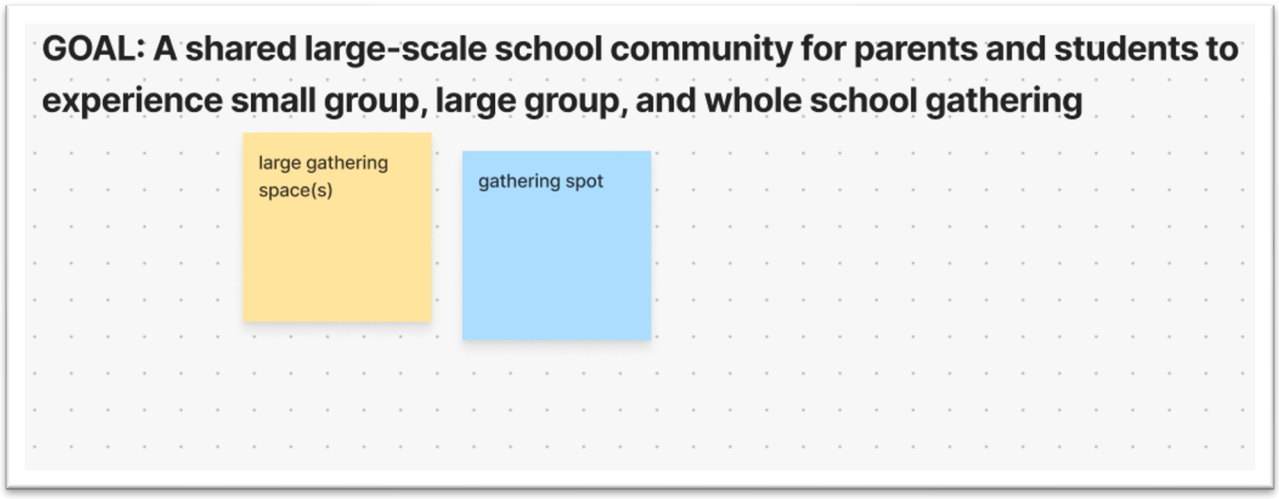
PROJECT GOALS:



- Experiences and spaces that promote students first as the doers and leaders of their own learning
- A learning environment that captures and supports the energy of kids
- Space to support all iterations of engagement now and in the future (student–student; student–teacher; teacher–teacher)
- School should serve as the hub of the community
- Facility should support extensions of learning, including before and after school opportunities
- A shared large-scale school community for parents and students to experience small group, large group, and whole school gathering



Individual responses that fall under each of these overarching project goals are documented in the pages that follow.



GOAL: A learning environment that captures and supports the energy of kids
students at the center
students at center of learning
authentic student center, active
flex/adapt
individual small group whole group multi-class
student centered and student driven
building will need to be able to flex in response to changing needs – education, kids, population, etc.
current/ forward-thinking
modern learning environment

GOAL: Experiences and spaces that promote students first as the doers and leaders of their own learning
opportunities for authentic audience/displays
connected to place (outdoors/local environment)
authentic experiences related to real world learning
challenged and inspired
inquiry exploration
active engagement

GOAL: School should serve as the hub of the community
opportunities for new community experiences
as a member of a shared community
feel connected
community – internal and connected to local partners, town(s) identity
hub of community
connections to the community
community center
"our school"

GOAL: Space to support all iterations of engagement now and in the future (student–student; student–teacher; teacher–teacher)
adaptable and flexible
differentiation to meet needs of all students
varied and accessible spaces for all staff and students
space – flex and adapt
students and teachers feel supported and "met where they are"
collaborative teaching and learning
flexible use of space

GOAL: Facility should support extensions of learning, including before and after school opportunities
playground, outside space, gym, auditorium, community usage during off times – weekend, summer, etc.
collaboration between home and school (partnership)
before and after school opportunities for students
support PreK support seniors connections "hub"
accessible to community beyond the school day

GOAL: A shared large-scale school community for parents and students to experience small group, large group, and whole school gathering
large gathering space(s)
gathering spot

Visioning 1 Overview

On September 22, 2025, members of Manchester Essex Regional School District attended a meeting with Educational Planner Mike Pirollo and Educational Consultant Paul White from MLP Integrated Design, Inc., along with JCJ Architecture. This meeting was part of the visioning effort for the Essex Elementary School Building Project. The session focused on understanding the developmental needs of PreK–5 learners and beginning to envision the spaces, structures, and experiences that will best support students in a future Essex Elementary School.

The meeting centered around the following goals:

- Understanding the developmental needs of PreK–5 learners
- Exploring grade configuration options and their implications
- Envisioning spaces that best support students' growth and learning

Part 1 – Understanding the Learner

In Part 1, participants explored the developmental characteristics of PreK–5 students. Through cross-grade discussions, they identified key academic, social-emotional, and physical milestones and considered how these shifts shape effective teaching, organization, and learning space design.

The responses from the whole-group wrap-up and learner profile charts are documented below.

- Integrating more movement into daily learning
- Major differences among Pre-K-5 so space and experience should be different
- Integration of SEL throughout day; being able to respond in real time – continuum of available space
- Need for flexibility in practice, space, and group size
- Variety of active and interactive learning
- Outside academic and movement spaces to support more choice
- Access to flexible spaces or outdoor space can't be cumbersome
- Need a feeling of warmth and comfort
- Developmentally appropriate scaled furniture and features – support independence
- Bring the outside in
- Use of glass and transparency for supervision and learning
- Showing students what is theirs to access

SOCIAL and EMOTIONAL

What are the most significant changes they experience?

GRADES PreK-K

Separation from family/ caregiver

making friends

following rules/expectations

managing emotions

problem solving

GRADES 1-3

testing authority/ limits

Changing structure of friendships

academic anxiety

adult guidance/support managing emotions + problem solving

GRADES 4-5

Competitive but cooperative

dating/relationships

hormonal - quick changing emotions

Integration of SEL across the entire School day!

Multi-tiered system of support for SEL

What supports, structures, and experiences can help them navigate this transition successfully?

warm, welcoming fun environment

learning through play - singing
dancing
hands-on experiences

Opportunities for different types of groupings
- large group
- small group
- partners
- individual

PHYSICAL

What are the most significant changes they experience?

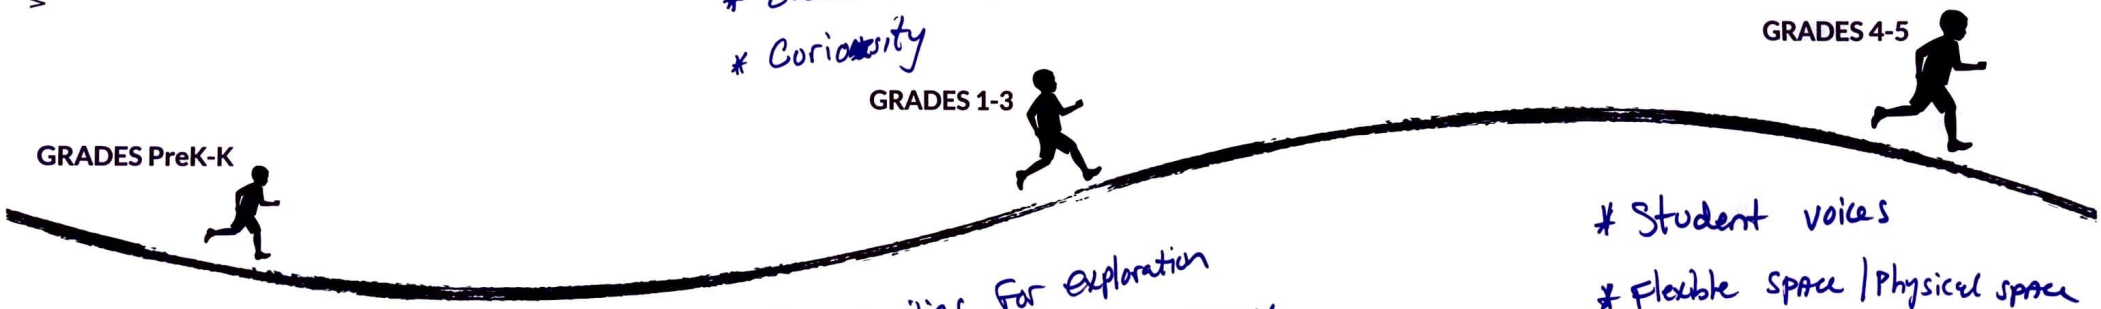
- needs movement opportunities
- short amt. sitting
- reduce fine-motor

- Copying from board is hard
- move from lots of movement to more compact
- body control
- play hard/work hard
- low stamina
- short movement breaks

- Copying from board gets easier
- big muscles/larger motor movement developing quickly
- better with tools
- snacks and rest periods
- pushing physical limits
- roughhousing

What supports, structures, and experiences can help them navigate this transition successfully?

- breaks in learning
- variety of types of learning experiences (tactile, auditory etc)
- hands-on experiences - authentic learning
- various ways to present information
- variety of scale of activities
- mutiple seating options/spaces
- different types of play spaces for variety of ages and physical skills.



ACADEMIC

What are the most significant changes they experience?

* Play Based
* Gross Motor play

* Structed hands on learning
* tools -vs- toys
* Coriosity

* AWARness - bigger picture worry
* Structur supports learning

What supports, structures, and experiences can help them navigate this transition successfully?

* Variety of options/ Intentional space

Outdoor learning space →

* Opportunities for exploration
* Balance between Lg + Small spaces

* Student voices
* Flexible space / Physical space
* Varied learning spaces

Part 2 – Grade Configuration Considerations

In Part 2, MLP presented several possible grade configuration models for the project. Participants rotated through stations to examine each option, considering its developmental alignment, benefits, and challenges. A gallery walk and group discussion followed, identifying key themes, priorities, and tradeoffs.

The collective feedback from these discussions is summarized below, with items in blue indicating ideas that resonated across groups.

Enrollment Scenario 1: *Town of Essex – K-3 + Pre-K (Essex 4th and 5th at MM) – 165 students*

Developmental Fit: *How well does this grade configuration support the developmental needs of students (social, emotional, academic, and physical?*

- Focus on early childhood' developmentally appropriateness
- One subset of students having an additional transition – not developmentally supported

Advantages: *What are the potential benefits or strengths of this configuration for students, educators, and the school community?*

- Smaller population
- Start education in neighborhood school
- Teaming and collaboration for Grades 4 & 5 teachers
- Access to programming for 4th / 5th – fields, Parks & Rec
- More opportunity to break student dynamics

Challenges: *What potential difficulties, concerns, or drawbacks might arise with this configuration?*

- Transition of 4th / 5th into existing culture / cohort at MMES
- Essex students have additional transition
- Teacher rapport building with Grade 4
- Parent buy-in
- Smaller population
- Too many young – missing older voices
- Many 4th / 5th together – increase in conflicts
- Families of elementary students spilt across sites
- Parent / family culture – having to join MMES PTO, etc.
- Essex as "outsiders" emphasized
- Teacher culture for those that have to move
- Will require focused efforts on culture
- Higher teacher cost (impact) for Special Education – specialized program

Enrollment Scenario 2: *Town of Essex – K-5 + Pre-K (current configuration) – 250 students*

Developmental Fit: *How well does this grade configuration support the developmental needs of students (social, emotional, academic, and physical?*

- Builds community and sense of place
- Small size
- Community keeps staff & families
- Keeps kids and relationships for 6 years (+ 2 Pre-K) – supports SEL
- Cross-grade opportunities

Advantages: *What are the potential benefits or strengths of this configuration for students, educators, and the school community?*

- Older students can support younger students
- Maintains regional agreement for district
- Families / comfort / familiar for local access
- Local community partners: library, shipbuilding, senior center
- Family engagement
- Community hub
- History (traditions)
- Pre-K-5 in 1 location
- Preference of community for neighborhood school
- Maintaining EES staff community / family

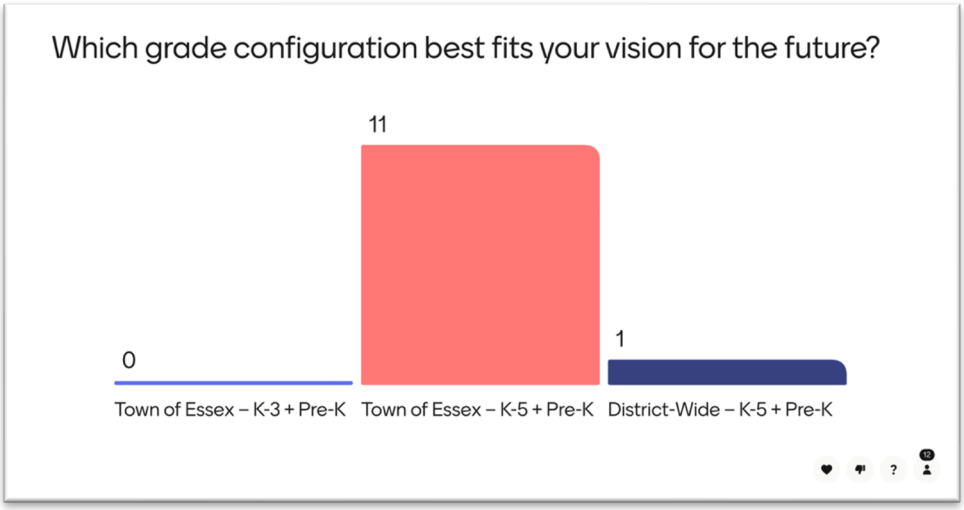
Challenges: *What potential difficulties, concerns, or drawbacks might arise with this configuration?*

- "Bubble" classes
- Outdoor structures for wide range Pre-K-5 and space
- Distance from other district schools
- District Sped programs – staff sharing
- Specialists (shared) drive schedule

Enrollment Scenario 3: *District-Wide – K-5 + Pre-K (expansion at Manchester Memorial) – 515 students*

Developmental Fit: *How well does this grade configuration support the developmental needs of students (social, emotional, academic, and physical?*

- Social connections with expanded geographic area
- Maintains same school for 6 years – supports SEL
- Size impacts (?) on all ages



Advantages: *What are the potential benefits or strengths of this configuration for students, educators, and the school community?*

- Economy of scale
- Peer collaboration (staff and students)
- Equity – everyone has the same stuff and experience
- Students already familiar with each other before MS transition
- Single connected campus – upper and lower school
- Minimizes transitions
- No school change needed for specialized Sped
- MERSD culture-building for all

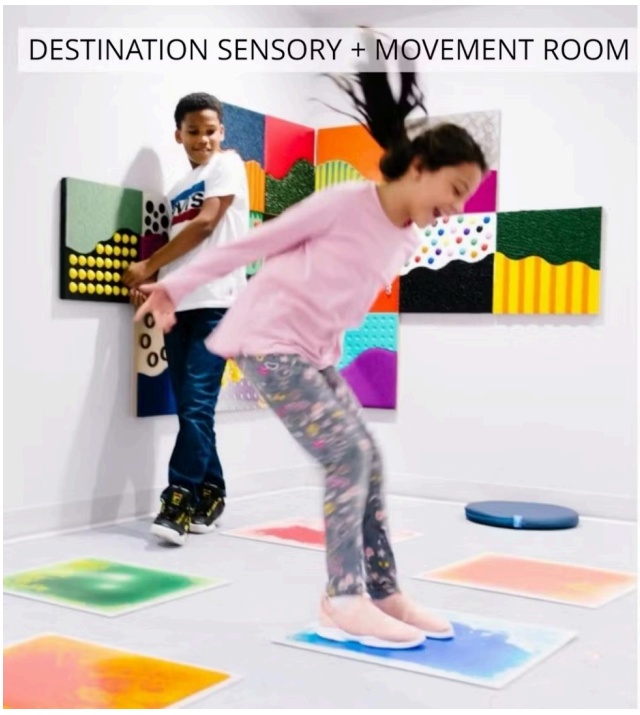
Challenges: *What potential difficulties, concerns, or drawbacks might arise with this configuration?*

- Lots of students currently ride their bike. They don't like the bus.
- Melding cultures / philosophies
- Parent buy-in
- No neighborhood school
- Another Memorial renovation
- Impact on Essex real estate market
- Impact on commute for some staff; traffic
- Community impact of site redesign
- Commuting distance for Essex residents
- Potential staff reduction
- Limited flexibility for growth options

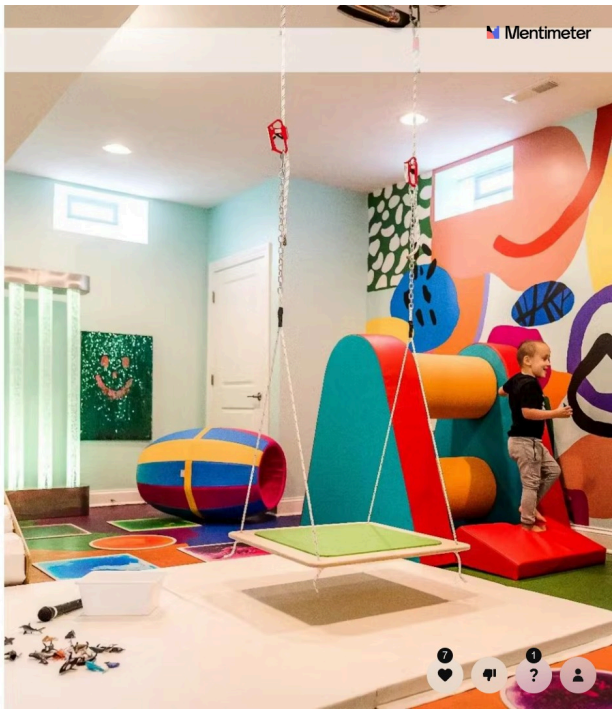
Finally, participants used Mentimeter to indicate their preferred configuration and discussed the results (shown below). The conversation emphasized the importance of alignment between grade configuration, developmental needs, and the district's goals for student success, belonging, and community.

Part 3 – Spaces That Support Students

In Part 3, participants examined how school spaces can best support students' academic, social, and emotional growth. Using precedent images and small-group discussion, participants explored how the environment can address key developmental needs, including movement and sensory regulation, social connection, self-regulation, and a sense of belonging.



Participants reacted to each photo with a heart if they felt like spaces supported development and their future vision, a question mark if spaces somewhat fit their future vision, or a thumbs down if spaces didn't fit their future vision. Then, the session concluded with groups brainstorming types of spaces that could meet these needs in a future Essex Elementary School. Their ideas and the precedent images with reactions are documented in the following pages.



- Spaces that are quiet and calming
- Calming space in & out
- Calming spaces in classes as important as calming spaces elsewhere
- Visibility to outdoors – connection to outside / nature
- More age inclusive outdoor space
- Indoor & outdoor motor opportunities that meets developmental ranges
- Bring the outside in (not sand!)
- Celebration of students / connection to community & Essex culture
- Collaboration spaces support learning (used with intention and purpose)
- Sensory space – specific room
- Destination for movement / sensory experiences
- Sensory movement options / spaces, especially for older students
- Sensory path
- Alternative dining – varied table sizes
- Quiet dining space / varied options
- Porch
- Neighborhood spaces
- Break out neighborhood outside classrooms for partnering classes on science, projects
- Sliding doors between classes with middle shared space
- Small group / intervention spaces near classrooms
- Visibility into shared spaces
- Avoid places where students can hide and not be visible
- Stage / café / gym configuration with non-traditional café seating options
- Make use of "passage" space for SEL
- Lots of light and glass

Visioning 2 Overview

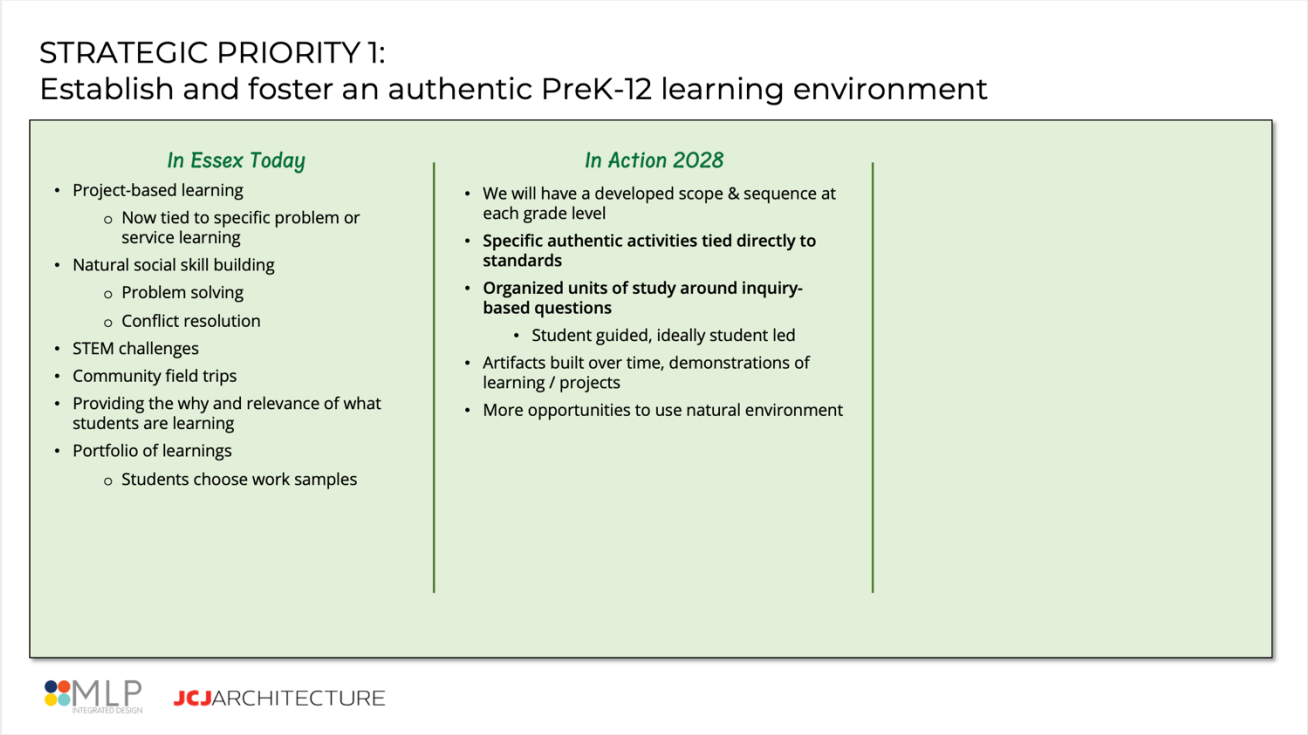
On October 22, 2025, members of Manchester Essex Regional School District attended the second visioning session for the Essex Elementary School Building Project, facilitated by Educational Planner Mike Pirollo and Educational Consultant Paul White from MLP Integrated Design, Inc., with JCJ Architecture. This session focused on connecting teaching, learning, and student experiences with the design of learning spaces.

The meeting centered around the following goals:

- Reflect on current instructional practice using the district's Strategic Plan
- Explore how space types and design features can support desired learning experiences

Part 1 – Learning That Sticks

In Part 1, participants began by reflecting on moments when learning truly "stuck" for themselves or their students. They identified key descriptors that make learning meaningful and shared them on a "*What We Value in Learning*" wall. This created a shared understanding of what effective, engaging learning looks like.



The responses from the *What We Value in Learning* chart is documented below. Please note, numbers in parenthesis signify the number of times a similar idea was made.

- Hands-on activities (4)
- Students helping each other (3)
- Whole class discussion and sharing ideas (2)
- Relationship building (2)
- Motivation / engagement (2)
- Connections to other learning or experiences (2)
- Fun (2)
- Cooperative learning (2)
- Creative
- Team building activities
- Whiteboard work
- Comparing strategies
- Was connected to current, real-world events
- Used knowledge and experiences many years later
- Kids struggled; it was hard but rewarding
- Show learning in different ways
- Choice
- Students taking ownership of their learning (the transfer and expansion)
- Outside in nature
- Active
- Relevant – solving a real problem
- Low-stakes, no pressure
- Data collection and visualization
- Whole-class participation
- Quick, easy
- Inviting space
- Natural light
- Appropriate seating

Part 2 – Strategic Plan in Action

In Part 2, participants worked in small groups to connect the district's Strategic Plan to classroom experiences. Each group documented how a priority is currently realized and how it might look in the final year of the District Improvement Plan, identifying gaps between current practice and desired outcomes.

The responses from the Strategic Plan priority charts are documented below.

STRATEGIC PRIORITY 2:
Integrate social-emotional learning into all aspects of the school day

In Essex Today

- Greet by name at door
- **Morning meetings / school meeting**
- RULER tools:
  - Chart how we want to feel
  - Mood meter
- **Calming spaces in class / school**
- Access to school adjustment counselor
- Multi-year personal relationships, personal connection
- Integrate students' interests in learning
- **Responsive Classroom routines**
- Birthday shout-outs
- After-school clubs – connecting after school with different adults
- Consistent expectations of routines, behavior (model & practice, role-playing)
- Logical consequences
- Student Leadership Council

In Action 2028

- **Consistent vertical scope of skills / practices**
- **Integrating purposeful movement / activators**
- **Integrate SEL assessments and intervention into MTSS model**
- **SEL component on report card**
- Integrate SEL in all academics / specials
- Small group space (close to classroom – visible to have private conversations)
- Peer leaders for conflict resolution
- Accessible spaces to meet SEL needs
- Large group spaces for collaboration

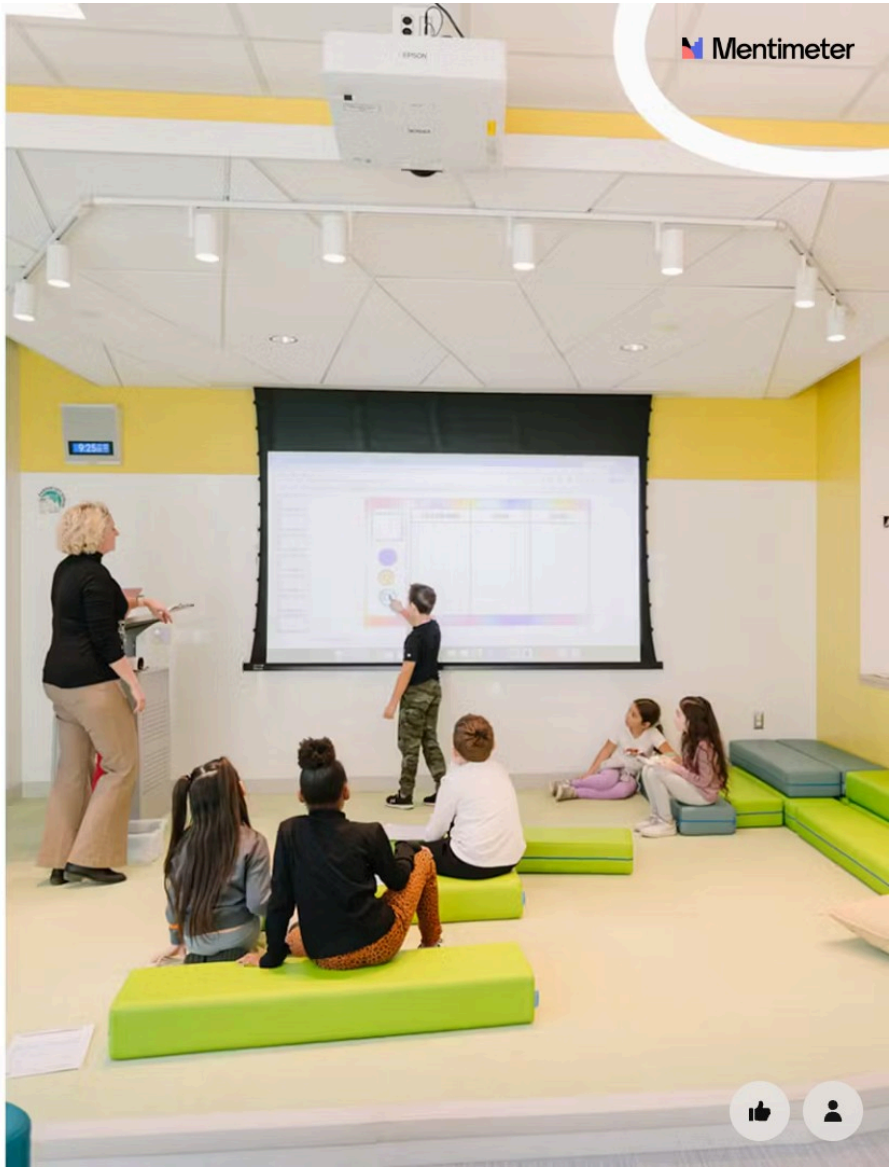
MLP INTEGRATED DESIGN JCJARCHITECTURE

STRATEGIC PRIORITY 3:
Celebrate and nurture an inclusive and diverse school culture through UDL

In Essex Today

- **Differentiation**:
  - Small group
  - Manipulatives
  - Type / amount for showing learning
  - MTSS (support for students in inclusive setting)
  - Title 1
  - Flexible seating
- Choice
  - Groupings
  - Order of completion
  - How to show work
  - Choice in assignment

In Action 2028

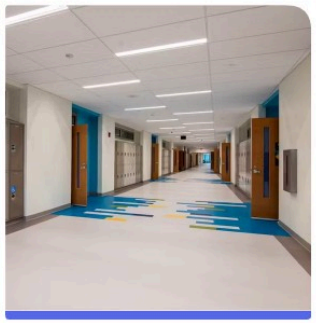


- Know the routines and expectations:
  - Group work
  - Partner work
  - Materials
- Small group spaces next to classrooms for support:
  - Minimize travel times
- Playground closer to lunch room = more time to play
- Flexible use of spaces
- Variety of spaces to meet students' needs (i.e. sensory)
- Programs / classes in the building with diverse learners:
  - SWING / RISE, PreK
  - World language classes
- Children are not stressed / anxious, better self-regulation

MLP INTEGRATED DESIGN JCJARCHITECTURE

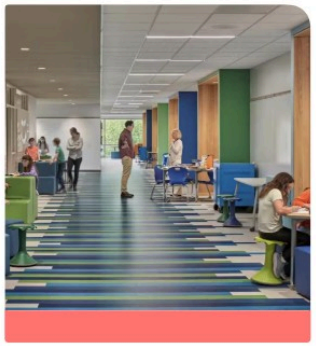
Part 3 – Learning Environments in Action

In Part 3, participants explored how different types of spaces can support learning, collaboration, core curriculum, and student wellness. They reflected on which environments resonated most, what experiences they would enable for students, and which spaces felt essential for the future school. There responses to specific prompts are documented in the pages that follow.



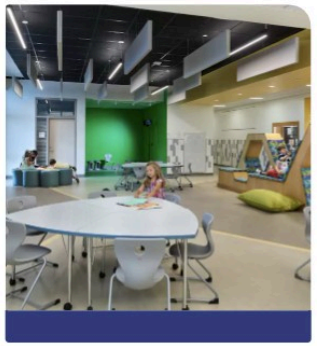
BUILDING ORGANIZATION

Mentimeter



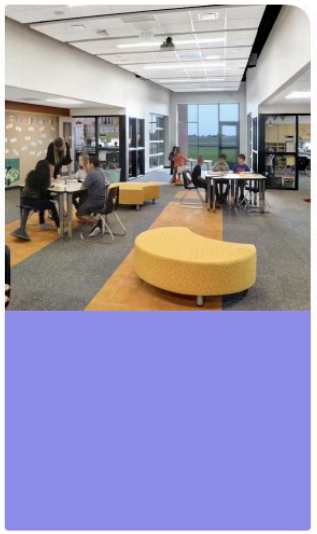
Which level of building organization feels right for MERSD students?

0



Traditional Corridor, No Breakout

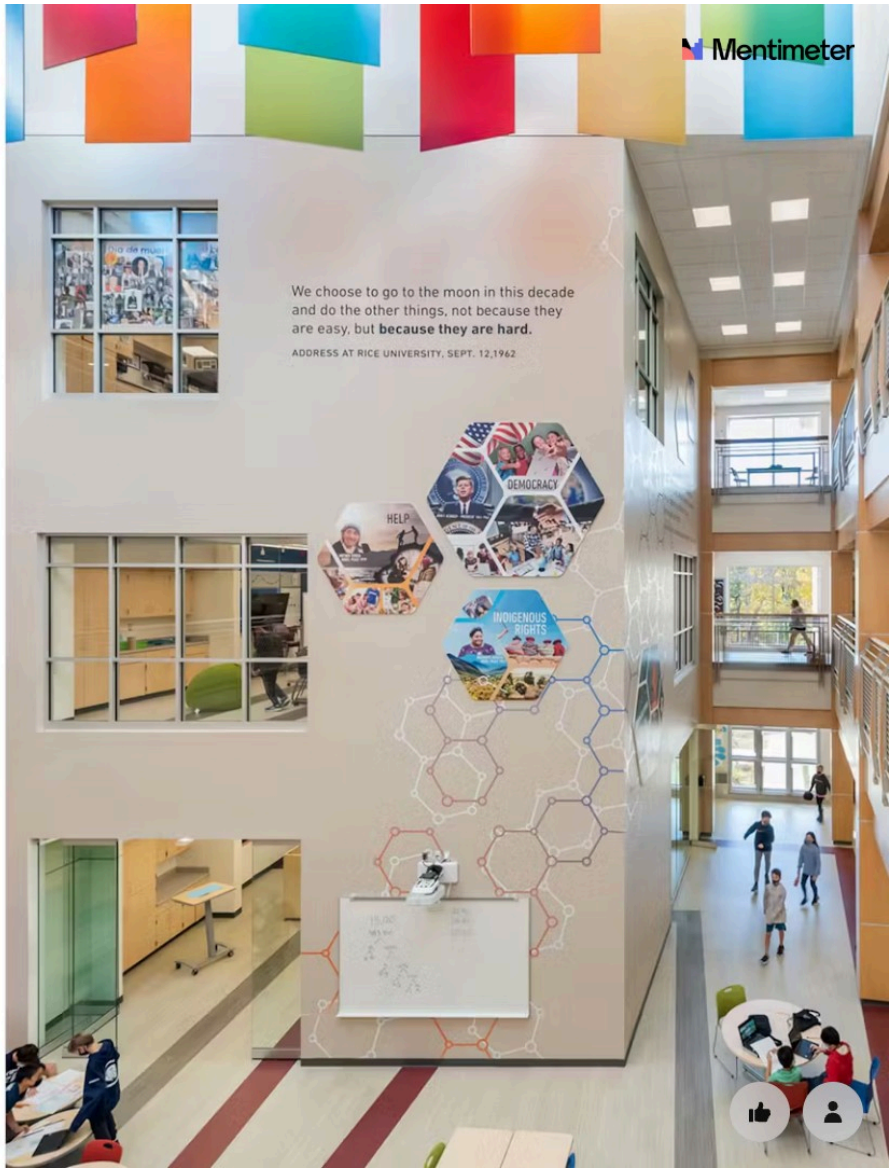
1



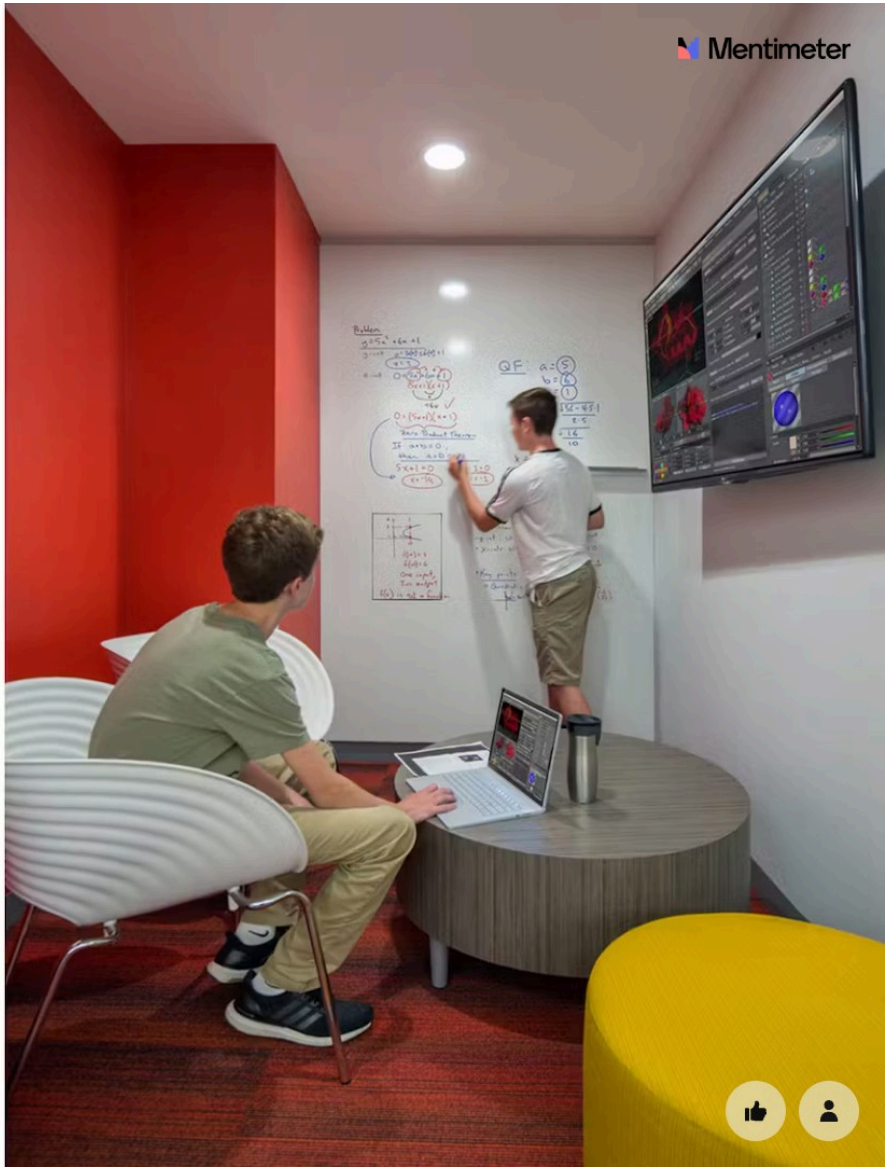
Small Corridor Breakout

1

Grouped Classrooms; Destination Breakout

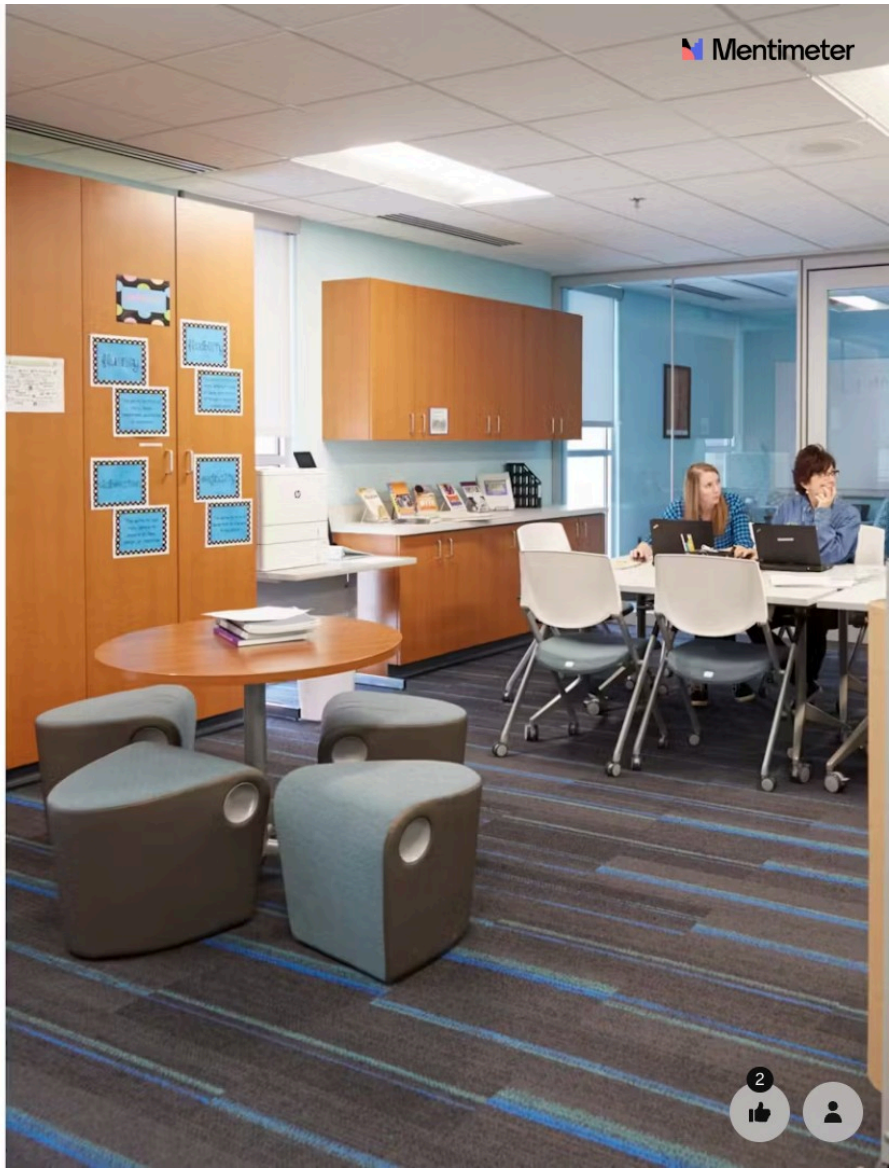


9

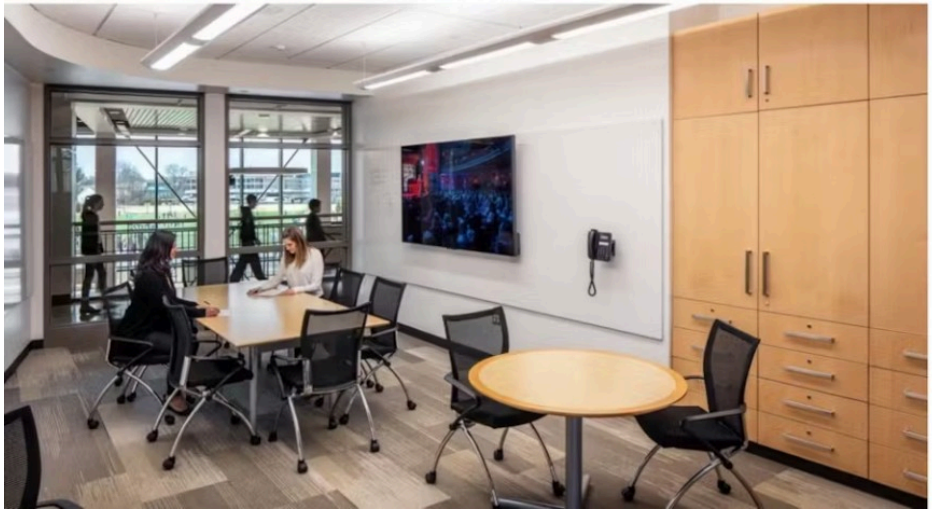


Small Learning Communities

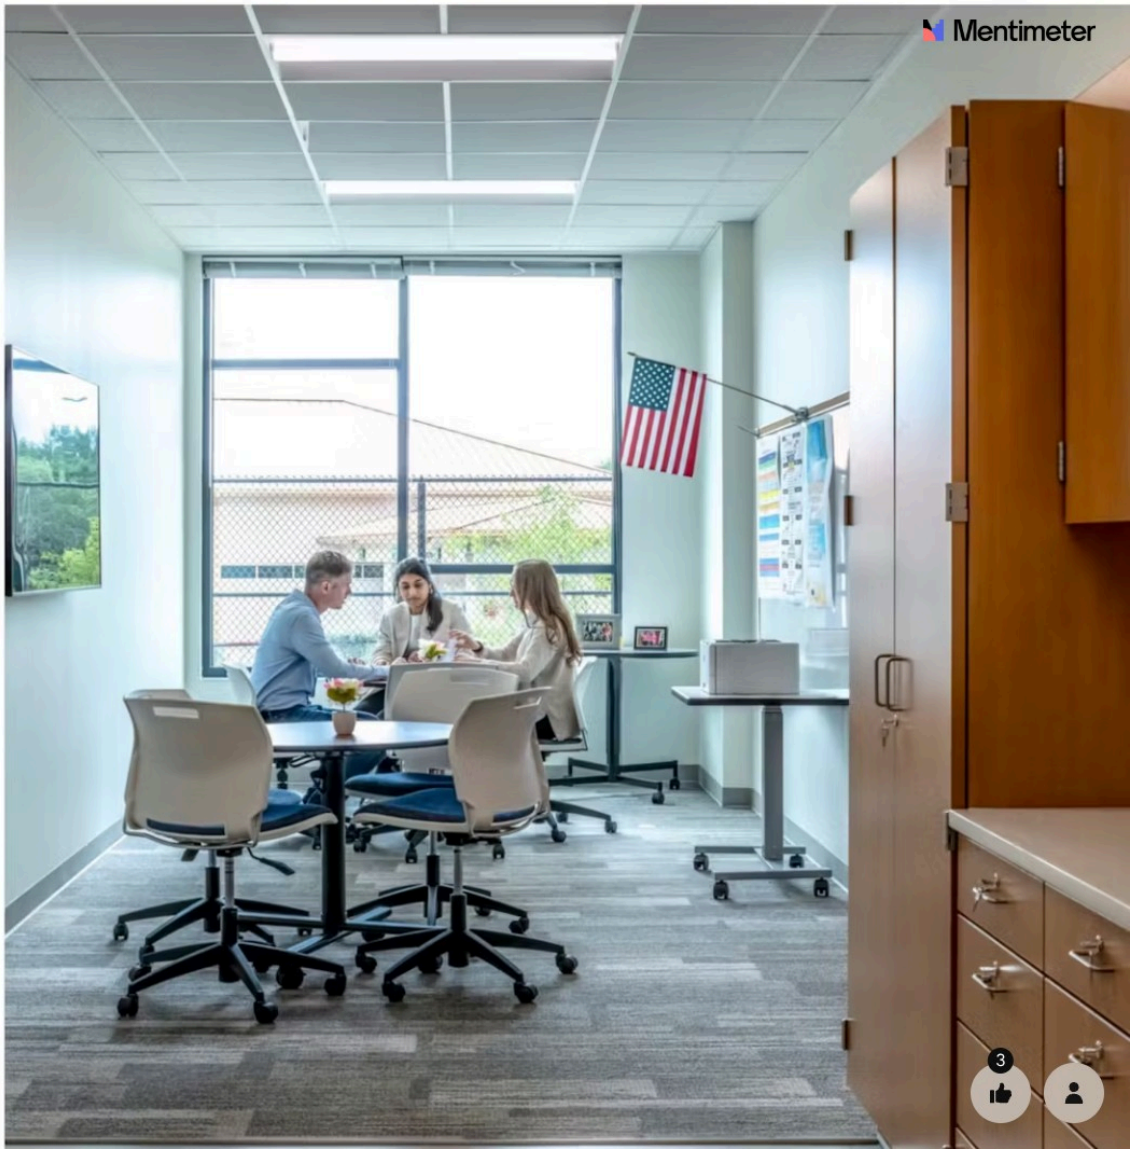
11



COLLABORATION + INTERACTION

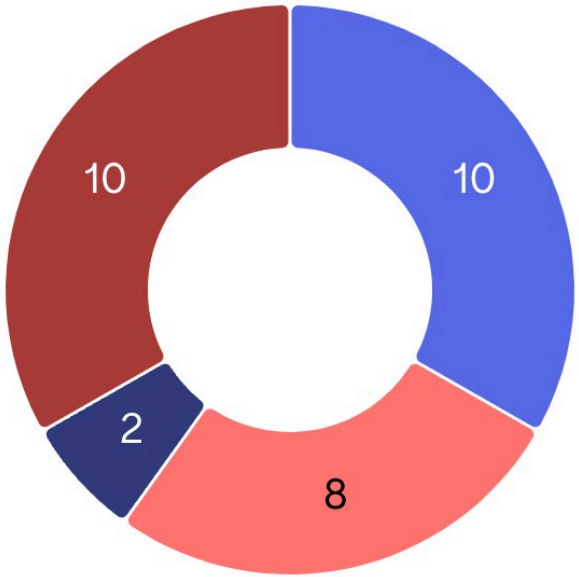


SMALL GROUP COLLABORATION



TEACHER COLLABORATION

Mentimeter
3



Picture a typical day for students in the new building.

What kinds of learning experiences should be easy and natural in classrooms and breakout spaces?

How should space support movement, hands-on exploration, and small-group learning to reach every child?

Mentimeter

What should collaboration space make *most possible* every day? Pick 3.

10	Active, hands-on exploration and movement
8	Small-group and individualized instruction
2	Collaboration among teachers and support staff
0	Calm, organized routines that help students focus
10	Flexibility to shift between group, partner, and independent learning

10

Mentimeter

Is there anything else collaboration spaces should make possible that isn't listed above?

Flexibility for learners physically. Opportunities for grades to collaborate together. Separate spaces for large projects

Larger class STEM activities or morning meetings

Performance and presentation

Shared space for cross grade collaboration such as k buddies Space for science labs with sinks

Co teaching with other classes.

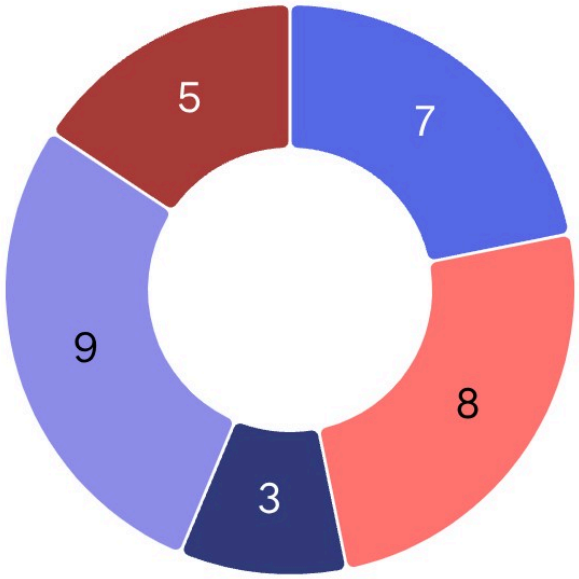
Learning that can happen over time (like it doesn't have to be cleaned up each day because there's no space) Co-teaching Cross-class or cross-grade collaboration with students

Ability to shift based on changes in education/best practices.

Space for groups to gather for extracurricular activities

8

CONNECTIONS TO CORE LEARNING



How should creation spaces connect to classroom learning?

When students move into these areas, what experiences do you hope they'll have (i.e. discovery, problem-solving?

How can design make it easy for teachers and specialists to work together so these experiences feel integrated?

Mentimeter

What's most important about how creation and exploration spaces connect to classroom learning? Pick 3.

7	They should be connected and visible to classrooms so learning flows easily between them.
8	They should be shared and flexible, used by different grades or programs for hands-on, creative work.
3	They should be collaborative, allowing teachers and specialists to co-teach or plan together.
9	They should be integrated and student-centered, supporting curiosity, making, and problem-solving.
5	They should also serve as community assets and not spatially connected to academics.

11

EDUCATIONAL WELLNESS & BELONGING

INDOOR – OUTDOOR CONNECTION

Think about an ideal day from morning arrival to lunch to the end of the day.

How can these spaces help students manage energy, focus, and emotions throughout the day?

Mentimeter

What kinds of spaces or design features can help students find calm, make choices, and belong?

Play spaces, distributed nooks and books, outdoor connections/access

Ruckus room

Flex for indoor to outdoor spaces

Lunch seating options are important. Quiet spaces carpeted with nooks, window seats.

Developmentally appropriate spaces for students, spaces that reflect different student interests (academic, sports, arts),

Age-appropriate play spaces; opportunities for outdoor learning activities. Indoor recess space.

Lunch with large, small, indoor and outdoor spaces

Indoor recess space upper grades recess space Lower grades recess space Flexible lunch spaces

9

Mentimeter

What kinds of spaces or design features can help students find calm, make choices, and belong?

A balance of calming spaces and active spaces is important. A cafeteria with different seating options so that all students can feel like they fill a table.

Indoor spaces for indoor recess

Varied/quiet space and seating for lunch Varied outdoor playground experiences Space for indoor recess activities

9

Part 4 – Strategic Plan in Action (Revisited)

In Part 4, groups revisited the strategic priority charts to link learning environments to priorities, considering how spaces would look, feel, and sound in supporting desired student outcomes.

The responses from the Strategic Plan priority charts are documented below.

STRATEGIC PRIORITY 1:
Establish and foster an authentic PreK-12 learning environment

In Essex Today	*In Action 2028*	*How Spaces Support*

• Project-based learning
  ○ Now tied to specific problem or service learning
• Natural social skill building
  ○ Problem solving
  ○ Conflict resolution
• STEM challenges
• Community field trips
• Providing the why and relevance of what students are learning
• Portfolio of learnings
  ○ Students choose work samples
	• We will have a developed scope & sequence at each grade level
	• **Specific authentic activities tied directly to standards**
	• **Organized units of study around inquiry-based questions**
	  • Student guided, ideally student led
	• Artifacts built over time, demonstrations of learning / projects
	• More opportunities to use natural environment
		• **Break out spaces support collaboration**
		• **Having a shared space allows for flexibility and choice (student & teacher)**
		• Flexible seating learning environment
		• Includes sinks at proper height
		• Space to set up projects / experiments and keep them up for a few days
		• Connection to outdoor spaces for learning
		• Display space for student work

MLP INTEGRATED DESIGN JCJARCHITECTURE

STRATEGIC PRIORITY 2:
Integrate social-emotional learning into all aspects of the school day

In Essex Today

- Greet by name at door
- **Morning meetings / school meeting**
- RULER tools:
  - Chart how we want to feel
  - Mood meter
- **Calming spaces in class / school**
- Access to school adjustment counselor
- Multi-year personal relationships, personal connection
- Integrate students' interests in learning
- **Responsive Classroom routines**
- Birthday shout-outs
- After-school clubs – connecting after school with different adults
- Consistent expectations of routines, behavior (model & practice, role-playing)
- Logical consequences
- Student Leadership Council

In Action 2028

- **Consistent vertical scope of skills / practices**
- **Integrating purposeful movement / activators**
- **Integrate SEL assessments and intervention into MTSS model**
- **SEL component on report card**
- Integrate SEL in all academics / specials
- Small group space (close to classroom – visible to have private conversations)
- Peer leaders for conflict resolution
- Accessible spaces to meet SEL needs
- Large group spaces for collaboration

How Spaces Support

- Calming / self-regulation sensory spaces
- Outdoor connections
- **Options for students to choose based on interest**
- **Café with tables of different sizes, booths**
- Collaboration:
  - Classroom – classroom
  - Students – students
  - Teachers
- **Large spaces to fit whole school plus families / community**

MLP INTEGRATED DESIGN JCJARCHITECTURE

STRATEGIC PRIORITY 3:
Celebrate and nurture an inclusive and diverse school culture through UDL

In Essex Today

- **Differentiation**:
  - Small group
  - Manipulatives
  - Type / amount for showing learning
  - MTSS (support for students in inclusive setting)
  - Title 1
  - Flexible seating
- Choice
  - Groupings
  - Order of completion
  - How to show work
  - Choice in assignment

In Action 2028

- Know the routines and expectations:
  - Group work
  - Partner work
  - Materials
- Small group spaces next to classrooms for support:
  - Minimize travel times
- Playground closer to lunch room = more time to play
- Flexible use of spaces
- Variety of spaces to meet students' needs (i.e. sensory)
- Programs / classes in the building with diverse learners:
  - SWING / RISE, PreK
  - World language classes
- Children are not stressed / anxious, better self-regulation

How Spaces Support

- Break out spaces

Part 5 – Closing Reflection

The session concluded with a reflection prompt asking participants: *"After everything we explored* during these past two sessions*, what's still sitting on your mind — a thought, question, or hope you're leaving with?"*

The thoughts and lingering questions from participants are documented below.

- Not all classrooms need to have the same things
- Bathrooms – kids and adults
- Handwashing stations in the cafeteria

Appendix B: *MERSD Regional Agreement*

Amended effective October 14, 2003 and May 10, 2007

AGREEMENT BETWEEN THE TOWNS OF ESSEX AND MANCHESTER-BY-THE-SEA, MASSACHUSETTS WITH RESPECT TO THE FORMATION OF A REGIONAL SCHOOL DISTRICT RESTATING THE PROVISIONS OF SAID AGREEMENT, AS AMENDED

This Agreement is entered into pursuant to Chapter 71 of the General Laws of the Commonwealth of Massachusetts, as amended, between the towns of Essex and Manchester-by-the-Sea ("MANCHESTER"), hereinafter sometimes referred to as member towns. In consideration of the mutual promises herein contained, it is hereby agreed as follows:

SECTION 1. THE REGIONAL SCHOOL COMMITTEE

(a) Composition

The powers and duties of the Regional School District shall be vested in and exercised by a Regional School Committee, hereinafter called the "Committee", which shall consist of seven (7) members, four (4) of whom shall be residents of Manchester and three (3) of whom shall be residents of Essex. All members shall serve until their respective successors are elected and qualified.

(b) Interim Committee

All members of the present Essex School Committee and the Manchester School Committee, acting jointly, shall serve as an Interim Committee until the next annual town elections held in the year following the year in which this Agreement is accepted by the member towns.

(c) Election of Members

Members of the Committee shall be elected by the voters of the member towns at each member town's annual town election.

At the next succeeding annual town elections of the member towns to be held in the year following the year in which this Agreement is accepted by the member towns, there shall be

elected seven (7) members of the Committee, four (4) of whom shall be residents of and elected by Manchester and three (3) of whom shall be residents of and elected by Essex, as follows:

(1) One (1) member who is a resident of and elected by Manchester and one member who is a resident of and elected by Essex, for a term of one (1) year;

(2) One (1) member who is a resident of and elected by Manchester and one member who is a resident of and elected by Essex, for a term of two (2) years;

(3) Two (2) residents who are residents of and elected by Manchester and one member who is a resident of and elected by Essex, for a term of three (3) years.

A candidate for membership on the Committee shall file nomination papers for the particular Committee position with the term such candidate is seeking as set forth in subparagraphs (i), (ii) or (iii) set forth above with the Town Clerk of the member town in which such candidate resides within the time allowed by the General Laws relating to filing nomination papers for town elections. Following the expiration of the original terms set forth in subparagraphs (i), (ii) and (iii) above, all members will be elected for a term of three (3) years at all succeeding elections.

Any registered voter of any member town may be a candidate and the method of his or her nomination shall be the same as if he or she were a candidate for elected town office in the member town in which he or she is a registered voter.

Promptly after their election, members of the Committee shall be sworn to the faithful discharge of their duties by the Town Clerk of the town in which they reside and a record of such oath shall be made and kept by the Town Clerk and a copy thereof delivered to the Secretary of the Committee.

Notwithstanding any other provision of this Agreement to the contrary, on February first immediately following the official publication of the most recently conducted state or federal census, the Committee shall determine, on the basis of such census figures, the total population of each member town and the total population of the District. (For the purposes of this provision, "official publication" means publication by the Secretary of the Commonwealth in the case of the state census and transmittal to Congress by the President in the case of the federal census.) Membership on the Committee shall be adjusted at that time, as hereinafter provided, so that the

town having the larger population as indicated in the official publication will have four (4) members on the Committee.

If a member town is entitled to an additional member of the Committee, as hereinabove provided, such additional member from such town shall be elected to the Committee at the annual town election next following the February first on which the determination of population must be made. If the population of a member town shall at any time cause its membership on the Committee to be reduced by one (1) member, such town shall at its next annual town election elect one less than the number of members of the Committee from that town whose terms expire.

The term of office of members of the Committee shall commence on the day following their election.

If there is a failure to nominate or a failure to elect a candidate, then the Board of Selectmen of the member town in which such failure to nominate or elect occurs shall appoint a member as though there were a vacancy under the provisions of subsection 1(e) of this Agreement.

(d) Organization

At the first regular meeting of the Committee following the acceptance of this Agreement by the member towns, and, thereafter at the first regular meeting of the Committee following the latter of the annual town elections of the member towns in each year, the Committee shall organize and choose by ballot a chairperson and vice-chairperson from its own membership. At the same meeting or at any other meeting, the Committee shall appoint a treasurer and a secretary who may be the same person but who need not be members of the Committee.

(e) Vacancies

If a vacancy occurs on the Committee, such vacancy shall be filled by a roll call vote of the Board of Selectmen and the remaining members of the Committee of the member town in which the member vacating office resided at the time of his or her election. The person so appointed shall be a resident of the town from which the vacancy occurred, and shall serve until the next town annual election, at which election a successor shall be elected to serve the balance of the unexpired term, if any.

(f) Quorum

A majority of the Committee shall constitute a quorum, at least one (1) of whom shall represent each member town.

(g) Powers and Duties

The Committee shall have all of the powers and duties conferred and imposed upon regional school district committees by law and by this Agreement and any amendment or additions thereto or as may be conferred and imposed upon it by any applicable general or special law.

SECTION 2. TYPE OF REGIONAL SCHOOL DISTRICT

The Regional School District shall include all grades, kindergarten through twelve (12). The Committee may establish and maintain vocational educational courses, acting as trustees therefore, in accordance with the provisions of Chapter 74 of the General Laws and any amendments or additions thereto.

SECTION 3. LOCATION AND LEASING OF SCHOOL FACILITIES

(a) Location

Any facility constructed to accommodate pupils in one or more grades from both member towns shall be located within the geographical limits of the District. The District shall at all times maintain at least one (1) elementary school facility in each member town. For purposes of this Agreement, an "elementary school facility" shall mean a facility used for elementary school grades as set forth in Section 13 below.

(b) Leasing

The Town of Essex is hereby authorized to lease to the Regional School District all the premises and buildings presently known as the

Essex Elementary and Middle School.

The Town of Manchester is hereby authorized to lease to the Regional School District all the premises and buildings presently known as the

Manchester Memorial School

Manchester Junior Senior High School

Each of the leases authorized above shall be for a term of twenty (20) years and the term shall commence on the date when the Committee assumes jurisdiction of the pupils in the grades served by said schools. Each of the leases shall contain a provision for the extension of the term thereof for a renewal term not in excess of twenty (20) years, renewable at any time during the term, at the option of the Committee. Each such lease shall automatically terminate, and the use of the building so leased shall revert back to the town from which it was leased in the event that the Committee decides that such building is no longer needed for the education program of the District. Each of the leases shall contain provisions authorizing the District to insure, repair, improve, alter or remodel any of the leased buildings. No rental shall be charged to the District by any of the member towns. Each lease shall contain identical warranties from the respective member towns warranting that the buildings shall be in good condition at the time of leasing to the District, on the terms as set forth in the leases. Each lease involving a member town shall be on such other terms and conditions as may be determined by the Selectmen thereof and the Committee, who shall execute the lease for the member town and the District, respectively.

The unpaid balance on the outstanding bonds (school bonds authorized for the purpose of constructing or improving the above-reference facilities) at the time of leasing of said buildings and facilities shall remain the obligation of the member town.

SECTION 4. APPORTIONMENT AND PAYMENT OF COSTS

(a) Definition of Costs

For the purpose of apportioning assessments levied by the District against the member towns, costs shall be divided into three (3) categories, as follows:

(1) Capital costs, which shall consist of the costs of: acquiring land and constructing, reconstructing, adding to, and equipping a school building or buildings; remodeling and making extraordinary repairs to a school building or buildings; constructing sewerage systems and sewerage treatment and disposal facilities; purchasing or using such sewerage systems with municipalities; leasing, with an option to purchase, equipment for educational purposes; any other projects or acquisitions of a capital nature which the District is or may be authorized to finance by borrowing; and debt service on bonds or notes of the District issued to finance capital costs.

(2) Special operating costs, which shall consist of the cost of evening, graduate, and extension courses or any other types of courses, including vocational educational programs but excluding summer school programs, that are offered by the District to persons other than pupils attending a regular District comprehensive school program in any of the grades kindergarten through twelve, inclusive.

(3) Operating costs, which shall consist of all costs of the District other than capital costs and special operating costs. Operating costs shall consist of "instructional costs" and "non-instructional costs", and the categorization of all operating costs into these two sub-categories shall be determined by the Regional District School Committee in accordance with any definitions that may be promulgated from time to time by the Massachusetts Department of Education.

(b) Apportionment of Capital Costs

Capital costs shall be apportioned as follows:

(1) Fifty percent (50%) on the basis that the equalized valuation of each member town pursuant to the latest equalized valuation of such town, as set forth in Chapter 559 of the Acts of 1945 entitled "An Act Establishing the Basis of Apportionment of State and County Taxes" ("Chapter 559"), or any later equalized valuations as may be enacted by the Commonwealth next preceding each bond issue, bears to the sum of all such equalized valuations of all member towns; and

(2) Fifty percent (50%) on the basis that the respective populations of each member town based on the most recent decennial U.S. Census (or any official census prepared by the U.S. Census bureau that calculates the populations of each member town, such census being referred to herein as the “Federal Census”) bears to the total combined populations of all member towns in that same Federal Census.

(c) Apportionment of Special Operating Costs

Special operating costs shall be apportioned to the member towns on the basis that the enrollment of pupil hours of residents of each member town in courses described in paragraph 2 of subsection 4 (a) above for the fiscal year next preceding the fiscal year for which the apportionment is determined bears to the total enrollment of pupil hours in such courses from

residents of both member towns on such date. Enrollment in such courses shall be determined on the basis of those pupils enrolled in each of said courses as of the first Tuesday after the first Monday of the week that said courses commence.

(d) Apportionment of Operating Costs

Operating costs shall be expressed as "instructional costs" and "non-instructional costs", and the categorization of costs into either of these sub-categories are to be determined by the Regional District School Committee, in accordance with any definitions that may be promulgated from time to time by the Massachusetts Department of Education.

.(1) Non-instructional operating costs shall be apportioned to the member towns as follows:

(i) Twenty-five percent (25%) on the basis that the "Average Equalized Valuation" (as defined below) of each member town bears to the "Total Equalized Valuation" (as defined below) of all member towns; and

(ii) Seventy-five percent (75%) on the basis that the population of each member town according to the most recent Federal Census bears to the combined populations of all member towns according to the same Federal Census.

(2) Instructional operating costs shall be apportioned to the member towns as follows:

(i) Twenty-five percent (25%) on the basis that the Average Equalized Valuation of each member town bears to the Total Equalized Valuation of all member towns; and

(ii) Seventy-five percent (75%) on the basis that the "Average Respective Pupil Enrollments" (as defined below) of each member town in all Regional School District schools bears to the "Total Pupil Enrollment" (as defined below).

(3) For purposes of this Agreement:

(i) the Average Equalized Valuation of each member town for fiscal year 2008 shall mean the "Latest Equalized Valuation of such Member Town" (as defined below);

(ii) the Average Equalized Valuation of each member town for fiscal year 2009 shall mean the arithmetic average of the Latest Equalized Valuation of such Member Town for fiscal year 2008 and fiscal year 2009;

(iii) the Average Equalized Valuation of each member town for fiscal year 2010 and each fiscal year thereafter shall mean the arithmetic average of the Latest Equalized Valuation of such Member Town for such fiscal year and the two immediately preceding fiscal years;

(iv) the Latest Equalized Valuation of such Member Town shall mean, with respect to any fiscal year, the equalized valuation of such member town as set forth in Chapter 559 most recently made publicly available prior to the beginning of such fiscal year;

(v) the Total Equalized Valuation of the member towns for any fiscal year shall mean the sum of the Latest Equalized Valuations of all member towns used in computing the Average Equalized Valuation for any member town for such fiscal year;

(vi) the Average Respective Pupil Enrollment of each member town for fiscal year 2008 shall mean such member town's pupil enrollment in the Regional School District on October 1, 2006;

(vii) the Average Respective Pupil Enrollment of each member town for fiscal year 2009 shall mean the arithmetic average of such member town's pupil enrollment in the Regional School District on October 1, 2007 and October 1, 2006;

(viii) the Average Respective Pupil Enrollment of each member town for fiscal year 2010 and each fiscal year thereafter shall mean the arithmetic average of such member town's pupil enrollment in the Regional School District on October 1 within each of the three (3) most recently ended fiscal years immediately prior to the fiscal year for which the determination is to be made; and

(ix) the Total Pupil Enrollment for any fiscal year shall mean the sum of the total pupil enrollments in the Regional School District on each October 1 used in computing the Average Respective Pupil Enrollment for any member town for such fiscal year.

(e) Times of Payments of Apportioned Costs

(1) Capital costs. At least fifteen (15) days prior to the date on which any indebtedness (consisting of interest or principal and interest on bonds and notes) incurred by the District to finance capital costs is payable, each member town shall pay to the District its respective share of the amount that is so payable by the District on said date. All other capital costs incurred by the District not consisting of payments on account of indebtedness as aforesaid shall be paid in the same manner as operating costs.

(2) Special Operating Costs and Operating Costs. Each member town shall pay to the District in each fiscal year its proportionate share, determined as provided in subsections 4 (c) and 4(d) above, of the special operating costs and operating costs. The annual share of each member town shall be paid in twelve (12) equal installments at such times that each installment except the first shall be paid on or before the first day of each month of the fiscal year, and the first such installment shall be paid on or before the fifteenth (15th) day of the first month of the first fiscal year.

SECTION 5. TRANSPORTATION

School transportation shall be provided by the District and the cost thereof shall be apportioned to the member towns as an operating cost.

SECTION 6. AMENDMENTS

This Agreement may be amended from time to time in the manner hereinafter provided, but no amendment shall be made that shall substantially impair the rights of the holders of the bonds or notes or other evidence of indebtedness of the District then outstanding, or the rights of the District to procure the means for payment thereof, provided nothing in this provision shall prevent the admission of a new town or towns to the District and the reapportionment accordingly of capital costs of the District represented by bonds or notes of the District then outstanding and of interest thereon.

Any proposal for amendment, except for a proposal for amendment providing for the withdrawal of a member town (which shall be acted upon as provided in Section 8), may be initiated by a majority vote of the Committee or by a petition signed by ten percent (10%) of the registered voters in said town according to the most recent voting list and the number of signatures on the petition which appear to be the names of registered voters of said town and said petition

shall be presented to the Secretary of the Committee. In either case, the Secretary shall mail a notice in writing to the Board of Selectmen of each member town that a proposal to amend this Agreement has been made and shall enclose a copy of such proposal (without the signatures in the case of a proposal by petition). The Selectmen of each member town shall include in the warrant for the next annual town meeting or a special town meeting called for the purpose an article stating the proposal or the substance thereof. Such amendment shall take effect upon its acceptance by each of the member towns, acceptance by each member town to be by a majority vote at a town meeting as aforesaid.

SECTION 7. ADMISSION OF ADDITIONAL TOWNS

By an amendment to this Agreement adopted under and in accordance with Section 6 above, any other town or towns may be admitted to the District upon adoption as therein provided of such amendment and upon acceptance by the town or towns seeking admission of the Agreement as so amended and also upon compliance with such provisions of law as may be applicable and upon such terms as may be set forth in such amendment.

SECTION 8. WITHDRAWAL

The withdrawal of a member town from the District may be affected by an amendment to this agreement in the manner hereinafter provided by this section. Any member seeking to withdraw shall, by vote at an annual or special town meeting, request the Committee to draw up an amendment to this Agreement setting forth the terms by which such town may withdraw from the District, provided:

(a) that the town seeking to withdraw shall remain liable for any unpaid operating costs which have been certified by the District treasurer to the treasurer of the withdrawing town, including the full amount so certified for the fiscal year in which such withdrawal takes effect; and

(b) that said town shall remain liable to the District for its share of the indebtedness, other than temporary debt in anticipation of revenue, of the District outstanding at the time of such withdrawal, and for interest thereon, to the same extent and in the same manner as though the town had not withdrawn from the District, except that such liability shall be reduced by any amount that such town has paid over at the time of withdrawal and which has been applied to the payment of indebtedness. The clerk of the town seeking to withdraw shall notify in writing the Committee that

such town has voted to request the Committee to draw up an amendment to the Agreement (enclosing a certified copy of such vote). Thereupon, the Committee shall draw up an amendment to the Agreement setting forth such terms of withdrawal as it deems advisable, subject to the limitations contained in the first paragraph of Section 6. The Secretary shall mail or deliver a notice in writing to the Board of Selectmen of each member town that the Committee has proposed an amendment (enclosing a copy of the proposed amendment). The Selectmen of each member town shall include in the warrant for the next annual town meeting or a special town meeting called for the purpose, an article stating the amendment or the substance thereof. Such amendment shall take effect upon its acceptance by all of the member towns, acceptance by each member town to be a majority vote at a town meeting as aforesaid. The withdrawing town's annual share of any future installment of principal and interest on bonds or notes outstanding on the effective date of its withdrawal shall be fixed at the percentage prevailing for such town at the last annual apportionment made next prior to the effective date of withdrawal. Upon the effective date of withdrawal, the terms of office of all members serving on the Committee who reside in the withdrawing town shall terminate.

(c) Money received by the District from the withdrawing town for payment of funded indebtedness or interest thereon shall be used only for such purpose and until so used shall be deposited in trust in the name of the District in the manner provided by law for the deposit of funds of regional school districts.

SECTION 9. AUTHORIZATION OF DEBT

The incurring of indebtedness, except temporary indebtedness in anticipation of revenue, by the District, shall be subject to disapproval by the registered voters in the member towns pursuant to the provisions of clause (d) of Section sixteen of chapter seventy-one of the General Law, as from time to time it may be amended. No such debt shall be incurred unless written notice of the amount of the debt and the general purpose for which it was authorized shall be given to the Board of Selectmen of each member town, nor until the expiration of sixty (60) days from the date on which the Committee votes to authorize said debt. Notwithstanding any provision of applicable law, it shall be the Regional School District's practice that such debt shall not actually be incurred until the amount of the proposed debt has been specifically approved by a two-thirds vote at the

next annual or special town meeting of each member town, to be held within the sixty (60) day notice period set forth in this provision.

SECTION 10. BUDGET

(a) Tentative Budget

No less than fifteen (15) days prior to the date on which the Committee adopts, or is required to adopt, whichever event occurs first, its final budget for the ensuing fiscal year, the Committee shall prepare a tentative operating and maintenance budget including therein provision for any installment of principal or interest to become due in such fiscal year on any bonds, notes or other evidence of indebtedness of the District. Said budget shall be in reasonable detail, including the amounts payable under the classification of expenses recommended by the Massachusetts Department of Education. Copies of such tentative budget shall be mailed to the Chairperson of the Finance Committee and the Board of Selectmen of each member town.

No less than seven (7) or more than fifteen (15) days following the date on which copies of the tentative budget are mailed to the Chairperson of the Finance Committee and the Board of Selectmen of the member towns as aforesaid, the Committee shall hold a public hearing within the District, after posting in at least two (2) public places in each member town at least seven (7) days in advance of the hearing, a notice stating the time, place, and purpose of the hearing, and giving such further notice as may be required by law. At such hearing, the Committee shall present the tentative budget and shall answer any reasonable inquiries with respect thereto.

Nothing in this Section 10 shall limit the ability of the Committee from preparing, reviewing or revising, alone or together with the one or more members of the Boards of Selectmen or Finance Committees of any member town, any preliminary budget in such form as the Committee may deem appropriate.

(b) Annual Budget

The Committee shall adopt an annual operating and maintenance budget on or before the latest date permitted by law therefore. Said budget shall include debt and interest charges as a separate item, and the Committee shall apportion the amount necessary to be raised in order to meet said budget in accordance with the provisions of subsections 4(b), (c) and (d). The amount so apportioned to each member town shall, not later than thirty (30) days following the adoption of the

final annual budget, be certified by the district treasurer to the treasurer of each member town, and each member town shall, at its next annual town meeting, appropriate the amounts so certified to it.

(c) Annual Report

The Committee shall, on or before October 1 of each year, submit an annual report to the Chair of the Board of Selectmen and Finance Committee in each of the member towns, containing a detailed financial statement, and a statement showing the method of computing the annual charges assessed against each member town, together with such additional information relating to the operation and maintenance of the District as may be deemed necessary by the Committee or the selectmen of any member town.

SECTION 11. EMPLOYMENT OF TEACHERS

Any teacher who has professional teacher status or other rights under Chapter 71, Section 41, whose position is superseded by reason of the establishment and operation of the District shall be employed with the same status by the Committee. Any teacher without status in a city or town in the district whose position is superseded by reason of the establishment and operation of the District shall be elected to serve in such District by the Committee; provided, however, that there is an available position which such person is certified to fill. All teachers employed by the District will be entitled to all of the rights set forth in Chapter 71, Section 42B.

SECTION 12. DISPUTE RESOLUTION

Any dispute by a member town or among member towns regarding the provisions of this Agreement or the performance of any member town under this Agreement shall be resolved as follows:

(a) Such dispute shall initially be submitted to the Committee in writing, specifying the dispute.

(b) If the Committee is unable to resolve the dispute within thirty (30) days of the receipt of the written referral to it, the dispute shall be referred to a committee comprised of the Chairs of the Committee and the Boards of Selectmen of each member town.

(c) If this committee is unable to resolve the dispute by unanimous action within fifteen (15) days of the submission of the dispute to it, the dispute shall be referred to a committee comprised of one (1) member of the Board of Selectmen and one (1) member of the Finance

Committee of each member town designated by the respective Board of Selectmen of each member town and a non-voting facilitator, chosen by the Committee, who will chair such committee.

(d) If this committee is unable to resolve the dispute by majority action within sixty (60) days of the submission of the dispute to it, the member towns shall submit such dispute to formal mediation with a professional mediator mutually agreeable to the Board of Selectmen of each member town; provided that if such mutual agreement is not obtained within thirty (30) days of the date the dispute is required to be submitted to formal mediation, the mediator shall be supplied by the nearest office of JAMS (www.jamsadr.com) or any successor organization upon the request of the Board of Selectmen of any member town or the Committee.

(e) The member towns agree not to initiate any litigation relating to a dispute prior to seeking resolution pursuant to the foregoing provisions. Written or oral statements or offers of settlement made in the course of this dispute resolution process will not be offered into evidence or used for any purpose other than this dispute resolution process and shall not constitute any admission or waiver of rights.

SECTION 13. ASSIGNMENT OF PUPILS

All pupils in grades designated by the Committee as elementary school grades, which shall at least be grades Kindergarten through Four (4) in both member towns, shall be guaranteed the opportunity to receive their education in facilities that are located in the respective towns in which the pupils reside, except that in the case of children with special needs, the Committee may provide for appropriate arrangements. For the purposes of this provision, the term "children with special needs" shall have the same meaning as the term "school-age child with special needs" as defined in section one of chapter seventy-one B of the General Laws. Any pupil who has been accepted to attend a public school in either member town other than the one in which he resides pursuant to Chapter 76, Section 12, as of the date that the Regional School District is formed shall be permitted to remain in the District until his high school graduation.

SECTION 14. EFFECTIVE DATE AND JURISDICTION

This Agreement shall take effect upon its acceptance by each of the Towns of Essex and Manchester.

SECTION 15. SEVERABILITY OF SECTIONS

According to Chapter 71. Section 16 (I), in the event that any provision of this Regional School District Agreement is held invalid in any circumstance, such invalidity shall not affect any other provisions or circumstances.

Appendix C: *MERSD Elementary Task Force Recommendations*

MERSD Elementary Configuration Task Force
Task Force Recommendation to MERSD School Committee

Background

The Manchester Essex Regional School District (MERSD) includes two Pre-Kindergarten through Grade 5 Elementary Schools. Following the completion of a preliminary internal assessment of the existing conditions of the two schools in 2012, the District recognized both buildings would require improvements and commissioned a professional study conducted by Habeeb & Associates Architects in early 2013.

The Habeeb study explored three solutions which were determined by MERSD to be the most logical possibilities moving forward:

Option A: Renovations and additions (if needed) to each of the two schools while maintaining the current grade configuration and serving the residents of each respective town.

Option B: Combine the students of each town and consist of renovations and additions (if needed) to each of the two schools while creating an early education center housing Pre-K, K, 1 and 2 at one of the schools, and grades 3 through 5 at the other.

Option C: Combine the students of each town in a new facility appropriately located on a new site.

The projected cost of the options range from $40MM to $47MM, and the Habeeb report included information about existing educational spaces, required educational spaces, operating capacities, size of additions and projected costs for upgrades, additions, and new structures.

Considering the significant investment that will be required by Essex and Manchester taxpayers to improve the District's aging elementary schools, MERSD fielded a Facilities Expansion Survey in both communities, and formed an Elementary Configuration Task Force in the of Fall 2013. The goal of these two initiatives was to gauge community awareness of critical facilities issues, and learn stakeholder priorities and preferences.

Formation of Elementary Configuration Task Force

The task force is chaired by Caroline Weld and Jim Haskell who represent the Facilities Sub Committee of the MERSD School Committee. It consists of 10 volunteer residents who represent various constituencies in the towns of Essex and Manchester:

Essex	Manchester
Timothy St. Laurent – Preschool Parent	Krista Jakes – Elem/Preschool Parent
Christine Woodman –Elem Parent	Flo Johnson – Elem/Middle School Parent
Michael Gerhardt –Elem Parent	Regina Villa – Community Member at Large
Rebecca Jones – Community Member at Large	Sue Pick – Finance Committee
Susan Coviello – Board of Selectman	Eli Boling – Board of Selectman

Task Force Objective

The Elementary Configuration Task Force was charged with delivering a recommendation to the MERSD School Committee answering the following question: **Should MERSD maintain the current neighborhood school model or move to a unified elementary model?**

Cost and financial impact to taxpayers in Essex and Manchester is top of mind with building projects of this magnitude. Those issues will be addressed in detail by a Building Committee during the next phase, beginning in Spring 2014.

Discovery Process

Between September and December 2013, members of the task force engaged in the following activities to inform their recommendation:

- Attended presentation and reviewed Facilities Needs Assessment from Habeeb & Associates Architects. For copies of presentations and details, click on visit the Elementary Facilities Project Page.
    - Habeeb & Associates Presentation
    - Habeeb & Associates Facilities Report

- Reviewed MERSD regional agreement. To read this agreement, click on Regional Agreement at.

- Read professional journal articles and secondary research about the pros and cons of different school configurations, renovating or replacing buildings, etc. Elementary Task Force Resources

- Reviewed results from Facilities Expansion Survey fielded by MERSD in conjunction with independent technology and communication firm, K12 Insight. For details, click on Elementary Facilities Survey Overview

- Established format, data recording, and data reporting processes for interviews, constituent meetings and public forums. (See Appendix A for Guiding Questions documents).

- Conducted phone interviews with superintendents in other communities throughout Massachusetts using guiding questions about pros/cons of different school configurations, their process for deciding on the configuration, approach for community involvement and awareness, etc.

- Moderated community focus groups with the following constituencies: Memorial School Council, Manchester PTO, Manchester Council on Aging, MEMHS Staff, Essex PTO, Essex Division Chamber, Essex Council on Aging, Manchester Division Chamber, ME Rotary, Essex Elementary Staff, MEMHS School Council, Pre-K Parents Essex, Pre-K Parents Manchester, Memorial Elementary Staff, Realtors, Essex School Council. (Notes for each meeting available upon request.)

Discovery Process (continued)

- Hosted community forums in Essex and Manchester where participants broke out into smaller groups to share opinions and discuss pros and cons of configuration options. (Notes for each forum available upon request.)

- Met six times as a task force, together with the MERSD Superintendent and Director of Finance & Operations, to review, discuss, and debate results of our findings, and arrive at our final recommendation.

- Developed FAQ and Quick Facts to address questions often heard in various groups and forums. (See Appendix B for the group handout).

Major Learning & Themes

- There is no primary or secondary research that will definitively tell us which model is best. Continue to be transparent, and continue dialogue with the communities at large.

- The superintendents interviewed were from a mix of configurations and school/district sizes, and in most cases there were no significant operational savings for one configuration versus another.

- Advocate for the structure that best meets the needs of the two communities, and stay focused on balancing cost challenges with academic and programmatic benefits for our students.

- Neighborhood K-5 schools are the heart of each town, encourage a strong sense of community, provide a preferred smaller overall student population, allow for walking to school, and the mix of younger and older together gives older students the opportunity to be role models.

- While some elementary staff members at both schools pointed to efficiencies and the ability to better balance resources with other configurations, the consensus was that maintaining the neighborhood model for this age group was most appropriate.

- Members of various constituent groups were somewhat open to different configurations but would need to be better informed about the financial benefit of changing the neighborhood model, and what value it brings to the school, curriculum, and our students.

- People definitely buy a house in either Essex or Manchester and expect their young children will go to school in that town K-5. Local realtors strongly supported neighborhood schools and thought home values and demand would be negatively affected for some time if there was a change in configuration.

Recommendation

Based on the learning from our discovery, the task force recommends maintaining the neighborhood school model for the two elementary schools in MERSD. While there is some traction and interest in the unified elementary model, the collective consensus from a variety of community groups clearly points to the neighborhood model.

Following are a variety of quotes gathered during interviews, focus groups, and forums:

> *"When a student is in a school for six years, there are more opportunities for teachers and students to know one another. A deep understanding of all students is essential for strong academic and social growth."*
>
> *"Lots of kids (900) in one building is too many."*
>
> *"Can't imagine being a preschool parent putting a kid on a bus to a different school. Some 5th grade parents already have trouble with this. At this age group, keep it local."*
>
> *"With 3-5 option, would be worried about all of the test taking grades in one building – how that anxiety might affect the culture, plus an even bigger disconnect with 2nd graders not knowing/being exposed to what's coming up."*
>
> *"Neighborhood is preferred, but understand the practical issue of cost."*

To be clear, there were many questions involving cost and financial impact to the residents of Essex and Manchester for the three options outlined in the Habeeb report. As the MERSD School Committee seats a Building Committee and moves to the next phase of addressing our aging elementary facilities, providing this information in more detail will be imperative.

In addition, people are anxious to hear about the District's plan to address/manage the likely surge in enrollment at the renovated schools as they progress to middle-high school. Many questioned how that facility would be able to handle the growing numbers.

For questions about this recommendation or if you need access to any supplemental documents or websites offered in the discover, please contact Caroline Weld or James Haskell.

Respectfully submitted,

Caroline Weld, Co-chair Facilities subcommittee
James Haskell, Co-chair Facilities subcommittee

Questions for the MERSD School Committee

What would happen to the old buildings if one new building was constructed?

True cost and feasibility of options?

Timing of all the options?

Is there an actual parcel of land available that is viable?

What is the expansion plan for both buildings?

What are the growth numbers for both towns?

Memorial school is in worse shape. How are the costs allocated?

Where do you put the students during renovations?

State funding options?

Appendix A

FOCUS GROUP GUIDELINES TO ELEMENTARY TASKFORCE

Questions

- Would you consider an alternative to neighborhood schools?
- What factors influence or guide your position?
- What information is important for the School Committee to communicate to residents of both towns as they move forward in this process?

Appendix B

Quick Fact Document handed to all forum attendees.

What is prompting the effort to explore elementary school options?
The Habeeb report of 2013 finds $6.7M in repairs between Essex Elementary and Memorial Elementary within the next 1-5 years. Below, we've listed the building elements that will require attention in the next 10 years; these items will all cost the district in excess of $100K each.

Issues estimated in excess of $100K each		
Manchester Memorial		**Essex**
Roof ($1.7M)	Parking Areas/Access Drives	Roof ($1.1M)
Boilers ($175K)	Sidewalks/Paved Play Areas	Boilers ($114K)
Windows ($2.4M)	Handicap Accessibility	Windows ($630K)
HVAC ($118K)	Supplemental Air Conditioning	Fire Protection
Fire Protection	Ceilings	Steam Unit Ventilators ($280K)
Interior and Exterior Doors	Painting	Controls ($142)
Kitchen	Floors	Parking Areas/Access Drives
Electric Service	Window Shades	Sink and Faucet Fixtures
Hot Water Unit Ventilators ($367K)	Sink and Faucet Fixtures	
Controls ($179K)		

Costs for repairs to existing buildings come out of the operating budget—the same budget that pays for salaries and educational expenses. More dollars spent on repairs means less money on education.

Charge to the task force: Make a recommendation to the School Committee regarding elementary school configuration.

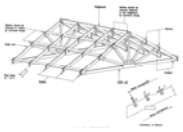
What have we learned about operating cost savings from the new middle high school building?
Cost per square foot savings is 58% lower for heating and 17% lower for electricity.

What is the difference between MERSD's operating and capital budget:

Operating costs: annual costs such as teacher/staff salaries and benefits, maintenance, educational materials, etc., contained in the school's annual budget, funded by taxation, and approved at the Annual Town Meeting.

Capital costs: Principal and interest payments on long-term debt (typically maturity of 20-30 years) issued to finance the construction of our Middle High School building. Significant renovations or new construction for elementary facilities would be similarly financed. These are usually funded by a debt exclusion—an action taken by a community through a referendum vote

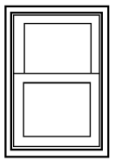
to raise the funds necessary to pay debt service costs for a particular project from the property tax levy, but outside the limits under Proposition 2.5% .



What's the process for renovation/rebuilding of elementary schools going forward?

- Task force makes recommendation to School Committee
- School Committee seats a building committee (Spring 2014)
- Building committee conducts a Feasibility Study (study of all alternatives, including, but not limited to, a final design program, space summary, budget statement for educational objectives, and a proposed total project budget).
- Building Committee prepares a Schematic Design (collaborates with the MSBA and develops a robust schematic design, of sufficient detail, in order to establish the scope, budget, and schedule).
- School Committee brings plan to two towns for a vote.

Where can I find more information about this process?



mersd.org go to the district page and look for Elementary Task Force process.

Appendix E: *Strategic Plan Overview & District Improvement Plan*

MERSD Strategic Plan Overview

Mission

The Mission of the Manchester Essex Regional School District (MERSD) is to provide a high quality, comprehensive, student-centered educational experience that prepares them for a post-secondary educational or service experience, a career, and life as an engaged member of society.

Vision

MERSD, with the partnership and support of member communities, will provide educational opportunities and resources so that all students can realize their individual, unique, and *highest potential, achieve academic excellence, value integrity and honesty, and become intellectually curious and critical thinkers.*

Core Values

Student Centered

We believe schools must establish a safe environment that supports the development of all students. Schools must engage all aspects of a child's development, including knowledge, a sense of self, emotional well-being, physical health, and skills and strategies to negotiate an ever-changing and unpredictable world.

Student Achievement

We believe MERSD should foster a learning environment that encourages academic achievement, social and emotional freedom and engagement, collaboration and creative problem-solving; the skills to confront new ideas with both rigor and sensitivity, and the awareness to and ability to extend the skills beyond the academic core to include experiential learning, the arts, cultural awareness, and physical and social emotional health.

Equity

We believe our schools must strive to create a just and equitable environment that respects individual differences and the diversity of our communities, country, and world.

Family & Community Partnerships

Schools are a reflection of their communities. We believe that providing a quality education that prepares our students for an unpredictable world is a shared responsibility, fostered by partnerships among the schools, families, educational non-profits, businesses and the community-at-large.

Resources

We believe the District and our community partners should collaborate to provide the necessary funding to equip our students with the essential critical thinking, analytic, communication, and problem-solving skills they need to be productive, contributing members of our local and global communities and deliver on the promise of our students' potential.

Vision of the Graduate

Empathetic Global Citizen Responsible Collaborator	Effective Communicator Critical Thinker Personally Accountable	Social/Emotional Awareness Innovative and Creative

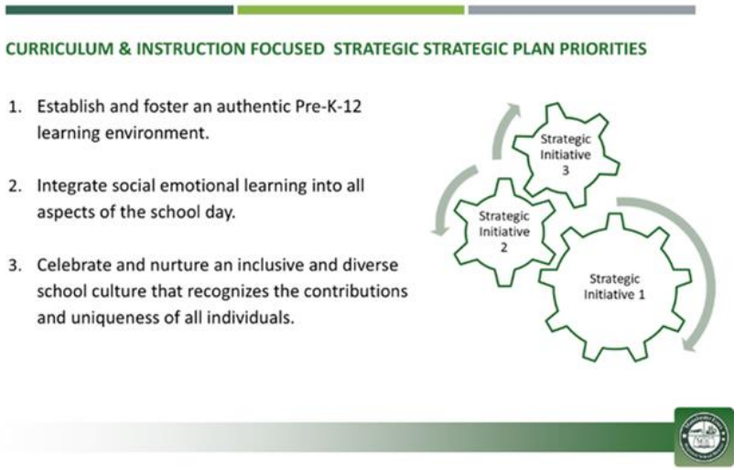
Theory of Action

If we

Keep students at the center of decision making and practice
Cultivate a collaborative and inclusive culture
Articulate the relationship between social emotional well-being and student achievement
Engage in two-way communication with our community

Then…

Students will realize their individual, unique, and *highest potential, achieve academic excellence, value integrity and honesty, and become intellectually curious and critical thinkers.*



Strategic Priorities

Establish and foster an authentic Pre-K-12 learning environment.	*Integrate social emotional learning into all aspects of the school day.*	*Celebrate and nurture an inclusive and diverse school culture that recognizes the contributions and uniqueness of each learner.*
Maintain a sustainable multi-year operational budget and capital improvement plan.		

MERSD District Improvement Plan 2025–2028

Introduction

This District Improvement Plan (DIP) is the second in a three-cycle sequence designed to carry forward the Manchester Essex Regional School District's long-term Strategic Plan priorities. It outlines the work we will take on between 2025 and 2028 to strengthen teaching and learning, support student well-being, build an inclusive school culture, and maintain sustainable operations.

How Strategic Priorities 1, 2, and 3 Work Together to Improve Instruction and Student Achievement: MERSD's instructional work is intentionally braided across three priorities. Priority 1 centers on authentic learning—coherent PreK–12 curriculum, performance-based assessment, and the Vision of the Graduate—so classroom experiences are rigorous, engaging, and connected to the real world. Priority 2 integrates social-emotional learning (SEL) and a Multi-Tiered System of Supports (MTSS) to ensure students are ready to learn every day through consistent Tier 1 practices, targeted interventions, and partnerships with families. Priority 3 advances Universal Design for Learning (UDL) and inclusive practices so all students can access, participate, and demonstrate mastery in multiple ways. Together, these priorities form the conditions and practices of high-quality instruction: strong core teaching (Priority 1), supportive environments that build readiness and belonging (Priority 2), and universally designed lessons that remove barriers (Priority 3).

This integrated approach strengthens teacher practice and accelerates student learning. Authentic, performance-based tasks demand higher-order thinking; SEL/MTSS routines increase engagement and persistence; and UDL ensures access and challenge for diverse learners. As we build staff capacity through coaching, collaboration, and clear "look-fors," we expect to see higher engagement, more consistent growth across student groups, and measurable gains in academic performance.

Priority 1: Authentic Learning	Priority 2: SEL & MTSS	Priority 3: UDL & Inclusion
• Real-world, inquiry-based tasks • Performance-based assessment • Vision of the Graduate embedded • Teacher coaching & collaboration	• Tier 1 routines for regulation & relationships • Consistent SEL scope & sequence • Data routines for early intervention • Family partnerships	• Flexible design for access & challenge • Multiple means of engagement/representation/action • Model classrooms & peer observation • Coaching aligned to UDL look-fors

Integrated Impact: Strong core instruction + supportive conditions + universally designed lessons ⇒ Higher engagement, access for every learner, and measurable gains in achievement

How to Read This Document

Each section of the DIP is organized under one of the four Strategic Plan priorities. Within each priority, you will find:

- **Objective** – The specific aim or goal we are working toward.
- **Student Impact (if achieved)** – The difference this work will make for students in their daily learning experience.
- **Action Steps / Deliverables** – The concrete tasks, initiatives, or structures we will put in place to reach the objective. These are listed by fiscal year (FY26, FY27, FY28) to show how the work will progress over time.

How to Use This Plan

- Read by Priority to see how the work aligns to our long-term goals.
- Follow the Timeline to understand how initiatives move from foundation to pilot to full implementation.
- Note the Student Impact to see how each action connects back to the classroom experience.
- Use the Glossary as a reference when educational terms appear.

Frequently Used Terms

- **Authentic Learning –** Student-centered authentic learning is an approach to teaching and learning that engages students in inquiry-based experiences that have real-world applications guided by students' experiences, skills, and interests. Authentic learning is grounded in real world issues, problems, and applications. It encourages higher order thinking, empowers students with practical and useful life skills, and invites them to make a difference in their world.
- **Vision of the Graduate (VOG) –** A district-defined set of skills and competencies (e.g., communication, collaboration, critical thinking) that every student should demonstrate by graduation. These skills are embedded into curriculum and assessments across grade levels.
- **MTSS (Multi-Tiered System of Supports) –** A structured framework that provides different levels of academic, behavioral, and social-emotional support. Tier 1 refers to practices all students receive, Tier 2 is targeted support for some, and Tier 3 is intensive support for individual students.
- **SEL (Social-Emotional Learning) –** The process of developing self-awareness, self-management, social awareness, relationship skills, and responsible decision-making.
- **UDL (Universal Design for Learning) –** An instructional approach that ensures lessons are flexible and accessible so all students, regardless of learning style or need, can succeed.
- **Performance-Based Assessment –** An assessment that asks students to demonstrate their learning by doing something meaningful (e.g., creating a presentation, solving a real problem, conducting an experiment) rather than taking a traditional test.
- **Look-Fors –** Agreed-upon indicators that administrators and teachers use to recognize whether a desired practice (such as authentic learning or SEL integration) is happening during classroom visits.
- **FY26, FY27, FY28 –** Fiscal years (July 1 – June 30) that provide a timeline for when action steps will be launched, piloted, or fully implemented.
  This structure is designed to make the DIP both a practical guide for educators and an accessible resource for families and community members who want to understand the district's priorities and track progress over time.

Strategic Priority 1: Establish and foster an authentic PreK-12 learning environment.		
Objective	**Student Impact (if achieved)**	**Action Steps / Deliverables**
Strengthen instructional practice by embedding authentic learning experiences across PreK-12.	Students experience deeper engagement and higher-order thinking through authentic problem-solving opportunities across disciplines.	**FY26 – Expansion of Practices** • Define and articulate shared PreK–12 expectations for "authentic learning experiences." • Conduct an inventory of current practices by grade band and create school-level matrices of strengths and gaps. • Provide ongoing coaching, training, and resources for technology and AI integration to support authentic learning. • Structure professional learning to focus on authentic instruction and assessment practices. **FY27 – Embedding & Piloting** • Pilot expanded student opportunities such as projects, service learning, or capstones. • Strengthen supervision and evaluation routines with "look-fors" for authentic learning, engagement, and higher-order thinking. **FY28 – Implementation & Monitoring** • Scale authentic learning practices across PreK–12. • Memorialize student opportunities (performance, presentation, exhibitions, capstones, service learning, internships etc.) into scope and sequence. • Use observation data and student outcomes to monitor impact and refine practice. **Adopt high-quality inclusive curriculum resources that support real-world, authentic learning in alignment with the Curriculum Review Cycle.*
Align curriculum and assessment to reflect changes in instructional practices, ensuring coherence and consistency across PreK-12.	Students benefit from a coherent PreK-12 curriculum and authentic, performance-based assessments that allow multiple ways to demonstrate mastery in real-world contexts.	**FY 26 – Expansion of Practices** • Audit curriculum maps and assessments PreK–12. • Build shared understanding of authentic, performance-based assessments through professional learning. • Schedule regular routines of data analysis and action planning including formative and performance-based assessments. **FY 27 – Embedding & Piloting** • Design and pilot performance-based assessments. • Develop rubrics, exemplars, and scoring protocols to guide consistency. **FY28 – Implementation & Refinement** • Implement assessments across grades and subjects. • Embed authentic assessments into curriculum maps. • Use student work/data to monitor outcomes and refine practice.

Expand implementation of the Vision of the Graduate by defining developmentally appropriate competencies and embedding them throughout the PreK-12 curriculum.	Students develop competencies like collaboration, communication, and critical thinking through authentic learning opportunities and partnerships that extend beyond the classroom.	**FY 27 – Expansion of Practices** • Respond to NEASC recommendations by creating grade-level benchmarks that define a developmentally appropriate PreK–12 skills continuum. • Align the Vision of the Graduate with classroom opportunities and existing extracurricular/field experiences. **FY 28 – Development & Design** • Develop a matrix illustrating VOG competencies for each grade span. • Embed VOG competencies into curriculum maps and unit design by identifying explicit connections between academic content and VOG skills. • Collect data through observation and student work to monitor success of alignment and guide administrative support. • Provide professional learning to support teacher use of authentic learning strategies to support implementation of Vision of the Graduate. **FY 29 – Implementation & Partnerships** • Implement performance assessments aligned to VOG competencies matrix. • Strengthen partnerships with community organizations by building a district-wide partner network tied to VOG benchmarks.
Elevate student voice by fostering relevance, engagement, and regard for student perspectives in the classroom.	Students will experience learning that is meaningful and relevant, with their perspectives valued in the classroom. This will increase engagement, motivation, and ownership of their learning.	**FY 27 – Foundation** • Establish regular student feedback loops (e.g., surveys, advisory discussions, student-led forums) to inform instructional design and monitor the impact of authentic learning initiatives. • Collect and analyze data on student access, representation, and achievement to identify gaps.

Strategic Priority 2: Integrate social emotional learning into all aspects of the school day.

Objective	Student Impact (if achieved)	Action Steps / Deliverables
Develop and implement a district-wide Multi-Tiered System of Supports (MTSS) model for SEL that supports mental health and wellness.	Students will experience consistent, tiered social-emotional and mental health supports that proactively meet their needs, resulting in increased well-being, improved readiness to learn, and stronger engagement in school.	**FY 26 – Expansion of Practice** • Convene a joint SEL/MTSS leadership team to define essential components of the model. • Audit current SEL and mental health practices across schools; identify strengths, gaps, and existing resources. • Build a foundation for a district-wide data system/process to identify and monitor students in need of SEL/mental health supports.

		• Strengthen access to mental health resources and partnerships with outside providers. **FY 27 – Development & Training** • Establish a district-wide data system/process to identify and monitor students in need of SEL/mental health supports. • Develop tiered supports (universal, targeted, intensive) with clear roles, protocols, and referral pathways. • Systematize tiered supports (universal, targeted, intensive) with clear roles, protocols, and referral pathways. • Targeted training to support SEL tiered supports. • Integrate consistent Tier One practices for emotional regulation and behavior supports across schools. **FY 28 – Implementation & Refinement** • Implement expanded MTSS model across PreK–12. • Establish progress-monitoring routines using student SEL data and well-being indicators. • Develop structured collaboration protocols for student support teams (teachers, counselors, specialists) to align Tier 1 and Tier 2 SEL practices across classrooms. • Refine practices based on evaluation data and stakeholder feedback.
Ensure students experience a consistent, vertically aligned SEL curriculum that builds self-regulation, relationships, and real-world application of SEL skills.	Students gain a foundation of SEL skills and can apply these competencies in school and beyond.	**FY 26 – Alignment & Expansion** • Review and expand existing elementary SEL work (RULER) to ensure alignment with CASEL and other frameworks as appropriate. • Begin developing a PreK–12 SEL scope and sequence (“integration plan”) that articulates tier 1 learning experiences and expectations across grade bands. • Utilize SEL “look-fors” to gather data to inform administrative team of trends, strengths, and areas for growth. **FY 27 – Curriculum & Practice Integration** • Embed SEL competencies into curriculum maps and unit design by identifying explicit connections between academic content and SEL skills. • Extend the K–8 SEL Leadership model to 9–12, with a focus on training staff in strategies that increase student availability for learning. • Launch consistent family engagement routines (e.g., annual SEL forums, ParentSquare updates, family workshops) to communicate SEL goals and strengthen school–home partnership in student well-being. **FY 28 – Implementation & Monitoring** • Finalize and implement the PreK–12 SEL scope and sequence.

		• Integrate SEL “look-fors” into administrative evaluation practices to ensure consistent attention to SEL in instruction. • Monitor student outcomes and refine SEL practices based on feedback and data.
Develop student leadership opportunities through establishing building-level programs that empower students to model and promote RULER Program/CASEL competencies.	Students will gain authentic leadership experiences that build confidence, deepen SEL competencies, and foster a positive school culture where peers model and promote healthy social and emotional behaviors.	**FY 27 – Program Design & Launch** • Establish building-level student leadership teams/programs (e.g., SEL Ambassadors, Peer Leaders, Student Voice Councils) to model RULER/CASEL competencies. • Provide training and mentoring for student leaders to develop facilitation, communication, and peer-support skills. **FY 28 – Student-Led Engagement & Partnerships** • Create opportunities for student leaders to design and lead SEL-focused activities such as school-wide assemblies, advisory sessions, or classroom workshops. • Partner with families and community organizations to host student-led showcases, SEL Family Nights, and collaborative events that reinforce SEL themes. **FY 29 – Expansion & Sustainability** • Formalize recurring structures for student leadership in SEL (e.g., annual leadership retreats, cross-grade mentoring, regular student-led forums). • Integrate leadership opportunities into curriculum and extracurricular programs to ensure equitable access across grade levels. • Monitor impact through student reflections, feedback from peers, and surveys of school culture and climate.
Strategic Priority 3: Celebrate and nurture an inclusive and diverse school culture that recognizes the contributions and uniqueness of each learner.		
Objective (We will…)	**Student Impact (if achieved)**	**Action Steps / Deliverables**
Implement Universal Design for Learning (UDL) practices in all classrooms to create inclusive learning experiences that meet the needs of all students, including those with learning differences.	Students with varied learning profiles will experience instruction that is accessible, engaging, and challenging. All students, including those with learning differences, will be able to participate fully, demonstrate their strengths, and achieve at high levels within a supportive and inclusive classroom environment.	**FY 26 – Foundation & Training** • Establish UDL as a district-wide instructional expectation. • Assess current staff knowledge and training in UDL. • Provide differentiated professional development for staff at varying levels of familiarity with UDL. **FY 27 – Implementation & Support** • Integrate UDL practices into grade level and curriculum teamwork, with teachers sharing strategies and student outcomes. • Identify model classrooms as demonstration sites for UDL in practice.

		• Incorporate ongoing coaching and peer observation focused on UDL implementation. **FY 28 – Monitoring & Accountability** • Focus on UDL "look-fors" during administrative supervision and evaluation practices. • Monitor impact on student access, engagement, and performance through observation and student data. • Adjust training and coaching based on observation and feedback. • Develop family-friendly resources that explain classroom differentiation and UDL strategies, ensuring families understand how instructional practices support diverse learners.
Implement inclusive curriculum and instruction, including diverse voices, perspectives, and cultural experiences across all content areas.	Students will engage with a curriculum that reflects a wide range of experiences and perspectives, helping them feel seen and valued. This exposure fosters empathy, critical thinking, and a deeper understanding of the world, enriching their learning and preparing them for a diverse society.	**Ongoing - Curriculum Review & Equity Lens** • Evaluate instructional materials for bias and inequities to ensure inclusive student learning experiences. **Ongoing - Data & Instructional Practices** • Collect and analyze data on student access, representation, and achievement to identify gaps. • Provide professional learning to support inclusive instructional strategies across grade levels and content areas. **Ongoing - Policy & Systems Alignment** • Use an equity lens rubric to audit and revise school and district policies. **Adopt high-quality inclusive curriculum resources that support real-world, authentic learning in alignment with the Curriculum Review Cycle.*
Provide multilingual learners with high-quality, tailored instruction that supports academic growth and full participation in grade-level learning alongside their peers.	All students benefit from an inclusive learning environment where multilingual learners thrive, fostering stronger peer collaboration, cultural awareness, and a richer classroom experience for everyone.	**FY 26 – Foundations & Capacity** • Ensure all identified teachers are SEI-endorsed. • Adopt an evidence-based ESL/ELD curriculum (WIDA-aligned) that supports MLL students K-12. • Coaching for all teachers with MLL students supporting integration of SEI strategies into daily instruction. • Training for administrators to enhance understanding of SEI strategies **FY 27 – Integration & Implementation** • Implement the ESL/ELD curriculum and align MLL programming with content curriculum and district assessment routines. • Integrate Sheltered English Immersion strategies in all core classes. • Provide ongoing PD/coaching that strengthen teachers' ability to support deeper content understanding, relevance, and transfer of learning for MLL students. **FY 28 – Monitoring & Refinement**

		• Establish a data routine to monitor MLL progress (ACCESS growth, screeners, classroom assessments) and adjust supports. • Calibrate expectations and materials across grades; share exemplars; refine program structure based on results. • Formalize MLL family engagement methods in a regular and ongoing routine.

Standard 4: Maintain a sustainable multi-year operational budget and capital improvement plan.		
Objective (We will…)	**Student Impact (if achieved)**	**Action Steps / Deliverables**
Strengthen financial management systems and processes to support data-driven decision making, operational efficiency, and sustainable resource allocation.	Students benefit from stable, well-resourced schools where funding decisions are efficient, equitable, and aligned to instructional priorities, ensuring that resources directly support teaching, learning, and long-term program sustainability.	**Systems & Tools** • Restructure payroll system; invest in and implement software tools to link payroll and personnel functions, improving reporting and efficiency. **Forecasting & Budget Alignment** • Develop a projection model to assess the long-term impact of increasing numbers of high-needs preschoolers on special education programs and staffing. • Utilize a zero-based budgeting approach in special education to ensure budgets are student-need driven and restructured as required. **Review & Long-Term Planning** • Implement a cyclical review process to evaluate efficiency of major programs and staffing models, reallocating resources to highest-impact areas while identifying opportunities for innovation and cost savings. • Forecast both large-scale and small-scale operational and facilities capital needs. • Advance planning for major capital projects (e.g., High School/Middle School 2034 Renovation Planning).
Optimize organizational structures and resource allocation to increase efficiency, support evolving instructional priorities, and prepare for future growth and program needs.		**Analysis & Immediate Adjustments** • Analyze technology infrastructure for capacity to meet future instructional and operational needs. • Review personnel efficiencies to improve or adjust delivery of programs (carryforward action). • Study options for shared leadership models cross district and the middle/high school.

		Program Expansion & Restructuring • Plan and prepare for the establishment of universal preschool, including classroom space, location, supervisory structures, and staffing needs. • Move special education chairpersons into an administrative role, ensuring program analysis and revisions prioritize efficiency and sustainability. **Long-Term Alignment & Sustainability** • Reorganize professional stipend structure to better align funding with curriculum and instructional improvement goals. • Continue to refine organizational structures and staffing models to support evolving instructional priorities and program growth.
Expand funding opportunities and future-focused planning to ensure the district is well-positioned to address challenges and opportunities.		**Revenue Review** • Review and adjust existing tuition structures (e.g., preschool, specialized programs) for opportunities to increase revenue. • Conduct a fee structure analysis to identify areas for sustainable increases aligned with community capacity. **Expanded Funding Sources** • Seek grant opportunities and alternative funding streams that directly align with district strategic priorities and improvement goals. • Build internal systems for tracking, applying for, and managing grants to maximize impact. **Long-Term Partnerships & Collaboration** • Investigate and pursue opportunities for shared services and collaboration with area school districts to reduce costs and expand resources. • Establish a process for annual review of revenue opportunities, partnerships, and funding models to ensure sustainability.

MERSD School Improvement Plan

Essex Elementary School

2024-2026

Every student is at the center of decision-making.

District Strategic Initiative 1 (DSI:1)

Establish and foster an authentic Pre-K-12 learning environment.

1. *Conduct external elementary school level assessments of current practice inclusive of authentic learning self-study. [Student Centered, Student Achievement]*
2. *Define "student centered authentic learning" and develop internal needs assessments for secondary level schools. [Student Centered, Student Achievement]*
3. *Map and deliver a developmentally differentiated professional development plan informed by the outcomes of school-based assessments.*
4. *Strengthen traditional academic program practices to ensure horizontal and vertical articulation. [Student Centered, Student Achievement]*
5. *Develop community partners to provide opportunities for students to connect learning to real-life application. [Family and Community Partnership]*
6. *Prioritize and support programming to promote creativity, innovation, and the arts. [Student Centered, Family Community Partnership]*

School Goals	Resources & Responsibilities	Deliverables (what & when) Measures of Implementation Documentation
EES will continue the process to receive NEASC Elementary Accreditation. This will be done as a collaborative exercise with our MMES counterparts. One focus area will be to align the authentic learning experiences at both elementary schools. ***DSI 1.1, 1.2, 1.3, 1.4 ****	• EES Principal • Director of Curriculum, Instruction, and Technology • EES Staff	• NEASC Final Report submitted - Sep 24 • NEASC Priority Areas for Growth submitted - Sep 24 • NEASC Report to be received- Nov-Dec '24 • NEASC Steering Committee to review recommendations - Jan '25 • NEASC Report shared with community- April '25 • NEASC Recommendations integrated into SIP Update - Sep '25 • NEASC progress presented during SIP Presentation - Sep '26

MERSD Instructional Coaches will work with teachers to add at least one novel Authentic Learning Activity to each grade level. ***DSI 1.1, 1.2 & 1.5 ****	• EES Principal • Director of Curriculum and Instruction • MERSD Instructional Coaches • EES Teachers	• Current list of authentic learning activities shared and expanded - Oct/Nov '24 • Additional authentic learning activities implemented, evaluated, and documented Oct '24-Jun '26 • Record of identified authentic learning experiences expanded to include novel grade level experiences - June '26
EES will work collaboratively with district staff and MMES staff to design a shared MERSD Elementary Teacher Assistance Team consultation model ***DSI 1.3, 1.4 ****	• EES Principal • Director of Student Services • EES TAT Team	• Best practice and past practice review - Sep '24-Dec '24 • Current practice overview comparison - Sep '24-Dec '24 • MERSD TAT Consultation Model developed and flow chart created/adjusted - Dec '24-Jun '25 • MERSD TAT Consultation Model presented to staff and implemented- Aug '25-Jun '26
EES administration will collaborate with MMES administration and the Director of Curriculum, Instruction, and Technology to develop and implement a plan for instructional coaching in the areas of literacy and mathematics. ***DSI 1.3 1.4 ****	• EES Principal • Director of Curriculum, Instruction, and Technology • MERSD Instructional Coaches	• Monthly Meetings with Instructional Coaches - Sep '24- Jun'26 • Monthly Elementary Leadership Meetings - Sep '24- Jun'26 • Collaborative Evaluations completed - May '25 and May '26
EES will collaborate with MMES administration and staff to align performing arts curriculum and performances. ***DSI 1.6****	• EES Principal • EES Music Teacher • EES Band Instructor	• Common Elementary Music Expectations and Plan Developed - Dec. '24 • Congruent K-5 Winter and Spring Culminating Music Performances Implemented - Dec '24 - Jun '26
EES administration will collaborate with MMES administration to develop and implement a plan for the new Library Teaching Assistant to support students and staff with authentic learning activities ***DSI 1.3 1.4 ****	• MMES Principal • MERSD Librarian • MERSD Library TA	• Quarterly Meetings with Elementary Library Staff - Sep '24- Jun'26 • Monthly Elementary Leadership Meetings - Sep '24- Jun'26

MERSD Instructional Coaches will design and implement an annual Family Literacy Night and Family Mathematics Night to partner with our students' families in each content area. ***DSI 1.1, 1.2 & 1.5****	• EES Principal • Director of Curriculum, Instruction and Technology • MERSD Instructional Coaches • EES Teachers	• Family Literacy/Mathematics Night Plan Developed - Oct-Dec '24 • Opportunities for grant funding explored - Oct-Dec '24 • Family Literacy/Mathematics Night Plan Implemented - Mar '25 • Family Literacy/Mathematics Night Plan Evaluated and Revised - Jun '25- June '26
EES will expand its partnerships with local community organizations and volunteers to offer after school clubs to students. ***DSI 1.5, 1.6***	• EES Principal • Community Partners/Volunteers	• Community outreach to determine club offerings for each session (4-8 clubs for three sessions per year)-- Sept '24 • Implement three sessions (6 weeks each) of afterschool clubs- Ongoing Sept '24 - June '26

Strategic Initiative 2

Integrate social emotional learning into all aspects of the school day.

1. *Create a K-12 SEL Leadership model charged with training staff on ways to integrate a variety of strategies to help increase student availability for learning. [Student Achievement, Student Centered, Equity]*
2. *Create a Vertical SEL Team to support the implementation of SEL informed instruction. [Student Achievement, Student Centered]*
3. *Design an integration plan and rubric to use to measure effectiveness of SEL integration at the individual student and classroom level. [Student Achievement, Student Centered, Equity]*
4. *Involve families and the community in the SEL work that our staff and students are engaged in. [Family and Community Partnerships]*

School Goals	Resources & Responsibilities	Deliverables (what & when) Measures of Implementation Documentation
EES will work with SEL Leadership Team and MMES staff to implement the developed SEL Scope and Sequence. ***DSI 2.2 ****	• EES Principal • EES Teachers • SEL Leadership Team	• Share Scope and Sequence with EES staff- Sep-Oct '24 • Implement scope and sequence during school day- June '25 • Feedback and refinement to SEL Leadership Team- June '25

		• Continued implementation using feedback/revisions- June ‘26
EES staff will provide resources for families (via weekly newsletter) to support students who are facing struggles with anxiety and other mental health challenges. This will include a collaboration with a child psychologist with specific expertise in the area of anxiety. ***DSI 2.4 ****	• EES Principal • EES Counselor • Director of Student Services • Child Psychologist Consultant	• Admin Training - Sep ‘24 • Staff Training - Dec ‘24 • Monthly Newsletter Outreach- Nov ‘24-Jun ‘26
Families will be engaged in the SEL work that our school is undertaking via regular newsletter updates and community SEL opportunities. ***DSI 2.4***	• EES Principal • MERSD SEL Team	• Newsletter and email updates – Sep ‘24-Jun ‘26 • SEL Opportunities at Open House – Sep ‘24 and Sep ‘25 • Family Charter Night- Sep ‘25
EES will establish a dedicated calm space within the school to support students’ sensory needs and enhance self-regulation skills, leading to improved behavior, social emotional learning, and academic performance. ***DSI 2.3***	• EES Principal • School Counselor • Occupational Therapist	• Calm Space set-up and inventory of resources and materials available in the space, including a replenishment plan– Sep - Oct ‘24 • Staff Training and Utilization Guides– Nov ‘24 • Monitoring and Evaluation Report with ongoing refinements based on feedback – Nov ‘24 - June ‘26
	•	•

Strategic Initiative 3

Celebrate and nurture an inclusive and diverse school culture that recognizes the contributions and uniqueness of all individuals.

1. *Identify and hire a consultant/coach to support the district in achieving cultural proficiency in the area of diversity, equity and inclusion. [Student Centered, Student Achievement, Equity, Family and Community Partnership, Resources]*
2. *Conduct a cultural proficiency, diversity, equity, and inclusion assessment. [Student Centered, Student Achievement, Equity, Family and Community Partnership, Resources]*
3. *Build on and expand inclusion and cultural competence training for staff and students.*

School Goals	Resources & Responsibilities	Deliverables (what & when) Measures of Implementation Documentation
EES will implement the "Investigating History" curriculum as it is released by DESE. This will provide more relevant and inclusive perspectives to students when learning about historical events. ***DSI 3.3****	• EES Principal • EES Teachers • MERSD Director of Curriculum	• Grade 5 - Sep '24-Jun '25 • Grade 3 and 4 - Sep '25-Jun'26 (pending DESE release)
EES will collaborate with MMES to expose students to authors from diverse backgrounds to increase global awareness and appreciation of diverse cultures. ***DSI 3.3***	• EES Principal • Elementary Librarian • FOESS	• Hena Kahn - '24-'25 • TBD - '25-'26
EES will evaluate and revise as needed classroom and schoolwide traditions to ensure they are culturally responsive and accessible to all students, reflecting the diversity of our community. ***DSI 3.2, 3.3***	• EES Principal • EES Leadership Team • EES School Council	• Audit of current traditions– Feb '25 • Creation of inclusive events calendar– June '25 • Revision/Implementation of events/traditions– June '26
	•	•

Strategic Initiative 4

Ensure funding for a stable, multi-year budget and capital improvement plan through collaboration with town and community partners.

1. *Develop and pass a budget that maintains quality and forward progress maintaining efficient practices but shifting to greater advocacy for increased funding to the District.*

2. *Articulate large and small scale operational and facilities capital needs and obligations. [Student Centered, Student Achievement, Equity, Family and Community Partnerships, Resources]*
3. *Continue to evolve the central administrative organization structure to efficiently and effectively support district wide improvement goals. [Student Centered, Student Achievement, Resources]*
4. *Review personnel efficiencies to improve or adjust delivery of programs. [Student Centered, Student Achievement, Equity, Resources]*

School Goals	Resources & Responsibilities	Deliverables (what & when) Measures of Implementation Documentation
EES administration will work collaboratively with MERSD district staff to identify materials and staffing gaps in areas highlighted by the NEASC report. ***DSI 4.1-4****	● EES Principal	● Budget Request - Oct '24-Jun '26

**Shared goal with EES*

Every student is at the center of decision-making.

Appendix F: *Grade-Level Curriculum Guides*

MERSD SPECIALS

Grade K, Trimester 3

LIBRARY

In this Trimester, your child will:

- Learn how to independently navigate *PebbleGo*, an online encyclopedia, via an iPad.
- Choose a research topic and understand what questions are going to be researched.
- Use books and *PebbleGo* to find information about a topic and take notes on a graphic organizer.
- Dictate learned facts about the research topic to the Library Teacher to type up.
- Create a final research poster (produced in collaboration with Technology class) and present their work to their class.

TECHNOLOGY

In this Trimester, your child will:

- Learn about computer science.
- Learn how to create basic codes.
- Create code with offline and online activities.
- Learn how to code robots to solve problems.
- Continue to use our mouse skills and navigation skills to produce and complete projects on the computers.

VISUAL ART

In this Trimester, your child will:

- Hear stories of famous artists.
- Learn how to create clay pinch pot.
- Continue to listen to stories and make connections to the story with art lessons.
- Continue to make art by painting, drawing, and printmaking
- Continue using scissors, tracing and glueing to make collages.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Show the difference between high and low sounds through singing and movement.
- Repeat back simple rhythms by ear with body percussion.
- As a class, sing 5 short songs from memory.
- Distinguish between major and minor chords.

WELLNESS / PE

In this Trimester, your child will:

- Try new fitness movements, activities and skills.
- Demonstrate safe and cooperative play with the parachute.
- Demonstrate beginning jump rope skills with self and partner.
- Demonstrate jumping skills over hurdles.
- Demonstrate beginning lacrosse skills such as passing, catching and shooting.
- Demonstrate walking, running, jogging, leaping, sliding, jumping, hopping, skipping, galloping.
- Continue our P.A. curriculum.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade K, Trimester 2

LIBRARY

In this Trimester, your child will:

- Demonstrate an understanding of how to locate different genres in the library space.
- Ask and answer questions about key details in a text, with prompting from the Library teacher.
- Will compare and contrast stories.
- Will continue to explore seasonal themes and world traditions via literature, and demonstrate an understanding via student-created projects.

TECHNOLOGY

In this Trimester, your child will:

- Learn about Internet safety and how to stay safe online.
- Create multimedia projects with different apps such as Chatterpix and Book Creator.
- Use their library research to create a multimedia project with digital artwork.
- Create a project that can then be shared with larger audiences.

VISUAL ART

In this Trimester, your child will:

- Create art through printmaking.
- Continue to listen to stories and make connections to the story with art lessons.
- Explore new ways to make art with painting texture with liquid tempera and watercolor paints.
- Learn how to create secondary colors from primary colors.
- Use scissors and glue to create collages.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Show the difference between fast and slow through singing and movement.
- Sing on stage as a group.
- Applaud at appropriate times.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate beginning Basketball skills.
- Demonstrate moving to various rhythms and demonstrate aerobics to various music.
- Demonstrate appropriate rolling movement turning tumbling.
- Demonstrate skills used in pickleball: striking forehand and backhand.
- Demonstrate moving to various rhythms and can perform dances of various countries.
- Will demonstrate beginning hockey skills.
- Continue our P.A. curriculum.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade K, Trimester 1

LIBRARY

In this Trimester, your child will:

- Learn the purpose of the school library and how to check out a book.
- Begin to independently navigate the library's physical space.
- Begin to recognize the difference between fiction and non-fiction books.
- Make predictions about what will happen next in a story.
- Learn about seasonal themes and world traditions via literature, and demonstrate understanding via student-created projects.

TECHNOLOGY

In this Trimester, your child will:

- Learn basic device safety and expectations of device care.
- Identify different kinds of computing devices in the classroom, like the mouse, laptop, printer and ipads.
- Learn how to use the mouse to navigate the computer and different applications.
- Use a program called Kipix to create simple pictures and learn how to type our name.

VISUAL ART

In this Trimester, your child will:

- Students will learn what art is, what an artist does and why art is important to people throughout history and around the world.
- Students will continue to explore new ways to explore artmaking and expressing themselves through drawing, painting, printing, collage and 3D construction.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Recognize music as a cultural universal.
- Sing a variety of songs as a group
- Learn the difference between loud and soft sounds.
- Keep a steady beat using their bodies.
- Respond to music through movement.
- Listen to music silently.

WELLNESS / PE

In this Trimester, your child will:

- Be introduced to a variety of locomotor skills (Hopping, skipping, jumping, leaping, running, galloping and sliding)
- Demonstrate soccer skills including striking, trapping, dribbling, headers, force and passing.
- Begin overhand and underhand throwing and catching
- Take part in Project Adventure curriculum which includes problem solving and teamwork.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

KINDERGARTEN
Trimester 3

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade K, Trimester 3 Big Ideas and Concepts:

- Read early emergent reader texts with purpose and understanding
- Continue to demonstrate developing phonological awareness (medial vowel sounds, blend and segment CVC words, add and delete sounds in words)
- Continue to know and apply word analysis skills in decoding words
- Read most kindergarten high frequency words
- With help from an adult, use written words and drawings to express an opinion or give information about something
- Participate in shared research and writing projects

By the end of Grade K, Trimester 3 students can:

- Recognize and write all uppercase and lowercase letters and sounds.
- Read decodable texts.
- Capitalize the first word in a sentence.
- Recognize punctuation marks used at the end of sentences.
- Use appropriate word spacing in a sentence.

Questions you can ask your child:

- ★ Which words in this book do you know?

Topics you can discuss with your child's teacher:

- ★ How and where to find appropriate books for your child

Grade K, Trimester 3 Big Ideas and Concepts:

- Compare two numbers between 1 and 10 represented as written numerals
- Fluently add and subtract within 5
- Represent and solve addition and subtraction problems within 10 concretely, verbally and symbolically with expressions and equations
- Describe measurable attributes of objects
- Correctly name basic 2D and 3D shapes
- Count to 100 by 1s and 10s, and count on from various starting points
- Find number pairs that add to ten and record them with drawings or equations
- Teen numbers
- Count 20 objects in various arrangements
- Decompose numbers to ten into pairs in more than one way

Questions you can ask your child:

- How can you solve 5-1? How about 3+2?
- What 3D shapes do you know? Can you find any in the room?
- What goes with 7 to make 10?

Topics you can discuss with your child's teacher:

- Things to work on over the summer
- First grade readiness
- How to build excitement about math skills

By the end of Grade K, Trimester 3 students can:

- Compose, decompose and understand numbers 10-19.
- Compare groups of objects using greater than, less than or equal to.
- Add and subtract mentally within 5.
- Use objects, drawings or strategy to add and subtract within 10.
- Use drawings or equations to represent addition and subtraction problems or number combinations.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade K, Trimester 3 Big Ideas and Concepts:

- Observe and communicate that animals (including humans) and plants need food, water, and air to survive. Animals get food from plants or other animals. Plants make their own food and need light to live and grow.
- Recognize that all plants and animals grow and change over time.
- Communicate solutions to reduce the amount of natural resources an individual uses.
- Investigate and communicate the idea that different kinds of materials can be solid or liquid depending on the temperature.
- Make observations to determine that sunlight warms materials on the earth's surface. Use tools and materials to design and build a structure that will reduce the warming effect of sunlight on an area.
- Use and share observations of local weather conditions to describe patterns over time.

By the end of Grade K, Trimester 3 students can:

- Describe the life cycle of a plant and tell what plants need to survive.
- Describe ways to reduce, reuse, and recycle.
- Describe how people can build things to protect themselves from the sun's heat.

Questions you can ask your child:

- ★ How do we take care of our house plants?
- ★ How can we take care of the earth?
- ★ How do you protect yourself from the sun?

Topics you can discuss with your child's teacher:

- ★ How science relates to everyday situations in your child's life.
- ★ Places in the community that can help your child learn science.

HISTORY AND SOCIAL SCIENCE

Grade K, Trimester 3 Big Ideas and Concepts:

- Describe the location of people, objects, and places
- With support, explain the similarities and differences between maps and globes
- Explain the location of important places in the student's town.
- Construct maps, drawings, and models of familiar places
- Describe some things people do when they work inside or outside the home
- Ask and answer questions about buying, selling, or trading something and explain how people make choices about the things they need and want
- Give examples of goods and services that people purchase with money they earn

Questions you can ask your child:

- What is your address?
- What is near your school?
- Who helps our community?
- Are toys a want, or a need?

Topics you can discuss with your child's teacher:

- Biographies, autobiographies, and historical fiction
- Celebrations and traditions that are important to our community

By the end of Grade K, Trimester 3 students can:

- Recite their home address.
- Use maps to find familiar locations in familiar places.
- Using relative position, describe the location of objects or places.
- Identify community helpers.
- Tell the difference between wants and needs.
- Explain how money is used.

KINDERGARTEN
Trimester 2

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read and listen to various texts.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate and express opinions, information, and experiences in drawing and writing.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

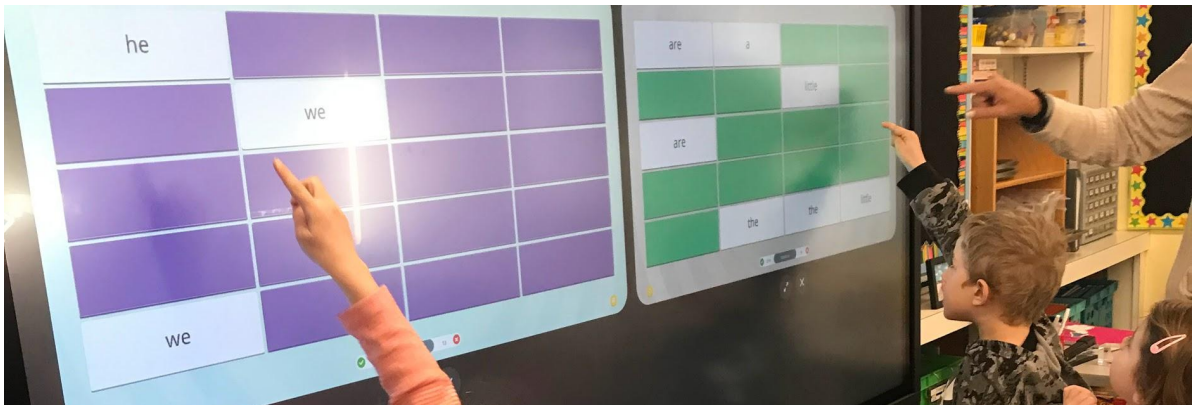
- Ask questions about the natural world and things humans design.
- Learn through various experiences and observations..
- Think of ideas to solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use mathematical reasoning to make arguments about why something is true or false.
- Use tools to show mathematical understanding.

HISTORY AND SOCIAL SCIENCE



In this Trimester, your child will:

- Learn about their community, the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade K, Trimester 2 Big Ideas and Concepts:

- Compare and contrast familiar stories
- Describe the relationship between illustrations and the story
- Continue to expand knowledge of literary genres
- Continue to demonstrate developing phonological awareness (final sounds, blend and segment CVC words)
- Continue to know and apply word analysis skills in decoding words
- Read more high frequency words
- With support, write a 3-5 word sentence and draw a corresponding picture

By the end of Grade K, Trimester 2 students can:

- Blend and read some CVC words
- Begin to read a sentence containing CVC and high frequency words
- Identify how many sounds are in a word
- Write most uppercase and lowercase letters
- Use high frequency words in their writing

Questions you can ask your child:

- ★ Is this book fiction or nonfiction?

Topics you can discuss with your child's teacher:

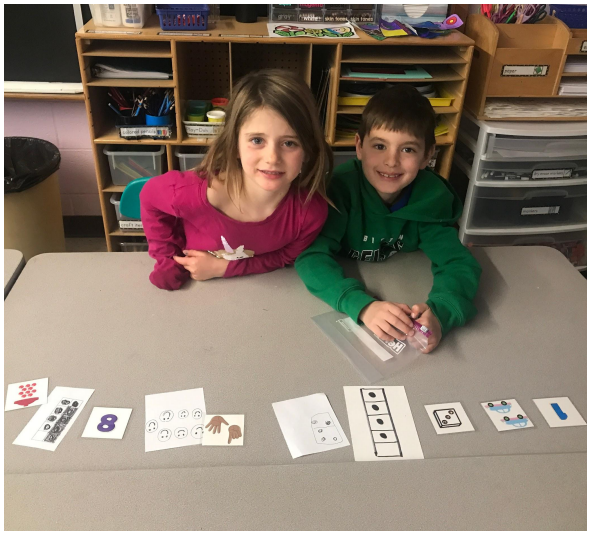
- ★ How to practice phonological awareness skills with your child

Grade K, Trimester 2 Big Ideas and Concepts:

- Orally count by 1s to at least 50, from 1 or starting at another number
- Compare numerals between 1 and 10
- Decompose numbers into pairs in more than one way
- Describe the length and weight of objects and compare objects by length
- Read and write numbers 0-20 and represent 20 objects with a numeral
- Solve simple number stories and problems involving addition and subtraction using various strategies
- Find combinations of 10
- Compose and decompose numbers 11-19 into a group of ten and some further 1s
- Use names of shapes and relative positions to describe two-dimensional shapes in the environment
- Classify objects into given categories, count the numbers of objects in each category, and sort categories by count
- Name circles, triangles, squares, rectangles, hexagons and some additional 3-dimensional shapes

Questions you can ask your child:

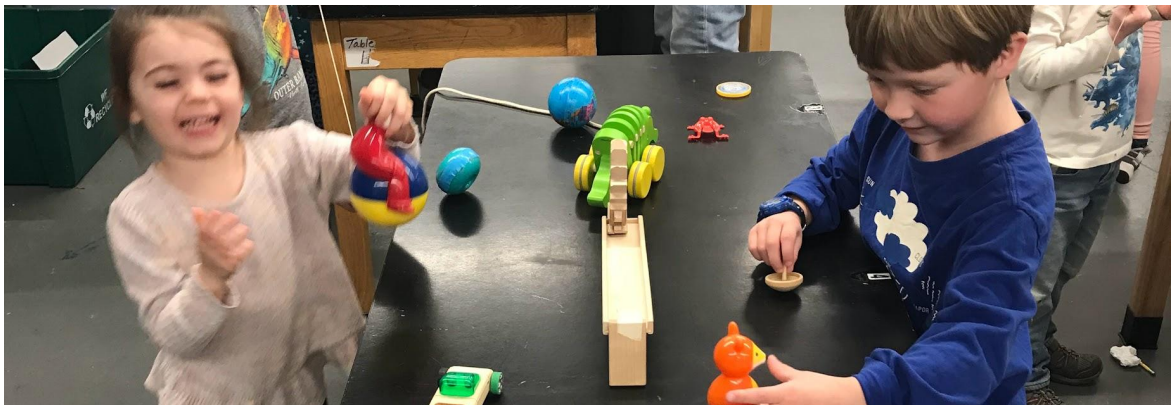
- ★ Which object is heavier /longer/ shorter/lighter?
- ★ How do we sort the groceries before we put them away?



Topics you can discuss with your child's teacher:

- ★ Sorting household objects
- ★ Taking risks, making guesses, double-checking

By the end of Grade K, Trimester 2 students can:



- Represent addition and subtraction concretely and verbally
- Compare quantities and numerals
- Use strategies to make combinations of 10
- Begin to identify 2D and 3D shapes
- Recognize and write teen numbers 10-19
- Sort objects using a rule

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade K, Trimester 2 Big Ideas and Concepts:

- Investigate and communicate the idea that different kinds of materials can be solid or liquid depending on the temperature
- Compare the effects of different strengths or different directions of pushes and pulls on the motion of an object
- Obtain and use information about weather forecasting to prepare for and respond to different types of local weather
- Construct an argument supported by evidence for how animals can change the environment.
- Use and share observations of local weather conditions to describe patterns over time

By the end of Grade K, Trimester 2 students can:

- Describe what happens to water when it gets cold
- Explain what happens when an object is pushed or pulled
- Describe what an animal needs to survive

Questions you can ask your child:

- ★ Ask your child to describe different habitats
- ★ Would snow melt faster on a sunny day or a cloudy day?

Topics you can discuss with your child's teacher:

- ★ How science relates to everyday situations in your child's life.
- ★ Places in the community that can help your child learn science.

Grade K, Trimester 2 Big Ideas and Concepts:

- With prompting and support, give examples from literature and informational texts read or read aloud of characters who show authority, fairness, caring, justice, responsibility, or who show how rules are created and followed.
- Ask and answer questions and explore books to gain information about national symbols, songs, and texts of the United States.
- Put events from their personal lives, observations of the natural world, and from stories and informational texts read or read aloud in temporal order, using words and phrases relating to chronology and time.

Questions you can ask your child:

- What can you tell me about bald eagles?
- Tell me about what you did in the morning or afternoon today.

Topics you can discuss with your child's teacher:

- Biographies, autobiographies, and historical fiction
- Celebrations and traditions that are important to our community

By the end of Grade K, Trimester 2 students can:

- Discuss positive traits of a character when reading a story with an adult
- Identify the American Flag, bald eagle, Star-Spangled Banner, and Pledge of Allegiance
- Sequence actions, using *first, next*, and *last*

HISTORY AND SOCIAL SCIENCE

KINDERGARTEN
Trimester 1

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❑ How did you contribute to your **community** today?
- ❑ How did someone help you learn today?
- ❑ Can you tell me about something you **read** today?
- ❑ How could you use the **math** you learned today?
- ❑ What **scientific ideas** did you talk about today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read and listen to various texts.
- Develop speaking and listening skills.
- Communicate and express information through drawing and writing.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask questions about the natural world and human-made things.
- Learn through various experiences and observations.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools to show mathematical umderstanding.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community, the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade K, Trimester 1 Big Ideas and Concepts:

- Engage in group reading activities
- Recognize parts of a book and define author and illustrator
- Recognize common types of texts
- Identify key ideas and details about a text
- Develop understanding of concepts of print
- Demonstrate developing phonological awareness skills (rhyming, syllables, beginning sounds)
- Know and apply word analysis skills in decoding words
- Read some high frequency words
- Beginning letter formation
- Draw simple pictures to express an idea

By the end of Grade K, Trimester 1 students can:

- Tell what a story is about
- Identify a text as fiction or nonfiction
- Recognize and produce rhyming words
- Blend and segment 2-3 syllable words
- Write some uppercase and lowercase letters

Questions you can ask your child:

- ★ Who was in the story? Where did it take place?
- ★ What is the first sound in this word?

Topics you can discuss with your child's teacher:

- ★ Does my child engage in group discussions?

MATHEMATICS

Grade K, Trimester 1 Big Ideas and Concepts:

- Oral and rational counting
- Routines such as counting the days of school, number of the day, calendar, weather and temperature observation and data
- Identify and compare geometric shapes (triangles, circles, rectangles)
- Representing and solving addition and subtraction situations concretely, within 5
- Sort objects into categories using attributes such as color or shape
- Numerals 0-10
- The cardinal principle and the successor function

Questions you can ask your child:

- Can you count stairs as you climb or descend ?
- Do you see any numbers in the grocery store or at home ?
- Where can you find a rectangle at home?

Topics you can discuss with your child's teacher:

- Games and activities for home which support learning
- How to incorporate mathematical thinking every day

By the end of Grade K, Trimester 1 students can:

- Identify and describe triangle, square, rectangle, circle
- Read and write numbers 0-10, count orally to 10
- Count a set of 10 or more objects
- Figure out how many objects when one is added to a group, without starting over
- Compare the number of objects in two groups

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade K, Trimester 1 Big Ideas and Concepts:

- Use and share observations of local weather conditions to describe patterns over time
- Obtain and use information about weather forecasting to prepare for and respond to different types of local weather
- Observe and communicate that plants need food, water, and air to survive. Plants make their own food and need light to live and grow
- Recognize that plants grow and change over time

By the end of Grade K, Trimester 1 students can:

- Report current weather conditions
- Read and analyze weather and temperature data
- Describe the life cycle of a pumpkin or apple
- Describe how trees change in the fall

Questions you can ask your child:

- What is the life cycle of a pumpkin?
- How should you dress for today's weather?
- What happens to trees in the fall?

Topics you can discuss with your child's teacher:

- How science relates to everyday situations in your child's life.
- Places in the community that can help your child learn science.

HISTORY AND SOCIAL SCIENCE

Grade K, Trimester 1 Big Ideas and Concepts:

- Understand and follow rules, limits and expectations with minimal prompting and assistance; with prompting and support, answer questions about the reasons for rules.
- Describe how some days, called civic holidays, are special because they celebrate important events or people in history.
- Compare and contrast traditions and celebrations of people with diverse cultural backgrounds.

Questions you can ask your child:

- Tell me about your classroom rules and why you have them.
- How were you a good friend today?

Topics you can discuss with your child's teacher:

- Biographies, autobiographies, and historical fiction
- Celebrations and traditions that are important to our community

By the end of Grade K, Trimester 1 students can:

- Explain what it means to be responsible
- Describe similarities and differences between themselves and others
- Take on responsibilities and follow through on them
- Be respectful and helpful to others

MERSD SPECIALS

Grade 1, Trimester 3

LIBRARY

In this Trimester, your child will:

- Review how to independently navigate *PebbleGo*, an online encyclopedia.
- Review the question "what is research?" and choose a research topic and determine what questions to answer.
- Use library books and *PebbleGo* to find information about the topic and take notes on a graphic organizer.
- Be interviewed by the Library Teacher about their research topic and create a collaborative multimedia project with Technology class.
- Share their finished research product in Library class.

TECHNOLOGY

In this Trimester, your child will:

- Create multimedia projects with different apps such as Chatterpix.
- Use their library research to create a multimedia project with apps like Book Creator.
- Create a project that can then be shared with larger audiences.
- Use knowledge from throughout the year to create and edit multimedia projects.

VISUAL ART

In this Trimester, your child will:

- Continue to create pictures through direct step by step observation and from imagination.
- Listen to stories that are inspiration for art lessons.
- Create styrofoam stamps for basic printmaking.
- Learn what organic shapes are vs geometric shapes.
- Paint correctly with pan watercolors.
- Build a small basic pinch pot from clay.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Play mallet instruments with proper technique.
- Distinguish between major and minor keys.
- As a class, sing 10 short songs from memory.
- Stay in rhythm while singing or playing as a class by listening to each other.

WELLNESS / PE

In this Trimester, your child will:

- Try new fitness movements, activities and skills.
- Demonstrate safe and cooperative play with the parachute.
- Demonstrate jump rope skills with self and partner.
- Demonstrate track and field skills such as hurdling.
- Demonstrate beginning lacrosse skills such as passing, catching and shooting.
- Continue our P.A. curriculum.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 1, Trimester 2

LIBRARY

In this Trimester, your child will:

- Learn and demonstrate understanding of elements of a story including, plot, character, setting and theme.
- Practice rephrasing assignments: "what am I supposed to do?"
- Understand the purpose of nonfiction text features including table of contents, captions, index and glossary.
- Continue to learn about seasonal themes and world traditions via literature, and compare and contrast literature via author studies.

TECHNOLOGY

In this Trimester, your child will:

- Learn about Internet safety and how to stay safe online.
- Understand how to be a good digital citizen.
- Learn about computer science.
- Learn how to create basic codes.
- Create code with offline and online activities.
- Learn how to code robots to solve problems.

VISUAL ART

In this Trimester, your child will:

- Create pictures by drawing with lines and shapes through direct step by step observation.
- Listen to stories that are inspiration for art lessons.
- Paint with tempera paints mixing the warm and cool colors.
- Learn what organic shapes are vs geometric shapes.
- Paint correctly with pan watercolors.
- Cut small shapes from papers to make a collage.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Perform on stage as a group, singing at an appropriate volume.
- Identify handheld percussion instruments by sight.
- Improvise short rhythmic ideas on handheld percussion instruments.
- Create percussion instruments to connect with 1st grade sound unit.

WELLNESS / PE

In this Trimester, your child will:

- Continue developing beginning Basketball skills.
- Demonstrate moving to various rhythms and demonstrate aerobics to various music.
- Demonstrate appropriate rolling movement turning tumbling and acrobatics.
- Demonstrate skills used in pickleball: striking forehand and backhand.
- Demonstrate moving to various rhythms and can perform dances of various countries.
- Will demonstrate beginning hockey skills.
- Continue our P.A. curriculum.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 1, Trimester 1

LIBRARY

In this Trimester, your child will:

- Learn and practice strategies to find a "just right" book.
- Distinguish fiction from non-fiction.
- Learn the parts of a library book (front/ back cover, spine, call #, verso page, and barcode.)
- Be introduced to non-fiction text features including table of contents, captions, index and glossary.
- Learn about seasonal themes and world traditions via literature, and demonstrate understanding via student-created projects.

TECHNOLOGY

In this Trimester, your child will:

- Learn basic device safety and expectations of device care for both laptops and ipads.
- Learn about the different parts of the computer
- Practice navigating to different applications and websites on the computer.
- Use the application Kidpix to create pictures and practice typing.

VISUAL ART

In this Trimester, your child will:

- Students will learn what art is, what an artist does and why art is important to people throughout history and around the world.
- Students will continue to explore new ways to explore artmaking and expressing themselves through drawing, painting, printing, collage and 3D construction.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Sing together, matching pitch.
- Repeat back simple rhythms by ear.
- Listen with appropriate audience etiquette.
- Express the emotion in music through movement.

WELLNESS / PE

In this Trimester, your child will:

- Continue developing skills used in a variety of locomotor skills (Hopping, skipping, jumping, leaping, running, galloping and sliding.)
- Demonstrate soccer skills including striking, trapping, dribbling, headers, force and passing.
- Be introduced to ball handling skills.
- Take part in Project Adventure curriculum which includes problem solving and teamwork.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

FIRST GRADE
Trimester 3

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions and fictional stories in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

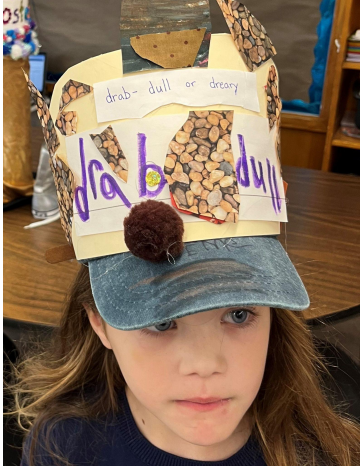
- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, such as number grids and pattern blocks, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE



In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 1, Trimester 3 Big Ideas and Concepts:

- Know and apply grade-level phonics and word analysis skills to decode unknown words
- Recognize and read irregularly spelled words (including high frequency words)
- Read with sufficient accuracy and fluency to support comprehension
- Demonstrate understanding of spoken words, syllables, and sounds
- Write in various genres

By the end of Grade 1, Trimester 3 students can:

- Decode regularly spelled one-syllable words with vowel teams, r-controlled vowels, diphthongs and more variant vowels.
- Read increasingly complex text with expression and intonation.
- Decode two syllable words following basic patterns.
- Phoneme deletion and substitution.
- Determine central message or lesson of a text.
- Make connections between texts.
- Write about their opinions.
- Write fiction stories.

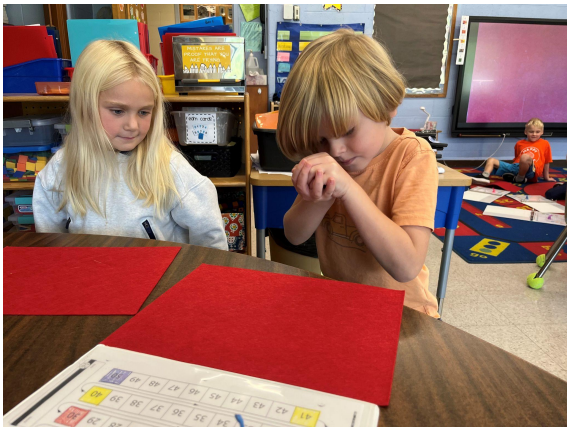
Questions you can ask your child:

- What lesson can you learn from this book?
- How is this story like another story?
- What story does this remind you of?

Topics you can discuss with your child's teacher:

- Supporting your child's reading fluency with more complex text.
- How to help your child read multisyllabic words.

Grade 1, Trimester 3 Big Ideas and Concepts:



- Understand how counting, addition, and subtraction are related
- Describe geometric shapes
- Reason with shapes and their attributes
- Identify simple fractions
- Tell time to the half hour
- Understand and solve number stories using 2-digit numbers

Questions you can ask your child:

- How much money is this collection of coins worth?
- What time does the clock say?
- What shape has 4 equal sides?
- How do you know this shape is a _____?

Topics you can discuss with your child's teacher:

- What 2D and 3D shapes we study.
- Games that can help your child practice at home.
- Which addition and subtraction strategies work best for your child.

By the end of Grade 1, Trimester 3 students can:

- Know the value of a collection of pennies and dimes.
- Tell the value of a digit in a given number.
- Tell and write time to the hour and half hour on digital and analog clocks.
- Identify attributes of 2D and 3D shapes.
- Separate shapes into equal parts. Describe the parts using the words halves, fourths, and quarters.
- Solve one-step word problems containing 2 digit numbers using addition and subtraction.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 1, Trimester 3 Big Ideas and Concepts:

- Students will identify similarities and differences among plants of the same kind.
- Students will identify similarities and differences among animals of the same kind.

By the end of Grade 1, Trimester 3 students can:

- Identify the parts of a plant (roots, stems, leaves, flowers, fruits).
- Identify the functions of these plant parts.
- Identify characteristics of animals.
- Categorize animals by similar characteristics.

Questions you can ask your child:

- What are the parts of a plant? What do they do?
- What kind of animal is that and how do you know?
- How are animals alike and different?

Topics you can discuss with your child's teacher:

- Play 20 Questions
- How science relates to your child's life (i.e. seasons, plants, animals, tide pools).

HISTORY AND SOCIAL SCIENCE

Grade 1, Trimester 3 Big Ideas and Concepts:

- Identify what goods and services are
- Identify goods and services in their lives
- Concepts of diversity, equity, and inclusion will be integrated and addressed throughout the year including, but not limited to: cultural differences, different types of abilities and disabilities, family make-ups and traditions

Questions you can ask your child:

- What are things we need in our family?
- Is a ____ need or a want?

Topics you can discuss with your child's teacher:

- Concept of saving money.
- Books to look at about H/SS topics.

By the end of Grade 1, Trimester 3 students can:

- Explain what goods and services are.
- Give examples of goods that people buy and use.
- Give examples of services people do for each other.
- Distinguish between needs and wants.
- Explain why people try to save some of their money rather than spend it all.
- Work to understand how different people see the world and live differently.

FIRST GRADE
Trimester 2

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate information in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, such as number lines, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 1, Trimester 2 Big Ideas and Concepts:

- Know and apply grade-level phonics and word analysis skills to decode unknown words.
- Recognize and read irregularly spelled words (including high frequency words).
- Read with sufficient accuracy and fluency to support comprehension.
- Demonstrate understanding of spoken words, syllables, and sounds.
- Write in various genres.

By the end of Grade 1, Trimester 2 students can:

- Decode regularly spelled one-syllable words with digraphs, long vowels with silent “e”, and variant vowel spellings.
- Read words with inflectional endings such as -ed and -ing.
- Read sentences and short passages smoothly.
- Blend and segment sounds in words.
- Identify main topic and supporting details.
- Identify nonfiction text features.
- Write informational pieces.

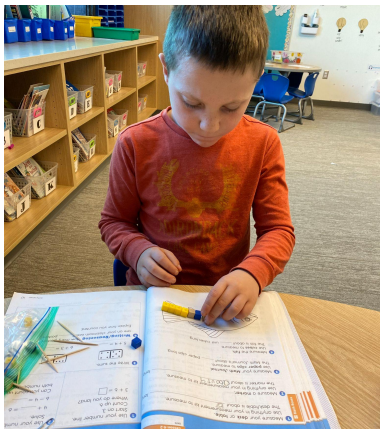
Questions you can ask your child:

- How do authors show information in a nonfiction book?
- How do you show that an action already happened?
- Can you tell me all the sounds in ____?

Topics you can discuss with your child’s teacher:

- Building your child’s background knowledge to improve reading.
- Supporting your child’s reading fluency.

Grade 1, Trimester 2 Big Ideas and Concepts:



- Understand measurement of length.
- Understand and apply properties of addition and subtraction within 20.
- Understand that two-digit numbers are made of tens and ones (place value).
- Understand and compare numbers using comparison symbols.
- Adding and subtracting two-digit numbers.
- Understanding the basics of telling time.

Questions you can ask your child:

- How many spoons long is ____?
- What are all the doubles facts you know?
- What are some ways to make 10?

Topics you can discuss with your child's teacher:

- How math applies in everyday life.
- Addition and subtraction facts.
- How to practice place value at home.

By the end of Grade 1, Trimester 2 students can:

- Measure length using non-standard tools.
- Solve number stories using addition and subtraction within 20.
- Solve addition and subtraction facts within 20.
- Know doubles facts through 10+10.
- Know complements of 10.
- Tell time to the hour on an analog clock.
- Identify the tens and ones place in a 2-digit number.
- Represent a given number using base-10 blocks.
- Use a tool to add 2 digit numbers.
- Use >,<,= to compare numbers and expressions.
- Identify a penny and a dime.
- Tell the value of a penny and a dime.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 1, Trimester 2 Big Ideas and Concepts:

- Students will learn about the moon and sun.
- Students will identify similarities and differences among animals of the same kind.
- Students will learn about how light and sound travel.

By the end of Grade 1, Trimester 2 students can:

- Identify the phases of the moon.
- Explain the patterns in the sunrise and sunset.
- Explain how animals use their bodies and senses to meet their needs.
- Build something that sends a signal (light or sound) over a distance.
- Identify that sound is created by vibrations.
- Explain the the properties of materials can affect the passage of light.

Questions you can ask your child:

- What do we call tonight's moon?
- What do you notice about the moon?
- How do we hear sound?
- What stops light?

Topics you can discuss with your child's teacher:

- Observe light and sound in everyday life. What affects it?
- How science relates to your child's life (i.e the moon, animals, seasons, light, sound).

Grade 1, Trimester 2 Big Ideas and Concepts:

- Explain what a map is and why it is used.
- Use cardinal directions (north, east, south, west) and various maps to find and describe places.
- Concepts of diversity, equity, and inclusion will be integrated and addressed throughout the year including, but not limited to: cultural differences, different types of abilities and disabilities, family make-ups and traditions.

Questions you can ask your child:

- Where are the cardinal directions on a given map?
- Look at maps that you have and talk about what information they get from the map.
- How to make a map of a room in your home.

Topics you can discuss with your child's teacher:

- What are some resources for using maps at home?
- Activities they can do to practice using maps with their child.

By the end of Grade 1, Trimester 2 students can:

- Identify physical features on a map.
- Identify and use cardinal directions.
- Explain that a map represents spaces.
- Use maps to identify locations.
- Work to understand how different people see the world and live differently.

FIRST GRADE
Trimester 1

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ How did you contribute to your classroom **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Be exposed to various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways like presentations and conversations.
- Communicate experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask scientific questions about the natural world.
- Learn through various experiences and observations.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, such as manipulatives and number lines, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 1, Trimester 1 Big Ideas and Concepts:

- Know and apply grade-level phonics and word analysis skills to decode unknown words.
- Recognize and read irregularly spelled words (including high frequency words).
- Demonstrate understanding of spoken words, syllables, and sounds.
- Comprehend and write texts of various genres.

By the end of Trimester 1 students can:

- Decode regularly spelled one-syllable words with short vowels and consonant blends.
- Read words and simple sentences smoothly.
- Identify a rhyme.
- Identify beginning sounds.
- Ask and answer questions about key details in a text.
- Make and confirm predictions.
- Identify story elements.
- Write personal narratives.
- Write words using the sounds they hear.

Questions you can ask your child:

- What rhymes with __?
- What do you think will happen?
- What do you do when you don't know how to spell a word? Can you sound out/spell ___?

Topics you can discuss with your child's teacher:

- Ways to practice phonics and phonemic awareness.
- How you can support your child's spelling and writing development.

Grade 1, Trimester 1 Big Ideas and Concepts:

- Understand and solve simple number stories.
- Understand and apply properties of addition and subtraction within 10.
- Students organize, represent, and interpret data.
- Students will read, write, and count single and double digit numbers.
- Students will learn and apply counting strategies.
- Understand and apply counting strategies through the use of tools such as a number line and manipulatives.
- Understand and apply properties of addition and subtraction within 10.
- Understand and solve number stories using addition and subtraction and represent with a number model.
- Recognize and use number patterns to extend the counting sequence.
- Understand how to represent and interpret data using tally marks.
- Apply appropriate tools and strategies to solve a variety of math problems.

Questions you can ask your child:

- ★ What is a given number?
- ★ Given a group of objects, how many are there?
- ★ How do you show a __ with tallies?
- ★ Can you count to 100 by 10s?

Topics you can discuss with your child's teacher:

- ★ Skip counting strategies.
- ★ Types of number stories.
- ★ How math applies in everyday life.

By the end of Trimester 1 students can:

- Read, write, and count the numbers through 50.
- Solve number stories using addition and subtraction within 10.
- Solve addition and subtraction facts within 10.
- Represent a number using tally marks.
- Answer questions about a tally chart.
- Count by 5s up to 50.
- Count by 10s to 100.

MATHEMATICS

SCIENCE AND TECHNOLOGY / ENGINEERING

Grade 1, Trimester 1 Big Ideas and Concepts:

- Students will learn about what a scientist is and what they do.
- Students will learn about seasons.
- Students will learn about the moon and sun.

By the end of Trimester 1 students can:

- Ask questions and make observations.
- Identify the 4 seasons
- Identify the patterns in seasons.
- Collect data on weather patterns.
- Identify the signs of the various seasons.
- Identify a problem and state possible solutions.

Questions you can ask your child:

- What do scientists do?
- What do you observe?
- What season is it now? How do you know it is summer/fall?
- How do scientists solve problems?

Topics you can discuss with your child's teacher:

- Ways you can help your child learn science.
- How science relates to your child's life (i.e. seasons, observations).

Grade 1, Trimester 1 Big Ideas and Concepts:

- Students will understand what it means to be part of a group and the benefits of being part of a group.
- Students will recognize core values of a community.
- Students will have a basic understanding of the democratic process, including voting.
- Concepts of diversity, equity, and inclusion will be integrated and addressed throughout the year including, but not limited to: cultural differences, different types of abilities and disabilities, family make-ups and traditions.

Questions you can ask your child:

- When do you vote in your classroom and how does it work?
- What are the core values of your school and why are they important?
- How do you want to feel at school/home?

Topics you can discuss with your child's teacher:

- How to incorporate elements RULER at home.
- Books to look at about history and other social studies topics.

By the end of Trimester 1 students can:

- Participate as responsible members of the classroom community.
- Identify the core values of the school.
- Identify the communities that they are part of.
- Describe how they want to feel in their school community.
- Explain how voting helps people make decisions in a community.
- Work to understand how different people see the world and live differently.

HISTORY AND SOCIAL SCIENCE

MERSD SPECIALS

Grade 2, Trimester 3

LIBRARY

In this Trimester, your child will:

- Review how to independently navigate online encyclopedias (*PebbleGo* and *Britannica Online*).
- Participate in a group research project to practice teamwork and note-taking skills.
- Use library books and online encyclopedias to find information about their research topic and take notes using keywords and bullet points.
- Create sentences based on keyword notes.
- Create a multimedia project in collaboration with Technology class.

TECHNOLOGY

In this Trimester, your child will:

- Create multimedia projects with different apps such as Book Creator.
- Use their library research to create a multimedia project.
- Create a project that can then be shared with larger audiences.
- Use knowledge from throughout the year. to create and edit multimedia projects text and image features.

VISUAL ART

In Trimester, your child will:

- Review basic types of lines adding spirals to make design patterns with markers.
- Know how to use oil pastels with watercolors to paint a landscape resist.
- Create a basic weaving pot holder on a loam.
- Identify geometric and organic shapes.
- Build a clay slab drape mold bowl that is symmetrical.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Categorize instruments of the orchestra by family.
- Read and write 8th notes and rests.
- Play melodies on instruments.
- Sing 10 short songs and 4 longer songs from memory.

WELLNESS / PE

In this Trimester, your child will:

- Students will continue developing skills used in a variety of locomotor skills (Hopping, skipping, jumping, leaping, running, galloping and sliding.)
- Students will demonstrate soccer skills including striking, trapping, dribbling, headers, force and passing.
- Students will begin overhand and underhand throwing and catching.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 2, Trimester 2

LIBRARY

In this Trimester, your child will:

- Review nonfiction text features (Table of Contents, Glossary, Index, Captions, Photos)
- Understand how nonfiction text features may be used as a resource when doing research.
- Learn and practice how to take a research note.
- Learn and practice how to communicate research facts in their own words.

TECHNOLOGY

In this Trimester, your child will:

- Learn about computer science.
- Learn how to create basic codes.
- Create code with offline and online activities.
- Learn and understand how to code robots to solve problems.
- Learn what an algorithm is and how to create one.

VISUAL ART

In Trimester, your child will:

- Learn how to add a horizon line to show distance in their work.
- Add visual texture to drawings and paintings.
- Learn how to mix tints and shades with tempera paint and oil pastels.
- Identify and be able to cut geometric and organic shapes.
- Create basic weaving placemats from painted papers.
- Use symmetry in basic prints.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Identify instruments of the orchestra by sight.
- Sing on stage as a group, matching pitch and diction.
- Clap on offbeats together as a class.

WELLNESS / PE

In this Trimester, your child will:

- Developing Basketball skills.
- Move to various rhythms and combine dance patterns.
- Demonstrate appropriate rolling movement during tumbling and acrobatics.
- Demonstrate skills used in pickleball: striking forehand and backhand.
- Perform dances of various countries.
- Demonstrate beginning hockey skills i.e. shooting, dribbling, passing and control.
- Continue P.A. curriculum.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 2, Trimester 1

LIBRARY

In this Trimester, your child will:

- Understand the relationship between spine label and book content and recognize the call number as a book's "address."
- Be introduced to the Dewey Decimal System for organizing non-fiction books in libraries.
- Practice organizing books on a shelf to inform browsing for books of interest.
- Practice using *Destiny,* the school library database, independently to search for library books.

TECHNOLOGY

In this Trimester, your child will:

- Learn basic device safety and expectations of device care.
- Learn about the different parts of the computer and what they do.
- Learn and practice using QR codes to scan into their Clever account to access our school's subscription applications
- Learn how we can be safe online and a responsible digital citizen.

VISUAL ART

In this Trimester, your child will:

- Students will learn what art is, what an artist does and why art is important to people throughout history and around the world.
- Students will continue to explore new ways to explore artmaking and expressing themselves through drawing, painting, printing, collage and 3D construction.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Sing together with clear diction, matching pitch.
- Improvise movement ideas.
- Repeat simple rhythms on handheld percussion instruments.
- Use the mood meter to show opinions on the emotion in music.

WELLNESS / PE

In this Trimester, your child will:

- Continue developing skills used in a variety of locomotor skills (Hopping, skipping, jumping, leaping, running, galloping and sliding.)
- Demonstrate soccer skills including striking, trapping, dribbling, headers, force and passing.
- Be introduced to ball handling skills.
- Take part in Project Adventure curriculum which includes problem solving and teamwork.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

SECOND GRADE
Trimester 3

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

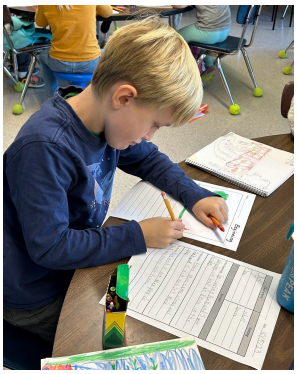
- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE



In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 2, Trimester 3 Big Ideas and Concepts:

- Know and apply grade level phonics and word analysis skills to decode unknown words
- Recognize and read irregularly spelled words (including high frequency words)
- Read with sufficient accuracy and fluency to support comprehension
- Read various genres including realistic fiction, biography, persuasive text, expository text, myth, and poetry
- Write in various genres
- Apply grade level speaking and listening skills

By the end of Grade 2, Trimester 3 students can:

- Decode and spell words with common vowel teams.
- Decode two-syllable words with long vowels.
- Describe how characters in a story respond to major events and challenges.
- Know and use various text features to locate key facts or information in a text efficiently.
- Write opinion pieces that state an opinion and supply reasons that support the opinion.
- Write informative texts that introduce a topic, use facts and definitions to develop points, and provide a concluding statement or section.

Questions you can ask your child:

- What problem did the character face? How did they solve it?
- What is your opinion? What are your reasons?
- What does fluent reading sound like?

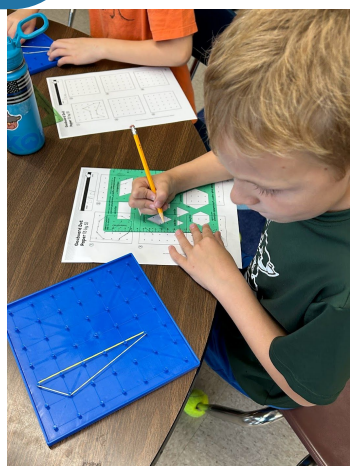
Topics you can discuss with your child's teacher:

- Strategies for practicing reading and writing over the summer break

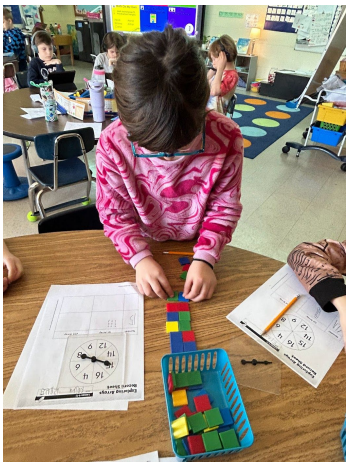
Grade 2, Trimester 3 Big Ideas and Concepts:

- Represent and solve problems involving addition and subtraction
- Use place value understanding and properties of operations to add and subtract
- Work with equal groups of objects to gain foundations for multiplication
- Measure and estimate lengths in standard units
- Represent and interpret data
- Reason with shapes and their attributes

Questions you can ask your child:



- About how many inches/centimeters is this object?
- What shape is this object?
- Is ___ more or less than ___?



Topics you can discuss with your child's teacher:

- Suggestions for applying math concepts/skills to real-world contexts.
- Strategies for practicing math skills over summer break

By the end of Grade 2, Trimester 3 students can:

- Add up to four 2-digit numbers.
- Compare 3-digit numbers.
- Estimate and measure objects in inches and centimeters.
- Represent data on a line plot.
- Recognize and draw shapes with specific attributes.
- Partition shapes into equal shares.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 2, Trimester 3 Big Ideas and Concepts:

- Develop and use models to compare how plants depend on their surroundings and other living things to meet their needs in the places they live
- Use texts, media, or local environments to observe and compare different kinds of living things in an area, and differences in the kinds of living things living in different types of areas
- Design and conduct an experiment to show the effects of friction on the relative temperature and speed of objects that rub against each other
- Describe and classify different kinds of materials by observable properties of color, flexibility, hardness, texture, and absorbency
- Analyze data from tests of two objects designed to solve the same design problem to compare the strengths and weaknesses of how each object performs

By the end of Grade 2, Trimester 3 students can:

- Describe what plants need to survive.
- Describe how plants and animals depend on each other in an ecosystem.
- Compare and contrast different materials based on their properties.
- Explain why we choose different materials for different purposes.
- Explain what happens to an object when it slides on a rough surface or a smooth surface.

Questions you can ask your child:

- What kind of materials should you use for this task?
- What happens to butter at different temperatures?

Topics you can discuss with your child's teacher:

- Places in the community that can help your child learn science

Grade 2, Trimester 3 Big Ideas and Concepts:

- Investigate reasons why people migrate (move) to different places around the world, recognizing that some migration is voluntary, some forced
- Give examples of why the United States is called "a nation of immigrants"
- Conduct interviews with family members, neighbors, friends, or school staff to discover where their families came from, how and why they moved to where they now live, and when and why their families came to Massachusetts
- Identify what individuals and families bring with them when they move to a different place and identify the significant impacts of migration; identify elements that define the culture of a society; explain how the community is enriched by contributions from all the people who form it today

Questions you can ask your child:

- Why would someone move to a new place?
- What are some of the cultures represented in your class?
- Where did your ancestors come from?

Topics you can discuss with your child's teacher:

- What are some grade level books we can read together to learn more?

By the end of Grade 2, Trimester 3 students can:

- Identify the types of problems people face that might be addressed by migration.
- Explain why people move to a new location or stay in a particular location.
- Give examples of traditions or customs from other countries practiced in the United States today.
- Describe traditional foods, customs, games, and music of the place they, their family, or their ancestors came.

HISTORY AND SOCIAL SCIENCE

SECOND GRADE
Trimester 2

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 2, Trimester 2 Big Ideas and Concepts::

- Notice and talk about the structure of a text. For example, describe how the beginning of a story introduces the characters, or explain what the last paragraph of an article says.

- Explain the overall purpose of a text: for example, the idea the author is trying to explain or the lesson the author is trying to teach.

By the end of Grade 2, Trimester 2 students can:

- Explain how a picture or diagram helps show what a text is saying.

- Gather information from different texts to answer a question.

- When presenting, speak loudly and clearly enough to be heard and understood.

Questions you can ask your child:

- Who is the story about? What do they do? Why?
- What kinds of things can you do to figure out what a word means?
- What kind of writing did you do in school today?

Topics you can discuss with your child's teacher:

- Books and authors to look for at the library
- Types of writing your child is working on

Grade 2, Trimester 2 Big Ideas and Concepts:

- Continue to understand place value in numbers up to 1,000.
- Use various methods to add and subtract with numbers up to 1,000. For example, find the total cost of three items at a clothing store.
- Understand and use standard units and tools of measurement. For example, estimate the length (in feet or meters) of a row of desks.

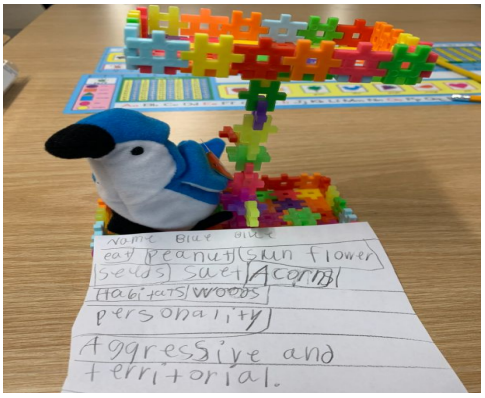
Questions you can ask your child:

- ★ Would it take more inches or feet to measure our table?
- ★ How much change will we have after we pay for our snacks with a $10 bill?

Topics you can discuss with your child's teacher:

- ★ Which addition and subtraction strategies work best for your child
- ★ Games that can help your child practice math at home.

By the end of Grade 2, Trimester 2 students can:



- Add and subtract within 20 quickly and accurately.
- Read, write and count numbers to 1,000.
- Arrange pairs of objects to tell whether a number is odd or even.
- Understand and create visual displays of information, like bar graphs.
- Solve one-step and two-step word problems, including problems involving length.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 2, Trimester 2 Big Ideas and Concepts

- Understand different kinds of plants & animals live in different environments and areas. For example, compare living things in a desert with living things in an ocean.
- Understand how wind and water can change the shape of land, and how people can prevent or slow down those changes by doing things like planting trees and building fences.

By the end of Grade 2, Trimester 2 students can:

- Create maps to show bodies of water and landforms in an area.
- Explain that water exists on Earth in different places and forms.
- Describe and sort materials by how they look, feel, or act.
- Observe that breaking something does not change its material.

Questions you can ask your child:

- ★ Which of these towels is better for wiping up water? Why?
- ★ Where can we find water near our home?

Topics you can discuss with your child's teacher:

- ★ Places in the community that can help your child learn science

Grade 2, Trimester 2 Big Ideas and Concepts:

- Understand how people interact with the physical world (environment).
- Explain why people decide to live in (settle in) particular places and why they move (migrate).
- Describe countries using their physical characteristics (like climate or geography) as well as their human ones (population or culture).

Questions you can ask your child:

- What are some reasons people move to different places around the world?

Topics you can discuss with your child's teacher:

- Places in the community where people work (like homes, schools, stores, restaurants, offices and factories)

By the end of Grade 2, Trimester 2 students can:

- Create maps to show bodies of water and landforms.
- Identify continents, countries, and physical characteristics such as: rivers, deserts & peninsulas.
- Investigate different reasons people migrate and what individuals and families bring with them when they migrate (like memories, objects, ideas, languages & habitats).

- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 2, Trimester 1 Big Ideas and Concepts:

- Know and apply grade level phonics and word analysis skills to decode unknown words
- Recognize and read irregularly spelled words (including high frequency words)
- Read with sufficient accuracy and fluency to support comprehension
- Read various genres including realistic fiction, fantasy, expository text, fable, and poetry
- Write informational, opinion, and persuasive pieces
- Apply grade level speaking and listening skills

By the end of Grade 2, Trimester 1 students can:

- Decode regularly spelled one-syllable words with short vowels and consonant blends.
- Read words and simple sentences fluently.
- Ask and answer questions about key details in a text.
- Make & confirm predictions.
- Identify story elements within various genres including realistic fiction, fantasy, expository text, fable, and poetry.
- Produce writing that demonstrates increasing knowledge of language and conventions.

Questions you can ask your child:

- What do you believe will happen next?
- What do you do when you don't know how to spell a word? Can you sound out /spell ___?
- Can you retell a story you read in school today?

Topics you can discuss with your child's teacher:

- Ways to practice phonics and phonemic awareness
- How you can support your child's spelling and writing development

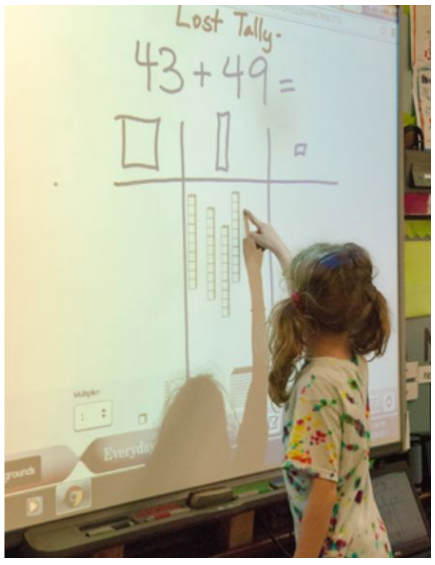
Grade 2, Trimester 1 Big Ideas and Concepts:

- Understand & solve simple number stories in addition and subtraction with a number model
- Understand & apply properties of addition and subtraction within 20
- Organize, represent, and interpret data
- Understand & apply counting strategies through the use of tools such as number lines and manipulatives
- Identify coins and their value
- Generate equivalent names for numbers

Questions you can ask your child:

- What is the sum of _ _ + _ _?
- Is a given number of objects odd or even?
- What is a given coin's value?

Topics you can discuss with your child's teacher:



- Strategies to find a sum
- Ways to compare and order numbers
- How math applies in everyday life

By the end of Grade 2, Trimester 1 students can:

- Add and subtract within 10.
- Determine whether a group of objects up to 10 is odd or even.
- Count by 1s, 5s, 10s
- Read and write up to 3-digit numbers.
- Compare and order 2-digit numbers.
- Mentally add or subtract 10 from a given number.
- Plot numbers on a number line by 1s.
- Identify coins and their values.
- Use objects, number lines, or number grids to add a 1-digit number to a 2-digit number.

https://everydaymath.uchicago.edu/parents/2nd-grade/em4-at-home/

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

https://www.istockphoto.com/photos/school-science-project

https://www.teachhub.com/

Grade 2, Trimester 1 Big Ideas and Concepts:

- Students will investigate living vs. non-living things
- Students will explore and compare different habitats
- Students will learn about different ecosystems and how they interact

By the end of Grade 2, Trimester 1 students can:

- Ask questions and make observations.
- Identify a problem and state possible solutions.
- Explain how animals depend on their surroundings and other living things to meet their needs in the places they live.
- Explain differences between living and non-living things.

Questions you can ask your child:

- What animals would we find in our neighborhood?
- How do we know if something is living or non-living?

Topics you can discuss with your child's teacher:

- How to support my child's interest in science
- How to support science in the classroom

Grade 2, Trimester 1 Big Ideas and Concepts:

- Community Citizenship
- Concepts of diversity, equity and inclusion will be integrated and addressed throughout the year including, but not limited to: cultural differences, different types of abilities and disabilities, family make ups and traditions
- Map Skills
- Economics
  - Resources
  - Goods/services
  - Saving/spending

Questions you can ask your child:

- How can you be a good citizen?
- What are the "Core Values" of your school and why are they important?
- How do you want to feel at school and at home?

Topics you can discuss with your child's teacher:

- How to incorporate elements of RULER at home
- How to support my child's interest in helping out within our community

By the end of Grade 2, Trimester 1 students can:

- Participate as responsible members of the classroom. and school community
- Identify the "Core Values" of the school.
- Provide examples of traditions from around the world.
- Identify how goods and services provide for our families and communities.
- Read maps and globes.
- Construct a map of a familiar location.

HISTORY AND SOCIAL SCIENCE

MERSD SPECIALS

Grade 3, Trimester 3

LIBRARY

In this Trimester, your child will:

- Choose a research topic and identify at least 3 sources to research their topic.
- Take research notes and paraphrase them to produce a script written in the third person.
- Record their script for a multimedia project using applications such as *Book Creator* or *iMovie* in collaboration with Technology class.
- Learn what a bibliography (vs. biography) is and its purpose.

TECHNOLOGY

In this Trimester, your child will:

- Learn about computer science.
- Learn how to create basic codes.
- Create code with offline and online activities.
- Learn and understand how to code robots to solve problems.
- Learn what an algorithm is and how to create one.

VISUAL ART

In Trimester, your child will:

- Cut intricate shapes from painted papers to make detailed collages.
- Create a 3D project from clay.
- Learn about local artist ie: Folly Cove Designers
- Review the printmaking process and create a printed art piece.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- As a group, sing and play instruments at the same time.
- Play instruments on stage.
- Compose blues lyrics.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate jumping rope and skipping by themselves and with a partner.
- Demonstrate introductory lacrosse skills.
- Demonstrate throwing, catching, and striking skills.
- Develop increased critical thinking and communication skills with relation to problem solving.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 3, Trimester 2

LIBRARY

In this Trimester, your child will:

- Be introduced to, and practice using, reference sources (Almanac, Atlas, Thesaurus, etc.) to find specific types of information.
- Review research note-taking practices.
- Learn what plagiarism is and how to avoid it.
- Discuss ethical use of information and definition of copyright.
- Will learn how to share research information in their own words.

TECHNOLOGY

In this Trimester, your child will:

- Learn about Internet Safety and how to stay safe online.
- Learn about Digital Citizenship and how we can demonstrate this when we use devices.
- Create multimedia projects with different apps such as Book Creator or iMovie.
- Use their library research to create a multimedia project that can then be shared with larger audiences.
- Use knowledge from throughout the year to create and edit multimedia projects text and image features.

VISUAL ART

In Trimester, your child will:

- Understand how to use atmospheric perspective to show space and distance in seascapes and landscapes.
- Review the primary and secondary colors, learn what the tertiary and complementary colors are.
- Learn what negative and positive space are.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Play chords on instruments.
- Identify instruments of the orchestra by sight and sound.
- Read and write quarter and eighth notes and rests.

WELLNESS / PE

In this Trimester, your child will:

- Develop stick handling skills.
- Develop increased flexibility, tumbling and balance.
- Increase spatial awareness skills.
- Continue to explore and develop teamwork and communication skills associated with working together.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 3, Trimester 1

LIBRARY

In this Trimester, your child will:

- Learn how to independently use *Destiny*, the library database, and *SORA*, a digital reading app, to search for books in different formats (books, e-books and audio books).
- With assistance, list the criteria for a Book Review assignment.
- Work collaboratively with a peer to choose a picture book to review and complete a Book Review graphic organizer.
- Work with a peer to summarize and paraphrase information about a book to be shared via a Book Trailer created in Technology class next trimester.

TECHNOLOGY

In this Trimester, your child will:

- Review basic device safety and care.
- Learn how to sign into our Google Classroom accounts and complete assignments.
- Learn about the different parts of the computer and how they work.
- Begin using a program called Keyboarding Without Tears to learn how to keyboard with proper finger placement.

VISUAL ART

In Trimester, your child will:

- Learn what art is, what an artist does and why art is important to people throughout history and around the world.
- Continue to explore new ways to explore artmaking and expressing themselves through drawing, painting, printing, collage and 3D construction.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Sing with clear diction and appropriate expression, matching pitch.
- Sing and dance to a variety of songs.
- Play melodies on instruments.
- Read and play quarter and eighth notes and rests.
- Identify instrument families in a recording by sound.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate soccer skills within small game situations
- Demonstrate throwing, catching and punting a football
- Demonstrate dribbling, passing and shooting of a basketball
- Demonstrate passing and catching skills used during the game of handball
- Take part in Project Adventure curriculum which includes problem solving and teamwork.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School

Essex, MA 01929

THIRD GRADE
Trimester 3

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 3, Trimester 3 Big Ideas and Concepts:

- Expectation #1: Independently and proficiently read and comprehend informational texts, including history/social studies, science, mathematical, and technical texts.
- Expectation #2: Use information gained from illustrations (e.g., maps, photographs) and the words, numbers, and symbols in a text to demonstrate understanding of the text (e.g., where, when, why, and how key events occur).
- Expectation #3: Improve writing by making changes. Changes can be larger (like explaining ideas more fully) or smaller (like fixing spelling mistakes).

By the end of Grade 3, Trimester 3 students can:

- Outcome #1: Notice differences between written and spoken English.
- Outcome #2: Use glossaries or a beginner dictionary to determine the meaning of key words and phrases.
- Outcome #3: Read aloud smoothly, not just one word at a time. Notice and try to fix mistakes while reading.
- Outcome #4: Read two or more books on the same topic. Notice what is the same and different.

Questions you can ask your child:

- How can you use a dictionary to find the meaning of a word?
- What is a way you like to practice reading fluency?

Topics you can discuss with your child's teacher:

- Recommended authors and titles
- Ways your child can practice writing

Grade 3, Trimester 3 Big Ideas and Concepts:

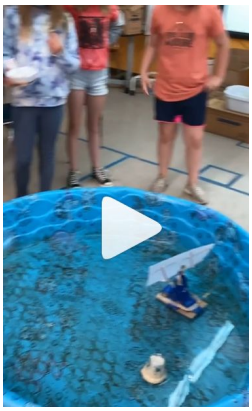
- **Expectation #1:** Understand connections between multiplication and the areas of shapes. For example, find the area of a room using floor tiles.
- Expectation #2: Describe, analyze, and compare shapes like rectangles and squares. For example, explain that any shape with four sides can be called a quadrilateral.
- Expectation #3: Fractions & Measurement Compare Fractions and collections of Fractions
- Expectation #4: Numbers & Operations: Multiply Multi-digit Numbers

Questions you can ask your child:

- ★ Can you give me an example of when and why we use fractions?
- ★ What makes a shape a quadrilateral?
- ★ What are some ways to compare fractions?

Topics you can discuss with your child's teacher:

- ★ Games to practice at home
- ★ Which ways have you shown to model fractions?
- ★ Which multiplication and division strategies work well for my child?



By the end of Grade 3, Trimester 3 students can:

- Outcome #1: Fluently (quickly and correctly) multiply and divide numbers up to 100.
- **Outcome #2:** Explain what the answer to a division problem means in the problem's context.
- **Outcome #3:** Solve problems using units of time (like minutes), mass (like grams), and volume (like liters).
- **Outcome #4:** Sort shapes into categories: for example, shapes with right (90°) angles.
- **Outcome #5:** Explain how to know whether two simple fractions (like ½ and 2/4) are equal.
- **Outcome #6:** Use symbols to compare simple fractions: for example, ½ > 1/3 or 2/5 < 3/5.
- **Outcome #7:** Place fractions on a number line along with whole numbers (like 2 and 5).

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 3, Trimester 3 Big Ideas and Concepts:

- Expectation #1: Understand how balanced and unbalanced forces affect an object.
- Expectation #2: Build models to demonstrate the transfer of energy.
- Expectation #3: Use the engineering process to construct a model and improve it.

By the end of Grade 3, Trimester 3 students can:

- Outcome #1: Explore how objects move and affect each other. Explain how they move differently over rough and smooth surfaces.
- Outcome #2: Draw or build models to show possible solutions to a problem (like how to design safe playground equipment).

Questions you can ask your child:

- ★ What is potential energy?
- ★ What is kinetic energy?
- ★ How do forces affect skyscrapers?

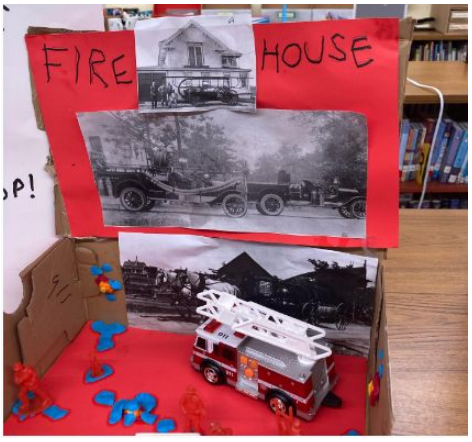
Topics you can discuss with your child's teacher:

- ★ The scientific method
- ★ The engineering design process
- ★ Inquiry based learning

Grade 3, Trimester 3 Big Ideas and Concepts:

- Expectation #1: Explain self-government and how it might look in a classroom (with rules, rights, and responsibilities).
- Expectation #2: Explain how Massachusetts people and events contributed to the American Revolution.
- Expectation #3: Use a current map of Massachusetts to locate and describe the city or town where the school students attend is located, its local geographic features and historic landmarks, and their significance.
- Expectation #4: Research the early history of your town or city and of Massachusetts and New England.

Questions you can ask your child:



- Why are governments important?
- What rights does the Bill of Rights give people?
- What events led to the American Revolution?

Topics you can discuss with your child's teacher:

- Books about local history to look for at the library

By the end of Grade 3, Trimester 3 students can:

- Outcome #1: Explain how local (town and city) governments are organized in Massachusetts and how to participate in them.
- Outcome #2: Describe the Declaration of Independence, the Constitution (including the Bill of Rights), and the Massachusetts Constitution.
- Outcome #3: Research the demographic origins of our town or city.

HISTORY AND SOCIAL SCIENCE

THIRD GRADE
Trimester 2

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 3, Trimester 2 Big Ideas and Concepts:

- Expectation #1: Identify common structural elements of fiction (e.g., problem, solution); describe how each successive part of a text builds on earlier sections.
- Expectation #2: Notice differences between literal and figurative language. For example, the "step" is literal in with the next step he reached the finish line but figurative in the next step is finding a partner.
- Expectation #3: Improve writing by making changes. Changes can be larger (like explaining ideas more fully) or smaller (like fixing spelling mistakes).

By the end of Grade 3, Trimester 2 students can:

- Outcome #1: Use books as well as other sources (like videos and websites) when doing research.
- Outcome #2: Read traditional stories like myths. Understand a story's lesson or message for readers.

Questions you can ask your child:

- ★ What was the problem that was explained in one of the myths that you read?
- ★ What are some of the sources you can use when doing research?

Topics you can discuss with your child's teacher:

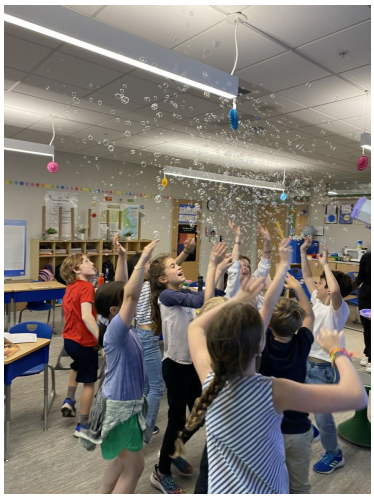
- ★ How to practice reading fluency in fun ways
- ★ What are some appropriate level books for my child

Grade 3, Trimester 2 Big Ideas and Concepts:

- Expectation #1: Measure lengths to the nearest half inch and represent the data as a line plot.
- Expectation #2: Fluently (quickly and correctly) multiply and divide numbers up to 100.
- Expectation #3: Solve two-step word problems using multiplication, division, addition, and subtraction.
- Expectation #4: Identify arithmetic patterns in the number grid, multiplication table, etc.
- Expectation #5:Understand fractions as a part of 1 whole.
- Relate area to the operations of multiplication and division.

Questions you can ask your child:

- What is your best strategy for solving multiplication/division facts?
- How would you solve this problem?
- How would you measure ½ cup for a recipe?



Topics you can discuss with your child's teacher:

- Games/activities to practice skills
- Practical applications for area and perimeter

By the end of Grade 3, Trimester 2 students can:

- Outcome #1: Use a ruler to measure to the nearest half inch
- Outcome #2: Know from memory all products of 1 digit numbers and 10
- Outcome #3: Use adding a group and subtracting a group strategies to multiply
- Outcome #4: Represent and identify fractions using picture, words, and fraction circles, and place fractions on a number line
- Outcome #5: Understand and use area and perimeter and find the area and perimeter of shapes like rectangles

MATHEMATICS

SCIENCE AND TECHNOLOGY / ENGINEERING

Grade 3, Trimester 2 Big Ideas and Concepts:

- Expectation #1: Learn how different organisms have different life cycles.
- Expectation #2: Understand that adaptations develop to help animals survive in their particular ecosystem.
- Expectation #3: Understand the difference between inherited traits and traits that develop due to environmental influences.
- Expectation #4: Understand that environmental changes affect animal survival.

By the end of Grade 3, Trimester 2 students can:

- Outcome #1: Understand that plants and animals can grow and reproduce in different ways.
- Outcome #2: Explain how specific characteristics help living things survive (like how thorns protect roses from being eaten by animals).
- Outcome #3: Explore the difference between inherited traits (like eye color) and traits caused by something in the environment (like when a plant is small because it gets too little sunlight).
- Outcome #4: Explain that when an environment changes, some plants and animals survive and reproduce, some move to other places, and some die.

Questions you can ask your child:

- ★ What is the life cycle?
- ★ What are adaptations?
- ★ How does the environment affect animal survival?

Topics you can discuss with your child's teacher:

- ★ The scientific method
- ★ The engineering design process
- ★ Inquiry based learning

Grade 3, Trimester 2 Big Ideas and Concepts:

- Expectation #1: Analyze the connection between events, locations, and individuals in Massachusetts in the early 1770s and the beginning of the American Revolution, using sources such as historical maps, paintings, and texts of the period.
- Expectation #2: Compare and contrast the roles and leadership decisions of early English leaders of the Puritans of the Massachusetts Bay Colony and the Pilgrims of the Plymouth colony.
- Expectation #3: On a physical map of North America, use cardinal directions, map scales, legends, and titles to locate the Northeast region and identify important physical features (e.g., rivers, lakes, ocean shoreline, capes and bays, and mountain ranges).

Questions you can ask your child:

- What was one goal of the Puritans?
- Where do you live and how does this impact how you live?

Topics you can discuss with your child's teacher:

- Places nearby that are important to the Puritans
- Places in Massachusetts you'd like to visit

By the end of Grade 3, Trimester 2 students can:

- Outcome #1: Use primary sources (like letters and journal entries) to analyze daily life in the Massachusetts Bay Colony.
- Outcome #2: Name the early leaders of the Puritans and describe the Puritans' relationships with Native Peoples.

HISTORY AND SOCIAL SCIENCE

THIRD GRADE
Trimester 1

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations
- Communicate opinions, information, and experiences in writing for various readers.
- Use knowledge of English grammar and vocabulary in both speech and writing.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

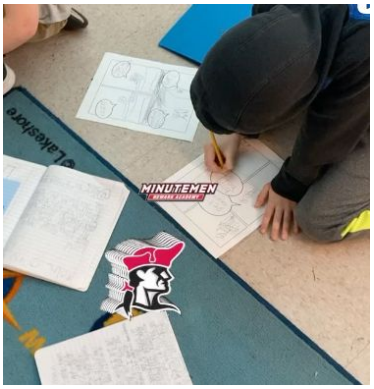
- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE



In Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.
- Use various sources of information in research, discussion, and inquiry.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 3, Trimester 1 Big Ideas and Concepts:

- Expectation #1: Identify different text features and how they help the reader.
- Expectation #2: Retell stories, including realistic fiction, determine the central message, lesson, or moral and explain how it is conveyed through key details in a text.
- Expectation #3: Organize writing in ways that help readers understand. For example, use linking words and phrases like “another reason” and “after that” to connect ideas and information.

By the end of Grade 3, Trimester 1 students can:

- Outcome #1: Stay on topic and ask and answer questions during discussions.
- Outcome #2: Sound out words with two or more syllables. Use story clues to determine what words mean.
- Outcome #3: Use pictures, headings, and other visual clues to help understand a story or article.
- Outcome #4: Describe characters in a story. Explain how their actions affect what happens.

Questions you can ask your child:

- ★ Who is the story about?
- ★ What do you think that word might mean? How can you figure it out?

Topics you can discuss with your child’s teacher:

- ★ Books and authors to look for at the library
- ★ Types of writing your child is working on

Grade 3, Trimester 1 Big Ideas and Concepts:

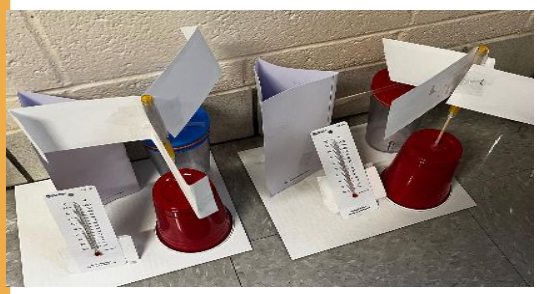
- Expectation #1: Solve two-step word problems using addition and subtraction.
- Expectation #2: Develop strategies for solving multiplication and related division facts.
- Expectation #3: Tell time on an analog clock and solve problems involving elapsed time.
- Expectation #4: Use place value understanding and properties of operations to perform multi-digit arithmetic.

Questions you can ask your child:

- How do you use your number grid to add or subtract?
- It takes 30 minutes to get to practice, what time will we need to leave to arrive by 5:30?

Topics you can discuss with your child's teacher:

- How can I help my child master addition and subtraction facts?
- Strategies for telling time and elapsed time
- Methods you use for rounding



By the end of Grade 3, Trimester 1 students can:

- Outcome # 1: Multiply using strategies for all one-digit numbers times 1, 2, 5 and 10.
- Outcome # 2: Solve two-step word problems with addition, and subtraction using equal groups and arrays.
- Outcome # 3: Add/Subtract within 1,000 using strategies based on place value.
- Outcome # 4: Round numbers to the nearest 10 and nearest 100.
- Outcome # 5: Tell time to the nearest 5 minutes and use a number line to determine elapsed time.
- Outcome # 6: Represent and interpret data on a scaled bar graph.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 3, Trimester 1 Big Ideas and Concepts:

- Expectation #1: The role of a scientist.
- Expectation #2: The role of an engineer.
- Expectation #3: Introduction and application of the scientific method.
- Expectation #4: Introduction and application of the engineering design process.
- Expectation #5: Create and interpret scientific models, including a model of an aluminum atom and the solar system.

By the end of Grade 3, Trimester 1 students can:

- Outcome #1: Use graphs and charts to talk about weather patterns around the world.
- Outcome #2: Use the engineering design process to solve a problem like flooding.
- Outcome #3: Use the scientific method to investigate a question.

Questions you can ask your child:

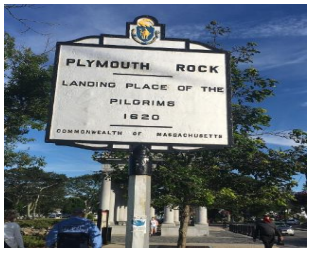
- What is an atom?
- Why is gravity important?
- What is a scientist?
- What is an engineer?

Topics you can discuss with your child's teacher:

- The scientific method
- The engineering design process
- Inquiry based learning

Grade 3, Trimester 1 Big Ideas and Concepts:

- Expectation #1: Understand relationships among Native Peoples, Europeans, and Africans in early Massachusetts.
- Expectation #2: Explain how Native Peoples first came into contact with Europeans, and explain why Europeans in the 16th–17th centuries sailed westward across the Atlantic.
- Expectation #3: Explain the diversity of Native Peoples, present and past, in Massachusetts and the New England region.



Questions you can ask your child:

- What are the states that make up New England?
- What are some of the Indigenous Tribes in Massachusetts?

Topics you can discuss with your child's teacher:

- Places nearby that are important to the history of Indigenous Peoples
- Books about Native Peoples, Pilgrims, and Explorers

By the end of Grade 3, Trimester 1 students can:

- Objective #1: Find the Northeast United States on a map. Find and name the New England states.
- Objective #2: Describe the various Native Peoples who live or lived in Massachusetts and New England. Explain how the Native Peoples in this area first met Europeans in the 1500s and 1600s.
- Objective #3: Describe what the Europeans thought about the Native Peoples and the environment.
- Objective #4: Explain why the Pilgrims settled in the Plymouth Colony. Describe the Mayflower Compact, the challenges Pilgrims faced, and their relationships with Native Peoples.

MERSD SPECIALS

Grade 4, Trimester 3

LIBRARY

In this Trimester, your child will:

- Choose a research topic and identify authoritative sources for their research.
- Independently conduct research and take notes using at least 3 sources.
- Create a bibliography with assistance, using *EasyBib*, an online citation tool.
- Create a multimedia project based on their research in collaboration with technology class.
- Conduct self-evaluation of their final research product.

TECHNOLOGY

In this Trimester, your child will:

- Create multimedia projects with different Google apps.
- Use their library research to create a multimedia project that can then be shared with larger audiences.
- Learn about computer science.
- Learn and understand how to code robots to solve problems.
- Learn what an algorithm is and how to create one.

VISUAL ART

In this Trimester, your child will:

- Make a clay coil pot.
- Use cut photos and magazine clippings to create a detailed visual self portrait collage.
- Learn about famous folk artists in North America.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Identify pop/rock instruments by sight and sound.
- Play chords on instruments while singing.
- Compose chord progressions.
- Play polyrhythms on percussion instruments.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate developing lacrosse skills.
- Demonstrate throwing, catching, and striking skills.
- Develop increased critical thinking and communication skills with relation to problem solving.
- Demonstrate a forehand hit in bounds with a tennis/pickleball racquet.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 4, Trimester 2

LIBRARY

In this Trimester, your child will:

- Discuss how to develop a topic for a research project.
- Learn the difference between search engines and websites.
- Practice how to conduct efficient online searches for information.
- Learn how to identify authoritative sources with a focus on publisher, author, and content and, practice evaluating online sources.
- Discuss the importance of citing sources and learn how to use *EasyBib*, an online citation tool, to cite sources.

TECHNOLOGY

In this Trimester, your child will:

- Learn about Internet Safety and how to stay safe online.
- Learn about Digital Citizenship and how we can demonstrate this when we use devices.
- Create multimedia projects to demonstrate how we can be safe online and a good digital citizen.
- Continue to develop our keyboarding skills.

VISUAL ART

In this Trimester, your child will:

- Create a still life from observation.
- Expand on printmaking skills and create a fish print.
- Draw realistically 3D forms using colored pencils.
- Use 1-point perspective in a landscape drawing with oil pastels.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Identify pop/rock instruments by sight and sound.
- Improvise melodies on instruments.
- Perform two-part rounds on stage with appropriate expression.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate dribbling, shooting, and passing skills.
- Demonstrate volleyball skills i/e setting, bumping, and serving.
- Develop increased flexibility, tumbling and balance.
- Increase spatial awareness skills.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 4, Trimester 1

LIBRARY

In this Trimester, your child will:

- Demonstrate awareness of literature from various cultures and genres, and begin to understand the concept of books as "mirrors or windows" via a Worldly Reading Challenge.
- Learn how to self-check out library books using *Destiny*, the school library database.
- Practice how to conduct an online search for information and begin to learn how to evaluate online sources.

TECHNOLOGY

In this Trimester, your child will:

- Review basic device safety and expectations of device care.
- Practice logging in and getting connected to Google Classroom.
- Review keyboarding finger placement and begin using Learning.com Keyboarding program.
- Focus on accuracy over speed when practicing keyboarding skills.

VISUAL ART

In this Trimester, your child will:

- Students will learn what art is, what an artist does and why art is important to people throughout history and around the world.
- Students will continue to explore new ways to explore artmaking and expressing themselves through drawing, painting, printing, collage and 3D construction.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Connect songs they sing to history and culture.
- Read and play whole, half, quarter and eighth notes and rests.
- Demonstrate context-appropriate audience etiquette.
- Recognize the ways musicians communicate nonverbally.

WELLNESS / PE

In this Trimester, your child will:

- Students will demonstrate soccer skills within small game situations
- Students will demonstrate throwing, catching and punting a football
- Student will demonstrate dribbling, passing and shooting of a basketball
- Students will demonstrate passing and catching skills used during the game of handball
- Students will also take part in Project Adventure curriculum which includes problem solving and teamwork.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

FOURTH GRADE
Trimester 3

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Plan, draft, and revise free verse poetry
- Plan, draft, and revise an expository essay
- Continue to build fluency skills by strengthening intonation and phrasing

SCIENCE AND TECHNOLOGY/ ENGINEERING

In Trimester, your child will:

- Learn that energy can be transferred in waves, like light, sound, and water
- Explore methods of communication, like Morse Code
- Understand scientific concepts like sound waves through hands on experiments

MATHEMATICS

In this Trimester, your child will:

- Use the four operations to work through multi-step word problems
- Explore the properties of angles and learn how to use protractors to measure them
- Analyze numerical patterns

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about the regions of the United States and how their resources, land, people, and important landmarks have helped shape the United States.
- Explore what life is like in the regions of the United States with hands on activities

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 4, Trimester 3 Big Ideas and Concepts:

- Students learn to think critically as they explore the expository, narrative nonfiction, and historical fiction genres and apply new knowledge and skills encompassing the four domains of language
- Students will read fluently, with expression, proper intonation, and phrasing
- Students will write an expository essay
- Students will write responses that reflect understanding using evidence from the text
- Students will identify and use adjectives and figurative language correctly
- Students will plan and draft a free verse poem

By the end of Grade 4, Trimester 3 students can:

- cite relevant evidence from text, and make inferences to support understanding.
- evaluate author's use of sequence text structure.
- identify and analyze author's use of imagery.
- identify the story's problem and solution.
- recognize foreshadowing.
- use text evidence to infer a story's theme.
- analyze an author's use of text features.
- evaluate an author's use of literary elements, such as dialogue.
- analyze and explain the theme in a poem.
- identify examples of imagery and personification.
- determine literary elements of free verse.

Questions you can ask your child:

- What is your favorite genre and why?
- Do your like to write stories or poems better and why?
- How does figurative language make your writing more interesting?

Topics you can discuss with your child's teacher:

- How can I encourage my child to read at home?
- What are some authentic types of writing we can do at home?
- What are some nonfiction titles my child might enjoy reading?

Grade 4, Trimester 3 Big Ideas and Concepts:

- Use the four operations with whole numbers to solve multi-step problems
- Generalize and analyze patterns
- Understand concepts of angles and measures angles
- Recognize that angle measures are additive
- Understand decimal notation for fractions and compare decimal fractions
- Represent and interpret data
- Classify shapes by properties of their lines and angles

Questions you can ask your child:

- Where can we find angles in the real world?
- What is your preferred method for solving multiplication problems and why?
- When would you record a remainder as a fraction?

Topics you can discuss with your child's teacher:

- How can I encourage perseverance in solving multi-step problems?
- How can I help my child multiply and divide efficiently?

By the end of Grade 4, Trimester 3 students can:

- multiply up to 4-digit by 1-digit and 2-digit by 2-digit numbers.
- find extended division facts with 1-digit divisors.
- solve area problems with unknown sides.
- add and subtract fractions and mixed numbers.
- Identify and measure acute, obtuse, and right angles.
- add and subtract to find unknown angle measures.
- continue to describe number patterns.
- divide up to 3-digit by 1-digit numbers.
- find multiples of unit fractions.
- multiply a fraction by a whole number.
- organize and represent fractional data on a line plot.
- add two fractions with denominators 10 or 100.
- use decimal notation for fractions with denominators of 10 or 100.
- use the four operations to solve number stories involving whole numbers of measured quantities.

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 4, Trimester 3 Big Ideas and Concepts:

- Understand that energy can be transferred from place to place by waves, which can make objects move.
- Understand the relationship between a particular sound and its properties, including its amplitude and frequency.
- Understand how patterns (light, sound, numbers, etc.) can be used to communicate information over a distance.
- Identify which communication solutions, like Morse Code, are more effective than others.

By the end of Grade 4, Trimester 3 students can:

- show how wave patterns carry energy and can cause objects to move.
- developed and used models of transverse and longitudinal waves.
- explore what changes a sound wave's amplitude, volume, and pitch.
- explore how different technologies use patterns to transfer information from one place to another.
- design and test multiple solutions that use light and sound to transfer information over a distance.

Questions you can ask your child:

- What is the difference between pitch and volume?
- How do stringed instruments make sounds?

Topics you can discuss with your child's teacher:

- Ways of applying what your child learns in science to everyday life
- Places in the community that can help your child learn science

Grade 4, Trimester 3 Big Ideas and Concepts:

- Understand the history of the Midwest region of the United States and how its physical features and political events influenced this history and the diverse cultural nature of the region (Native people, Africans, Europeans and other immigrant groups).
- Understand the history of the Southwest region of the United States and how its physical features and political events influenced this history and the diverse cultural nature of the region (Native people, Mexico, Africans, Europeans and other immigrant groups).
- Understand the history of the West region of the United States and how its physical features and political events influenced this history and the diverse cultural nature of the region (Native people, Mexico, Africans, Europeans and other immigrant groups).

Questions you can ask your child:

- What state in these regions would you most want to visit and why?
- How are natural disasters impacting these regions?

Topics you can discuss with your child's teacher:

- Sources to find accurate and up to date information about the topics we are studying
- Where in the community to learn more about North America

By the end of Grade 4, Trimester 3 students can:

- Be able to locate Midwestern states and name their capitals
- Identify the important physical features of the Midwest (mountains, rivers, ports)
- Be able to locate the Southwestern states and name their capitals
- Identify the important physical features of the Southwest (mountains, rivers, ports)
- Be able to locate the Western states and name their capitals
- Identify the important physical features of the West (mountains, rivers, ports)
- Explain how natural disasters impact these regions

FOURTH GRADE
Trimester 2

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read argumentative texts and think critically about facts and opinions.
- Plan, draft, and revise an essay.
- Continue to refine their "writing about reading" skills by including textual evidence to support their points.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Continue to understand how earth's four systems are constantly interacting (emphasis on the water cycle.)
- Explore physics concepts like simple machines, forces, energy, and motion.
- Learn how to solve a real-world problem using the process of engineering.

MATHEMATICS

In this Trimester, your child will:

- Learn a variety of strategies for multiplying two-digit numbers.
- Understand the process of ordering fractions based on benchmarks.
- Solve real-world problems involving fractions (adding and subtracting.)

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about the regions of the United States and how their resources, land, people, and important landmarks have helped shape the United States.
- Explore what life is like in the regions of the United States with hands-on activities.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 4, Trimester 2 Big Ideas and Concepts:

- Students learn to think critically as they explore the realistic fiction, argumentative text, and narrative nonfiction genres and apply new knowledge and skills encompassing the four domains of language
- Students will read fluently with expression
- Students will identify action verbs and analyze the use of verb tenses
- Students will write a realistic fiction narrative to develop experiences or events using effective literary techniques, descriptive details, and clear sequences
- Students will write responses to texts that demonstrate understanding
- Students will plan and draft an essay

By the end of Grade 4, Trimester 2 students can:

- cite relevant evidence from text, and make inferences to support understanding.
- identify point of view.
- analyze the author's use of facts and opinions.
- explain the author's use of flashback.
- identify the sequence of events using timelines.
- explain the use of anecdote.
- use antonyms and synonyms to determine meaning.
- analyze the procedural text structure.
- identify and use text structures.
- describe how the compare and contrast text structure contributes to author's purpose.
- analyze how setting and dialogue develop plot.
- identify and analyze elements of narrative poetry.

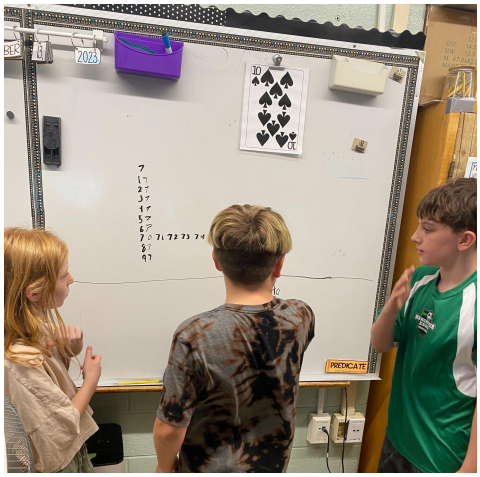
Questions you can ask your child:

- ★ Do you prefer to read fiction or nonfiction and why?
- ★ What are you writing about in school this week?
- ★ What is the difference between a fact and an opinion?

Topics you can discuss with your child's teacher:

- ★ How can I encourage my child to read at home?
- ★ What are some authentic types of writing we can do at home?
- ★ Who are some poets my child might enjoy reading?

Grade 4, Trimester 2 Big Ideas and Concepts:



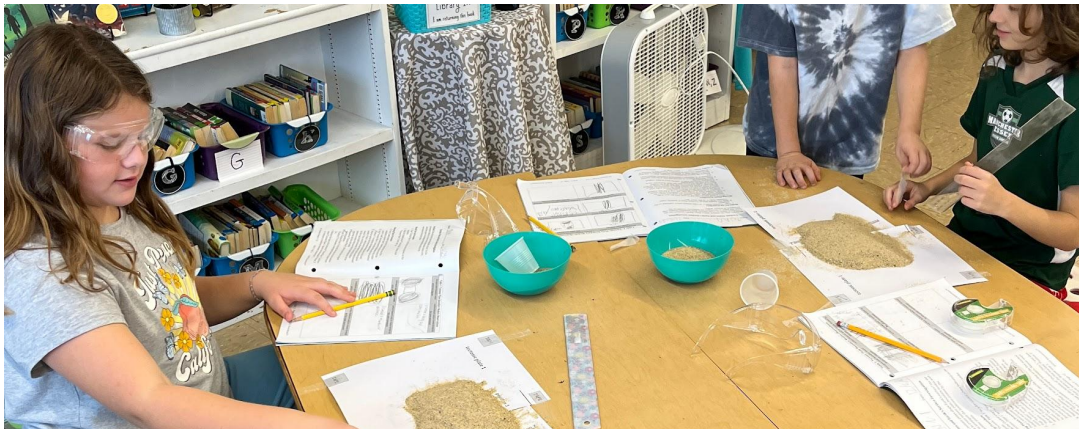
- Understand fraction equivalence and ordering
- Understand the relationship between fractions and decimals
- Understand how to solve problems with whole numbers using the four operations
- Gain familiarity with factors and multiples
- Solve problems involving measurements and conversions of measurements
- Build fractions from unit fractions by applying and extending previous understanding on operations of whole numbers
- Understand properties related to lines, angles and 2-dimensional shapes

Questions you can ask your child:

- What are the different ways you can decompose $^{6}/_{10}$?
- What is your most efficient strategy for multiplication?
- How do we use fractions and decimals at home?

Topics you can discuss with your child's teacher:

- How can I support my child's understanding of fractions and decimals?
- How can I help my child attend to precision when solving problems?



By the end of Grade 4, Trimester 2 students can:

- recognize two equivalent fractions through 12^{ths} using a model.
- recognize that fraction comparisons require same-size wholes.
- compare fractions and decimals using a model.
- represent decimals to hundredths using base-10 numerals.
- translate between decimal notation and fraction with denominators of 10 and 100.
- compare decimals using a model.
- convert between meters, centimeters, and millimeters.
- accurately multiply 2-digit by one-digit whole numbers.
- use a formula to find the perimeter and area of rectangles.
- solve number stories involving units of length, time, and money.
- add and subtract fractions and mixed numbers using a visual tool.
- decompose fraction and represent with an equation.
- solve number stories involving fractions.
- organize and represent data to the ½ and ¼ units on a line plot.
- identify benchmark rotations such as quarter, three-quarter, half, and full turn.
- recognize that angles are measured in iterations of one-degree angles.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 4, Trimester 2 Big Ideas and Concepts:

- Understand how water moves around Earth, interacting with all of Earth's systems and influencing weather.
- Understand the impacts of urban flooding and water pollution.
- Understand how dams provides energy but also impacts the environment.
- Understand that levers are simple machines because they redirect force to make work easier.
- Understand the differences between the scientific method and the engineering design process and how they work together.
- Understand how potential energy becomes kinetic energy.
- Understand the relationship between the structure of matter and electricity.
- Understand how energy is converted from electrical energy into another form of energy in a circuit.

By the end of Grade 4, Trimester 2 students can:

- analyze how water moves around Earth, interacting with all of Earth's systems and influencing weather.
- describe how the use of dams provides energy but also impacts the environment.
- design, test, and evaluate a prototype that reduces the impact of flooding.
- use simple machines to explore the relationship between forces, energy and motion.
- investigate how levers redirect force to make work easier, and test how the positions of the fulcrum, effort force, and load force affect how forces are redirected.
- design and test a prototype catapult to see how well it can change potential energy into kinetic energy.

Questions you can ask your child:

- ★ Where can you find examples of levers in our home?
- ★ Where do transfers of energy happen in your home or community?
- ★ How does a circuit work?

Topics you can discuss with your child's teacher:

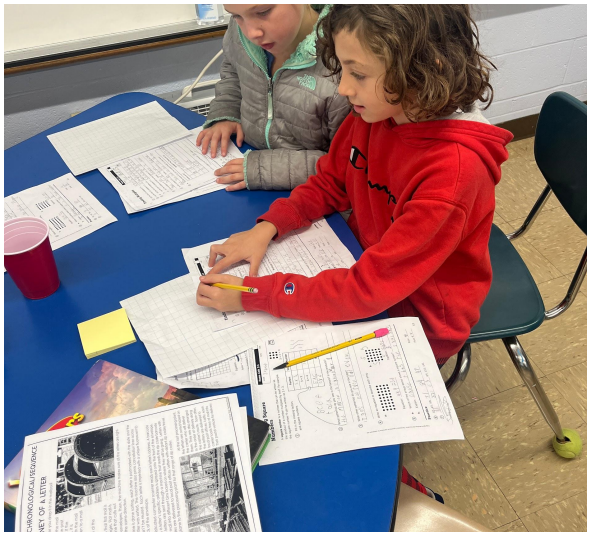
- ★ Studying for unit tests
- ★ Inquiry based learning
- ★ How our science curriculum teaches next generation science skills

Grade 4, Trimester 2 Big Ideas and Concepts:

- Understand the history of the Northeast region of the United States and how its physical features and political events influenced this history and the diverse cultural nature of the region (Native people, Africans, Europeans and other immigrant groups).
- Understand the history of the Southeast region of the United States and how its physical features and political events influenced this history and the diverse cultural nature of the region (Native people, Africans, Europeans and other immigrant groups).

Questions you can ask your child:

- What is our nation's capital and what are some important landmarks there?
- What state along the east coast would you most like to visit and why?



Topics you can discuss with your child's teacher:

- Sources to find accurate and up to date information about the topics we are studying
- Where in the community to learn more about North America

By the end of Grade 4, Trimester 2 students can:

- be able to locate the Northeast states and name their capitals.
- identify the important physical features of the Northeast (mountains, rivers, ports.)
- be able to locate the Southeast states and name their capitals
- identify the important physical features of the Southeast (mountains, rivers, ports.)
- explain how natural disasters impact the northeast and southeast.

HISTORY AND SOCIAL SCIENCE

FOURTH GRADE
Trimester 1

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read a variety of genres like stories of realistic fiction, and nonfiction articles and texts.
- Strengthen their reading fluency skills by reading aloud and listening to others read.
- Write personal narratives about important moments in their lives.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask scientific questions about the natural world as well as things that humans design.
- Learn through various hands-on experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Learn strategies to solve large addition and subtraction problems.
- Be exposed to various methods for rounding large numbers, and learn how rounding can be applied to real-world problems

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Understand the timeline of the first explorers of North America and recognize the impact their settlement had on the land and people.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 4, Trimester 1 Big Ideas and Concepts:

- Think critically as they explore the expository and realistic fiction genres and apply new knowledge and skills encompassing the four domains of language
- Read fluently, focusing on rate, accuracy, intonation and expression
- Demonstrate an understanding of sentence structure and the proper usage of nouns
- Write narratives to develop experiences or events using effective literary techniques, well-chosen details, and well-structured sequence
- Write a response to texts using reflective thinking and textual evidence
- Plan and draft a lyric poem

By the end of Grade 4, Trimester 1 students can:

- cite relevant evidence from text, and make inferences to support understanding.
- identify author's use of compare-and-contrast text structure.
- explain the author's purpose and message within a text.
- analyze the author's use of text features.
- identify the problem and solution in plot.
- distinguish between fact and opinion.
- identify how dialogue is used in a story.
- identify main ideas and details.
- summarize, maintaining meaning and logical order.
- analyze how the author shows the changes a character undergoes.
- identify structure of a drama, including acts, scenes, setting, stage directions, and characters.
- analyze point of view.
- describe the purpose of imagery and assonance.

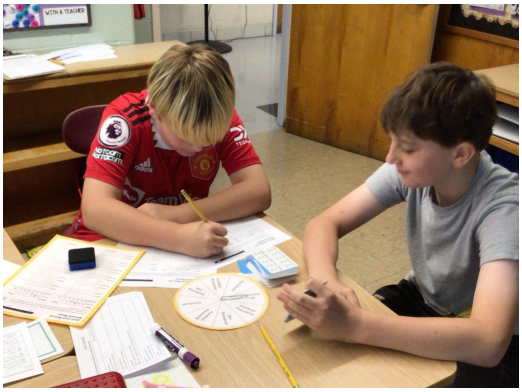
Questions you can ask your child:

- ★ What kinds of things do you like to read and why?
- ★ What are you writing in school this week?
- ★ What new words or phrases did you use in school today?

Topics you can discuss with your child's teacher:

- ★ How can I encourage my child to read at home?
- ★ What are some authentic types of writing we can do at home?
- ★ What is a book series my child might enjoy reading?

Grade 4, Trimester 1 Big Ideas and Concepts:



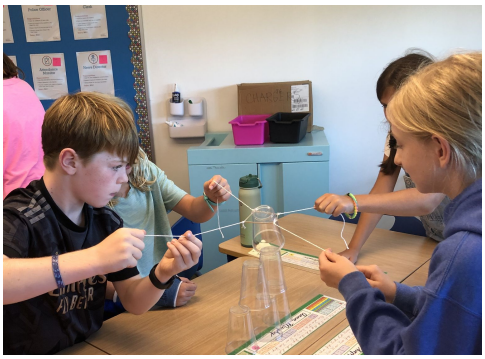
- Understand how to solve problems with whole numbers using the four operations
- Generalize place value understanding
- Understand conversion of measurement from a larger unit to a smaller unit
- Gain familiarity with factors and multiples
- Understand the attributes of lines, line segments, rays and right angles
- Understand the use of formulas to calculate area and perimeter
- Understand the difference between prime and composite numbers

Questions you can ask your child:

- What do you see in nature that is symmetrical?
- Would you measure the length of a driveway in inches or feet?
- What is your preferred method for solving addition problem and why?

Topics you can discuss with your child's teacher:

- How can I help my child to become fluent in math facts?
- How can I encourage perseverance in solving problems?



By the end of Grade 4, Trimester 1 students can:

- round number through the 100,000.
- read, write and identify numbers though the 100,000.
- apply the U.S. traditional algorithm for addition and subtraction up to four digit numbers.
- recognize the relationship between place values in a base ten number system.
- convert feet, yards and inches.
- Find the perimeter and area of rectangles.
- Draw and label points, lines, line segments, and rays.
- identify right angles.
- solve multi-step addition and subtraction number stories using an estimate to assess reasonableness of answers
- recognize a number story as additive or multiplicative and explain how they know.
- Identify more than one factor pair for composite numbers less than 40.
- write multiples of a 1-digit number
- identify prime and composite numbers less than 40
- Use fact extensions to multiply by a multiple of 10.
- identify properties of line segments and angles within quadrilaterals and identify right angles within triangles
- identify at least one line symmetry in 2-dimensional symmetric figures.

MATHEMATICS

SCIENCE AND TECHNOLOGY / ENGINEERING

Grade 4, Trimester 1 Big Ideas and Concepts:

- Understand that all matter is made up of atoms and that atoms determine a substance's properties
- Understand the processes that cause Earth's surface to change over time
- Understand how rocks and fossils can be used to identify the processes that have changed Earth's landmass
- Understand the process of weathering and erosion

By the end of Grade 4, Trimester 1 students can:

- follow the scientific method to plan and carry out experiments.
- determine the properties of a solid and find its mass.
- investigate the relationship between an object's speed and its energy.
- predict how energy will change in a collision between a moving marble and a cup at rest.
- model the different ways that tectonic plates move to observe how landforms are created.
- test how the forces of moving water erodes sediment.
- analyze clues in rock to determine how Earth's surface has changed over time.
- analyze and interpret maps of Earth's mountain ranges, volcanoes, and earthquakes to describe patterns.
- explain how non-renewable energy sources are different from renewable resources.

Questions you can ask your child:

- What are the processes that cause earth's surface to change?
- How do mass and speed impact the force of a collision?
- Where in your community are there examples of weathering and erosion?

Topics you can discuss with your child's teacher:

- Ways of applying what your child learns in science to everyday life
- Places in the community that can help your child learn science

Grade 4, Trimester 1 Big Ideas and Concepts:

- Understand how various map features (scales, keys, cardinal directions) help to locate physical features and political regions (countries, states, cities) of North America.
- Understand how archeologists developed theories about ancient migration to North America.
- Students will learn the reasons for early European exploration and conquest of North America.

Questions you can ask your child:

- Ask them to find different places of importance to your family on a map.
- Who do you think migrated to North America first?
- Who were some of the Europeans that first voyaged to North America?

Topics you can discuss with your child's teacher:

- Sources to find accurate and up to date information about the topics we are studying
- Where in the community to learn more about North America

By the end of Grade 4, Trimester 1 students can:

- use map features to locate and identify important physical features in North America.
- on a political map of North America, locate Canada and its provinces, Mexico and its states, the nations of the Caribbean, and the United States of America and its states.
- provide information about the various theories of how ancient people first migrated to North America.
- explain how archeologists conduct research.
- show on a map various European explorations of North America and the Caribbean during the 15th and 16th centuries.

HISTORY AND SOCIAL SCIENCE

MERSD SPECIALS

Grade 5, Trimester 3

LIBRARY

In this Trimester, your child will:

- Independently conduct research and take notes about an activist using authoritative books and online sources.
- Independently create a bibliography using *EasyBib*, an online citation tool.
- Write a script based on their research to be the basis of a self-produced multimedia project using applications such as *BrainPop* in collaboration with Technology class.
- Conduct peer review and evaluation of final video products.

TECHNOLOGY

In this Trimester, your child will:

- Create multimedia/video presentations using Library research.
- Expand on the Library's Worldly Book Challenge by creating movies about Civil Rights Activists.
- Use our knowledge from previous years to develop multimedia projects that incorporate a variety of text, image and video edits and features.

VISUAL ART

In this Trimester, your child will:

- Design a 2D cubist art piece.
- Learn and understand how to draw using cross-hatching basics to show value.
- Create a 2-point perspective dream bedroom.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Analyze the form and harmony of music by listening.
- Make educated guesses about where and when music comes from based on auditory evidence.
- Compose a short piece using digital music software.
- Sing as a group with accurate pitch, rhythm, diction, volume, and expression.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate developing lacrosse skills.
- Demonstrate throwing, catching, and striking skills.
- Demonstrate an understanding of basic skills associated with track and field.
- Develop increased critical thinking and communication skills with relation to problem solving.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 5, Trimester 2

LIBRARY

In this Trimester, your child will:

- Review prior learning of library research skills.
- Answer the questions: *What are Civil Rights? What is an activist?*
- Be introduced to their capstone research project and all of its components.
- Conduct pre-research on civil rights activists to determine a topic.
- Begin identifying authoritative sources for their research project.

TECHNOLOGY

In this Trimester, your child will:

- Expand on our Computer Science knowledge.
- Learn how to use Scratch to create animations using code.
- Review how to be safe online and a good digital citizen.
- Create multimedia/video presentations on digital citizenship that can be shared with a younger audience using apps such as Green Screen.

VISUAL ART

In Trimester, your child will:

- Design a personal mandala that illustrates things about them.
- Create an abstract drawing using their name and oil pastels, markers, crayon and colored pencils.
- Learn and understand how to draw depth using cross-hatching basics.
- Make a cylinder vase out of clay.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Sing three-part rounds.
- Identify orchestral, pop, and world instruments by sight and sound.
- Place music into genres by listening, supporting choices with auditory evidence.
- Give examples of how the historical and geographical context of music can affect its sound.

WELLNESS / PE

In this Trimester, your child will:

- Demonstrate dribbling, shooting, and passing skills.
- Demonstrate volleyball skills i/e setting, bumping, and serving.
- Develop increased flexibility, tumbling and balance.
- Increase spatial awareness skills specific to spotting, supporting and climbing within the P.A. curriculum.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

MERSD SPECIALS

Grade 5, Trimester 1

LIBRARY

In this Trimester, your child will:

- Continue to explore multicultural literature from various cultures and genres, to expand understanding of literature as "mirrors or windows" via a Worldly Reading Challenge.
- Practice modifying online searches for better results.
- Recognize gaps and inaccuracies in information using critical thinking skills.
- Practice summarizing and paraphrasing information.

TECHNOLOGY

In this Trimester, your child will:

- Review basic device safety and expectations of device care.
- Practice logging in and getting connected to Google Classroom.
- Review keyboarding finger placement and begin using Learning.com Keyboarding program.

VISUAL ART

In this Trimester, your child will:

- Students will learn what art is, what an artist does and why art is important to people throughout history and around the world.
- Students will continue to explore new ways to explore artmaking and expressing themselves through drawing, painting, printing, collage and 3D construction.

MUSIC & PERFORMING ARTS

In this Trimester, your child will:

- Sing rounds.
- Explain the purpose of music in society.
- Play instruments as a group, reading standard notation.
- Read and play whole, half, quarter, eighth, and sixteenth notes and rests.
- Respond to the cues of a conductor.

WELLNESS / PE

In this Trimester, your child will:

- Students will demonstrate soccer skills within small game situations
- Students will demonstrate throwing, catching and punting a football
- Student will demonstrate dribbling, passing and shooting of a basketball
- Students will demonstrate passing and catching skills used during the game of handball
- Students will also take part in Project Adventure curriculum which includes problem solving and teamwork.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

FIFTH GRADE
Trimester 3

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❑ Can you tell me about something you **read** today?
- ❑ How could you use the **math** you learned today?
- ❑ What **scientific ideas** did you talk about today?
- ❑ How did you contribute to your **community** today?
- ❑ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 5, Trimester 3 Big Ideas and Concepts:

- Compare and contrast stories in different literary forms on their approaches to similar themes and topics
- Explain how a series of stanzas fit together to provide the overall structure of a particular poem
- Analyze multiple accounts of the same event or topic noting important similarities and differences
- Use multiple sources and identify relevant information to support expository response
- Write routinely over extended time frames and shorter time frames for a range of purposes and tasks

By the end of Grade 5, Trimester 3 students can:

- Draw inferences from a text.
- Come to discussions prepared and draw on that preparation to explore ideas under discussion.
- Write an expository essay that students have researched.
- Analyze the meaning of a poem and speakers point of view.
- Demonstrate command of standard english conventions.
- Write a conclusion to their narrative that connects to the story and provides closure.
- Use sensory details

Questions you can ask your child:

- What type of writing do you like best?
- What is a limerick?
- What is your favorite type of poem to read?

Topics you can discuss with your child's teacher:

- Summer reading recommendations
- My child's participation in class discussions
- Transition to middle school

Grade 5, Trimester 3 Big Ideas and Concepts:

- Learn how the powers of 10 affect multiplication and division
- Develop strategies for multiplying & dividing decimals to the hundredth place
- Understand properties of different polygons
- Explore different ways to present data
- Solve measurement conversion problems
- Discover methods to calculate the area of triangles

Questions you can ask your child:

- What is 3.4 times 10 to the power of 4?
- What are some properties of a rectangle?
- How many centimeters equals 3 meters?

Topics you can discuss with your child's teacher:

- Math games
- Projects you can do at home to practice metric measurement conversions

By the end of Grade 5, Trimester 3, students can:

- Multiply and divide decimals by powers of 10.
- Create a line plot with data.
- Use a hierarchy chart to classify polygons by characteristics.
- Explore line plots and coordinate grids.
- Convert U. S. customary and metric measurements.
- Use the Rectangle Method to find the area of a triangle.

MATHEMATICS

SCIENCE AND TECHNOLOGY / ENGINEERING

Grade 5, Trimester 3 Big Ideas and Concepts:

- Understand how energy can be transferred from one place to another in a circuit to do work.
- Understand the interactions between electricity and magnetism.
- Understand how sound energy is transferred from one place to another in waves of vibrating molecules and how sound energy is absorbed be different materials.

By the end of Grade 5, Trimester 3 students can:

- Students will be able to create a functioning circuit.
- Create a model of a motor using an electromagnet.
- Design a sound absorbing wall using materials with properties that modify or change sound waves.

Questions you can ask your child:

- What are the differences between a simple, series, and parallel circuit?
- How electromagnets different from permanent magnets?
- How does the sound from your voice from a Kazoo vibrate?

Topics you can discuss with your child's teacher:

- How can you help reinforce classroom instruction at home
- Places in the community that can help your child learn science.

Grade 5, Trimester 3 Big Ideas and Concepts:

- Understand how the Constitution attempted to balance competing interests, the question of power, and the ideas of slavery.
- Explore the responsibilities of the government in the Constitution and the freedoms granted to citizens in the Bill of Rights.

Questions you can ask your child:

- Why have different people had different rights in this country's history?
- What are the responsibilities of the three Branches of Government?

Topics you can discuss with your child's teacher:

- People and places in Massachusetts related to the Constitution
- Books about the Government and Constitution.

By the end of Grade 5, Trimester 3 students can:

- Read the Preamble and understand the purpose of the Constitution.
- Explain how the framers of the Constitution divided and shared powers.
- Explain that voting rights and property rights did not extend to women or slaves.
- Demonstrate understanding of at least one of the freedoms guaranteed to citizens by the United States.

FIFTH GRADE
Trimester 2

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❏ Can you tell me about something you **read** today?
- ❏ How could you use the **math** you learned today?
- ❏ What **scientific ideas** did you talk about today?
- ❏ How did you contribute to your **community** today?
- ❏ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read various texts, like books, poems, letters, news articles, and Internet pages.
- Speak and listen in formal and informal ways, like presentations and conversations.
- Communicate opinions, information, and experiences in writing for various readers.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester, your child will:

- Ask scientific questions about the natural world and things humans design.
- Learn through various experiences, like observations and experiments.
- Solve problems using the skills and tools of engineers and scientists.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use tools, like rulers and calculators, to show mathematical relationships.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about their local community and about the state, country, and world.
- Discover how people and events from the past relate to the present.
- Work to understand how different people see the world differently.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 5, Trimester 2 Big Ideas and Concepts:

- Determine a theme of a story, drama or poem from detail in the text including how characters in a story respond to challenges.
- Describe how a narrators or speakers point of view impact how events are described in story, myth, or drama.
- Write expository texts to examine a topic and convey ideas and information clearly.
- Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
- Engage effectively in range of collaborative discussions with diverse partners on grade 5 topics and texts.

By the end of Grade 5, Trimester 2 students can:

- Summarize a text
- Use common, grade appropriate Greek and Latin roots as clues to the meaning of a word.
- Develop informational, persuasive and argumentative essays with facts, concrete details, with other information.
- Use a comma to separate an introductory element from the rest of the sentence.

Questions you can ask your child:

- What is the meaning of the word "circ"?
- Give an example of a metaphor or simile.
- What is the difference between a persuasive and argumentative essay?

Topics you can discuss with your child's teacher:

- Activities that can be done at home to improve writing
- Good study habits
- Executive functioning skills

Grade 5, Trimester 2 Big Ideas and Concepts:

- Students will explore fractions using fraction circle pieces, diagrams and number lines.
- Students will explore division number stories resulting in fractional answers.
- Students will extend place value patterns to decimals.
- Students will explore the first quadrant in the coordinate grid.
- Students will add, subtract, multiply and divide fractions.

Questions you can ask your child:

- Tell your child a whole number and ask him/her to find a half, third or fourth of the number.
- Practice using maps that use a grid with a map.

Topics you can discuss with your child's teacher:

- Projects that you can do at home to practice solving problems with fractions and decimals.
- Which strategies for finding common denominators work best in given situations.

By the end of Grade 5, Trimester 2 students can:

- Represent compare and rename fractions using models and manipulatives.
- Solve division number stories and write number models to build an understanding of fractions as division.
- Use place value strategies to compare decimals to the thousandths place.
- Plot points on a coordinate grid using ordered pairs.
- Using algorithms to solve Operations(+, −, x, ÷) with fractions.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 5, Trimester 2 Big Ideas and Concepts:

- Understand what a watershed is and how water moves through cycles on Earth: for example how rain can evaporate into the air or be absorbed into the ground.
- Understand how people affect the Earth: for example the effects of chemicals from factories and farms and how people can reduce those effects.
- Understand how the engineering design process can be used to solve real world problems.
- Understand how energy flows and matter cycles through an ecosystem.
- Understand how plants make their own food using water, air, and energy from the sun. Explore how the sun's energy helps plants grow and reproduce.

By the end of Grade 5, Trimester 2 students can:

- Graph and compare the amounts of salt water, fresh water and frozen water (ice) on Earth.
- Test a simple system for filtering water. Use the engineering design process to make improvements.
- Explain how different living things produce, consume, and decompose other things.

Questions you can ask your child:

- ★ What could we invent to make our chores at home easier?
- ★ How does water get from the geosphere to the atmosphere?
- ★ How can a filter improve water quality?
- ★ Describe how the energy from the sun transfers to energy in the body?

Topics you can discuss with your child's teacher:

- ★ How can you help reinforce classroom instruction at home
- ★ Places in the community that can help your child learn science.

Grade 5, Trimester 2 Big Ideas and Concepts:

- Explore the events leading up from the French and Indian War to the Revolutionary War.
- Learn about the reasons for the American Revolution and how it involved Massachusetts people.
- Use primary sources to discuss the importance of the Declaration of Independence.

Questions you can ask your child:

- Who was involved in the French and Indian War?
- What led to the American Revolution?

Topics you can discuss with your child's teacher:

- People and places in Massachusetts related to the Revolutionary War
- Books about the Revolutionary War.

By the end of Grade 5, Trimester 2 students can:

- Explain key British policies and the colonial response to them.
- Explain the relationship between Native Peoples and the French and the British.
- Analyze the role and the significance of Massachusetts people during the pre-revolutionary and revolutionary period.
- Demonstrate understanding of the effects of the Revolutionary War.

FIFTH GRADE
Trimester 1

TALK TO YOUR CHILD ABOUT SCHOOL

You can ask...

- ❑ Can you tell me about something you **read** today?
- ❑ How could you use the **math** you learned today?
- ❑ What **scientific ideas** did you talk about today?
- ❑ How did you contribute to your **community** today?
- ❑ How did someone help you learn today?

ENGLISH LANGUAGE ARTS & LITERACY

In this Trimester, your child will:

- Read grade level text with purpose and understanding.
- Explain how an author uses reasons and evidence to support particular points in a text.
- Produce clear and coherent narrative writing in which the development and organization are appropriate to task, purpose, and audience.

SCIENCE AND TECHNOLOGY/ ENGINEERING

In this Trimester , your child will:

- Ask scientific questions about space and matter.
- Learn through various experiences, such as observations and experiments.
- Answer questions using the scientific method.

MATHEMATICS

In this Trimester, your child will:

- Use math to represent and solve real-world problems.
- Use math to make arguments about why something is true or false.
- Use models to show mathematical relationships, such as area and volume.

HISTORY AND SOCIAL SCIENCE

In this Trimester, your child will:

- Learn about the history of our local community, state, country, and world.
- Discover how people and events from the past relate to the present.
- Understand cultural differences and perspectives.

Manchester Memorial Elementary School
43 Lincoln St.
Manchester-by-the-Sea, MA 01944

Essex Elementary School
12 Story St.
Essex, MA 01929

ENGLISH LANGUAGE ARTS & LITERACY

Grade 5, Trimester 1 Big Ideas and Concepts:

- Use a variety of texts, determine the main idea and supporting details.
- Describe how an author uses one or more text structures to present information in a text.
- Write narratives to develop experiences or events using effective literary techniques, descriptive details, and clear sequence.
- Develop and strengthen writing as needed by planning, revising, editing, rewriting or trying a new approach.
- Determine or clarify the meaning of unknown and multiple meaning words and phrases based on grade 5 reading and content choosing flexibly from a range of strategies.

By the end of Grade 5, Trimester 1 students can:

- Write a story chronologically using appropriate grade level voice, sentence fluency, conventions, word choice, and vocabulary.
- Use a variety of transitional words, phrases and clauses to manage sequence.
- Independently and proficiently read and comprehend literary texts representing a variety of genres, cultures, and perspectives.

Questions you can ask your child:

- What is your favorite genre to read?
- What strategies can you use to construct the meaning of unknown words in a text?
- How do good writers organize their ideas when they are writing?

Topics you can discuss with your child's teacher:

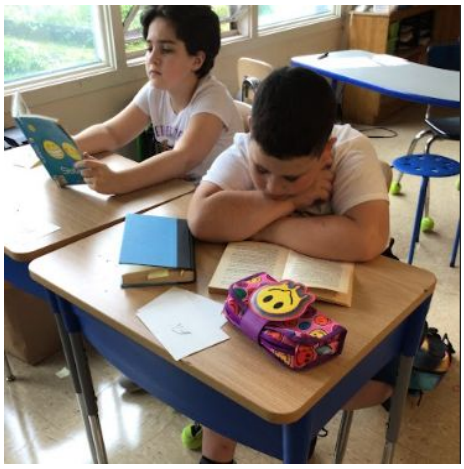
- Choosing an appropriate level book.
- How your child participates in class discussions.
- Available resources to help my child improve in reading.

Grade 5, Trimester 1 Big Ideas and Concepts:

- Students will explore the concept of volume and discover two mathematical formulas for volume.
- Students will review area and develop strategies for finding the area of rectangles in which the length of one side is a fractional part.
- Students will interpret parentheses in mathematical expressions.
- Students will explore place value relationships in multi-digit numbers, powers of ten and exponential notation.
- Students will review familiar and explore new algorithms for multiplying and dividing large numbers.

Questions you can ask your child:

- Which container holds the most? How can you tell?
- What is the value of 4 in 7,401,325?



Topics you can discuss with your child's teacher:

- Projects that you can do at home to practice solving problems with volume and area.
- Math games

By the end of Grade 5, Trimester 1, students can:

- Solve area problems using $A = l \times w$.
- Solve volume problems using $V = l \times w \times h$ or $V = B(\text{area of base}) \times h$.
- Write, explain, and compute math expressions using parentheses.
- Understand place value to the millions place. Multiply by the powers of ten.
- Compute problems using US traditional multiplication and division.

MATHEMATICS

SCIENCE AND TECHNOLOGY/ ENGINEERING

Grade 5, Trimester 1 Big Ideas and Concepts:

- Students should understand the Earth's position in our solar system and how it relates with our sun and moon.
- Students will understand the conservation of matter and states of matter.
- Students will be able to distinguish between rock and minerals and understand how minerals are formed and identified based on their properties.

By the end of Grade 5, Trimester 1 students can:

- Use models to explain day and night and how the sun, stars and moon appear in different parts of the sky at different times during a day, month and year.
- Measure, graph and analyze substances before and after a chemical reaction.
- Explain the changes that happen when liquids, gases and solids are heated and cooled.
- Observe properties of various rocks and minerals.

Questions you can ask your child:

- Why does the sun appear larger and brighter than any other star in the sky?
- What is the conservation of matter?
- How can you use properties to identify a mineral?

Topics you can discuss with your child's teacher:

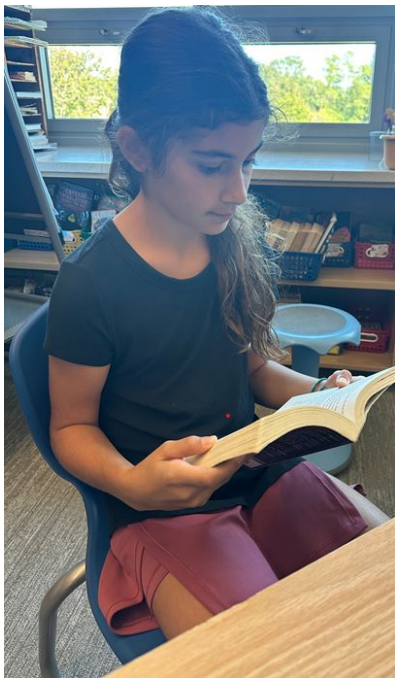
- How can you help reinforce classroom instruction at home?
- Places in the community that can help your child learn science.

Grade 5, Trimester 1 Big Ideas and Concepts:

- Build on prior schema of the New World at the time Christopher Columbus landed and the impact on Native Populations
- Explore the relationships between Native People and European settlers
- Learn about the first English settlements in North America
- Understand how settlements grew into populated colonies
- Explore the similarities and differences between the New England, Middle, and Southern colonies
- Learn about the origins of slavery

Questions you can ask your child:

- How did the colonists and Native People interact?
- How did climate affect the economies of the 3 colonial regions?



Topics you can discuss with your child's teacher:

- Historical fiction books
- Non fiction books about the American colonies
- Places in the community related to colonial history

By the end of Grade 5, Trimester 1, students can:

- Describe the beginnings and early growth of the American colonies.
- Compare and contrast the three colonial regions
- Explain the Triangular Slave Trade.
- Describe the relationships between Native Peoples and English settlers.

HISTORY AND SOCIAL SCIENCE

Appendix G: *Special Education Program Review*

School Committee Presentation

October 21, 2025

MERSD Special Education

Special education finance and District operating budgets

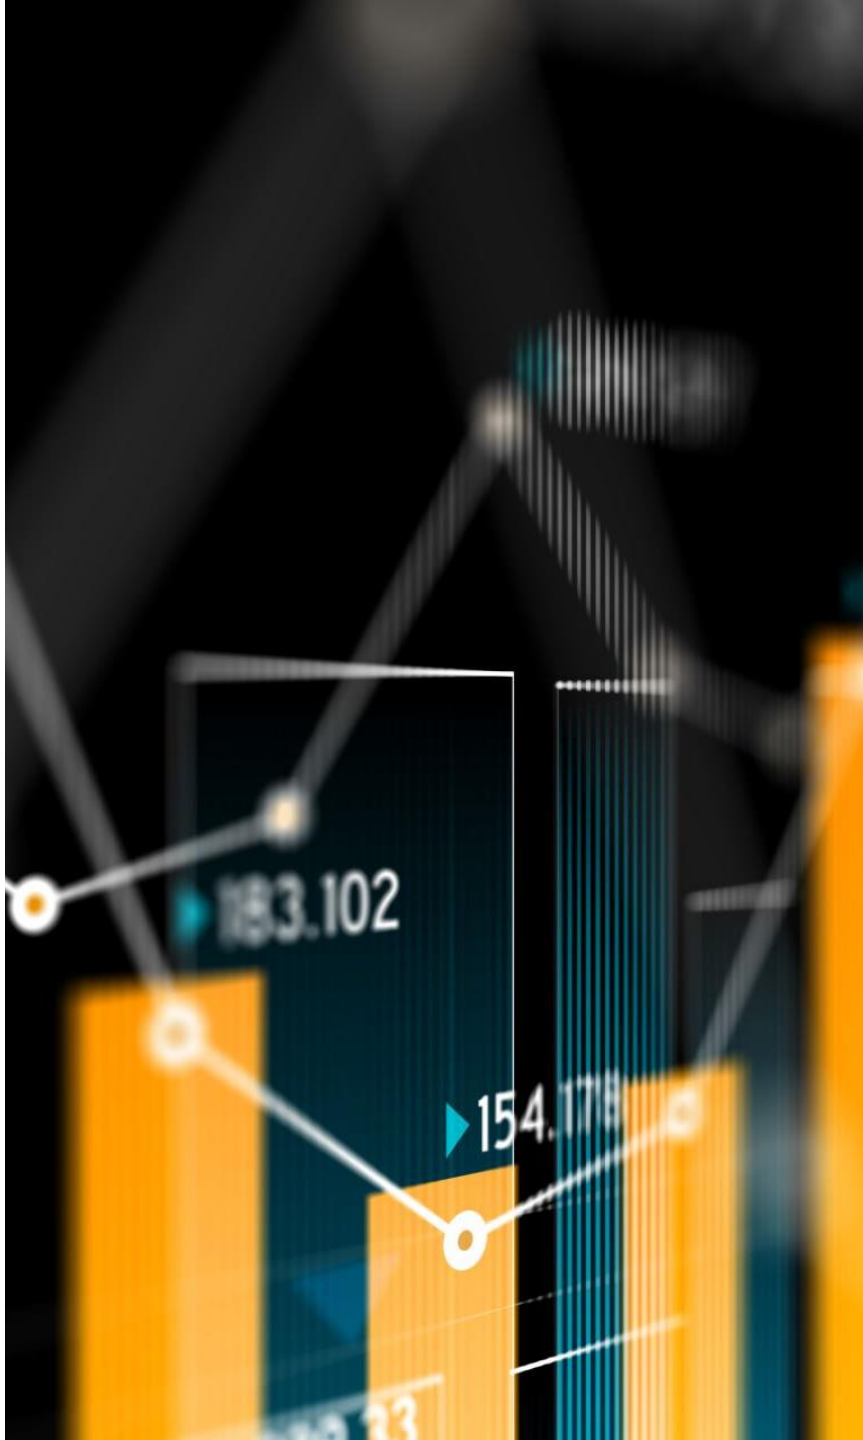
Navigating volatility, building effective structures, and planning for change

Community	% SPED /Operating Budget
Amesbury	26%
Danvers	26%
Gloucester	27%
Hamilton Wenham	27%
Lynnfield	23%
MASCO	23%
MERSD	26%
Newburyport	27%
North Reading	23%
Pentucket	26%
Rockport	29%
Triton	25%
Massachusetts	22%

Special Education as a Percentage of District Operating Budget

MERSD and Cape Ann Comparables (FY24, RADAR)

Special Education in MERSD



231 Students, 19.6% of all students

- 68% in full inclusion
- 6.5% in partial inclusion
- 17% in substantially separate programs
- 8.5% in out of district placements

Aspen, 10/2025

Data in this presentation

- ASPEN 2026 data
- DESE website state data
- Local databases

Types of Support Provided

- Applied behavioral analysis
- Evaluation and consultation
- Inclusion support and co-teaching
- Language based instructional practices
- Small group academic tutorials and classes
- Speech and language, articulation, and social pragmatics
- Occupational and physical therapies
- Assistive technology

Specialized Programs

Preschool

age 3 and 4

SWD and Peer Pals

RISE

complex needs

ABA methodologies

IRWL

dyslexia

grades 2 through 12

SAIL

autism and emotional/behavioral needs

K-8

ACE

neurological and communication

4-12

Transitions

autism and social/emotional needs

9-12

Out of District Programs

- Collaboratives
- Private Day
- Other Public Schools
- Residential Programs

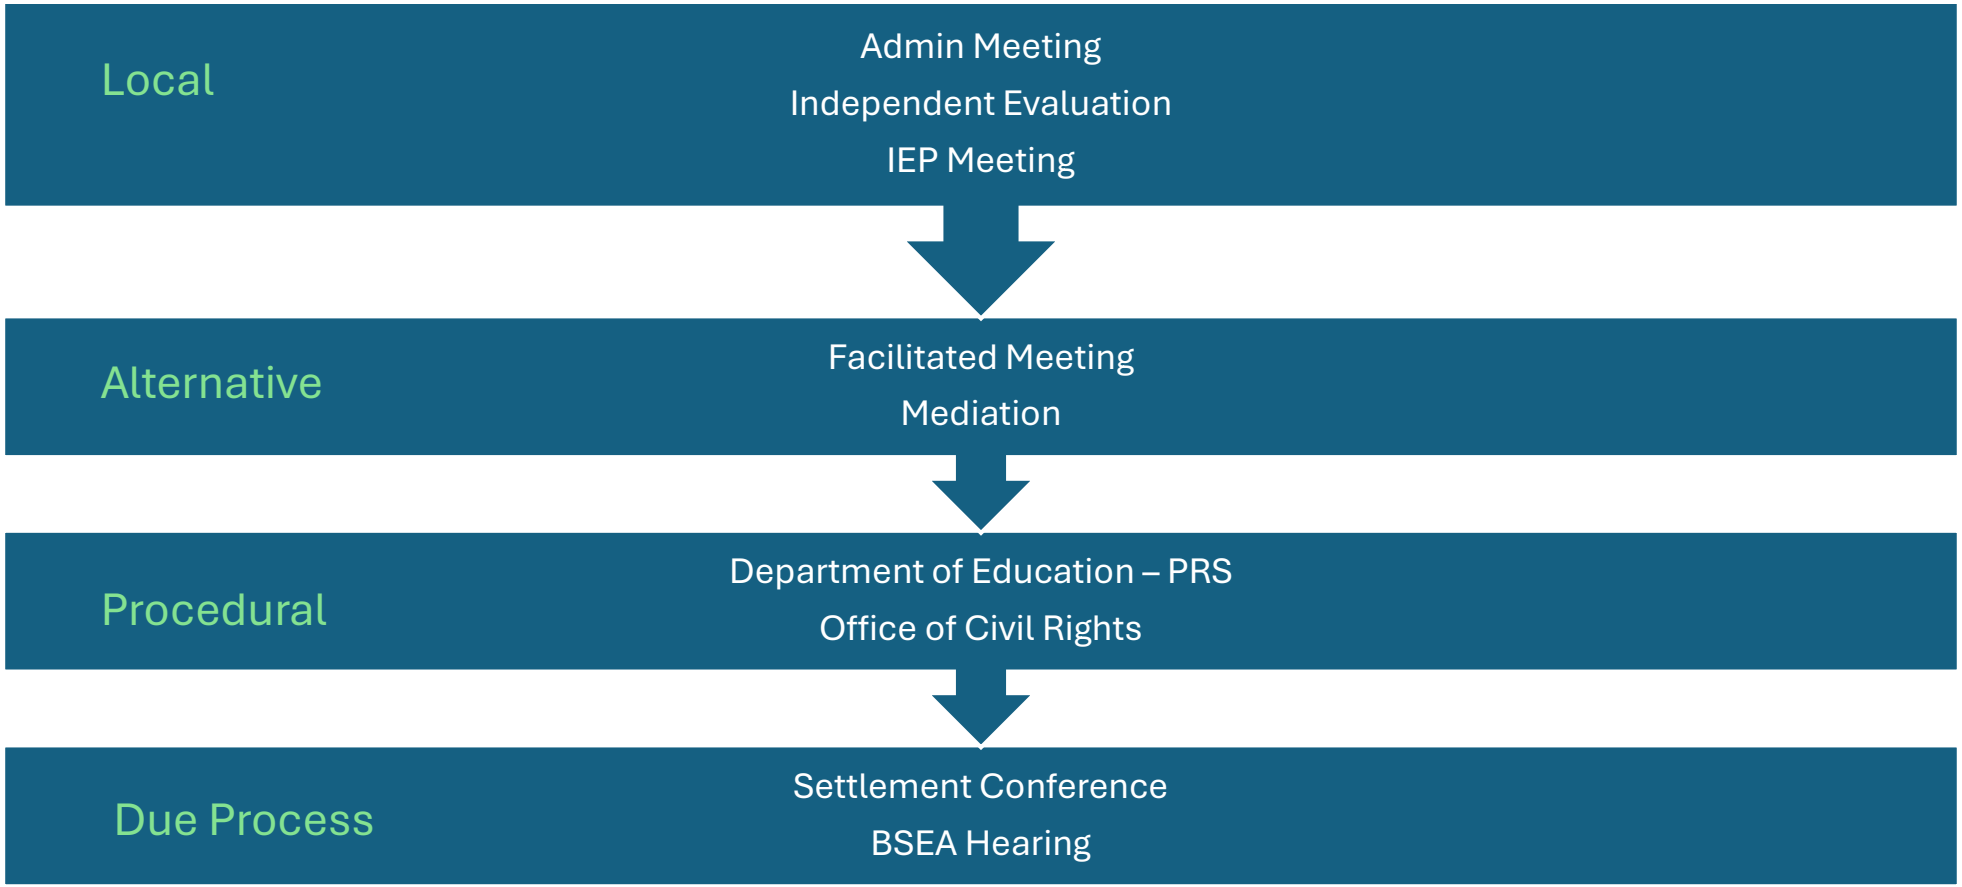
Understanding Eligibility

Special education regulations, procedures, and parent rights

What is special education and which regulations support it?

Individuals with Disabilities Education Act

- Federal law passed in 1975
- Reauthorized most recently in 2004



603 CMR 28.00

- Massachusetts special education law
- Last updated in 2022
- Mass special education laws in effect since 1972

Parent Rights under the IDEA

- Prior written notice
- Consent
- Active participation
- Annual IEP meetings and three-year reevaluations
- Independent evaluation
- Access to student record
- Observation of proposed program by parent or designee
- Dispute resolution and due process
- “Stay put” pending appeal

What is dispute resolution?

Special education eligibility criteria

Student has a disability

Lack of effective progress as a result of the disability

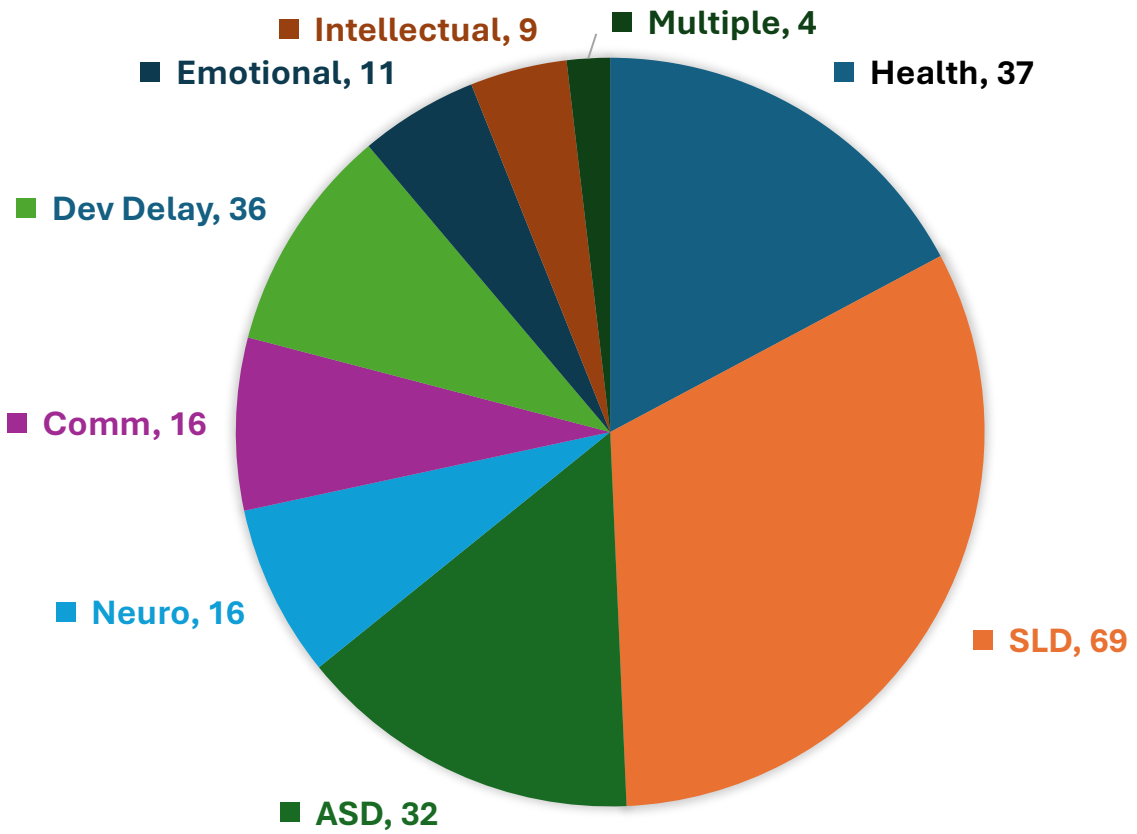
Requires specially designed instruction

How do we determine services?

- Team of parents and educators
- Student evaluation, observation, and progress data
- Discussion of disability related needs
- Goal of meaningful educational benefit and effective progress

Special Education in MERSD

Eligibility Data and Trends



MERSD Eligibility Trends

School Year	Students with Disabilities (SWD)	Percent SWD
25-26	231	19.6
24-25	237	19.6
23-24	232	19
22-23	230	18.5

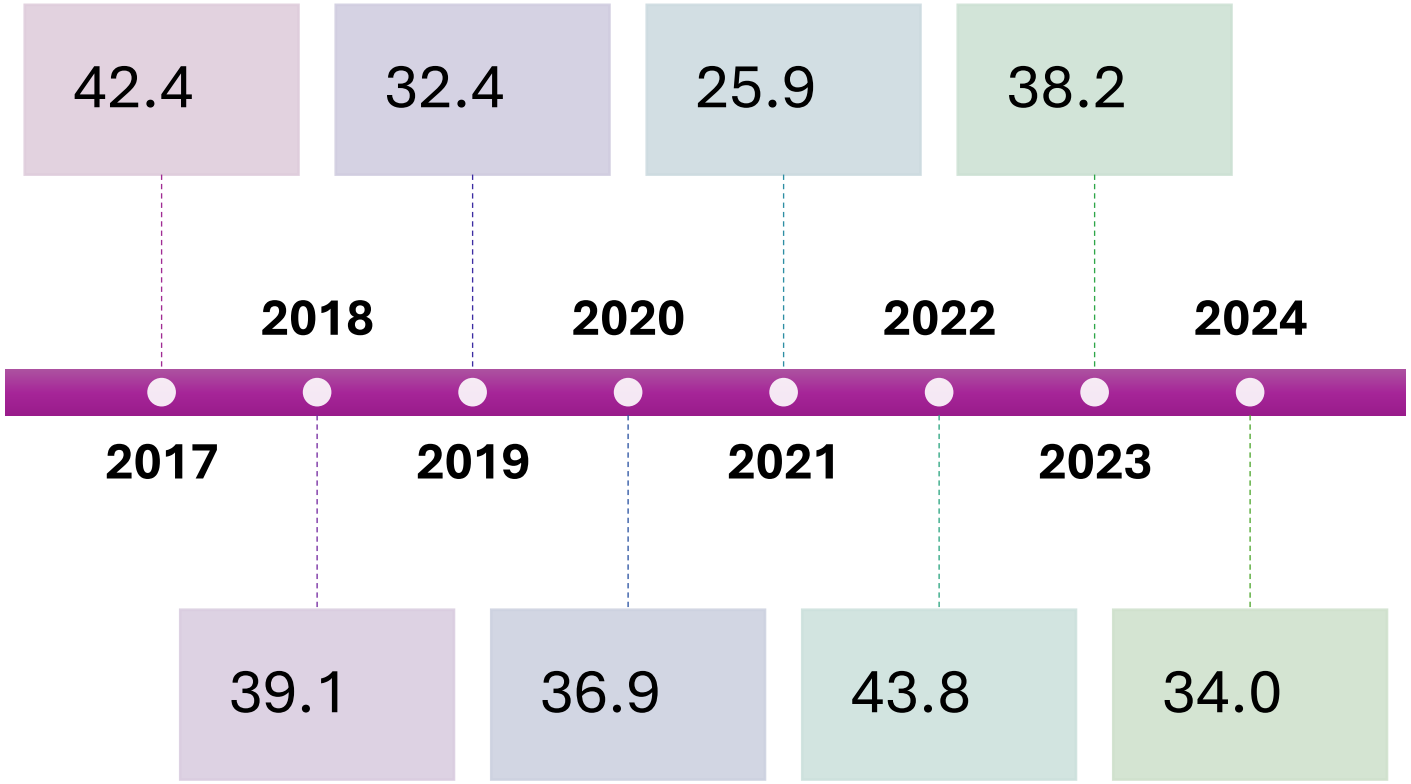
- Specialized program enrollment
- Students entering and exiting
- Transitions
  - Early intervention to preschool
  - Preschool to K
  - Post-high school (18-22)

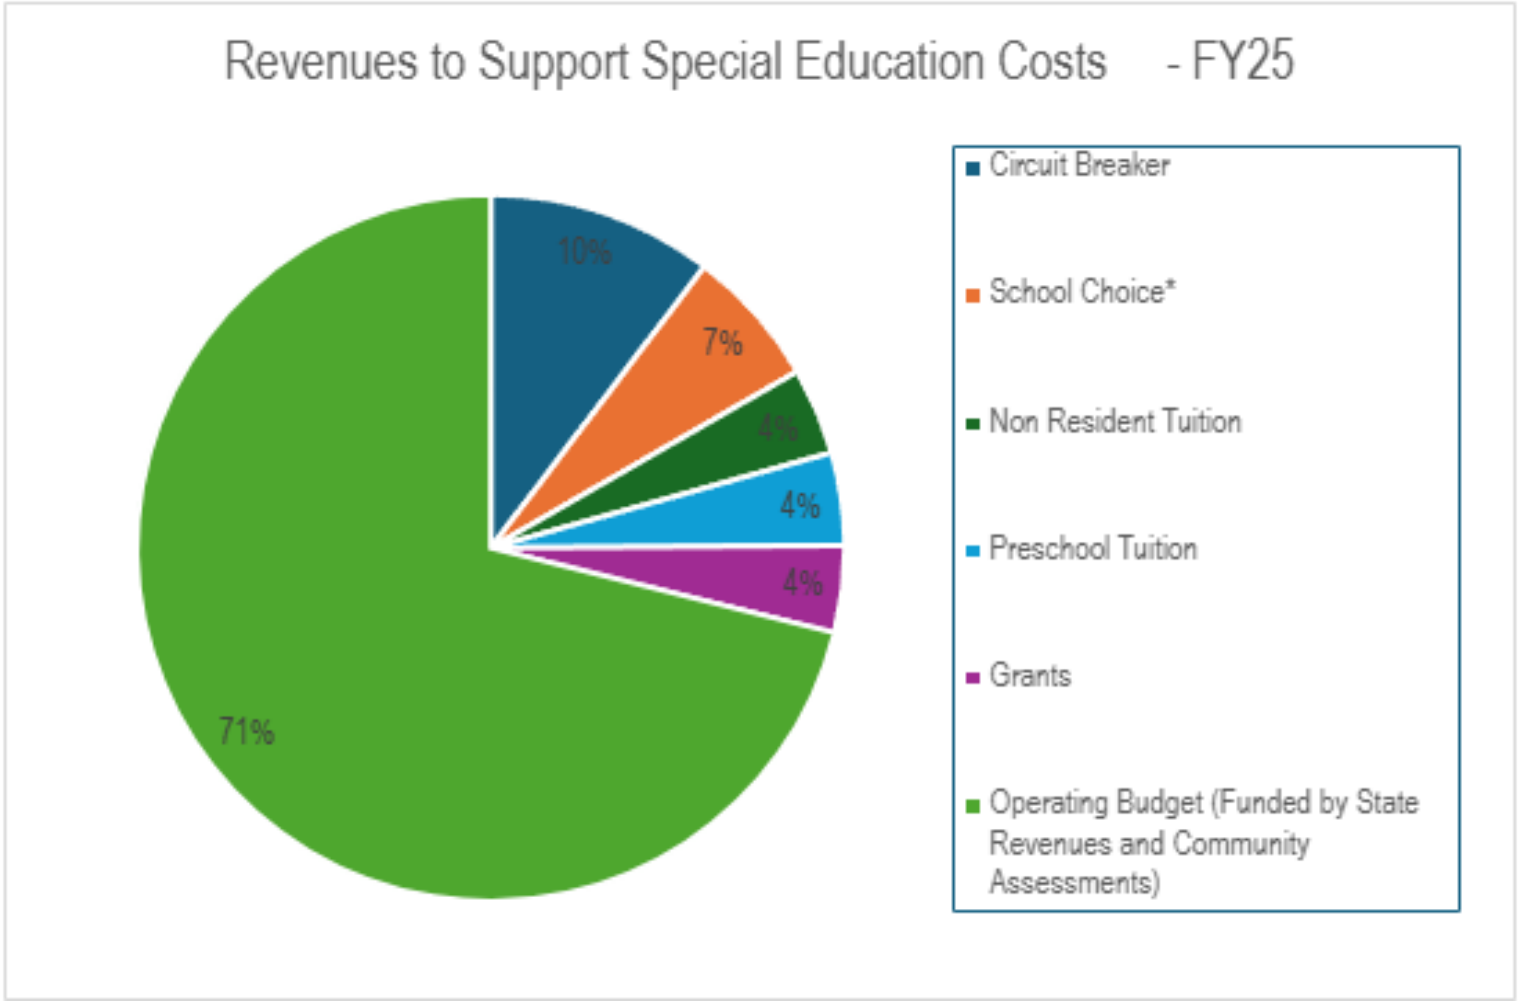
FY26 Special Education Spending



Special Education Teacher Staffing Trend

**Staffing Carried in the Operational Budget Excludes Grant Funded Positions*

Teaching Assistant Trend



Sources of Revenue

Preschool

Special Education Tuition

Circuit Breaker

Sources of Revenue

Revenue from tuition students (FY26)

Tuition Students	Tuition Amount
SAIL	$75,271
ACE HS (3)	$205,062
Total	$280,333

Current revenue from preschool

28 Peer pals

FY26 Tuition
$400,395

Circuit Breaker

Partial funding of placements above claim threshold

- FY 26 threshold = $53,431

Up to 75% reimbursement for tuitions above threshold

Example

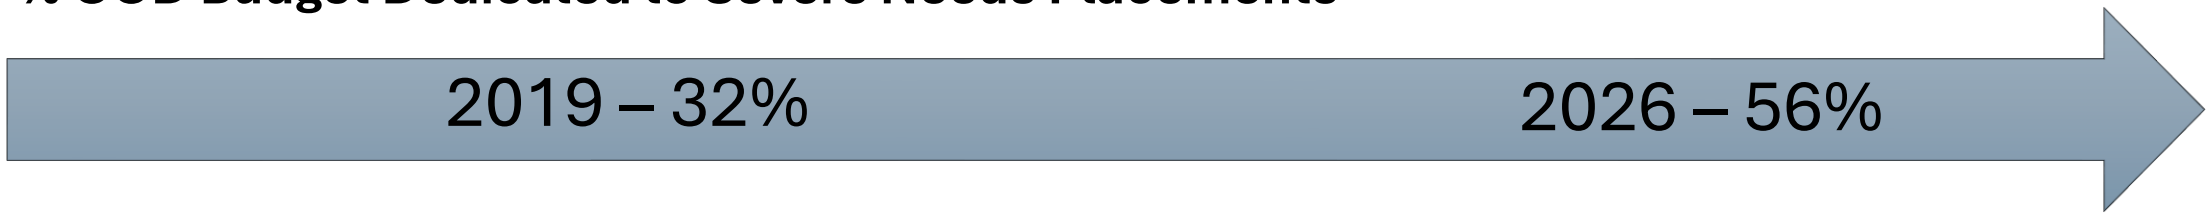
- $100,000 Tuition
- Subtract $53,431 threshold, multiple remaining amount by 75%
- Reimbursement (one year later) = $34,926.75

Out of District

Trends, Analysis, Cost Avoidance

OOD Programs
Funding for Day v. Residential FY26

Program Type	# Students	% of Tuition Costs
Day	17 Students	57%
Residential	4 Students	43%



OOD Programs
FY 26 Spending by Disability Type

Disability type	# Students	% of Tuition Costs
Learning disability	24% 5 Students	9%
Mental and behavioral health	28.5% 6 Students	23%
Developmental and severe disabilities (excluding 18-22)	28.5% 6 Students	45%
18-22 programs	19% 4 Students	23%

Changing Cost of a Severe Needs Placement

School	FY2019	FY2026	% Increase
Cotting School	$78,381	$119,501	52.5%
Children's Center for Communication	$90,949	$129,205	42.0%
Hopeful Journeys	$117,340	$160,486	36.8%
Nashoba Learning Group	$108,388	$148,243	36.8%

% OOD Budget Dedicated to Severe Needs Placements

Students attending 18-22 programs

FY20	• 4 Students
FY22	• 5 Students
FY24	• 6 Students
FY26	• 4 Students
FY28	• 8 Students

School Choice and Out of District

District obligated to educate all students accepted via School Choice through graduation

District receives tuition and transportation from sending districts for students who require OOD placements

Specialized programs and OOD cost avoidance

In District vs. OOD

In District Specialized Programs

- Staff salaries
- Benefits
- Tuition revenue

OOD Programs

- Tuition
- Transportation
- Circuit breaker funding

OOD Net Cost – In District Net Cost = Savings from OOD programs

In District Programs FY26

Program	Grades Served	# Students
RISE	K-3	4
SAIL/Transitions	K-12	22
ACE	4-12	24
IRWL	3-12	23
Total Students	K-12	73

Special Education Cost Avoidance Example

- Ms. Sartell's RISE classroom currently has 4 students K-2 requiring intensive, individualized instruction
- One teacher, four assistants

Option 1:

Salary and benefits costs for RISE staff

1 Teacher, 4 Teaching Assistants

$391,687

Option 2	Placement Options	Transportation
Hopeful Journeys	$160,486	225 days x $284/day $63,900
Melmark	$155,772	225 days x $380/day $85,500
KOG	$171,104	225 days x $284/day $63,900
Nashoba Learning Group	$148,243	225 days x $385/day
Average	$158,888	$78,695
Average Tuition and Transport x 4	**$950,332**	

Difference between OOD and In District Costs = $558,645

Anticipated FY27 reimbursement = $316,371

Cost avoidance by program 2026

Program	Grades Served	# Students	Cost Avoidance
RISE	K-3	4	$558,645
SAIL/Transitions	K-12	22	$2,234,299
ACE	4-12	24	$2,556,925
IRWL	3-12	23	$1,224,732
Total		**73**	**$5,023,155**

Estimated Circuit Breaker Reimbursement (FY 27): $2,405,246

OOD and Cost Variability Factors

In-District Programs	Tuition	Transportation	Circuit breaker
• Tuitions and enrollment fluctuate • Must maintain programs for students remaining in District	• Unpredictable, determined annually by OSD • Restructuring	• Rising costs • Personnel shortages • Shared vs. solo runs	• Threshold and percent reimbursement determined annually by state

Cost of Long-Term Placement

- Student with severe special needs
- Enters program grade 2 - FY26
  - Attends local OOD placement with a 1:1 teaching assistant
  - District provides mandated transportation
- Student remains in placement until age 22
- Est. annual cost increase of 4.5%
- Total cost Grade 2 – Program Completion: $5,248,675

Grade	Tuition and Transport	Grade	Tuition and Transport
2	$231,873	9	$315,547
3	$242,307	10	$329,747
4	$253,211	11	$344,585
5	$264,605	12	$360,092
6	$276,513	13	$376,296
7	$288,956	14	$393,229
8	$301,958	15	$410,924
		16	$429,416

Special Education Next Steps

Adapting to changing enrollment

Future Needs and Goals

1

EES building project

- Distribute specialized programs between both buildings
- Preschool, RISE, ACE will be in Essex

2

Student Achievement

- Strengthen Tier 1 instruction
- Prereferral decision making process
- Continue to implement specially designed instruction to close skill gaps

3

Specialized Programs

Maintain high quality in district programs

Expand RISE to prepare for children with autism and developmental disabilities moving through preschool

INITIAL SPACE SUMMARY

SECTION 3.1.3

3.1.3 - INITIAL SPACE SUMMARY

- Initial Space Summary Overview
- Initial Space Summaries – Various Enrolment Options
  - 165 student enrollment, grades K-3 + 30 PreK student enrollment
  - 250 student enrollment, grades K-5 + 30 PreK student enrollment
  - 515 student enrollment, grades K-5 + 60 PreK student enrollment
- Existing Floor Plans
- Variations from MSBA Space Guidelines

INITIAL SPACE SUMMARY OVERVIEW

As defined in the executed Design Enrollment Certification Letter dated August 16, 2024 the Massachusetts School Building Authority (MSBA) and the Manchester Essex Regional School District (District) agreed upon three design enrollments for the Essex Elementary School to be investigated by this study. The first enrollment is for 165 students, serving kindergarten to grade three with the addition of 30 student enrollment serving PreK and is for the town of Essex population, only. The next level of enrollment serves 250 students, serving kindergarten to grade five with the addition of 30 student enrollment serving PreK and is for the town of Essex population, only. The 515-student enrollment will incorporate the students from both Essex and Manchester-By-The-Sea and will serve kindergarten to grade five with the addition of 60 student enrollment serving PreK. For the 2025-2026 school year, the Manchester Essex Regional School District operates the Essex Elementary School with a current enrollment of approximately 200 students serving kindergarten through grade five and the Manchester Memorial Elementary School with a current enrollment of approximately 268 students serving kindergarten through grade five with an additional enrollment of 38 Students in PreK. The options reflect the criteria of the Design Enrollment Certification Letter that is included in Appendix 3.1.8.3 of this report. The following pages contain the Initial Space Summaries for the grade configurations and enrollment levels the MSBA has authorized the District to explore and document.

[1] **Individual Room Net Floor Area (NFA)** Includes the net square footage measured from the inside face of the perimeter walls and includes all specific spaces assigned to a particular program area including such spaces as non-communal toilets and storage rooms.

[2] **Total Building Gross Floor Area (GFA)** Includes the entire building gross square footage measured from the outside face of exterior walls.

[3] **Remaining** Includes exterior walls, interior partitions, chases, and other areas not listed above. Do not calculate this area, it is assumed to equal the difference between the Total Building Gross Floor Area and area not accounted for above.

Architect Certification

I hereby certify that all of the information provided in this "Proposed Space Summary" is true, complete and accurate and, except as agreed to in writing by the Massachusetts School Building Authority, in accordance with the guidelines, rules, regulations and policies of the Massachusetts School Building Authority to the best of my knowledge and belief. A true statement, made under the penalties of perjury.

EXISTING FIRST FLOOR PLAN

EXISTING BASEMENT FLOOR PLAN

VARIATIONS FROM MSBA SPACE GUIDELINES

Beginning with the MSBA Space Summary template for elementary school spaces, the District developed an education plan to best serve the students into the future. With three levels of enrollment, agreed upon by the District and the MSBA, the differences are as follows:

165 student enrollment, grades K-3 + 30 PreK student enrollment

The 165-student enrollment incorporates the student population from the Town of Essex only.

The Proposed Space Summary totals 40,518 net square feet (nsf) [60,777 gross square feet (gsf) applying a 1.50 grossing factor]. This is 13,640 nsf [31,077 gsf total] larger than the MSBA Guideline of 27,128 nsf [29,700 gsf total] for an elementary school of this enrollment size. Based on the District's Educational Program, the differences from the MSBA Guidelines can be attributed as follows:

Core Academic Spaces

- One (1) additional General Classroom at 950 nsf each [1,425 gsf total] to accommodate the District's teaming model per grade as noted in the Educational Program.
- One (1) additional Project Room (STE) Room at 1,080 nsf each [1,620 gsf total] to accommodate the District's STE curriculum as noted in the Educational Program.
- One (1) additional Project Storage Room at 120 nsf each [180 gsf total] to accommodate the District's STE program as noted in the Educational Program.
- One (1) additional World Language Classroom at 950 nsf each [1,425 gsf total] to accommodate the District's World Language program as noted in the Educational Program.
- One (1) MTSS Interventionist Coach Office at 500 nsf each (750 gsf total) to accommodate the District's curriculum as noted in the Educational Program.
- One (1) MTSS Interventionist Small Group Room at 250 nsf (375 gsf total) located adjacent to the MTSS Interventionalist Coach office to accommodate the District's curriculum as noted in the Educational Program.
- Two (2) additional Break-out spaces at 500 nsf each [1,500 gsf total] distributed throughout the building to accommodate the District's curriculum as noted in the Educational Program.

Special Education

- Minus One (-1) additional Special Education Self-contained Classroom (RISE, Gr. K-3) at 950 nsf each [1,425 gsf total] with Minus One (-1) additional toilet rooms at 60 nsf each (90 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Self-Contained Special Education Classroom (ACE, Gr. K-3) at 600 nsf (900 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- Three (3) Additional Small Group Rooms reduced from 500 nsf to 250 nsf [750 gsf total] to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Equipment Storage (RISE) at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) School Psychologist Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Speech and Language Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Occupational Therapy Room (OT) at 475 nsf (712.5 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Physical Therapy Room (PT) at 1,200 nsf (1,800 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Physical Therapy Storage Room at 250 nsf (375 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Special Education Team Chair Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Special Education Conference Room at 200 nsf each (300 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.

Art & Music

- One (1) Art Classroom at 1,000 nsf [1,500 gsf tota]) to accommodate the District's Art curriculum as noted in the Educational Program.
- One (1) Art Workroom with Storage and Kiln at 150 nsf [225 gsf tota]) to accommodate the District's Art curriculum as noted in the Educational Program.

- One (1) Music Classroom / Large Group (25-50 seats) at 950 nsf [1,425 gsf tota]) to accommodate the District's Performing Arts curriculum as noted in the Educational Program.
- Minus One (-1) Music Practice / Ensemble Room at -75 nsf [-112.5 gsf tota]) not required to accommodate the District's Performing Arts curriculum as noted in the Educational Program.

Health & Physical Education

- Increase the Gymnasium to 850 nsf [1,275 gsf] to accommodate bleacher seating.

Media Center

- No changes

Dining & Food Service

- No changes

Medical

- No changes

Administration & Guidance

- One (1) Tech Office at 235 nsf [352.5 gsf total] to accommodate the District's curriculum as noted in the Educational Program.

Custodial & Maintenance

- No changes

Other

- Two (2) Additional Pre-Kindergarten Classrooms with Toilets at 1,200 nsf each [3,600 gsf total] to accommodate the District's Early Educational curriculum as noted in the Educational Program.
- One (1) Additional Pre-Kindergarten Storage Room at 250 nsf each [375 gsf total] to accommodate the District's Early Educational curriculum as noted in the Educational Program.
- One (1) Additional Mother's Room at 120 nsf each [180 gsf total] to accommodate the District's needs as noted in the Educational Program.

250 student enrollment, grades K-5 + 30 PreK student enrollment

The 250-student enrollment incorporates the student population from the Town of Essex only.

The Proposed Space Summary totals 49,115 net square feet (nsf) [73,673 gross square feet (gsf) applying a 1.50 grossing factor]. This is 15,125 nsf [28,673 gsf total] larger than the MSBA Guideline of 33,990 nsf [45,000 gsf total] for an elementary school of this enrollment size. Based on the District's Educational Program, the differences from the MSBA Guidelines can be attributed as follows:

Core Academic Spaces

- One (1) additional General Classroom at 950 nsf each [1,425 gsf total] to accommodate the District's teaming model per grade as noted in the Educational Program.
- One (1) additional Project Room (STE) Room at 1,080 nsf each [1,620 gsf total] to accommodate the District's STE curriculum as noted in the Educational Program.
- One (1) additional Project Storage Room at 120 nsf each [180 gsf total] to accommodate the District's STE program as noted in the Educational Program.
- One (1) additional World Language Classroom at 950 nsf each [1,425 gsf total] to accommodate the District's World Language program as noted in the Educational Program.
- Two (2) MTSS Interventionist Office at 500 nsf each (1,500 gsf total) to accommodate the District's curriculum as noted in the Educational Program.
- Two (2) MTSS Interventionist Small Group Room at 250 nsf each (750 gsf total) located adjacent to the MTSS Interventionist office to accommodate the District's curriculum as noted in the Educational Program.
- Three (3) additional Break-out spaces at 500 nsf each [2,250 gsf total] distributed throughout the building to accommodate the District's curriculum as noted in the Educational Program.

Special Education

- One (1) Self-Contained Special Education Classroom (ACE, Gr. K-2) at 600 nsf (900 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Self-Contained Special Education Classroom (ACE, Gr. 3-5) at 600 nsf (900 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- Five (5) Additional Small Group Rooms reduced from 500 nsf to 250 nsf each [1,500 gsf total] to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- Two (2) Equipment Storage (RISE) at 150 nsf each (450 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) School Psychologist Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Speech and Language Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Sensory Room (Calming Corner) at 250 nsf (375 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Occupational Therapy Room (OT) at 475 nsf (712.5 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Physical Therapy Room (PT) at 1,200 nsf (1,800 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Physical Therapy Storage Room at 250 nsf (375 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Special Education Team Chair Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Special Education Conference Room at 200 nsf each (300 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.

Art & Music

- No changes

Health & Physical Education

- Increase the Gymnasium to 850 nsf [1,275 gsf] to accommodate bleacher seating.

- No changes

Administration & Guidance

- One (1) Tech Office at 235 nsf [352.5 gsf total] to accommodate the District's curriculum as noted in the Educational Program.

Custodial & Maintenance

- No changes

Other

- Two (2) Additional Pre-Kindergarten Classrooms with Toilets at 1,200 nsf each [3,600 gsf total] to accommodate the District's Early Educational curriculum as noted in the Educational Program.
- One (1) Additional Pre-Kindergarten Storage Room at 250 nsf each [375 gsf total] to accommodate the District's Early Educational curriculum as noted in the Educational Program.
- One (1) Additional Mother's Room at 120 nsf each [180 gsf total] to accommodate the District's needs as noted in the Educational Program.

515 student enrollment, grades K-5 + 60 PreK student enrollment

The 515-student enrollment incorporates the student population from both the town of Essex and the town of Manchester-By-The-Sea.

The Proposed Space Summary totals 79,334 net square feet (nsf) [119,001 gross square feet (gsf) applying a 1.50 grossing factor]. This is 25,238 nsf [39,219 gsf total] larger than the MSBA Guideline of 54,096 nsf [79,782 gsf total] for an elementary school of this enrollment size. Based on the District's Educational Program, the differences from the MSBA Guidelines can be attributed as follows:

Core Academic Spaces

- Four (4) additional General Classroom at 950 nsf each [5,700 gsf total] to accommodate the District's teaming model per grade as noted in the Educational Program.
- Two (2) additional Project Room (STE) Room at 1,000 nsf each [3,000 gsf total] to accommodate the District's STE as noted in the Educational Program.
- One (1) additional Project Storage Room at 120 nsf each [180 gsf total] to accommodate the District's STE program as noted in the Educational Program.
- One (1) additional World Language Classroom at 1000 nsf each [1,500 gsf total] to accommodate the District's World Language program as noted in the Educational Program.
- Two (2) MTSS Interventionist Office at 500 nsf each (1,500 gsf total) to accommodate the District's curriculum as noted in the Educational Program.
- Two (2) MTSS Interventionist Small Group Rooms at 250 nsf each (750 gsf total) located adjacent to the MTSS Interventionist office to accommodate the District's curriculum as noted in the Educational Program.
- Three (3) additional Break-out spaces at 500 nsf each [1,500 gsf total] distributed throughout the building to accommodate the District's curriculum as noted in the Educational Program.

Special Education

- One (1) additional Special Education Self-contained Classroom (RISE, Gr. K-2) at 950 nsf each [1,425 gsf total] with One (1) additional toilet rooms at 60 nsf each (90 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) additional Special Education Self-contained Classroom (RISE, Gr. 3-5) at 950 nsf each [1,425 gsf total] with One (1) additional toilet rooms at 60 nsf each (90 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.

- One (1) Self-Contained Special Education Classroom (ACE, Gr. K-2) at 600 nsf (900 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Self-Contained Special Education Classroom (ACE, Gr. 3-5) at 600 nsf (900 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- Two (2) Additional Resource Rooms at 500 nsf each [1500 gsf total] to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- Two (2) Additional Small Group Rooms at 500 nsf each [1500 gsf total] to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- Two (2) Equipment Storage (RISE) at 150 nsf each (450 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) School Psychologist Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Speech and Language Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Sensory Room (Calming Corner) at 250 nsf (375 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Occupational Therapy Room (OT) at 475 nsf (712.5 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Physical Therapy Room (PT) at 1,200 nsf (1,800 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Physical Therapy Storage Room at 250 nsf (375 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Special Education Team Chair Office at 150 nsf (225 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.
- One (1) Special Education Conference Room at 200 nsf each (300 gsf total) to accommodate the District's Special Educational curriculum as noted in the Educational Program.

Art & Music

- One (1) Music Practice / Ensemble room at 200 nsf vs MSBA guidelines allowable Three (3) at 75 nsf for a difference of -25 nsf (-37.5 gsf total) to accommodate the District's Performing Arts curriculum as noted in the Educational Program.

Health & Physical Education

- Increase the Gymnasium to 850 nsf [1,275 gsf] to accommodate bleacher seating.

Media Center

- One (1) Leveled Library at 300 nsf each (450 gsf total) to accommodate the District's Educational curriculum as noted in the Educational Program.

Dining & Food Service

- Existing Kitchen and staff lunchroom slatted to remain are slightly undersized from the MSBA Guidelines resulting in -208 nsf (-312 gsf total) reduction

Medical

- Existing medical suite slated to remain is slightly undersized from the MSBA Guidelines resulting in -100 nsf (-150 gsf total) reduction

Administration & Guidance

- One (1) Tech Office at 235 nsf [352.5 gsf total] to accommodate the District's curriculum as noted in the Educational Program.

Custodial & Maintenance

- Existing Custodial & Maintenance areas slated to remain are slightly undersized from the MSBA Guidelines resulting in -60 nsf (-90 gsf total) reduction

Other

- Four (4) Additional Pre-Kindergarten Classrooms with Toilets at 1,200 nsf each [7,200 gsf total] to accommodate the District's Early Educational curriculum as noted in the Educational Program.
- Two (2) Additional Pre-Kindergarten Storage Room at 250 nsf each [750 gsf total] to accommodate the District's Early Educational curriculum as noted in the Educational Program.
- One (1) Additional Mother's Room at 120 nsf each [180 gsf total] to accommodate the District's needs as noted in the Educational Program.

3.1.4 – EVALUATION OF EXISTING CONDITIONS

PROPERTY OWNERSHIP

The 9.75-acre site located at 12 Story Street Essex Massachusetts, is owned by the town of Essex, MA and leased to the Manchester Essex Regional School District. Copies of the Property Deeds are included in Appendix 3.1.8.9 of this report.

PROPERTY DEVELOPMENT

The site is located in the General Use Zoning District. Educational use is permitted within the General Use Zoning District with Special Permit by the Planning Board Required. Any applicable development restrictions including, but not limited to, municipal open space, property line setbacks and wetland setbacks are addressed by each site in Section 3.1.5 Site Development Requirements and by each option in Section 3.1.6 Preliminary Evaluation of Alternatives of this Report.

HISTORICAL SIGNIFICANCE

A Project Notification Form was submitted to the Massachusetts Historical Commission (MHC) and received on November 24, 2025. After reviewing MHC files and the materials submitted, the MHC determined that this project is neither included in the Inventory nor listed in the National and State Registers of Historic Places. No further review by the MHC is required for the MSBA-funded project. A copy of the MHC recorded Project Notification Form dated December 2, 2025, is included in Appendix 3.1.8.8 of this report.

BUILDING CODE

In accordance with the Massachusetts State Building Code, Tenth Edition, the existing Essex Elementary School is an Educational Group E occupancy with non-separated mixed uses. The building appears to have been constructed in two sections at different times with the original building consisting of an admin area, two core academic wings, and cafetorium with kitchen built in 1958 and a southern addition consisting of a media center and gymnasium with locker rooms built in 1975. The building is not currently protected by a fire sprinkler system. Based on the field observation, the building appears to be Type IIB construction (non-combustible, unprotected). Any future alterations should follow the requirements for Type IIB so that new materials are non-combustible except where permitted by IBC Section 603: Combustible Materials in Types I and II Construction.

Massachusetts General Law MGL c148, s26G, requires that any existing building over 7,500 square feet that undergoes major alterations, modifications or building addition must include a fire sprinkler system.

Examples of major alterations are demolition or reconstruction of existing ceilings or installation of suspended ceilings; removal of sub flooring; demolition and/or reconstruction of walls, doors, or stairways; or removal or relocation of a significant portion of the building's mechanical or electrical systems. Alterations are considered major when such work affects 33% or more of the building area or when total work (excluding sprinkler installation) is equal to 33% or more of the assessed value of the building.

The proposed scope of work needs to be determined if the project is a major alteration. If the work is considered a major alteration, then an automatic combined sprinkler/standpipe system is required for the entire existing building and any additions.

In addition, the building would also require substantial improvements to the exterior envelope to meet the 2021 International Energy Conservation Code (IECC) & Stretch Energy Code. Thought the Strech Energy Code has not been adopted by the town of Essex it is a requirement of the Massachusetts School Building Authority and therefore will be required for any additions, renovations or new school construction.

The effective code will be based on the date of the building permit application.

ACCESSIBILITY

In general, the building provides accessible routes to all areas and reasonable accommodations have been made to comply with ADA/MAAB; however, the building would require significant alterations to become fully compliant with the accessibility guidelines including, but not limited to, the following:

- Several of the secondary egresses are not on grade and have multiple step egresses.
- Some locations have been modified to provide wooden ramps. Though in most cases these need repair and at the end of their useful life
- Several doors lack ADA/MAAB compliant hardware. Many classroom doors lack the proper push / pull free area clearances.
- Interior signage is not ADA/MAAB compliant in size, location or providing tactile writing.
- Classroom sinks lack knee clearance and are not equipped with accessible faucets.
- Single use toilet rooms are not accessible.

GEOTECHNICAL EVALUATION

The preliminary geotechnical engineering services for the Essex Elementary School Building will commence once the Building Committee votes to advance the Preliminary Design Program (PDP) for further development for evaluation in the Preferred Schematic Report (PSR).

A copy of the geotechnical engineering data report presenting the results of our subsurface exploration program with preliminary recommendations and design criteria for safe and economical foundation design will be submitted with the Preferred Schematic Report.

ENVIRONMENTAL SITE ASSESMENT

The completion of the required Phase I Environmental Site Assessment (ESA) for the 12 Story Street, Essex, MA, property was performed on September 24th, 2025. A copy of the Phase I Environmental Site Assessment (ESA) included in Appendix 3.1.8.14 of this report.

SUSTAINABILITY

The Madchester Essex Regional School District is committed to achieving sustainability.

LEED Requirements: Using LEED-S, achieve a minimum of "Silver", including a minimum total of three points (from seven points available) from the following three categories: MR Building Product Disclosure and Optimization – Material Ingredients; IEQ – Low Emitting Materials; and IEQ – Indoor Air Quality Assessment.

MSBA Energy Efficiency Requirements: Meet the minimum energy efficiency requirements described in the MA DOER "Stretch Code Green Community" Standards.

MSBA Project Advisory #81 Requirements: The District is targeting the additional 3% reimbursement by meeting the minimum energy efficiency requirements described in the MA DOER "Opt-In Specialized Code" standards. The district is targeting the additional 1% reimbursement by achieving five (from seven available points) in the LEED indoor air quality points noted above.

The Sustainability goals will be established at the initiation of the Preferred Schematic Design effort, and an application to register the project for LEED for Schools version 4 will be submitted to the Green Business Certification, Inc. (GBCI) prior to the end of the year.

EXISTING DOCUMENTATION

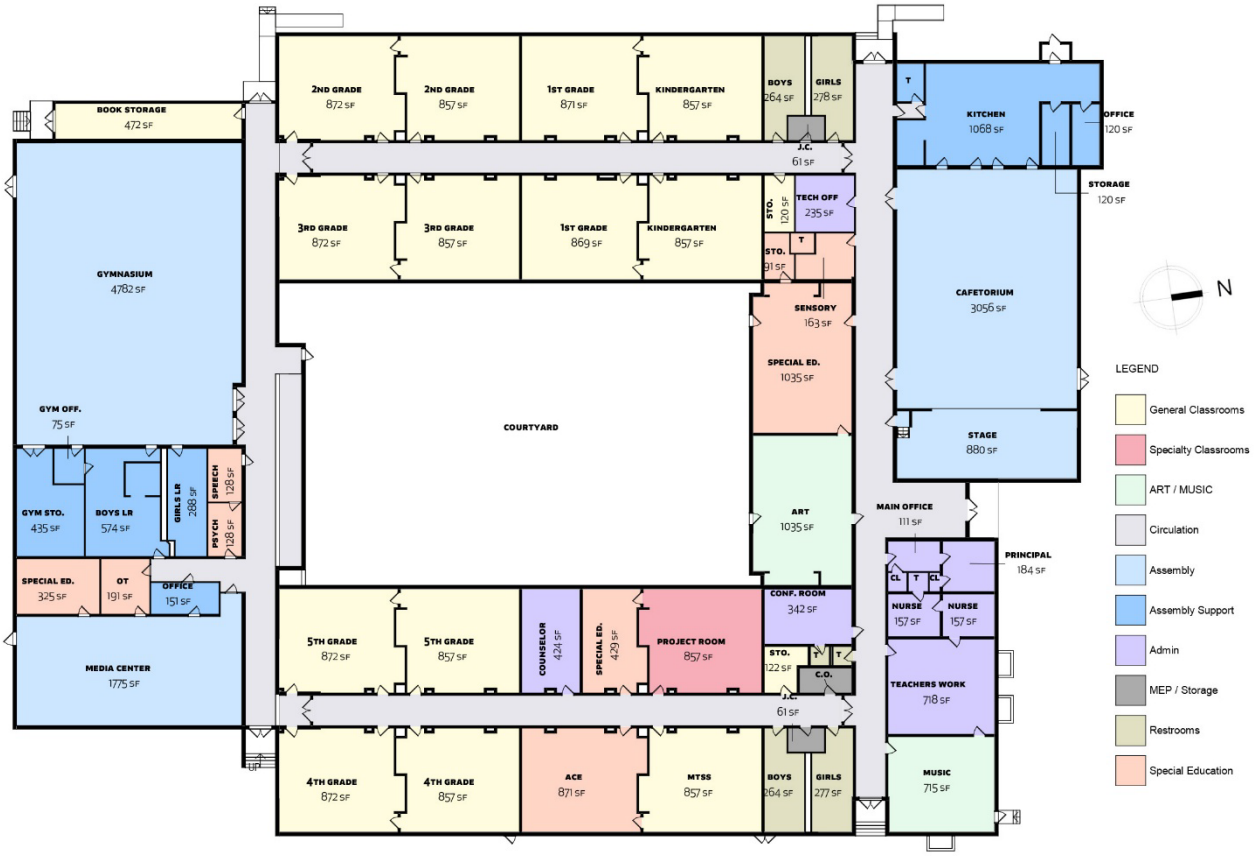
The Manchester Essex Regional School District made the following documents available to the Designers for review in preparation of this report:

- Construction Documents for the Essex Elementary School New Addition Drawings date May 16th, 1975, prepared by W.H. Jones & Son Architects

- Facility Needs Assessment dated January 27th, 2023, prepared by Habeeb & Associates Architects

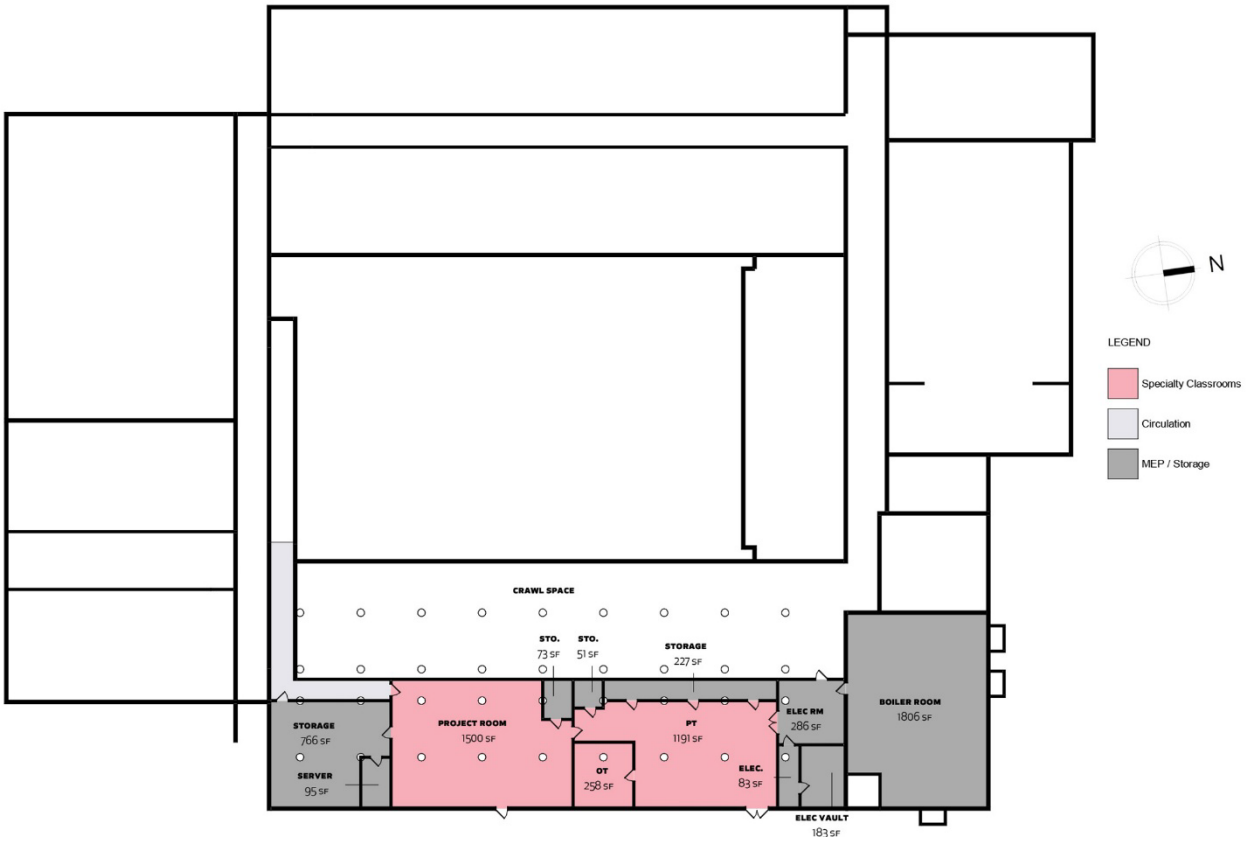
GENERAL EXISTING CONDITIONS

The Essex Elementary School, located at 12 Story St, Essex, MA, was originally constructed in 1958. A media center and gymnasium addition were added in 1975. The total facility as it stands today is 53,036 gross square feet and is located on the site of approximately 9.75 acres. The school is a single-story courtyard building with a half-level change accessible via ramps between the 1958 and 1975 portions of the school. There is a portion of the basement that is occupied for school activities that has level access discharge due to site topography.



The Essex Elementary School is one of two elementary schools in the Manchester Essex Regional School District. The school's current enrollment is 200 students from grades Kindergarten through 5th grade.

During the fall of 2025, representatives from the architect, civil engineer, landscape architect, structural engineer, mechanical engineer, electrical engineer, plumbing engineer, audio/visual, foodservice, hazardous materials, and technology consultants toured the building to complete a visual assessment of the existing site and building structure, envelope and systems; there was no destructive testing conducted as part of this assessment.



The building has a mostly single story rectangular shaped footprint with a central courtyard. The site is mostly flat except for the east side of the building which steps down to reveal an at grade occupied portion of the basement. There is some visible ledge at the northwest corner of the existing building as well as some visible ledge in the unoccupied portion of the basement. There is a central main entrance at the northern side of the building facing Story Street, to the east is the main office and admin space and to the west is the cafetorium and kitchen. The front entrance has a single set of aluminum storefront doors in a full window wall. There is no entrance vestibule or secure check in area. Corridors on both the east and west side of the building wrap around the courtyard and house the two academic wings of the building. At the southern end of the building the corridors ramp down to the 1975 addition that houses both the media center and gymnasium.

Also, in the southern corridor there is another ramp down to the occupied portion of the basement. The basement classroom once functioned as the art room but in recent years has been converted to project rooms and OT / PT spaces. There is also storage as well as the building's server room located in the basement. The northeast corner of the basement houses the electrical rooms as well as building maintenance storage. Beyond the electrical rooms is a subbasement that houses the buildings boiler room. There is no accessible access to this space. The rest of the basement is mostly unoccupied space that houses mechanical equipment as well as pipe chase for sanitary and HVAC piping.

EXISTING FIRST FLOOR PLAN

EXISTING BASEMENT FLOOR PLAN

3.1.4 – EVALUATION OF EXISTING CONDITIONS – ARCHITECTURE

Prepared by JCJ Architecture

There are several categories of architectural features that will be evaluated as part of the Feasibility Phase to determine the overall scope of the renovation/addition options for the Essex Elementary School.

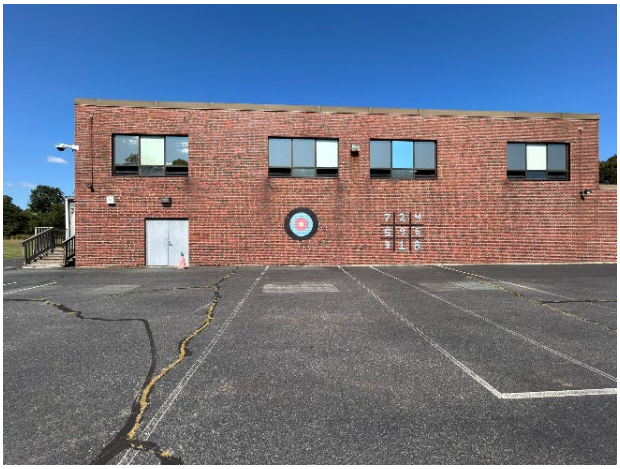
EXTERIOR ENCLOSURE

Exterior Walls

Most the schools' exterior walls are brick masonry with sections of wood siding, mostly found below the windows in the 1958 portion of the building. The occupied portion of the basement has a solid concrete exterior exposed foundation wall. The roof edge of the 1958 portion of the building has a 3-foot overhang consisting of exposed concrete deck and aluminum edge metal fascia. The exposed deck is visible spalling and damaged in several locations. Rebar is visible in these areas and needs repair or reconstruction. Due to the age and construction of the building it is assumed that all the walls are uninsulated. There are no visible masonry weeps at either the top of bottom of the walls or at any window head locations. There is ongoing issues with water intrusion in the exterior walls of the gyms most likely due to the solid masonry construction and lack of proper weeping of water that is accumulating in the wall during rain events.

Exterior Doors

The exterior doors are a mix of hollow metal, fiberglass reinforced polymer, and aluminum. Most of the door frames appear of the original construction though several of the doors appear to have been replaced over time. Most if not all the doors appear at the end of their useful life and should be considered for replacement. While many exterior doors themselves appear to meet ADA/MAAB requirements several of the main and secondary egress doors do not have at grade exit discharge due to the presence of a step at several of these critical locations. Several locations have been modified to provide egress ramps. However, most of the ramps are of wood construction and need repair or replacement.

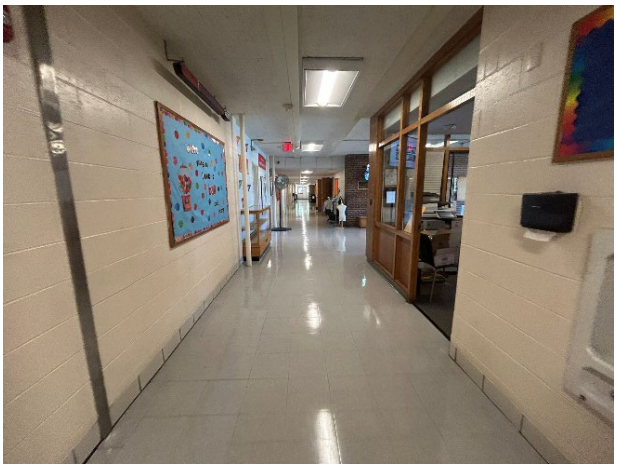


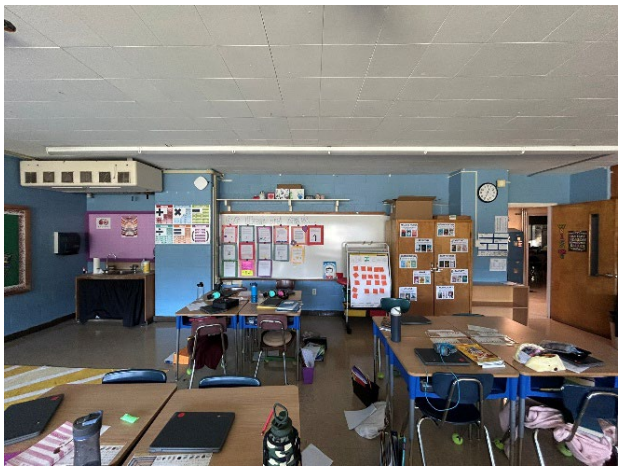
Exterior Windows

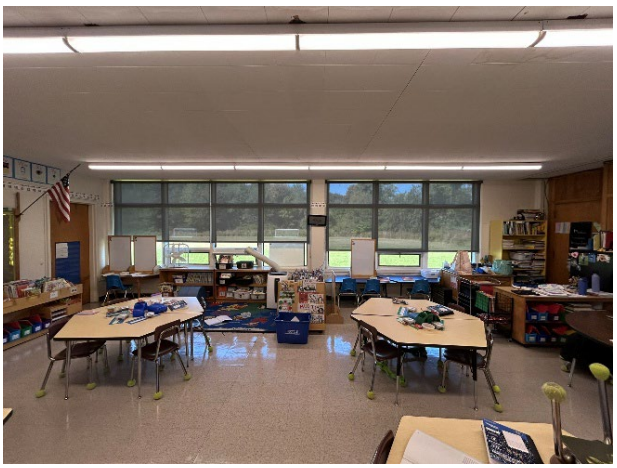
There are fixed and operable multi-pane vision glazed openings, while some of the glazing appears it may have been replaced, most of the frames appear to be of the original construction. The original portion of the building has wood framed windows, and the 1975 addition has aluminum framed windows. There is visible rot on the wood framed windows and caulking around the windows is old and cracking and, in many areas, missing. All the windows are at the end of their useful life and should be considered for removal and replace with modern energy efficient glazing and thermally broken framing.

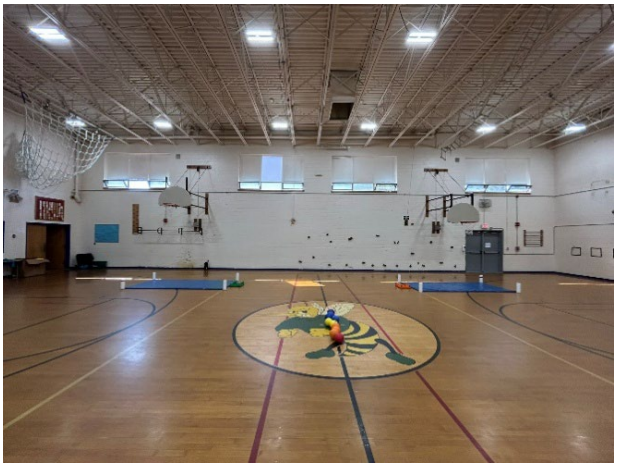
Roofing

The roofing consists of a 60 mil EPDM single-ply roofing membrane installed in 1998. The roofing membrane is in fair condition considering its age, though there are several patches throughout the field of the roof. Most of the roofs are low slope flat roofs with the exception to the cafetorium. It has been well maintained but is at the end of its useful life and needs replacement. There are several large air bubbles forming under the roof and there is the possibility that a large wind event could cause major damage. The current roof does not meet modern energy code and insulation values. Drain placement is poor causing standing and ponding water. There were no reported active leaks as the roof is well maintained by the facilities staff to increase its longevity. The fascia and roof edge for much of the school is aluminum break metal. There are some areas of damage to the facia noticed around the facility. The Gymnasium walls have water infiltration issues. It is unknown currently if those issues are caused by the roof or the wall construction. It would be recommended to replace the roof and explore the walls closer if this portion of the building is to be renovated. There are no roof hatches and no permanent access to the roof. There are no walkway pads located on the roof for extra protection while walking on the roof. There are several skylights throughout the corridors, most of which are in poor condition either cracked or patched and need replacement.





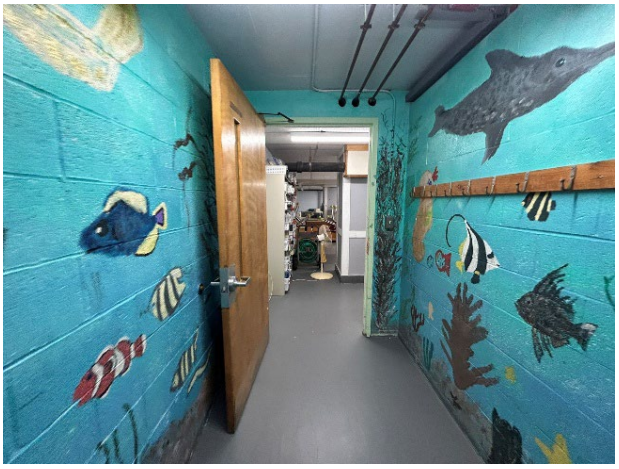




INTERIOR CONSTRUCTION

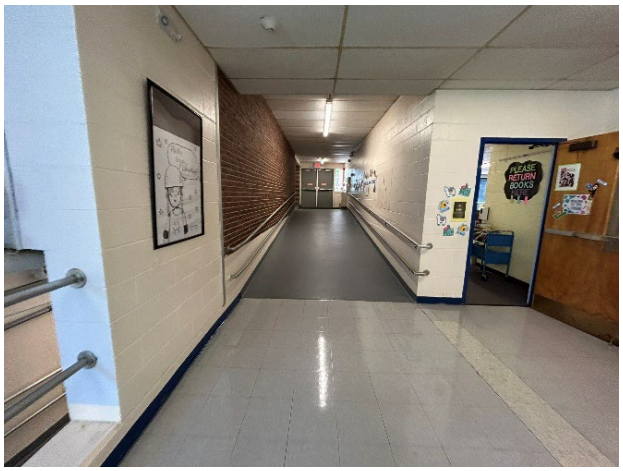
Interior Partitions

Most of the interior partitions are concrete block masonry. The demising walls between classrooms are of wood construction. Mostly consisting of custom millwork storage units. There are a few gypsums board on metal stud walls mostly in spaces that have been reconfigured in recent years.



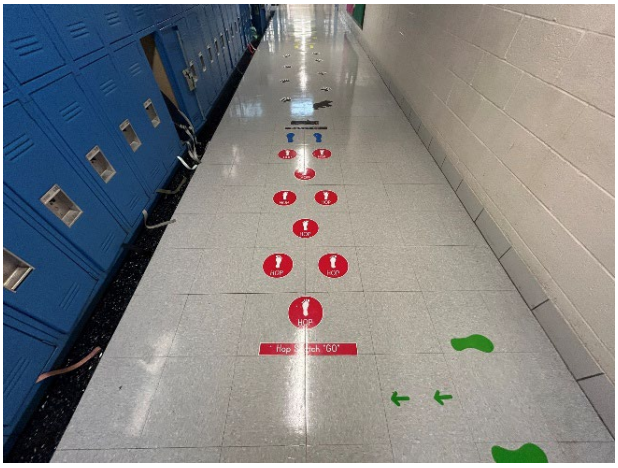
Interior Doors

The interior doors are solid wood doors, many with vision lights in painted metal frames. The doors and frames are in fair condition. Several doors lack ADA/MAAB compliant hardware. Most of the classroom doors lack ADA/MAAB compliant pull side door clearance for accessibility.

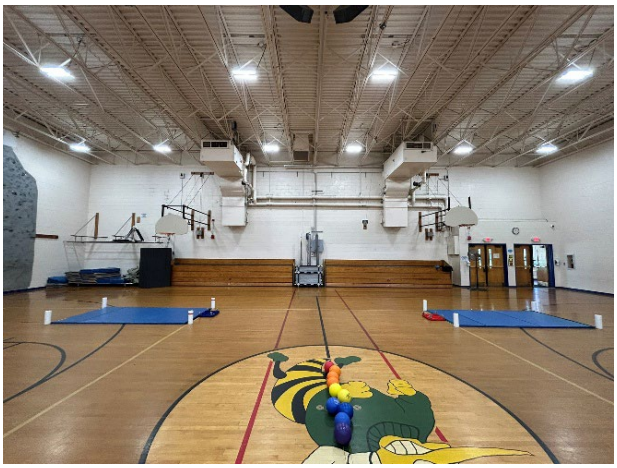


Stairs, Ramps, Lifts

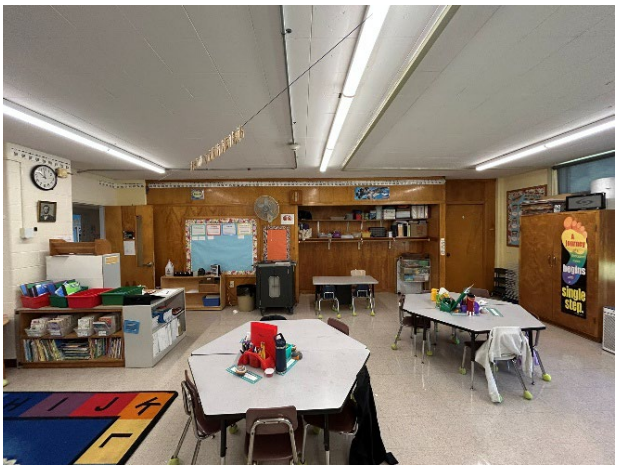
There are serval ramps throughout the building. Both academic wings connect to the 1975 addition via ramps on opposite ends of the southern corridor and in the middle of those two ramps is a ramp down to the basement. All levels of the building are accessible via ramps. The only interior stairs in the building are for access to the stage. Accessible access at the stage is provided via a wheelchair lift. There is also a small spiral staircase from the janitors closet near the bathrooms in the northeast corner of the building. This spiral stair is not for public use only custodial staff. It leads directly to the electrical and boiler room below. The ramps and stairs appear to be ADA/MAAB compliant.

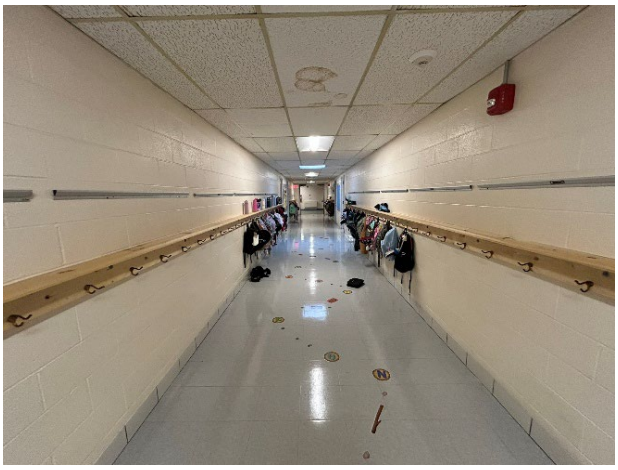


Floor Finishes



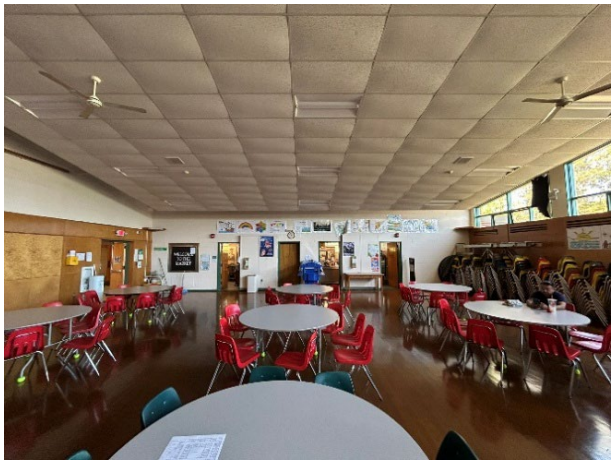
VCT flooring with rubber bases is typical throughout the classrooms. The corridors also have VCT flooring with glazed CMU starter course base. The media center is carpeted with rubber base. The cafetorium and gymnasium have hardwood floors. The gym has a metal vented base. The bathrooms have tiled floors and cove tile bases with half tiled walls. The flooring looks well maintained though it shows its age and wear and is at the end of its life cycle. Most if not all flooring would be recommended for removal and replacement in a renovation / alteration scheme.





Ceiling Finishes:

The school corridors, media center, cafetorium, conference room, and main office have suspended 2'x4' acoustic ceiling tiles. The acoustic tiles are old, stained and sagging in many locations and should be considered for replacement. Most of the rest of the school classrooms have 1'x1' spline style acoustic tiles. These tiles are original to the building and would be removed and replaced if the building is to be renovated.



3.1.4 – EVALUATION OF EXISTING CONDITIONS – STRUCTURE

Prepared by RSE Associates, Inc.

EXECUTIVE SUMMARY

On September 24, 2025, RSE visited the existing Essex Elementary School to make observations of the building structure. No exploratory probes were performed, so all field observations were made on exposed structure. No structural drawings were available from the original building, but the structural drawings from the 1975 addition wing were available for reference.

EXISTING CONSTRUCTION

The existing one-story building was built in 1958, with an addition constructed in 1975. There is a partial basement and crawl space under a portion of the original building.

The original C-shaped building's roof and ground floor slab are constructed from reinforced cast in place concrete. There are precast concrete blocks set into the formwork to create ribs spanning to a shallow concrete beams along the exterior walls and the corridor walls. The concrete roof slab cantilevers to create an overhang along much of the building perimeter. In the partial basement, the ground floor slab is supported by 24" diameter concrete columns and concrete retaining walls. The roof is supported typically by 12" square concrete columns and 3 ½" diameter steel columns along one of the corridor walls. The Cafetorium roof is supported by steel trusses spanning to load-bearing CMU walls. The foundation system is unknown but assumed to be shallow concrete spread footings and a concrete slab on grade.

The 1975 addition's roof is constructed from open web steel trusses with galvanized metal roof deck. The trusses span to CMU bearing walls. The floor is a concrete slab on grade and there are reinforced concrete foundation walls on spread footings supported the CMU bearing walls. There is an expansion joint separating the addition from the original building.

While the 1975 addition was designed for wind and seismic loads using CMU shear walls for lateral resistance, the original building was designed under an earlier version of the building code that did not require lateral design. There are CMU partitions in the original building that provide lateral stiffness even though rebar may not be present.

STRUCTURAL RECOMMENDATIONS

The existing building appears to be well maintained and shows no major signs of structural distress. There were some minor cracks and spalls observed on the exterior that should be repaired. No other major repairs are required unless a proposed renovation or addition triggers structural upgrades per CMR 780 10th edition, which references the IEBC 2021. The following options can be considered.

1. **Level 1 Alterations – minor cosmetic changes such as repainting and changing floor finishes, new MEP equipment.**
    a. Structural elements will be maintained.
    b. Support for new equipment will be designed for current code-mandated loads.
2. **Level 2 Alterations – reconfiguration of walls, changes to any doors or windows.**
    a. Structural elements can remain:
        i. If existing gravity loads are not increased more than 5%, or capacity of structural elements carrying gravity loads is not reduced by more than 5%. Gravity elements are roof deck, CMU bearing walls, steel trusses, concrete slabs and beams, columns, and concrete footings.
        ii. If capacity of existing lateral elements is not reduced by more than 10%. Lateral elements can be assumed to be the CMU walls.
    b. Structural elements need to be designed for current IBC 2021 loads or reduced seismic loads:
        i. If the demand/capacity ratio listed above has been exceeded.
        ii. New structural elements
        iii. Voluntarily for the purposes of improving seismic performance.
3. **Level 3 Alterations – structural alteration area exceeds 30% of the total roof.**
    a. Substantial structural alteration requires existing gravity and lateral systems to be designed for current IBC 2021 loads and reduced seismic loads.
    b. Brace CMU walls to roof diaphragms.
4. **Addition – horizontal or vertical addition**
    a. For a horizontal addition with an expansion joint between new and existing, the new structure should be designed for current IBC 2021 loads.
    b. For a horizontal and vertical addition that adds more than 5% gravity load or 10% lateral load to the existing structure, the affected structure should be designed for current IBC 2021 loads.

In general, minor structural changes such as creating small openings for new rooftop equipment will not trigger major structural upgrades. Keeping in place the structural framing and lateral partitions and simply providing basic building maintenance such as periodic roofing replacement and brick repointing will extend the life of the building for many more years. Any major renovation resulting in

an upgrade to the lateral system will require positive connections between the roof and floor diaphragms and the CMU walls. Note that if the CMU walls do not extend up to the roof diaphragm, new bracing elements will need to be installed to create this connection. Very often the cost of the seismic upgrade results in the renovation option as cost prohibitive compared to the cost of new construction.

CONCLUSION

Using the existing structural drawings and observations made during the walk-thru, the condition of the existing structural system appears to be good and simply requires periodic maintenance.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – HVAC

Prepared by GGD Consulting Engineers, Inc.

EXECUTIVE SUMMARY

Essex Elementary school was originally constructed in 1958 with an addition added circa 1975. The installed HVAC system is a steam heating system that primarily serves unit ventilators, air handling units, finned tube radiators, and unit heaters. The air handling units serve larger single zones such as the gymnasium and cafeteria. Vestibules and hallways are typically served by steam unit heaters. Bathrooms and some office areas are heated by finned tube radiators. Window, thru-wall, and portable air conditioners are installed in classrooms, office areas, and nurse's suite.

Although the school has done a good job of maintaining the equipment over the years, due to the age of the HVAC equipment and associated distribution systems, we recommend that an all-new HVAC system should be provided. Modern day HVAC systems will offer much higher operational efficiencies, will increase thermal comfort, and improve indoor air quality.

HEATING PLANT:

The boiler room houses two (2) gas-fired steam boilers, although only one appears to be operational. One boiler is a cast iron sectional steam boiler manufactured by Smith Boilers, model 28 HE-S-17, with a net IBR rating of 3384 MBH. The boiler is paired with a Power Flame burner, model WC3-G-25B with a maximum natural gas input of 5155 MBH. The boiler was installed in 2007 and is still operational. This boiler was provided to replace the original boiler when the building was constructed in 1958.

The second boiler is manufactured by H.B. Smith. This boiler was installed when the addition was completed in 1975. This boiler is no longer operational and is abandoned in place. No tag information could be located, so information on this boiler is limited. However it likely had a heat capacity similar to the 2007 boiler noted above.

Existing Operational Boiler

Existing Abandoned Boiler

The boilers are connected to a common stainless steel flue gas exhaust ductwork system which vents all flue gasses out a chimney. The boilers utilize room air for combustion air in lieu of a directly ventilated system which would typically be found on modern day boilers. Combustion air is brought into the space by a wall mounted intake louver. An exhaust fan and exhaust louver are also provided which is presumably provided to exhaust the mechanical space based on room temperature.

Steam condensate is piped back to the mechanical room and pumped back to the boilers by two (2) condensate return pumps, manufactured by Vent-Rite Valve Corp. model 57110. The pumps were replaced around 2005 and are still operational. Condensate is stored in a large main tank and overflow tank.

Condensate Return Pumps

Mechanical Room Makeup Air Duct

CONTROLS:

In 2015, the school updated their existing pneumatic controls to an all new direct digital controls (DDC) system, including a Building Management System (BMS). The new DDC controls system is manufactured by Johnson Controls. The air compressors, refrigerant dryer, and related accessories for the original pneumatic controls system still remain, abandoned in place. The original thermostats are also located throughout the building, which no longer function.

DDC Controls

New T'stat (left) and abandoned T'stat (right)

CLASSROOMS:

The classrooms are heated and ventilated by wall or ceiling mounted unit ventilators. Wall mounted unit ventilators are connected to exterior wall mounted louvers for fresh air intake. Rooms with ceiling mounted unit ventilators are ducted to roof hoods for fresh air intake. Plumbing vents were observed while on site to be well within 25 feet of roof intake hoods, which is a code violation.

Unit ventilators are equipped with steam coils, supply fan, and filter. Classrooms are also provided with exhaust typically by wall mounted exhaust grilles, tied to various roof mounted exhaust fans. The unit ventilators and exhaust fans appear to be well past their expected service life.

Horizontal Unit Ventilator

Vertical Unit Ventilator

Roof hood

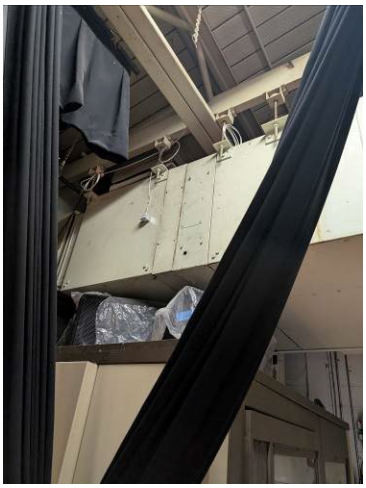
Roof Exhaust Fan

There is no central air conditioning system for the classroom spaces. Instead, select spaces are provided with thru-wall air conditioners or portable air conditioners. In most cases though, only box fans are provided to help provide some level of thermal comfort during the warmer months.

Portable Air Conditioner

MEDIA CENTER:

The media center is heated and ventilated by unit ventilators. These unit ventilators appear to be more modern than the unit ventilators observed throughout the rest of the building. The unit ventilators are equipped with supply fans, filters, and steam coils for heating. Thru-wall window air conditioners are installed to provide cooling.

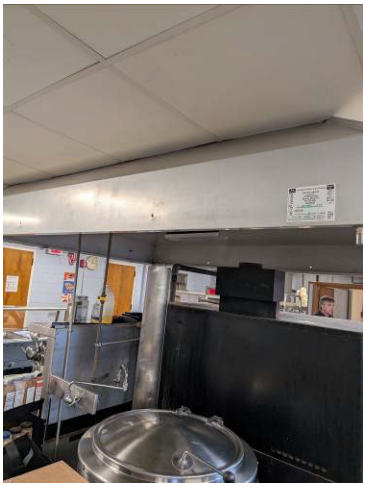


Media Center Unit Ventilator

Media Center Air Conditioner

CAFETORIUM:

The cafetorium is served by two (2) indoor air handling units located above the stage. Each air handling unit is equipped with a steam heating coil, supply fan, return fan, and filters. The air handling units provide heat and ventilation only; there is no cooling section. Supplemental heat is provided by finned tube radiators that are concealed in a furred-out wall along the perimeter.



Cafeteria Air Handling Unit

KITCHEN:

The kitchen is heated and ventilated by a ceiling mounted unit ventilator. Fresh air is introduced to the unit ventilator through a roof intake hood. There is a large kitchen exhaust hood with associated kitchen exhaust fan located on the roof. Makeup air presumably comes from the adjacent cafetorium space, which would require the door to the kitchen to remain open since there are no transfer grilles between the kitchen and cafetorium.

The dishwasher is provided with a dedicated exhaust system, which is recommended. The dishwasher appears to be in fair condition.

Kitchen Exhaust Hood

Dishwasher Exhaust

GYMNASIUM:

The gymnasium is served by two (2) indoor mounted air handling units, which provide heating and ventilation air to the space. The air handling units are mounted high within the space, with supply air located up near the ceiling and return air located about midway up the wall, above the bleachers. The air handlers are manufactured by Herman Nelson. Research suggests that Herman Nelson may no longer be producing air handling units, which would make servicing these units difficult and costly. There is no supplemental heat in the gymnasium, such as finned tube. As a result, the gymnasium reportedly has issues maintaining the space heating temperature setpoint.

The adjacent locker rooms are served by a third indoor mounted air handling unit, located within a storage closet. Air is ducted to ceiling mounted supply and return grilles.

Gymnasium AHU

Locker Room AHU

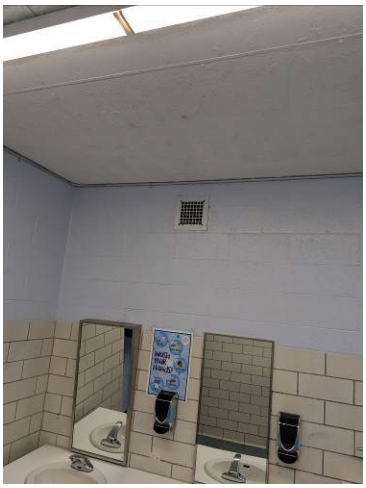
ADMINISTRATION AREAS:

The administration area is provided with heat primarily by unit ventilators, or fined tube radiators. Window air conditions are provided for air conditioning in some spaces. Interior spaces are served by an air handling unit to provide heating, cooling, and ventilation.

Fintube & Window Air Conditioner

CORRIDORS AND ENTRY WAYS:

Corridors and entryways are provided with heat by steam unit heaters or fintube radiators. There was no direct ventilation observed in the corridor spaces. The unit heaters appear to be in fair condition, considering their age. However, they are likely the original unit heaters that were provided back in 1958, which would make them well beyond their recommended service life.



Entry Cabinet Unit Heater

TOILET ROOMS:

Toilet rooms with exterior exposure are typically provided with heat by finned tube radiators. The bathrooms are exhausted by various roof mounted exhaust fans ducted to exhaust grilles in each toilet room.

Toilet Room Fintube

Toilet Room Exhaust

RECOMMENDATIONS:

These recommendations have been based on our field visits and review of the available existing HVAC system drawings.

In general, the existing HVAC system has been well maintained over the years, though a majority of the building HVAC indoor air handling unit, terminal equipment and ductwork distribution systems are originally installed equipment that's approaching their life expectancy.

All new systems and equipment shall be installed in accordance with the building mechanical and energy conservation code in effect at the time of permitting of the proposed system replacements.

The classroom unit ventilators should be replaced with a more efficient system. The systems use a considerable amount of energy as they bring in raw ventilation air without energy recovery, which is then heated, only to be exhausted outdoors. We recommend providing dehumidified displacement air with a Variable Air Volume (VAV) terminal unit to all classrooms paired with radiant heating/cooling panels. The system allows for individual control in each room with CO2 demand control ventilation. Maintenance is minimized as it everything is performed at the air handling unit or rooftop unit.

Provide some level of air-conditioning for all regularly occupied spaces for increased health, productivity, comfort, and building longevity.

Provide new 100% Outdoor Air central ventilation system including energy recovery to provide tempered ventilation to administration, and corridor areas via a galvanized duct distribution system consisting of supply and exhaust ductwork. This could be single or multiple units depending on several factors including roof capacity and clearance for ductwork.

An induction unit system is recommended for space heating and cooling of the administration area. Each space would be provided with induction units sized for the code required ventilation rate and shall be equipped with heating and cooling coils. This will allow individual space temperature control. Hot and chilled water shall be provided by a heat recovery air source heat pump chiller plant, which shall be capable of producing hot and chilled water simultaneously.

Kitchen equipment should be upgraded. HVAC shall be added to support new equipment. A dedicated make-up air unit for the kitchen hood should be installed. A Melink control system is recommended to modulate exhaust and make-up air to the system for energy savings. In addition, an exhaust system shall be added for the new dishwasher.

Replace all existing building exhaust systems with new fans and duct distribution systems.

Replace all existing terminal heating units with new hot water heating units including direct digital control (DDC) valves for increased efficiency, controllability, and longevity.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – ELECTRICAL

Prepared by GGD Consulting Engineers, Inc.

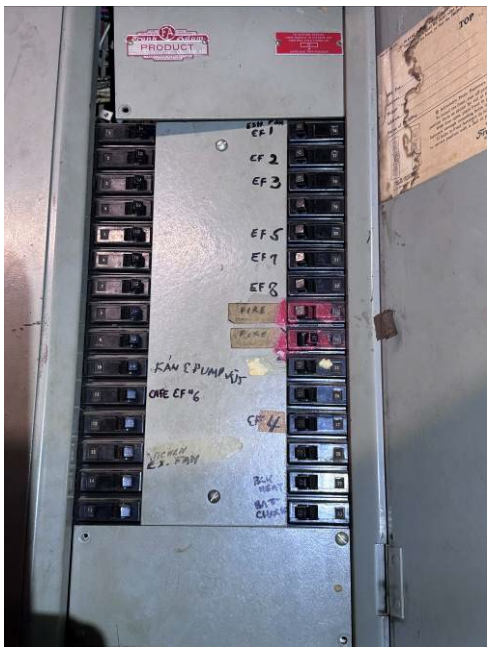
EXECUTIVE SUMMARY:

The existing school facility was constructed in 1958. In 1975 a renovation to the school was completed. Most of the electrical distribution systems are original to the building and although functioning, have far outlived their intended useful life. Upgrades such as an emergency generator and fire alarm system have been completed and are in fair condition. The facility's electrical power is provided by National Grid and is secondary metered, the utility company transformer is located within a building vault accessible from the building's exterior. Other incoming utilities include telephone, fiber, and cable TV.

The power distribution system has had some upgrades, but the majority is original and in poor condition. The interior lighting fixtures have been upgraded since the renovation in 1975 and at present are mostly LED sourced linear utility type strip lighting that are high glare and not ideal for classroom or office installations. All exterior lighting are new LED type fixtures, however products installed vary from door to door and are low quality, high glare fixtures for which the existing wiring was also reused.

(Images provided below are of incoming service pole and existing building generator)

POWER DISTRIBUTION SYSTEMS:



Incoming secondary service originates from pole 1629 fed from Story Street to the school entrance roadway and shares the same utility poles with telephone and cable TV. The site is secondary metered Meter #98 742 157 via a CT cabinet located in the mechanical room in the basement of the facility. The secondary voltage is rated at 60 amperes, 120/208-volt 3 phase, 4 wire provided by National Grid.

The existing electrical equipment is a mixture of vintage and newer panels and disconnect switches. The main service disconnect switch is rated for 600 amps at 120/208, 3 phase 4 wire. The switch is original vintage and reached the end of its useful life expectancy.

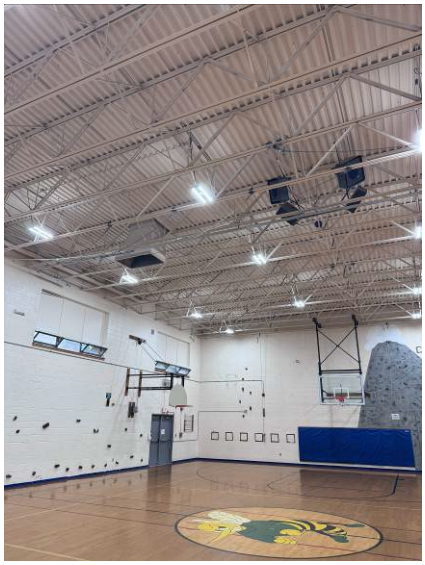
Panels located throughout the existing building range from poor to good condition.

Branch circuits and receptacles have been added over the years to accommodate school technology; however, there seems to be a lack of receptacles where some are needed. It was noted that kitchen receptacles and some receptacles are located within 6 ft. of a sink and not GFCI protected this is an electrical code violation.

(Images below depict aging and damaged electrical panels and incoming service primary meter)

INTERIOR LIGHTING:

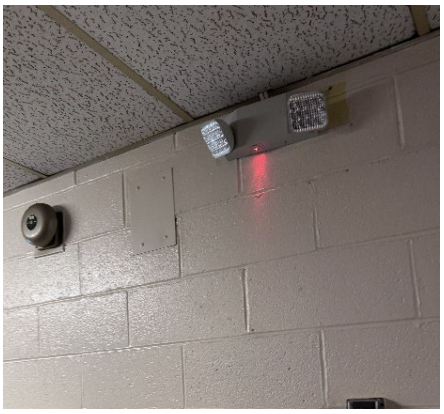
Most interior lighting has been converted or replaced with LED fixture options. In general, all fixtures currently installed are lower quality utility surface mounted types commonly associated with high glare issues. It was also observed that continuous rows of these fixtures were installed in all



classrooms. The combination of high glare fixtures, quantity of fixtures present, and absence of dimmable lighting controls create spaces where symptoms associated with lighting fatigue may be commonplace. Wiring for most if not all of the newly installed LED fixtures utilized existing lighting circuitry.

Corridor and stairway lighting consists primarily of the same surface mounted LED wraparound fixtures described above. The exception to this was a small number of spaces where 2' x 4' recessed center basket LED troffer style fixtures were installed in lieu of the strip lighting.

Within the existing building's gymnasium, newer high bay industrial LED split lens lighting fixtures with clear high lensing are being utilized.
Lighting controls in most areas consist of a single (1) single pole line voltage switch controlling all fixtures within the room. In some smaller spaces, line voltage manual switching has been replaced with an in-wall occupancy sensor. These types of sensors commonly cause false off signals in areas used as the view of the sensor commonly becomes obstructed. No ceiling mounted occupancy/vacancy or daylight harvesting sensors were observed throughout the facility.



(Images below depict the lighting as described within all classrooms and the building's gymnasium)

EMERGENCY LIGHTING SYSTEM:

The school is supported by a Kohler manufactured generator. The generator is diesel fired and located at the buildings exterior within a weatherproof enclosure. The size could not be determined during the field visit. It is estimated at 125 kW. A single 250 ampere feeder serves on Kohler automatic transfer switch decision maker MPAC 1500 which is in excellent condition. Life safety egress lighting is handled via emergency battery units. There are several types and sizes located throughout the building ranging from original to newer LED models.

(Images above depict the various types of battery units seen throughout the building)

Gang toilet rooms throughout the building are not provided with any form of life safety lighting and while not always code required it is a widely accepted good engineering practice to provide all bathrooms within a building with life safety lighting.

No egress emergency lighting was observed at any exterior egress door.

Exit signs range from original to more up-dated types.

EXTERIOR LIGHTING SYSTEM:

The facility has exterior lighting in the parking lots and mounted off the building. The parking lot lighting is pole mounted with single and double heads. Both types are mounted on concrete pole bases. These luminaires have been recently upgraded to LED type.

Wall mounted building lighting is of various types, mostly newer LED type wall packs, but there are some dual head security types with motion sensors which are also LED type.

FIRE ALARM SYSTEM:

The fire alarm system for the facility consists of a Notifier NFS 303 addressable control panel with voice evacuation. The fire alarm control panel is the main vestibule. The panel was replaced recently. The system is in good condition and appears to be code compliant. There is an Ansul fire suppression system in the kitchen at the exhaust hood. No carbon monoxide detection was observed in the kitchen.

COMMUNICATION SYSTEMS:

Services:

Services include district fiber, coax cabling and POTS lines. The internet service provider is Comcast.

Telephone System:

The telephone system seems to be a VOIP system in alignment with the district standard.

RECOMMENDATIONS:

The existing electrical service is in poor condition and should be replaced.

New switchboard, secondary panelboards and feeders should be installed and segregated to serve specific loads such as power, lighting, and mechanical. Panelboards should be installed in dedicated electrical rooms.

Receptacles should be added to accommodate technology devices and A/V devices used in 21st century learning. The branch circuits should be wired to dedicated power panels with TVSS protection and 200% neutrals to protect sensitive electronics.

Lighting should be upgraded to high efficiency LED lighting to reduce the overall light power density and improve light levels. An automated lighting control system should be provided in the facility that communicates with occupancy sensors, daylight dimming sensors, and low voltage light switches. This will allow for an energy code compliant lighting control system that will further reduce energy usage. Also, lighting should be added to areas where only skylights and clearstory (classroom toilets) to provide additional lighting in times of darkness.

A new wireless clock system should be installed to replace the present system.

New tel/data closets designed to accommodate telecommunications equipment including grounding and air conditioning should be provided. CAT 6A cabling should be installed throughout. The locations of the data drops as well as number of drops needs to be revised to accommodate the furniture layout.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – PLUMBING

Prepared by CA Crowley Engineering

EXECUTIVE SUMMARY:

The building is a roughly 53,036 sf single-story school building which was originally constructed in 1958, with a gymnasium, locker rooms, and media center added in 1975.

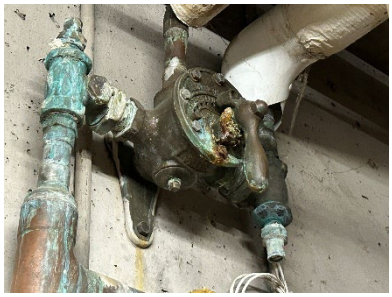
The existing school building is equipped with several plumbing systems including domestic hot and cold water; sanitary drain, waste, and vent; natural gas; and storm drainage.

EXISTING CONDITIONS:

Systems and Equipment

The building has one domestic water supply, supplied underground through what appears to be a four-inch (4") ductile iron service entering the boiler room high on the wall in the northeast corner. The four-inch (4") domestic water supply is equipped with a strainer, meter, and isolation valve. The water service piping is a mixture of ductile iron and copper, and appears to be in fair condition.

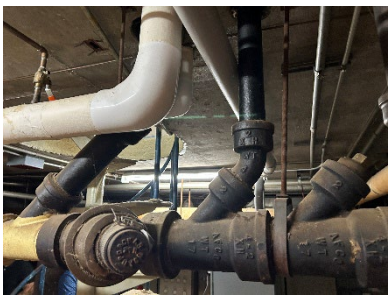
Water Service



Only the exposed water piping scattered throughout the building could be observed and evaluated. The domestic water piping is hard drawn copper tube of various vintages with solder joint or pressed fittings, and appears to be in fair to good condition, with some evidence of previous leaks. The majority of piping throughout the buildings appears to be insulated. Domestic water piping withing the boiler room around the water heater and mixing valve is not insulated. Depending on vintage, the pipe insulation is poor or fair. Newer pipe insulation is in good condition.

The water heating system is located in the boiler room and includes a Weil-McLain model PFG-6-PIN

atmospheric hot water boiler and a Weil-McLain model Plus 100 70-gallon indirect water heater. The equipment appears to be about 20 years old. Combustion air is taken from the room, and the exhaust gas is vented through the existing masonry chimney. The domestic hot water is a single-temperature system with a thermostatic mixing valve. Hot water recirculation was not observed. The piping around the water heater and mixing valve is in fair to good condition. Piping connections at the mixing valve are leaking and corroding the piping.



Water Heating System

Mixing Valve

What could be seen of the existing sanitary drain, waste and vent system appears to be a combination of drainage pattern copper and cast iron. The majority of the older piping is hub and spigot cast iron with either gasketed or leaded and caulked joints, with some no-hub cast iron pipe with rubber couplings and stainless-steel bands with shields, as well as threaded galvanized steel vent piping. Copper drainage piping is limited primarily to fixture connections. Piping was observable in a crawl space and pipe tunnel along the perimeter of the building. Sanitary drainage piping appeared to be in fair to good condition.

Cast Iron Sanitary Piping

Cast Iron Storm Drain Piping

Roof drains were scattered through the various roof areas. Roof drains have cast iron bodies with ductile iron domes, where present. Many roof drains were missing the domes and had makeshift strainers made out of wire mesh. Some roof drains appear to have been retrofitted as part of roof maintenance. Storm piping serving the drains is cast iron with hub and spigot joints with either gasketed or leaded and caulked joints, with some no-hub cast iron pipe with rubber couplings and stainless-steel bands with shields. The gymnasium has a sloped roof with scuppers which discharge

to the lower roof. The cafeteria has sloped roofs with gutters and downspouts which discharge to the lower roof.

Roof Drain

Roof Drain Missing Strainer

There are a couple of sumps in the basement. One is equipped with a pump discharging to a floor drain, the other appears to have had a pump, which discharged through the foundation wall to grade, but has since been disconnected. It is unclear currently what these sumps serve.

The building is equipped with a natural gas service located outside boiler room on the northeast side of the building. This natural gas service is equipped with a pressure regulator and meter and provides low pressure gas to the building. The gas serves domestic water heater, building heating equipment, and kitchen equipment. Gas piping is steel with welded, flanged, and threaded fittings, and appears to be in good condition.

Gas Service

Gas equipment in the boiler room includes the aforementioned domestic hot water heating boiler, as well as two low pressure steam boilers for building heating. Combustion air is provided through an exterior louver and single wall galvanized steel ductwork. The combustion air system is not of adequate size to serve all the equipment in the boiler room.

The boiler exhaust vent connector piping is either single wall galvanized sheet metal, or double wall Type B factory-built chimney, both of which are connected to an insulated exhaust vent assumed to be of galvanized steel. The vent extends and connects to a masonry chimney which rises and exits through the roof.

Combustion Air Duct

Boiler Vent Connector

The total combined load of all gas fired equipment in the building is unknown at this time.

The boiler make-up water is equipped with a reduced pressure backflow preventer.

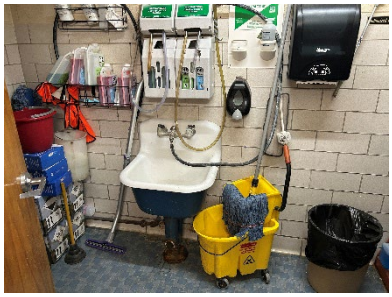
Plumbing Fixtures

Restroom plumbing fixtures include wall hung and floor mounted toilets, wall hung and floor mounted urinals, and wall hung and drop-in countertop lavatories with a combination of manual flush valves, and manual or automatic faucets.

Lavatory

Toilet

Urinals

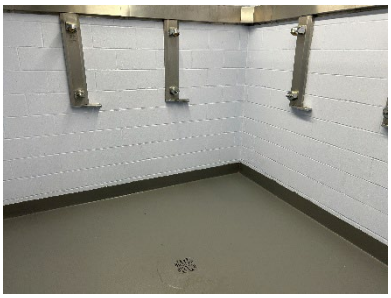


Lavatories

There are various other fixtures located throughout the building including drinking fountains and bottle fillers, service sinks, classroom and general use sinks, floor drains, and kitchen equipment.

Drinking Fountain

Custodial Sink



Various original plumbing fixtures, flush valves, and faucets have been replaced over the years.

A majority of the classroom sinks are equipped with bubblers, but cold water only, and many of the faucets and bubblers are inoperable.

Some drinking fountains have been replaced by freestanding refrigerated water dispensers

The locker rooms include tiled gang showers with metering shower valves and master mixing and shower supply control valves.

Wall hydrants are located along the exterior perimeter of the building.

Gang Shower

Classroom Sink & Bubbler

The kitchen is equipped with various cooking and ware washing equipment and appliances.

The triple pot scullery sink is equipped with an interior floor mounted grease interceptor with remote draw-off piping. The kitchen has been retrofitted with an exterior underground grease interceptor with cast iron manhole access covers.

The kitchen does not appear to be equipped with a fire extinguishing system nor an emergency gas shutoff valve.

The kitchen is equipped with a Takagi model T-KD20 direct vent gas-fired hot water booster. Water heater utilizes room air for combustion and is vented through the wall.

Interior Grease Interceptor

Triple Pot Sink

Prep Sink & Hot Water Booster

Gas-Fired Cooking Equipment

DEFICIENCIES:

There were various deficiencies noted. While many of the items may have been allowed by the codes in force at the time of construction, they do not meet the latest edition of the codes and would most likely need to be addressed during any major renovation.

These items include:

- Missing roof drain strainers.
- Some rooftop plumbing vents are too close to fresh air intakes.
- Lack of hot water recirculation.
- Lack of adequate combustion air.
- Toilets equipped with closed front seats and covers.
- Floor mounted urinals.
- Detergent dispensing systems are not equipped with backflow preventers.
- Plumbing fixtures range in condition but may not meet current codes for flow rates and/or accessibility.
- Various hose connections throughout the building are not equipped with vacuum breakers.
- Floor drains throughout the building do not appear to be equipped with automatic trap primers.
- Domestic water piping insulation thickness may not meet current energy code requirements.
- Central shower floor drains.
- Kitchen gas supply may not be properly interlocked with the kitchen hoods.
- Kitchen prep sink not piped indirectly through and air gap.

RECOMMENDATIONS:

All deficiencies noted above should be investigated, evaluated, and addressed.

Although some of the sanitary drainage system piping appears to be in good condition, the original piping is almost 68 years old and nearing the end of its useful life. There were multiple locations where repairs had been made or piping had been abandoned and repiped, indicating that the piping was no longer useful. Therefore, the piping should be replaced, or extensive investigation should be conducted prior to proposed reuse or modifications if the existing cast iron drainage piping system is intended to last for an extended period of time, as should be expected with a major renovation.

Although it appears to be in fair to good condition, we do not believe that the existing domestic water piping system in the building would last for an extended period of time, as should be expected with a major renovation, and would be prone to failure before the building reached its life expectancy.

Any major renovation should consider the replacement of the domestic water piping system in the building.

With the replacement of the water piping in the original building, the hot water piping system should be modified to provide the proper water temperature to the various fixtures, with the hot water serving the kitchen and janitorial sinks, and tempered water serving the remainder of the fixtures.

Hot water recirculation should be provided.

The water heating system and thermostatic mixing valve should be replaced. Consideration should be given to installing an additional water heater and storage tank for redundancy and maintenance/repair.

The water heater in the kitchen appears to be fairly new and in good condition and could remain in service.

The existing 2" underground service and natural gas piping may be able to remain and be modified as needed. However, an increase in gas consumption causing it to exceed the capacity of the existing service would require replacement of the existing 2" underground service and meter, as well as portions of the existing gas piping system.

The kitchen gas system should be equipped with an emergency gas shutoff system interlocked with the kitchen hood.

Due to the standing pilots, a carbon monoxide detector(s) and control panel should be installed.

In general, the newer plumbing fixtures are in good condition, functional, and could remain in service. However, many fixtures are dated, worn, and in poor condition and should be replaced. Most fixtures may fail to comply with current accessibility and water conservation standards. In addition, the existing water closets may not function properly with the newer water conserving flush valves. Given the assessed value of the existing building, the respective cost of any proposed building renovation or addition could require replacement of most of the existing fixtures.

Any work to the building should include an analysis of the current fixture count and plumbing code requirements and provide the correct type and quantity of plumbing fixtures, including separate restroom facilities for faculty and kitchen staff.

If not replaced, damaged or malfunctioning fixtures or equipment should be repaired.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – FIRE PROTECTION

Prepared by CA Crowley Engineering

EXECUTIVE SUMMARY:

The building is roughly 53,036 (sf) school building which was originally constructed in 1958 and was not sprinklered at the time of construction.

A gymnasium, locker rooms, and media center were added in 1975, and were not sprinklered at the time of construction.

There have been no modifications, renovations, or additions which would have required retrofitting the building with an automatic fire suppression system since that time.

The existing kitchen hood is not equipped with an integral fire suppression system.

DEFICIENCIES:

The existing building does not meet current code requirements.

The current Massachusetts State Building Code requires all newly constructed buildings of Use Group E – Educational which are over 12,000 square feet in area to be equipped with an automatic sprinkler system. In addition, legitimate stages are required to be equipped with automatic standpipe systems.

Massachusetts General Laws, Part I, Title XX, Chapter 148, Section 26G, requires automatic sprinkler systems to be installed in all buildings, including additions, with a gross area totaling more than 7,500 square feet.

This law is only triggered if a new building is constructed, an addition is built onto an existing building, or major alterations or modifications are planned for an existing structure. Major alterations and modifications are further defined and discussed in the 2009 advisory memorandum issued by the Executive Office of Public Safety and Security's Department of Fire Services.

Hydrant flow test data was not available, so it is unknown at this time if the existing public water supply system is of adequate capacity to support a new fire sprinkler system.

NOTES:

If a fire pump is required, it would need to be diesel engine driven, or electric motor driven with an emergency generator for back-up. The fire pump needs to be located within a dedicated 2-hour fire rated room with exterior access.

Based on the building's footprint of approximately 44,650sf, the building would need one sprinkler system riser. The building appears to be of non-combustible construction, so sprinklers would not be required in the non-combustible interstitial spaces above suspended ceilings.

RECOMMENDATIONS:

In accordance with Chapter 34 of the current Massachusetts State Building Code, existing buildings in Use Group E are not required to be retrofitted with an automatic fire sprinkler system or brought into full compliance with the new codes in force unless they undergo major alterations or additions.

However, because of the proven property and life-saving benefits of these systems, this office would recommend retrofitting the original building in the near future regardless of renovation.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – Foodservice Equipment

Prepared by Crabtree McGrath Associates, Inc.

EXECUTIVE SUMMARY:

The Essex Elementary School is an elementary school serving approximately 230 students in grades kindergarten through five. Crabtree-McGrath Associates, Inc. is a foodservice design consulting firm that visited the school in October of 2025. The existing conditions of the kitchen and servery were reviewed in detail to develop the following report. The foodservices assessment in this report will address major components within the current foodservice program. We will reference the National Sanitation Foundation (NSF), an independent governing body responsible for developing standards for foodservice equipment and facility design. It is imperative to note that all equipment in commercial kitchens must be constructed in accordance with NSF standards as mandated by the food codes. When mentioning the health code, we are citing the requirements outlined in the Federal Food Code, 2021 edition, published by the FDA, as well as the Merged Massachusetts Food Code 2018 edition.

SCHOOL LUNCH PROGRAM:

The school's cafeteria kitchen serves the standard school lunch program, providing a variety of food options along a single main serving line. This serving line is located within the kitchen space, allowing for typical visual and verbal communication between production and serving staff members. However, major infrastructure elements, including cooking equipment, exhaust systems, and serving lines, have not received significant updates since the original construction of the facility. Considering the current school population, the kitchen also faces challenges related to insufficient refrigeration, freezer, and dry storage space needed for efficient storage and food production.

The walls are a mix of durable glazed block and painted block which has held up well. The floor within the kitchen is an epoxy painted concrete floor which is worn and has cracks in some locations. The floor appears to have been recently painted and in fair condition but the cracks in the floor are an issue that needs to be corrected. The ceiling finishes in the main portion of the kitchen and is lay in smooth faced tile. The tiles are in fair condition but there are areas where they are stained or need to be replaced.

Image 1

The school kitchen faces limitations in its refrigerated and dry storage capacities. See images 1, 2, and 3. What was once a walk-in cooler and freezer had been converted to a dray storage room. As a result, the refrigerated and frozen storage is being done in a series of three door reach-in refrigerators. The units are new and in great condition, however they fall short of the storage capacity needed.

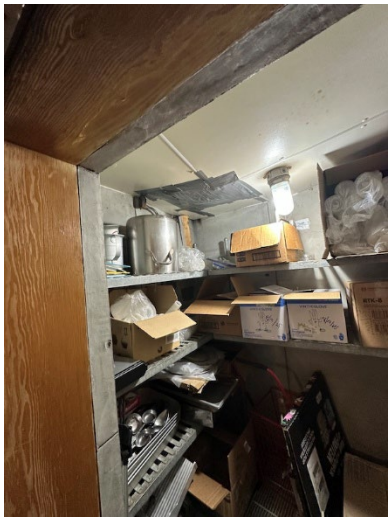


Image 2

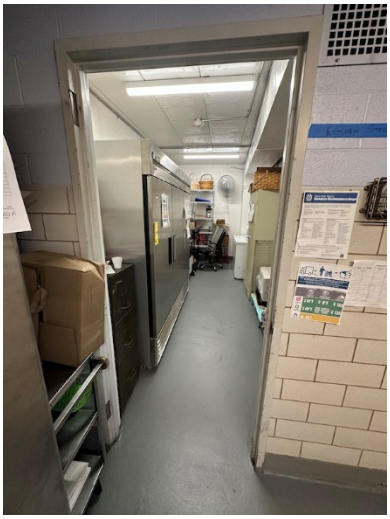

Image 3

Image 4

Dry goods storage capacity is inefficient and needs reorganization to increase dry goods storage density. Image 3.

While the kitchen features several stainless teel topped worktables, there's a limited amount of food preparation areas with sinks for effectively separating function of and washing food products before

the cooking process. Not all tables in the kitchen have stainless steel tops, which is not aligned with modern-day food code standards. Table legs are constructed from older galvanized steel. Galvanized steel tends to chip and rust over time, requiring unnecessary maintenance, such as regular painting of the table legs. Modern tables must be 100% stainless steel construction, offering the best in food contact surfaces and durability.

At the cook line, there are exposed utility lines mounted to and through the exhaust hood canopy. This situation creates a cleanliness issue. In newer construction, utilities are concealed as much as possible. See image 4 for an example of excessive exposed conduits and piping.

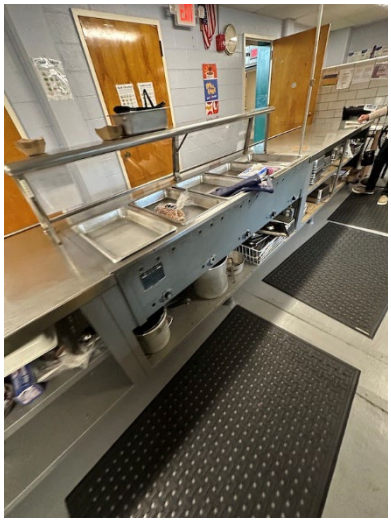

Image 2

Additionally, the exhaust hood in the kitchen space is outdated and should be upgraded to incorporate modern-day finishes and efficiency controls. The hood size is out of proportion to the equipment below it. Lastly, there is no fire suppression system or cooking surface fire protection for the open burner range. In the event of a fire there is no automatic emergency gas shutoff interlock which allows for the turning off the gas supply and fire department notification in the event of an emergency

The serving line (image 5) in this kitchen is outdated and will greatly benefit from equipment updates. The current setup offers no hot holding capability. The hot wells are old, outdated gas fired units. The units were malfunctioning with the leaking of gas, and the gas supply has been turned off.

There are no refrigerated holding options along the line to maintain cold food offerings at safe and appropriate serving temperatures. Additionally, there are no sneeze guards at the cold side of the counter, which is essential for compliance with current NSF (National Sanitation Foundation) regulations. The sneeze guard that is present in front of the hot wells is not code complaint. It lacks sufficient side protection and again the hot wells do not provide heat to keep food hot.

This facility has a conveyer style dish machine, but reusable trays are not being used. Additionally, the aging dishwasher is close to requiring replacement. Overall, the dishwash area is well equipped but underutilized.

RECOMMENDATIONS:

The modernization of the kitchen and serving equipment is warranted. There are two reach-in refrigerators that are in good working order and that can be reused. However, the utility infrastructure and finishes need modernization. The exhaust hood configuration and monitoring of

the gas appliances are a concern that must be addressed regardless of any outcome. Unfortunately, maintaining the current configuration does not allow for improvement in workflow and space utilization. A modern kitchen will require addition are to configure the space for maximum efficiency and optimal performance.

In any scenario where the existing food service space is kept intact, all noted health code deficiencies and violations must be corrected. Plumbing must be reworked with code compliant assemblies that both satisfy the Plumbing, Electrical, and Health codes.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – AUDIO VISUAL

Prepared by Newcomb & Boyd

EXECUTIVE SUMMARY:

The evaluation outlines the current existing audio-visual (AV) infrastructure and equipment across key AV enabled spaces in the school. The evaluation identifies the location of equipment and assumed functionality and provides recommendations for the renovation project.

Cafeteria/Stage:

- Existing ceiling projector facing the cafeteria stage.
- Two pairs of stereo surface mounted speakers in front of the stage area.
- Existing lectern located directly in front of stage, on stage left side.
- Behind stage, an existing AV rack is located near accessibility lift. An analog audio mixing console is located on the surface of the AV rack and next to the AV rack is a loose PA speaker.

Conference Room:

- Existing 85” (approx.) interactive flat panel display with no apparent videoconferencing capabilities. Power and data are located beneath display at 18” AFF. Hard-wired connectivity at the table is not included in the system.

Media Center:

- Existing 85” (approx.) interactive flat panel display with no apparent videoconferencing capabilities. Power and data are located near display.

Classrooms:

- Existing 85” (approx.) interactive flat panel display with no apparent videoconferencing capabilities. Power and data are located beneath display at 18” AFF. A laptop is connected to the display over hard-wired connection, directly into the display’s input.

RECOMMENDATIONS:

N&B recommends improvements made to the Cafeteria AV system such as adding a ceiling distributed speaker system for voice lift and a wireless microphone system. N&B shall evaluate the possibility of re-using the stereo speakers in front of stage for program audio as well as the projector and projection screen. For typical conference rooms, classrooms and the Media Center, N&B would recommend following the standard of interactive displays and add videoconferencing to the conference rooms.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – TECHNOLOGY EQUIPMENT

Prepared by Newcomb & Boyd

EXECUTIVE SUMMARY:

This information below is primarily focused on the technology equipment in the existing building, rather than the communications infrastructure (i.e. network cabling, etc.). Most of the technology equipment is either at the end if it's useful life, or will be by the anticipated opening of the new school.

Server & Network Room:

- The server room is located in the basement level, and is shared with the fire alarm, S2 security system, and the space is also used for IT storage and equipment setup. There is a single 4-post equipment rack containing network cabling, one network switch, several rack-mount servers, and other equipment primarily to support the building security systems.
- There is an additional IT room located in proximity to the Server Room where the majority of the network cabling for the building terminates to, as well as the network switches.
- The uplink between the Server Room switch and the IT Room switches is via a Cat-5 cable.
- There are UPS's serving the equipment, however it was noted that the batteries do not hold a charge and provide limited backup capacity.

Network Switches:

- The network switches are primarily from Extreme Networks. There is one HP/Aruba switch. The Extreme Networks switches were purchased about 4 years ago. At least one switch is PoE capable.
- Most of the network cabling is believed to be Category-5e, although there could be some Cat-6.

Telephone System:

- The existing NEC phone system is located in the IT Room (adjacent room to Server Room).
- The phone system headend resides at the high school, with Essex connected via cable modem.
- All telephone handsets are analog.
- NEC phone system is end of life.

Wireless Access Points:

- Existing cabling was used for new access points that were installed about two years ago.
- The access points are from Extreme Networks, and use a cloud-based controller.
- The wireless system was upgraded district-wide, including Essex.
- The existing wireless access points are typically mounted vertically on the walls, versus being mounted horizontally on the ceiling that may provide better signal coverage

Specialty Spaces:

- Computer Lab
  - The existing desktop computers are 5+ years old.
  - There were RAM and hard drive upgrades done, but the equipment has reached the end of its usable life..
- Conference Room
  - There is a single Promethian board mounted to the wall, off-center from the table. The conference table does not have any A/V inputs requiring users to connect directly to the board with a cable.
  - There does not appear to be capability for video conferencing, except for directly through a laptop or other connected device.
- Typical Classroom
  - Promethian interactive displays are located on the teaching wall with teacher laptops (Windows based) needing to be direct-connected to the display as there are no A/V inputs serving the display.
  - The boards are equipped with built-in Chromebox that is not consistently used.
  - The mounting heights of the displays appear to be appropriate for the student grade level being served.
  - The boards were installed new in September 2021, at the same time as the Memorial School.
- Principal's Suite
  - The reception area has a flat-screen display mounted high for viewing of video surveillance cameras feeds. The Principal's office does not have a display for viewing of video surveillance feeds
  - There is a wireless access point mounted in the ceiling grid.

Additional Information:

- The existing sound reinforcement system is a portable system, not an installed system as found at other schools where the LightSpeed Topcat solution is utilized.
- Looking towards the future, it was requested that the phone system, and paging & bell system be from a single manufacturer to facilitate better integration between the systems.

RECOMMENDATIONS:

A complete technology refresh is recommended for the school. Options to re-use existing equipment was explored, however much of the equipment is currently obsolete, or will be when the new school is constructed. As examples, the wireless access points will be at least six years old, and the network switches eight years old.

Technology improvements will include new network switches capable of providing sufficient data and power via network cabling to video surveillance cameras, wireless access points, telephones, and other powered network devices. UPS battery backup of the network equipment is recommended, with battery runtime sufficient to keep telephones and other critical network devices online for an extended period (i.e. 2-4 hours).

Wireless Access Point technology will continue to improve over the next several years necessitating new access points for the school. Heatmapping of the proposed building is recommended to identify the optimal placement of the access points.
A new telephone system with VoIP technology is recommended. Presumably, this upgrade would need to be implemented district-wide. Data cabling and switches to provide power to the handsets will be required.

In the classrooms, the existing Promethian boards will be due for replacement, with new interactive displays offering features that may not be available with current technology. Sounds reinforcement in the classrooms is also recommended.

Other equipment including desktop computers and monitors in the computer lab will need to be replaced. New devices would likely have a small physical footprint allowing for more space on the worksurface (i.e. the desktops could be mounted and secured below the tables).
Additional technology equipment that supports the educational program is recommended to be included in the new building.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – CIVIL (SITE)

Prepared by Samiotes Consultants

EXECUTIVE SUMMARY:

The following are preliminary findings and research of the existing infrastructure at the existing Essex Elementary School located at 12 Story Street in Essex MA; in order to evaluate the site for either renovation, renovation & addition, or new construction at the existing Essex elementary site.

Information from the Town of Essex Wetlands By-laws has been included in the report, having jurisdictional resource areas that will require filing with the Conservation Commission should work occurs within those jurisdictional areas.

Executive Summary (Civil + Infrastructure)
The existing major utilities review was based on a visual site walk conducted by Samiotes on September 24, 2025.

All major utilities (water, sewer, drainage, gas, & power) are available in the vicinity of the existing Essex Elementary building allowing for the potential of an addition or a new building to have access for connections, assuming excess capacity is available.

Water Service

According to record documents received from the Town of Essex Department of Public Works dated June 1991 a water line exists in Story Street that feeds both the existing building and a hydrant located on Story Street, in front of the school property. (see figure X)

Refer to the plumbing facility assessment section for further in-depth analysis of the building's water and fire protection service and capacity.

Sanitary Sewage

According to record documents received from the town of Essex Department of Public Works dated June 1991, the existing school building has an 8" PVC exiting the north (front) face of the building and ties into the 8" municipal line within Story Street.

Gas Service

The existing elementary School building is assumed to be serviced with natural gas, as a gas meter

was observed on the eastern side of the school (see image 7). The record utility drawings, and/or town GIS do not show the gas line size or routing. A utility survey is in the process of being completed. Refer to the plumbing facility assessment section for further in-depth analysis of the building's gas service and capacity.

Stormwater Management

According to record documents received from the town of Essex Department of Public Works dated June 1991, there is a municipal drain line within Story Street.

Electric Service

The existing school's electrical service enters the site from the northeast via overhead electrical lines from Story Street. It appears the electrical service switches to underground service at the driveway of the side parking lot located on the east side of the property.

Refer to the electrical facility assessment section for further in-depth analysis of the building's electrical system.

Pavement

Based on the site walk performed by Samiotes Consultants, the on-site parking areas and access drives near the school-which are primarily bituminous asphalt pavement and are in fair to poor condition (see image 5). Pavement cracking is visible throughout most of the site and in need of remediation. Several curbs have also deteriorated and need replacement. There are numerous areas where the asphalt is exhibiting signs of gross failure (i.e. "alligator" cracks). There are numerous areas where crack filler has been used with several instances of asphalt patching around manholes that have been replaced or where subgrade/pavement has collapsed around them.

Alligator cracking indicates the failure of a pavement's subbase, indicating the potential need for a full depth replacement. It is recommended that representative pavement core samples be taken to confirm the pavement profiles prior to any project redevelopment/expansion. Depending on the core reports, it is likely the entire asphalt pavement area would need to be milled and overlayed at a minimum and/or potentially repaired with a full-depth replacement within the parking areas and the entire driveway.

Accessibility

The site does not meet ADA / MAAB compliance. The slopes of walkways appear too steep, and the poor quality of roads and walkways with physical barriers such as tree roots, cracks, and heaves. Sidewalks are also missing ADA compliant detectable warning strips. Any renovations to the parking

lot, or overall site, will require accessibility standards to be met. It is recommended that a Code Consultant and/or the Landscape Architect further review ADA / MAAB Compliance, and the extent of work needed to upgrade external pedestrian connectivity to the school to meet requirements.

ENVIRONMENTAL REGULATIONS:

Flood Plain

No flood plain exists on the site.

Wetland Ordinance

Zone I:

Definition: Zone I means the protective radius required around a public water supply well or wellfield. For public water system wells with approved yields of 100,000 gpd or greater, the protective radius is 400 feet. In no case shall the Zone I radius be less than 100 feet.

Zone II:

Definition: That area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation). It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries.

Some Wellhead Restrictions for site:

- stockpiling and disposal of snow or ice removed from highways and streets located outside of Zone II that contains sodium chloride, chemically treated abrasives or other chemicals used for snow and ice removal;
- petroleum, fuel oil and heating oil bulk stations and terminals
- storage of sodium chloride, chemically treated abrasives or other chemicals used for the removal of ice and snow on roads,
- the removal of soil, loam, sand, gravel or any other mineral substances within four feet of the historical high groundwater table elevation, unless the substances removed are redeposited within 45 days of removal on site to achieve a final grading greater than four feet above the historical high water mark, and except for excavations for the construction of building foundations or the installation of utility works, or wetland restoration work
- land uses that result in the rendering impervious of more than 15% or 2500 square feet of any lot or parcel, whichever is greater, unless a system for artificial recharge of precipitation is provided that will not result in the degradation of groundwater quality.

Inner/Outer Riparian (100' & 200' riverfront buffer):
The Riverfront Area is the area of land between a river's mean annual high-water line measured horizontally outward from the river and a parallel line located 200 feet away.

Where a proposed activity involves work within the Riverfront Area, the issuing authority shall presume that the area is significant to protect the private or public water supply; to protect the groundwater; to provide flood control; to prevent storm damage; to prevent pollution; to; to protect wildlife habitat; and to protect fisheries. The presumption is rebuttable and may be overcome by a clear showing that the Riverfront Area does not play a role in the protection of one or more of these interests.

Redevelopment Within Previously Developed Riverfront Areas; Restoration and Mitigation. The issuing authority may allow work to redevelop a previously developed Riverfront Area, provided the proposed work improves existing conditions. Redevelopment means replacement, rehabilitation or expansion of existing structures, improvement of existing roads, or reuse of degraded or previously developed areas. A previously developed Riverfront Area contains areas degraded prior to August 7, 1996 by impervious surfaces from existing structures or pavement, absence of topsoil, junkyards, or abandoned dumping grounds. Work to redevelop previously developed Riverfront Areas shall conform to the following criteria:

(a) At a minimum, proposed work shall result in an improvement over existing conditions of the capacity of the Riverfront Area to protect the interests identified in M.G.L. c. 131 § 40. When a lot is previously developed but no portion of the Riverfront Area is degraded, the requirements of 310 CMR 10.58(4) shall be met.
(b) Stormwater management is provided according to standards established by the Department.
(c) Within 200 foot Riverfront Areas, proposed work shall not be located closer to the river than existing conditions or 100 feet, whichever is less, or not closer than existing conditions within 25 foot Riverfront Areas,
(d) Proposed work, including expansion of existing structures, shall be located outside the Riverfront Area or toward the Riverfront Area boundary and away from the river,
(e) The area of proposed work shall not exceed the amount of degraded area, provided that the proposed work may alter up to 10% if the degraded area is less than 10% of the Riverfront Area,

Town of Essex Wetland By-Law

At this time, the Town of Essex does not have any non-zoning bylaws or ordinances giving the Conservation Commission further power to protect the wetlands beyond the MA DEP Wetlands Protection Act.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – LANDSCAPE

Prepared by Studio 2112

EXECUTIVE SUMMARY:

Studio 2112 visited Essex Elementary School on September 24, 2025, to conduct an existing conditions assessment. Information in this report was gathered from observing the current conditions on site and aerial site photography. Essex Elementary School is located in the town of Essex, MA, and bordered by residential neighborhoods and a logging property to the north. Wetlands make up the western end of the property, and a pond lies on the southeast corner of the site. For additional information on the adjacent wetlands/pond refer to the civil engineering section. The school building is in the central portion of the site and has parking north and east of the building. Student activity areas include a playground, asphalt hardscape, and soccer field west and south of the school, as well as an interior courtyard.

Site Access and Pedestrian Circulation:

The site has two vehicular access roads – the main access off Story St which is a one-way parent drop-off loop, and a secondary one-way bus drive from Western Ave that terminates at the drop-off loop. Parking is distributed in several locations around the building: the parent drop-off loop, at the

northwest and southeast corners of the school, and at the lot east of the main entrance. See civil engineer evaluations for further vehicular traffic conditions.

Pedestrian access to the site is via Story St and the sidewalk that abuts the drop-off loop. There is no pedestrian walkway or sidewalk between the main entrance and the outdoor program areas at the back. An asphalt walkway runs along the west edge of the building from the northwest corner parking lot, allowing pedestrian access to the outdoor program areas, however, there is no pedestrian sidewalk along its access drive from the drop loop/ main entrance. Most circulation paths/curbing on site are asphalt, in overall fair to poor condition. There are numerous areas (including the edge of road conditions) where the asphalt is cracking, splitting, and crumbling.

Student access to outdoor play areas appears to be primarily via two doors located on the southwest corner of the building, one with ramp access and the other with stairs. Circulation from play spaces to the pond is closed off by a wood and wire mesh fence boundary. A crushed stone path circles the playground, sloping up behind it. Natural stone stairs connect this path to the playground down below. The building's inner courtyard is grass with no paved pedestrian paths.

Exposed ledge was noted in spots throughout the site and inside the courtyard. The area just west of the main entrance and a section of the pond bank were noticeably raised with ledge.

Entrance to site from Story St with parking

Main entrance and asphalt sidewalk

Asphalt curb and sidewalk in poor

Vehicular loop road exit

Western Ave vehicular entrance

Northwest parking lot drive with no sidewalk

Northwest parking lot connection to field

Crushed stone pathway with natural stone

Accessibility:

Most of the outdoor spaces on site are not fully accessible and do not meet ADA requirements. Existing asphalt walkways are cracking, with vegetation often growing between the cracks, making the surfaces inaccessible and difficult for individuals with mobility issues. The site is relatively flat

with significant topographical changes primarily on the north edge of the site. Most of the site's pedestrian asphalt walkways are sloped accessibly; however, the sidewalk at the northeast end of the drop off loop appears to be over 5% slope (verification required with survey) and has significant with severely deteriorated curb ramp at Story St, making it inaccessible. Painted crosswalks and curb ramps are located on site; however, they are missing detectable warning strips. The main entrance and secondary entrance at the building's northern face are both ADA accessible but have a large joint condition where the concrete pad meets the asphalt. Most doors on site are not accessible and have either stairs with code-compliant railings or sit on raised concrete pads. A recessed door on the eastern side of the building has non-compliant wooden rails in very poor condition.

There are two accessible doors with ramps and railings at the northwest and southwest corners of the building that allow access to the outdoor programmed spaces behind the school. The crushed stone pathway surrounding the playground has not been maintained to meet ADA accessibility requirements. The playground itself has poured rubber surfacing which meets ADA and MAAB accessibility requirements.

The gathering space adjacent to the pond, and inner courtyard are not accessible as they have no ADA accessible surfacing or paths. Within the playground, there are several ADA accessible play structures, including the universal carousel, play huts, sensory panels, and musical ensembles.

Cracking at asphalt surface at main entrance

Large joint at main entrance

Steep slope at pedestrian sidewalk

Missing and cracking asphalt at curb ramp

ADA parking spots at front parking lot

ADA entry ramp at southwest door

ADA entry ramp at northwest parking lot

Non-accessible overgrown crushed stone

Accessible play equipment and migrating

Non-compliant wood railings

Site Amenities:

Site amenities on the Essex elementary school site include a pond overlook space, asphalt play area, playground, athletic fields, and an inner courtyard. There are various site furnishings scattered throughout the property, such as benches and picnic tables.

The playground has been installed within the last few years and is a robinia wood playground by Kompan. Structures are in good condition and include a large wooden combined play structure with climbing elements, bridges, ropes, and two slides, a wood-themed ropes course, universal carousel, percussion music panel, dress up cottage, 2 play huts, and a 5-swing set (4 normal, 1 net). An adjacent wood gaga ball pit is also part of the playground. Mulch was observed migrating onto the rubber surfacing due to the lack of edge restraint.

The hardscape asphalt area connects the building to the playground has two half-court basketball courts with hoops in good condition and several painted games, including hopscotch, 4 square, wall bullseye, and class lineup lines, all showing signs of fading. The asphalt pavement is particularly in poor condition, with large cracking and plant growth, as well as deteriorating edge conditions.

The fenced-off pond area features numerous wooden logs arranged in manner that designates an outdoor classroom, as well as a metal bench along the fence in poor condition. Site furnishings in these areas include 3 wood picnic tables, a buddy bench, waste receptacles housed in wooden lockers, and a Rotary Club Peace Pole.

The athletic field has 4 actively used soccer goals, 2 larger in poor condition, and 2 smaller in good condition. 2 Additional goals presumed to be in disuse were observed in the fields surrounding

wetland vegetation. Line painting indicated only one soccer pitch located at the center of the field.

Additional site furnishings observed include metal benches, metal picnic tables, a memorial wood bench with plaque, donation bins (2 clothing, 1 book), concrete-framed storage shed, 2 full bike racks, and roughly 50-foot flagpole with no paved access path or lighting fixtures Across from the main entrance on the grass island.

The inner courtyard has a variety of seating and planting amenities. There are 4 larger wood picnic tables and 2 smaller, rounded ones, all in fair condition. A concrete bench sits next to a memorial plaque. Planting amenities include: 10 large planters (9 wooden and 1 plastic) in conditions ranging from fair to poor, a glass and metal-framed greenhouse in poor condition and overgrown. Scattered about are various rain barrels, planting trays, and rolling compost bins. The courtyard also has a plastic storage shed in fair condition and a wooden doghouse in good condition. There are no formal walkways or paved surfaces within the courtyard.

Benches at main entrance

Bench at front of building

Picnic tables at front of building

Donation boxes

Rotary Club Peace Pole

Pond area bench and logs

Picnic table, buddy bench and Gaga Pit at playground

Waste receptacles at playground

Main playground structure

Swings and play hut

Wood themed ropes course

Theatre and musical sensory play structures

Basketball half court

Fading line painting on blacktop

Wall with painted games and cracked asphalt

Bent picnic table

Large soccer goal in poor condition

Soccer goal in adjacent planting

Bike racks at northwest parking lot

Flagpole at drop-off loop island

Courtyard picnic tables and shed at

Stone memorial plaque and bench at

Doghouse at courtyard with overgrown trellis behind it

Greenhouse and water bins at courtyard

Tree Cover and Vegetation:

The main entrance to Essex Elementary School is flanked by two planting beds full of perennials and a few small specimen trees. Beds are not well maintained with many creeping into the adjacent lawn area, however, most plants (Amsonia, Hydrangea, Lilacs) seem to be healthy and in good condition. Mature Norway Maples dot the entry landscape around the drop-off loop and bus drive, as well as four prominent ones adjacent to Story Street. A few of these at the Story Street edge are in very poor condition, with damaged structures, missing limbs and invasives at their base. All Norway Maples visible on site had indications of Tar Spot, or Rhytisma acerinum. Other notable trees to the front of the building include a large mature deciduous tree in good condition west of the main entrance, and a mature yew tree in good condition against the northwestern corner of the building.

There is sod throughout the site in fair to good condition, with browning at edge conditions near roadways and playground, as well as at the entrance to the interior courtyard from heavy pedestrian use.

The interior courtyard is actively used as an afterschool gardening club. In the center of the courtyard is a greenhouse flanked by six garden beds in various states of use and disrepair full of overgrown plantings. On either side of the greenhouse are two mature Kousa Dogwoods. The entire area is covered in sod in poor to good condition. On the western edge of the courtyard are three large mature shrubs, a young deciduous tree with poor form and an old arbor covered in mature grapevines. On the eastern edge of the courtyard is a recently planted young 'Golden Falls' Weeping Redbud tree in good condition, and small perennial garden bed.

In the southeastern corner of the property is a pond with thick woodland edging that appears to be a healthy ecosystem. Near the pond, on the playground edge are two younger maple trees in good condition. The southern edge of playground is contained by a healthy woodland edge with large

mature trees and shrubs that continue around to the western edge of the property. To the west of the playground is a large grass soccer field ranging from fair to poor condition with some areas that are dry and eroding. The wetland adjacent to the soccer field is densely planted with a mix of natives (Aronia, Solidago) and invasives (Purple Loosestrife).

Perennials at building facade

Mature deciduous tree at front of building

Norway maple at front of building

Norway maples along Story St

Yew tree against building

Shrubs at courtyard

Shrub and grape vines at courtyard

Dogwood trees and planters around

Planting at pond edge

Maple trees by playground

Wetland edge west of field

Woodland edge at field

Wayfinding and Signage:

A school sign with “Essex Elementary School” monument sign with a plaque describing the district sits out in front of the building. Entry and exit signs are located at the loop drive to guide circulation. See civil engineer evaluations for additional information on vehicular signage. By the pond enclosure entrance is a sign honoring the Girl Scouts pond restoration project. The playground has a sign indicating that it was designed for ages 5-12. ADA accessible signage is posted around the building at all doors that apply.

ADA signage at main entrance

Essex Elementary School sign

Girl Scouts sign at pond

Playground sign

Fencing and Site Security:

The only security fencing around the school relates to vehicular traffic or to restrict access to the pond. The south end of the school yard is bound by a woodland edge that closely borders a nearby residential lot with an open pathway between the two, and the western border of the site is bound by a thickly vegetated wetland. The Western Ave entry has a vehicular gate and a secondary 4ft chain link fence gate to restrict traffic to the backside of the school. Branching from that is a 4-foot wood

and wire mesh fence that closes off the pond area from the playground and blacktop areas. A line of boulders is used on the other side of the school to prevent vehicular travel from the northwest corner parking lot into the field.

At the northeast corner of the building, a 4ft chain link fence is built onto a retaining wall that abuts the building's generator and holds up a secondary entrance path. The generator has no protective bollards or barriers around it. Inside the courtyard, a wood picket fence, in poor condition, runs partially through the space denoting the seating and gardening areas. A stone feature wall also runs along the sidewalk of Story St in between the entrance and exit of the drop off loop.

Chain link fence at retaining wall

Vehicular gate at southeast parking lot

Western Ave vehicular gate

Fencing at pond

Courtyard fence

Rustic stone wall

Boulders blocking vehicular access to field

Southern edge open to adjacent property

Site Service:

Service and utilities on the school site are located on the northeast and northwest corners of the school. On the west side are two dumpsters and a trailer. On the east there is a Kohler generator, loading zone, and gas utility located behind a tree.

3.1.4 – EVALUATION OF EXISTING CONDITIONS – PHASE 1 (ESA)

Prepared by Mabbett & Associates, INC.

EXECUTIVE SUMMARY:

The Phase I Environmental Site Assessment (ESA) Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett & Associates, Inc. (Mabbett) on behalf of JCJ Architecture (JCJ) to support the Manchester Essex Regional School District decision making regarding capital investments at Essex Elementary School. The subject property for this Phase I ESA is Essex Elementary School addressed 12 Story Street, which encompasses approximately 9.75 acres of land in Essex, Massachusetts.

Essex Elementary School was originally constructed in 1958, with a gymnasium addition around 1975. The subject property is currently developed with an approximately 53,036 square foot elementary school that has a centrally located courtyard, sub-grade boiler room, classrooms, a kitchen, and cafeteria.

The subject property was undeveloped land in 1888. By 1893, one structure was present on the northern boundary of the subject property by Story Street. Between 1915 and 1919, a roadway bisected the northern portion of the site and had as many as 4 structures built on it. This roadway was gone by 1938. The subject property appeared to have been historically used as agricultural land. The buildings on the subject property were razed sometime between 1952 and the construction of the new elementary school was completed in 1958. The manmade pond in the southern corner of the subject property had also been built at this time. A gymnasium was added to the subject property around 1975.

The area surrounding the subject property consisted of residential use lands.

The Phase I ESA included a site reconnaissance on September 24, 2025, a review of available records, interviews with knowledgeable parties, and a database search. The findings are summarized in the following sections:

<u>Recognized Environmental Conditions (RECs):</u>

During the site reconnaissance, a red colored petroleum staining was observed on the concrete floor of the boiler room, which was located sub-grade in the northeastern portion of the Essex Elementary School. Additionally, a slight petroleum sheen was observed within a pit filled with groundwater in the boiler room. According to Manchester Essex Schools Maintenance Supervisor, after periods of

heavy precipitation, groundwater can seep through the concrete floor and enter the boiler room. Parts of the boiler room floor were observed to be visibly wet during the site reconnaissance. The oily sheen may have originated from a heating oil UST or AST previously associated with the boiler room; however, Mabbett was unable to confirm its size, contents, or historical location at the subject property. The indications observed of an oil release within the boiler room and the potential for that release to have impacted groundwater represents a REC.

Historical Recognized Environmental Conditions (HRECs):

No HRECs were identified on or affecting the subject property

Controlled Recognized Environmental Conditions (CRECs):

No CRECs were identified on or affecting the subject property.

Data Gaps:

According to a municipal record, the Conservation Commission was requested to determine the applicability of the Wetlands Protection Act for the removal of underground heating oil storage tanks at 12 Story Street in March 2002. Mabbett was unable to obtain documentation confirming the removal of a underground storage tank (UST) at the subject property nor environmental conditions associated with the removal of an UST. No records were available for review pertaining to its size, location, or contents. A vent pipe, but no fill pipe, was observed exiting the northeastern wall of the Essex Elementary School near the current generator. Suspected UST piping was observed entering through the wall of the boiler room; however, the source and purpose of this piping could not be confirmed . The lack of information and documentation pertaining to this UST record represents a data gap.

Business Environmental Risks (BERs):

Regulated Building Materials: According to the 2023 Asbestos Hazard Emergency Response Act (AHERA) Inspection Report, documented asbestos containing material (ACM) are present throughout the elementary school. Considering the age of the existing school building, lead-based paint (LBP) was presumably used during original construction and subsequent upkeep through 1978, and such coatings are anticipated to be present on a significant portion of interior and exterior surfaces.. The documented presence of ACM and presumed presence of LBP represents a business environmental risk (BER) due to the added cost of abatement during future demolition or renovation of the building.

Fill Soils: The U.S Department of Agriculture (USDA) Web Soil Survey identified the soils located beneath the elementary school and southeast of the elementary school as Urban land (i.e., urban

fill). The potential for the quality of fill materials to result in elevated environmental premiums for off-site management during future redevelopment activities is considered a BER.

Refer to Appendix Section 3.1.8.14 for the full Phase I ESA report for Essex Elementary School.

Recommendations:

To assess the REC, BER and UST data gap identified in the Phase I ESA, Mabbett recommends performing a Phase II Environmental Site Investigation (ESI) to support the decision making of the site selection process and quantify potential environmental premiums that would be incurred during redevelopment of this property.

Mabbett recommends performing a ground penetrating radar (GPR) survey on the subject property to determine the location, size, and extent of the UST that was indicated to be present in municipal records from 2002. The historical UST would likely be or have been located by the northeastern corner of the school near the subgrade boiler room. The GPR survey will use radar pulses to detect objects or disturbances in the subsurface soils, highlighting anomalies which can indicate the presence of a tank or underground utility lines.

Upon determination of the former UST location, if not still present, soil borings should be advanced within the tank grave to determine if a release of fuel oil the environment has occurred. Soils should be screened, documented, and sampled by a geologist and submitted for laboratory analysis of, at a minimum, extractable petroleum hydrocarbons (EPH), and volatile petroleum hydrocarbons (VPH). If groundwater is encountered during the advancement of soil borings, it may be warranted to install and sample groundwater monitoring wells to assess whether contamination is present in groundwater.

If the UST is still present, it should be closed and removed in accordance with state (310 CMR 80.00) and local guidelines. Any contents located within the tank should be pumped out and transported off the subject property under the appropriate documentation. Upon removal of the UST, sidewall and bottom soil samples should be collected from the tank grave to confirm that no soil contamination is present. If contamination is present, over excavation of contaminated soils or other remedial actions may be warranted in accordance with the Massachusetts Contingency Plan (MCP; 310 CMR 40.0000).

Shallow soil borings should be advanced within the boiler room and completed as groundwater monitoring wells to determine whether the subsurface beneath this area has been impacted by historical heating operations of the property. Groundwater is anticipated to be less than 5 feet below ground surface within the subgrade boiler room. Soils should be screened, documented, and sampled by a geologist and submitted for laboratory analysis. Soil and groundwater samples, at a

minimum, should be analyzed for EPH, VPH, and volatile organic compounds (VOCs).

If urban fill soils are encountered during the Phase II soil boring program, Mabbett may recommend collecting composite pre-characterization soil samples to support the quantification of off-site soil management costs during construction. These soil samples would be analyzed for common landfill (Comm-97-001) and beneficial use (Comm-15-01) required parameters.

Mabbett will document the results investigation in a Phase II ESI Report, which will identify any regulatory reporting obligations associated with releases of oil and/or hazardous materials, and provide recommendations for soil management and potential remediation strategies to support safe and compliant redevelopment.

SITE DEVELOPMENT REQUIREMENTS

  - Opportunities
  - Limitations
  - Conclusion

3.1.5 – SITE DEVELOPMENT REQUIREMENTS

OVERVIEW

The Site Development Requirements for the PDP Submission to MSBA are intended to help in the Site Selection process. This section describes a variety of options that were explored with the Building Committee, the Designer, and the OPM. Three potential sites were discussed and through several iterations of discussions and data gathering efforts, the list was narrowed to the two now being submitted with the PDP.

Consideration of possible site was constrained by the fact that this School District is a Regional District that does not own any property in either Manchester-by-the Sea or in Essex. Presently, the District leases its Middle High School and Manchester Memorial Elementary School sites from the Town of Manchester-by-the-Sea and its Essex Elementary School from the Town of Essex. A copy of the District's lease agreement is included within the Appendix section 3.1.8.9.

Because the District does not have the financial resources to purchase land directly, only properties that the Town of Essex was willing to propose for use by the Regional District could be considered. These included properties presently being leased by the District, including Essex Elementary School and Manchester Memorial Elementary School sites. Another property that was considered was the Apple Street site in the town of Essex.

A limited number of properties were studied through this project as many other sites were previously investigated in the original site investigation effort for the recently completed Manchester Memorial Elementary School in 2022 and the Manchester Essex Middle-High School project of 2009. As no new sites except for the Apple Street site surfaced between that time and now, sites that had been eliminated in the previous study were not revisited during this study as the conditions on those sites did not change and therefore the outcome from the previous studies were still valid.

Due to several factors, upon closer review the Apple Street site was deemed to be unfavorable and was removed from consideration by the School Building Committee.

- No sewer structures were observed within Apple Street. A sewer E1 pump station was observed along Landing Road. It is assumed this services the Essex Transfer Station, and the houses also located on Landing Road. It is unknown at this time whether the existing pump station has excess capacity
- Both Apple Street & Landing Road do not have sidewalks.
- Bridges at both streets would need to be reconstructed to accommodate sidewalks or parallel bridges for the sidewalks
- Per FEMA map 25009C0431H dated 7/8/2025 there is a portion of the 100-year flood plain located at the northwest corner of the site near Landing Road. Area appears to be wooded
- Possible to trip MEPA thresholds depending on design.

The opportunities and limitations of the two viable sites are outlined in the section below.

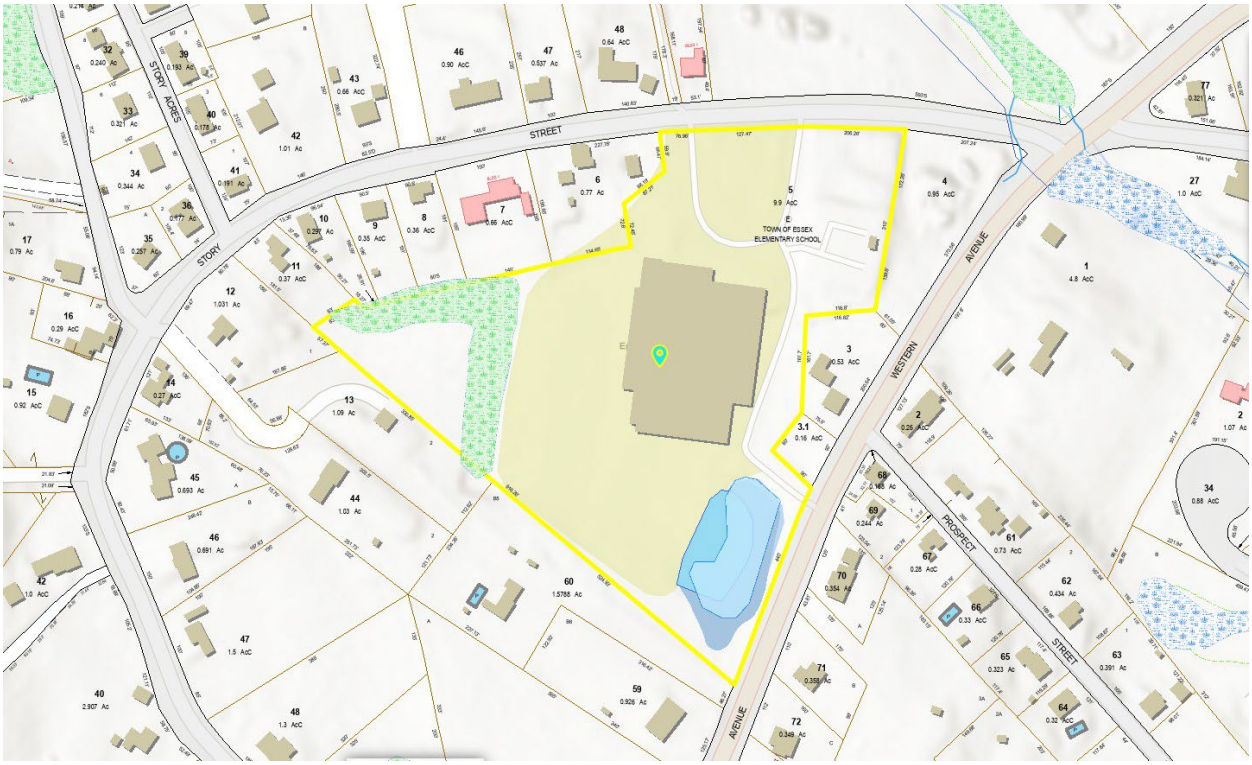
12 STORY STREET, ESSEX, MA

12 Story Steet Existing Site Plan

SITE SCOPE

The Statement of Interest identified the property located at 12 Story Street in Essex, MA as the focus of this project. This is the site of the current Essex Elementary School, a public Elementary School serving the Town of Essex and part of the Manchester Essex Regional School District. The Campus is bordered by residential homes on all sides and a tree and landscaping company to the northeast.

The overall lot area is approximately 9.75 acres. The existing building is in the approximate center of the site. Parking is located on the eastern and northern portions of the site. There is a large playing field to the west of the school building and a blacktop and playground on the southern end of the building.



REGULATORY

The site is in a General Use Zoning District (GUD), per the Town of Essex Bylaws dated September 9, 2025. The district is characterized by single-family and two-family dwellings, including dwellings with home occupations, and small-scale multi-family dwellings, with considerable protected and/or private open spaces and wetlands. The district also includes areas of commercial and agricultural

use, occasional institutional, civic, and light industrial uses, and minor utility facilities. Education is a permitted use in General Use Zoning District (GUD) but there are no specific regulations for educational facilities in the bylaws.

- Minimum Lot Area: 30,000 sf
- Minimum Frontage: None
- Minimum Lot Depth: None
- Front Yard Setback: 50 feet
- Side Yard Setback: 30 feet
- Rear Yard Setback: None
- Maximum Height: 35 feet
- Maximum Stories: 2 1/2
- Maximum Building Coverage: None
- Maximum Floor Area Ratio (FAR): None
- Minimum Open Space: None

The current building is in conformance with General Use Zoning District (GUD) and is an existing conforming permitted use as an educational facility. Special permits are not required for a public school. A site plan review process will be required.

Conservation Commission

Based on a review of the current survey, as well as cross referencing other online resources such as MassMapper, there is a wetland in the west corner of the site with a boundary approximately 200' west of the existing elementary school building, and a pond in the southeast corner of the site with a boundary approximately 70' south of the existing school. There is also a stream with associated wetlands northeast of the site, approximately 200' northeast of the site across Story Street and passing under Western Avenue to the east. The associated wetland resource buffers on the site include Bordering Vegetated Wetlands (BVW) and Banks.

All wetland resource areas are protected by the Massachusetts DEP Wetlands Protection Act Regulations. At this time, the Town of Essex does not have any non-zoning bylaws or ordinances giving the Conservation Commission further power to protect the wetlands beyond the MassDEP Wetlands Protection Act.

For any proposed redevelopment work that impacts the existing wetland resource, it is likely that a Notice of Intent (NOI) will need to be filed with the Conservation Commission to perform activities that are within or that affect the resource buffers. The permit application shall include such information and plans as are deemed necessary by the Commission to describe proposed activities and their effects on the Resource Areas protected by the Wetland Protection Act.

Planning Board

Any new construction or proposed redevelopment activity will require Site Plan Approval from the Essex Planning Board, according to the Town of Essex Bylaws. Section 6-10.7.2.1 states:

6-10.7.2.1: Projects Continuing Established Use of any Building, Structure and/or Site: As part of the required permitting process for new construction, remodeling or reconstruction, or relocation of any building, the Planning Board shall complete a Site Plan Review for the following types of projects, except as provided in 6-10.7.4:

A. Any building(s) with an aggregate ground floor footprint of equal to or greater than 2500 square feet, including additions and/or alterations,
B. Any building to be used for commercial, industrial, office, residential development, municipal, utility and/or recreational purposes,
C. Single family and Two-family dwellings with an aggregate ground floor footprint of 4000 square feet or more, including additions and/or alterations,
D. Projects covered under Special Permit categories in Section 6-4.3 are required to have a Site Plan Review completed, in addition to any other requirements under 6-4.3. e. Projects where more than 3 parking spots are created or added.

The proposed design will need to adhere to Planning Board Rules and Regulations, as well as the Zoning Bylaw. The application will need to go through a public hearing process, which will require appearance in front of the Planning Board at scheduled/advertised meetings. The extent of the new construction option selected will dictate the specific requirements for the Site Plan permit application package.

FEMA Floodplain:

Per MassMapper and the FEMA Flood Map Online Service Center, there are no FEMA floodplains within the vicinity of the site.

MA DEP Groundwater Discharge Permit:

No groundwater Discharge Permit is anticipated.

Town of Essex Board of Health

It is not anticipated that any filings will be necessary with the Board of Health. It is assumed that the existing sanitary service connects to municipal mains and will be maintained and/or updated as necessary. No septic system is anticipated for any of the proposed options. Thus, no Board of Health reviews are anticipated.

EPA NPDES Construction General Permit (CGP) and Stormwater Pollution Prevention Plan (SWPPP)

A NPDES Construction General Permit (CGP) from the New England EPA (i.e. eNOI) and a SWPPP will need to be obtained/developed by the contractor prior to the start of construction for any land disturbance that exceeds one (1) acre. It is anticipated this will be required for the project. Approval for the submitted eNOI can be obtained within fourteen (14) days of approval.

Building Permit

Any new construction or proposed renovation will likely require a building permit. All building, electrical, plumbing, gas, and fire department permits can be applied for online through the Inspectional Services Town Portal.

NHESP Priority Habitats of Rare Species and Rare Wildlife

The project site is not located within Priority Habitat or Estimated Habitat of Rare Wetlands Wildlife as determined by reference to data provided by the Mass. Division of Fisheries and Wildlife – Natural Heritage and Endangered Species Program (NHESP) available on Mass mapper.

MEPA (301 CMR 11.00)

The Massachusetts Environmental Policy Act (MEPA) and the corresponding 301 CMR 11.00 code was created to provide the MassDEP the opportunity for public review of the potential environmental impacts from projects that meet or exceed the thresholds outlined therein.
Depending on the size and scope of any new development, MEPA permitting may be required for the site. The thresholds for an Environmental Notification Form (ENF), or an Environmental Impact Report (EIR) for more significant land development impacts, include (but are not limited to) the following:

1. Direct alteration of 25 or more acres of land.
2. Creation of five or more acres of impervious area.
3. Alteration requiring a variance in accordance with the Wetlands Protection Act.
4. New withdrawal or Expansion in withdrawal of: 2,500,000 or more gallons per day (gpd) from a surface water source.

A full review of thresholds shall be completed once a design option is chosen, and the project moves into Schematic Design. Additionally, if a Project requires MEPA review in accordance with 301 CMR 11.01(2) and one or more Environmental Justice Populations are located within the Designated Geographic Area around the Project (within one mile of the project), measures shall be undertaken to provide public involvement opportunities for Environmental Justice Populations.

UTILITIES

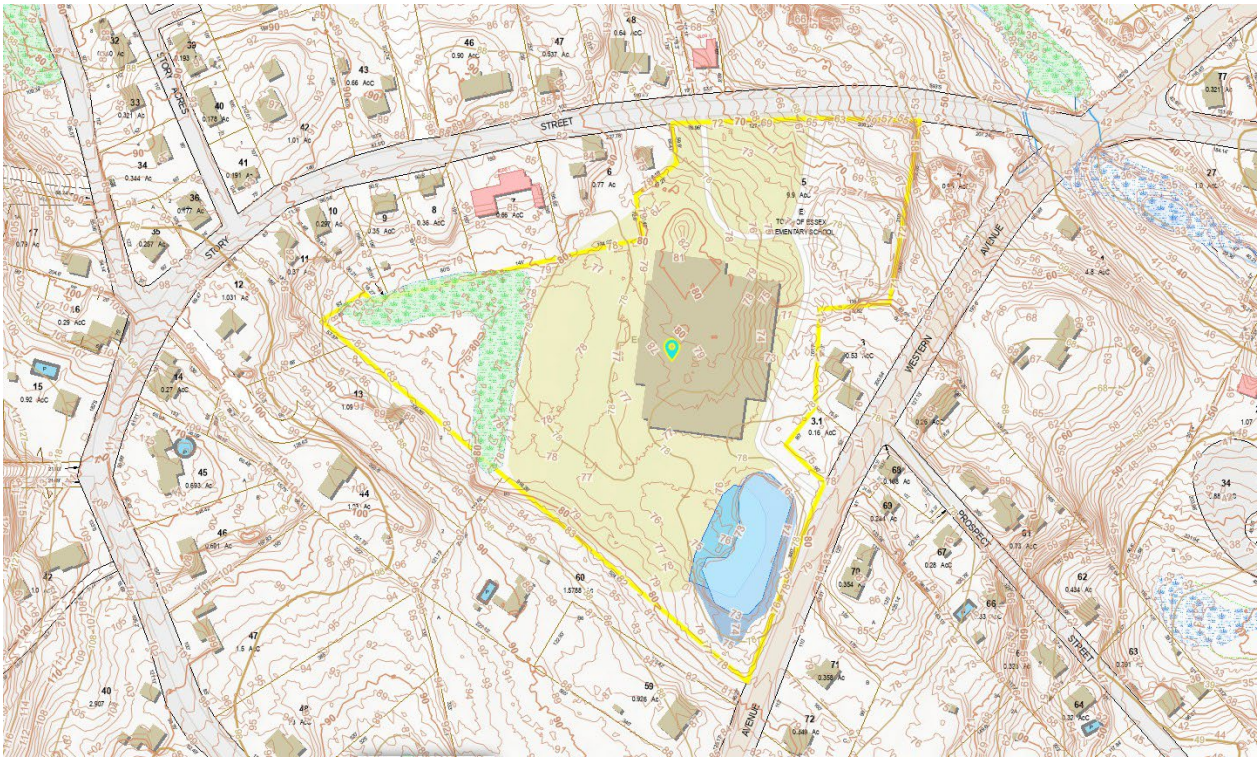
It is anticipated that all utilities will be reviewed by the DPW and Water & Wastewater departments as part of the Site Plan review process and Conservation Commission NOI submission. In particular, the DPW will provide additional comments with regards to the sanitary systems, water systems, and stormwater design as necessary according to the standard Planning Board review process. All other utilities will need to be coordinated with the corresponding utility provider prior to the permitting effort.

Town of Essex Stormwater Management Regulation

Any major proposed redevelopment or renovation of the site will require compliance with the Town of Essex Stormwater Management Regulation. These regulations apply to any project that meets or exceeds the following triggers:

1. A Land Disturbance Permit is required for disturbance of equal to or greater than one (1) acre of land, or for the disturbance of any amount of land where the proposed use is a land use of higher potential pollutant loads pursuant to the Massachusetts Stormwater Management Standards.
2. The Stormwater Authority may require a permit for a project of any size which has caused or can reasonably be expected to cause or contribute to a violation of State Water Quality Standards or as deemed necessary by the Stormwater Authority.
3. Disturbance of Land, New Development, or Redevelopment that is subject to jurisdiction under the Massachusetts Wetlands Protection Act and demonstrates compliance with the

Massachusetts Stormwater Management Standards and the Essex Stormwater Management Bylaw and Regulations as reflected in an Order of Conditions issued by the Conservation Commission will not require a separate Land Disturbance Permit. The entire project and construction activities and all Stormwater Management must be fully within the jurisdiction of the Conservation Commission.



4. A project that has been reviewed and definitively approved by the Planning Board under the Massachusetts Subdivision Control Law or the Special Permit or the Site Plan Review provisions of the Essex Zoning Bylaws, may be deemed as acceptable under the Stormwater Management Bylaw only if the entire project and construction activities, including all land disturbance, adhere fully and meet the requirements as specified in the Stormwater Management Bylaw and these regulations adopted under the Bylaw. The Planning Board's issued Definitive Subdivision Permit, Final Approved Plans, and/or applicable Special Permit or Site Plan Review and associated permit conditions must require compliance with the Stormwater Management Bylaw and these associated Regulations. A separate Land Disturbance Permit will not be required. A copy of the final approved plans and approved permit will be shared with the Stormwater Authority.

Given the above requirements, a stormwater permit will likely be required for any of the proposed renovation or redevelopment options. The code compliance option is also likely to require a stormwater permit, pending a determination from the Planning Board. The official Stormwater Authority is the Town of Essex DPW, but the stormwater permit application can be submitted in conjunction with the Conservation Commission NOI and the Planning Board Site Plan Application. The DPW will provide comments on the stormwater design, as well as the other relevant site and utility components as part of the Planning Board Review Process.

SITE ANALYSIS

TOPOGRAPHY

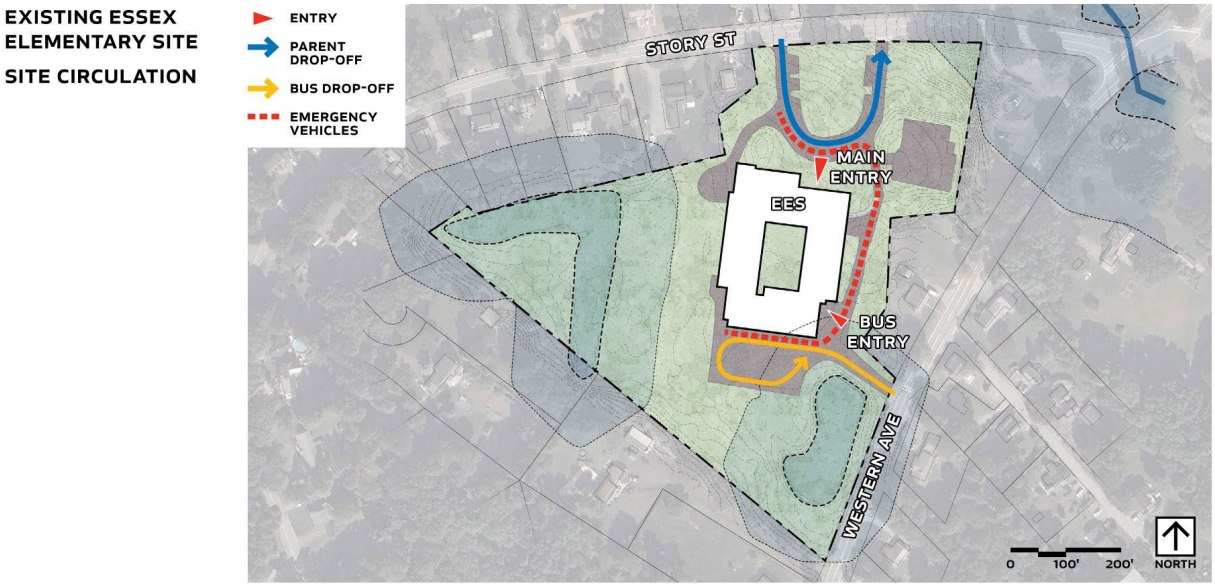
Topography is a significant criterion in identifying candidates for a building site. The existing site features insignificant elevation change across the majority of the site resulting in a relatively flat and buildable site. The only significate elevation change is on the east side of the site where the current building utilizes this elevation change to allow for a walk out basement level. Most of the site lays in elevations 81 feet to 78 feet from west to east with the significate slope drop mostly at the northeastern corner of the site down to 58 feet. The existing playing fields, located on the west side of the site are at the flattest area of the site, though adjacent to wetlands they provide a highly favorable future building site. Some exposed ledge is visible on the northern side site adjacent to the existing cafeteria as well as visible ledge in the unexcavated portions of the existing school basement.

Site Topography

SITE ACCESS AND CIRCULATION

General and emergency vehicular access is provided off Story Street and Western Ave. From Story Street, there is access to a one-way vehicular loop that approaches the front of the school building. There are parking spaces located on the interior of the loop and access to two parking lots. One parking lot is situated directly west of the front of the school building, while the other is northeast from the building. There is another entrance from Western Ave which is signed to be for authorized vehicles only, and leads to some additional parking spots before connecting to the main loop. This road is a one way street, and vehicles are meant to exit through the end of the loop onto Story Street. There is also a bituminous play area on the southern side of the building that is blocked by a vehicular gate, but could be accessed by an emergency vehicle if necessary.

Buses enter from Western Avenue. The loop around the asphalt play area at the south end of the school dropping of students in the middle. The either exit back out onto Western Avenue or follow the access road on the east side of the school till it merges with the parent drop off loop at the northeast corner of the school and then exit onto Story Street on the eastern side of the front entry loop.



Pedestrian access is provided from both Story Street and Western Ave. Story Street features a sidewalk on the same side of the street that the building is on, and the sidewalk continues along the entirety of the loop road and provides pedestrian access to the front entrances to the building. Crosswalks are available at any intersections along this path, but there is no signage indicating the crosswalks. There is also a sidewalk on the side of Western Ave which the school is accessible from, but there are no sidewalks on the drive leading to the school from Western Ave. A sidewalk runs along the entire length of the western wall of the school, adjacent to the field. This sidewalk provides access from the front of the school to the bituminous play area in the back of the school. The paved play area serves as a means for pedestrians to access to both the playground and the rear entrance into the school.

Site Access and Circulation

- Comply with accessibility requirements of the Massachusetts Architectural Access Board (MAAB) and Americans with Disabilities Act (ADA) Design Standards See “Accessibility Requirements” section for more detail. Generally, provide grading that minimizes need for wheelchair ramps and steep walkways and that maximizes multifunctional, pedestrian-oriented space.
- Arrange walkways and barriers to facilitate pedestrian flow to controlled and secure access points.
- Arrange walkways and barriers to connect and enhance existing pedestrian circulation patterns on the site.
- Provide for safe and efficient drop-off and pick-up by having a separate bus drop-off and parental drop-off area and a clearly discernible main entrance.
- Incorporate a fire lane & emergency access route around the perimeter of the building.
- Provide adequately sized service areas and loading areas with adequate separation from play areas and pedestrian circulation.

Parking and Paving

- Full depth replacement asphalt paving is recommended, with a mill and overlay at minimum.
- New configurations should, wherever possible, be provided in areas of the site already impervious/paved.
- Provide MAAB/ADA compliant handicapped parking spaces and access aisles.
- Provide appropriately sized and configured service and loading areas.

Existing Site Circulation

PARKING

There are approximately 88 parking spaces at the existing elementary school. There are 4 parking locations present on the premises. The interior side of the loop features a row of 35 parking spaces. A small parking area on the west side of the school contains another 6 parking spaces. A larger parking area on the northeastern side of the property has an additional 36 parking spaces, as well as a designated area for a bus to park. Adjacent to the building on the southeast side, another 11 parking spaces are present. The bituminous play area to the south of the school building appears that it may have been designed to be a parking lot, but does not seem to be currently used for this purpose. No parking spaces in any of these areas have wheel stops or curbs in front of them.

The school is served by 2 buses that enter from Western Avenue and queue at the south end of the school. There is enough room onsite and limited buses that service the school that the queue of buses should not extend into either street and obstruct traffic during drop-off.

Service access is available through the loop road off Story Street as Well as the secondary entrance off Western Ave.

There are no sidewalks on the access road from Western Ave. It appears that the intention is for pedestrians to only be able to access the school via the loop extending from Story Street.

Paving and curbing will be specified during the design process. Asphalt paving of vehicular driveways and parking is typical. Walkway paving may include different materials such as asphalt, concrete and unit pavers based on location and use.

Existing curbing is present along all existing sidewalks. The majority of the loop features asphalt berms, which are in poor condition. The sidewalk in front of the building at the bus drop off area is granite that has been painted yellow. The access road on the east side of the building lacks sidewalks as well as curbing. New curbing will include vertical granite at walkways and high impact areas and possibly Cape Cod asphalt berm at low impact areas along landscaping.

STRUCTURES AND FENCES

The site currently supports one elementary school building only. There is one small greenhouse and portable shed within the building courtyard. The school site is generally not fenced. Play spaces, including the playground and play field, border directly on adjacent planting and properties.

A chain link fence and vehicular gate separate parking and vehicular circulation on the east from the playground. In addition, a 4'high chain link fence functions as a guard adjacent the loading dock retaining wall. The pond is separated from the play area by a 4-5' high rustic wooden fence backed with metal mesh in poor condition; The northern entry point near the pond is gated but not fenced.

The rest of the school is unfenced, using natural barriers to contain space. There is a spatial break between the play fields and southern service parking area created with 10 large boulders.

Proposed design should include perimeter fencing adjacent outdoor play spaces (including outdoor classroom, playground, and play fields), review and possible replacement of existing fencing, storage for maintenance equipment, and courtyard storage for portable outdoor play equipment, and teaching tools.

ACCESSIBILITY

Access to doorways around the building are not ADA compliant. One entrance at the front of the school has a steep slope approaching it, and there is a rear entrance that is only accessible from a flight of stairs. Ramps leading to other entrances have slopes that are steeper than ADA code permits.

Pedestrian curb ramps along the loop road do not have detectable warning surfaces and are showing signs of degradation. Accessible parking along the drop-off loop is limited, with only two (2) accessible parking spaces available. The grades in these spaces are not ADA compliant, with cross slopes of up to 3.4%. Accessible parking signs are not present at either parking space, and they are only indicated by the striping on the asphalt. Portions of paved walkways exceed 1H:20V without handrails or landings.

Currently, grades in several locations are not compliant with ADA standards. Due to surface cracking and subsurface settling, the bituminous play area behind the building has grades of up to 7.7% and the walkway to the west of the building has cross slopes over 3%. Ramps to the building have slopes of greater than 10%, making current accessibility into the school difficult and noncompliant with code.

Image 1: Curb ramp in poor condition with no detectable warning surface. Slopes and cracks likely exceed ADA regulations.

Image 2: Rear entrance (at southeast) that is not currently ADA accessible.

Image 3: Cross slope of 3.4% on existing accessible parking space exceeds the max slope of 2%.

Image 4: No signs at accessible parking spaces

Image 5: Slope of 10.9% on ramp exceeds ADA regulations of 8.33%.

EMERGENCY VEHICLE ACCESS

Emergency vehicles may access the site from Story Street or from Western Ave. It may be difficult for emergency vehicles to properly traverse the site because all roads are one lane, so any vehicles obstructing the path may impede the movement of emergency vehicles. A full review of the existing emergency access challenges or issues with the Fire Chief and other relevant Town officials is recommended to determine what access updates may be needed.

SAFETY AND SECURITY REQUIREMENTS

Safety and security at the school campus are paramount. The Story Street site currently features building-mounted exterior surveillance cameras, and planned upgrades will expand perimeter coverage using high-resolution, low-light, and infrared fixed and multi-lens cameras. Integrated video analytics, such as motion detection, will help establish a virtual perimeter and enhance monitoring of driveways, parking areas, playgrounds, and outdoor classrooms. To maximize coverage while maintaining visual harmony, cameras will be discreetly mounted on the school façade, soffits, and light poles. All exterior cameras will utilize Power over Ethernet (PoE), specified for environmental durability and surge suppression, and supported by UPS and emergency power. PoE provides multiple advantages, including centralized low-voltage power management, the ability to activate or deactivate devices based on schedules or events, and reduced material usage by eliminating separate power cabling, contributing to improved efficiency and sustainability.

Parking areas, parent drop-off and pick-up loops, and bus circulation zones will be clearly designated, with separate paths for buses and cars to support safe and orderly student transport. After the start of the school day, only the main front entry will remain open, accessible through a secure visitor entry sequence. Thoughtful site planning, including proper lighting, unobstructed sightlines, secure fencing, well-placed bollards, and intuitive wayfinding, helps create a safe and well-managed school environment. Effective lighting enhances visibility for surveillance, discourages unsafe behavior, and supports the safe movement of vehicles and pedestrians. Clear sightlines enable staff and first responders to quickly assess conditions, while fencing around playgrounds and activity areas establishes secure boundaries, reduces opportunities for unauthorized access, and ensures students remain within supervised zones. Gates, bollards, and other fixed barriers further restrict vehicle access near pedestrian walkways, accessible routes, and building entrances, creating controlled circulation patterns during school hours.

Transition zones and delineated pedestrian pathways reinforce separation between people and vehicles, reducing conflicts and improving safety. Traffic-calming measures, such as narrowed lanes, raised crosswalks, textured pavement, and strategic signage, help maintain safe driving speeds and increase driver awareness in high-pedestrian-activity areas. Complementing these physical measures, intuitive wayfinding, supported by clear signage and identifiable entry points guides individuals to their destinations while discouraging access to restricted areas. Effective wayfinding also assists emergency responders and helps staff quickly identify unusual or unsafe movements. When integrated into the overall security strategy, coordinated lighting, clear sightlines, fencing, bollards, pedestrian-vehicle separation, traffic-calming features, and wayfinding collectively

strengthen situational awareness, streamline daily operations, and improve the school's readiness to prevent, detect, and respond to potential security concerns.

Access from Story Street will be maintained and enhanced to accommodate the largest emergency vehicles. Site and landscape design are critical in providing a safe educational environment and ensuring occupants can evacuate safely during emergencies. Key strategies include defining transition zones between vehicular and pedestrian areas with barriers that stop vehicles while maintaining unobstructed pedestrian egress. Clear sightlines at eye level and from security cameras, combined with appropriate site lighting, provide staff and first responders with the visibility and reaction time necessary to recognize and respond to potential hazards.

Image ##: Manual swing gate at the rear of the site

ATHLETIC FIELDS AND OUTDOOR EDUCATIONAL SPACES

The site has one grassed multi-purpose field area (approximately 350' x 175') with several soccer nets present. The site also has one paved play area (approximately 175' x 100'), including 2 basketball hoops and striping for four-square games. A playground is located on the southern side of the site behind the paved play area including a swing set, a gaga ball pit, and several play structures for climbing. The site has no sports lighting or irrigation.

The site also includes an internal courtyard used for gardening and outdoor learning that has no accessible surfacing or paths.

Impact to the playground and field depends on the scheme. All schemes should provide the following:

- Playground with poured-in-place rubber surfacing

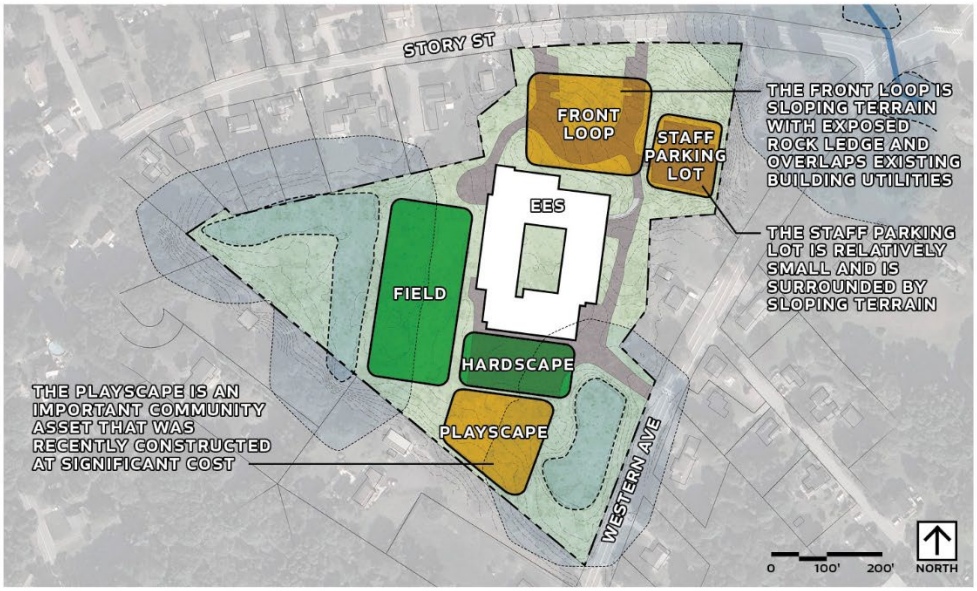
- Natural turf athletic field (not regulation size)
- Hardscape paved play area with basketball hoops and line painting games
- Outdoor classroom with accessible paving
- Space for gardening programed with accessible paths and raised beds
- Site furnishings, including tables and chairs, accessible seating, bins, benches, and bike racks.

Image 6: Grassed athletic field

Image 7: Playground and basketball hoop

Image 8: Paved play area behind building

CODE REQUIREMENTS



The preferred building solution and site design will fully meet current accessibility regulations and building code requirements. This includes compliant accessible parking, pedestrian routes, curbs ramps, stairs, and ramps with associated handrails as well as compliant guard railings along pedestrian routes located above walks greater than 30-inches high.

BUILDABLE AREA

After careful consideration of the attributes, opportunities, and limitations of this 9.75± acre site, the focus has narrowed to approximately 6.0± acres of land outside of the existing building footprint for further study in the Preferred Schematic Report factoring open space and zoning setback. Any addition to the existing building would likely take place in the open areas west or south of the existing building.

EXISTING ESSEX ELEMENTARY SITE

BUILDABLE AREA

Buildable Area

OPPORTUNITIES

The existing school, as sited, preserved the flatter portion of the western side of the site for outdoor recreational fields and activities. This placed the existing school at the center of the site separating the building from the surrounding residential homes. A single level courtyard style building was an effective use of building massing and orientation. The building is set back from the main road, allowing for parking and circulation with visibility to the main entrance. Renovation options of the existing school would explore the potential to restore this original design intent and focus on way to restore and better utilize the interior courtyard. Siting of any new additions would also seek to harvest as much of the sun's energy as possible, reducing energy use, operational costs and increasing comfort for students and staff. The design team employs advanced modeling and diagnostic tools to analyze optimum solar orientation on the site. This iterative method informs the building design throughout the process and will enable the team to make informed decisions early.

New building options will ideally be located on the site to allow continuous operation of the existing school facility throughout the construction schedule. As such, they will likely be sited on the south and western portion of the site in the location of the existing field and blacktop play surface. Other new building options will explore a phased approach to construction which will allow the new building to be situated in a similar footprint to the existing facility phased in a manor to allow continuous operation of the existing school facility. The use of portables or off-site facilities will be explored, though the preference would be to phase the new building to allow for swing space to move the students around during construction within the confines of the new and partially demolished portions of the existing school. Multiple options studied can be reviewed section 3.1.6 Preliminary Evaluation of Alternatives. These new options will also benefit from the same energy modeling software and workflow, ensuring the highest performance school building possible within the project constraints.

The design team will develop the siting, massing and placement of glazing and openings to maximize the solar benefit and limit the negative effects of glare and unwanted solar heat gain in cooling seasons.

LIMITATIONS

This site's limitations include the following issues. The lack of access to the rear of the site. There will be a need to relocate playing field and playground in several of the new building options causing the lack of use of these assets during construction. This is visible ledge around the site as well as the presence of a small pond and some wetlands to the west. There are also possible impacts to the neighboring properties if new construction is located close to property setbacks. There are also challenges associated with phase construction and maintaining operations of portions of the existing school throughout construction.

CONCLUSION

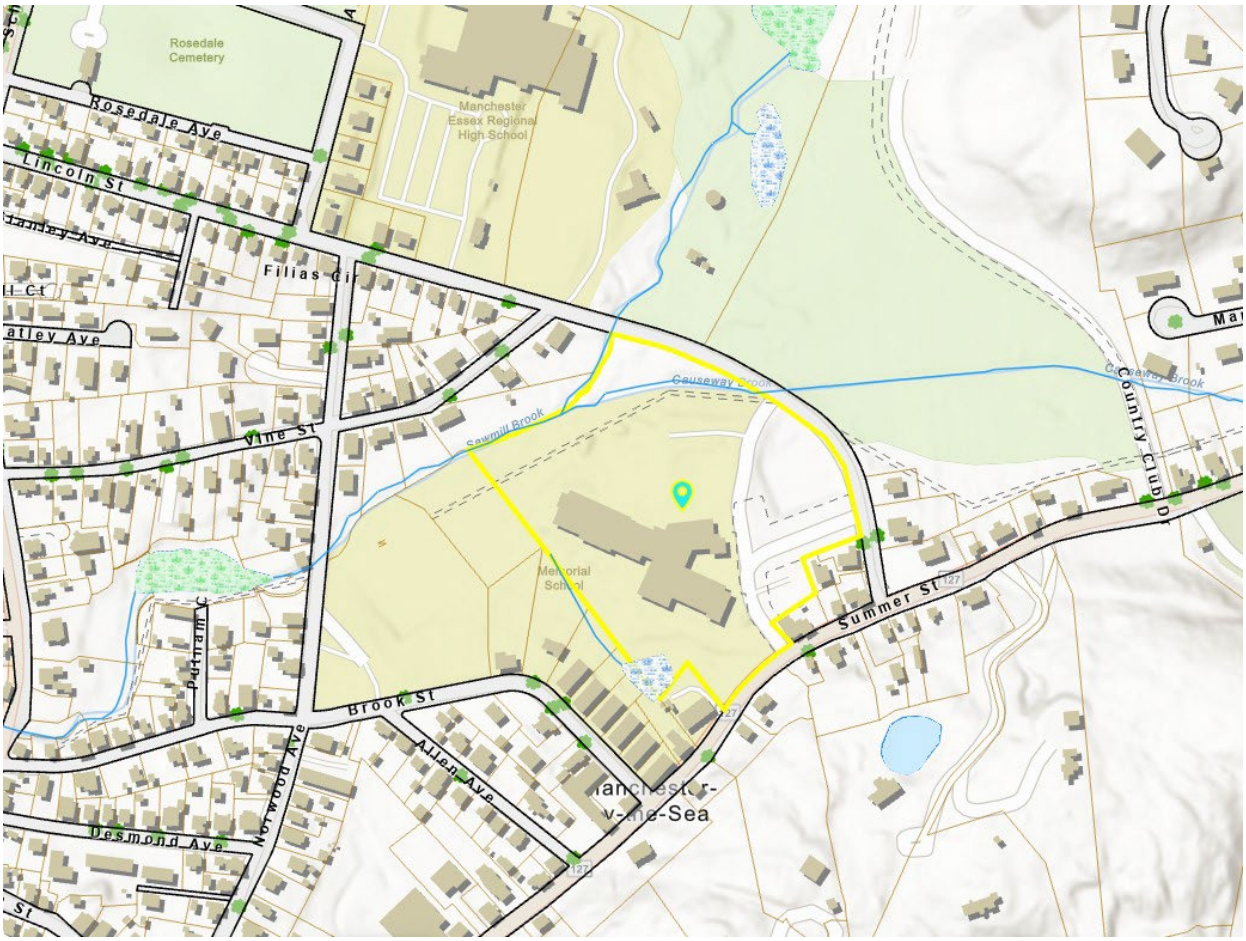
After careful consideration of the attributes, opportunities and limitations of this site, the School Building Committee decided it was favorable to advance the 12 Story Street site for further study in the Preferred Schematic Report.

43 LINCOLN STREET, MANCHESTER-BY-THE-SEA, MA

43 Lincoln Steet Existing Site Plan

SITE SCOPE

The existing Manchester Memorial Elementary School, located at 43 Lincoln Street, Manchester-By-The-Sea, MA is a public Elementary School serving the Town of Manchester-By-The-Sea. It was recently constructed on the site of the former elementary school and completed in 2022. The Campus is bordered by residential homes to the south and west, the Essex Country Club to the northeast and Manchester Essex Regional Middle Highschool to the north.
The overall lot area is 11± acres. The existing building is centrally located on the site with most of the parking to the north and east of the building. Any new construction would likely take place on the eastern side of the building in the location of the current faculty parking lot, requiring the removal or relocation of the town-owned tennis courts to facilitate new parking and student drop-off.



REGULATORY

Memorial Elementary School is located at 43 Lincoln Street in Manchester-by-the-Sea, MA. The property is presently under the control of the Manchester-Essex Regional School District via a lease with the Town of Manchester-by-the-Sea, MA. A copy of the lease agreement is included in the Appendix. The Memorial Site is presently zoned G – General District. In this zone, educational

facilities are allowed by use, and the current school building is an approved entity. The zoning setbacks and limitations are as follows:

- Minimum Frontage – 60 feet
- Minimum Lot Width – 50 feet
- Front Yard Setback – 5 feet
- Side Yard Setback – 10 feet
- Rear Yard Setback – 10 feet
- Maximum Building Coverage – 40%
- Maximum Lot Coverage – 70%
- Maximum Floors – 2-1/2
- Maximum Height – 35 feet
- Minimum Lot Area – 6000 square feet

The current building is in conformance with G - General District and is an existing conforming permitted use as an educational facility. Special permits are not required for a public school. A site plan review process will be required.

Conservation Commission

See the delineation report by Rimmer Environmental and previously issued ORAD (Mass DEP # 039-0782) that has now expired, but delineated Perennial stream, inner/outer riparian, inland bank, bordering vegetated wetlands, wetland buffers, and Zone I & II. For any proposed redevelopment work that impacts the existing wetland resource, a Notice of Intent (NOI) will need to be filed with the Conservation Commission to perform activities that are within or that affect the resource buffers. The permit application shall include such information and plans as are deemed necessary by the Commission to describe proposed activities and their effects on the Resource Areas protected by the Wetland Protection Act.

Flood plain elevation per town bylaws on site is 18.25. the western portion of the site is dedicated to flood plain restoration area. The existing tennis courts and rain garden are below elevation 18.25. It is highly likely that the by-law flood plain extends to this area but would need to be confirmed with the Manchester Conservation Commission.

Planning Board (assume 3-4 months):

We are anticipating submitting to Planning Board for Site Plan Approval when the project would be in DD. It is assumed that there will be up to 3 hearings/ meetings. Planning Board Site Plan Approval application will be concurrent with the conservation submission. The submission will require plans to be prepared to the level of 90% Design Development at a minimum. Hearings are held twice a month on the 2nd and 4th Mondays.

As part of the Planning Board submission, other consultants will need to submit plans for the site plan review application. The required plans to be submitted showing landscaping and lighting/electric site plans and details are to be provided by the Landscape Architect and the Electrical Engineer.

MA DEP Groundwater Discharge Permit:

No groundwater Discharge Permit is anticipated.

Board of Health

It is not anticipated that any filings will be necessary with the Board of Health. It is assumed that the existing sanitary service connects to municipal mains and will be maintained and/or updated as necessary. No septic system is anticipated. Thus, no Board of Health reviews are anticipated.

NPDES SWPPP

A NPDES Construction General Permit (CGP) from the New England EPA (i.e. eNOI) and a SWPPP will need to be obtained/developed by the contractor prior to the start of construction for any land disturbance that exceeds one (1) acre. It is anticipated this will be required for the project. Approval for the submitted eNOI can be obtained within fourteen (14) days of approval.

Building Permit

Any new construction or proposed renovation will likely require a building permit. All building, electrical, plumbing, gas, and fire department permits can be applied online through the Inspectional Services Town Portal.

NHESP Priority Habitats of Rare Species and Rare Wildlife

The project site is not located within Priority Habitat or Estimated Habitat of Rare Wetlands Wildlife as determined by reference to data provided by the Mass. Division of Fisheries and Wildlife – Natural Heritage and Endangered Species Program (NHESP) available on MassMapper.

MEPA

The Massachusetts Environmental Policy Act (MEPA) and the corresponding 301 CMR 11.00 code was created to provide the MassDEP the opportunity for public review of the potential environmental impacts from projects that meet or exceed the thresholds outlined therein.
Depending on the size and scope of any new development, MEPA permitting may be required for the site. The thresholds for an Environmental Notification Form (ENF), or an Environmental Impact Report (EIR) for more significant land development impacts, include (but are not limited to) the following:

1. Direct alteration of 25 or more acres of land.
2. Creation of five or more acres of impervious area.
3. Alteration requiring a variance in accordance with the Wetlands Protection Act.
4. New withdrawal or Expansion in withdrawal of: 2,500,000 or more gallons per day (gpd) from a surface water source.

A full review of thresholds shall be completed once the project is approved. Additionally, if a Project requires MEPA review in accordance with 301 CMR 11.01(2) and one or more Environmental Justice Populations are located within the Designated Geographic Area around the Project (within one mile of the project), measures shall be undertaken to provide public involvement opportunities for Environmental Justice Populations.

UTILITIES

Water:

The domestic water supply for the new school extends from the same 6-inch water line for one service and through a new tap in Summer Street for the western service. One 6-inch line extends along each side of the new building. The service on the west side of the building serves domestic and fire protection needs of the building and serves a hydrant located at the northwest corner of the new building. The service on the east side of the building supplies a hydrant is located near the building entrance.

It is assumed the addition would be fed internally and no new external water line would be required. Refer to the plumbing facility assessment section for further in-depth analysis of the building's domestic and fire protection service and capacity

Sewer:

The new building is served by three 6-inch sanitary sewer services. Two services are located on the north side of the building for sanitary sewer conveyance, with one sanitary sewer connection on the south side. There is also a 4-inch service for kitchen waste, with an exterior grease trap provided on the south side of the building prior to connection to the sanitary service.

It is assumed that the addition would have an internal connection and tie into the existing sewer line. Refer to the plumbing facility assessment section for further in-depth analysis of the internal building's sewer capacity.

Gas:

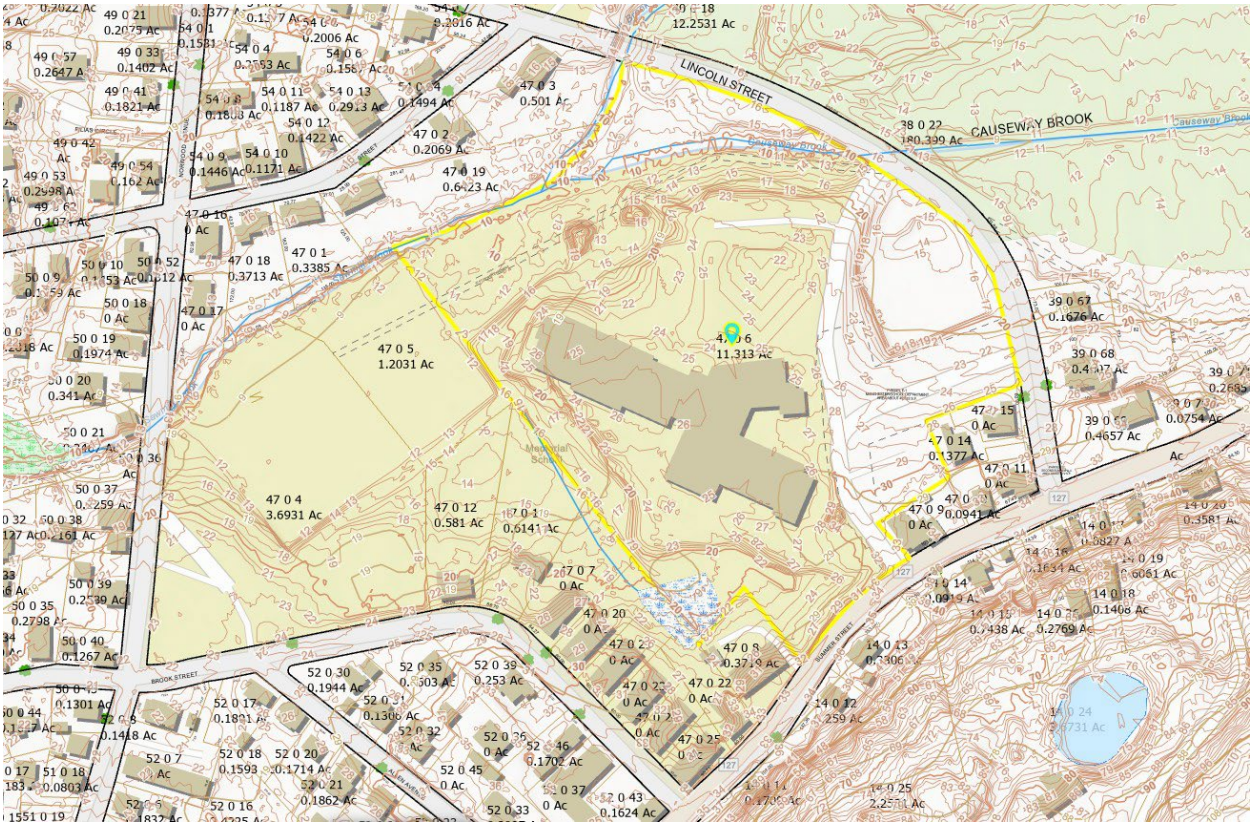
Gas service extends along the south side of the school from a new connection in Summer Street to the gas connection at the new building. Refer to the plumbing facility narrative section for further in-depth analysis of the building's gas service and capacity.

Stormwater Management:

The Elementary School site's stormwater runoff is treated by a stormwater management system. The runoff from the vehicular impervious areas on the north side of the site is collected via deep sump catch basins and manholes, directed through a stormwater quality unit for water quality treatment, and ultimately enter a subsurface infiltration basin, with overflow stormwater volume discharging to the west side of the site towards Causeway Brook.

Hardscapes on the east side of the property and a portion of the building roof is collected by a series of area drains, directed to an LID rain garden feature for water quality treatment prior to

infiltration to groundwater with overflow structures provided per the Massachusetts Stormwater Handbook requirements out letting to the south of the property.



The south and west sides of the property include a series of catch basins and area drains conveying stormwater to stormwater quality units prior to discharge to the west and south sides of the property respectively.

A stormwater management system would need to be constructed within the footprint of the new parking lot for the additional impervious area, and the building addition.

SITE ANALYSIS

TOPOGRAPHY

The existing site features significant elevation change along the western and southern end of the site. These elevation changes were part of the previous MSBA project to construct the Manchester Memorial Elementary School in 2022 for the purpose of both flood water management and to create a relatively flat portion of the site for the purpose of constructing the new school. The existing faculty parking located on the eastern side of the site is the only available area for the purpose of constructing an addition on the site that would not result in major redesigning of both the flood water storage and underground water retention systems. The site is surrounded by wetland and water riparian areas further limiting the available buildable area.

Site Topography

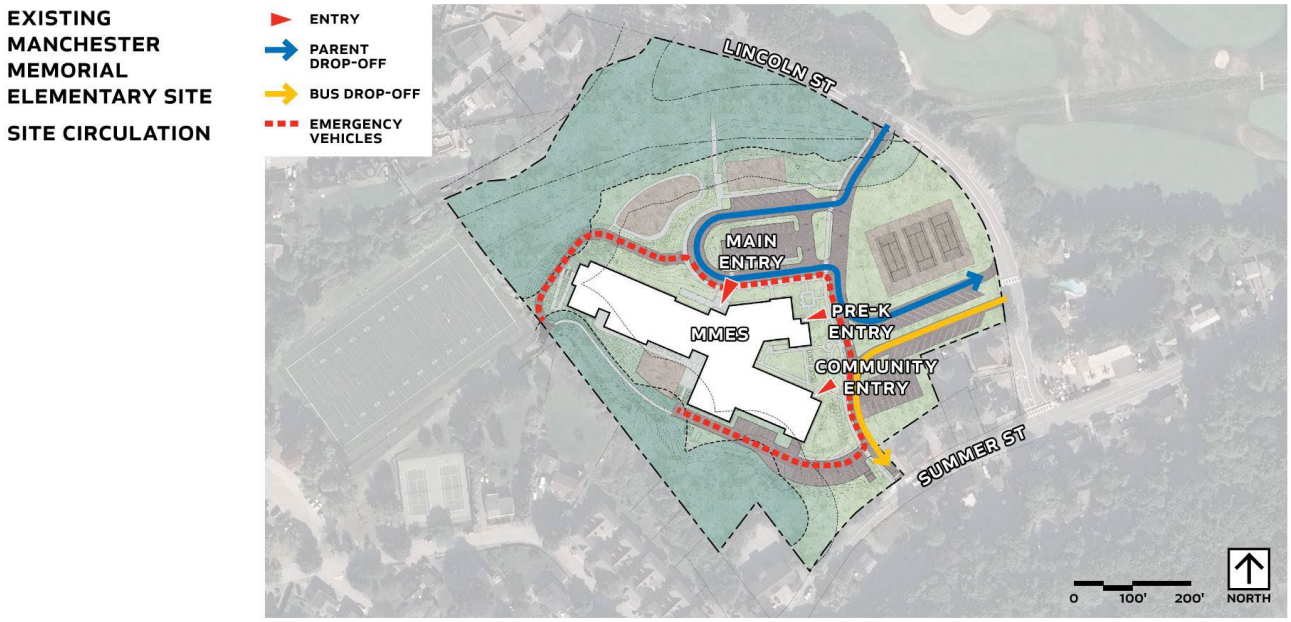
SITE ACCESS AND CIRCULATION

There is an emergency vehicle access road around three quarters of the building perimeter. A portion of the access road southwest of the building is gated and for emergency vehicle access only.

There is a separate parent drop off loop that enters to the north from Lincoln Street, loops around the parking lot at the north side of the school and drops students off at the main entrance. Then loops back out a second eastern exit back onto Lincoln Street. The roadways in this loop are all one way to keep traffic flowing in the same direction. Along this loop there is a secondary drop-off location at the northeast corner of the building for Pre-K student drop-off

There is a secondary bus drop off loop that enters from Lincoln Street at the eastern entrance and loops along the eastern edge of the school. This loop is also one way and exits at the southeast end of the school onto Summer Street.

There are pedestrian sidewalks and access on all sides of the school. Include multiple locations for bike parking. There is also a pedestrian bridge to the north of the site the connects over Lincoln Street for pedestrian or bike access to the middle high school which is located to the north of the existing school also on Lincoln Street.



Site Access and Circulation

- Comply with accessibility requirements of the Massachusetts Architectural Access Board (MAAB) and Americans with Disabilities Act (ADA) Design Standards See “Accessibility Requirements” section for more detail. Generally, provide grading that minimizes need for wheelchair ramps and steep walkways and that maximizes multifunctional, pedestrian-oriented space.
- Arrange walkways and barriers to facilitate pedestrian flow to controlled and secure access points.
- Arrange walkways and barriers to connect and enhance existing pedestrian circulation patterns on the site.
- Incorporate a fire lane & emergency access route around a majority of the perimeter of the building.
- Provide adequately sized service areas and loading areas with adequate separation from play areas and pedestrian circulation.

Parking and Paving

- Per Manchester -by-the-sea Zoning Bylaw
    - Off-street parking spaces shall be designed with minimum dimensions of 9 feet by 18 feet. In parking areas of more than six (6) spaces, one third of the spaces may be compact car spaces, with minimum dimensions of 8 feet by 16 feet

- No parking area shall be located in the front yard or within (5') feet of any property line.
- Parking Area Plantings. Landscape treatment around the perimeter and interior of the parking lot is required and shall be used to break up large expanses of pavement and manage excess heat (heat island effect) and stormwater. Parking areas containing (5) or more parking spaces shall have at least one (1) tree per every five (5) parking spaces, such trees to be located either within the lot or within ten (10') feet of it. Such trees shall be at least two (2") inches trunk diameter, with not less than forty (40) square feet of unpaved soil per tree, in landscape islands with no dimension less than four (4') feet in width. For any parking area having twenty (20) or more spaces, at least five (5%) percent of the interior area shall include landscaping, including trees in landscape islands of at least the dimensions of one parking space with no more than 10 contiguous parking spaces between each island. Trees shall be so located as to provide visual relief and sun and wind interruption within the parking area, shade for pedestrian circulation routes, and to assure safe patterns of internal circulation. Trees shall be protected by curbs, bollards, or other barriers sufficient to prevent damage

Existing Site Circulation

PARKING

The main entrance is from Lincoln Street, at the north end of the site, which provides one-way access for school buses and parent drop-off vehicles entering the site. There is also a bituminous drop-off loop for cars that includes a bay of angled parking for 10 cars on the north side. A parking lot inside the loop with 23 spaces, including 2 handicapped accessible spaces and 1 handicapped van accessible space.

Bus drop-off occurs along the main drive directly in front of the school. The parking lot is separated from the drive by grass and planting bed islands, with precast concrete curb. A second grass island with granite curb provides separation from the main drive and the parking lot's entrance and exit. The one-way, 22' wide loop allows room for passing queuing cars and widens to 28' at the curve to accommodate turning vehicles. After making drop-offs, cars exit the loop back onto the school's main drive, which provides one-way traffic to exits at Lincoln Street to the East or Summer Street to the south.

A second bituminous drive is located south of the new school building, and is also accessed by the main drive. This area provides service and dumpster access, as well as an additional parking bays at the building for 8 spaces and across the drive to the south for 14 spaces.

The drive extends west to the school's rear plaza area, adjacent to which electrical utilities are located. A pedestrian walkway connects to the rear drive extension, consisting of 3 handicapped-accessible ramps and a bituminous walkway, which in turn connects with the bituminous emergency access drive and access to the off-site athletic field.

The 12' wide emergency access drive continues from the existing drive at the athletic field, and continues through the site around the rear of the building and terminates at the drop-off loop, enabling emergency vehicle access to all parts of the building exterior. This emergency access drive is closed to vehicular traffic except during emergencies and will primarily function as a pedestrian walkway. No changes were previously made to the existing entrance and exit at Lincoln Street east of the site.

The total new car park previously added by the MMES project was 55 spaces, including 3 handicapped accessible spaces.

STRUCTURES AND FENCES

The site currently supports one elementary school building only. The new fencing at Manchester Memorial ES is extensive. There are three playgrounds: one to the north, near the main parking lot, another to the southern edge of the building and a small one to the east. The southern playground in the rear is fenced in with black 4' high chain link fence. The pre-k eastern playground has 3' high black chain link fence surrounding it. The main playground to the north has a 4' high black chain link fence separating it from the wetlands to the north but is not fully enclosed. To the north of the main parking lot area are two basketball half courts with 10' high chain-link fencing fully enclosing them. The vehicular bridge leading from the northern part of the site to the middle school is lined with 4' high wooden white fencing / railing with white metal mesh.

Along the southern edge of the building a 4' high black chain link fence is affixed atop a retaining wall, separating the school from the path below.

Fencing is new and does not need replacement. Proposed design should review and include storage of outdoor play equipment or teaching tools at the pre-k area.

ACCESSIBILITY

The site was previously designed to meet ADA/MAAB regulations

A new bituminous walk with granite curb beginning at the Lincoln Street crosswalk was constructed to provide a connection to the pedestrian network within the site. The sidewalk splits and users can either follow along the main drive, crossing the drop-off loop entrance and exits at designated crosswalks, or continue around the loop where the basketball court and upper grades playground are located. The sidewalk connects to the pedestrian bridge at the north of the site, and the previously newly widened 8'6" sidewalk around the drop-off area. At the main entry plaza and drop-off area, a widened plaza and covered waiting area includes 11 bike racks and 4 benches. A separate 4' wide concrete sidewalk connects the drop-off sidewalk with a single exterior door at one of the pre-k classrooms. Outside the pre-k classrooms is a gathering area which houses a relocated sculpture from the old school, as well as benches and plantings.

South of this area along the main drive, sidewalk connections are made to double doors at the pre-k wing, as well as from the existing parking lot cross walks to the pre-k playground and plaza area. This sidewalk was previously laid out so that it incorporates the preservation of a large existing shade tree which users pass under on the way to the playground.

The designated pre-k playground is enclosed by a 4' height black vinyl clad chain link fence. Also in this space there is a sandbox play area and a seating area with a handicapped-accessible café table.

Outside of the fenced area, between the playground and the driveway are raised planting beds for gardening, a circular concrete outdoor classroom with bench seating, and 8 bike racks.

South of the school, pedestrian access is provided from existing sidewalks that meet the newly constructed concrete sidewalk with pre-cast concrete curb, which crosses the service entry at a designated crosswalk. In the rear of the school and adjacent to the cafeteria, south-facing concrete plaza features café tables and trash receptacles, a playground for kindergarten to Grade 1, and gardening space. These areas can be accessed directly from the building, or by one of the walkways connecting parking areas to the rear plaza area. The bituminous access drive doubles as a wide walkway linking adjacent off-site athletic fields with the school campus. At the west end of the school, a concrete staircase and handicapped accessible ramp provides building access, and 6 bike racks at the base that offer safe and secure bicycle storage. All sidewalk areas are lit by pedestrian area lights for safety and security, which are placed at regular intervals across the site.

EMERGENCY VEHICLE ACCESS

The 12’ wide emergency access drive continues from the existing drive at the athletic field and continues through the site around the rear of the building and terminates at the drop-off loop, enabling emergency vehicle access to all parts of the building exterior. This emergency access drive is closed to vehicular traffic except during emergencies and will primarily function as a pedestrian walkway.

SAFETY AND SECURITY REQUIREMENTS

Safety and security at the school campus are paramount. The Lincoln Street site currently includes both building-mounted and pole-mounted exterior surveillance cameras, and planned enhancements will expand perimeter coverage through the deployment of high-resolution, low-light, and infrared fixed and multi-lens cameras. Integrated video analytics, such as motion detection, will help establish a virtual perimeter and monitor activity throughout the site, including driveways, parking areas, playgrounds, and outdoor classrooms. To optimize coverage while maintaining aesthetics, cameras will be strategically mounted on the school façade, soffits, and light poles. All exterior cameras will use Power over Ethernet (PoE), specified for environmental suitability and surge suppression. PoE power supplies will be supported by uninterruptible power systems (UPS) and emergency power to ensure operational continuity. This low-voltage power architecture provides centralized management, enables scheduled or event-based activation, and reduces material usage by eliminating separate power runs, contributing to energy efficiency and sustainability.

Parking areas, parent drop-off and pick-up loops, and bus circulation zones will be clearly defined, with separated vehicle paths to support safe and orderly transport. After the start of the school day, only the main front entry will remain open, accessible through a secure visitor entry sequence. Thoughtful site planning, including appropriate lighting, clear sightlines, secure fencing, well-placed bollards, and intuitive wayfinding, creates a safe and well-managed school environment. Effective lighting enhances visibility for surveillance, discourages unsafe behavior, and promotes safe

pedestrian and vehicular movement. Unobstructed sightlines allow staff and first responders to quickly observe activity, while fencing around playgrounds and activity areas establishes clear boundaries, minimizes unauthorized access, and ensures students remain within supervised zones. Gates, bollards, and other fixed barriers further restrict vehicle access near walkways, accessible routes, and building approaches, creating controlled circulation patterns throughout the school day.

Transition zones and delineated pedestrian pathways reinforce separation between pedestrians and vehicles, reducing conflicts and improving safety. Traffic-calming features, such as narrowed lanes, raised crosswalks, textured pavement, and strategic signage, encourage safe vehicular speeds and increase driver awareness in areas with high pedestrian activity. Complementing these measures, intuitive wayfinding supported by clear signage and defined entry points guides individuals efficiently through the site while discouraging access to restricted areas. Effective wayfinding also assists emergency responders and helps staff more quickly identify unusual or unsafe movement. When integrated into an overall security strategy, coordinated lighting, sightlines, fencing, bollards, pedestrian-vehicle separation, traffic-calming elements, and wayfinding collectively strengthen situational awareness, support daily operations, and enhance the school's ability to prevent, detect, and respond to potential security concerns.

Access from Lincoln Street will be maintained and improved to accommodate the largest emergency vehicles. Site and landscape design play a critical role in creating a safe educational environment and ensuring occupants can evacuate efficiently during emergencies. Key strategies include establishing clearly defined transition zones between vehicular and pedestrian areas, using barriers that stop vehicles without impeding pedestrian egress. Clear sightlines at eye level and from security cameras, paired with adequate site lighting, provide staff and first responders the visibility and response time needed to identify and react to potential hazards.

ATHLETIC FIELDS AND OUTDOOR EDUCATIONAL SPACES

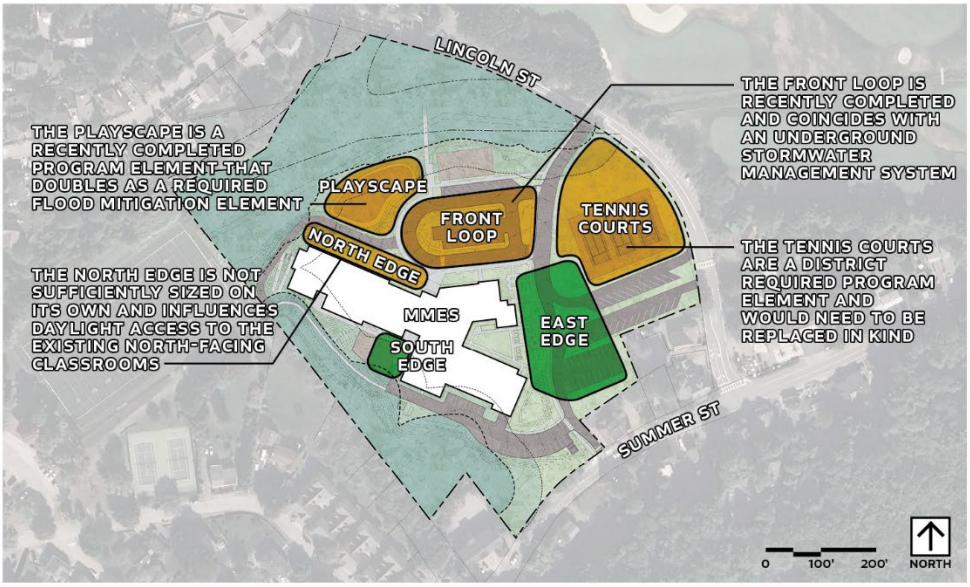
The site has 3 tennis courts and 2 basketball half courts with line painting games. A football field is located adjacent to the school site. There are three playgrounds: one to the north, near the main parking lot, has a large climbing structure, rope play features, triple hoop and other freestanding play features. A second playground in the southern edge of the building has a nautical theme with a ship play structure and other play equipment. The third is the pre-k playground to the east.

The site has no sports lighting or irrigation.

Flexible outdoor learning spaces with seat walls and paving are located on the east side of the school.

Proposed designs should maintain as much of the exterior programming as possible, provide outdoor learning spaces and replace any play spaces affected.

CODE REQUIREMENTS



The preferred building solution and site design will fully meet current accessibility regulations and building code requirements. This includes compliant accessible parking, pedestrian routes, curbs ramps, stairs, and ramps with associated handrails as well as compliant guard railings along pedestrian routes located above walks greater than 30-inches high.

BUILDABLE AREA

After careful consideration of the attributes, opportunities, and limitations of this 11.5± acre site, the focus has narrowed to approximately 4.0± acres of land outside of the existing building footprint for further study in the Preferred Schematic Report factoring open space and zoning setback. Any addition to the existing building would likely take place in the open areas north and west of the existing building.

EXISTING MANCHESTER MEMORIAL ELEMENTARY SITE

BUILDABLE AREA

Buildable Area

OPPORTUNITIES

The existing school was recently constructed in 2021 and therefore no new building options are being considered for this site. Only Renovation and addition options would be considered, those options can be reviewed in section 3.1.6 Preliminary Evaluation of Alternatives. Due to all the regulatory restrictions on the site and the fact the building was recently constructed there is limited space for siting the proposed expansion addition at the 43 Lincoln Street site. The only viable location for an addition is to the eastern side of the school in the location of the current rain garden and faculty parking. Siting the addition here will likely result in the town needing to relocate or remove the 3 tennis courts located on the east of the site to accommodate expanded parking, water retention and reconfiguration of both the parent and bus drop-off circulation loops. Increased student and faculty at this location will have negative effects on the traffic congestion in the surrounding area especially at arrival and dismissal.

The design team employs advanced modeling and diagnostic tools to analyze optimum solar orientation on the site. This iterative method informs the building design throughout the process and will enable the team to make informed decisions early. The design team will develop the siting, massing and placement of glazing and openings to maximize the solar benefit and limit the negative effects of glare and unwanted solar heat gain in cooling seasons.

LIMITATIONS

This site's limitations include the following issues. There is limited access to the rear of the site currently, which will potentially only be made worse with an addition. Increased enrollment will require larger capacity parking, resulting in the loss of the town's tennis courts which are used by the high school's tennis team to be able to compete in state competitions. Portions of the building that were recently completed under a previous MSBA project that would need renovations or alterations would not be eligible for reimbursement. The Manchester Essex Regional School district would need to vote to change their bylaws to relocate students from Essex to a facility in the Town of Manchester-By-The-Sea. There are also challenges associated with phase construction and maintaining operations of portions of the existing school throughout construction.

Due to the existing tennis courts and rain garden being within the floodplain, if the area is to be converted to parking, compensatory flood plain area will need to be provided elsewhere on site. This may require removing previously built programmatic space.

CONCLUSION

After careful consideration of the attributes, opportunities and limitations of this site, the School Building Committee has reservations about the 43 Lincoln Street site. The SBC will be discussing further at the start of the Preferred Schematic Report stage.

PRELIMINARY EVALUATION OF ALTERNATIVES

SECTION 3.1.6

3.1.6 – PRELIMINARY EVALUATION OF ALTERNATIVES

- Introduction
- Code Upgrade Option
  - Option A0.1 – 12 Story Street, Essex, MA, Grades K-3 + PreK
  - Option A0.2 – 12 Story Street, Essex, MA, Grades K-5 + PreK
- Renovation and Addition Options
  - Option A1.1 – 12 Story Street, Essex, MA, Grades K-3 + PreK
  - Option A1.2 – 12 Story Street, Essex, MA, Grades K-5 + PreK
  - Option B1.1 – 43 Lincoln Street, Manchester-by-the-Sea, MA, Grades K-5 + PreK
- New Construction Options
  - Option A2.1 – 12 Story Street, Essex, MA, Grades K-3 + PreK
  - Option A2.2 – 12 Story Street, Essex, MA, Grades K-5 + PreK

3.1.6 – PRELIMINARY EVALUATION OF ALTERNATIVES

SCHOOL ASSINGMENT PRACTICES

There are currently two (2) Elementary Schools in the District: Essex Elementary and Manchester Memorial Elementary. Manchester Memorial Elementary School was recently rebuilt and reopened in 2021.

The current design options being considered include several combined enrollment and grade reconfiguration scenarios. If one of the combined enrollment or grade reconfiguration options is selected, the District will relocate students as necessary. The relocation of students or the use of modular swing spaces is not anticipated during construction for any of the design options except for option A0.2 which would require a 4-classroom modular or offsite swing space. See all the potential design options included in the PDP submission to the MSBA.

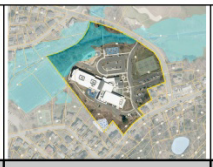
TUITION AGREEMENTS

The Manchester Essex Regional School District participates in Massachusetts's School Choice. Massachusetts General Laws Chapter 76, Section 12B was enacted in 1991 to allow parents to send their children to public schools in communities other than the one in which they reside. The Manchester Essex Regional School District currently participates in accepting out-of-district students from all communities outside the Manchester Essex region in Grades K through 12.

RENTAL OR ACQUISION OF EXISTING BUILDINGS

There are not facilities of sufficient size available within the Towns of Manchester or Essex to accommodate the entire range of student enrollments being studied (165-515).

ALTERNATE SITES



The initial development of the project began with an exploration of available sites within the town of Essex. The design team was provided with a list of 112 town of Essex owned Parcels. Of those 112 sites 16 met the minimum required size of 9.75 acres and only 7 of the 16 had street access and utilities. Six out of the 7 viable sites were already currently in use by other town functions such as town hall and the town library. The only viable alternate site to the existing school site was found to be 30 Apple Street, Essex, Ma. While 30 Apple Street site met the needs of the project, through the data collection process, it was determined that required infrastructure upgrades in surrounding streets, imposed significate financial and scheduling barriers to this being a viable option. The School Building Committee voted to remove this site from contention and no further exploration into the 30 Apple Street site was carried out.

At the request of the Building Committee, one potential site in Essex and one site in Manchester-by-the-Sea were considered as part of this Preliminary Design Program for further study. Through a series of discussions that included an evaluation of compiled data, 12 Story Street, Essex, MA (Essex Elementary School) and 43 Lincoln Street, Manchester-by-the-Sea, MA (Manchester Memorial Elementary School) emerged as the preferred sites to explore renovation, addition and new construction options as part of the Preferred Schematic Report.

Both sites are currently owned by their respective towns, the Town of Essex and the Town of Manchester-by-the-Sea. Each school has a 20-year lease agreement last extended on August 16, 2021. Each lease contains a provision for extension of the term and thereof for renewal term not in excess of twenty (20) years, renewable at any time during the term at the option of the School Committee. A copy of the Executed Leases are included in Appendix 3.1.8.9 of this report.

Schedule	No significant schedule risks - "Shovel Ready"			

EVALUATION OF DESIGN ALTERNATES

Upon completion of the Educational Program, the Initial Space Summary, evaluating the Existing Conditions, exploring alternative sites held by the town of Essex, and defining the Site Development Requirements that led to the identification the two alternate sites to be considered, the Building Committee considered seven (7) conceptual design options on the two sites to explore as part of the Preliminary Design Program.

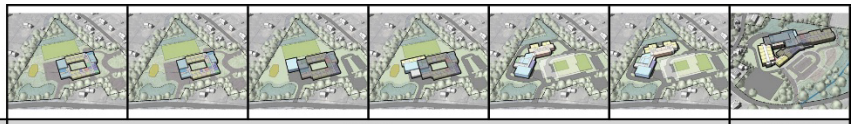
In collaboration with the MSBA, the District developed three design enrollments/grade configurations that would be studied in the Preliminary Design Program. Each design option, whether a code upgrade, renovation/addition or new construction, meets the projected enrollment capacities to best serve the District and enable an informed decision when selecting the Preferred Option development in the Preferred Schematic Report phase.

The Building Committee approved these options for development on the Essex and Manchester-by-the-Sea sites. The options include:

- Code Upgrade Option
  - Option A0.1 – 12 Story Street, Essex, MA, Grades K-3 + PreK
  - Option A0.2 – 12 Story Street, Essex, MA, Grades K-5 + PreK
- Renovation and Addition Options
  - Option A1.1 – 12 Story Street, Essex, MA, Grades K-3 + PreK
  - Option A1.2 – 12 Story Street, Essex, MA, Grades K-5 + PreK
  - Option B1.1 – 43 Lincoln Street, Manchester-by-the-Sea, MA, Grades K-5 + PreK
- New Construction Options
  - Option A2.1 – 12 Story Street, Essex, MA, Grades K-3 + PreK
  - Option A2.2 – 12 Story Street, Essex, MA, Grades K-5 + PreK

The test-fit options demonstrate, at a conceptual level, how a potential design could be placed on the site to identify site challenges and opportunities while addressing the defined site development requirements.

In addition, a Comparative Probable Cost Analysis was developed to provide a relative probable cost for each option to assist the School Building Committee to determine which options may be further considered and studied. The Comparative Probably Cost Analysis values are not to be considered project budget values. These values are subject to change as options are further developed.



The probable cost for each option was derived using the MSBA Space Summary template to generate projected Gross Building Areas accounting for renovated area and new construction. Using general descriptions to define the anticipated scope of work for the site and building, an independent estimator provided historic square foot cost data for each scope to generate an estimate of probable construction cost for each option. The probable construction costs were used to general total project costs based on historic cost percentages of the construction cost. The total project costs

were derived from industry standards for project “soft cost”, including cost data from other recent MSBA projects. These soft costs include, but are not limited to, FF&E, Technology, OPM and Architect Fee’s, utilities, Moving Costs and Owner Contingency.

A Design Alternatives Evaluation Matrix and the summary of the Design Alternatives for the Essex and Manchester-by-the-Sea Sites has been created and will be used by the School Building Committee to evaluate which options will be further explored during the Preferred Schematic Report (PSR).

An analysis of the Seven (7) options developed during the PDP phase are provided on the following pages of this report. Each option accommodates the preferred design program for the various enrollments. The summaries highlight how each option accommodates the space summary area in addition to opportunities (pros), limitations (cons) and other qualities discussed by the School Building Committee.

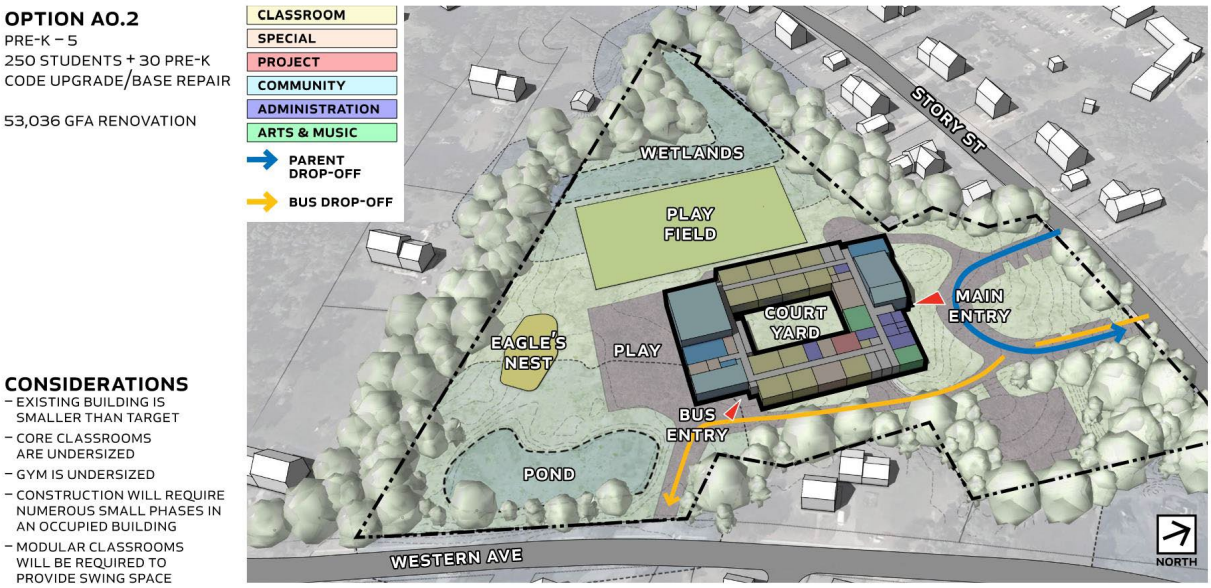
OPTION A0.1 - CODE UPGRADE/BASE REPAIR

By definition, a Code Upgrade option includes repair of systems and scope required for purposes of code compliance excluding modifications of existing spaces or their function to meet the Educational Plan, set forth by the School Building Committee.

Option A0.1 investigates the requirements to complete an accessibility and code upgrade for the existing Essex Elementary School. Many of the inherent building conditions prevent the effective delivery of the District's educational vision defined in the Educational Program. This option will bring the facility into full accessibility and code compliance. The replacement of all exterior doors and windows, roofing, interior finishes and building systems as well as improving the energy performance of the existing building envelope will be studied. Refer to the existing conditions report section 3.1.4 for more information regarding existing conditions.

Due to a reduction in total enrollment in this option, there is assumed to be four vacant classrooms available to move students around the facility to accommodate a continuous construction schedule. To minimize the construction impact on school and District operations, construction phasing for common areas of the building would need to be planned to occur during school vacations and/or after-hours and weekend periods. Such an approach would extend the construction duration and increase the cost of the scope of work due to the inefficient delivery.

PROS



- Retains entire existing facility.
- No impact on the playground or play field

CONS

- Renovated building will not meet the Educational Program.
- Difficult site circulation/accessibility.
- No opportunity to create Learning Neighborhoods.
- No opportunity to improve administrative offices.
- Extended construction schedule to accommodate phasing.
- Does not meet current district regional agreement

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.

OPTION A0.2 - CODE UPGRADE/BASE REPAIR

By definition, a Code Upgrade option includes repair of systems and scope required for purposes of code compliance excluding modifications of existing spaces or their function to meet the Educational Plan, set forth by the School Building Committee.

Option A0.1 investigates the requirements to complete an accessibility and code upgrade for the existing Essex Elementary School. Many of the inherent building conditions prevent the effective delivery of the District's educational vision defined in the Educational Program. This option will bring the facility into full accessibility and code compliance. The replacement of all exterior doors and windows, roofing, interior finishes and building systems as well as improving the energy performance of the existing building envelope will be studied. Refer to the existing conditions report section 3.1.4 for more information regarding existing conditions.

This option would not have available swing space and therefore if would require a 4-classroom modular. To minimize the construction impact on school and District operations, construction phasing for common areas of the building would need to be planned to occur during school vacations and/or after-hours and weekend periods. Such an approach would extend the construction duration and increase the cost of the scope of work due to the inefficient delivery.

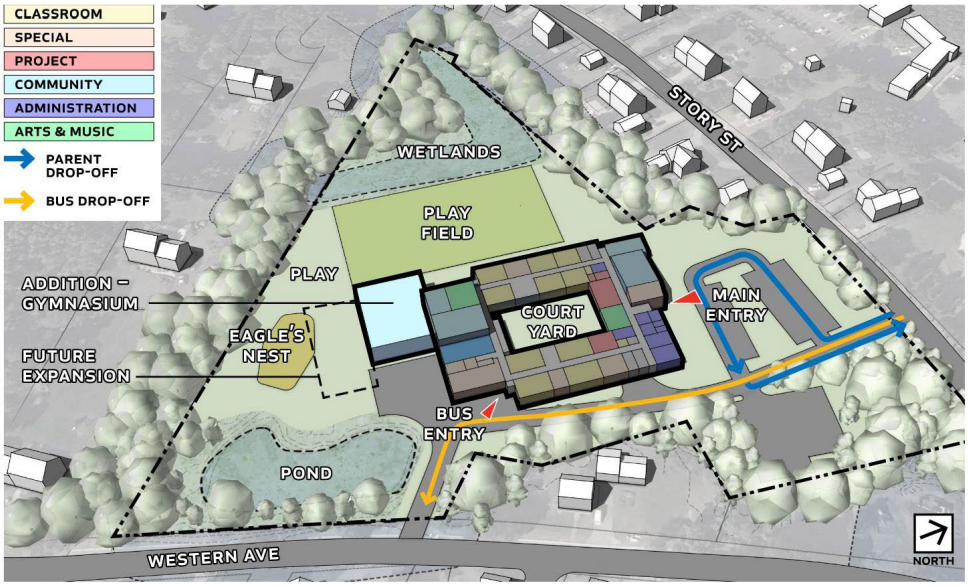
PROS

- No impact to bus operations.
- Retains entire existing facility.
- No impact on the playground or play field.
- Does not require changes to the regional agreement.

CONS

- Renovated building will not meet the Educational Program.
- Building is not capable of absorbing additional enrollment increases.
- Difficult site circulation/accessibility.
- No opportunity to create Learning Neighborhoods.
- No opportunity to improve administrative offices.
- Extended construction schedule to accommodate phasing.
- No swing space – requires modulars to complete construction.

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.



OPTION A1.1 – ADDITION AND RENOVATION

OPTION A1.1
PRE-K – 3
165 STUDENTS + 30 PRE-K
ADDITION/RENOVATION

53,036 GFA RENOVATION
7,741 GFA ADDITION

TOTAL: 60,777 GFA

CLASSROOM
SPECIAL
PROJECT
COMMUNITY
ADMINISTRATION
ARTS & MUSIC
PARENT DROP-OFF
BUS DROP-OFF

CONSIDERATIONS
- FULL-SIZE GYM COULD BE ACCOMMODATED IN AN ADDITION
- CONSTRUCTION WILL REQUIRE NUMEROUS SMALL PHASES IN AN OCCUPIED BUILDING
- MOVING GRADES 4-5 TO MMES CREATES SWING SPACE (4 CLASSROOMS)
- K-3 REQUIRES MODIFICATION TO THE REGIONAL AGREEMENT

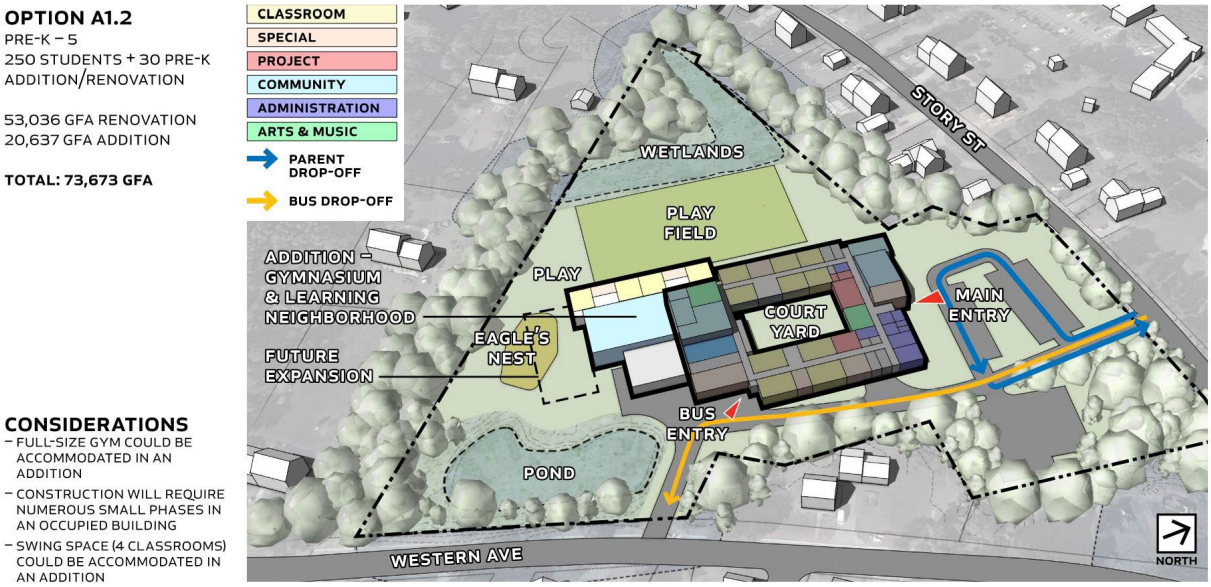
Option A1.1 includes the full renovation of the original circa 1958 multi-level courtyard style building and the 1975 media center and gymnasium addition, 53,036 gsf total existing footprint with an addition of 7,741 gsf for a total facility of 60,777 GSF. The proposed addition would be a new gymnasium allowing for the existing gymnasium to be repurposed into other community building functions.

Existing interior spaces will be modified to create conditions like the proposed Learning Neighborhoods. This will be accomplished by creating break-out spaces in the existing building.

To minimize the impact on existing school operations renovation and addition are proposed as a multi-phased construction project. The reduction in enrollment in this option should provide enough swing space for the student population to eliminate the need for modulars or off-site lease agreements.

The first phase will include construction of the addition of the gymnasium. Phase two will allow the existing gym to be renovated into the new cafeteria and kitchen. Phase three will allow the existing cafeteria to be renovated into the new media center. Phases three, four, and five will allow for the renovations of the academic wings and the administrative areas. Their exact order and schedule of these phases will be detailed and investigated further if this option is chosen to proceed. The existing building elements that remain during the phased construction will be occupied and students and faculty will move into new construction as it is completed. The final phase will include site circulation, playgrounds and restoration of the landscaped areas.

PROS



- Provide appropriately sized program areas.
- Creation of Learning Neighborhoods.
- Maintains and renovates a majority of the existing footprint.

CONS

- Extended phasing.
- Community spaces are not all in one location in building footprint.
- Renovated classrooms are not as easily configured for Learning Neighborhoods.
- No new image of the school from the street
- Does not meet current district regional agreement.
- Firewalls needed to compartmentalize school

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.

OPTION A1.2 – ADDITION AND RENOVATION

Option A1.2 includes the full renovation of the original circa 1958 multi-level courtyard style building and the 1975 media center and gymnasium addition, 53,036 gsf total existing footprint with an addition of 20,637 gsf for a total facility of 73,673 GSF. The proposed addition would be a new classroom learning neighborhood and a new gymnasium with stage allowing for the existing gymnasium to be repurposed into other community building functions.

Existing interior spaces will be modified to create conditions like the proposed Learning Neighborhoods. This will be accomplished by creating break-out spaces in the existing building.

To minimize the impact on existing school operations, renovation and addition are proposed as a multi-phased construction project. Constructing the additions in phase one of this option should provide enough swing space for the student population to eliminate the need for modulars or off-site lease agreements.

The first phase will include construction of the addition of the gymnasium and new academic wing. Phase two will allow the existing gym to be renovated into the new cafeteria and kitchen. Phase three will allow the existing cafeteria to be renovated into the new media center. Phases three, four, and five will allow for the renovations of the academic wings and the administrative areas. Their exact order and schedule of these phases will be detailed and investigated further if this option is chosen to proceed. The existing building elements that remain during the phased construction will be occupied and students and faculty will move into new construction as it is completed. The final phase will include site circulation, playgrounds and restoration of the landscaped areas.

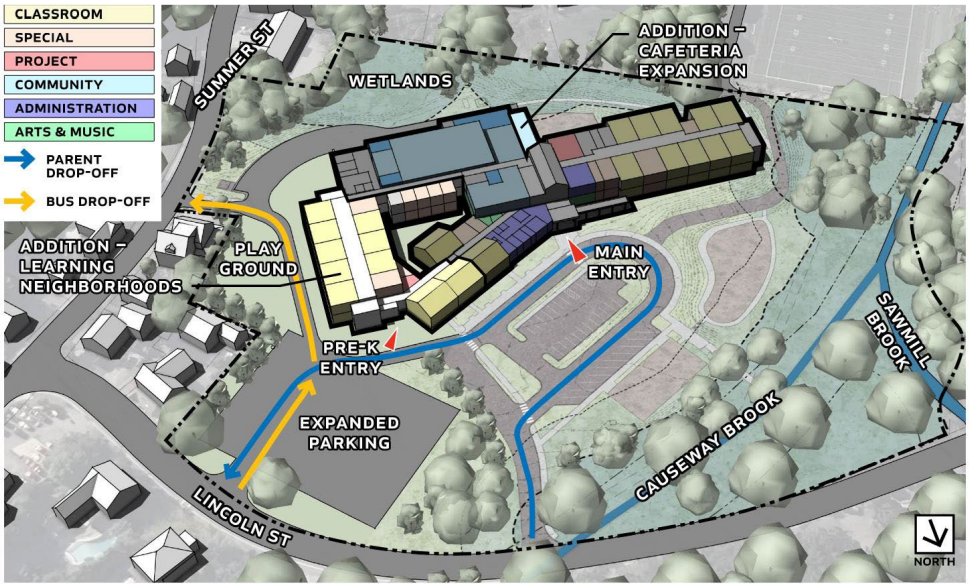
PROS

- Provide appropriately sized program areas.
- Creation of Learning Neighborhoods.
- Maintains and renovates a majority of the existing footprint.
- Does not require changes to the regional agreement.

CONS

- Extended phasing.
- Community spaces are not all in one location in building footprint.
- Renovated classrooms are not as easily configured for Learning Neighborhoods.
- No new image of the school from the street
- Firewalls needed to compartmentalize school

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.



OPTION B1.1 – ADDITION AND RENOVATION

OPTION B1.1
PRE-K –5
515 STUDENTS + 60 PRE-K
ADDITION/RENOVATION

77,102 GFA EXISTING/RENO
41,899 GFA NEW

TOTAL: 119,001 GFA

CONSIDERATIONS
- SITE AMENITIES WILL BE LIMITED SUCH AS PLAY SPACE AND PARKING CAPACITY
- REMOVAL OF TENNIS COURTS LIKELY
- NO FUTURE EXPANSION POTENTIAL
- BUILDING CODE AREA LIMITATIONS REQUIRES FIRE WALLS SEPARATING ADDITIONS
- COMMUNITY ENTRY AND NEAR-BY PARKING COMPROMISED BY ADDITION LOCATION
- NUMEROUS ISSUES ASSOCIATED WITH ELIMINATING A SCHOOL IN ESSEX (TRAVEL, BUSING, AFTERSCHOOL PROGRAMS, REGIONAL AGREEMENT, ETC.)

Option B1.1 includes the limited renovation of the recently completed (2021) multi-level school. Approximately 5,000 gsf of renovation of the existing school will be needed to connect to the 41,899 gsf additions. The total school will be 119,001 gsf when completed. Within an enlarged enrollment scenario, the cafeteria and support spaces are substandard and need to be modified to support the Education Plan developed by the School Building Committee at the posted enrollment for this option at 515 students. This enrollment will serve students from prekindergarten to grade five from the Essex and Manchester-by-the-Sea school communities.

The proposed two-level addition of approximately 41,899 sf will provide new space for the Core Academics, Cafeteria expansion, Special Education, Administration and Early Education programs required to support the goals of the Educational Program. Existing interior spaces will have limited modifications to accommodate the connections to the new additions.

To minimize the impact on existing school operations and to eliminate the need to create swing space, the current Essex elementary school would remain online until the completion of the addition and renovation to the Manchester Memorial Elementary School. The additions will be constructed in a phases approach to minimize impact on the Manchester Memorial current student population. Construction schedule will need to accommodate the cafeteria additions to occur during the summer months to avoid loss of the kitchen and cafeteria during the standard school year.

PROS

- Consolidates the entire districts elementary school population into one facility.

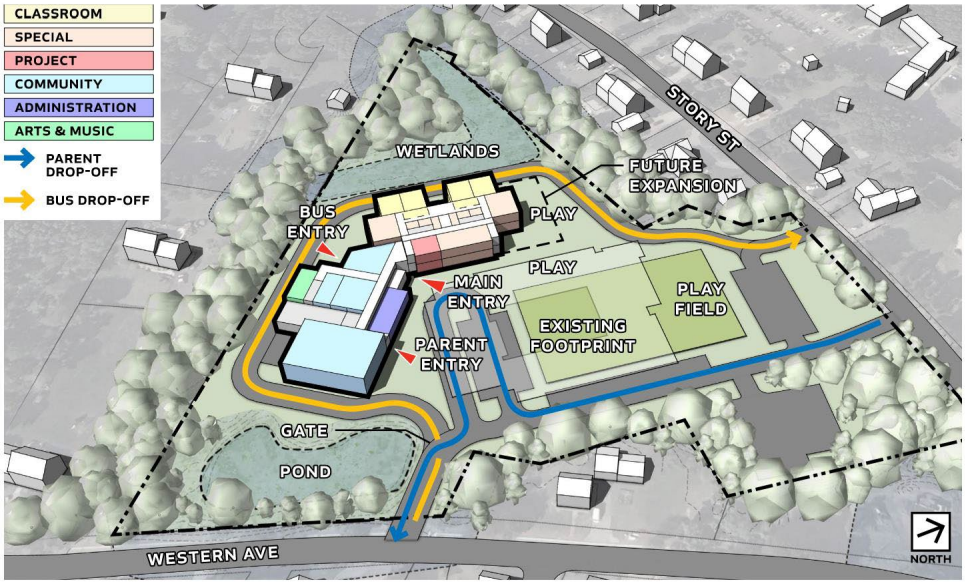
CONS

- Renovation to a new school – loss of MSBA reimbursement.
- Redundant Mechanical and Electrical systems to meet Massachusetts all electric and stretch energy code requirements.
- Extensive firewall construction to compartmentalize school.
- Complex site conditions and regulatory requirements.
- Loss of town owned tennis courts affecting high school sports team
- Does not meet current district regional agreement.
- Limited site area for proposed addition -loss of original design intent of all wings of the school rotating off the central hub of the school.
- Loss of existing playgrounds and site features.

OTHER

- Town of Essex would still need to renovate or demolition the existing school at the 12-story street site.

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.



OPTION A2.1 – NEW CONSTRUCTION

OPTION A2.1
PRE-K – 3
165 STUDENTS + 30 PRE-K
NEW

60,777 GFA NEW

TOTAL: 60,777 GFA

CLASSROOM
SPECIAL
PROJECT
COMMUNITY
ADMINISTRATION
ARTS & MUSIC
PARENT DROP-OFF
BUS DROP-OFF

CONSIDERATIONS
- SITE LAYOUT PROVIDES FULL PERIMETER ACCESS AND IMPROVED SIGHT LINES
- DESIRED ROOM SIZES AND ADJACENCIES CAN BE OPTIMIZED
- ACCESS TO COMMUNITY SPACES EASILY CONTROLLED
- TWO-STORY BUILDING REDUCES FOOTPRINT TO MAXIMIZE SITE POTENTIAL
- K-3 REQUIRES MODIFICATION TO THE REGIONAL AGREEMENT

Option A2.1 is a two-level building of approximately 60,777 gsf of all-new construction on the south-east portion of the site on the location of the existing playing fields and playground. As all-new construction, this option will provide the necessary program space to support the Education Plan developed by the School Building Committee at the posted enrollment for this option at 165 students plus 30 PreK students. This enrollment will serve students from pre-kindergarten to grade three from the Essex school community.

To minimize the impact on existing school operations and to eliminate the need to create swing space, the new building is proposed as a single-phased construction project. Once the new construction is complete, the students and staff will move into the new space. The second phase of the project will incorporate demolition of the existing building and construction of the new playing fields and site infrastructure.

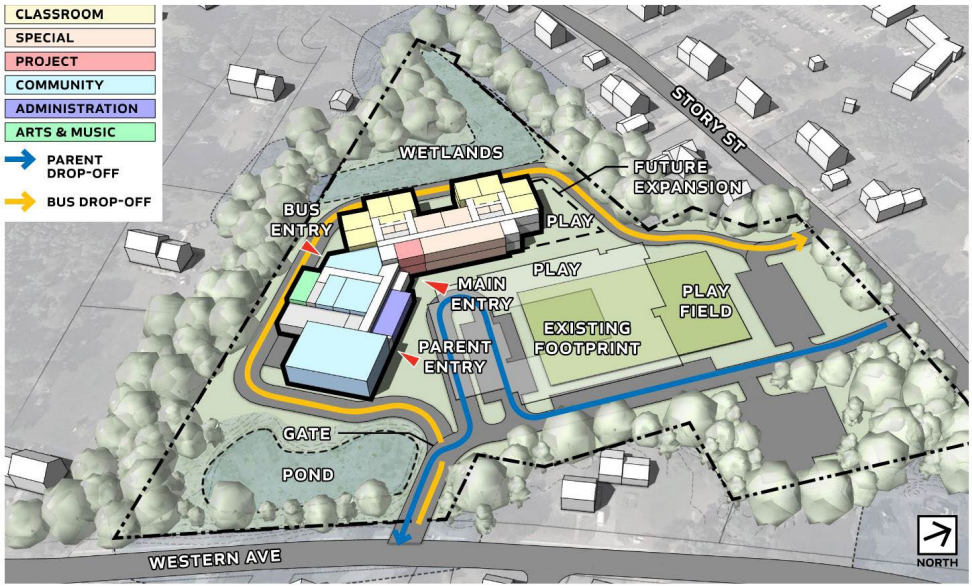
PROS

- Shortest construction phasing schedule.
- Provide appropriately sized program areas.
- Creation of Learning Neighborhoods.
- New image of the school from the street.
- Places the new building on the flattest portion of the site.
- Less excavation/soils removal at building site.
- Two-story option maximizes available site.
- All-new parking, bus and parent drop-off loop.
- New playing fields can be optimized for orientation and regulation sizes.

CONS

- Does not meet current district regional agreement.
- Demolition of the existing playground

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.



.

OPTION A2.2 – NEW CONSTRUCTION

OPTION A2.2
PRE-K – 5
250 STUDENTS + 30 PRE-K
NEW

73,673 GFA NEW

TOTAL: 73,673 GFA

CONSIDERATIONS
- SITE LAYOUT PROVIDES FULL PERIMETER ACCESS AND IMPROVED SIGHT LINES
- DESIRED ROOM SIZES AND ADJACENCIES CAN BE OPTIMIZED
- ACCESS TO COMMUNITY SPACES EASILY CONTROLLED
- TWO-STORY BUILDING REDUCES FOOTPRINT TO MAXIMIZE SITE POTENTIAL

Option A2.2 is a two-level building of approximately 73,673 gsf of all-new construction on the south-east portion of the site on the location of the existing playing fields and playground. As all-new construction, this option will provide the necessary program space to support the Education Plan developed by the School Building Committee at the posted enrollment for this option at 250 students plus 30 PreK students. This enrollment will serve students from pre-kindergarten to grade five from the Essex school community.

To minimize the impact on existing school operations and to eliminate the need to create swing space, the new building is proposed as a single-phased construction project. Once the new construction is complete, the students and staff will move into the new space. The second phase of the project will incorporate demolition of the existing building and construction of the new playing fields and site infrastructure.

PROS

- Shortest construction phasing schedule.
- Provide appropriately sized program areas.
- Creation of Learning Neighborhoods.
- New image of the school from the street.
- Places the new building on the flattest portion of the site.
- Less excavation/soils removal at building site.
- Two-story option maximizes available site.
- All-new parking, bus and parent drop-off loop.
- New playing fields can be optimized for orientation and regulation sizes.
- Does not require changes to the reginal agreement.

CONS

- Demolition of the existing playground

As required by the MSBA process and after careful consideration of the opportunities, limitations and other qualities, the Building Committee will vote on advancing this option for further study at the start of the Preferred Schematic Report.

LOCAL ACTIONS AND APPROVALS

SECTION 3.1.7

3.1.7 – LOCAL ACTIONS AND APPROVALS

- Meeting Summary
  - School Building Committee Meetings
  - Community Meetings

MEETINGS SUMMARY

Public Meetings held since MSBA's Board of Directors invited the Manchester Essex Regional School District to conduct a Feasibility Study on December 13, 2024.

School Building Committee Meetings (SBC)

- SBC – Meeting No.1: April 29, 2025
- SBC – Meeting No.2: June 24, 2025
- SBC – Meeting No.3: July 22, 2025
- SBC – Meeting No.4: August 26, 2025
- SBC – Meeting No.5: September 15, 2025
- SBC – Meeting No.6: September 30, 2025
- SBC – Meeting No.7: October 14, 2025
- SBC – Meeting No.8: October 28, 2025
- SBC – Meeting No.9: November 6, 2025
- SBC – Meeting No.10: November 25, 2025
- SBC – Meeting No.11: December 15, 2025
- SBC – Meeting No.12: January 6, 2026

Community Meetings

- Community Meeting No.1: October 8, 2025
- Community Meeting No.2: November 20, 2025
- Community Meeting No.3: December 9, 2025

The complete Local Action and Approvals document is included in Appendix 3.1.8.10 of this report.

MANCHESTER ESSEX REGIONAL SCHOOL DISTRICT

PAMELA BEAUDOIN
SUPERINTENDENT OF SCHOOLS

January 14, 2026

Mr. Michael McGurl
Director of Capital Planning
Massachusetts School Building Authority
10 Post Office Square, Suite S400
Boston, Massachusetts 02109

Dear Mr. McGurl:

The Manchester Essex Regional *School District* School Building Committee ("SBC") has completed its review of the Feasibility Study *Preliminary Design Program* for the Essex Elementary school project (the "Project"), and on January 6, 2025, the SBC voted to approve and authorize the Owner's Project Manager to submit the Feasibility Study related materials to the MSBA for its consideration. A certified copy of the SBC meeting minutes, which includes the specific language of the vote and the number of votes in favor, opposed, and abstained, are attached.

Since the MSBA's Board of Directors invited the District to conduct a Feasibility Study on December 13, 2024, the SBC has held 12 meetings regarding the proposed project, in compliance with the state Open Meeting Law. These meetings include:

- **May 29, 2025** – Designer RFS Review/Approval, Town Owned Land, Goal Setting, Working Groups, Website
- **June 24, 2025** – Designer Selection Process, Memorial Expansion Potential, Website, Goal Setting, Working Groups
- **July 22, 2025** – Designer RFS Submission
- **August 26, 2025** – Designer Introduction, Project Schedule Review, Visioning Plan, Working Groups
- **September 15, 2025** – Work Plan, Visioning Plan, Existing Conditions, Site Evaluation, Communication Working Group Report Out
- **September 30, 2025** – Visioning Plan, Site Selection Criteria, Sustainability Goals
- **October 14, 2025** – Community Meeting Report Out, Ed Program and Space Summary Review, Site Logistics WG Report Out
- **October 28, 2025** – Eliminate Site Option, Space Summary & Ed Program, Schedule Update
- **November 6, 2025** – Space Summary & Ed Program Acceptance, Preliminary Evaluation of Alternatives Review, Schedule Update
- **November 25, 2025** – Community Meeting No. 2 Feedback, Sustainability WG Update, Work Plan Review, Further Evaluate Alternatives, Schedule Update
- **December 15, 2025** – Final review of alternatives with preliminary costs.
- **January 6, 2026** – Vote to Approve PDP

The Manchester Essex Regional School District does not discriminate in its programs, activities or employment practices based on race, color, age, national origin, religion, gender, sexual orientation or disability.

MANCHESTER ESSEX REGIONAL SCHOOL DISTRICT

PAMELA BEAUDOIN
SUPERINTENDENT OF SCHOOLS

Notices for these meetings were posted and made available for public review on-line on the District's website: Calendar (www.mersd.org). Notices were also made available on our project website: Essex Elementary School Building Project | Essex Elementary School | 12 Story Street, Essex, MA, USA www.mersdessexelementaryproject.com

In addition to the SBC meetings listed above, the District held 3 public meetings, which were posted in compliance with the state Open Meeting Law, at which the Project was discussed. These meetings include:

- **October 8, 2025**, @ 6:00 PM – Community Meeting No. 1
- **November 20, 2025**, @ 6:00 PM – Community Meeting No. 2
- **December 9, 2025,** @ 6:00 PM – Community Meeting No. 3

The presentation materials for each meeting, meeting minutes, and summary materials related to the Project are available locally for public review at www.mersdessexelementaryproject.com **> Project Documents**

To the best of my knowledge and belief, each of the meetings listed above complied with the requirements of the Open Meeting Law, M.G.L. c. 30A, §§ 18-25 and 940 CMR 29 *et seq.*

If you have any questions or require any additional information, please contact (*insert name, title, and contact information*).

By signing this Local Action and Approval Certification, I hereby certify that, to the best of my knowledge and belief, the information supplied by the District in this Certification is true, complete, and accurate.

APPENDIX

SECTION 3.1.8

STATEMENT OF INTEREST

SECTION 3.1.8.1

Massachusetts School Building Authority

Next Steps to Finalize Submission of your FY 2023 Statement of Interest

Thank you for submitting an FY 2023 Statement of Interest (SOI) to the MSBA electronically. **Please note, the District's submission is not yet complete if the District selected statutory priority 1 or priority 3**. If either of these priorities were selected, the District is required to mail the required supporting documentation to the MSBA, which is described below.

ADDITIONAL DOCUMENTATION FOR SOI STATUTORY PRIORITIES #1 AND #3: If a District selects Statutory priority #1 and/or priority #3, the District is required to submit additional documentation with its SOI.

- If a District selects statutory priority #1, Replacement or renovation of a building which is structurally unsound or otherwise in a condition seriously jeopardizing the health and safety of the school children, where no alternative exists, the MSBA requires a hard copy of the engineering or other report detailing the nature and severity of the problem and a written professional opinion of how imminent the system failure is likely to manifest itself. The District also must submit photographs of the problematic building area or system to the MSBA.
- If a District selects statutory priority #3, Prevention of a loss of accreditation, the SOI will not be considered complete unless and until a summary of the accreditation report focused on the deficiency as stated in this SOI is provided.

ADDITIONAL INFORMATION: In addition to the information required above, the District may also provide any reports, pictures, or other information they feel will give the MSBA a better understanding of the issues identified at a facility.

If you have any questions about the SOI process please contact the MSBA at 617-720-4466 or SOI@massschoolbuildings.org.

Submission Date 4/13/2023

SOI CERTIFICATION

To be eligible to submit a Statement of Interest (SOI), a district must certify the following:

- [x] The district hereby acknowledges and agrees that this SOI is NOT an application for funding and that submission of this SOI in no way commits the MSBA to accept an application, approve an application, provide a grant or any other type of funding, or places any other obligation on the MSBA.
- [x] The district hereby acknowledges that no district shall have any entitlement to funds from the MSBA, pursuant to M.G.L. c. 70B or the provisions of 963 CMR 2.00.
- [x] The district hereby acknowledges that the provisions of 963 CMR 2.00 shall apply to the district and all projects for which the district is seeking and/or receiving funds for any portion of a municipally-owned or regionally-owned school facility from the MSBA pursuant to M.G.L. c. 70B.
- [x] The district hereby acknowledges that this SOI is for one existing municipally-owned or regionally-owned public school facility in the district that is currently used or will be used to educate public PreK-12 students and that the facility for which the SOI is being submitted does not serve a solely early childhood or Pre-K student population.
- [x] Prior to the submission of the SOI, the district will schedule and hold a meeting at which the School Committee will vote, using the specific language contained in the "Vote" tab, to authorize the submission of this SOI. This is required for cities, towns, and regional school districts.
- [x] Prior to the submission of the SOI, the district will schedule and hold a meeting at which the City Council/Board of Aldermen or Board of Selectmen/equivalent governing body will vote, using the specific language contained in the "Vote" tab, to authorize the submission of this SOI. This is not required for regional school districts.
- [x] The district hereby acknowledges that current vote documentation is required for all SOI submissions. The district will use the MSBA's vote template and the required votes will specifically reference the school name and the priorities for which the SOI is being submitted.
- [x] The district hereby acknowledges that it must upload all required vote documentation on the “Vote” tab, in the format required by the MSBA. All votes must be certified or signed and on city, town or district letterhead.
- [x] The district hereby acknowledges that this SOI submission will not be complete until the MSBA has received all required supporting documentation for statutory priority 1 and statutory priority 3. If statutory priority 1 is selected, your SOI will not be considered complete unless and until you provide the required engineering (or other) report, a professional opinion regarding the problem, and photographs of the problematic area or system. If statutory priority 3 is selected, your SOI will not be considered complete unless and until you provide a summary of the accreditation report focused on the deficiency as stated in this SOI. The documentation noted above must be post-marked and submitted to the MSBA by the Core Program SOI filing period closure date.

LOCAL CHIEF EXECUTIVE OFFICER/DISTRICT SUPERINTENDENT/SCHOOL COMMITTEE CHAIR (E.g., Mayor, Town Manager, Board of Selectmen)

Chief Executive Officer *	**School Committee Chair**	**Superintendent of Schools**
Pamela Beaudoin	Theresa Whitman	Pamela Beaudoin
Superintendent		
		
(signature)	(signature)	(signature)
Date	Date	Date
4/13/2023 1:46:12 PM	4/13/2023 3:29:42 PM	4/13/2023 1:56:24 PM

* Local chief executive officer: In a city or town with a manager form of government, the manager of the municipality; in other cities, the mayor; and in other towns, the board of selectmen unless, in a city or town, some other municipal office is designated to the chief executive office under the provisions of a local charter. Please note, in districts where the Superintendent is also the Local Chief Executive Officer, it is required for the same person to sign the Statement of Interest Certifications twice.

Submission Date 4/13/2023

Note

The referenced Facilities Report/Habeeb Report can be found at https://www.mersd.org/Page/1759

Please advise if this should be submitted electronically or hard copy sent.

Thank you.

The following Priorities have been included in the Statement of Interest:

1. ☐ Replacement or renovation of a building which is structurally unsound or otherwise in a condition seriously jeopardizing the health and safety of school children, where no alternative exists.
2. ☐ Elimination of existing severe overcrowding.
3. ☐ Prevention of the loss of accreditation.
4. ☐ Prevention of severe overcrowding expected to result from increased enrollments.
5. ☑ Replacement, renovation or modernization of school facility systems, such as roofs, windows, boilers, heating and ventilation systems, to increase energy conservation and decrease energy related costs in a school facility.
6. ☐ Short term enrollment growth.
7. ☑ Replacement of or addition to obsolete buildings in order to provide for a full range of programs consistent with state and approved local requirements.
8. ☐ Transition from court-ordered and approved racial balance school districts to walk-to, so-called, or other school districts.

SOI Vote Requirement

☑ I acknowledge that I have reviewed the MSBA's vote requirements for submitting an SOI, which are set forth in the Vote Tab of this SOI. I understand that the MSBA requires votes from specific parties/governing bodies, in a specific format using the language provided by the MSBA. Further, I understand that the MSBA requires certified and signed vote documentation to be submitted with the SOI. I acknowledge that my SOI will not be considered complete and, therefore, will not be reviewed by the MSBA unless the required accompanying vote documentation is submitted to the satisfaction of the MSBA. All SOI vote documentation must be uploaded on the Vote Tab.

SOI Program: Core
Potential Project Scope: Potential New School
Is this a Potential Consolidation? No

Is this SOI the District Priority SOI? Yes

School name of the District Priority SOI: 2023 Essex Elementary

Is this part of a larger facilities plan? Yes

If "YES", please provide the following:

Facilities Plan Date: 11/15/2022

Planning Firm: Habeeb & Associates Architects

Please provide a brief summary of the plan including its goals and how the school facility that is the subject of this SOI fits into that plan:

The Manchester Essex Regional District (MERSD) was formed in 2000 by the Towns of Manchester-by-the-Sea and Essex, Massachusetts. Following regionalization, MERSD evaluated its facility priorities, and based on building conditions, determined that the first facility requiring attention would be the regional middle high school (MSHS). MERSD's MSHS was built in partnership with the MSBA and completed in 2010. Following the completion of this project, MERSD turned its attention to its elementary facilities, one in each town, and contracted with Habeeb & Associates Architects (H&A) in 2013 to conduct an independent Facilities Condition Assessment (FCA) to document the condition of both elementary schools. Based on the findings of the 2013 FCA, MERSD submitted Statements of Interest (SOIs) to MSBA for both schools in 2015. The 2013 FCA findings made clear that the needs and investment required at the Manchester Memorial Elementary School (MMES) were much more significant compared to Essex Elementary School (EES), and as a result, MMES was determined to be MERSD's priority SOI. The MSBA accepted MMES into its pipeline and a new elementary school was constructed and completed by the 2021-2022 school year. MERSD is currently in MSBA's Closeout phase for the MMES project.

Knowing that EES is now approximately 66 years old, MERSD commissioned an update of the FCA for EES, which was completed during the 2022-2023 school year. MERSD has continued to use its operating budget and preventative maintenance practices to maintain EES to the fullest extent possible. MERSD earned 1.93% out of a maximum possible 2.0% incentive reimbursement points from MSBA for the MMES project, based on the District's preventative maintenance practices, which, for EES include annual inspections by external contractors of the roof, boiler, HVAC system, grease traps, playground, kitchen equipment, wheelchair lift and fire alarms as well as frequent ongoing internal maintenance by MERSD's maintenance supervisor, a position added via budget restructuring, in order to more efficiently maintain key facility assets and infrastructure.

Additionally, the District has used its General Fund budget, Stabilization reserve funds, and the State's Green Communities Grant program (in partnership with the Town of Essex), to invest more significantly in certain key facility areas at EES in a best effort to extend the useful life of the building and strive for programmatic equity for students. Investment examples include:

new digital HVAC controls and other energy efficiency measures (e.g., steam trap replacement, LED lighting conversion) totaling nearly $578K through the Green Communities Grant, updated security systems ($47K)

new playground ($400K)

updated Project Adventure courses infrastructure ($16K)

student and staff technology upgrades ($170K upgrade of classroom interactive teaching panels, in addition to ongoing operating investments in modern computer device technology),

a new fire alarm system ($169K)

reconfiguration of outmoded locker room spaces into speech-language space ($70K)

asphalt repair to sidewalks and recreational play surfaces ($34K)

new burner assembly for 2008 boiler ($44K)

Replacement of rotted wood in courtyard, around windows, on accessible ramps and surrounding playground ($27K)

Despite these significant investments, the recent FCA makes clear that due to the age of the building, significant infrastructure investments are necessary across all aspects of the building, including site, envelope, interiors, mechanical systems and interiors. Many of these investments are needs within the next five years with an estimated cost of $18.8 million, based on recent market pricing, suggesting that a systemic solution is necessary, rather than a piecemeal approach. A systemic solution would require MERSD to bring the building up to code in certain grandfathered areas, leading to a total estimated cost of remediation of $28.7 million, based on the detailed FCA cost analysis. A copy of the 2022-2023 updated FCA from H&A is attached to our SOI submission.

Please provide the current student to teacher ratios at the school facility that is the subject of this SOI: 19 students per teacher

Please provide the originally planned student to teacher ratios at the school facility that is the subject of this SOI: 19 students per teacher

Does the District have a Master Educational Plan that includes facility goals for this building and all school buildings in District? Yes

If "YES", please provide the author and date of the District's Master Educational Plan.

Yes, the District has a Master Educational Plan. The MERSD Strategic, District, and School Improvement plans in conjunction with our capital improvement plan informed by the Habeeb Report serve as the educational master plan. Drafted by MERSD Leadership Team with the guidance of the Strategic planning committee and input from community stakeholders, the plan was approved by the School Committee in the Fall of 2022. The plan can be reviewed by visiting the MERSD website at www.mersd.org Quick Lin

Is there overcrowding at the school facility? No

If "YES", please describe in detail, including specific examples of the overcrowding.

Has the district had any recent teacher layoffs or reductions? Yes

If "YES", how many teaching positions were affected? 5
At which schools in the district? All
Please describe the types of teacher positions that were eliminated (e.g., art, math, science, physical education, etc.).

To address a decline in enrollment MERSD reduced full-time equivalent positions by attrition. Elementary Classroom and Specialist Teacher Consolidations [art, music, tech, library] K-6 World Language

Has the district had any recent staff layoffs or reductions? No

If "YES", how many staff positions were affected? 0
At which schools in the district?
Please describe the types of staff positions that were eliminated (e.g., guidance, administrative, maintenance, etc.).

Please provide a description of the program modifications as a consequence of these teacher and/or staff reductions, including the impact on district class sizes and curriculum.

Consolidation of specialist staff [art, music, library, tech / interventionist] now shared between two elementary schools.

Please provide a description of the local budget approval process for a potential capital project with theMSBA. Include schedule information (i.e. Town Meeting dates, city council/town council meetings dates, regional school committee meeting dates). Provide, if applicable, the District's most recent budget approval process that resulted in a budget reduction and the impact of the reduction to the school district (staff reductions, discontinued programs, consolidation of facilities).

MERSD utilizes a collaborative approach to budget planning and works cooperatively with Boards of Selectman and Finance Committees in both Essex and Manchester. Through monthly meetings, we provide one another with on-going progress reports on our planning process and outlook. In October, principals, with input from faculty, formulate and submit school-based budgets that reflect staffing, program, and facility needs. Budgets are then synthesized into the MERSD budget proposal presented for public input. Under the Manchester Essex Regional Agreement, the district presents a tentative budget and holds a public hearing for feedback in December; it is considered the first draft budget. A second public hearing is held in January prior to the submission of the budget in the first week of February. Final budget approval is at the Manchester and Essex town meetings in April and May. The FY24 budget represents what the district believes is needed to maintain quality and position the schools for continual improvement of the educational program and student achievement. For the past four years, MERSD has used reserve funding, intended for capital needs, to keep town assessments within the levy limit, particularly for Essex whose apportioned share has escalated due to enrollment patterns. This year our budget request discontinues the use of reserves for operating revenue. As a result, the annual assessment is higher than in a typical year, and it will require the Town of Essex to seek a proposition 2.5 override to address the revenue gap. The boards are aware and in support of our SOI submissions, and leadership in both towns are committed to addressing Essex Elementary facility needs as it is the third and final building replacement. As such, they are prepared to bring forward the funding request for a feasibility study should we be accepted into the pipeline. For more information: www.mersd.org Quick Link: Budget

General Description

BRIEF BUILDING HISTORY: Please provide a detailed description of when the original building was built, and the date(s) and project scopes(s) of any additions and renovations (maximum of 5000 characters).

Essex Elementary was built in 1957 and expanded with an addition in 1975. The addition included the library and gymnasium which added 13,400 square feet to the original 42,200 square foot facility. Building construction predated the 2000 formation of the regional school district and was designed to serve students in grades K-8. With the formation of the Manchester Regional School District and subsequent construction of a regional middle high school, students in grades 6-8 from the Town of Essex were migrated to the regional middle high school facility (MSHS). The Regional Agreement stipulates that elementary-aged students shall be guaranteed the opportunity to attend elementary school in their town of residence with the exception made for special education programs. As a result, the facility serves grades K-5 for students residing in Essex and districtwide special education programs (SWING and ACE) for elementary-aged students from both member towns. Prior to beginning the MMES project in partnership with MSBA, MERSD solicited community input via a districtwide survey, which confirmed that residents overwhelmingly preferred to retain an elementary school in each member town, instead of consolidating elementary schools into a regional facility.

TOTAL BUILDING SQUARE FOOTAGE: Please provide the original building square footage PLUS the square footage of any additions.

55600

SITE DESCRIPTION: Please provide a detailed description of the current site and any known existing conditions that would impact a potential project at the site. Please note whether there are any other buildings, public or private, that share this current site with the school facility. What is the use(s) of this building(s)? (maximum of 5000 characters).

Essex Elementary School (EES) sits on 9.9 acres, which is ample space for the existing K-5 program. All bituminous parking areas, access drives, rear play area behind the gymnasium and walkway pavements are approximately 40 years old, compared to a typical useful life of twenty years, and have been patched or sealed as needed, but not replaced. Per the most recent facility conditions assessment (FCA) provided by Habeeb & Associates (H&A), the entire pavement should be replaced in 3-5 years with an estimated cost of $191K. Paved site areas also have minimal storm drainage, directed towards either a retention pond southeast of the building or adjacent to lawns, which serve as fields for school sports. The playing field has extremely poor drainage, and a new drainage system was recommended in the Habeeb Report in the next 3-5 years at an estimated cost of $374K. An engineering study of the site could help to clarify the challenges, potential remedies, and cost for this item. The school is also surrounded by wetlands and any work near the wetlands needs prior approval by the Town of Essex Conservation Commission.

In addition to being the sole elementary school for Essex, EES is a community facility. It is used daily for after-school childcare, run in partnership with the YMCA. The gymnasium is a practice site for the Manchester Essex Middle High School athletics program. In the winter, the Manchester Essex Youth Basketball program uses the school gym on a regular basis, as it is the only indoor basketball court in town. Spring and fall youth soccer programs utilize the fields. Essex Elementary School is a community center and hosts several town gatherings such as the annual holiday pancake breakfast, it serves as the official site of all town meetings, and the Essex Elementary playground is a hub for informal community gatherings.

ADDRESS OF FACILITY: Please type address, including number, street name and city/town, if available, or describe the location of the site. (Maximum of 300 characters)

12 Story Street, Essex, MA 01929 /The facility is centrally located in the Town of Essex, a few blocks away from the town center, where the Town Hall and public safety buildings are located.

BUILDING ENVELOPE: Please provide a detailed description of the building envelope, types of construction materials used, and any known problems or existing conditions (maximum of 5000 characters).

Roofing is constructed out of EPDM single-ply fully adhered membrane with rigid insulation. The main portion is approximately 25 years old, and the portion over Side B of the building is approximately 20 years old. MERSD contracts with an external provider to conduct routine roofing inspections, and recent reports have found that lead-coated copper cap flashings at all brick wall-to-roof transitions need significant repair or replacement. Flashing heights are low and new insulation will be above flashings when the membrane is replaced. Cantilevered concrete roof slab exterior soffit areas and vertical fascia edges on the building perimeter are exposed, leading to moisture penetration and spalled concrete at bottom drip edges. Per the FCA, a new roof is needed within 3-5 years with an estimated cost of $3.4M.

The main floor structure is concrete slab on grade and rib-pan concrete slab above the ground floor. Exterior walls are 8” CMU with 4” brick veneer (no cavity or insulation). There is minor face brick veneer cracking and signs of water intrusion near the gym. Masonry repairs to the veneer, per the FCA, should take place within 3-5 years with an estimated cost of $104K. The windows are wood framed, many have original single pane glazing, and some dual pane windows show condensation. This causes rooms to be extremely uncomfortable and drafty and is also extremely inefficient from an energy use perspective. These are in need of replacement, with many original to the building and past their useful lifespan and should be replaced per the FCA in 1-2 years. The wood trim and sills are also original and many are rotted. Total cost for window replacement, including trim and sills, is estimated at $1.5M. With window replacement, blinds and shades will also need replacement, which could add an estimated $57K to the project cost. Skylights throughout the building are also beyond their useful life with deteriorated sealants and condensation patches, with an estimated replacement cost of $47K.

The exterior doors are aluminum storefront and or hollow metal. Some doors have begun to corrode and per the FCA should be replaced, in the next 3-5 years at a potential cost of $31K. The siding is T1-11 plywood, warped and peeled, and shows signs of decay. Based on the building’s age, it is assumed that exterior paint may contain lead and would need to be abated. The estimated cost to replace painted siding in 3-5 years is $105K.

Has there been a Major Repair or Replacement of the EXTERIOR WALLS? NO
Year of Last Major Repair or Replacement:(YYYY) 1957
Description of Last Major Repair or Replacement:
Walls are original to the building with no major repair. Although replacement is not required in the next few years, the walls have little to no insulation and the cost to upgrade to energy code would be significant, above $1 million per the FCA.

Roof Section A
Is the District seeking replacement of the Roof Section? YES
Area of Section (square feet) 48138
Type of ROOF (e.g., PVC, EPDM, Shingle, Slate, Tar & Gravel, Other (please describe)
EPDM
Age of Section (number of years since the Roof was installed or replaced) 25
Description of repairs, if applicable, in the last three years. Include year of repair:
Roofing is constructed out of EPDM single-ply fully adhered membrane with rigid insulation. The main portion is approximately 25 years old, and the portion over Side B of the building is approximately 20 years old. MERSD contracts with an external provider to conduct routine roofing inspections, and recent reports have found that lead-coated copper cap flashings at all brick wall-to-roof transitions need significant repair or replacement. Flashing heights are low and new insulation will be above flashings when the membrane is replaced. Cantilevered concrete roof slab exterior soffit areas and vertical fascia edges on the building perimeter

are exposed, leading to moisture penetration and spalled concrete at bottom drip edges. Per the FCA, a new roof is needed within 3-5 years with an estimated cost of $3.4M.

Roof Section B
Is the District seeking replacement of the Roof Section? YES
Area of Section (square feet) 7000
Type of ROOF (e.g., PVC, EPDM, Shingle, Slate, Tar & Gravel, Other (please describe)
EPDM
Age of Section (number of years since the Roof was installed or replaced) 20
Description of repairs, if applicable, in the last three years. Include year of repair:
Roofing is constructed out of EPDM single-ply fully adhered membrane with rigid insulation. The main portion is approximately 25 years old, and the portion over Side B of the building is approximately 20 years old. MERSD contracts with an external provider to conduct routine roofing inspections, and recent reports have found that lead-coated copper cap flashings at all brick wall-to-roof transitions need significant repair or replacement. Flashing heights are low and new insulation will be above flashings when the membrane is replaced. Cantilevered concrete roof slab exterior soffit areas and vertical fascia edges on the building perimeter are exposed, leading to moisture penetration and spalled concrete at bottom drip edges. Per the FCA, a new roof is needed within 3-5 years with an estimated cost of $3.4M.

Window Section A
Is the District seeking replacement of the Windows Section? YES
Windows in Section (count) 500
Type of WINDOWS (e.g., Single Pane, Double Pane, Other (please describe))
Wood framed with original (66 year old) single pane glazing and steel operable vent sash. Some wood windowalls are
retrofitted with 2nd pane or insulated glazing. Aluminum storefront frames and insulated glazing are on building addition.
Age of Section (number of years since the Windows were installed or replaced) 66
Description of repairs, if applicable, in the last three years. Include year of repair:
None

MECHANICAL and ELECTRICAL SYSTEMS: Please provide a detailed description of the current mechanical and electrical systems and any known problems or existing conditions (maximum of 5000 characters).

The school only has one functioning gas-fired steam boiler that was installed in 2008. This unit has begun to experience operating interruptions, which are managed through the operating budget for facility maintenance. MERSD believes that having a backup boiler would align with best practice to avoid interruptions in instructional delivery, should an outage occur during the heating season. An additional boiler, working with the 2008 boiler, would also help extend the useful life of the 2008 unit. The FCA recommended addition of a new boiler within 1-2 years at a cost of $325K but to avoid instructional interruptions, MERSD intends to proceed with this project before a more systemic building solution can be initiated. This exemplifies investments that are immediately necessary throughout EES, but not ideal or cost effective on a stand-alone basis, given the need for a building wide systemic solution. Ultimately, continuity of operations may necessitate additional, piecemeal immediate investments that, from a financial efficiency standpoint, would be better suited to include in a future (ideally near-term), systemic building project.

Individual classroom unit ventilators are original to the building and are not efficient and cause inconsistent heat into the rooms, despite the recent introduction of a new, building-wide digital control solution. Servicing these units has become increasingly problematic, as many essential parts are no longer available. There are also 4 Air Handling Units that service the gym, cafeteria, and basement area, which were installed in 1975. All rooftop exhaust fans appear to be original. Per the FCA, based on the useful life and condition of the units, the entire system should be replaced in 3-5 years at a cost of $2.2M.

Except for natural gas service, which is about 20 years old, other service lines into and out of the building are believed to be original and at least 66 years old, including water and sanitary. Although no known issues exist with these systems, given their age, replacement will become necessary at some point in the future, with costs estimated in the FCA to exceed $300K. The hot water boiler in the building is approximately 16 years old and will need replacement in the next 3-5 years at an estimated cost of $33K.

The electrical system consists of 800 Amp 120/208-volt 3 phase service. Main service and disconnect panel and distribution wireways appear to be original. Sub-panels were added with the 1975 building addition. Building usage is near maximum for the present system and a replacement cost is estimated at $650K. The cost of replacing electrical wiring and sub-distribution system, in an electrical upgrade, is estimated in the FCA at $1.1 million.

Boiler Section 1
Is the District seeking replacement of the Boiler? YES
Is there more than one boiler room in the School? NO
What percentage of the School is heated by the Boiler? 100
Type of heating fuel (e.g., Heating Oil, Natural Gas, Propane, Other)
Natural Gas
Age of Boiler (number of years since the Boiler was installed or replaced) 15
Description of repairs, if applicable, in the last three years. Include year of repair:
One of the two boilers was replaced in 2008. A BMS along with programmable thermostats was installed in 2017 and 2021 at a total cost of $275K to replace the old pneumatic system throughout the building so the HVAC system can be scheduled with occupied and non-occupied settings to reduce the load on the boiler. Nevertheless, efficiency of the new system is limited by dated steam tramp technology (recently upgraded as well at a cost of $36K) and unit ventilators that struggle to maintain even temperatures. Heating delivery is also negatively impacted by single pane windows throughout the building.

Has there been a Major Repair or Replacement of the HVAC SYSTEM? YES
Year of Last Major Repair or Replacement:(YYYY) 2008
Description of Last Major Repair or Replacement:
One of the two boilers was replaced in 2008. A BMS along with programmable thermostats was installed in 2017 and 2021 at a total cost of $275K to replace the old pneumatic system throughout the building so the HVAC system can be scheduled with occupied and non-occupied settings to reduce the load on the boiler. Nevertheless, efficiency of the new system is limited by dated steam tramp technology (recently upgraded as well at a cost of $36K) and unit ventilators that struggle to maintain even temperatures. Heating delivery is also negatively impacted by single pane windows throughout the building.

Has there been a Major Repair or Replacement of the ELECTRICAL SERVICES AND DISTRIBUTION SYSTEM? NO
Year of Last Major Repair or Replacement:(YYYY) 1957
Description of Last Major Repair or Replacement:
None

BUILDING INTERIOR: Please provide a detailed description of the current building interior including a description of the flooring systems, finishes, ceilings, lighting, etc. (maximum of 5000 characters).

Floor structure: concrete slab-on grade and rib-pan framed slab above ground floor.

Floor finishes: vinyl 9x9 tiles in corridors classrooms. These non-ACM tiles have been identified to contain black mastic according to the 2023 AHERA report. The cost to replace the tiles is approximately $1.3M. There is wood flooring in the gym and cafetorium, and carpet in various staff areas, media center, and K classrooms. All carpeting is past its useful life and the condition suggests that replacement is necessary with an estimated cost of $65K. Epoxy painted concrete is present on ramps and in locker/bathrooms in the building addition.

Wall finishes: mostly painted concrete block. Glazed block and ceramic tile dado walls in the bathrooms.

Ceiling finishes: exposed metal deck in gym, exposed concrete in mechanical and storage room. Entire building addition and corridors of classroom wings and cafetorium are 2x4 acoustic tile ceilings. The staff area, lobby main corridor and classrooms have 1x1 acoustic tile ceilings. Many ceiling tiles are cupping, mismatched or discolored and full building replacement is required but would be costly. All but one bathroom each for staff, and boy and girl students are not HP accessible.

Interior lighting was converted to LED between 2018 and 2019, through the MA Green Communities Grant program, in partnership with the Town of Essex, at a total cost of $267K. Emergency lighting is approximately 12 years old.

Much of the kitchen equipment is original to the building, and other equipment is in excess of 30 years old. Repairs can be challenging, given the lack of available parts inventory. This limits options for cooking operations and meal preparation at the school. The school lacks an ANSUL fire suppression system.

PROGRAMS and OPERATIONS: Please provide a detailed description of the current grade structure and programs offered and indicate whether there are program components that cannot be offered due to facility constraints, operational constraints, etc. (maximum of 5000 characters).

The Manchester Essex elementary schools employ a broad- range of teaching methodologies that strive to balance the best of progressive methodology with tried-and-true traditional approaches. Our curriculum and instructional program are designed to support our mission, vision, and core values. To that end we provide a rigorous core curriculum that is complemented by a rich program of experiential and exploratory learning experience designed to utilize an interdisciplinary approach that creates connections between learning and the real world. Overall, MERSD elementary level curriculum and instruction is delivered in a single classroom model with the elementary classroom teacher responsible for the delivery of all core content instruction. All classroom lessons are differentiated based on formative assessment data and whole group, small group, and individual work is integrated into all lessons with an increasing number of lessons relying on anywhere, anytime access to technology and a flexible learning environment. In addition to general differentiated instruction, students receive a variety of support services that are provided through inclusion and push-in services whenever possible.

EES is the smallest of two MERSD elementary schools. Per the regional agreement, students in grades K-5 are entitled to attend elementary school in the town in which they reside unless they are a special education student requiring specialized programing. Grades K-5 are organized into two sections per grade level; art, music, library, and technology are weekly specials with dedicated classroom spaces, and physical education meets twice per week in the gymnasium. EES is a Title I School (poverty rate 21%) and serves a diverse range of students. EES houses our district-wide Students with Integrated Goals (SWING) and Academic and Communication Enhancement (ACE) substantially separate special education programs, and the English Language Learner (ELL) program.

While we can physically accommodate our current student population and critical program needs, the age and condition of the facility limit the scope of the academic program in both general and special education. The end-of-life facility results in frequent disruptions of the educational program, challenges our ability to meet state regulations, and limits the scope of the academic program in both regular and special education. Primarily impacted are instructional opportunities for students and teachers. Outdated learning spaces that do not support flexible learning, extreme swings in building temperatures, leaking windows, basement level classrooms, absence of kindergarten lavatories and lack of handicap accessibility throughout the building, acoustically unsound learning spaces, limited and large group gathering space, and no small group learning spaces or project rooms, are all barriers to our program and current best practice instruction.

Substandard Physical Plant Impact on Program & Special Education

Moderate special education support services are delivered in two classrooms, one severely undersized, limiting the number of students that can be supported at any given time. This undersized space houses both a special education teacher and a paraprofessional which contributes to a noisy and distracting environment for the delivery of

individual and small group tutorials. Appropriate educational space is not available due to an inadequate number of small group learning spaces available in an outdated building.

Occupational and physical therapy occurs in a basement area with damp and musty conditions. This space abuts the boiler room and is accessed by walking through the art classroom which does not allow for student privacy. This undersized space restricts the amount and type of equipment utilized and limits the number of students that can be served during a class period. Speech and Language services are delivered in a converted locker room space in an attempt to create small group learning spaces.

Handicap accessibility deficits include door construction, parking and ramp access, water fountains, bathroom facilities, lockers, classroom sinks which do not meet current MAAB/ADA code.

EES has no appropriate dedicated, private rooms for state mandated student evaluations by the special education department.

EES has no space for de-escalation, in-school suspensions, or time outs for both general and special education students.

EES does not have appropriate science laboratory space for the older grades to conduct experiments which significantly limits the school's ability to implement its STEM curriculum. Experiments are done in the classrooms, which are carpeted, leading to cleanliness and safety issues.

EES does not have adequate large group space. Performances and school assemblies are held in the dated "cafetorium." This limits the number and type of school performances for student.

EDUCATIONAL SPACES: Please provide a detailed description of the Educational Spaces within the facility, a description of the number and sizes (in square feet) of classrooms, a description of science rooms/labs including ages and most recent updates, a description of the cafeteria, gym and/or auditorium and a description of the media center/library (maximum of 5000 characters).

EES has 12 core academic spaces, of which 2 serve Kindergarten, averaging 1,200 square feet (sf) and 10 serve grades 1-5, averaging 936 sf. Kindergarten rooms do not have toilets. Grade 1-5 classrooms have 1 sink per classroom, which are not accessible. EES has 4 special education classrooms, averaging 936 sf, and 1 small group reading room of 936 sf. There is one technology room at 936 sf. The art classroom serving 25 students with 1,980 sf, is located in the basement, adjacent to the mechanical room, which is below grade, and can be musty and damp. There is one music classroom at 936 sf. There are no stand-alone science rooms/labs. The media center is 2,830 sf.

CAPACITY and UTILIZATION: Please provide the original design capacity and a detailed description of the current capacity and utilization of the school facility. If the school is overcrowded, please describe steps taken by the administration to address capacity issues. Please also describe in detail any spaces that have been converted from their intended use to be used as classroom space (maximum of 5000 characters).

As noted, EES was originally designed as a K-8 facility. While there is no overcrowding, many substandard spaces are being used in ways that do not match the original design intent. The art classroom and occupational and physical therapy classrooms are in the basement, adjacent to mechanical room spaces, and below grade, leading to mustiness and dampness. Self-contained special education classrooms, which serve elementary students from both towns, do not contain toilets. The music room is not adequately sized for classes and practice spaces. Storage is in a modular addition that is over 20 years old with water intrusion at the connection to the main building and from the aging roof. The modular addition is also showing issues with uneven flooring. Metal student lockers are not accessible. The gym area includes a boys' and girls' locker room, which is no longer in use. A portion of this space has been converted for use by the school's speech-language pathologist. The CMU walls of the gymnasium are showing evidence of water intrusion and the exterior brick wall throughout the building has little to no insulation, making the building thermally inefficient. The medical suite has a toilet, but it does not meet accessibility

standards. Given the presence of non-ambulatory students in the SWING program, a more modern facility and enhanced outdoor recreational facilities would better serve the physical needs of students and program.

MAINTENANCE and CAPITAL REPAIR: Please provide a detailed description of the district's current maintenance practices, its capital repair program, and the maintenance program in place at the facility that is the subject of this SOI. Please include specific examples of capital repair projects undertaken in the past, including any override or debt exclusion votes that were necessary (maximum of 5000 characters).

The boiler, HVAC systems, grease traps, playground kitchen equipment, roof, wheelchair lift and fire alarm systems are checked by professional contractors each year to ensure proper operation. Maintenance staff perform regular inspections on all items and perform minor repairs, as well as changing the filters to all AHU. The District employs a facility "ticketing" system, whereby staff can send in needs for maintenance that are prioritized, tracked and closed by the facilities department. As part of each year's budgeting process, building principals meet with the facilities manager to identify "small capital" (i.e., $5-25K) projects that are prioritized together with the Director of Finance & Operations, and budgeted pending funding availability to take place typically over the summer when school is not in session. Additionally, the district uses its FCA, maintenance staff and contractor inspections to identify and prioritize larger capital investment projects (>$25K typically) that can be funded through the District's stabilization and other reserve funds.

Over the past five years, the district has completed many facility capital projects at EES including:

-New Playground ($400K)

-New BMS on all unit vents, boiler and AHU ($275K)

-Steam trap replacement building-wide ($36K)

- LED lighting upgrades, building-wide ($267K)

-New pull-down shades for all classrooms ($26K)

-New camera and burglar alarm system for better security and protection ($47K)

-New fire alarm system ($169K)

- New burner assembly for boiler ($44K)

- Sidewalk asphalt repair, blacktop recreational area sealcoating and basketball installation repair ($34K)

- Replacement of rotted wood in courtyard, around window sills, on accessible ramps, and surrounding playground ($27K)

- Reconfigure locker room space into Speech-Language space ($70K)

Each of these repairs was funded within the district's operating budget or Stabilization reserve funds. There has been no debt issued to cover maintenance of EES facility needs. The District will use the recent Habeeb Report FCA to further develop our capital plan and prioritize maintenance projects.

Priority 5

Question 1: Please provide a detailed description of the issues surrounding the school facility systems (e.g., roof, windows, boilers, HVAC system, and/or electrical service and distribution system) that you are indicating require repair or replacement. Please describe all deficiencies to all systems in sufficient detail to explain the problem.

Per the FCA, due to the building's age, significant infrastructure investments are necessary across all aspects of the building, including site, envelope, interiors, mechanical systems and interiors. Many of these investments are needs within the next five years with an estimated cost of $18.8 million, based on recent market pricing, suggesting that a systemic solution is necessary, rather than a piecemeal approach. A systemic solution would also require MERSD to bring the building up to code in certain grandfathered areas, leading to a total estimated cost of remediation of $28.7 million, based on the detailed FCA cost analysis. A copy of the 2022-2023 updated FCA from H&A is attached to our SOI submission.

From a site perspective, bituminous parking areas, access drives, rear play area behind the gymnasium and walkway pavements are approximately 40 years old, compared to a typical useful life of twenty years, and have been patched or sealed as needed, with investments over the past five years totaling $34K although a full replacement, which is needed, has not yet occurred. Per the most recent facility conditions assessment (FCA) provided by Habeeb & Associates (H&A), the entire pavement should be replaced in 3-5 years with an estimated cost of $191K. The paved site areas also have minimal storm drainage, directed towards either a retention pond southeast of the building or adjacent to lawns, which serve as fields for school sports. The playing field has extremely poor drainage, and a new drainage system was recommended in the Habeeb Report in the next 3-5 years at an estimated cost of $374K. An engineering study of the site could help to clarify the challenges, potential remedies, and cost for this item. The school is also surrounded by wetlands and any work near the wetlands needs prior approval by the Town of Essex Conservation Commission.

With regard to building envelope, the main portion of the EPDM single-ply membrane roof is approximately 25 years old; a portion over Side B of the building is approximately 20 years old. MERSD contracts with an external provider to conduct routine roofing inspections, and recent reports have found that lead-coated copper cap flashings at all brick wall-to-roof transitions need significant repair or replacement. Flashing heights are low and new insulation will be above flashings when the membrane is replaced. Cantilevered concrete roof slab exterior soffit areas and vertical fascia edges on the building perimeter are exposed, leading to moisture penetration and spalled concrete at bottom drip edges. Per the FCA, a new roof is needed within 3-5 years with an estimated cost of $3.4M.

Additionally, the windows are wood framed. Many have original single pane glazing, and some dual pane windows show condensation. This causes rooms to be extremely uncomfortable and drafty and is also extremely inefficient from an energy use perspective. These are in need of replacement with many original to the building and past their useful lifespan and should be replaced per the FCA in 1-2 years. The wood trim and sills are also original (1957) and rotted although MERSD has invested in wood replacement throughout the building, the total cost for window replacement, including trim and sills, is estimated at $1.5M. With window replacement, blinds and shades will also need replacement, which could add an estimated $57K to the project cost. Skylights throughout the building are also beyond their useful life with deteriorated sealants and condensation patches, with an estimated replacement cost of $47K. Siding throughout the building is T1-11 plywood, warped and peeled, and shows signs of decay. Based on the building’s age, it is assumed that exterior paint may contain lead and would need to be abated. The estimated cost to replace painted siding in 3-5 years is $105K. Walls are original to the building, and although replacement is not required in the next few years, the walls have little to no insulation and the cost to upgrade to energy code would be significant, above $1 million per the FCA. There is minor face brick veneer cracking and signs of water intrusion near the gym. Masonry repairs to the veneer, per the FCA, should take place within 3-5 years with an estimated cost of $104K.

Mechanical and Electrical Systems further contribute to the time-sensitive need for a systemic building solution. There is currently only 1 working boiler, installed in 2008, which has begun to experience operating interruptions. MERSD believes adding a backup boiler would align with best practice to avoid interruptions in instructional delivery, should an outage occur during the heating season. An additional boiler, working with the 2008 boiler, would also help extend the useful life of the 2008 unit. The FCA recommended addition of a new boiler within 1-2

years at a cost of $325K but to avoid instructional interruptions, MERSD intends to proceed with this project before a more systemic building solution can be initiated. This exemplifies investments that are immediately necessary throughout EES, but not ideal or cost effective on a stand-alone basis, given the need for a building wide systemic solution. Ultimately, continuity of operations may necessitate additional, piecemeal immediate investments that, from a financial efficiency standpoint, would be better suited to include in a future (ideally near-term), systemic building project.

Individual classroom unit ventilators are original to the building and are not efficient and cause inconsistent heat into the rooms, despite the recent introduction of a new, building-wide digital control solution. Servicing these units has become increasingly problematic, as many essential parts are no longer available. There are also 4 Air Handling Units that service the gym, cafeteria, and basement area, which were installed in 1975. All rooftop exhaust fans appear to be original. Per the FCA, based on the useful life and condition of the units, the entire system should be replaced in 3-5 years at a cost of $2.2M.

Except for natural gas service, which is about 20 years old, other service lines into and out of the building are believed to be original and at least 66 years old, including water and sanitary. Although no known issues exist with these systems, given their age, replacement will become necessary at some point in the future, with costs estimated in the FCA to exceed $300K. The hot water boiler in the building is approximately 16 years old and will need replacement in the next 3-5 years at an estimated cost of $33K.

The electrical system consists of 800 Amp 120/208-volt 3 phase service. Main service and disconnect panel and distribution wireways appear to be original. Sub-panels were added with the 1975 building addition. Building usage is near maximum for the present system and a replacement cost is estimated at $650K. The cost of replacing electrical wiring and sub-distribution system, in an electrical upgrade, is estimated in the FCA at $1.1 million.

Much of the kitchen equipment is original to the building, and other equipment is in excess of 30 years old. Repairs can be challenging, given the lack of available parts inventory. This limits options for cooking operations and meal preparation at the school. The school lacks an ANSUL fire suppression system.

Priority 5

Question 2: Please describe the measures the district has already taken to mitigate the problem/issues described in Question 1 above.

A new BMS was installed in 2017 and 2021 for $275K in partnership with the Town of Essex through the MA Green Communities Grant, so the HVAC system can be scheduled with occupied and non-occupied settings to reduce the load on the boiler. Nevertheless, efficiency of the new system is limited by dated steam tramp technology (recently upgraded as well at a cost of $36K) and unit ventilators that struggle to maintain even temperatures.

A maintenance plan is completed every year on the boiler to provide proper operation prior to the heating system. MERSD was able to salvage a burner assembly from the Memorial Elementary School (which was recently reconstructed in partnership with MSBA) and installed it on the EES 2008 boiler to extend its useful life.

The roof is inspected every year and recent repairs include repairing 20 failed patches and flashing conditions on all roof sections and repair 30 failed patches over edge metal laps on all roof sections. Repairs to the rotted sills and frames are planned to be addressed in the summer of 2023. MERSD has replaced rotted wood in the courtyard around some windows and on accessible ramps and surrounding the playground ($27K) over the past several years.

Asphalt repairs have been to sidewalks and recreational play surfaces over the past several years ($34K).

Despite these significant investments, the recent FCA makes clear that due to the age of the building, significant infrastructure investments are necessary across all aspects of the building, including site, envelope, interiors, mechanical systems and interiors. Many of these investments are needs within the next five years with an estimated cost of $18.8 million, based on recent market pricing, suggesting that a systemic solution is necessary, rather than a piecemeal approach. A systemic solution would also require MERSD to bring the building up to code in certain grandfathered areas, leading to a total estimated cost of remediation of $28.7 million, based on the detailed FCA cost analysis. A copy of the 2022-2023 updated FCA from H&A is attached to our SOI submission.

Priority 5

Question 3: Please provide a detailed explanation of the impact of the problem/issues described in Question 1 above on your district's educational program. Please include specific examples of how the problem prevents the district from delivering the educational program it is required to deliver and how students and/or teachers are directly affected by the problem identified.

The age and condition of the facility limits the scope of the academic program in both regular and special education. Outdated learning spaces that do not support flexible learning, extreme swings in building temperatures, leaking windows, basement level classrooms, absence of kindergarten lavatories and lack of handicap accessibility throughout the building, acoustically unsound learning spaces, limited and large group gathering space, and no small group learning spaces or project rooms, are all barriers to our program and current best practice instruction.

Substandard Physical Plant Impact on Program Delivery

- Limited climate control which creates safety issues for students with identified disabilities and prevents summer programming for students with special needs.
- Outdated unit ventilators do not properly regulate heat in classrooms. Despite recently upgraded digital controls, excessive temperature swings interrupt instruction. Students at times need to wear coats in classrooms. Temperature problems also present safety and health concerns.
- Rainwater leaks into the building requiring the school to put out buckets in hallways and create the potential for hazardous slips, and water damage inside the building. Leaks also present a hazard to educational technology.
- Handicap accessibility deficits door construction, parking and ramp access, water fountains, bathroom facilities, lockers, classroom sinks do not meet current MAAB/ADA code.
- Moderate special education support services are delivered in two classrooms, one severely undersized, limiting the number of students that can be supported at any given time. This undersized space houses both a special education teacher and a paraprofessional. Three to four staff members share resource room space, which contributes to a noisy and distracting environment for the delivery of individual and small group tutorials. Appropriate educational space is not available due to an inadequate number of small group learning spaces available in an outdated building.
- Occupational and physical therapy occurs in a basement area regularly impacted by damp and musty conditions. This space abuts the boiler room and is accessed by walking through the art classroom which does not allow for student privacy. This undersized space restricts the amount and type of equipment utilized and limits the number of students that can be served during a class period.
- Speech and Language services are delivered in a converted locker room space in an attempt to create small group learning spaces.
- English Language Learning instruction takes place in a converted storage space that is in adequate in square footage and lacks appropriate furniture. There is no available space to relocate this program.
- EES has no appropriate dedicated, private rooms for state mandated student evaluations by the special education department.
- EES has no space for de-escalation, in-school suspensions, or time outs for both general and special education students.
- EES does not have appropriate science laboratory space for the older grades to conduct experiments which significantly limits the school's ability to implement its STEM curriculum. Experiments are done in the classrooms, which are carpeted, leading to cleanliness and safety issues.
- EES does not have adequate large group space. Performances and school assemblies are held in the dated cafetorium. This limits the number and type of school performances for students and families.
- Security measures, considered common in all schools today, are either missing or retrofitted in less than efficient ways. A lack of door alarms, signals for open doors, PA system accessible by all classrooms/office spaces, and an emergency direct-call button to the local police/fire are all cause for concern, particularly when these safety measures are in place in other district schools.
- Antiquated and broken kitchen equipment results in less variety in menu items, point of service choices and farm-to-table nutrition initiatives. Nutrition instruction is limited by these representational choices.

Priority 5

Question 4: Please describe how addressing the school facility systems you identified in Question 1 above will extend the useful life of the facility that is the subject of this SOI and how it will improve your district's educational program.

Based on the facility condition assessment conducted by Habeeb & Associates, addressing the school facility systems would extend the useful life of the space at a projected preliminary cost of $28.75M. Although, this would not address some of the needs of the educational deficiencies the school has. However, a new elementary school has a projected cost of $32M as per the Habeeb Report and would address the schools' educational needs.

Please also provide the following:

Have the systems identified above been examined by an engineer or other trained building professional?:
YES

If "YES", please provide the name of the individual and his/her professional affiliation (maximum of 250 characters):
Habeeb & Associates Architects

The date of the inspection: 9/13/2022

A summary of the findings (maximum of 5000 characters):
An attached copy of the full Habeeb Report will be provided.

Priority 7

Question 1: Please provide a detailed description of the programs not currently available due to facility constraints, the state or local requirement for such programs, and the facility limitations precluding the programs from being offered.

The Manchester Essex elementary schools employ a broad- range of teaching methodologies that strive to balance the best of progressive methodology with tried-and-true traditional approaches. Our curriculum and instructional program are designed to support our mission, vision, and core values. To that end, we provide a rigorous core curriculum that is complemented by a rich program of experiential and exploratory learning experiences designed to utilize an interdisciplinary approach that creates connections between learning and the real world. Project-based, authentic learning is a key strategic priority for MERSD. Inherent in this approach are long-range, multi-disciplinary investigations and/or projects. The final outcomes of a project-based learning experience vary in nature and are frequently used to display information regarding the in-depth study of the topic and/or problem.

The structure of the classrooms, with their lack of storage and/or counter space, inability to accommodate a large number of students and lack of flexible workspaces, hinder the integration of project-based learning across the curriculum. Teachers struggle to find spaces in which ongoing projects can remain undamaged and readily available to students as they continue with these long-range projects. Outdated learning spaces that do not support flexible learning, extreme swings in building temperatures, leaking windows, basement level classrooms, absence of kindergarten lavatories and lack of handicap accessibility throughout the building, acoustically unsound learning spaces, limited and large group gathering space, and no small group learning spaces or project rooms, are all barriers to our program and current best practice instruction.

- Science instruction lacks the robust engagement the discipline offers. Lack of a designated space, no counter space in classroom areas, limited large group spaces and no flexible seating means that instruction is limited, lacking experimentation, particularly on experiments that continue over many school days. Again, storage impacts instruction with materials related to science stored in an on-site, attached modular.
- Program limitations arise throughout the building because of the antiquated structure of the learning spaces. A lack of instructional materials storage has resulted in the addition of an attached storage modular as well as the use of a basement space impacted by mustiness and dampness. Space to work on and store ongoing projects restricts project-based learning opportunities. With no counters, shelves or additional storage in the classrooms, the outcomes for long term projects are often limited to paper or two-dimensional products. Students can frequently be found spread out in hallways (not designed as flexible learning space) to work on group projects with shared resources, threatening the ability of safe traverse through the hallways.
- Of primary concern for our instructional program is the inclusion of all students. Acoustically, the structure and construction of several instructional spaces make proper acoustics a challenge, particularly for those students with hearing and/or attention concerns. The gymnasium, one of the few large area gathering spaces, is one such learning space. Hearing and understanding directions are particularly challenging in this space. Due to safety concerns, large visual displays such as smartboards are also not available for instructional modifications to make up for this acoustical challenge.
- Physically, the OT/PT space and the Art room are located in the basement. This area is made available through a ramp that requires careful thought and supervised use for students with physical handicaps. Services for students with physical disabilities are located in the basement PT/OT space, requiring travel down the ramp to access services. Students and staff must pass through the art classroom to access the PT/OT space, disrupting learning as well as serving to identify students in need of these services. This location is susceptible to mustiness, dampness, and cold, particularly in the spring and fall when the heat in the building is not on. For art materials, these conditions often lead to waste and an inability to store materials necessary for instruction. Not only are these spaces unappealing to students due to the submerged position of the classroom but also, they are unsafe and/or unable to get important notifications as interference occurs when employing the walkie-talkie communication systems used throughout the building. Walkie-talkies are used to call for additional support for dysregulated students as well as dismissal announcements. Particularly troubling is that students who are dysregulated are

often found using the sensory equipment in the PT/OT space. In the event of the need for additional personnel to support a student, communication often fails if the call is made to, or intended for, staff located in this space. Emergency communications are also restricted in this manner.

- Increasingly, students with physical disabilities, and even those with in-the-moment childhood injuries, such as a broken leg, find using the bathrooms a challenge. While all students report feeling “unsafe” in the bathrooms because of a lack of privacy related to the old stall fixtures and acoustics within, students in wheelchairs, crutches or that require toileting, are at an even more heightened disadvantage. The single bathroom found in the nurse’s office is not ADA compliant. Only one bathroom, attached to a classroom, allows enough privacy and space for toileting a student. Any child in a wheelchair must use a designated staff bathroom due to space constraints.
- The social-emotional programming found at the school and district level has been enhanced since the pandemic shutdown. With the SEL needs of students on the rise, the need for a flexible, appropriate counseling space is paramount. Office space exists for the school adjustment counselor; however, the office is undersized for any service group size larger than one individual. Group meetings must be scheduled in conjunction with openings in other larger office spaces and/or classrooms. This fluidity in movement threatens privacy as well as requiring the counselor to shift her instructional materials consistently to accommodate instruction.
- Offering opportunities to our students as a collective learning community strengthens the social emotional learning of the district and of the school. Community meetings and school-wide presentations are restricted by the lack of risers and ease of access to the stage, which is part of the cafeteria. Due to the multi-use nature of this space, time restrictions also impact the ability to gather as a school-wide learning community. No other performance space is available in the building.

Priority 7

Question 2: Please describe the measures the district has taken or is planning to take in the immediate future to mitigate the problem(s) described above.

The District has used its General Fund budget, Stabilization reserve funds, and the State's Green Communities Grant program (in partnership with the Town of Essex), to invest more significantly in certain key facility areas at EES in a best effort to extend the useful life of the building and strive for programmatic equity for students. Investment examples include:

- new playground ($400K)
- updated Project Adventure courses infrastructure ($16K)
- student and staff technology ($170K in one-time upgrades of classroom interactive teaching panels, in addition to ongoing operating investments in modern computer device technology),
- a new fire alarm system ($169K)
- reconfiguration of outmoded locker room spaces into speech-language space ($70K)
- asphalt repair to sidewalks and recreational play surfaces ($34K)
- new burner assembly for 2008 boiler ($44K)
- replacement of rotted wood in courtyard, around windows, on accessible ramps and surrounding playground ($27K)

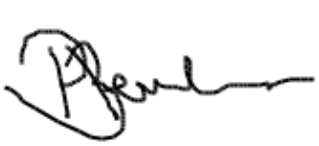
The facility constraints that impact the program are related to the overall construction, design, and age of the building. Despite these significant investments, the recent FCA makes clear that due to the age of the building, significant infrastructure investments are necessary across all aspects of the building, including site, envelope, interiors, mechanical systems and interiors. Many of these investments are needed within the next five years with an estimated cost of $18.8 million, based on recent market pricing, suggesting that a systemic solution is necessary, rather than a piecemeal approach. A systemic solution would require MERSD to bring the building up to code in certain grandfathered areas, leading to a total estimated cost of remediation of $28.7 million, based on the detailed FCA cost analysis. A copy of the 2022-2023 updated FCA from H&A is attached to our SOI submission.

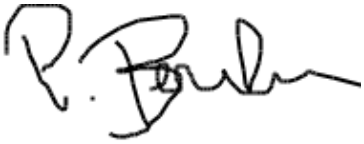
Priority 7

Question 3: Please provide a detailed explanation of the impact of the problem described in this priority on your district's educational program. Please include specific examples of how the problem prevents the district from delivering the educational program it is required to deliver and how students and/or teachers are directly affected by the problem identified.

As the oldest building in the Manchester Essex Regional School District, the inequities of instructional approach, programmatic offerings, up-to-date accommodations, and resource management are stark. Essex Elementary School houses the elementary ELL student population and two sub-separate special education programs. Additionally, EES has the highest percentage of high-risk students in the district. The inequities in facilities with their elementary peers at the Manchester Memorial Elementary School, its district sister school, result in a significantly different educational experience. Lack of project rooms, science labs, flexible use spaces, appropriate performance spaces, and spaces large enough to accommodate multiple classroom groups hinders the collaboration among grade levels and classrooms as well as robust, engaging, real-life instructional connections. Lack of storage and counter space in classrooms restricts the instructional practices that teachers can employ daily to engage students.

While we can physically accommodate our current student population and critical program needs, the age and condition of the facility limit the scope and delivery of the academic program in both general and special education. The end-of-life facility results in frequent disruptions of the educational program, challenges our ability to meet state regulations, and limits the scope of the academic program in both regular and special education. Primarily impacted are instructional opportunities for students and teachers, both in regular and in special education. Outdated learning spaces that do not support flexible learning, extreme swings in building temperatures, leaking windows, basement level classrooms, absence of kindergarten lavatories, lack of handicap accessibility throughout the building, acoustically unsound learning spaces, limited and large group gathering space, and no small group learning spaces or project rooms are all barriers to our program and current best practice instruction.





Substandard Physical Plant Impact on Program & Special Education Compliance:

- Limited climate control which creates safety issues for students with identified disabilities and prevents summer programming for students with special needs.
- Outdated unit ventilators do not properly regulate heat in classrooms. Despite recently upgraded digital controls, excessive temperature swings interrupt instruction. Students at times need to wear coats in classrooms. Temperature problems also present safety and health concerns.
- Rainwater leaks into the building requiring the school to put out buckets in hallways and create the potential for hazardous slips, and water damage inside the building. Leaks also present a hazard to educational technology.
- Handicap accessibility deficits: door construction, parking and ramp access, water fountains, bathroom facilities, lockers, and classroom sinks do not meet the current MAAB/ADA code.
- Moderate special education support services are delivered in two classrooms, one severely undersized, limiting the number of students that can be supported at any given time. This undersized space houses both a special education teacher and a paraprofessional which contributes to a noisy and distracting environment for the delivery of individual and small group tutorials. Appropriate educational space is not available due to an inadequate number of small group learning spaces available in an outdated building.
- Occupational and physical therapy occurs in a basement area regularly impacted by damp and musty conditions. This space abuts the boiler room and is accessed by walking through the art classroom which does not allow for student privacy. This undersized space restricts the amount and type of equipment utilized and limits the number of students that can be served during a class period.
- Handicap accessibility deficits door construction, parking and ramp access, water fountains, bathroom facilities, lockers, classroom sinks do not meet current MAAB/ADA code.
- Speech and Language services are delivered in a converted locker room space in an attempt to create small group learning spaces.
- EES has no appropriate dedicated, private rooms for state mandated student evaluations by the special education department.
- EES has no space for de-escalation, in-school suspensions, or time outs for both general and special education students.

- EES does not have appropriate science laboratory space for the older grades to conduct experiments which significantly limits the school's ability to implement its STEM curriculum. Experiments are done in the classrooms, which are carpeted, leading to cleanliness and safety issues.
- EES does not have adequate large group space. Performances and school assemblies are held in the dated "cafetorium." This limits the number and type of school performances for students and families.
- Security measures, considered common in all schools today, are either missing or retrofitted in less than efficient ways. A lack of door alarms, signals for open doors, PA system accessible by all classrooms/office spaces, and an emergency direct-call button to the local police/fire are all cause for concern, particularly when these safety measures are in place in other district schools.
- Antiquated and broken kitchen equipment results in less variety in menu items, point of service choices and farm-to-table nutrition initiatives. Nutrition instruction is limited by these representational choices.

CERTIFICATIONS

The undersigned hereby certifies that, to the best of his/her knowledge, information and belief, the statements and information contained in this statement of Interest and attached hereto are true and accurate and that this Statement of Interest has been prepared under the direction of the district school committee and the undersigned is duly authorized to submit this Statement of Interest to the Massachusetts School Building Authority. The undersigned also hereby acknowledges and agrees to provide the Massachusetts School Building Authority, upon request by the Authority, any additional information relating to this Statement of Interest that may be required by the Authority.

* Local chief executive officer: In a city or town with a manager form of government, the manager of the municipality; in other cities, the mayor; and in other towns, the board of selectmen unless, in a city or town, some other municipal office is designated to the chief executive office under the provisions of a local charter. Please note, in districts where the Superintendent is also the Local Chief Executive Officer, it is required for the same person to sign the Statement of Interest Certifications twice.

MSBA BOARD ACTION LETTER – INVITATION TO FEASIBILITY

SECTION 3.1.8.2

Massachusetts School Building Authority

Deborah B. Goldberg
Chair, State Treasurer

James A. MacDonald
Chief Executive Officer

Mary L. Pichetti
Executive Director / Deputy CEO

December 13, 2024

Ms. Pamela Beaudoin, Superintendent
Manchester-Essex Regional School District
36 Lincoln Street
Manchester-by-the-Sea, MA 01944

Re: Manchester-Essex Regional School District, Essex Elementary School

Dear Superintendent Beaudoin:

I am pleased to report that the Board of the Massachusetts School Building Authority (the "MSBA") has voted to invite the Manchester-Essex Regional School District (the "District") to partner with the MSBA in conducting a Feasibility Study for the Essex Elementary School. The Board's vote follows the District's timely completion of all of the requirements of the MSBA's Eligibility Period.

I do want to emphasize that this invitation to partner on a Feasibility Study is ***not*** approval of a project, but is strictly an invitation to the District to work with the MSBA to explore potential solutions to the problems that have been identified. Moving forward in the MSBA's process requires collaboration with the MSBA, and communities that "get ahead" of the MSBA without MSBA approval will not be eligible for grant funding. To qualify for any funding from the MSBA, local communities must follow the MSBA's statute, regulations, and policies which require MSBA collaboration and approval at each step of the process.

During the Feasibility Study phase, the District and the MSBA will partner pursuant to the terms of the Feasibility Study Agreement to find the most fiscally responsible and educationally appropriate solution to the problems identified at the Essex Elementary School. The Feasibility Study, which will be conducted pursuant to the MSBA's regulations and policies, requires the District to work with the MSBA on the procurement of an Owner's Project Manager and Designer, which will help bring the District's Feasibility Study to fruition.

We will be contacting you soon to discuss these next steps in more detail. In the meantime, however, I wanted to share with you the Board's decision and provide a brief overview of what this means for the Manchester-Essex Regional School District.

I look forward to continuing to work with you as part of the MSBA's grant program. As always, feel free to contact me or my staff at (617) 720-4466 should you have any questions.

Sincerely,

Mary L. Pichetti
Executive Director

Re: Manchester-Essex Regional School District, Essex Elementary School

Dear Superintendent Beaudoin:

I would like to thank representatives of the Manchester-Essex Regional School District (the "District") for meeting with Massachusetts School Building Authority (the "MSBA") staff on June 24, 2024, and July 22, 2024, to review enrollment projections and methodologies for the Essex Elementary School project (the "Proposed Project"). As discussed, the next critical step is for the MSBA and the District to agree on a study enrollment for the Proposed Project.

The MSBA works with local communities to create affordable, sustainable, and energy-efficient schools across Massachusetts. A critical early component in achieving these objectives begins with an appropriate design enrollment that positions the District to efficiently meet space capacity needs throughout potential future enrollment variations.

The MSBA uses a data-driven enrollment projection methodology based on the widely accepted modified grade-to-grade cohort survival methodology (the "enrollment methodology"). The MSBA's enrollment methodology generates a baseline enrollment projection as discussed during the June 24, 2024, enrollment meeting, and as further described on the MSBA's website found under the 'Building With Us', 'MSBA Enrollment Methodology' section.

Based on discussion with and information supplied by the District, data from sources such as the Department of Elementary and Secondary Education ("DESE") and Department of Public Health, the MSBA has been able to create enrollment projections for the Proposed Project, as follows.

The Essex Elementary School presently serves the Town of Essex grade K through 5 enrollments. The MSBA understands that in addition to the current grade configuration, the District would like its Feasibility Study to evaluate a district-wide grade Pre-K through 5 configuration with an expansion to the MSBA-funded Manchester Memorial Elementary School. The District would also like to evaluate a grade Pre-K through 3 configuration at the existing Essex Elementary School resulting in district-wide grades 4 through 5 enrollments attending the MSBA-funded Manchester Memorial Elementary School.

As discussed, Pre-K enrollment is not included in these projections and the determination for required space will be in the early phase of the grant program's feasibility study phase of the MSBA's process at the time of the review of the District's proposed educational space program for the Proposed Project. Accordingly, this analysis will be focused on the enrollment projections for grades K through 5.

The table below illustrates the District's K through 12 enrollments during the most recent ten-year period, including enrollment for the school year 2023-2024 as reported by the Department of Elementary and Secondary Education ("DESE").

School Year	Essex	District Wide			
	K-5	K-5	6-8	9-12	Total
2014-2015	270	672	376	440	1,488
2015-2016	249	610	384	432	1,426
2016-2017	225	574	386	424	1,384
2017-2018	228	560	372	443	1,375
2018-2019	222	538	368	471	1,377
2019-2020	219	518	357	483	1,358
2020-2021	189	450	343	459	1,252
2021-2022	219	497	283	450	1,230
2022-2023	231	489	283	416	1,188
2023-2024	229	489	274	399	1,162

A version of the above table with more detail regarding the District's historic enrollment can also be found in the District's Enrollment Projection package.

The total grade K through 5 enrollments in the Town of Essex as reported by the District for the 2023-2024 school year was 229 students, which reflects a decrease of 61 students (-15.2%) from the maximum grade K through 5 enrollments reported during the preceding ten years. Additionally, the 2023-2024 grade K through 5 enrollment reflects an increase of 1 student (0.4%) from the average grade K through 5 enrollments reported during the preceding ten-year period. The MSBA understands that the District initially proposed an enrollment to accommodate approximately 240 students in grades Pre-K through 5 at the Essex Elementary School.

The total grade K through 5 enrollments in the Manchester-Essex Regional School District as reported by the District for the 2023-2024 school year was 489 students, which reflects a decrease of 183 students (-27.2%) from the maximum grade K through 5 enrollments reported during the preceding ten years. Additionally, the 2023-2024 district-wide grade K through 5 enrollment reflects a decrease of 51 students (-9.4%) from the average grade K through 5 enrollments reported during the preceding ten-year period.

With respect to future enrollments, the MSBA's base enrollment projection indicates the District's grade K-5 enrollment will stabilize then trend upward, peaking in the 2032-2033

school year before declining. A similar pattern is also projected for the Town of Essex. In accordance with the MSBA's Enrollment Methodology, the baseline enrollment is calculated using the ten-year average of projected enrollments. As such, the average base enrollment projections for the Proposed Project through the 2032-2033 school year are as follows:

- Essex Elementary School Current Configuration: Grade K-5 base enrollment projection: 245 students
- Essex Elementary School Proposed Configuration: Grade K-3 base enrollment projection: 160 students
- District-wide proposed Configuration: Grade K-5 base enrollment projection: 505 students

As a result of a sensitivity analysis performed by the MSBA on this base enrollment projection and further discussion with the District, the following adjustment has been made to the base enrollment projection:

Out-of-District Enrollment

- In order to adjust for fluctuations to in the out-of-district enrollment patterns of the District's residents over time, the MSBA has made an additional adjustment to the base enrollment projection.
- In order to make this adjustment, the MSBA adjusted the grade-to-grade survival ratios for grade K through 5 by a total of 3.3% throughout a four-year period in the projection.
- This adjustment added the following numbers of students to the base enrollment, as compared to the projection without this adjustment:
  - Essex Elementary School Current Configuration of grade K-5 enrollment: the adjustment added approximately five students
  - Essex Elementary School Proposed Configuration of grade K-3 enrollment: the adjustment added approximately five students
  - District-wide Proposed Configuration of grade K-5 enrollment: the adjustment added approximately ten students

As a result of the analysis of the base enrollment forecast, the historical enrollment trends of the District and the adjustment described above, the MSBA recommends for planning and study purposes only, study enrollments for the Proposed Project as follows:

- Essex Elementary School Current Configuration of grade K through 5 enrollment: 250 students (plus Pre-K students)
- Essex Elementary School Proposed Configuration of grade K through 3 enrollment: 165 students (plus Pre-K students)
- District-wide Proposed Configuration of grade K through 5 enrollment: 515 students (plus Pre-K students)

Please note that these recommendations for study enrollments do not represent an affirmation by the MSBA for approval and/or funding of any of these options and are intended only to provide a

framework to inform the feasibility study to be conducted as a means of determining the most cost-effective and educationally sound solution to be agreed upon by the District and the MSBA. The MSBA's study enrollment recommendations assume full utilization of all remaining school facilities.

If the current grade K-5 enrollment configuration in the Town of Essex is not determined to be the Preferred Solution, the District will be required to document in the Preferred Schematic Report that the Preferred Solution has been approved by the School Committee and necessary District officials. Further, the MSBA will require a written plan from the District describing the process for determining local support for preferred grade reconfiguration. Please note any potential grant associated with a Proposed Project that includes a grade Pre-K through 3 configuration at the existing Essex Elementary School, resulting in district-wide grades 4 through 5 enrollments attending the MSBA-funded Manchester Memorial Elementary School, will be limited to the work at the Essex Elementary School. Upon approval of the District's Preferred Solution, the MSBA will forward a design enrollment certification that is specific to the grade configuration associated with the approved Preferred Solution.

The MSBA believes that these study enrollment recommendations will position the District to efficiently meet space capacity needs throughout future enrollment variations. Please sign and return the attached certification within 21 calendar days to confirm agreement on these study enrollment recommendations. If the District feels that these study enrollment recommendations do not meet the needs of the District, please respond to this letter via e-mail to Claire Ackerman and propose three meeting/conference call times for which the District can be available to discuss enrollment.

If you have any questions regarding this matter, please do not hesitate to contact me or Claire Ackerman (Claire.Ackerman@massschoolbuildings.org) at 617-720-4466.

Sincerely,

Michael P McGurl

MSBA Project No. 202306980020

MASSACHUSETTS SCHOOL BUILDING AUTHORITY
MANCHESTER-ESSEX REGIONAL SCHOOL DISTRICT
ESSEX ELEMENTARY SCHOOL
STUDY ENROLLMENT CERTIFICATION

As a result of a collaborative analysis with the Massachusetts School Building Authority (the "MSBA") of enrollment projections and space capacity needs for the Essex Elementary School (the "Proposed Project"), the Manchester-Essex Regional School District (the "District") hereby acknowledges and agrees that the design of alternatives, which may be evaluated as a part of the feasibility study for the Essex Elementary School, shall be based in accordance with the following:

Town of Essex Grade K-3 Enrollment (plus Pre-K)	**Town of Essex Grade K-5 Enrollment (plus Pre-K)**	**District-wide Grade K-5 Enrollment (plus Pre-K)**
165 students	250 students	515 students

The District further acknowledges and agrees that, pursuant to 963 CMR 2.00 *et seq.*, the MSBA shall determine the square feet per student space allowance and total square footage according to the enrollments noted above. The District acknowledges and agrees that it has no right or entitlement to any particular design enrollment, square feet per student space allowance, or total square footage and that it has no right or entitlement to a design enrollment any greater than any of the enrollments noted above, and further acknowledges and agrees that it shall not bring any claim or action, legal or equitable, against the MSBA, or any of its officers or employees, for the purpose of obtaining an increase in the design enrollment for the Proposed Project that it has acknowledged and agreed to herein. The District further acknowledges and agrees that, among other things, the design enrollment, square feet per student space allowance, and total square footage of the Proposed Project shall be subject to the approval of the MSBA's Board and that the final approval of a Proposed Project shall be within the sole discretion of the MSBA's Board.

The undersigned, for themselves and the District, hereby certify that they have read and understand the contents of this study enrollment certification and that each of the above statements is true, complete and accurate. The undersigned hereby certify that they have been duly authorized by the appropriate governmental body to execute this certification on behalf of the District and to bind the District to its terms.

CAPITAL BUDGET STATEMENT

SECTION 3.1.8.4

Capital Budget & Financial Capacity Statement

Manchester Essex Regional School District (MERSD)

The Manchester Essex Regional School District (MERSD) works collaboratively with its two member towns—Manchester-by-the-Sea and Essex—to plan, finance, and manage capital investments on a multi-year basis. The District and towns maintain a coordinated approach to capital planning that aligns school construction and major facility investments with long-term municipal financial planning to ensure predictability, affordability, and fiscal sustainability.

MERSD has a demonstrated history of responsibly financing major school construction projects. The District's most recent major construction project was the Manchester Memorial Elementary School project, which was financed through a combination of long-term general obligation bonds and short-term bond anticipation notes (BANs). Permanent financing includes $32.29 million in 30-year general obligation bonds, along with an additional $3.23 million bond issuance, while BAN financing was utilized during construction and will be retired through final MSBA reimbursement. All Memorial School debt service costs are shared regionally between Manchester and Essex using a combined Equalized Valuation (EQV) and population-based assessment methodology established by the Regional Agreement.

Prior to the Memorial School project, the District completed the Middle/High School construction project using approximately $32.3 million in voter-approved general obligation bond. Debt service for this project is similarly apportioned between Manchester and Essex using the District's established assessment methodology.

In addition to large-scale construction projects, MERSD has continued to invest in targeted capital improvements and facility maintenance through a mix of long-term debt, pay-as-you-go funding, and prudent debt management practices, including the use of bond premiums to offset interest costs and smooth annual debt service.

MERSD maintains a comprehensive long-range capital plan, updated annually in coordination with both towns, that incorporates routine maintenance, equipment replacement, and lifecycle planning for District facilities. As part of this work, the District has begun assessing Middle High School facility needs in anticipation of a mid-life (2034) need to invest in major systems and structures including roof replacement, mechanical systems, and technology infrastructure upgrades, ensuring that future capital needs are evaluated within the context of overall district debt capacity.

As part of its Project Development Plan (PDP) submissions to the Massachusetts School Building Authority (MSBA), Essex School Building Project Team has identified preliminary project cost ranges for the future Essex Elementary School Project. These include an estimated range of $45 million to $95 million for an Essex Elementary School project, depending on scope, educational program requirements, and site considerations. Financial planning for future projects assumes that existing debt obligations remain in place, allowing the District and towns to evaluate cumulative impacts and ensure long-term affordability.

EXECUTIVE SUMMARY

In the fall of 2025, members of the Manchester Essex Regional School District participated in a series of Educational Visioning sessions facilitated by Educational Planner Mike Pirollo and Educational Consultant Paul White from MLP Integrated Design, Inc., in collaboration with JCJ Architecture. Each session was part of a collaborative process designed to inform the Essex Elementary School Feasibility Study and pre-design process. Through interactive workshops and reflective discussions, participants engaged in a step-by-step process aimed at capturing high-level thinking around the following:

- Educational, Architectural, and Community Priorities
- Developmental Needs of PreK–5 Learners
- Vision of Teaching and Learning, Including Practices, Strategies, and Structures
- Vision of Learning Environments that Best Support Student Growth

Through this process, participants shared rich insights about what students need to thrive, how teaching and learning can best support their development, and how the school's physical environment can be designed to align with these goals. The following summary captures the key outcomes and themes that emerged, reflecting the community's aspirations for an educational experience that is responsive, inclusive, and future-focused.

Guiding Educational Principles

The guiding principles emerging from this visioning process emphasize:

1. Students as the Doers and Leaders of Their Own Learning
2. A Learning Environment that Captures and Supports the Energy of Children
3. Flexibility in Space and Practice to Support Collaboration and Engagement
4. A School that Serves as the Hub of the Essex Community
5. Seamless Connections Between Indoor and Outdoor Learning
6. Spaces that Promote Comfort, Belonging, and Accessibility for All Learners

Developmental Considerations & Impacts

Participants reflected deeply on the developmental characteristics of PreK–5 learners, emphasizing the need for environments that balance structure and independence, movement and focus, and social connection and quiet reflection.

They identified major shifts across the early childhood and elementary years, calling for varied and flexible spaces that respond to differences in readiness, regulation, and learning style. PreK and early elementary learners benefit from warm, nurturing environments scaled to their size and independence, while upper elementary students thrive when given opportunities for leadership, autonomy, and peer collaboration.

Movement, sensory regulation, and access to nature were identified as essential to supporting cognitive growth and emotional wellbeing. Participants emphasized that space should not limit engagement—

outdoor classrooms, small breakout areas, and calming zones are as critical to learning as traditional classrooms.

Access, Engagement, and Belonging

Stakeholders envisioned Essex Elementary as a community-centered school where learning extends beyond the classroom walls and across the full day. The facility should support before- and after-school enrichment, family and community gatherings, and integrated partnerships with local organizations such as the library, senior center, and Parks & Recreation. Participants underscored the importance of connection and continuity, valuing relationships that grow across years and across grade levels. Cross-age collaboration, buddy systems, and leadership roles for older students were seen as ways to foster belonging and a shared sense of community.

Teaching, Learning, and the Vision of the Future School

Across all sessions, participants described learning that "sticks" as hands-on, active, joyful, and relevant, learning that connects to real-world experiences and allows students to take ownership. Educators emphasized practices that promote curiosity, critical thinking, and creativity through collaboration, inquiry, and problem solving. The school should enable flexible teaching models, including team-based instruction, project-based learning, and small-group intervention, supported by adaptable spaces and shared professional areas for teacher collaboration. A future Essex Elementary School should celebrate curiosity and encourage risk-taking within a safe, supportive, and inclusive environment.

Design & Physical Space Implications

Participants envisioned a building that reflects Essex's character and values—inviting, connected to nature, and sized for community. Key design implications include:

- Flexible learning neighborhoods that support varied groupings, collaboration, and movement
- Transparency and visibility to promote safety, connection, and shared learning
- Calming and sensory-friendly spaces integrated throughout the school for all learners
- Strong indoor-outdoor connections, with direct access to outdoor learning and play
- Community-scaled gathering spaces for small group, large group, and whole-school events
- Environments that foster comfort, pride, and ownership for students, staff, and families

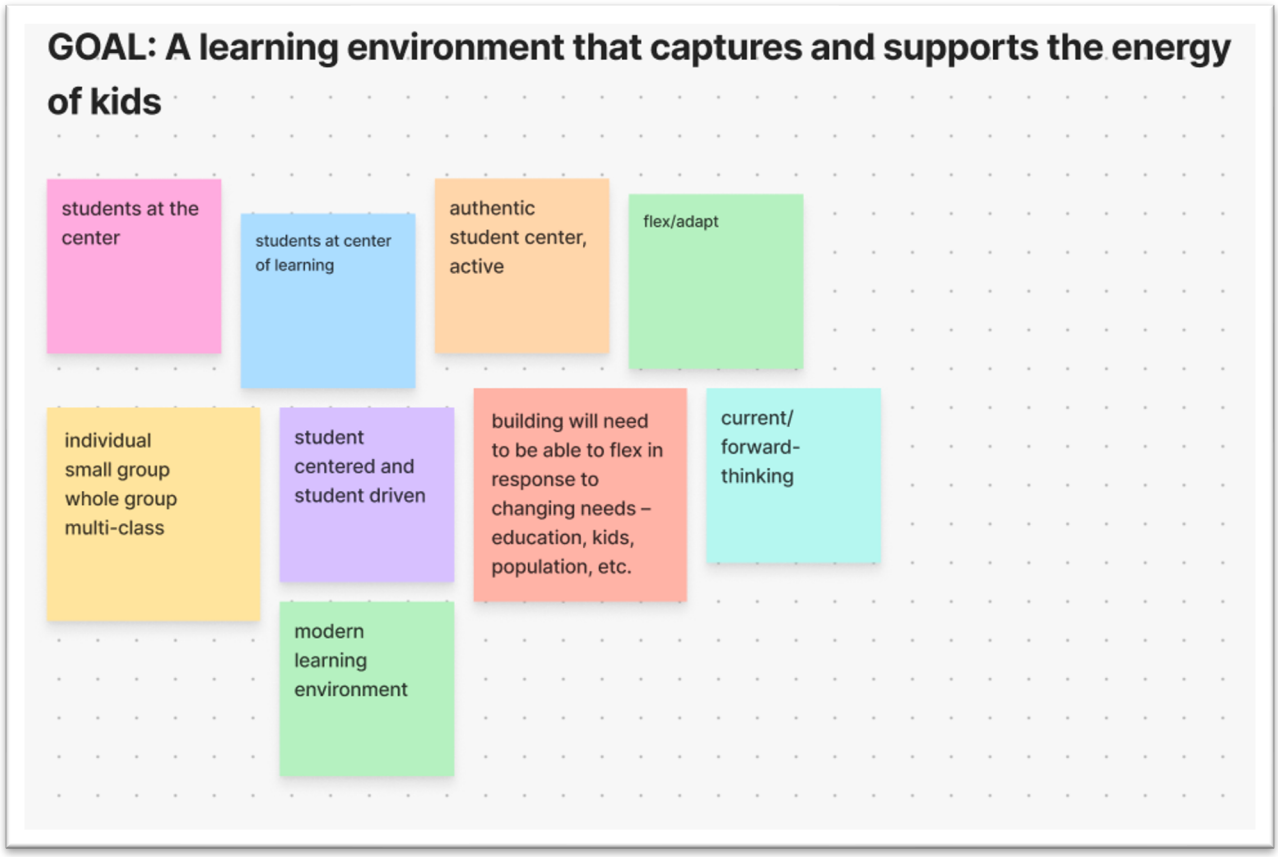
Community Vision

Ultimately, the community envisions Essex Elementary School as a joyful, flexible, and future-ready learning environment, one that celebrates the unique energy of children, strengthens community identity, and honors the developmental journey of every learner.

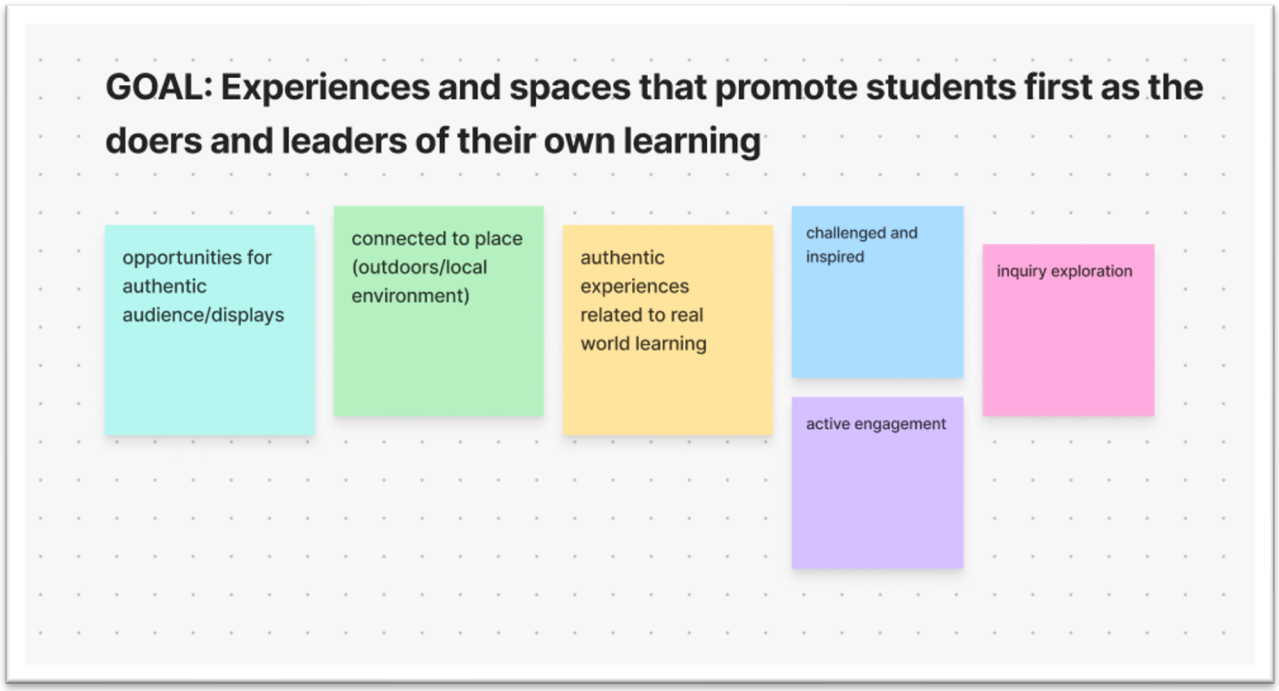
The future Essex Elementary will be a hub for learning and connection, designed to nurture curiosity, confidence, and belonging. It will reflect a shared belief that students learn best when they are engaged, supported, and inspired by an environment that grows with them, academically, socially, and emotionally.

Launch & Priority Mapping Overview

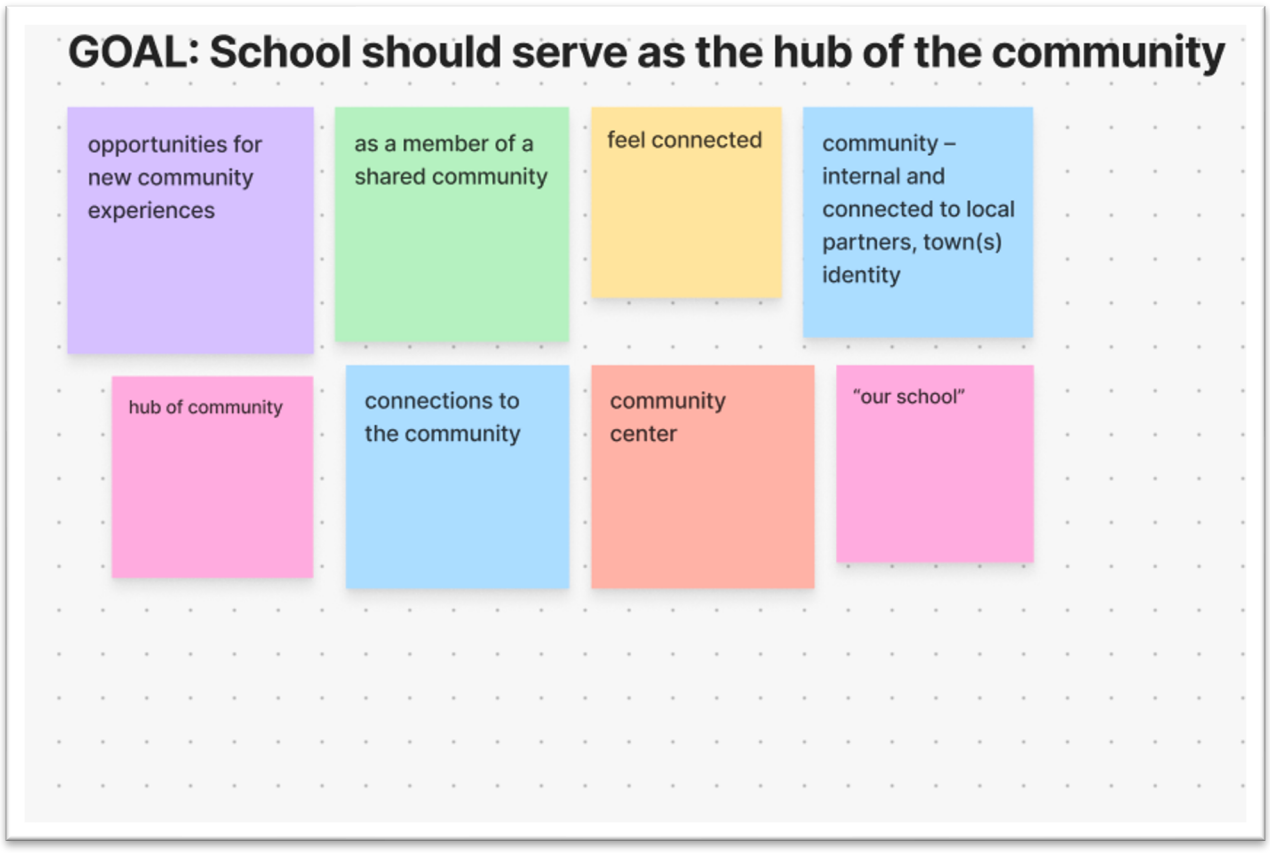
On September 16, 2025, members of Manchester Essex Regional School District attended a meeting with Educational Planner Mike Pirollo from MLP Integrated Design, Inc., along with JCJ Architecture. This meeting was part of the visioning effort for the Essex Elementary School building project. The goal of the meeting was to identify educational, architectural, and community goals and priorities.



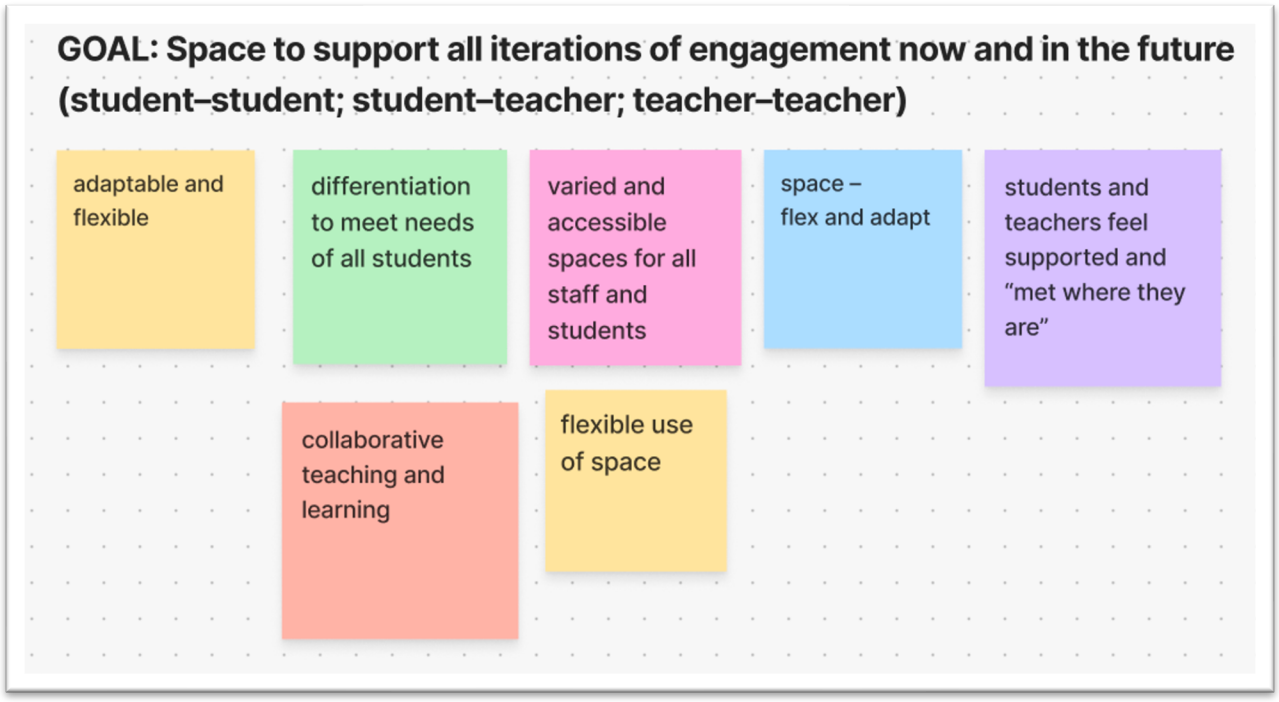
Part 1 - Educational, Architectural, and Community Priorities



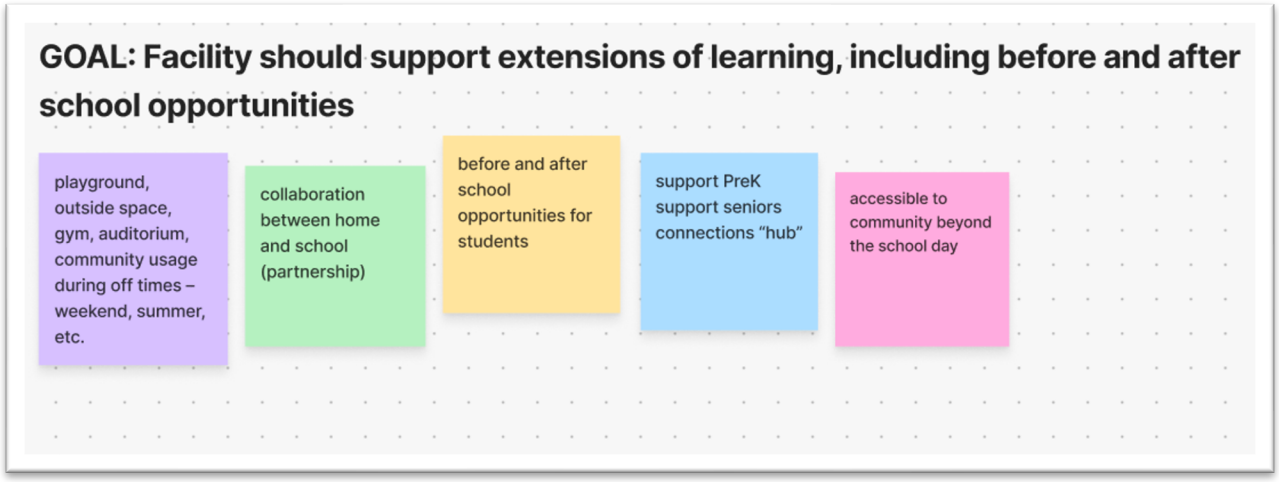
In Part 1, participants were asked to identify educational, architectural, and community priorities on individual sticky notes. After sharing their individual responses, participants grouped and categorized like-ideas to identify overarching project goals and considerations as documented below:



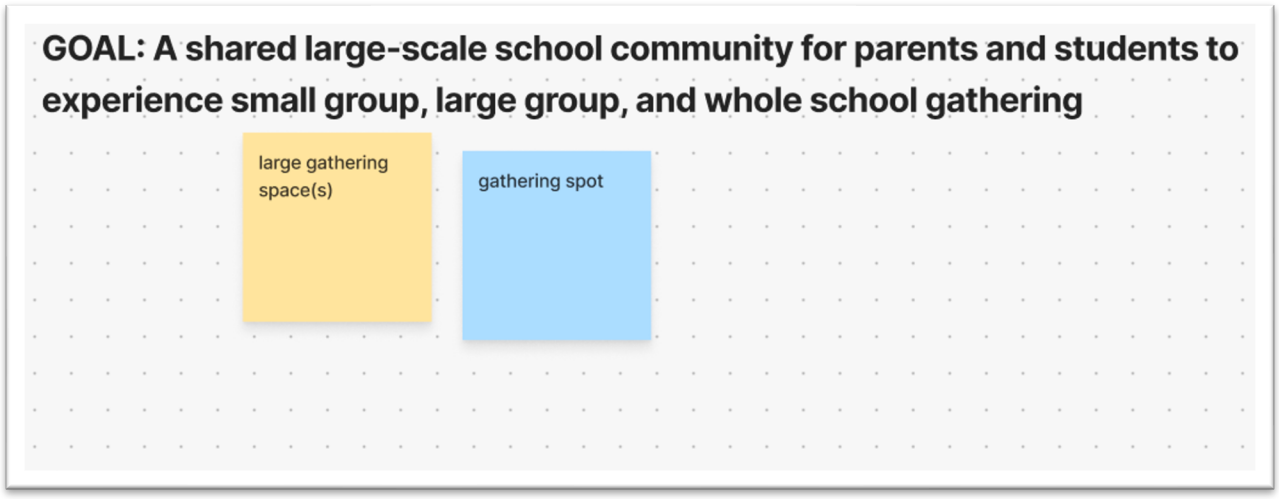
PROJECT GOALS:



- Experiences and spaces that promote students first as the doers and leaders of their own learning
- A learning environment that captures and supports the energy of kids
- Space to support all iterations of engagement now and in the future (student–student; student–teacher; teacher–teacher)
- School should serve as the hub of the community
- Facility should support extensions of learning, including before and after school opportunities
- A shared large-scale school community for parents and students to experience small group, large group, and whole school gathering



Individual responses that fall under each of these overarching project goals are documented in the pages that follow.



GOAL: A learning environment that captures and supports the energy of kids
students at the center
students at center of learning
authentic student center, active
flex/adapt
individual small group whole group multi-class
student centered and student driven
building will need to be able to flex in response to changing needs – education, kids, population, etc.
current/ forward-thinking
modern learning environment

GOAL: Experiences and spaces that promote students first as the doers and leaders of their own learning
opportunities for authentic audience/displays
connected to place (outdoors/local environment)
authentic experiences related to real world learning
challenged and inspired
inquiry exploration
active engagement

GOAL: School should serve as the hub of the community
opportunities for new community experiences
as a member of a shared community
feel connected
community – internal and connected to local partners, town(s) identity
hub of community
connections to the community
community center
"our school"

GOAL: Space to support all iterations of engagement now and in the future (student–student; student–teacher; teacher–teacher)
adaptable and flexible
differentiation to meet needs of all students
varied and accessible spaces for all staff and students
space – flex and adapt
students and teachers feel supported and "met where they are"
collaborative teaching and learning
flexible use of space

GOAL: Facility should support extensions of learning, including before and after school opportunities
playground, outside space, gym, auditorium, community usage during off times – weekend, summer, etc.
collaboration between home and school (partnership)
before and after school opportunities for students
support PreK support seniors connections "hub"
accessible to community beyond the school day

GOAL: A shared large-scale school community for parents and students to experience small group, large group, and whole school gathering
large gathering space(s)
gathering spot

Visioning 1 Overview

On September 22, 2025, members of Manchester Essex Regional School District attended a meeting with Educational Planner Mike Pirollo and Educational Consultant Paul White from MLP Integrated Design, Inc., along with JCJ Architecture. This meeting was part of the visioning effort for the Essex Elementary School Building Project. The session focused on understanding the developmental needs of PreK–5 learners and beginning to envision the spaces, structures, and experiences that will best support students in a future Essex Elementary School.

The meeting centered around the following goals:

- Understanding the developmental needs of PreK–5 learners
- Exploring grade configuration options and their implications
- Envisioning spaces that best support students' growth and learning

Part 1 – Understanding the Learner

In Part 1, participants explored the developmental characteristics of PreK–5 students. Through cross-grade discussions, they identified key academic, social-emotional, and physical milestones and considered how these shifts shape effective teaching, organization, and learning space design.

The responses from the whole-group wrap-up and learner profile charts are documented below.

- Integrating more movement into daily learning
- Major differences among Pre-K-5 so space and experience should be different
- Integration of SEL throughout day; being able to respond in real time – continuum of available space
- Need for flexibility in practice, space, and group size
- Variety of active and interactive learning
- Outside academic and movement spaces to support more choice
- Access to flexible spaces or outdoor space can't be cumbersome
- Need a feeling of warmth and comfort
- Developmentally appropriate scaled furniture and features – support independence
- Bring the outside in
- Use of glass and transparency for supervision and learning
- Showing students what is theirs to access

SOCIAL and EMOTIONAL

What are the most significant changes they experience?

GRADES PreK-K

Separation from family/ caregiver

making friends

following rules/expectations

managing emotions

problem solving

GRADES 1-3

testing authority/ limits

Changing structure of friendships

academic anxiety

adult guidance/support managing emotions + problem solving

GRADES 4-5

Competitive but cooperative

dating/relationships

hormonal - quick changing emotions

Integration of SEL across the entire School day!

Multi-tiered system of support for SEL

What supports, structures, and experiences can help them navigate this transition successfully?

warm, welcoming fun environment

learning through play - singing
dancing
hands-on experiences

Opportunities for different types of groupings
- large group
- small group
- partners
- individual

PHYSICAL

What are the most significant changes they experience?

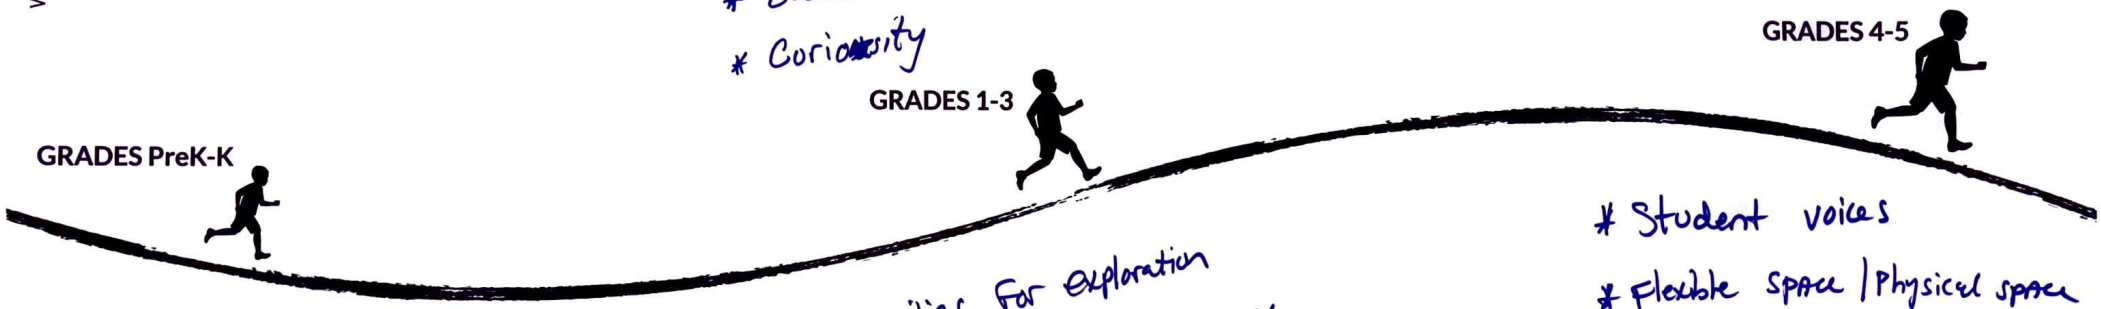
- needs movement opportunities
- short amt. sitting
- reduce fine-motor

- Copying from board is hard
- move from lots of movement to more compact
- body control
- play hard/work hard
- low stamina
- short movement breaks

- Copying from board gets easier
- big muscles/larger motor movement developing quickly
- better with tools
- snacks and rest periods
- pushing physical limits
- roughhousing

What supports, structures, and experiences can help them navigate this transition successfully?

- breaks in learning
- variety of types of learning experiences (tactile, auditory etc)
- hands-on experiences - authentic learning
- various ways to present information
- variety of scale of activities
- mutiple seating options/spaces
- different types of play spaces for variety of ages and physical skills.



ACADEMIC

What are the most significant changes they experience?

* Play Based
* Gross Motor play

* Structed hands on learning
* tools -vs- toys
* Coriosity

* AWARness - bigger picture worry
* Structur supports learning

What supports, structures, and experiences can help them navigate this transition successfully?

* Variety of options/ Intentional space

Outdoor learning space →

* Opportunities for exploration
* Balance between Lg + Small spaces

* Student voices
* Flexible space / Physical space
* Varied learning spaces

Part 2 – Grade Configuration Considerations

In Part 2, MLP presented several possible grade configuration models for the project. Participants rotated through stations to examine each option, considering its developmental alignment, benefits, and challenges. A gallery walk and group discussion followed, identifying key themes, priorities, and tradeoffs.

The collective feedback from these discussions is summarized below, with items in blue indicating ideas that resonated across groups.

Enrollment Scenario 1: *Town of Essex – K-3 + Pre-K (Essex 4th and 5th at MM) – 165 students*

Developmental Fit: *How well does this grade configuration support the developmental needs of students (social, emotional, academic, and physical?*

- Focus on early childhood' developmentally appropriateness
- One subset of students having an additional transition – not developmentally supported

Advantages: *What are the potential benefits or strengths of this configuration for students, educators, and the school community?*

- Smaller population
- Start education in neighborhood school
- Teaming and collaboration for Grades 4 & 5 teachers
- Access to programming for 4th / 5th – fields, Parks & Rec
- More opportunity to break student dynamics

Challenges: *What potential difficulties, concerns, or drawbacks might arise with this configuration?*

- Transition of 4th / 5th into existing culture / cohort at MMES
- Essex students have additional transition
- Teacher rapport building with Grade 4
- Parent buy-in
- Smaller population
- Too many young – missing older voices
- Many 4th / 5th together – increase in conflicts
- Families of elementary students spilt across sites
- Parent / family culture – having to join MMES PTO, etc.
- Essex as "outsiders" emphasized
- Teacher culture for those that have to move
- Will require focused efforts on culture
- Higher teacher cost (impact) for Special Education – specialized program

Enrollment Scenario 2: *Town of Essex – K-5 + Pre-K (current configuration) – 250 students*

Developmental Fit: *How well does this grade configuration support the developmental needs of students (social, emotional, academic, and physical?*

- Builds community and sense of place
- Small size
- Community keeps staff & families
- Keeps kids and relationships for 6 years (+ 2 Pre-K) – supports SEL
- Cross-grade opportunities

Advantages: *What are the potential benefits or strengths of this configuration for students, educators, and the school community?*

- Older students can support younger students
- Maintains regional agreement for district
- Families / comfort / familiar for local access
- Local community partners: library, shipbuilding, senior center
- Family engagement
- Community hub
- History (traditions)
- Pre-K-5 in 1 location
- Preference of community for neighborhood school
- Maintaining EES staff community / family

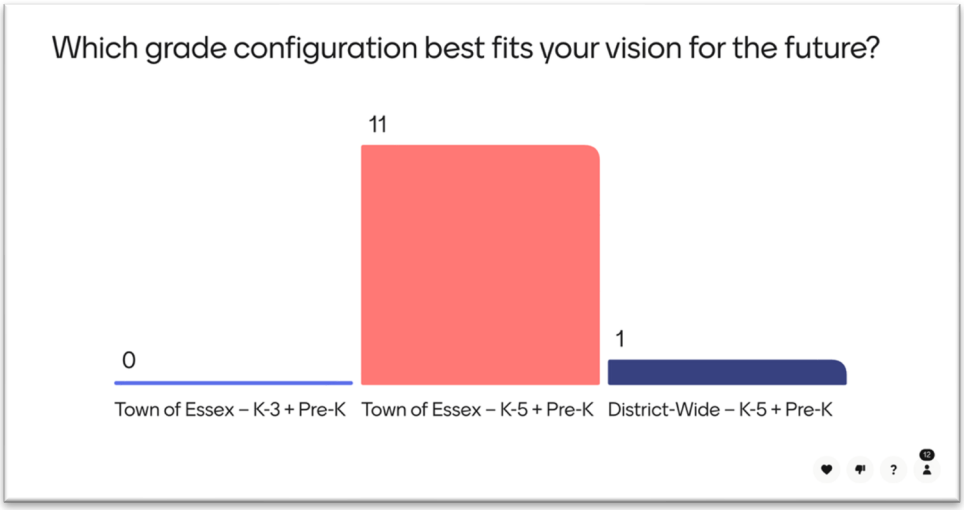
Challenges: *What potential difficulties, concerns, or drawbacks might arise with this configuration?*

- "Bubble" classes
- Outdoor structures for wide range Pre-K-5 and space
- Distance from other district schools
- District Sped programs – staff sharing
- Specialists (shared) drive schedule

Enrollment Scenario 3: *District-Wide – K-5 + Pre-K (expansion at Manchester Memorial) – 515 students*

Developmental Fit: *How well does this grade configuration support the developmental needs of students (social, emotional, academic, and physical?*

- Social connections with expanded geographic area
- Maintains same school for 6 years – supports SEL
- Size impacts (?) on all ages



Advantages: *What are the potential benefits or strengths of this configuration for students, educators, and the school community?*

- Economy of scale
- Peer collaboration (staff and students)
- Equity – everyone has the same stuff and experience
- Students already familiar with each other before MS transition
- Single connected campus – upper and lower school
- Minimizes transitions
- No school change needed for specialized Sped
- MERSD culture-building for all

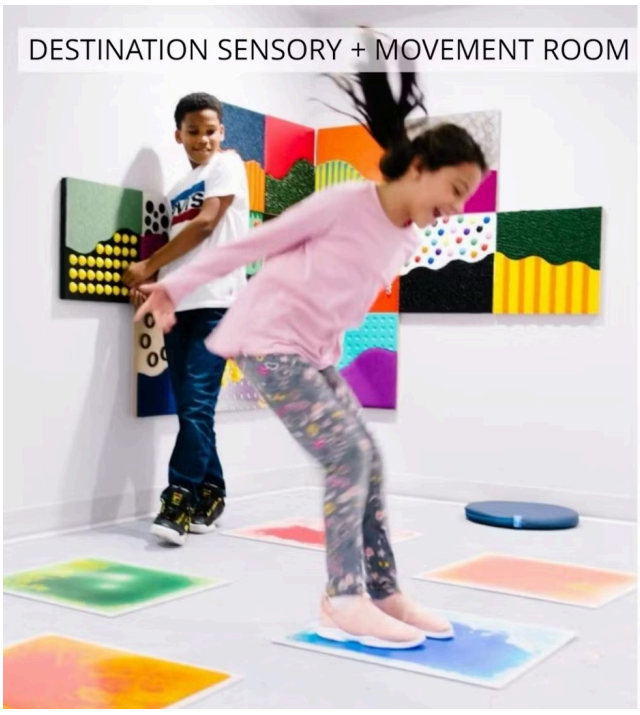
Challenges: *What potential difficulties, concerns, or drawbacks might arise with this configuration?*

- Lots of students currently ride their bike. They don't like the bus.
- Melding cultures / philosophies
- Parent buy-in
- No neighborhood school
- Another Memorial renovation
- Impact on Essex real estate market
- Impact on commute for some staff; traffic
- Community impact of site redesign
- Commuting distance for Essex residents
- Potential staff reduction
- Limited flexibility for growth options

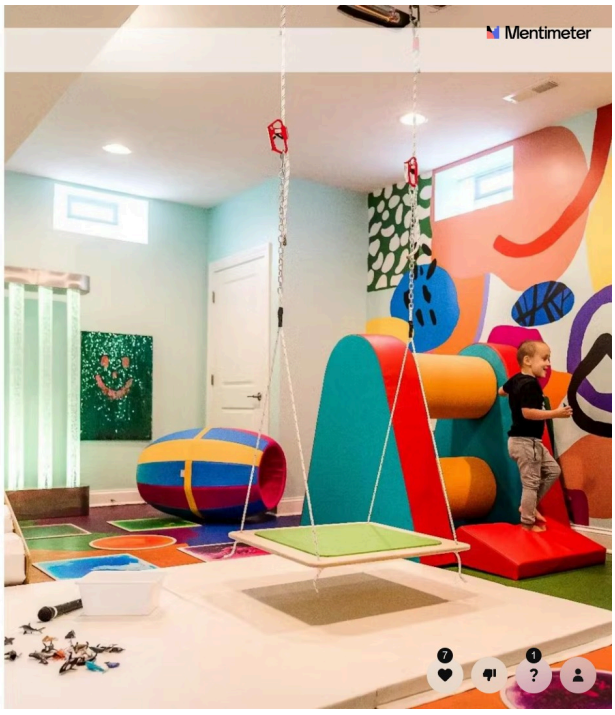
Finally, participants used Mentimeter to indicate their preferred configuration and discussed the results (shown below). The conversation emphasized the importance of alignment between grade configuration, developmental needs, and the district's goals for student success, belonging, and community.

Part 3 – Spaces That Support Students

In Part 3, participants examined how school spaces can best support students' academic, social, and emotional growth. Using precedent images and small-group discussion, participants explored how the environment can address key developmental needs, including movement and sensory regulation, social connection, self-regulation, and a sense of belonging.



Participants reacted to each photo with a heart if they felt like spaces supported development and their future vision, a question mark if spaces somewhat fit their future vision, or a thumbs down if spaces didn't fit their future vision. Then, the session concluded with groups brainstorming types of spaces that could meet these needs in a future Essex Elementary School. Their ideas and the precedent images with reactions are documented in the following pages.



- Spaces that are quiet and calming
- Calming space in & out
- Calming spaces in classes as important as calming spaces elsewhere
- Visibility to outdoors – connection to outside / nature
- More age inclusive outdoor space
- Indoor & outdoor motor opportunities that meets developmental ranges
- Bring the outside in (not sand!)
- Celebration of students / connection to community & Essex culture
- Collaboration spaces support learning (used with intention and purpose)
- Sensory space – specific room
- Destination for movement / sensory experiences
- Sensory movement options / spaces, especially for older students
- Sensory path
- Alternative dining – varied table sizes
- Quiet dining space / varied options
- Porch
- Neighborhood spaces
- Break out neighborhood outside classrooms for partnering classes on science, projects
- Sliding doors between classes with middle shared space
- Small group / intervention spaces near classrooms
- Visibility into shared spaces
- Avoid places where students can hide and not be visible
- Stage / café / gym configuration with non-traditional café seating options
- Make use of "passage" space for SEL
- Lots of light and glass

Visioning 2 Overview

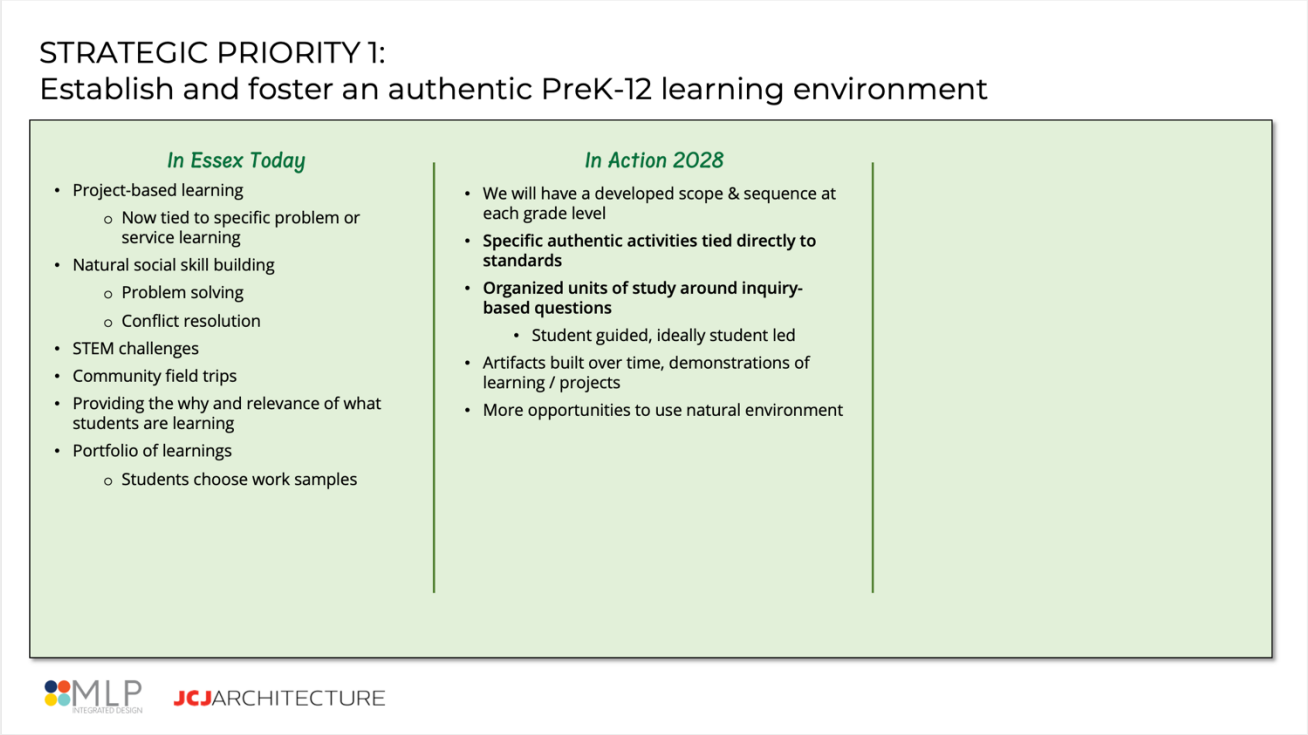
On October 22, 2025, members of Manchester Essex Regional School District attended the second visioning session for the Essex Elementary School Building Project, facilitated by Educational Planner Mike Pirollo and Educational Consultant Paul White from MLP Integrated Design, Inc., with JCJ Architecture. This session focused on connecting teaching, learning, and student experiences with the design of learning spaces.

The meeting centered around the following goals:

- Reflect on current instructional practice using the district's Strategic Plan
- Explore how space types and design features can support desired learning experiences

Part 1 – Learning That Sticks

In Part 1, participants began by reflecting on moments when learning truly "stuck" for themselves or their students. They identified key descriptors that make learning meaningful and shared them on a "*What We Value in Learning*" wall. This created a shared understanding of what effective, engaging learning looks like.



The responses from the *What We Value in Learning* chart is documented below. Please note, numbers in parenthesis signify the number of times a similar idea was made.

- Hands-on activities (4)
- Students helping each other (3)
- Whole class discussion and sharing ideas (2)
- Relationship building (2)
- Motivation / engagement (2)
- Connections to other learning or experiences (2)
- Fun (2)
- Cooperative learning (2)
- Creative
- Team building activities
- Whiteboard work
- Comparing strategies
- Was connected to current, real-world events
- Used knowledge and experiences many years later
- Kids struggled; it was hard but rewarding
- Show learning in different ways
- Choice
- Students taking ownership of their learning (the transfer and expansion)
- Outside in nature
- Active
- Relevant – solving a real problem
- Low-stakes, no pressure
- Data collection and visualization
- Whole-class participation
- Quick, easy
- Inviting space
- Natural light
- Appropriate seating

Part 2 – Strategic Plan in Action

In Part 2, participants worked in small groups to connect the district's Strategic Plan to classroom experiences. Each group documented how a priority is currently realized and how it might look in the final year of the District Improvement Plan, identifying gaps between current practice and desired outcomes.

The responses from the Strategic Plan priority charts are documented below.

STRATEGIC PRIORITY 2:
Integrate social-emotional learning into all aspects of the school day

In Essex Today

- Greet by name at door
- **Morning meetings / school meeting**
- RULER tools:
  - Chart how we want to feel
  - Mood meter
- **Calming spaces in class / school**
- Access to school adjustment counselor
- Multi-year personal relationships, personal connection
- Integrate students' interests in learning
- **Responsive Classroom routines**
- Birthday shout-outs
- After-school clubs – connecting after school with different adults
- Consistent expectations of routines, behavior (model & practice, role-playing)
- Logical consequences
- Student Leadership Council

In Action 2028

- **Consistent vertical scope of skills / practices**
- **Integrating purposeful movement / activators**
- **Integrate SEL assessments and intervention into MTSS model**
- **SEL component on report card**
- Integrate SEL in all academics / specials
- Small group space (close to classroom – visible to have private conversations)
- Peer leaders for conflict resolution
- Accessible spaces to meet SEL needs
- Large group spaces for collaboration

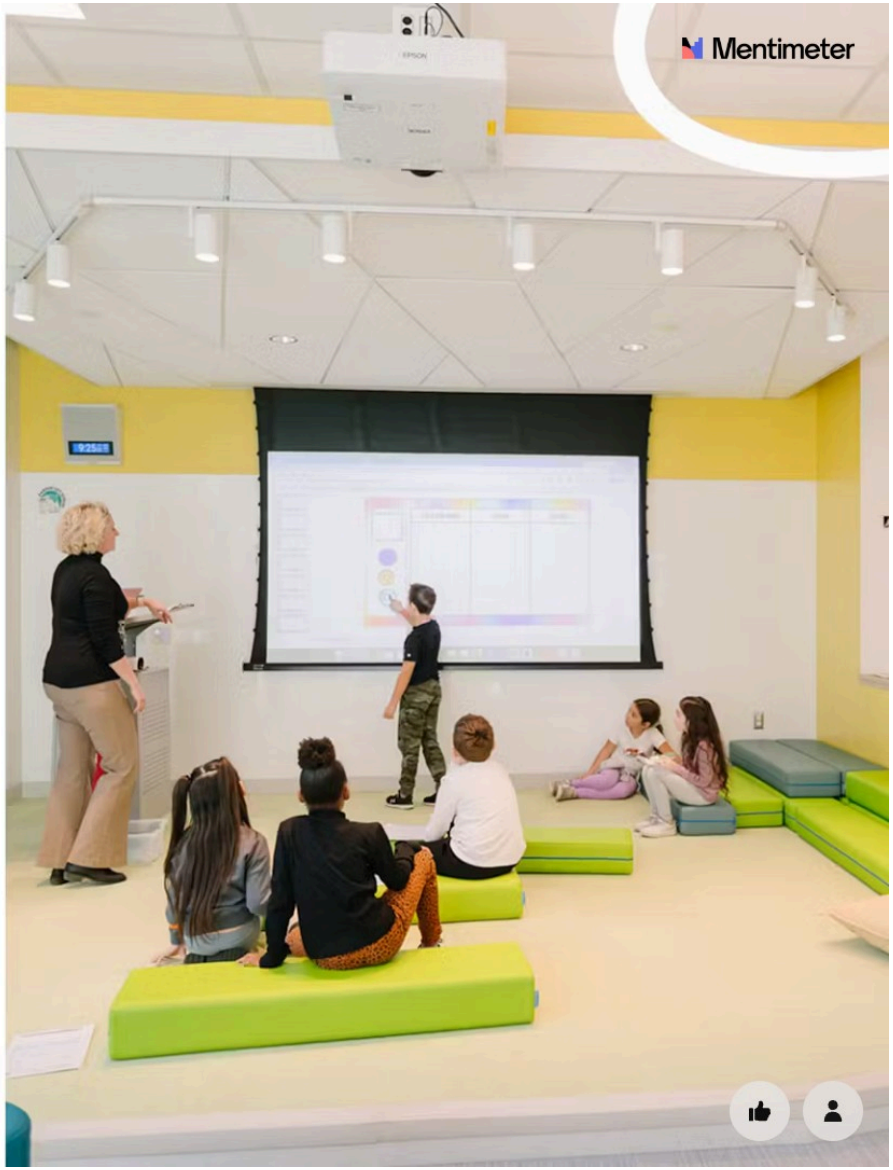
MLP INTEGRATED DESIGN JCJARCHITECTURE

STRATEGIC PRIORITY 3:
Celebrate and nurture an inclusive and diverse school culture through UDL

In Essex Today

- **Differentiation**:
  - Small group
  - Manipulatives
  - Type / amount for showing learning
  - MTSS (support for students in inclusive setting)
  - Title 1
  - Flexible seating
- Choice
  - Groupings
  - Order of completion
  - How to show work
  - Choice in assignment

In Action 2028

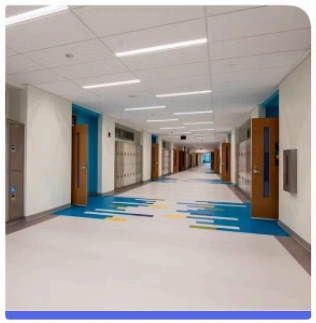


- Know the routines and expectations:
  - Group work
  - Partner work
  - Materials
- Small group spaces next to classrooms for support:
  - Minimize travel times
- Playground closer to lunch room = more time to play
- Flexible use of spaces
- Variety of spaces to meet students' needs (i.e. sensory)
- Programs / classes in the building with diverse learners:
  - SWING / RISE, PreK
  - World language classes
- Children are not stressed / anxious, better self-regulation

MLP INTEGRATED DESIGN JCJARCHITECTURE

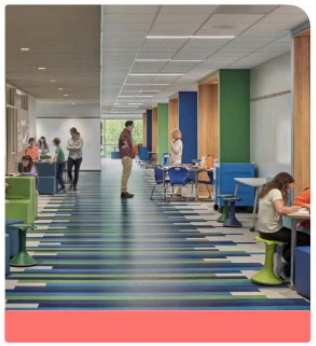
Part 3 – Learning Environments in Action

In Part 3, participants explored how different types of spaces can support learning, collaboration, core curriculum, and student wellness. They reflected on which environments resonated most, what experiences they would enable for students, and which spaces felt essential for the future school. There responses to specific prompts are documented in the pages that follow.



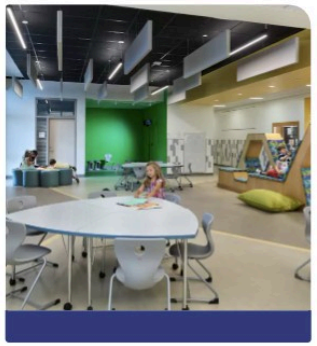
BUILDING ORGANIZATION

Mentimeter



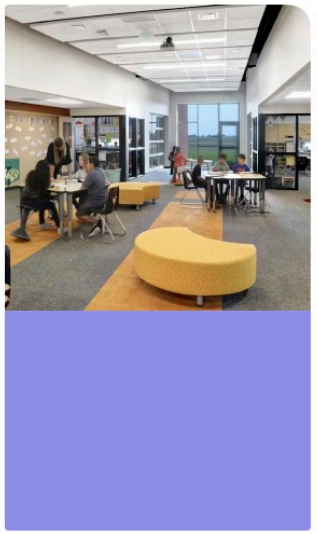
Which level of building organization feels right for MERSD students?

0



Traditional Corridor, No Breakout

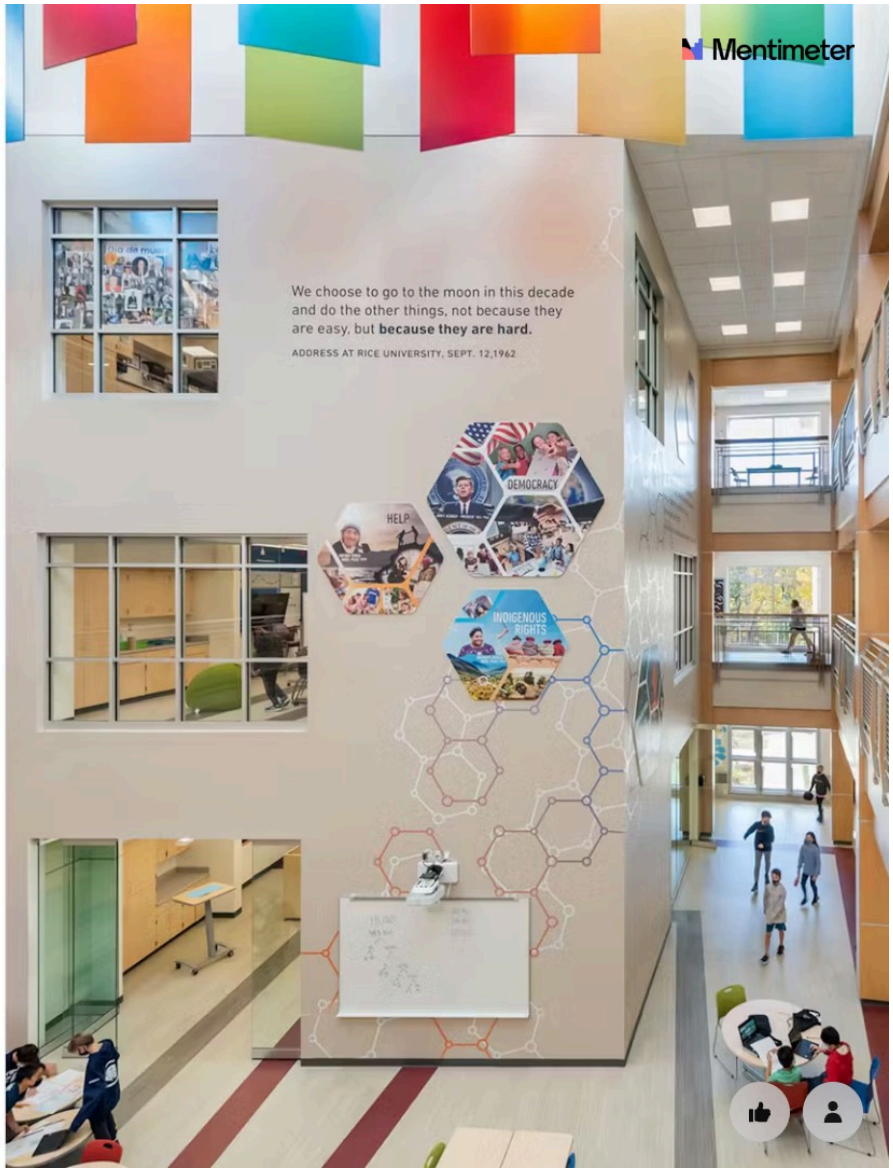
1



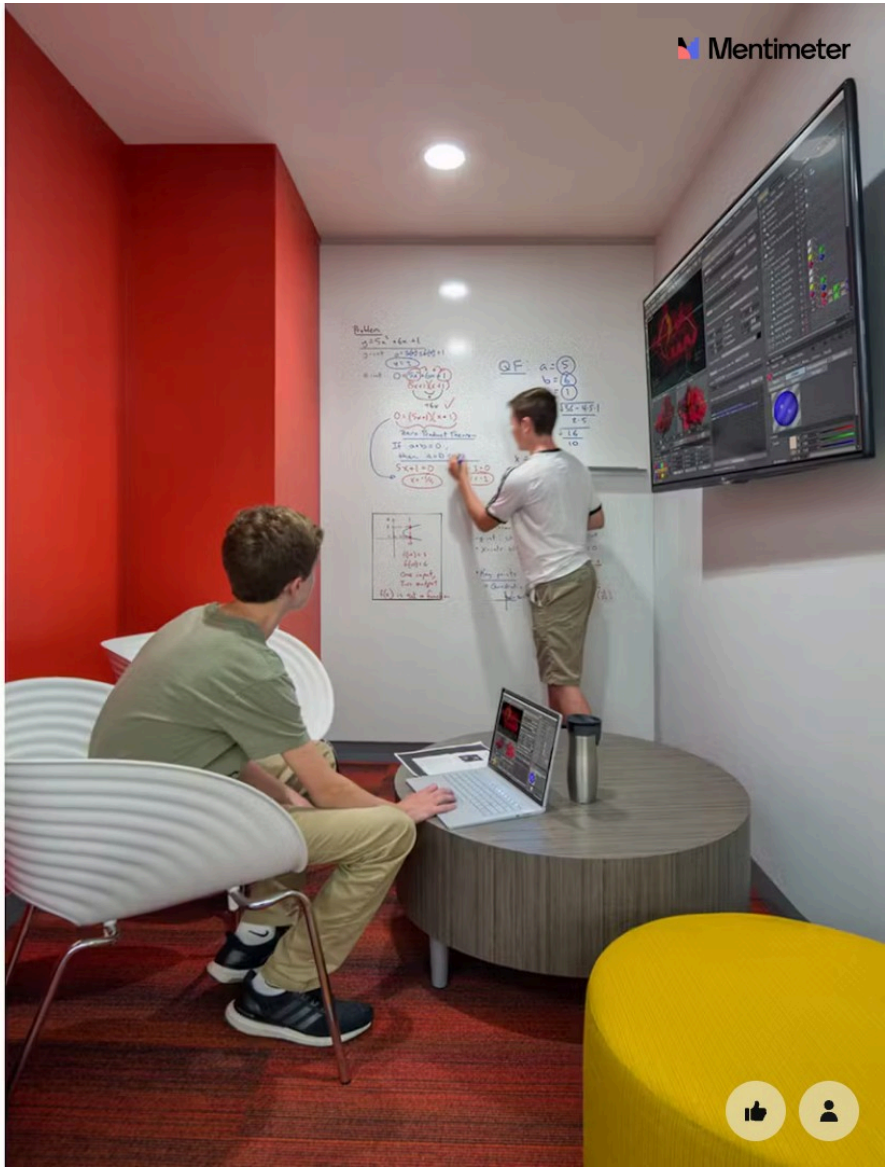
Small Corridor Breakout

1

Grouped Classrooms; Destination Breakout

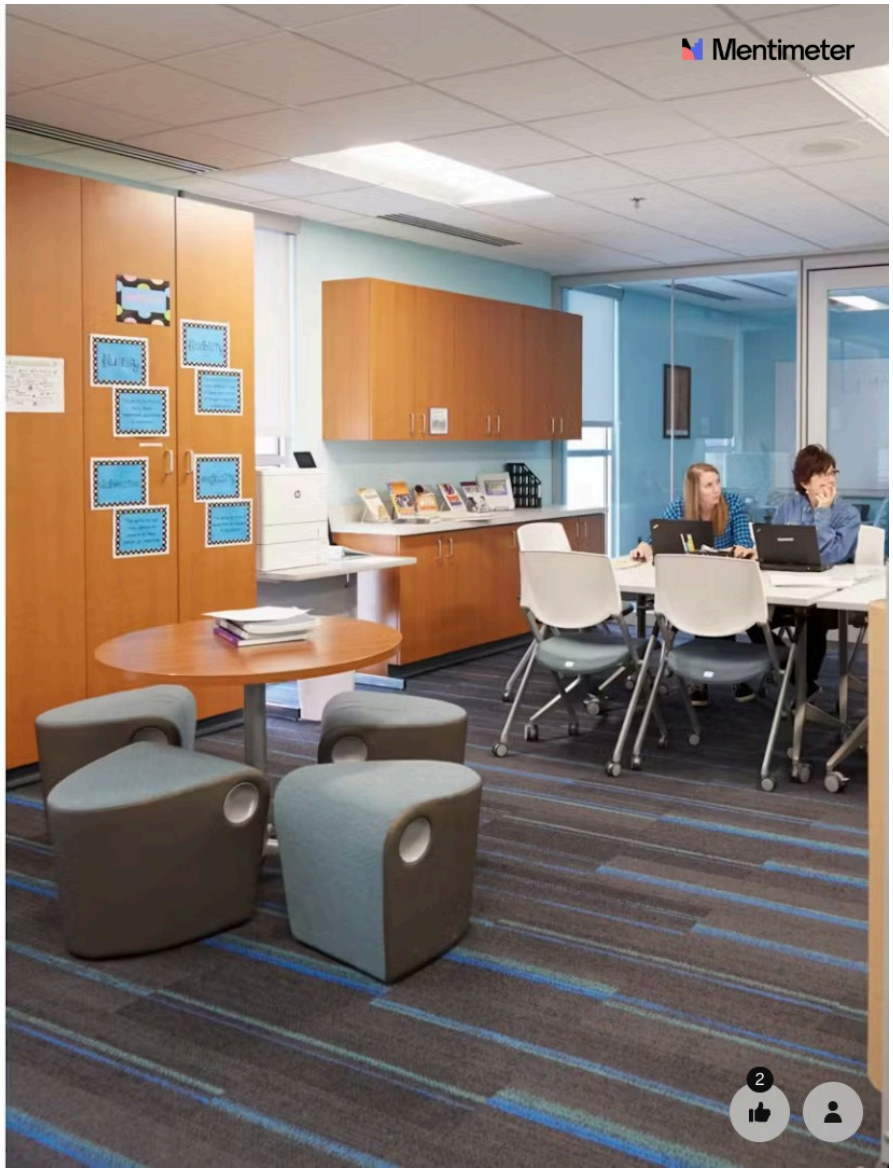


9

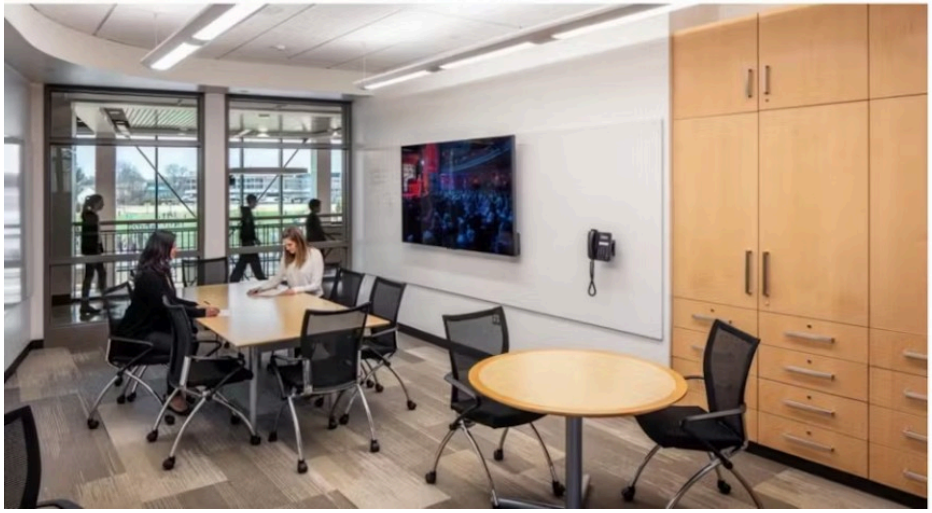


Small Learning Communities

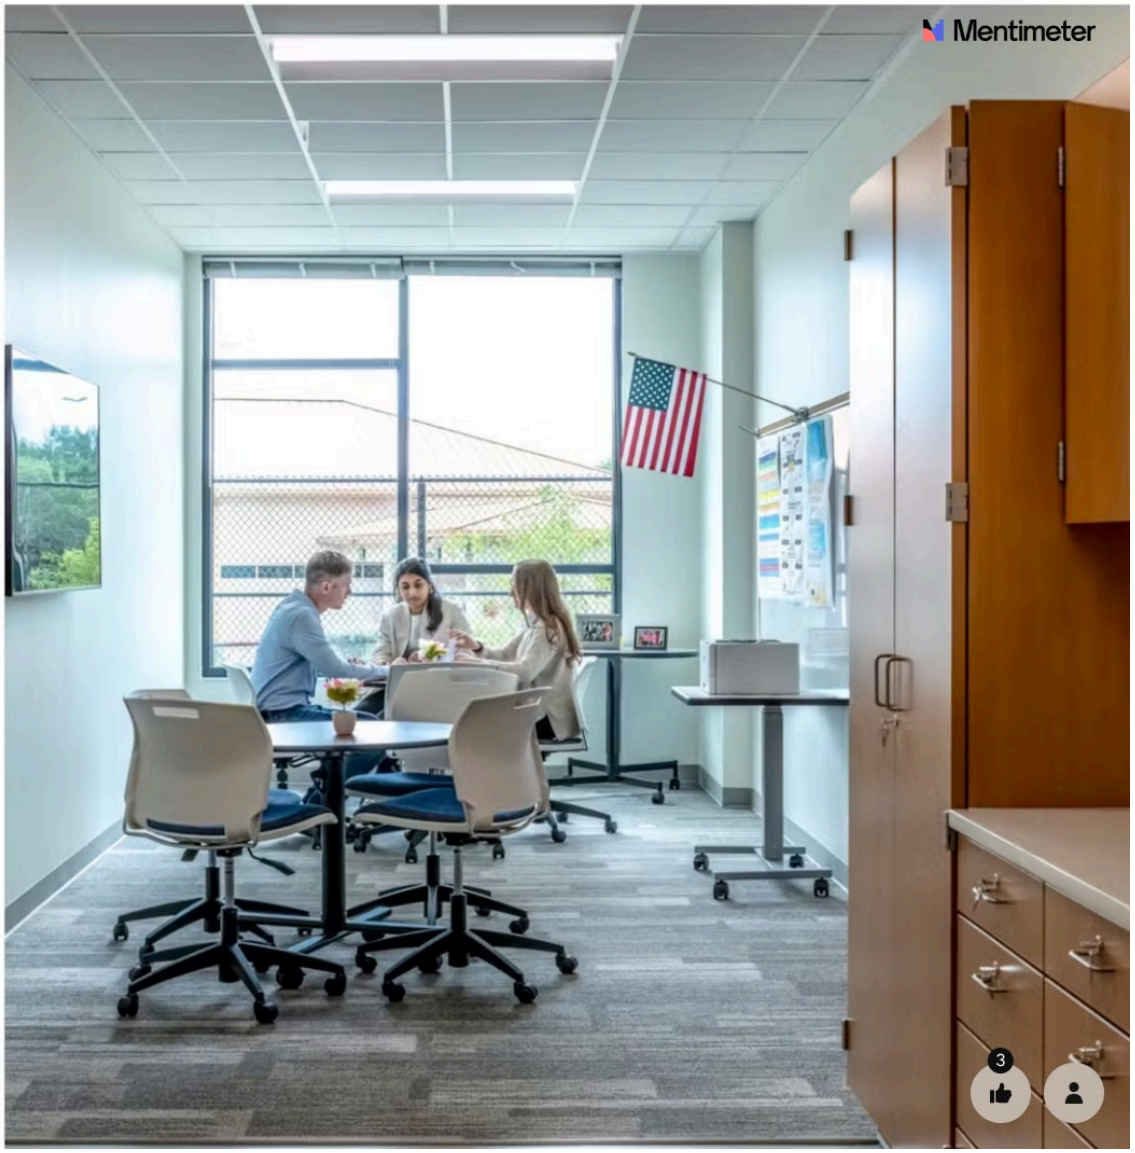
11



COLLABORATION + INTERACTION

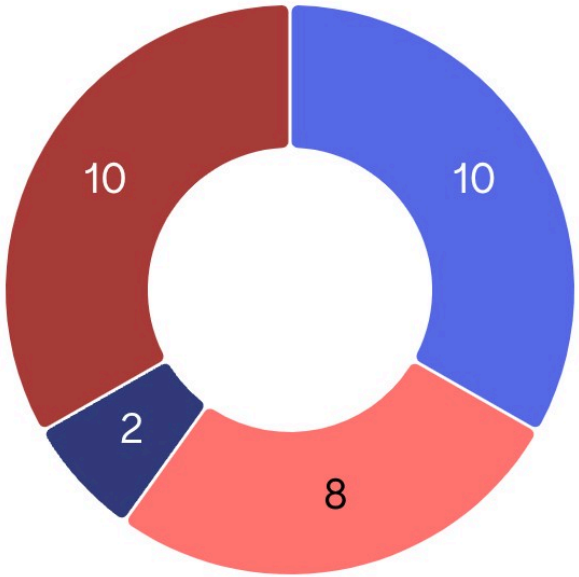


SMALL GROUP COLLABORATION



TEACHER COLLABORATION

Mentimeter
3



Picture a typical day for students in the new building.

What kinds of learning experiences should be easy and natural in classrooms and breakout spaces?

How should space support movement, hands-on exploration, and small-group learning to reach every child?

Mentimeter

What should collaboration space make *most possible* every day? Pick 3.

10	Active, hands-on exploration and movement
8	Small-group and individualized instruction
2	Collaboration among teachers and support staff
0	Calm, organized routines that help students focus
10	Flexibility to shift between group, partner, and independent learning

10

Mentimeter

Is there anything else collaboration spaces should make possible that isn't listed above?

Flexibility for learners physically. Opportunities for grades to collaborate together. Separate spaces for large projects

Larger class STEM activities or morning meetings

Performance and presentation

Shared space for cross grade collaboration such as k buddies Space for science labs with sinks

Co teaching with other classes.

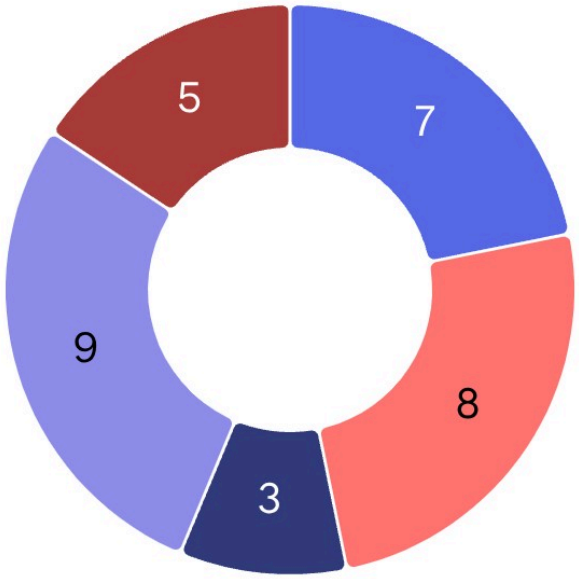
Learning that can happen over time (like it doesn't have to be cleaned up each day because there's no space) Co-teaching Cross-class or cross-grade collaboration with students

Ability to shift based on changes in education/best practices.

Space for groups to gather for extracurricular activities

8

CONNECTIONS TO CORE LEARNING



How should creation spaces connect to classroom learning?

When students move into these areas, what experiences do you hope they'll have (i.e. discovery, problem-solving?

How can design make it easy for teachers and specialists to work together so these experiences feel integrated?

Mentimeter

What's most important about how creation and exploration spaces connect to classroom learning? Pick 3.

7	They should be connected and visible to classrooms so learning flows easily between them.
8	They should be shared and flexible, used by different grades or programs for hands-on, creative work.
3	They should be collaborative, allowing teachers and specialists to co-teach or plan together.
9	They should be integrated and student-centered, supporting curiosity, making, and problem-solving.
5	They should also serve as community assets and not spatially connected to academics.

11

EDUCATIONAL WELLNESS & BELONGING

INDOOR – OUTDOOR CONNECTION

Think about an ideal day from morning arrival to lunch to the end of the day.

How can these spaces help students manage energy, focus, and emotions throughout the day?

Mentimeter

What kinds of spaces or design features can help students find calm, make choices, and belong?

Play spaces, distributed nooks and books, outdoor connections/access

Ruckus room

Flex for indoor to outdoor spaces

Lunch seating options are important. Quiet spaces carpeted with nooks, window seats.

Developmentally appropriate spaces for students, spaces that reflect different student interests (academic, sports, arts),

Age-appropriate play spaces; opportunities for outdoor learning activities. Indoor recess space.

Lunch with large, small, indoor and outdoor spaces

Indoor recess space upper grades recess space Lower grades recess space Flexible lunch spaces

9

Mentimeter

What kinds of spaces or design features can help students find calm, make choices, and belong?

A balance of calming spaces and active spaces is important. A cafeteria with different seating options so that all students can feel like they fill a table.

Indoor spaces for indoor recess

Varied/quiet space and seating for lunch Varied outdoor playground experiences Space for indoor recess activities

9

Part 4 – Strategic Plan in Action (Revisited)

In Part 4, groups revisited the strategic priority charts to link learning environments to priorities, considering how spaces would look, feel, and sound in supporting desired student outcomes.

The responses from the Strategic Plan priority charts are documented below.

STRATEGIC PRIORITY 1:
Establish and foster an authentic PreK-12 learning environment

In Essex Today	*In Action 2028*	*How Spaces Support*

• Project-based learning
  ○ Now tied to specific problem or service learning
• Natural social skill building
  ○ Problem solving
  ○ Conflict resolution
• STEM challenges
• Community field trips
• Providing the why and relevance of what students are learning
• Portfolio of learnings
  ○ Students choose work samples
	• We will have a developed scope & sequence at each grade level
	• **Specific authentic activities tied directly to standards**
	• **Organized units of study around inquiry-based questions**
	  • Student guided, ideally student led
	• Artifacts built over time, demonstrations of learning / projects
	• More opportunities to use natural environment
		• **Break out spaces support collaboration**
		• **Having a shared space allows for flexibility and choice (student & teacher)**
		• Flexible seating learning environment
		• Includes sinks at proper height
		• Space to set up projects / experiments and keep them up for a few days
		• Connection to outdoor spaces for learning
		• Display space for student work

MLP INTEGRATED DESIGN JCJARCHITECTURE

STRATEGIC PRIORITY 2:
Integrate social-emotional learning into all aspects of the school day

In Essex Today

- Greet by name at door
- **Morning meetings / school meeting**
- RULER tools:
  - Chart how we want to feel
  - Mood meter
- **Calming spaces in class / school**
- Access to school adjustment counselor
- Multi-year personal relationships, personal connection
- Integrate students' interests in learning
- **Responsive Classroom routines**
- Birthday shout-outs
- After-school clubs – connecting after school with different adults
- Consistent expectations of routines, behavior (model & practice, role-playing)
- Logical consequences
- Student Leadership Council

In Action 2028

- **Consistent vertical scope of skills / practices**
- **Integrating purposeful movement / activators**
- **Integrate SEL assessments and intervention into MTSS model**
- **SEL component on report card**
- Integrate SEL in all academics / specials
- Small group space (close to classroom – visible to have private conversations)
- Peer leaders for conflict resolution
- Accessible spaces to meet SEL needs
- Large group spaces for collaboration

How Spaces Support

- Calming / self-regulation sensory spaces
- Outdoor connections
- **Options for students to choose based on interest**
- **Café with tables of different sizes, booths**
- Collaboration:
  - Classroom – classroom
  - Students – students
  - Teachers
- **Large spaces to fit whole school plus families / community**

MLP INTEGRATED DESIGN JCJARCHITECTURE

STRATEGIC PRIORITY 3:
Celebrate and nurture an inclusive and diverse school culture through UDL

In Essex Today

- **Differentiation**:
  - Small group
  - Manipulatives
  - Type / amount for showing learning
  - MTSS (support for students in inclusive setting)
  - Title 1
  - Flexible seating
- Choice
  - Groupings
  - Order of completion
  - How to show work
  - Choice in assignment

In Action 2028

- Know the routines and expectations:
  - Group work
  - Partner work
  - Materials
- Small group spaces next to classrooms for support:
  - Minimize travel times
- Playground closer to lunch room = more time to play
- Flexible use of spaces
- Variety of spaces to meet students' needs (i.e. sensory)
- Programs / classes in the building with diverse learners:
  - SWING / RISE, PreK
  - World language classes
- Children are not stressed / anxious, better self-regulation

How Spaces Support

- Break out spaces
- Porch
- **Different lunch room options, table sizes**
- Upper grade play space
- Lower grade play space
- Space for all movement
- Student / cultural representation (town artifacts)
- Flexible size options for furniture

MLP INTEGRATED DESIGN JCJARCHITECTURE

Part 5 – Closing Reflection

The session concluded with a reflection prompt asking participants: *"After everything we explored* during these past two sessions*, what's still sitting on your mind — a thought, question, or hope you're leaving with?"*

The thoughts and lingering questions from participants are documented below.

- Not all classrooms need to have the same things
- Bathrooms – kids and adults
- Handwashing stations in the cafeteria

MHC PROJECT NOTIFICATION FORM

SECTION 3.1.8.8

APPENDIX A

MASSACHUSETTS HISTORICAL COMMISSION
220 MORRISSEY BOULEVARD
BOSTON, MASS. 02125
617-727-8470, FAX: 617-727-5128

PROJECT NOTIFICATION FORM

Project Name: Essex Elementary School

Location / Address: 12 Story Street

City / Town: Essex, Ma 01929

Project Proponent

Name: JCJ Architecture c/o Fawn Walton Pellegrini, Associate Principal / Senior Project Manager

Address: 120 Huyshope Avenue, Suite 400

City/Town/Zip/Telephone: Hartford, CT 06106 - 860.240.9310

Agency license or funding for the project (list all licenses, permits, approvals, grants or other entitlements being sought from state and federal agencies).

Agency Name	Type of License or funding (specify)
Massachusetts School Building Authority	

Project Description (narrative):

New construction or Addition/ Renovations of the existing Essex Elementary School in Essex Massachusetts. The existing single story school constructed in 1958 with an additions in 1975

Does the project include demolition? If so, specify nature of demolition and describe the building(s) which are proposed for demolition.

If the new construction option is selected, the existing building in its entirety will be demolished. If the addition/renovation option is selected, limited portions of the existing building may be demolished. Design options need to be developed to determine the extent of demolition.

Does the project include rehabilitation of any existing buildings? If so, specify nature of rehabilitation and describe the building(s) which are proposed for rehabilitation.

If the new construction option is selected, the existing building will not be rehabilitated. If the addition/renovation option is selected, portions of the existing building may be substantially renovated and rehabilitated to bring the building up to current accessibly, building/structural and fire protection codes, and reconfigured to comply with the Educational Program.

Does the project include new construction? If so, describe (attach plans and elevations if necessary).

If the new construction option is selected, the entire project will consist of a new school located on the existing site. If the addition/renovation option is selected, a new addition(s) of unspecified area and program will be constructed adjacent to the existing school. The area and number of stories for either of the options are dependent up on completion of the Educational Program and associated preferred design program.

APPENDIX A (continued)

To the best of your knowledge, are any historic or archaeological properties known to exist within the project's area of potential impact? If so, specify.

No

.

What is the total acreage of the project area?

Woodland	acres	Productive Resources:	
Wetland	acres	Agriculture	acres
Floodplain	acres	Forestry	acres
Open space	+/- 6.75 acres	Mining/Extraction	acres

RE: Essex Elementary School, 12 Story Street, Essex, MA; MHC# RC.77636

Dear Ms. Pellegrini:

Thank you for submitting a Project Notification Form (PNF) for the project referenced above, which was received at this office on November 24, 2025. Staff of the Massachusetts Historical Commission (MHC) has reviewed the information submitted and has the following comments.

The proposed project consists of either the renovation-addition of the existing Essex Elementary School at 12 Story Street in Essex or the demolition of the existing school and construction of a new school building at the same location. The information provided indicates that the project will use state funding from the Massachusetts School Building Authority (MSBA).

Review of the MHC's *Inventory of Historic and Archaeological Assets of the Commonwealth* indicates that the existing Essex Elementary School is neither included in the Inventory nor listed in the National and State Registers of Historic Places. No further review by the MHC is required for the MSBA-funded project.

These comments are offered to assist in compliance with Massachusetts General Laws, Chapter 9, Sections 26-27C (950 CMR 71.00). Please do not hesitate to contact me if you have any questions.

Sincerely,

Joshua Dorin
Preservation Planner
Massachusetts Historical Commission

PROPERTY LEASES

SECTION 3.1.8.9

Amended effective October 14, 2003 and May 10, 2007

AGREEMENT BETWEEN THE TOWNS OF ESSEX AND MANCHESTER-BY-THE-SEA, MASSACHUSETTS WITH RESPECT TO THE FORMATION OF A REGIONAL SCHOOL DISTRICT RESTATING THE PROVISIONS OF SAID AGREEMENT, AS AMENDED

This Agreement is entered into pursuant to Chapter 71 of the General Laws of the Commonwealth of Massachusetts, as amended, between the towns of Essex and Manchester-by-the-Sea ("MANCHESTER"), hereinafter sometimes referred to as member towns. In consideration of the mutual promises herein contained, it is hereby agreed as follows:

SECTION 1. THE REGIONAL SCHOOL COMMITTEE

(a) Composition

The powers and duties of the Regional School District shall be vested in and exercised by a Regional School Committee, hereinafter called the "Committee", which shall consist of seven (7) members, four (4) of whom shall be residents of Manchester and three (3) of whom shall be residents of Essex. All members shall serve until their respective successors are elected and qualified.

(b) Interim Committee

All members of the present Essex School Committee and the Manchester School Committee, acting jointly, shall serve as an Interim Committee until the next annual town elections held in the year following the year in which this Agreement is accepted by the member towns.

(c) Election of Members

Members of the Committee shall be elected by the voters of the member towns at each member town's annual town election.

At the next succeeding annual town elections of the member towns to be held in the year following the year in which this Agreement is accepted by the member towns, there shall be

elected seven (7) members of the Committee, four (4) of whom shall be residents of and elected by Manchester and three (3) of whom shall be residents of and elected by Essex, as follows:

(1) One (1) member who is a resident of and elected by Manchester and one member who is a resident of and elected by Essex, for a term of one (1) year;

(2) One (1) member who is a resident of and elected by Manchester and one member who is a resident of and elected by Essex, for a term of two (2) years;

(3) Two (2) residents who are residents of and elected by Manchester and one member who is a resident of and elected by Essex, for a term of three (3) years.

A candidate for membership on the Committee shall file nomination papers for the particular Committee position with the term such candidate is seeking as set forth in subparagraphs (i), (ii) or (iii) set forth above with the Town Clerk of the member town in which such candidate resides within the time allowed by the General Laws relating to filing nomination papers for town elections. Following the expiration of the original terms set forth in subparagraphs (i), (ii) and (iii) above, all members will be elected for a term of three (3) years at all succeeding elections.

Any registered voter of any member town may be a candidate and the method of his or her nomination shall be the same as if he or she were a candidate for elected town office in the member town in which he or she is a registered voter.

Promptly after their election, members of the Committee shall be sworn to the faithful discharge of their duties by the Town Clerk of the town in which they reside and a record of such oath shall be made and kept by the Town Clerk and a copy thereof delivered to the Secretary of the Committee.

Notwithstanding any other provision of this Agreement to the contrary, on February first immediately following the official publication of the most recently conducted state or federal census, the Committee shall determine, on the basis of such census figures, the total population of each member town and the total population of the District. (For the purposes of this provision, "official publication" means publication by the Secretary of the Commonwealth in the case of the state census and transmittal to Congress by the President in the case of the federal census.) Membership on the Committee shall be adjusted at that time, as hereinafter provided, so that the

town having the larger population as indicated in the official publication will have four (4) members on the Committee.

If a member town is entitled to an additional member of the Committee, as hereinabove provided, such additional member from such town shall be elected to the Committee at the annual town election next following the February first on which the determination of population must be made. If the population of a member town shall at any time cause its membership on the Committee to be reduced by one (1) member, such town shall at its next annual town election elect one less than the number of members of the Committee from that town whose terms expire.

The term of office of members of the Committee shall commence on the day following their election.

If there is a failure to nominate or a failure to elect a candidate, then the Board of Selectmen of the member town in which such failure to nominate or elect occurs shall appoint a member as though there were a vacancy under the provisions of subsection 1(e) of this Agreement.

(d) Organization

At the first regular meeting of the Committee following the acceptance of this Agreement by the member towns, and, thereafter at the first regular meeting of the Committee following the latter of the annual town elections of the member towns in each year, the Committee shall organize and choose by ballot a chairperson and vice-chairperson from its own membership. At the same meeting or at any other meeting, the Committee shall appoint a treasurer and a secretary who may be the same person but who need not be members of the Committee.

(e) Vacancies

If a vacancy occurs on the Committee, such vacancy shall be filled by a roll call vote of the Board of Selectmen and the remaining members of the Committee of the member town in which the member vacating office resided at the time of his or her election. The person so appointed shall be a resident of the town from which the vacancy occurred, and shall serve until the next town annual election, at which election a successor shall be elected to serve the balance of the unexpired term, if any.

(f) Quorum

A majority of the Committee shall constitute a quorum, at least one (1) of whom shall represent each member town.

(g) Powers and Duties

The Committee shall have all of the powers and duties conferred and imposed upon regional school district committees by law and by this Agreement and any amendment or additions thereto or as may be conferred and imposed upon it by any applicable general or special law.

SECTION 2. TYPE OF REGIONAL SCHOOL DISTRICT

The Regional School District shall include all grades, kindergarten through twelve (12). The Committee may establish and maintain vocational educational courses, acting as trustees therefore, in accordance with the provisions of Chapter 74 of the General Laws and any amendments or additions thereto.

SECTION 3. LOCATION AND LEASING OF SCHOOL FACILITIES

(a) Location

Any facility constructed to accommodate pupils in one or more grades from both member towns shall be located within the geographical limits of the District. The District shall at all times maintain at least one (1) elementary school facility in each member town. For purposes of this Agreement, an "elementary school facility" shall mean a facility used for elementary school grades as set forth in Section 13 below.

(b) Leasing

The Town of Essex is hereby authorized to lease to the Regional School District all the premises and buildings presently known as the

Essex Elementary and Middle School.

The Town of Manchester is hereby authorized to lease to the Regional School District all the premises and buildings presently known as the

Manchester Memorial School

Manchester Junior Senior High School

Each of the leases authorized above shall be for a term of twenty (20) years and the term shall commence on the date when the Committee assumes jurisdiction of the pupils in the grades served by said schools. Each of the leases shall contain a provision for the extension of the term thereof for a renewal term not in excess of twenty (20) years, renewable at any time during the term, at the option of the Committee. Each such lease shall automatically terminate, and the use of the building so leased shall revert back to the town from which it was leased in the event that the Committee decides that such building is no longer needed for the education program of the District. Each of the leases shall contain provisions authorizing the District to insure, repair, improve, alter or remodel any of the leased buildings. No rental shall be charged to the District by any of the member towns. Each lease shall contain identical warranties from the respective member towns warranting that the buildings shall be in good condition at the time of leasing to the District, on the terms as set forth in the leases. Each lease involving a member town shall be on such other terms and conditions as may be determined by the Selectmen thereof and the Committee, who shall execute the lease for the member town and the District, respectively.

The unpaid balance on the outstanding bonds (school bonds authorized for the purpose of constructing or improving the above-reference facilities) at the time of leasing of said buildings and facilities shall remain the obligation of the member town.

SECTION 4. APPORTIONMENT AND PAYMENT OF COSTS

(a) Definition of Costs

For the purpose of apportioning assessments levied by the District against the member towns, costs shall be divided into three (3) categories, as follows:

(1) Capital costs, which shall consist of the costs of: acquiring land and constructing, reconstructing, adding to, and equipping a school building or buildings; remodeling and making extraordinary repairs to a school building or buildings; constructing sewerage systems and sewerage treatment and disposal facilities; purchasing or using such sewerage systems with municipalities; leasing, with an option to purchase, equipment for educational purposes; any other projects or acquisitions of a capital nature which the District is or may be authorized to finance by borrowing; and debt service on bonds or notes of the District issued to finance capital costs.

(2) Special operating costs, which shall consist of the cost of evening, graduate, and extension courses or any other types of courses, including vocational educational programs but excluding summer school programs, that are offered by the District to persons other than pupils attending a regular District comprehensive school program in any of the grades kindergarten through twelve, inclusive.

(3) Operating costs, which shall consist of all costs of the District other than capital costs and special operating costs. Operating costs shall consist of "instructional costs" and "non-instructional costs", and the categorization of all operating costs into these two sub-categories shall be determined by the Regional District School Committee in accordance with any definitions that may be promulgated from time to time by the Massachusetts Department of Education.

(b) Apportionment of Capital Costs

Capital costs shall be apportioned as follows:

(1) Fifty percent (50%) on the basis that the equalized valuation of each member town pursuant to the latest equalized valuation of such town, as set forth in Chapter 559 of the Acts of 1945 entitled "An Act Establishing the Basis of Apportionment of State and County Taxes" ("Chapter 559"), or any later equalized valuations as may be enacted by the Commonwealth next preceding each bond issue, bears to the sum of all such equalized valuations of all member towns; and

(2) Fifty percent (50%) on the basis that the respective populations of each member town based on the most recent decennial U.S. Census (or any official census prepared by the U.S. Census bureau that calculates the populations of each member town, such census being referred to herein as the “Federal Census”) bears to the total combined populations of all member towns in that same Federal Census.

(c) Apportionment of Special Operating Costs

Special operating costs shall be apportioned to the member towns on the basis that the enrollment of pupil hours of residents of each member town in courses described in paragraph 2 of subsection 4 (a) above for the fiscal year next preceding the fiscal year for which the apportionment is determined bears to the total enrollment of pupil hours in such courses from

residents of both member towns on such date. Enrollment in such courses shall be determined on the basis of those pupils enrolled in each of said courses as of the first Tuesday after the first Monday of the week that said courses commence.

(d) Apportionment of Operating Costs

Operating costs shall be expressed as "instructional costs" and "non-instructional costs", and the categorization of costs into either of these sub-categories are to be determined by the Regional District School Committee, in accordance with any definitions that may be promulgated from time to time by the Massachusetts Department of Education.

.(1) Non-instructional operating costs shall be apportioned to the member towns as follows:

(i) Twenty-five percent (25%) on the basis that the "Average Equalized Valuation" (as defined below) of each member town bears to the "Total Equalized Valuation" (as defined below) of all member towns; and

(ii) Seventy-five percent (75%) on the basis that the population of each member town according to the most recent Federal Census bears to the combined populations of all member towns according to the same Federal Census.

(2) Instructional operating costs shall be apportioned to the member towns as follows:

(i) Twenty-five percent (25%) on the basis that the Average Equalized Valuation of each member town bears to the Total Equalized Valuation of all member towns; and

(ii) Seventy-five percent (75%) on the basis that the "Average Respective Pupil Enrollments" (as defined below) of each member town in all Regional School District schools bears to the "Total Pupil Enrollment" (as defined below).

(3) For purposes of this Agreement:

(i) the Average Equalized Valuation of each member town for fiscal year 2008 shall mean the "Latest Equalized Valuation of such Member Town" (as defined below);

(ii) the Average Equalized Valuation of each member town for fiscal year 2009 shall mean the arithmetic average of the Latest Equalized Valuation of such Member Town for fiscal year 2008 and fiscal year 2009;

(iii) the Average Equalized Valuation of each member town for fiscal year 2010 and each fiscal year thereafter shall mean the arithmetic average of the Latest Equalized Valuation of such Member Town for such fiscal year and the two immediately preceding fiscal years;

(iv) the Latest Equalized Valuation of such Member Town shall mean, with respect to any fiscal year, the equalized valuation of such member town as set forth in Chapter 559 most recently made publicly available prior to the beginning of such fiscal year;

(v) the Total Equalized Valuation of the member towns for any fiscal year shall mean the sum of the Latest Equalized Valuations of all member towns used in computing the Average Equalized Valuation for any member town for such fiscal year;

(vi) the Average Respective Pupil Enrollment of each member town for fiscal year 2008 shall mean such member town's pupil enrollment in the Regional School District on October 1, 2006;

(vii) the Average Respective Pupil Enrollment of each member town for fiscal year 2009 shall mean the arithmetic average of such member town's pupil enrollment in the Regional School District on October 1, 2007 and October 1, 2006;

(viii) the Average Respective Pupil Enrollment of each member town for fiscal year 2010 and each fiscal year thereafter shall mean the arithmetic average of such member town's pupil enrollment in the Regional School District on October 1 within each of the three (3) most recently ended fiscal years immediately prior to the fiscal year for which the determination is to be made; and

(ix) the Total Pupil Enrollment for any fiscal year shall mean the sum of the total pupil enrollments in the Regional School District on each October 1 used in computing the Average Respective Pupil Enrollment for any member town for such fiscal year.

(e) Times of Payments of Apportioned Costs

(1) Capital costs. At least fifteen (15) days prior to the date on which any indebtedness (consisting of interest or principal and interest on bonds and notes) incurred by the District to finance capital costs is payable, each member town shall pay to the District its respective share of the amount that is so payable by the District on said date. All other capital costs incurred by the District not consisting of payments on account of indebtedness as aforesaid shall be paid in the same manner as operating costs.

(2) Special Operating Costs and Operating Costs. Each member town shall pay to the District in each fiscal year its proportionate share, determined as provided in subsections 4 (c) and 4(d) above, of the special operating costs and operating costs. The annual share of each member town shall be paid in twelve (12) equal installments at such times that each installment except the first shall be paid on or before the first day of each month of the fiscal year, and the first such installment shall be paid on or before the fifteenth (15th) day of the first month of the first fiscal year.

SECTION 5. TRANSPORTATION

School transportation shall be provided by the District and the cost thereof shall be apportioned to the member towns as an operating cost.

SECTION 6. AMENDMENTS

This Agreement may be amended from time to time in the manner hereinafter provided, but no amendment shall be made that shall substantially impair the rights of the holders of the bonds or notes or other evidence of indebtedness of the District then outstanding, or the rights of the District to procure the means for payment thereof, provided nothing in this provision shall prevent the admission of a new town or towns to the District and the reapportionment accordingly of capital costs of the District represented by bonds or notes of the District then outstanding and of interest thereon.

Any proposal for amendment, except for a proposal for amendment providing for the withdrawal of a member town (which shall be acted upon as provided in Section 8), may be initiated by a majority vote of the Committee or by a petition signed by ten percent (10%) of the registered voters in said town according to the most recent voting list and the number of signatures on the petition which appear to be the names of registered voters of said town and said petition

shall be presented to the Secretary of the Committee. In either case, the Secretary shall mail a notice in writing to the Board of Selectmen of each member town that a proposal to amend this Agreement has been made and shall enclose a copy of such proposal (without the signatures in the case of a proposal by petition). The Selectmen of each member town shall include in the warrant for the next annual town meeting or a special town meeting called for the purpose an article stating the proposal or the substance thereof. Such amendment shall take effect upon its acceptance by each of the member towns, acceptance by each member town to be by a majority vote at a town meeting as aforesaid.

SECTION 7. ADMISSION OF ADDITIONAL TOWNS

By an amendment to this Agreement adopted under and in accordance with Section 6 above, any other town or towns may be admitted to the District upon adoption as therein provided of such amendment and upon acceptance by the town or towns seeking admission of the Agreement as so amended and also upon compliance with such provisions of law as may be applicable and upon such terms as may be set forth in such amendment.

SECTION 8. WITHDRAWAL

The withdrawal of a member town from the District may be affected by an amendment to this agreement in the manner hereinafter provided by this section. Any member seeking to withdraw shall, by vote at an annual or special town meeting, request the Committee to draw up an amendment to this Agreement setting forth the terms by which such town may withdraw from the District, provided:

(a) that the town seeking to withdraw shall remain liable for any unpaid operating costs which have been certified by the District treasurer to the treasurer of the withdrawing town, including the full amount so certified for the fiscal year in which such withdrawal takes effect; and

(b) that said town shall remain liable to the District for its share of the indebtedness, other than temporary debt in anticipation of revenue, of the District outstanding at the time of such withdrawal, and for interest thereon, to the same extent and in the same manner as though the town had not withdrawn from the District, except that such liability shall be reduced by any amount that such town has paid over at the time of withdrawal and which has been applied to the payment of indebtedness. The clerk of the town seeking to withdraw shall notify in writing the Committee that

such town has voted to request the Committee to draw up an amendment to the Agreement (enclosing a certified copy of such vote). Thereupon, the Committee shall draw up an amendment to the Agreement setting forth such terms of withdrawal as it deems advisable, subject to the limitations contained in the first paragraph of Section 6. The Secretary shall mail or deliver a notice in writing to the Board of Selectmen of each member town that the Committee has proposed an amendment (enclosing a copy of the proposed amendment). The Selectmen of each member town shall include in the warrant for the next annual town meeting or a special town meeting called for the purpose, an article stating the amendment or the substance thereof. Such amendment shall take effect upon its acceptance by all of the member towns, acceptance by each member town to be a majority vote at a town meeting as aforesaid. The withdrawing town's annual share of any future installment of principal and interest on bonds or notes outstanding on the effective date of its withdrawal shall be fixed at the percentage prevailing for such town at the last annual apportionment made next prior to the effective date of withdrawal. Upon the effective date of withdrawal, the terms of office of all members serving on the Committee who reside in the withdrawing town shall terminate.

(c) Money received by the District from the withdrawing town for payment of funded indebtedness or interest thereon shall be used only for such purpose and until so used shall be deposited in trust in the name of the District in the manner provided by law for the deposit of funds of regional school districts.

SECTION 9. AUTHORIZATION OF DEBT

The incurring of indebtedness, except temporary indebtedness in anticipation of revenue, by the District, shall be subject to disapproval by the registered voters in the member towns pursuant to the provisions of clause (d) of Section sixteen of chapter seventy-one of the General Law, as from time to time it may be amended. No such debt shall be incurred unless written notice of the amount of the debt and the general purpose for which it was authorized shall be given to the Board of Selectmen of each member town, nor until the expiration of sixty (60) days from the date on which the Committee votes to authorize said debt. Notwithstanding any provision of applicable law, it shall be the Regional School District's practice that such debt shall not actually be incurred until the amount of the proposed debt has been specifically approved by a two-thirds vote at the

next annual or special town meeting of each member town, to be held within the sixty (60) day notice period set forth in this provision.

SECTION 10. BUDGET

(a) Tentative Budget

No less than fifteen (15) days prior to the date on which the Committee adopts, or is required to adopt, whichever event occurs first, its final budget for the ensuing fiscal year, the Committee shall prepare a tentative operating and maintenance budget including therein provision for any installment of principal or interest to become due in such fiscal year on any bonds, notes or other evidence of indebtedness of the District. Said budget shall be in reasonable detail, including the amounts payable under the classification of expenses recommended by the Massachusetts Department of Education. Copies of such tentative budget shall be mailed to the Chairperson of the Finance Committee and the Board of Selectmen of each member town.

No less than seven (7) or more than fifteen (15) days following the date on which copies of the tentative budget are mailed to the Chairperson of the Finance Committee and the Board of Selectmen of the member towns as aforesaid, the Committee shall hold a public hearing within the District, after posting in at least two (2) public places in each member town at least seven (7) days in advance of the hearing, a notice stating the time, place, and purpose of the hearing, and giving such further notice as may be required by law. At such hearing, the Committee shall present the tentative budget and shall answer any reasonable inquiries with respect thereto.

Nothing in this Section 10 shall limit the ability of the Committee from preparing, reviewing or revising, alone or together with the one or more members of the Boards of Selectmen or Finance Committees of any member town, any preliminary budget in such form as the Committee may deem appropriate.

(b) Annual Budget

The Committee shall adopt an annual operating and maintenance budget on or before the latest date permitted by law therefore. Said budget shall include debt and interest charges as a separate item, and the Committee shall apportion the amount necessary to be raised in order to meet said budget in accordance with the provisions of subsections 4(b), (c) and (d). The amount so apportioned to each member town shall, not later than thirty (30) days following the adoption of the

final annual budget, be certified by the district treasurer to the treasurer of each member town, and each member town shall, at its next annual town meeting, appropriate the amounts so certified to it.

(c) Annual Report

The Committee shall, on or before October 1 of each year, submit an annual report to the Chair of the Board of Selectmen and Finance Committee in each of the member towns, containing a detailed financial statement, and a statement showing the method of computing the annual charges assessed against each member town, together with such additional information relating to the operation and maintenance of the District as may be deemed necessary by the Committee or the selectmen of any member town.

SECTION 11. EMPLOYMENT OF TEACHERS

Any teacher who has professional teacher status or other rights under Chapter 71, Section 41, whose position is superseded by reason of the establishment and operation of the District shall be employed with the same status by the Committee. Any teacher without status in a city or town in the district whose position is superseded by reason of the establishment and operation of the District shall be elected to serve in such District by the Committee; provided, however, that there is an available position which such person is certified to fill. All teachers employed by the District will be entitled to all of the rights set forth in Chapter 71, Section 42B.

SECTION 12. DISPUTE RESOLUTION

Any dispute by a member town or among member towns regarding the provisions of this Agreement or the performance of any member town under this Agreement shall be resolved as follows:

(a) Such dispute shall initially be submitted to the Committee in writing, specifying the dispute.

(b) If the Committee is unable to resolve the dispute within thirty (30) days of the receipt of the written referral to it, the dispute shall be referred to a committee comprised of the Chairs of the Committee and the Boards of Selectmen of each member town.

(c) If this committee is unable to resolve the dispute by unanimous action within fifteen (15) days of the submission of the dispute to it, the dispute shall be referred to a committee comprised of one (1) member of the Board of Selectmen and one (1) member of the Finance

Committee of each member town designated by the respective Board of Selectmen of each member town and a non-voting facilitator, chosen by the Committee, who will chair such committee.

(d) If this committee is unable to resolve the dispute by majority action within sixty (60) days of the submission of the dispute to it, the member towns shall submit such dispute to formal mediation with a professional mediator mutually agreeable to the Board of Selectmen of each member town; provided that if such mutual agreement is not obtained within thirty (30) days of the date the dispute is required to be submitted to formal mediation, the mediator shall be supplied by the nearest office of JAMS (www.jamsadr.com) or any successor organization upon the request of the Board of Selectmen of any member town or the Committee.

(e) The member towns agree not to initiate any litigation relating to a dispute prior to seeking resolution pursuant to the foregoing provisions. Written or oral statements or offers of settlement made in the course of this dispute resolution process will not be offered into evidence or used for any purpose other than this dispute resolution process and shall not constitute any admission or waiver of rights.

SECTION 13. ASSIGNMENT OF PUPILS

All pupils in grades designated by the Committee as elementary school grades, which shall at least be grades Kindergarten through Four (4) in both member towns, shall be guaranteed the opportunity to receive their education in facilities that are located in the respective towns in which the pupils reside, except that in the case of children with special needs, the Committee may provide for appropriate arrangements. For the purposes of this provision, the term "children with special needs" shall have the same meaning as the term "school-age child with special needs" as defined in section one of chapter seventy-one B of the General Laws. Any pupil who has been accepted to attend a public school in either member town other than the one in which he resides pursuant to Chapter 76, Section 12, as of the date that the Regional School District is formed shall be permitted to remain in the District until his high school graduation.

SECTION 14. EFFECTIVE DATE AND JURISDICTION

This Agreement shall take effect upon its acceptance by each of the Towns of Essex and Manchester.

SECTION 15. SEVERABILITY OF SECTIONS

According to Chapter 71. Section 16 (I), in the event that any provision of this Regional School District Agreement is held invalid in any circumstance, such invalidity shall not affect any other provisions or circumstances.

LEASE AMENDMENT NUMBER 2

TO

LEASE AGREEMENT BY AND BETWEEN

THE TOWN OF MANCHESTER-BY-THE-SEA

AND

THE MANCHESTER ESSEX REGIONAL SCHOOL DISTRICT

WITH JOINDER BY THE TOWN OF ESSEX

FOR ARTICLE 6(f) AND 6(g)

FOR THE PREMISES KNOWN AS

MANCHESTER MEMORIAL SCHOOL AND THE MANCHESTER MIDDLE AND HIGH SCHOOL

THIS LEASE AMENDMENT Number 2 ("Amendment or Amendment Number 2") is made this 16th day of August, 2021, by and between the Town of Manchester-by-the-Sea ("Lessor"), the Town of Essex and the Manchester Essex Regional School District ("Lessee") (collectively, the "Parties").

RECITALS

WHEREAS the Town of Manchester-by-the-Sea (Manchester) ("Lessor") and the Manchester Essex Regional School District (District) ("Lessee") as of July 1, 2000 entered into a lease whereby Manchester leased to the District the Premises known as the Manchester Memorial School and the Manchester Middle and High School ("Lease") and Essex signed on as a Joinder to Article 6((f) and 6(g), a copy of which is attached to this amendment as Exhibit A; and

WHEREAS said Lease was for a term of twenty (20) years, running from July 1, 2000 through June 30, 2020; and

WHEREAS said Lease provided that it shall be automatically extended pursuant to Article 3(b) under the same terms and conditions unless the Parties agree otherwise; and

WHEREAS the Parties desired in 2020 to not have the Lease automatically extend, so that they could review the terms of the Lease with a view towards entering into a new lease with each other; and

WHEREAS the Parties desired to extend the terms and conditions of the current Lease for a one year period, except for the Lease's automatic extension provision pursuant to Article 3(b), while they seek to negotiate a new lease; and

WHEREAS the parties entered into a Lease Amendment (being Lease Amendment Number 1) dated June 29, 2020, a copy of which is attached to this Amendment as Exhibit B, by which the automatic renewal clause under Article 3(b) was stricken and the Lease extended as amended through June 30, 2021; and

WHEREAS the parties, having met and discussed the renewal of the lease and have decided to extend the lease for another twenty year term and add back in Article 3(b);

NOW, THEREFORE, in exercise of the Parties' power to modify the Lease pursuant to Article 19 of the Lease, in consideration of the matters described above, the mutual benefits and obligations set forth in this amendment, and the Parties agreeing to add back in Article 3(b) and to extend the Lease for twenty years and for other good and valuable consideration, the receipt and adequacy of which is acknowledged, the Parties agree as follows:

1. Original Article 3(b), a provision regarding an automatic extension is added back into the lease.

2. The amended Lease is extended for a period of twenty (20) years, from July 1, 2021 through June 30, 2041 under the same terms and conditions of the Lease incorporated into this Amendment Number 2, and are by this Amendment Number 2 modified or supplemented to

conform with this Amendment Number 2 except as otherwise altered by this Amendment.

Executed as a sealed instrument.

LEASE AGREEMENT

This Lease is made as of the 1st day of July, 2000, by and between the Town of Essex and the Manchester Essex Regional School District. In consideration for the mutual covenants herein set forth, the parties agree as follows.

ARTICLE 1. Basic Lease Information

The following terms are referred to in other provisions of the Lease. Each such reference shall incorporate the applicable Basic Lease Information. In the event of any conflict between the Basic Lease Information and the provisions of the Lease, the latter shall control.

Landlord shall refer to the Town of Essex, a municipality located within the Commonwealth of Massachusetts.

Tenant shall refer to the Manchester Essex Regional School District, a regional school district created by the Town of Manchester-by-the-Sea and the Town of Essex, pursuant to Chapter 71 of the Massachusetts General Laws and by agreement between such towns dated May 15, 2000 (the "Regionalization Agreement").

Premises shall refer to the land, buildings and other improvements known as the Essex Elementary and Middle School, located on Western Avenue and Story Street, Essex County of Essex, Commonwealth of Massachusetts, as more particularly described in Exhibit A, attached hereto.

Commencement Date shall refer to July 1, 2000, the date on which Tenant assumed jurisdiction of the pupils served by the public schools of the Town of Essex and the Town of Manchester-by-the-Sea pursuant to the Regionalization Agreement.

Term shall refer to the term of this Lease, as the same may be extended or terminated pursuant to Article 3 hereof.

School Building shall refer to school building now or hereafter located on the Premises and "School Buildings" shall refer collectively to the school buildings or any other structure, permanent or portable, that is used for school purposes that is or may be located on the premises now or hereafter located on the premises, as they may require.

Execution Date: July 1, 2004

ARTICLE 2. Demise

Landlord hereby leases the Premises to Tenant and Tenant hereby agrees to lease the Premises from the Landlord, subject to and with the benefit of the terms, covenants, conditions and provisions of this Lease. The Premises are leased, together with the buildings and improvements thereon and all rights and easements appurtenant thereto.

ARTICLE 3. Term

a. Initial Lease Term. The initial Term of the Lease shall be for a period of twenty (20) years, beginning on the Commencement Date.

b. Extension. The term of this Lease shall automatically be extended for subsequent extension periods of twenty years each, in accordance with the Regionalization Agreement, unless either the Regionalization Agreement shall be terminated or unless this Lease shall be terminated in accordance with the provisions of this Lease. For any extension period or term of this Lease, such extension period or term shall be upon the same terms and conditions as in this Lease now contained unless the parties otherwise agree.

c. Tenant's Termination. Tenant shall have the right to terminate this Lease by ninety (90) calendar days advance written notice (i) in the event of substantial damage to the school building thereon by casualty or other Acts of God or war, provided that Landlord and Tenant shall jointly agree and determine that the school building shall not be rebuilt and that the parties have agreed to construct a new substitute building for the school building on the Premises on other premises or (ii) Tenant decides that the Premises are no longer necessary for the educational program of Tenant as stated in the Regionalization Agreement.

d. Landlord's Termination. Landlord shall have the right to terminate this Lease (i) upon Landlord's withdrawal from the District in accordance with the provisions of the Regionalization Agreement or (ii) upon ninety (90) days written notice to Tenant, if the Premises are not being used for the permitted uses and it is not contemplated that the Premises will be used for any permitted use within ninety (90) days. Landlord may terminate the Lease as to a portion of the Premises if a portion thereof is not being used for the permitted uses and it is not contemplated that the portion will be used for any permitted use within ninety (90) days.

e. Mutual Agreement. Landlord and Tenant may terminate this Lease by written agreement at any time duly authorized by the Tenant and the Landlord..

f. Effect. Upon the effective date of any such termination, this Lease shall terminate and be of no further force or effect and the Premises shall revert to Landlord.

ARTICLE 4. Rent and Utilities

a. Rent. Tenant shall pay rent in the amount of $1.00 to Landlord for the Initial Lease Term and for any extended Lease Term in connection with the letting of the Premises pursuant to this Lease. All other costs to be paid by the Tenant hereunder shall be deemed additional rent hereunder.

Tenant shall use best efforts to cause appropriations to be made for all of the Rent and additional rent under this Lease, including, without limitation, construction, maintenance, repairs, Future Renovations (defined below) and reimbursement of Landlord for the exercise of its right to self help pursuant to this Lease.

b. Utilities. The term "utility" or "utilities" as used in this Article shall include, without limitation, gas, electricity, oil, water (including, without limitation water for fire protection service), sewer (both sanitary and storm) and septic, cable, internet, telephone and other communications costs. Tenant shall pay all charges for the consumption of all utilities and trash removal at the Premises from and after the Commencement Date, as separately metered to the Premises or otherwise billed. Should Tenant at any time require additional utility service, Landlord agrees to cooperate with Tenant and to execute those documents necessary to obtain same, but all costs in connection therewith shall be paid for by Tenant, except as specifically provided herein to the contrary. Tenant shall be responsible for complying with any applicable governmental or Landlord's regulations pertaining to recycling of garbage or waste from the Premises.

ARTICLE 5. Use of the Premises

a. Use of the Premises for Educational Purposes. Tenant shall have the right to use the Premises for (i) the operation of a school system for children in grades pre-kindergarten through twelve and all related functions, including without limitation, a day care facility, pre-school and post-school activities, athletic fields, tennis courts, and other facilities typical for a school facility, and (ii) for other education related purposes, such as the operation of evening, graduate, extension and vocational classes.

b. Alterations. Subject to the provisions of this Lease governing alterations, structural changes, improvements and renovations, Tenant shall make alterations and structural changes to the Premises which Tenant believes are reasonably necessary for the operation of the school facility within the Premises and are consistent with the permitted uses of the Premises. For all Future Renovations (as that term is defined in Article 6(b) below), improvements, alterations, and structural changes, either exterior, structural or interior (collectively, "Changes" and individually "Change"), (i) Prior to the commencement of such changes, Tenant shall obtain all necessary permits, approvals, consents and orders with respect to such Changes and deliver copies of same to Landlord; (ii) Tenant shall agree to obtain and maintain, all insurances and performance bonds in the amounts as required by State Statute and shall name the Town as an "also insured" on all coverages; (iii) the Tenant shall have required all such contractors and subcontractors to work in harmony with other workers in the Premises; (iv) Tenant shall indemnify the Landlord from and for all liens of mechanics and materialmen on the Premises (v) Tenant shall

commence such Changes and complete all Changes commenced in a good and workmanlike manner, using all due diligence to complete same promptly after commencement of same and shall pay all costs for the Changes, direct and indirect, contemplated and uncontemplated, including, without limitation, legal costs and reasonable legal fees. Tenant shall comply with all governmental and insurance impositions in connection with the operations of the Premises hereunder and its work hereunder, whether under this Article 5(b), Article 6 or otherwise.

c. Quiet Enjoyment. Landlord hereby covenants and agrees that if Tenant shall perform all the covenants and other provisions herein stipulated to be performed or observed on Tenant's part, Tenant shall at all times during the continuance hereof have peaceable and quiet enjoyment and possession of the Premises without any manner of hindrance from Landlord or any person or persons lawfully claiming under Landlord, subject, however, to the terms of this Lease, including without limitation the rights reserved to the Landlord in Article 7 and any instruments having a prior lien. The rights granted by this Paragraph are in lieu of any other rights Tenant may have by statute or law.

ARTICLE 6. Maintenance and Repairs

a. Landlord's Limited Warranties.

(i) Landlord warrants on the terms set forth in this Lease, that at the Commencement Date, the School Building was in good condition, and required no substantial work other than as set forth in Exhibit B attached hereto. Landlord's timely compliance with the requirements of Article 6(b) below, shall satisfy any obligation of Landlord as to the warranty in this Article 6(a)(i). However, in the event that funding constraints hamper Landlord's timely compliance, Landlord shall agree to complete all work listed under Exhibit B beyond the warranty period, and appropriate funds in future budget cycles until such time that all work is completed.

(ii) Landlord hereby warrants that, except for the findings and determinations in the report prepared by Flansburgh & Associates prepared in 2001, a copy of which has been delivered to Tenant, and any other items listed in Exhibit B attached hereto, (A) it is not aware of other material defects in the School Building as of the date hereof, and (B) it is not aware of other material defects in the School Building upon the date of the execution of this Lease, the parties hereby acknowledging and agreeing that this Lease is being executed on June 21, 2004.

(iii) As used herein, the term "substantial work" shall mean work that is presently necessary to correct existing conditions that reflect substantial under-capacity, present substantial life safety or handicap accessibility issues or pose a significant danger to the integrity of the existing School Buildings. All such substantial work is identified in Exhibit B attached hereto.

b. Landlord's Repairs and Other Work. Landlord and Tenant acknowledge that Tenant shall during the term of this Lease and from time to time perform substantial renovations, maintenance, improvements, alterations and repairs to the School Building

to accomplish Tenant's education purposes (collectively, the "Future Renovations" and each individually, a "Future Renovation"). Tenant shall be fully responsible for the payment of all expenses connected with the Future Renovations, including, without limitation, any studies, analysis or planning that may be required. Any work hereunder shall be in compliance with any and all applicable regulations, subject to any permits, licenses, approvals and orders which shall be required pursuant to governmental or insurance company impositions.

During the period from the date of this Lease through June 30, 2005, Landlord will, subject to voter approval of appropriations, provided that Landlord shall use reasonable best efforts to cause any appropriations to be made which shall be necessary for the funding of the Future Renovations, be responsible for funding and performing the repairs or other work as provided in Exhibit B and for the funding of all Future Renovations as described in the previous grammatical paragraph. In determining the appropriateness and timing of such repairs or other work, Landlord and Tenant shall take into account any substantial renovation, demolition or other changes to the Premises anticipated to be made by Tenant as part of the Future Renovations, and, in any event, the parties shall use good faith efforts to coordinate their work schedules, and cooperate with any work to be performed, so that the work to be performed by Landlord pursuant to Exhibit B and the Future Renovations shall be performed as efficiently and economically as possible. Landlord shall not be required to undertake any repairs to the School Building or any of its components or systems that will be repaired or otherwise cured as part of Tenant's Future Renovations other than as required in Exhibit B, but Landlord may do so at its sole discretion in accordance with Article 6(d) hereinbelow. Landlord shall make repairs or do any other work to the Premises as required in Exhibit B until such time that all work is completed. Tenant shall not be responsible for any loss, cost (including, without limitation, reasonable legal fees and costs) or claim of same in connection with compliance with the handicap access requirements, and Landlord shall indemnify, hold harmless and defend Tenant with respect thereto. Notwithstanding anything to the contrary in this Lease, failure by the Landlord to make repairs or do any other work to the Premises as required in Exhibit B shall not be a default by Landlord under this Lease, so long as Landlord shall be continuing to use reasonable best efforts to cause any such necessary appropriations to be made, or Landlord, having appropriated such funding, shall be making diligent efforts to complete such work.

Landlord and Tenant agree that any dispute or claim arising out of or relating to the repair and other work items identified in Exhibit B or Future Renovations, including, without limitation, any dispute regarding the appropriateness or timeliness of the repairs, Future Renovations, Exhibit B or other work, shall prior to submission to any other forum for resolution, be submitted to mandatory mediation by the Commonwealth of Massachusetts mediation program for public disputes. Shall mandatory mediation fail, said dispute shall be submitted to binding arbitration under the auspices of the American Arbitration Association in Boston, Massachusetts.

c. Tenant's Maintenance, Repairs and Improvements. Except as provided in Article 6(b), through the term of this Lease Agreement, Landlord shall have no obligation or responsibility for the maintenance, repair or improvement of the Premises and Tenant

shall be responsible, at Tenant's sole cost and expense, to maintain, repair and improve the Premises, including, without limitation, snow and ice removal and control, lawn and field maintenance, pavement and sidewalk sweeping and all other similar work as would be required to be performed to maintain the School Buildings and the Premises in a first class condition as if the Tenant were the owner thereof, and to perform the Future Renovations, keeping the Premises at all times in good, safe, clean and well maintained condition. Tenant shall use reasonable best efforts to cause any appropriations to be made which shall be necessary for the funding of the Future Renovations and the maintenance and repair of the Premises.

d. Reimbursement of Landlord for Certain Maintenance, Repairs and Improvements Related Expenses. In the event Landlord determines that Tenant has failed to undertake or perform necessary maintenance, repairs or improvements, including, without limitation, Future Renovations, that Tenant is obligated to undertake or perform pursuant to this Lease, Landlord shall give notice to Tenant, informing Tenant of the nature of its failure, and affording Tenant a reasonable time under the circumstances within which to cure this failure. For instance, there shall be a shorter notice period with respect to immediate threat to health, safety or welfare. In the event Tenant fails to cure the failure within such reasonable period of time, Landlord may but shall have no obligation to undertake or perform the maintenance, repairs or improvements. In such event, Landlord shall account to Tenant for the cost of maintenance or repairs completed by Landlord and Tenant shall be obligated to reimburse Landlord for such costs. Notwithstanding the foregoing, Landlord shall not be obligated to undertake or perform any maintenance, repairs or improvements, except as provided in Article 6(b).

e. Reimbursement of Tenant for Certain Maintenance, Repairs and Improvements Related Expenses. In the event Tenant determines that Landlord has failed to undertake or perform necessary repairs or other work that Landlord is obligated to undertake or perform pursuant to this Lease pursuant to Article 6(b), provided, however, that no failure shall be deemed to have occurred if Landlord shall be continuing to use reasonable best efforts to cause any necessary appropriations to be made or Landlord, having appropriated such funding, shall be making diligent efforts to complete such work. Tenant shall give notice to Landlord, informing Landlord of the nature of its failure, and affording Landlord a reasonable time under the circumstances within which to cure this failure. In the event Landlord fails to cure the failure within a reasonable period of time, Tenant may but shall have no obligation to undertake or perform the repairs or other work. In such event, Tenant shall account to Landlord for the cost of repairs or other work completed by Tenant and Landlord shall be obligated to reimburse Tenant for such costs. Notwithstanding the foregoing, Tenant shall not be obligated to undertake or perform any repairs or other work which is the responsibility of Landlord as provided in Article 6(b) or Article 6(c).

f. Landlord's Retained Rights to Make Future Renovations. Landlord shall have the right, at its sole option, with the approval of Tenant, which approval shall not be unreasonably withheld, conditioned or delayed, to make Future Renovations to the Essex Elementary and Middle School if Landlord believes such Future Renovations are reasonably necessary for the operation of the school facility within the Premises and are necessary or

desirable for the permitted uses of the Premises (an "Essex Renovation"). For all such Essex Renovations (i) Prior to commencement of such Essex Renovation, Landlord shall obtain all necessary permits, approvals, consents and orders with respect to such Essex Renovation; (ii) Landlord shall throughout the term of the construction of the Essex Renovation carry builders risk, liability insurance coverage, workers compensation, payment and performance bonds and such other insurance coverages as are reasonably necessary to protect the interest of Tenant, provided in such amounts as shall be reasonably necessary consistent with amounts and coverages customarily provided in Massachusetts for similar school construction projects; (iii) Landlord shall indemnify Tenant from and for all liens of mechanics and materialmen on the Premises; and (iv) Landlord shall commence and complete any Essex Renovation undertaken by Landlord in a good and workmanlike manner, using all due diligence to complete same promptly and shall pay all costs for the Essex Renovation, direct and indirect, contemplated and not contemplated, including, without limitation, legal costs and reasonable legal fees. Such renovation shall not unreasonably interfere with Tenant operation.

g. Landlord's Costs of an Essex Renovation. In the event that Landlord shall elect, at its sole option, to proceed to make an Essex Renovation to the Premises as herein provided, Landlord shall do so at its sole cost and expense without reimbursement from Tenant, except to the extent that superceding law, rule or regulation, or opinion or advice from bond counsel shall require that the Tenant be the borrower for any funds necessary to complete the Essex Renovation. In such an event, Landlord shall indemnify and hold the Tenant harmless from, and reimburse any loss, cost or damage in connection with such borrowing or expenditures.

ARTICLE 7. Access

Landlord shall have access to the Premises from 6 a.m. to 10 p.m. on weekdays and at other times when school buildings are generally open in Essex County, Massachusetts and at all reasonable times and upon reasonable notice (and in case of emergency at any time without notice) for the purpose of examining the same or undertaking or performing such maintenance, repairs or improvements to the Premises as the Landlord may deem necessary or appropriate, including any maintenance, repairs and improvements that the Landlord is obligated or permitted to undertake or perform pursuant to Article 6, provided that in no event shall Landlord be required to perform any maintenance, repairs or improvements, except as provided in Exhibit B.

Landlord will comply with Tenant's policy with respect to student and staff safety by following the guidelines for all visitors during the hours of 6 a.m. to 10 p.m. on weekdays. Tenant shall use the system in place from time to time in a consistent manner in connection with the reservation and assignment of facilities of the Premises for various activities by the Landlord or other parties, provided that the parties acknowledge and agree that the Tenant shall retain priority to itself for activities in connection with the Tenant's own educational activities permitted under this Lease.

Furthermore, Landlord reserves the right, to the extent that the Premises are not used for school purposes or other purposes permitted hereunder, to use the Premises for such usual and customary purposes as school buildings are generally used in Essex County, Massachusetts. Landlord agrees to provide Tenant with primacy of use. Landlord agrees

to use reasonable efforts to ensure that any activities permitted by Landlord hereunder shall not unreasonably interfere with the Tenant's use of the Premises for the purposes permitted in this Lease.

No forcible entry shall be made by Landlord unless such entry shall be reasonably necessary to prevent injury, loss or damage to persons or property or otherwise for Landlord to exercise its rights under this Lease. Landlord shall repair any damage to the Premises caused by or resulting from Landlord's undertaking or performance of maintenance, repairs, or improvements, and Landlord's entry onto the Premises for such purposes, excepting any damage caused by or resulting from actions taken by Landlord in the case of an emergency, a default by Tenant hereunder, and the negligence, fault or willful misconduct of Tenant or anyone claiming by or through Tenant. No action of Landlord pursuant to this Article shall be deemed an eviction or disturbance of Tenant, nor shall Tenant be allowed damages for any injury or inconvenience occasioned thereby.

ARTICLE 8. Insurance

a. General Liability Insurance. During the Term, and for as long as Tenant shall occupy the Premises, Tenant shall keep in full force and effect, at its own expense, a general liability insurance policy, in occurrence form, covering bodily injury or death to persons and damage to or destruction of property, with coverage limits as Landlord shall reasonably request consistent with coverages carried by other schools and municipalities in Essex County, Massachusetts.

b. Fire and Casualty Insurance. During the Term, and for as long as Tenant shall occupy the Premises, Tenant shall keep in full force and effect, at its own expense, a fire and casualty insurance policy on the Premises, with the usual extended coverage endorsements, which shall insure against perils normally covered by a so-called all risk policy, including, without limitation, differences in conditions, costs of demolition, vandalism, malicious mischief, collapse and increased costs of construction, and which shall be written on the replacement cost basis (with a so-called replacement cost endorsement), noncontributory as to all parties, in amounts not less than one hundred percent (100%) of the full replacement cost thereof above foundation walls, with only such commercially reasonable deductibles as the Landlord reasonably approves. Such insurance shall also insure Landlord's interest in the Premises. Such insurance shall also insure Landlord's interest in the Premises.

c. Worker's Compensation Insurance. Tenant shall carry workers' compensation insurance as required by state and/or federal law.

d. Terrorism Insurance. Tenant shall carry terrorism insurance with such coverages and in such amounts as Landlord shall reasonably request form time to time but not less than coverages and amounts carried by other schools and municipalities in Essex County, Massachusetts.

e. Other Insurance. Tenant shall carry such other insurance in such coverages and in such amounts as Landlord shall reasonably request from time to time consistent with

coverages and amounts carried by other schools and municipalities in Essex County, Massachusetts.

f. Additional Insurance Requirements. All insurance policies required under this Lease shall (i) name Landlord as an insured party; (ii) be issued by insurers having a minimum policy holders rating of "A" VIII per the latest rating publication Property and Casualty Insurers by A.M. Best Company (or who are otherwise approved by Landlord) and who are lawfully doing business in the Commonwealth of Massachusetts; (iii) provide that the coverage maintained thereunder may not be canceled without at least thirty (30) days' prior notice to Landlord, and that any notice to Tenant that such coverage will not be renewed shall also be given simultaneously to Landlord; and (iv) contain a waiver by the insurer of any rights of subrogation to any cause of action (including, without limitation, negligent acts) against the Tenant or Landlord (as the case may be). Further, Landlord and Tenant hereby waive any claim or cause of action against the other party hereto arising from any loss or damage to the property which is covered or could be covered by such insurance, but only insofar as such party is compensated by such insurance for such loss or damage, except that they do not waive claims or causes of action for deductibles , uninsured casualties or self-insured losses.

g. Blanket Insurance Policies. Tenant shall have the right to provide the coverages required herein under blanket policies of insurance, provided that the coverage afforded Landlord shall not be diminished by reason thereof.

h. Review of Insurance Coverage. Upon notice from Landlord from time to time, Tenant shall deliver to Landlord evidence of the coverage required herein from Tenant at any time and from time to time. Landlord shall have the right to review these insurance requirements at any time and from time to time and to require changes in the amounts of insurance or the types of insurance, or both, as it deems reasonably necessary in order to adequately protect its interests. If Tenant shall fail, refuse or neglect to obtain or maintain any insurance required to be carried by Tenant under this Lease, Landlord shall have the right, but not the obligation, at Landlord's option, to purchase such insurance and to pay the premiums thereon immediately upon notice (oral or written) to Tenant. All such payments made by Landlord shall be recoverable by Landlord from Tenant on demand as additional rent hereunder. If Tenant shall fail, refuse or neglect to obtain and maintain the insurance required pursuant to this Lease, and if Landlord does not acquire the insurance which Tenant has failed, refused or neglected to obtain and maintain as aforesaid, and the Premises sustains a loss which was not, but was required to be, covered by the insurance provided for in this Lease, then in that event Tenant shall be responsible for all reasonable costs and expenses incurred by Landlord in restoring and repairing the Premises and all related improvements to the condition that existed prior to the casualty.

i. Waiver of Recovery. Neither Landlord nor Tenant shall be liable to the other or to any insurance company (by way of subrogation or otherwise) insuring the other party for any loss or damage to any structure, building or other tangible property, or any resulting loss of income, or losses under worker's compensation laws and benefits, even though such damage or loss might have been occasioned by the negligence of Landlord or Tenant or

any of their agents or employees, to the extent that any such loss or damage is covered by insurance benefiting the party suffering such loss or damage.

j. Indemnity. Except if and to the extent Tenant has been released from liability pursuant to the provisions of Article 8(h) hereinabove, Tenant does hereby assume liability for, and does hereby agree to indemnify, protect, reimburse, defend, save and hold harmless Landlord from and against any and all liabilities, obligations, claims, actions, demands, fines, suits, judgments, penalties, damages and losses (including, without limitation, all of the costs, fees and expenses connected therewith or incident thereto, including, without limitation, reasonable legal fees and costs) for the death of or injury to any person whomsoever and for loss of, damage to, or destruction of any property whatsoever (including, without limitation, loss of use thereof) arising out of the negligent or willful act or omission of Tenant, its officers, employees, agents, contractors or invitees as they related to Tenant's use, occupancy of the Premises and/or maintenance, alteration or improvement thereof.

k. Tenant shall not occupy or use, or permit any portion of the Premises to be occupied or used for any business or purpose which is extra hazardous, or permit anything to be done which will in any way increase the rate of insurance on the Premises and/or its contents.

l. To the extent permitted by law, and except as otherwise provided under Article 11, Tenant shall occupy the Premises at its sole risk, and Landlord shall not be liable for any damages, direct or indirect, consequential or otherwise for any act or negligence by Landlord under this lease.

ARTICLE 9. Damage or Destruction by Eminent Domain, Fire or Casualty

a. Taking by Eminent Domain. In the event the Premises, or any material part thereof, shall be taken by any public authority or for any public use, and as a result of such taking, Tenant's ability to operate a school thereon is substantially impaired or prohibited, then any net damage award recovered shall be payable to the Tenant in escrow for the purposes of restoring the Premises, as if the Premises were affected by casualty, and such restoration shall be made and funds disbursed in accordance with Article 9(b) hereinbelow. For purposes of this provision, net damage award shall refer to the gross damage award recovered by Landlord, less reasonable expenses, attorneys' fees and costs incurred by Landlord in the collection of the same, and in the event that the Premises or any material part thereof are taken by any public authority or for any public use, but such taking does not substantially impair or prohibit Tenant's operation of a school on the Premises, then any damage award recovered may be retained by Landlord, without further obligation to Tenant.

b. Damage by Fire or Casualty. If the Premises are damaged or destroyed by fire or other casualty insured against, then the net insurance proceeds recovered shall be placed in an escrow account for the restoration of the Premises or otherwise as provided in this Article 9, and the Tenant shall place the deductible and/or the amount uninsured into such escrow account, and Landlord shall have an obligation to use such funds, to repair or restore the Premises to their original condition, provided that in no event shall the

Landlord be obligated to spend in excess of the funds in such escrow account for such restoration. For purposes of this provision, net insurance proceeds shall refer to the gross insurance proceeds received by Landlord, less reasonable expenses, attorneys' fees and costs incurred by Landlord in connection with the collection of such proceeds. Such funds shall be made available either for the restoration of the Premises or construction of such new school building, in accordance with a construction schedule agreed to by the parties, subject to approval by the parties of plans, specifications and budget, contractors and subcontractors therefor, appropriation of funds for such alterations; obtaining of all necessary permits, approvals, consents and orders with respect thereto; throughout the term of the construction carrying builders risk, liability insurance coverage, workers compensation payment and completion bonds and such other insurance coverages as are required by Landlord, in such amounts as shall be deemed appropriate by the parties, provided that such amounts and coverages shall be customary in Massachusetts for similar school construction projects; all such contractors and subcontractors to work in harmony with other workers in the Premises; payment for all liens of mechanics and materialmen on the Premises; and commencement of such work and completion thereof in a good and workmanlike manner, using all due diligence to complete same promptly after commencement of same and payment of all costs for the Changes, direct and indirect, contemplated and uncontemplated, including, without limitation, legal costs and reasonable legal fees. Notwithstanding the foregoing, if the Premises are completely or substantially destroyed by fire or casualty, and the parties elect not to restore the School Building, or construct a substitute School Building on the Premises, then Landlord shall be entitled to any portion of the insurance proceeds allocable to the demolition of the Premises and site clean up, and the remainder, plus the deductible and any uninsured amount shall be made available from such escrow fund for the construction of a school building on an alternative site. The escrow fund shall be held by the Tenant ("Escrowee") and shall be subject to such reasonable requirements as the parties, including, without limitation, the Escrowee, shall reasonably require, and the parties shall use best efforts to agree to such the terms of such escrow arrangement

ARTICLE 10. Assignment and Subletting

Tenant shall have the right to sublet or license the Premises, or a portion thereof, in accordance with Chapter 71, Massachusetts General Laws, Sections 71 and 16(r) and any other governmental impositions regarding leasing of schools, as the same may be amended from time to time, including, without limitation, related regulations and policies adopted by the Tenant thereunder, including, without limitation, the then effective applicable policy regarding "Community Use of School Facilities" adopted by the Tenant, non-discriminatorily applied. No assignment or subletting shall relieve Tenant of its liabilities and obligations hereunder.

Tenant shall deliver to Landlord written monthly reports regarding any subleasing and licensing for any subleasing or licensing not later than the fifteenth day of the calendar month following the calendar month of such subleasing or licensing.

ARTICLE 11. No Liability of Landlord

Unless caused by or due to the negligence of Landlord, Landlord shall not be liable for any personal injury or property damage suffered by Tenant or of other occupants of the Premises, including but not limited to any injury or damage resulting from fire, explosion, falling plaster, steam, gas, electricity, rain, snow or other of the elements, water, or leaks.

ARTICLE 12. Surrender of the Premises

Upon termination or expiration of this Lease, Tenant shall quit and surrender the Premises, leaving the Premises in good order and condition, excepting ordinary wear and tear, damage by fire or other casualty, the elements, and any cause beyond Tenant's control. Upon termination or expiration of this Lease, Tenant shall remove all of its property from the Premises, except as provided otherwise herein. In the event that Tenant shall hold over after the termination or expiration of the Term of this Lease, Tenant shall reimburse Landlord for its loss, costs, including, without limitation, reasonable legal fees and costs, which Landlord may incur, directly or indirectly, consequential or otherwise, due to Tenant's failure to vacate the Premises.

ARTICLE 13. Removal of Improvements

Any fixtures, equipment, improvements, and signs installed or permanently affixed on the Premises by Tenant during the Term shall remain on the Premises and become property of Landlord upon the expiration of the Lease or earlier termination thereof. In the event that the Regionalization Agreement shall be terminated, all personal property shall remain at the Premises. In the event that the Premises shall cease being used as a school and a new school shall be constructed to replace same, all personal property shall be moved to such new school, provided that in the event that such personal property shall not be used at such new school, it shall remain or be moved back to the Premises. In any event, removal of fixtures, equipment and personal property shall be subject to Tenant's obligation to maintain the Premises and to deliver the Premises to the Landlord at the end of the term hereof in good condition, normal wear and tear and damage by casualty loss excepted, and to repair any damage caused by their removal.

ARTICLE 14. Severability

It is agreed that if any provision of this Lease shall be determined to be void by any court of competent jurisdiction, then such determination shall not affect any other provisions of this Lease, all of which other provisions shall remain in full force and effect, except to the extent the context requires otherwise; and it is the intention of the parties that if a provision of this Lease is capable of two constructions, one of which would render the provision void and the other of which would render the provision valid, then the provision shall have the meaning which renders it valid.

ARTICLE 15. Notice

Any notice, demand, consent or approval ("Notice") required by this Lease shall be in writing and shall be given by delivery by a nationally recognized overnight delivery service that routinely issues delivery receipts, or by mailing such Notice by registered or certified mail, return receipt requested, postage prepaid, to the following:

In the case of Landlord to:

Town Administrator

Town of Essex

Town Hall, 30 Martin Street

Essex, Massachusetts 01929

In the case of Tenant to:

Superintendent of Schools

Manchester Essex Regional School District

36 Lincoln Street

Manchester-by-the-Sea, MA 01944

Each party may add or change its address, for the purpose of receiving Notice hereunder, by providing the other party with at least ten (10) days prior Notice of such change of address. Notices so given shall be deemed to be given and effective at the time they are delivered, tendered for delivery, or refused, at the address set forth above.

ARTICLE 16. Authority

Tenant warrants and represents that it is duly formed, organized and existing, that this Lease is within the scope of its powers, and that the Lease has been duly authorized and approved by the School Committee of the Tenant. Landlord warrants and represents that the Premises are in the custody of the Town of Essex, that by action of the Board of Selectmen of the Landlord, the Landlord has been authorized (i) to enter into the Regionalization Agreement and (ii) to execute and deliver the herein Lease.

ARTICLE 17. Waiver

The failure of either party to seek redress for violation of, or to insist upon the strict performance of any covenant or condition of this Lease shall not prevent a subsequent act which would have originally constituted a violation from having all the force and effect of an original violation. No provision in this Lease shall be deemed to have been waived by either party, unless such waiver be in writing. No act by Landlord or its agent shall be deemed an acceptance of surrender of the Premises or an agreement to accept such

surrender unless in writing and signed by Landlord. The delivery of keys shall not operate as a termination of this Lease or surrender of the Premises.

ARTICLE 18. Damages

Except as may be provided otherwise herein, Landlord shall not be liable for any consequential, special, punitive or indirect loss or damage which Tenant may incur or suffer in connection with this Lease or any services to be performed or provided pursuant thereto. Any net insurance proceeds recovered shall be payable to Tenant and Landlord shall have no obligation to repair or restore the Premises to their original condition. For the purposes of this provision, net insurance proceeds shall refer to the gross insurance proceeds received by Landlord, less reasonable expenses, attorney's fees and costs incurred by Landlord in connection with the collection of such proceeds. Notwithstanding the foregoing, if the Premises are completely or substantially destroyed by fire or casualty, and tenant elects not to restore the School Building on the Premises, then Landlord shall be entitled to retain any portion of the insurance proceeds allocable to the demolition of the Premises and site clean up.

Notwithstanding anything to the contrary in this Lease, in the event that the School Building shall not be restored and the construction of substitute School Building shall not have been completed at the expiration of the term of this Lease, the net insurance proceeds shall be paid to the Landlord.

ARTICLE 19. Entire Agreement

This Lease and the exhibits annexed hereto contain the entire agreement between Landlord and Tenant, and all prior negotiations and agreements between the parties are merged into this Lease. No agreement hereafter made between Landlord and Tenant shall be effective to modify any provision of this Lease unless such agreement is in writing and signed by both parties. This Lease shall be binding upon, and inure to the benefit of, the parties hereto and their respective legal representatives, successors and assigns. This Lease shall run with the land.

Notwithstanding any other provision of this Agreement to the contrary, if there is any conflict between the provisions of this Agreement and the Regionalization Agreement, the provisions of the Regionalization Agreement shall prevail. In the event that the Regionalization Agreement is amended, such amendment by the voters of the member towns shall be deemed to modify the terms of this Lease Agreement to be consistent with the modified Regionalization Agreement.

ARTICLE 20. Captions

The captions and headings used in this Lease are for the purpose of convenience only and shall not be construed to limit or extend the meaning of any part of this Lease.

ARTICLE 21. Recording

Landlord and Tenant agree that this Lease may not be recorded. Each party agrees, promptly after request of the other, to execute, acknowledge and deliver a notice of lease in accordance with Chapter 183, Massachusetts General Laws, Section 4. Such notice of lease shall not include any of the financial terms in this Lease contained. The requesting party shall pay any and all recording costs and shall deliver a copy of the recorded notice of lease to the other party upon receipt from the Essex South District Registry of Deeds.

ARTICLE 22. Force Majeure

Each of Landlord and Tenant shall be excused for the period of any delay in the performance of any obligation hereunder, other than Tenant's obligation to pay Rent or additional rent or to carry insurance as provided in this Lease, when such delay is occasioned by the other party, or by fire or other casualty, Acts of God, unusually severe weather conditions which would not reasonably be predicted and would not normally be factored into construction schedules in Essex County, Massachusetts area, strikes or work stoppages, shortages or unavailability of equipment or material, actions or failure to act of other governmental agencies or entities, war, invasions or hostility, civil disturbances or riots or environmental conditions on the Premises requiring further investigation and/or remediation which are discovered and reported to the other party within six months after the date of this Lease. Any party, if utilizing this provisions to suspend its obligations, shall give prompt notice to the other party, describing such condition and its anticipated effect, and it shall use commercially practicable best efforts to eliminate or reduce the effect of such conditions.

ARTICLE 23. Default

It shall be an event of default ("Event of Default") under this Lease if Tenant shall:

Default in the timely payment of Rent or additional rent or shall not maintain the insurance required to be maintained by Tenant hereunder, and such default shall not have been cured within five (5) business days after notice to Tenant; or

Default in the observance or performance of any of Tenant's other covenants herein and such default shall not have been cured within twenty days after notice, provided that if the default complained of shall be of such a nature that the same cannot be completely remedied or cured within such twenty day period, then such default shall not be an enforceable default against Tenant for the purposes of this Article, if Tenant shall have commenced curing such default within such twenty-day period and shall proceed with reasonable diligence and in good faith to cure such default within thirty days; or

Be adjudicated bankrupt or insolvent, or have a receiver or trustee appointed for all or substantially all of its assets on the grounds of Tenant's insolvency or suffer an order to be entered approving a petition filed against Tenant seeking reorganization of Tenant under the Federal Bankruptcy Laws or any other applicable law or statute of the United States or any State thereof, or if execution is issued against it, or if the interest of Tenant in this Lease passes by operation of law to any person other than Tenant; or

Institute any Chapter 11 or any other voluntary bankruptcy proceedings, or fail to have any involuntary proceedings instituted by anyone else to adjudge Tenant a bankrupt or to have a fiduciary appointed over the assets of Tenant dismissed within thirty days; or

Make an assignment for the benefit of its creditors, or file a voluntary petition in bankruptcy or a petition or answer seeking reorganization or arrangement under the Federal Bankruptcy Laws or any other applicable law or statute of the United States or any State thereof, or shall file a petition to take advantage of any insolvency act or shall consent to the appointment of a receiver or trustee of all or a substantial part of its business and property; or

Vacate the Premises and fail to (i) continue its maintenance obligations hereunder, (ii) provide adequate insurance on the Premises, including, without limitation, the improvements thereon, or (iii) provide adequate security for the Premises as a vacant building;

then upon the happening of any one or more of such Events of Default and the expiration of the period of time, if any allowed for curing same, Landlord may exercise any and all of its rights under the Regionalization Agreement.

ARTICLE 24. Hazardous Substances

(a) Tenant shall have the right to conduct its own environmental assessment of the Premises provided that (i) in doing so it shall not unduly interfere with any construction or remedial activities being then conducted on the Premises by Landlord and (ii) Tenant shall disclose the results of any such assessment to Landlord. Landlord shall be required to promptly remediate any condition which presents an immediate threat to health or safety or which requires immediate attention under applicable Environmental Laws, and shall promptly remove any Hazardous Substance that may be encountered in the course of work required by the Landlord's Limited Warranties. Landlord shall not be responsible to remediate any Hazardous Substances that do not present immediate threat to health or safety and do not require immediate removal under present Environmental Laws. Tenant shall be responsible for the removal of all remaining Hazardous Substances either during any Tenant Renovations or otherwise as required by Environmental Laws.

As used herein, "Hazardous Substances' means any substance which is toxic, ignitable, reactive, or corrosive or which is regulated by "Environmental Laws". The term "Environmental Laws" means federal, state and local laws and regulations, judgments, ordinances, orders and permits governing the protection of the environment,, including, without limitation, the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. 9601 et seq. as amended (CERCLA); the Resource Conservation and Recovery Act, as amended, 42 U.S.C. 6901 et seq.; the Federal Water Pollution Control Act *(33* U.S.C.A. Section 1151 et seq.); the Clean Water Act, 33 U.S.C. 1251 et seq.; the Clean Air Act, 42 U.S.C. 7401 et seq.; the Toxic Substance Control Act, 15 U.S.C. 2601 et seq.; the Safe Drinking Water Act, 42 U.S.C. 300f through 300j; and the regulations promulgated thereunder. "Hazardous Substances" includes any and all material or substances that are defined as "hazardous waste", "extremely hazardous waste" or a "hazardous substance" pursuant to state, federal or local governmental law.

"Hazardous Substances" includes but is not restricted to asbestos, polychlorinated biphenyls ("PCBs") and petroleum products.

(b) Tenant shall not cause or permit any Hazardous Substances to be used, stored, generated or disposed of in, on or about the Premises or the Project by Tenant, its agents, employees, contractors or invitees, except for those Hazardous Substances customarily used by schools and other educational facilities. Any such Hazardous Substances permitted on the Premises as hereinabove provided, and all containers therefore, shall be used, kept, stored and disposed of and shall be removed from the Premises upon the earlier of(i) when it is no longer needed for the purposes permitted hereunder and (ii) the termination of the Lease, in a manner that complies with all federal, state and local laws or regulations applicable to any such Hazardous Substances. Tenant further agrees that it shall, at its sole cost and expense (or at the expense of third parties other than Landlord), remove any Hazardous Substances which pose a threat to health, safety or the environment and which are required to be removed pursuant to any Environmental Laws and/or administrative determinations thereunder and which result from the acts of Tenant, its agents, employees and/or contractors. Tenant shall indemnify, defend and hold harmless the Landlord from and against any and all claims, damages, fines, judgments, penalties, costs, expenses or liabilities (including, without limitation, any and all sums paid for settlement of claims, reasonable attorneys' fees, consultant and expert fees) arising under Environmental Laws or the common law, during or after the Term of this Lease, from or in connection with the use, storage, generation or disposal of Hazardous Substances in, on or about the Premises by Tenant, Tenant's agents, employees, contractors or invitees and/or arising from or caused by Tenant's breach of the foregoing representations and/or the foregoing agreement to remove such Hazardous Substances.

(c) The indemnification contained in subsection (b) above shall expressly include, without limitation, any and all costs incurred due to any investigation of the site or any cleanup, removal and restoration mandated by a federal, state or local agency or political subdivision, or any party acting on their behalf tinder any "Citizen Suit" provision or otherwise.

EXHIBIT A

Legal Description

LOT 1

The land in Essex, in the County of Essex on the Northerly side of Western Avenue and the Southerly side of Story Street, bounded and described as follows:

Beginning at a point on the Western Avenue which is the Southwesterly corner of the granted premises; thence running Northwesterly by land now or former of William R. Noyes, Jr. and Eleanor A. Noyes, b a wall, two hundred sixteen (216) feet to a corner; thence turning and running Northwesterly by a wall by said Noyes land, one hundred twenty-nine (129) feet to a corner in the wall; thence turning and running Northeasterly by a wall by said Noyes land and by land now or formerly of Frederick S. O'Keiff et ux, three hundred twenty-two (322) feet to a corner; thence turning and running b y a wall by said O'Keiff land, eighty-six (86) feet to a corner; thence turning and running Northeasterly by a wall by said O'Keiff land, seventy (70) feet Story Street; thence turning and running Southeasterly by said Story Street, four hundred twelve (412) feet to land formerly of Aurelia A. Story; thence turning and running Southwesterly by a wall by said Story land, three hundred ten (310) feet to a corner by land now or formerly of Karl P. Stephany et ux; thence turning and running Northwesterly by a wall by said Stephany land, one hundred sixteen and 82/100 (116.82) feet to a corner; thence turning and running Southwesterly by a wall by said Stephany land; one hundred sixty-one and 70/100 (161.70) feet to a corner; thence turning and running Southeasterly by a wall by said Stephany land, seventy-five and 90/100 (75.90) feet to Western Avenue; thence turning and running Southwesterly by said Western Avenue, ninety-two (92) feet to the point begun at. Containing 4.1 acres, as shown on plan to recorded with Essex South District Registry of Deeds in Plan Book 86, Plan 88, entitled "Plan of Land in Essex, Mass. Between Western Avenue and Story Street, Scale: 1 in =40 ft., January 20, 1955, George E. Hodsdon, Surveyor."

The foregoing conveyance is subject to an easement for the benefit of said Karl P. Stephany and Leonora A. Stephany referred to in deed to them from Francelia S. Soule and Mary E. Sawyer, dated April 30, 1943 and recorded in Essex South District Registry of Deeds, Book 3403, Page 489.

For title reference, see deed of Francelia S. Soule dated September 6, 1955 recorded with said Deeds in Book 4203, Page 399.

LOT 2

The land in said Essex on the Northerly side of Western Avenue, bounded and described as follows:

Beginning at a point on the Northerly side of Western Avenue which is the Southeasterly corner of the granted premises and which is the Southwesterly corner of land formerly of Francelia S. Soule, now of the Inhabitants of the Town of Essex; thence running Northwesterly, two hundred sixteen (216) feet to a corner; thence turning and running again Northwesterly, one hundred twenty-nine (129) feet to a corner; thence turning and running Northeasterly, two hundred forty-seven (247) feet to a corner, the here courses just described being by a wall by said land formerly of Francelia S. Soule, now of the Inhabitants of the Town of Essex; thence turning and running Northwesterly by a wall by land now or formerly of Frederick S. O'Keiff et ux, of Wilson, of Millet, of Meader, of Doucette, and of Lothrop, four hundred fifty-two (452) feet to a corner; thence turning and running again Northwesterly by a wall by said land of Lothrop, eighteen (18) feet; thence turning and running Southwesterly but nearly Westerly by a wall by land now or formerly of Rideout, eighty (80) feet to a corner; thence turning and running Southeasterly in a straight line by other land of said William R. Noyes, Jr. and Eleanor A. Noyes, nine hundred sixteen (916) feet to a drill hole in a stone on Western Avenue at the end of a wall; thence turning and running Northeasterly by said Western Avenue, three hundred forty-six (346) feet to the point begun at. Being said to contain 5.9 acres, as shown on plan entitled "Plan of Land in Essex, Mass. Between Western Avenue and Story Street, Scale 1 in.+40 ft., January 20, 1955, George E. Hodsdon, Surveyor" and recorded with deed of Francelia S. Soule to the Inhabitants of the Town of Essex, dated September 6, 1955, in the Essex South District Registry of Deeds in Plan Book 86, Page 88.

For title reference see deed of William R. Noyes, Jr. and Eleanor A. Noyes dated October 20, 1955 recorded with said Deeds in Book 4216, Page 501.

LEASE AGREEMENT

This Lease is made as of the 1st day of July, 2000, by and between the Town of Manchester-by-the-Sea and the Manchester Essex Regional School District. In consideration of the mutual covenants herein set forth, the parties agree as follows.

ARTICLE 1. Basic Lease Information

The following terms are referred to in other provisions of the Lease. Each such reference shall incorporate the applicable Basic Lease Information. In the event of any conflict between the Basic Lease Information and the provisions of the Lease, the latter shall control.

Landlord	shall refer to the Town of Manchester-by-the-Sea, a municipality located within the Commonwealth of Massachusetts.
Tenant	shall refer to the Manchester Essex Regional School District, a regional school district created by the Town of Manchester-by-the-Sea and the Town of Essex, pursuant to Chapter 71 of the Massachusetts General Laws and by agreement between such towns dated May 15, 2000 (the "Regionalization Agreement").
Premises	shall refer to the land, buildings and other improvements known as the Manchester Essex Junior-Senior High School, the Manchester Memorial School, located on Lincoln Street, and the pedestrian bridge that crosses over Lincoln Street between the Junior-Senior High School and Memorial School campuses, Manchester-by-the-Sea, Essex County, Commonwealth of Massachusetts, as more particularly described in Exhibit A, attached hereto, including without limitation any buildings, playing fields, tennis courts, parking area, sidewalks, curbing, flagpoles, fences, signs, exterior lighting, trees, plantings, or structures thereon.
Commencement Date	shall refer to July 1, 2000, the date on which Tenant assumed jurisdiction of the pupils served by the public schools of the Town of Essex and the Town of Manchester-by-the-Sea pursuant to the Regionalization Agreement.
Term	shall refer to the term of this Lease, as the same may be extended or terminated pursuant to Article 3 hereof.
School Building	shall refer to a school building now or hereafter located on the Premises and "School Buildings" shall refer collectively to the school buildings or any other structure, permanent or portable, that is used for school purposes that is or may be located on the premises now or hereafter located on the Premises, as they may require.
Execution Date	July 1, 2004

ARTICLE 2. Demise

Landlord hereby leases the Premises to Tenant and Tenant hereby agrees to lease the Premises from the Landlord, subject to and with the benefit of the terms, covenants, conditions and provisions of this Lease. The Premises are leased, together with the buildings and improvements thereon and all rights and easements appurtenant thereto.

ARTICLE 3. Term

a. Initial Lease Term. The initial Term of the Lease shall be for a period of twenty (20) years, beginning on the Commencement Date.

b. Extension. The term of this Lease shall automatically be extended for subsequent extension periods of twenty years each, in accordance with the Regionalization Agreement, unless either the Regionalization Agreement shall be terminated or this Lease shall be terminated in accordance with the provisions of this Lease. For any extension period or term of this Lease, such extension period or term shall be upon the same terms and conditions as in this Lease now contained, unless the parties otherwise agree.

c. Tenant's Termination. Tenant shall have the right to terminate this Lease by ninety (90) calendar days advance written notice (i) in the event of substantial damage to the school building thereon by casualty or other Acts of God or war, provided that Landlord and Tenant shall jointly agree and determine that the school building shall not be rebuilt and that the parties have agreed to construct a new substitute building for the school building on the Premises or other premises or (ii) Tenant decides that the Premises are no longer necessary for the educational program of Tenant.

Further, Tenant shall have the right to terminate this Lease as to a portion, but not all of the Premises, in the event of a determination of the occurrence of(i) or (ii) as to a portion of the Premises.

d. Landlord's Termination. Landlord shall have the right to terminate this Lease (i) upon Landlord's withdrawal from the District in accordance with the provisions of the Regionalization Agreement or (ii) upon ninety (90) days written notice to Tenant, if the Premises are not being used for the permitted uses and it is not contemplated that the Premises will be used for any permitted use within ninety (90) days. Landlord may terminate the Lease as to a portion of the Premises if a portion thereof is not being used for the permitted uses and it is not contemplated that the portion will be used for any permitted use within ninety (90) days.

e. Mutual Agreement. Landlord and Tenant may terminate this Lease by written agreement at any time duly authorized by the Tenant and the Landlord.

f. Effect. Upon the effective date of any such termination, this Lease shall terminate and be of no further force or effect, except to the extent that Articles 12 and 13 are intended to be complied with after said termination, and the Premises shall revert to Landlord.

ARTICLE 4. Rent

Tenant shall pay rent in the amount of $1.00 to Landlord for the Initial Lease Term and for any extended Lease Term in connection with the letting of the Premises pursuant to this Lease. All other costs to be paid by the Tenant hereunder shall be deemed additional rent hereunder.

The term "utility" or "utilities" as used in this Article shall include, without limitation, gas, electricity, oil, water (including, without limitation water for fire protection service), sewer (both sanitary

and storm) and septic, cable, internet, telephone and other communications costs. Tenant shall pay all charges for the consumption of all utilities and trash and recycling removal at the premises whether separately metered to the Premises or otherwise. Landlord has heretofore provided water and sewer to Tenant without charge. Landlord notifies Tenant that Landlord will regularly bill Tenant for water and Sewer after June 30, 2003.

Tenant shall use best efforts to cause appropriations to be made for all of the Rent and additional rent under this Lease, including, without limitation, construction, maintenance, repairs, Future Renovations and reimbursement of Landlord for the exercise of its right to self help pursuant to this Lease.

ARTICLE *5.* Use of the Premises

a. Use of the Premises for Educational Purposes. Tenant shall have the right to use the Premises for (i) the operation of a school system for children in grades pre-kindergarten through twelve and all related functions, including without limitation, a day care facility, pre-school and post-school activities, athletic fields, tennis courts, and other facilities typical for a school facility, and (ii) for other education related purposes, such as the operation of evening, graduate, extension and vocational classes.

b. Alterations. Subject to the provisions of this Lease governing alterations, structural changes, improvements and renovations, Tenant shall make alterations and structural changes to the Premises which Tenant believes are reasonably necessary for the operation of the school facility within the Premises and are consistent with the permitted uses of the Premises. For all Future Renovations (as that term is defined in Article 6(b) below), improvements, alterations, and structural changes, either exterior, structural or interior (collectively, "Changes" and individually "Change"), (i) Prior to commencement of such Changes, Tenant shall obtain all necessary permits, approvals, consents and orders with respect to such Changes and deliver copies of same to Landlord; (ii) Tenant shall throughout the term of the construction of the Changes carry builders risk, liability insurance coverage, workers compensation, payment and performance bonds and such other insurance coverages as are required by Landlord, provided in such amounts as shall be required by Landlord, provided that such amounts and coverages shall be customary in Massachusetts for similar school construction projects; (iii) Tenant shall indemnify the Landlord from and for all liens of mechanics and materialmen on the Premises; and (iv) Tenant shall commence such Changes and complete all Changes commenced in a good and workmanlike manner, using all due diligence to complete same promptly after commencement of same and shall pay all costs for the Changes, direct and indirect, contemplated and uncontemplated, including, without limitation, legal costs and reasonable legal fees. Tenant shall comply with all governmental and insurance impositions in connection with the operations of the Premises hereunder and its work hereunder, whether under this Article 5(b), Article 6 or otherwise.

c. Quiet Enjoyment. Landlord hereby covenants and agrees that if Tenant shall perform all the covenants and other provisions herein stipulated to be performed or observed on Tenant's part, Tenant shall at all times during the continuance hereof have peaceable and quiet enjoyment and possession of the Premises without any manner of hindrance from Landlord or any person or persons lawfully claiming under Landlord, subject, however, to the terms of this Lease, including without limitation the rights reserved to the Landlord in Article 7. The rights granted by this Paragraph are in lieu of any other rights Tenant may have by statute or law.

ARTICLE 6. Maintenance and Repairs

a. Landlord's Limited Warranties. Exhibits B-1 and B-2, attached hereto, describe repairs and other work that Landlord and Tenant have identified as being presently necessary to correct existing conditions that reflect substantial under-capacity, present substantial life safety or handicap accessibility issues or pose a significant danger to the integrity of the existing School Buildings (collectively, "Substantial Defects" and each individually a "Substantial Defect"), together with information as to appropriateness, timing, and where available, anticipated cost. Exhibits B-1 and B-2 also identify repairs or other work completed by Landlord since the Commencement Date. Landlord warrants, on the terms set forth in this Lease, that at the Commencement Date, the School Buildings were in good condition, and contained no Substantial Defect other than as set forth in Exhibits B-1 or B-2 or in the findings and determinations in the 2000 report prepared by Ammondson Architects, a copy of which has been delivered to Tenant. Landlord's timely compliance with the requirements of Article 6(b) below, shall satisfy any obligation of Landlord as to the warranty in this Article 6(a).

b. Landlord's Repairs and Other Work. Landlord and Tenant acknowledge that Tenant shall during the term of this Lease and from time to time perform substantial renovations, maintenance, improvements, alterations and repairs to the School Buildings, which may include demolition, in part or in whole and reconstruction thereof, to accomplish Tenant's education purposes (collectively, the "Future Renovations" and each individually, a "Future Renovation"). Tenant shall be fully responsible for the payment of all expenses connected with the Future Renovations, including, without limitation, any studies, analysis or planning that may be required. Any work hereunder shall be in compliance with any and all applicable regulations, subject to any permits, licenses, approvals and orders which shall be required pursuant to governmental or insurance company impositions.

During the period from the Commencement Date through June 30, 2005, Landlord will, subject to voter approval of appropriations, which Landlord shall use reasonable best efforts to obtain, be responsible for funding and performing the repairs or other work as provided in Exhibits B-1 and B-2. In determining the appropriateness and timing of such repairs or other work, Landlord and Tenant shall take into account any substantial renovation, demolition or other changes to the Premises anticipated to be made by Tenant as part of the Future Renovations, and, in any event, the parties shall use good faith efforts to coordinate their work schedules, and cooperate with any work to be performed, so that the work to be performed by Landlord pursuant to Exhibits B-1 and B-2 and the Future Renovations shall be performed as efficiently and economically as possible. Landlord shall not be required to undertake any repairs to the School Buildings or any of their components or systems that will be repaired or otherwise cured as part of Tenant's Future Renovations, or is required to be repaired or cured by Tenant under Article 6(c), other than as required in Exhibits B-1 and B-2, but Landlord may do so at its sole discretion in accordance with Article 6(d) herein below. Landlord has made repairs to the Premises as required in Exhibits B-1 and B-2 and will continue to do so on an as-needed basis as shown in Exhibits B-1 and B-2 through June 30, 2005. In no event shall Landlord be obligated to make any repairs or do any other work to the Premises after June 30, 2005,

a) except to complete work in progress on that date, and/or
b) except work shown in Exhibits B-1 and B-2 that has not commenced as of June 30, 2005, but has been identified as needing repair by the Landlord and Tenant jointly in writing subsequent to the execution of the Lease Agreement but prior to June 30, 2005. Only those items acknowledged by the Landlord and Tenant prior to June 30, 2005 in writing shall be repaired by the Landlord.

Landlord and Tenant agree that any dispute or claim arising out of or relating to the repair and other work items identified in Exhibits B-1 or B-2 or Future Renovations, including, without limitation, any dispute regarding the appropriateness or timeliness of the repairs, Future Renovations, Exhibits B-1 or B-2 or other work, shall prior to submission to any other forum for resolution, be submitted to binding arbitration under the auspices of the American Arbitration Association in Boston, Massachusetts.

c. Tenant's Maintenance, Repairs and Improvements. Except as provided in Article 6(b), through the term of this Lease Agreement, Landlord shall have no obligation or responsibility for the maintenance, repair or improvement of the Premises and Tenant shall be responsible, at Tenant's sole cost and expense, to maintain, repair and improve the Premises, including, without limitation, snow and ice removal and control, lawn and field maintenance, pavement and sidewalk sweeping and all other similar work as would be required to be performed to maintain the School Buildings and the Premises in a first class condition as if the Tenant were the owner thereof, and to perform the Future Renovations, keeping the Premises at all times in good, safe, clean and well maintained condition. Tenant shall use reasonable best efforts to cause any appropriations to be made which shall be necessary for the funding of the Future Renovations and the maintenance and repair of the Premises.

Attached hereto as Exhibit C is a list of services that Landlord has been providing to or for the benefit of Tenant since the Commencement Date, which would otherwise be the responsibility of Tenant under the provisions of this Lease. Landlord hereby notifies Tenant that it will no longer provide these services after June 30, 2004, except pursuant to agreement between Landlord and Tenant or pursuant to Landlord's rights in Article 6(d).

d. Reimbursement of Landlord for Certain Maintenance, Repairs and Improvements Related Expenses. In the event Landlord determines that Tenant has failed to undertake or perform necessary maintenance, repairs or improvements, including, without limitation, Future Renovations, that Tenant is obligated to undertake or perform pursuant to this Lease, Landlord shall give notice to Tenant, informing Tenant of the nature of its failure, and affording Tenant a reasonable time under the circumstances within which to cure this failure. For instance, there shall be a shorter notice period with respect to immediate threat to health, safety or welfare. In the event Tenant fails to cure the failure within such reasonable period of time, Landlord may but shall have no obligation to undertake or perform the maintenance, repairs or improvements. In such event, Landlord shall account to Tenant for the cost of maintenance or repairs completed by Landlord and Tenant shall be obligated to reimburse Landlord for such costs. Notwithstanding the foregoing, Landlord shall not be obligated to undertake or perform any maintenance, repairs or improvements, except as provided in Article 6(b).

e. Reimbursement of Tenant for Certain Maintenance, Repairs and Improvements Related Expenses. In the event Tenant determines that Landlord has failed to undertake or perform necessary repairs or other work that Landlord is obligated to undertake or perform pursuant to Article 6(b), provided however, that no failure shall be deemed to have occurred if Landlord shall be continuing to use reasonable best efforts to cause any necessary appropriations to be made or Landlord, having appropriated such funding, shall be making diligent efforts to complete such work. Tenant shall give notice to Landlord, informing Landlord of the nature of its failure, and affording Landlord a reasonable time under the circumstances within which to cure this failure. In the event Landlord fails to cure the failure within a reasonable period of time, Tenant may but shall have no obligation to undertake or perform the repairs or other work. In such event, Tenant shall account to Landlord for the cost of repairs or other work completed by Tenant and Landlord shall be obligated to reimburse Tenant for such costs. Notwithstanding the foregoing, Tenant shall not be obligated to undertake or perform any repairs or other work that is the responsibility of Landlord as provided in Article 6(b) or Article 6(c).

f. Landlord's Retained Rights to Make Future Renovations. Landlord shall have the right, with the approval of Tenant, which approval shall not be unreasonably withheld, conditioned or delayed, to make Future Renovations to the Memorial School portion of the Premises if Landlord believes such Future Renovations are reasonably necessary for the operation of the school facility within the Premises and are necessary or desirable for the permitted uses of the Premises (a "Manchester Renovation"). For all such Manchester Renovations (i) Prior to commencement of such Manchester Renovation, Landlord shall obtain all necessary permits, approvals, consents and orders with respect to such Manchester Renovation; (ii) Landlord shall throughout the term of the construction of the Manchester Renovation carry builders risk, liability insurance coverage, workers compensation, payment and performance bonds and such other insurance coverages as are reasonably necessary to protect the interest of Tenant, provided in such amounts as shall be reasonably necessary consistent with amounts and coverages customarily provided in Massachusetts for similar school construction projects; (iii) Landlord shall indemnify Tenant from and for all liens of mechanics and materialmen on the Premises; and (iv) Landlord shall commence and complete any Manchester Renovation undertaken by Landlord in a good and workmanlike manner, using all due diligence to complete same promptly and shall pay all costs for the Manchester Renovation, direct and indirect, contemplated and not contemplated, including, without limitation, legal costs and reasonable legal fees. Such renovation shall not unreasonably interfere with Tenant operation.

g. Landlord's Costs of a Manchester Renovation. In the event that Landlord shall elect to proceed to make a Manchester Renovation to the Premises as herein provided, Landlord shall do so at its sole cost and expense without reimbursement from Tenant, except to the extent that superceding law, rule or regulation, or opinion or advice from bond counsel shall require that the Tenant be the borrower for any funds necessary to complete the Manchester Renovation. In such an event, Landlord shall indemnify and hold the Tenant harmless from, and reimburse any loss, cost or damage in connection with such borrowing or expenditures.

ARTICLE 7. Access

a. General. Landlord shall have access to the Premises at all times when school buildings and their grounds are generally open or available in Essex County, Massachusetts and at all reasonable times and upon reasonable notice (and in case of emergency at any time without notice) for (i) the purpose of examining the same or undertaking or performing such maintenance, repairs or improvements to the Premises as the Landlord may deem necessary or appropriate, including any maintenance, repairs and improvements that the Landlord is obligated or permitted to undertake or perform pursuant to Article 6, provided that in no event shall Landlord be required to perform any maintenance, repairs or improvements, except as provided in Exhibits B-1 and B-2 or (ii) for the purposes for which use is reserved to the Landlord pursuant to subsection b), below. Landlord agrees to use reasonable efforts to ensure that any activities permitted by Landlord hereunder shall not unreasonably interfere with the Tenant's use of the Premises for the purposes permitted in this Lease.

b. Other. Landlord reserves the right, to the extent that the it does not materially interfere with Tenant's use of the Premises for school purposes or other purposes permitted hereunder, to use the Premises, without fee or charge, for such usual and customary purposes as school buildings are generally used in Essex County, Massachusetts including without limitation, town meetings, elections, emergency shelters and other governmental and recreational activities. Landlord agrees to use reasonable efforts to ensure that any activities permitted by Landlord hereunder shall not unreasonably interfere with the Tenant's use of the Premises for the purposes permitted in this Lease. No forcible entry shall be made by Landlord unless such entry shall be reasonably necessary to prevent injury, loss or damage to persons or property or otherwise for Landlord to exercise its rights under this Lease. Landlord shall promptly repair any damage to the Premises caused by or resulting from Landlord's undertaking or performance of maintenance, repairs, or improvements, and Landlord's entry onto the Premises for such purposes, excepting any damage caused by or resulting from actions taken by Landlord in the case of an emergency, a default by

Tenant hereunder, and the negligence, fault or willful misconduct of Tenant or anyone claiming by or through Tenant. No action of Landlord pursuant to this Article shall be deemed an eviction or disturbance of Tenant, nor shall Tenant be allowed damages for any injury or inconvenience occasioned thereby.

c. Shared Facilities. Landlord reserves the primary right to use, without cost or charge, the Coach Ed Field Playground, the Brook Street tennis courts and the parking lot and memorial site at the corner of Brook Street and Norwood Avenue (each a "Shared Facility and collectively, "Shared Facilities") to and for the Landlord and the residents of the Town of Manchester-by-the-Sea. The area of the Shared Facilities is Parcels 4 and *5* on the Valuation Survey dated June 1926, prepared by Raymond C. Allen, Civil Engineer, as amended, a copy of a potion of which is attached hereto as Exhibit A-3. Unless the parties agree otherwise in writing, (i) each may use a Shared Facility only to an extent and in a manner consistent with the practice of the parties at the date of execution of this Lease Agreement, (ii) a Shared Facility may not be materially altered without both parties' written concurrence and (iii) Landlord shall be responsible for maintenance, repair and up-keep of the Shared Facilities and shall indemnify Tenant against loss, cost (including, without limitation, reasonable attorney's fees) or damage arising from failure of Landlord to carry out this obligation.

d. Water Department Facilities. The land, buildings and facilities located on the Premises (the "Water Department Facilities"), which are now used by the Town of Manchester-by-the-Sea Water Department and which are approximately depicted on Exhibit D, attached hereto, shall remain temporarily under the custody, management and control of the Water Department until such time as the Town shall have provided replacement land, buildings and facilities in accordance with Article *4* of the June 24, 1959 Town Meeting. Landlord shall be responsible for maintenance, repair and up-keep of the Water Department Facilities and shall indemnify Tenant against loss, cost (including, without limitation, reasonable attorney's fees) or damage arising from failure of Landlord to carry out this obligation. Landlord shall have a right, by foot and by vehicle, of access to and egress from the Water Department Facilities in common with the Tenant over the walks and drives now or hereafter located on the Premises.

ARTICLE 8. Insurance

a. General Liability Insurance. During the Term, and for as long as Tenant shall occupy the Premises, Tenant shall keep in full force and effect, at its own expense, a general liability insurance policy, in occurrence form, covering bodily injury or death to persons and damage to or destruction of property, with coverage limits as Landlord shall reasonably request consistent with coverages carried by other schools and municipalities in Essex County, Massachusetts.

b. Fire and Casualty Insurance. During the Term, and for as long as Tenant shall occupy the Premises, Tenant shall keep in full force and effect, at its own expense, a fire and casualty insurance policy on the Premises, and all contents thereof with the usual extended coverage endorsements, which shall insure against perils normally covered by a so-called all risk policy, including, without limitation, differences in conditions, costs of demolition, vandalism, malicious mischief, collapse and increased costs of construction, and which shall be written on the replacement cost basis (with a so-called replacement cost endorsement), noncontributory as to all parties, in amounts not less than one hundred percent (100%) of the full replacement cost thereof above foundation walls, with only such commercially reasonable deductibles as the Landlord reasonably approves.

c. Worker's Compensation Insurance. Tenant shall carry workers' compensation insurance as required by state and/or federal law.

d. Terrorism Insurance. Tenant shall carry terrorism insurance with such coverages and in such amounts as Landlord shall reasonably request from time to time but not less than coverages and amounts carried by other schools and municipalities in Essex County, Massachusetts.

e. Other Insurance. Tenant shall carry such other insurance with such coverages and in such amounts as Landlord shall reasonably request from time to time but not less than coverages and amounts carried by other schools and municipalities in Essex County, Massachusetts.

f. Additional Insurance Requirements. All insurance policies required under this Lease shall (i) name Landlord as an additional insured party; (ii) be issued by insurers having a minimum policy holders rating of"A" VIII per the latest rating publication Property and Casualty Insurers by A.M. Best Company (or which are otherwise approved by Landlord) and which are lawfully doing business in the Commonwealth of Massachusetts; and (iii) provide that the coverage maintained thereunder may not be canceled without at least thirty (30) days' prior notice to Landlord, and that any notice to Tenant that such coverage will not be renewed shall also be given simultaneously to Landlord.

g. Blanket Insurance Policies. Tenant shall have the right to provide the coverages required herein under blanket policies of insurance, provided that the coverage afforded Landlord shall not be diminished by reason thereof.

h. Review of Insurance Coverage. Upon notice from Landlord from time to time, Tenant shall deliver to Landlord evidence of the coverage required herein. Landlord shall have the right to review these insurance requirements at any time and from time to time and to require changes in the amounts of insurance or the types of insurance, or both, as it deems reasonably necessary in order to adequately protect its interests, but not more frequently than annually. If Tenant shall fail, refuse or neglect to obtain or maintain any insurance required to be carried by Tenant under this Lease, Landlord shall have the right, but not the obligation, at Landlord's option, to purchase such insurance and to pay the premiums thereon immediately upon notice (oral or written) to Tenant. All such payments made by Landlord shall be recoverable by Landlord from Tenant on demand as additional rent hereunder. If Tenant shall fail, refuse or neglect to obtain and maintain the insurance required pursuant to this Lease, and if Landlord does not acquire the insurance which Tenant has failed, refused or neglected to obtain and maintain as aforesaid, and the Premises sustains a loss which was not, but was required to be, covered by the insurance provided for in this Lease, then in that event Tenant shall be responsible for all reasonable costs and expenses incurred by Landlord in restoring and repairing the Premises and all related improvements to the condition that existed prior to the casualty.

i. Waiver of Recovery. Neither Landlord nor Tenant shall be liable to the other or to any insurance company (by way of subrogation or otherwise) insuring the other party for any loss or damage to any structure, building or other tangible property, or any resulting loss of income, or losses under workers' compensation laws and benefits, even though such damage or loss might have been occasioned by the negligence of Landlord or Tenant or any of their agents or employees, to the extent that any such loss or damage is covered by insurance benefiting the party suffering such loss or damage.

j. Indemnity Except if and to the extent Tenant has been released from liability pursuant to the provisions of Article 8(i) hereinabove, Tenant does hereby assume liability for, and does hereby agree to indemnify, protect, reimburse, defend, save and hold harmless Landlord from and against any and all liabilities, obligations, claims, actions, demands, fines, suits, judgments, penalties, damages and losses (including, without limitation, all of the costs, fees and expenses connected therewith or incident thereto, including, without limitation, reasonable legal fees and costs) for the death of or injury to any person whomsoever

and for loss of, damage to, or destruction of any property whatsoever (including, without limitation, loss of use thereof) arising out of the negligent or willful act or omission of Tenant, its officers, employees, agents, contractors or invitees as they relate to Tenant's use, occupancy of the Premises and/or maintenance, alteration or improvement thereof.

k. To the extent permitted by law, and except as otherwise provided under Article 11, Tenant shall occupy the Premises at its sole risk, and Landlord shall not be liable for any damages, direct or indirect, consequential or otherwise for any act or negligence by Landlord under this lease.

ARTICLE 9. Damage or Destruction by Eminent Domain, Fire or Casualty

a. Taking by Eminent Domain. In the event the Premises, or any material part thereof, shall be taken by any public authority or for any public use, and as a result of such taking, Tenant's ability to operate a school thereon is substantially impaired or prohibited, then any net damage award recovered shall be payable to Tenant in escrow for the purposes of restoring the Premises, as if the Premises were affected by casualty, and such restoration shall be made and funds disbursed in accordance with Article 9(b) hereinbelow. For purposes of this provision, net damage award shall refer to the gross damage award recovered by Landlord, less reasonable expenses, attorneys' fees and costs incurred by Landlord in the collection of the same, and in the event that the Premises or any material part thereof are taken by any public authority or for any public use, but such taking does not substantially impair or prohibit Tenant's operation of a school on the Premises, then any damage award recovered may be retained by Landlord, without further obligation to Tenant.

b. Damage by Fire or Casualty. If the Premises are damaged or destroyed by fire or other casualty insured against, then the net insurance proceeds recovered shall be placed in an escrow account for the restoration of the Premises or otherwise as provided in this Article 9, and the Tenant shall place the deductible and/or the amount uninsured into such escrow account, and Landlord shall have an obligation to use such funds, to repair or restore the Premises to their original condition, provided that in no event shall the Landlord be obligated to spend in excess of the funds in such escrow account for such restoration. For purposes of this provision, net insurance proceeds shall refer to the gross insurance proceeds received by Landlord, less reasonable expenses, attorney's fees and costs incurred by Landlord in connection with the collection of such proceeds. Such funds shall be made available either for the restoration of the Premises or construction of such new school building. Notwithstanding the foregoing, if the Premises are completely or substantially destroyed by fire or casualty, and the parties elect not to restore the School Building, or construct a substitute School Building on the Premises, then Landlord shall be entitled to any portion of the insurance proceeds allocable to the demolition of the Premises and site cleanup, and the remainder, plus the deductible and any uninsured amount shall be made available from such escrow fund for the construction of a school building on an alternative site. The escrow fund shall be held by the Tenant (Escrowee) and shall be subject to such reasonable requirements as the parties, including, without limitation, the Escrowee, shall reasonably require, and the parties shall use best efforts to agree to such terms of such escrow arrangement.

ARTICLE 10. Assignment and Subletting

Tenant shall have the right to sublet or license the Premises, or a portion thereof, in accordance with Chapter 71, Massachusetts General Laws, Sections 71 and 16(r) and any other governmental impositions regarding leasing of schools, as the same may be amended from time to time, including, without limitation, related regulations and policies adopted by the Tenant thereunder, including, without limitation, the then effective applicable policy regarding "Community Use of School Facilities" adopted by the Tenant, non-discriminatorily applied. No assignment or subletting shall relieve Tenant of its liabilities and obligations hereunder.

Tenant shall deliver to Landlord written monthly reports regarding any subleasing and licensing for any subleasing or licensing not later than the fifteenth day of the calendar month following the calendar month of such subleasing or licensing.

ARTICLE 11. No Liability of Landlord

Unless caused by or due to the negligence of Landlord, Landlord shall not be liable for any personal injury or property damage suffered by Tenant or of other occupants of the Premises.

ARTICLE 12. Surrender of the Premises

Upon termination or expiration of this Lease, Tenant shall quit and surrender the Premises, leaving the Premises in good order and condition, excepting ordinary wear and tear, damage by fire or other casualty, the elements, and any cause beyond Tenant's control. Upon termination or expiration of this Lease, Tenant shall remove all of its property from the Premises, except as provided otherwise herein. In the event that Tenant shall hold over after the termination or expiration of the Term of this Lease, Tenant shall reimburse Landlord for its loss, costs, including, without limitation, reasonable legal fees and costs, which Landlord may incur, directly or indirectly, consequential or otherwise, due to Tenant's failure to vacate the Premises.

ARTICLE 13. Removal of Improvements

Any fixtures, equipment, improvements, and signs installed or permanently affixed on the Premises by Tenant during the Term shall remain on the Premises and become property of Landlord upon the expiration of the Lease or earlier termination thereof. In the event that the Regionalization Agreement shall be terminated, all personal property shall remain at the Premises. In the event that a School Building shall cease being used as a school and a new school shall be constructed to replace same, all personal property shall be moved to such new school, provided that in the event that such personal property shall not be used at such new school, it shall remain or be moved back to the Premises, or disposed of as Landlord may direct, without cost or expense to the Landlord and with the Landlord to receive any proceeds. In any event, removal of fixtures, equipment and personal property shall be subject to Tenant's obligation to maintain the Premises and to deliver the Premises to the Landlord at the end of the term hereof in good condition, normal wear and tear and damage by casualty loss excepted, and to repair any damage caused by their removal.

ARTICLE 14. Severability

It is agreed that if any provision of this Lease shall be determined to be void by any court of competent jurisdiction, then such determination shall not affect any other provisions of this Lease, all of which other provisions shall remain in full force and effect, except to the extent the context requires otherwise; and it is the intention of the parties that if a provision of this Lease is capable of two constructions, one of which would render the provision void and the other of which would render the provision valid, then the provision shall have the meaning which renders it valid.

ARTICLE 15. Notice

Any notice, demand, consent or approval ("Notice") required by this Lease shall be in writing and shall be given by delivery by a nationally recognized overnight delivery service that routinely issues delivery receipts, or by mailing such Notice by registered or certified mail, return receipt requested, postage prepaid, to the following:

In the case of Landlord to:

Town Administrator
Town of Manchester-by-the-Sea
Town Hall, 10 Central Street
Manchester-by-the-Sea, Massachusetts 01944

In the case of Tenant to:

Superintendent of Schools
Manchester Essex Regional School District
36 Lincoln Street
Manchester-by-the-Sea, MA 01944

Each party may add or change its address, for the purpose of receiving Notice hereunder, by providing the other party with at least ten (10) days prior Notice of such change of address. Notices so given shall be deemed to be given and effective at the time they are delivered, tendered for delivery, or refused, at the address set forth above.

ARTICLE 16. Authority

Tenant warrants and represents that it is duly formed, organized and existing, that this Lease Agreement is within the scope of its powers and has been duly authorized and approved by the School Committee of Tenant. Landlord warrants and represents that (a) at the Commencement Date, the Premises were in the custody of Landlord, (b) pursuant to Town Meeting authorizations, Landlord entered into the Regionalization Agreement and (c) pursuant to authorization of the Board of Selectmen of Landlord, Landlord has executed and delivered this Lease Agreement.

ARTICLE 17. Waiver

The failure of either party to seek redress for violation of, or to insist upon the strict performance of any covenant or condition of this Lease shall not prevent a subsequent act which would have originally constituted a violation from having all the force and effect of an original violation. No provision in this Lease shall be deemed to have been waived by either party, unless such waiver be in writing. No act by Landlord or its agent shall be deemed an acceptance of surrender of the Premises or an agreement to accept such surrender unless in writing and signed by Landlord. The delivery of keys shall not operate as a termination of this Lease or surrender of the Premises.

ARTICLE 18. Captions

The captions of paragraphs in this Lease are inserted only as a matter of convenience, and shall in no way define, limit or describe the scope of this Lease or the intent of any provision hereof.

ARTICLE 19. Damages

Except as may be provided otherwise herein, Landlord shall not be liable for any consequential, special, punitive or indirect loss or damage which Tenant may incur or suffer in connection with this Lease or any services to be performed or provided pursuant thereto.

ARTICLE 20. Entire Agreement

This Lease and the exhibits annexed hereto contain the entire agreement between Landlord and Tenant, and all prior negotiations and agreements between the parties are merged into this Lease. No agreement hereafter made between Landlord and Tenant shall be effective to modify any provision of this Lease unless such agreement is in writing and signed by both parties. This Lease shall be binding upon, and inure to the benefit of, the parties hereto and their respective legal representatives, successors and assigns. This Lease shall run with the land.

Notwithstanding any other provision of this Agreement to the contrary, if there is any conflict between the provisions of this Agreement and the Regionalization Agreement, the provisions of the Regionalization Agreement shall prevail. In the event that the Regionalization Agreement is amended, such amendment by the voters of the member towns shall be deemed to modify the terms of this Lease Agreement to be consistent with the modified Regionalization Agreement.

ARTICLE 21. Recording.

Landlord and Tenant agree that this Lease will be recorded with the Essex South District Registry of Deeds in accordance with Chapter 183, Massachusetts General Laws, Section 4.

ARTICLE 22. Force Majeure.

Each of Landlord and Tenant shall be excused for the period of any delay in the performance of any obligation hereunder, other than Tenant's obligation to pay Rent or additional rent or to carry insurance as provided in this Lease, when such delay is occasioned by the other party, or by fire or other casualty, Acts of God, unusually severe weather conditions which would not reasonably be predicted and would not normally be factored into construction schedules in Essex County, Massachusetts area, strikes or work stoppages, shortages or unavailability of equipment or material, actions or failure to act of other governmental agencies or entities, war, invasions or hostility, civil disturbances or riots or environmental conditions on the Premises requiring further investigation and/or remediation. Any party, if utilizing this provision to suspend its obligations, shall give prompt notice to the other party, describing such condition and its anticipated effect, and it shall use commercially practicable best efforts to eliminate or reduce the effect of such conditions.

ARTICLE 23. Default

It shall be an event of default ("Event of Default") under this Lease if Tenant shall:

Default in the timely payment of Rent or additional rent or shall not maintain the insurance required to be maintained by Tenant hereunder, and such default shall not have been cured within five (5) days after notice to Tenant; or

Default in the observance or performance of any of Tenant's other covenants herein and such default shall not have been cured within twenty days after notice, provided that if the default complained of shall be of such a nature that the same cannot be completely remedied or cured within such twenty day period, then such default shall not be an enforceable default against Tenant for the purposes of this Article, if Tenant shall have commenced curing such default within such twenty-day period and shall proceed with reasonable diligence and in good faith to cure such default within thirty days; or

Be adjudicated bankrupt or insolvent, or have a receiver or trustee appointed for all or substantially all of its assets on the grounds of Tenant's insolvency or stiffer an order to be entered approving a petition filed against Tenant seeking reorganization of Tenant under the Federal Bankruptcy Laws or any other applicable law or statute of the United States or any State thereof, or if execution is issued against it, or if the interest of Tenant in this Lease passes by operation of law to any person other than Tenant; or

Institute any Chapter 11 or any other voluntary bankruptcy proceedings, or fail to have any involuntary proceedings instituted by anyone else to adjudge Tenant a bankrupt or to have a fiduciary appointed over the assets of Tenant dismissed within thirty days; or

Make an assignment for the benefit of its creditors, or file a voluntary petition in bankruptcy or a petition or answer seeking reorganization or arrangement under the Federal Bankruptcy Laws or any other applicable law or statute of the United States or any State thereof, or shall file a petition to take advantage of any insolvency act or shall consent to the appointment of a receiver or trustee of all or a substantial part of its business and property; or

Vacate the Premises and fail to (i) continue its maintenance obligations hereunder, (ii) provide adequate insurance on the Premises, including, without limitation, the improvements thereon, or (iii) provide adequate security for the Premises as a vacant building;

then upon the happening of any one or more of such Events of Default and the expiration of the period of time, if any allowed for curing same, Landlord may exercise any and all of its rights under this Lease Agreement, the Regionalization Agreement or otherwise.

ARTICLE 24. Hazardous Substances

(a)Tenant shall have the right to conduct its own environmental assessment of the Premises provided that (i) in doing so it shall not unduly interfere with any construction or remedial activities being then conducted on the Premises by Landlord and (ii) Tenant shall disclose the results of any such assessment to Landlord. Landlord shall be required to promptly remediate any condition which presents an immediate threat to health or safety or which requires immediate attention under applicable Environmental Laws, and shall promptly remove any Hazardous Substances that may be encountered in the course of work required by the Landlord's Limited Warranties. Landlord shall not be responsible to remediate any Hazardous Substances that do not present immediate threat to health or safety and do not require immediate removal under present Environmental Laws. Tenant shall be responsible for the removal of all remaining Hazardous Substances either during any Tenant Renovations or otherwise as required by Environmental Laws.

As used herein, "Hazardous Substances' means any substance which is toxic, ignitable, reactive, or corrosive or which is regulated by "Environmental Laws". The term "Environmental Laws" means federal, state and local laws and regulations, judgments, ordinances, orders and permits governing the protection of the environment,, including, without limitation, the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. 9601 et seq. as amended (CERCLA); the Resource Conservation and Recovery Act, as amended, 42 U.S.C. 6901 et seq.; the Federal Water Pollution Control Act *(33* U.S.C.A. Section 1151 et seq.); the Clean Water Act, 33 U.S.C. 1251 et seq.; the Clean Air Act, 42 U.S.C. 7401 et seq.; the Toxic Substance Control Act, 15 U.S.C. 2601 et seq.; the Safe Drinking Water Act, 42 U.S.C. 300f through 300j; and the regulations promulgated thereunder. "Hazardous Substances" includes any and all material or substances that are defined as "hazardous waste", "extremely hazardous waste" or a "hazardous substance" pursuant to state, federal or local governmental law. "Hazardous Substances" includes but is not restricted to asbestos, polychlorinated biphenyls ("PCBs") and petroleum products.

(b)Tenant shall not cause or permit any Hazardous Substances to be used, stored, generated or disposed of in, on or about the Premises or the Project by Tenant, its agents, employees, contractors or invitees, except for those Hazardous Substances customarily used by schools and other educational facilities. Any such Hazardous Substances permitted on the Premises as hereinabove provided, and all containers therefore, shall be used, kept, stored and disposed of and shall be removed from the Premises upon the earlier of (i) when it is no longer needed for the purposes permitted hereunder and (ii) the termination of the Lease, in a manner that complies with all federal, state and local laws or regulations applicable to any such Hazardous Substances. Tenant further agrees that it shall, at its sole cost and expense (or at the expense of third parties other than Landlord), remove any Hazardous Substances which pose a threat to health, safety or the environment and which are required to be removed pursuant to any Environmental Laws and/or administrative determinations thereunder and which result from the acts of Tenant, its agents, employees and/or contractors. Tenant shall indemnify and hold harmless the Landlord from any and all claims, damages, fines, judgments, penalties, costs, expenses or liabilities (including, without limitation, any and all sums paid for settlement of claims, reasonable attorneys' fees, consultant and expert fees) arising under Environmental Laws or the common law, during or after the Term of this Lease, from or in connection with the use, storage, generation or disposal of Hazardous Substances in, on or about the Premises by Tenant, Tenant's agents, employees, contractors or invitees and/or arising from or caused by Tenant's breach of the foregoing representations and/or the foregoing agreement to remove such Hazardous Substances.

(c) The indemnification contained in subsection (b) above shall expressly include, without limitation, any and all costs incurred due to any investigation of the site or any cleanup, removal and restoration mandated by a federal, state or local agency or political subdivision, or any party acting on their behalf tinder any "Citizen Suit" provision or otherwise.

Lease Amendment as voted by the MERSD school committee April 4, 2007

Ms Harrison moved to approve an amendment to Article 7 Section C of the lease agreement between the Town of Manchester-by-the-Sea and the Manchester Essex Regional School district to read as follows:

> "Article 7. Access
> c. Coach Field Playground and Shared Facilities. Landlord reserves the primary right to use the Coach Ed Field Playground ("Coach Field Playground"), and the Brook Street tennis courts and the parking lot and memorial site at the corner of Brook Street and Norwood Avenue (each a "Shared Facility" and collectively, "Shared Facilities") to and for the Landlord and the residents of the Town of Manchester-by-the-Sea. The area of the Coach Field Playground and Shared Facilities is Parcels 4 and 5 on the Valuation Survey dated June 1926, prepared by Raymond C. Allen, Civil Engineer, as amended, a copy of a portion of which is attached hereto as Exhibit A-3. Unless the parties agree otherwise in writing, (i) the Landlord may use the Shared Facilities without cost or charge, (ii) each may use a Shared Facility or Coach Field Playground only to an extent and in a manner consistent with the practice of the parties at the date of execution of this Lease Agreement, (iii) neither the Coach Field Playground nor a Shared Facility may be materially altered without both parties' written concurrence, (iv) Landlord shall be responsible for maintenance, repair, and up-keep of the Shared Facilities and shall indemnify Tenant against loss, cost (including, without limitation, reasonable attorney's fees) or damages arising from failure of Landlord to carry out this obligation, (v) Tenant shall be responsible for maintenance, repair, and up-keep of the Coach Field Playground and shall indemnify Landlord against loss, cost (including, without limitation, reasonable attorney's fees) or damages arising from failure of Tenant to carry out this obligation, and (vi) Tenant may assess Landlord for a share of the cost of maintenance, repair, and up-keep of the Coach Field Playground proportionate the extent of Landlord's use of the playground."

Ms Cameron seconded Ms Harrison's motion and it passed unanimously.

SIDE LETTER OF AGREEMENT TO ADDRESS ARTICLE 7. c. (iii) OF THE AMENDED SCHOOL LEASE AGREEMENT BETWEEN THE TOWN OF MANCHESTER-BY-THE-SEA AND THE MANCHESTER ESSEX REGIONAL SCHOOL COMMITTEE

The Board of Selectmen of Manchester-by-the-Sea and the Manchester Essex School Committee both hereby agree to a "material" alteration of Coach Field playground, specifically the installation of synthetic turf on that portion of coach field presently used as a soccer field. The specifications related to this installation to be substantially coincident with those described in Volume I, Section 02540 of the Project Manual for the Manchester-Essex Middle High School.

EXHIBIT A

Legal Description

I. Area North of Lincoln Street

That certain parcel of land in the Town of Manchester-by-the-Sea being Parcels II and the Westerly portion of Parcel 18 on the Valuation Survey dated October *23,* 1925, prepared by Raymond C. Allen, Civil Engineer, as amended, a copy of a portion of which is attached hereto as Exhibit A-i. Said parcel contains approximately 12.34 acres of land as depicted on the sketch plan attached hereto as Exhibit A-2, the exact area and dimensions of which shall be determined by a survey to be prepared by Landlord, at Landlord's cost and expense.

Being the premises conveyed to the Town by Deed of Nora T. Flatley dated July 22, 1952 recorded with Essex South District Registry of Deeds in Book 3911, Page 250 and a portion of the premises taken by the Town by an instrument of taking dated September 11, 1891 recorded with said Deeds in Book 1320, Page 451 and *454.* Also see Confirmatory Deeds recorded in Book 1381, page 87 and Deeds recorded in Book 1575,page 262 and Book 1645, page 289.

II. Area South of Lincoln Street

That certain parcel of land in the Town of Manchester-by-the-Sea being Parcels 4, 5 and *6* on the Valuation Survey dated June 1926, prepared by Raymond C. Allen, Civil Engineer, as amended, a copy of a portion of which is attached hereto as Exhibit *A-3.*

Included within said property is a parcel of registered land being Lot A' on Land Court Plan B *5245* to which reference is made for a more particular description. Being the premises conveyed to Landlord by the following Deeds:

Henrietta J Price	May 1, 1900	B 1609, p. 447
Alfred Annable, et al	May 1, 1900	B. 1609, p. 446
Lucy A. Carroll	May *5,* 1905	B. 1776, p. *536*
Morley & Flatley	April *25,* 1905	B. 1776, p. *538*
John J. Wynne	April 12, 1909	B. 1776, p. 540
Clara J. Ayers, Conservator and	February *5,* 1947	B. *3507,* p. 137
Individually	February 5, 1947	B. *3507,* **p.** 138

Excepting and excluding 444 square feet deeded to Samuel Knight by Deed dated August 12, 1907, recorded in Book 1900, page *58.*

LANDLORD'S REPAIRS AND OTHER WORK
MEMORIAL SCHOOL

Repairs and Other Work Performed by Landlord

During Period July 1, 2000 - March 31, 2004

Item	Cost
Repaired exit and emergency lighting (Memorial and Jr.-Sr. High Schools)	$54,000
Repaired HV AC system (Memorial and Jr.-Sr. High Schools)	$127,000
Miscellaneous repairs (drainage, electrical)	$9,000
Fire alarm upgrade (Memorial and Jr.-Sr. High Schools)	$70,200
Repaired boiler leak	$8,300
Window repairs	$6,507
Repaved walk C Wing	$4,752
Replaced exterior door C Wing	$4,850
Lowered roof drains	See Jr.-Sr. High School reroof labs
Wired boiler flame out alarm to central alarm panel	$1,656

Repairs and Other Work to be Performed by Landlord

During Period April 1. 2004 - June 30, 2005

Item	Comment	Estimated Cost
Upgrade selected electrical components	Proceed as needed	As needed
Ensure that boilers operate through warranty period	Proceed as needed to keep boilers serviceable	As needed
Make C Wing handicapped accessible	Proceed as needed	As needed
Repair roof leaks	Proceed as needed	As needed

EXHIBIT B-2

LANDLORD'S REPAIRS AND OTHER WORK
MANCHESTER ESSEX JUNIOR-SENIOR HIGH SCHOOL

Repairs and Other Work Performed by Landlord

During Period July 1, 2000 - March 31, 2004

Item	Cost
Repaired exit and emergency lighting	See Memorial School
Repaired HV AC system	See Memorial School
Repaired gym corridor roof leaks	$13,560
Fire alarm upgrade	See Memorial School
Re-roof over computer and science labs	$35,000
Minor roof leaks	See Memorial School window repairs
Repaired exhaust fans and ventilation units	$13,900

Repairs and Other Work to be Performed by Landlord

During Period April 1. 2004 - June 30. 2005

Item	Comment	Estimated Cost
Upgrade selected electrical components	Proceed as needed	As needed
Ensure that boilers operate through warranty period	Proceed as needed to keep boilers serviceable	As needed
Repair boiler	Work ongoing	$80,000 estimate
Repair clerestory windows	Proceed as needed	As needed
Repair curtain wall	Proceed as needed	As needed
Repair roof leaks	Proceed as needed	As needed

EXHIBIT C

Services provided by Landlord to or for the benefit of Tenant since the Commencement Date:

Refuse and recyclable collection and disposal

Snow plowing and sanding of all school property

Installing and removing snow fence for football and baseball

Sweeping driveways, parking lots and play areas

Lawn and tree care and maintenance

Athletic field maintenance at Hyland Field

Maintenance and repair of the irrigation system at Hyland Field

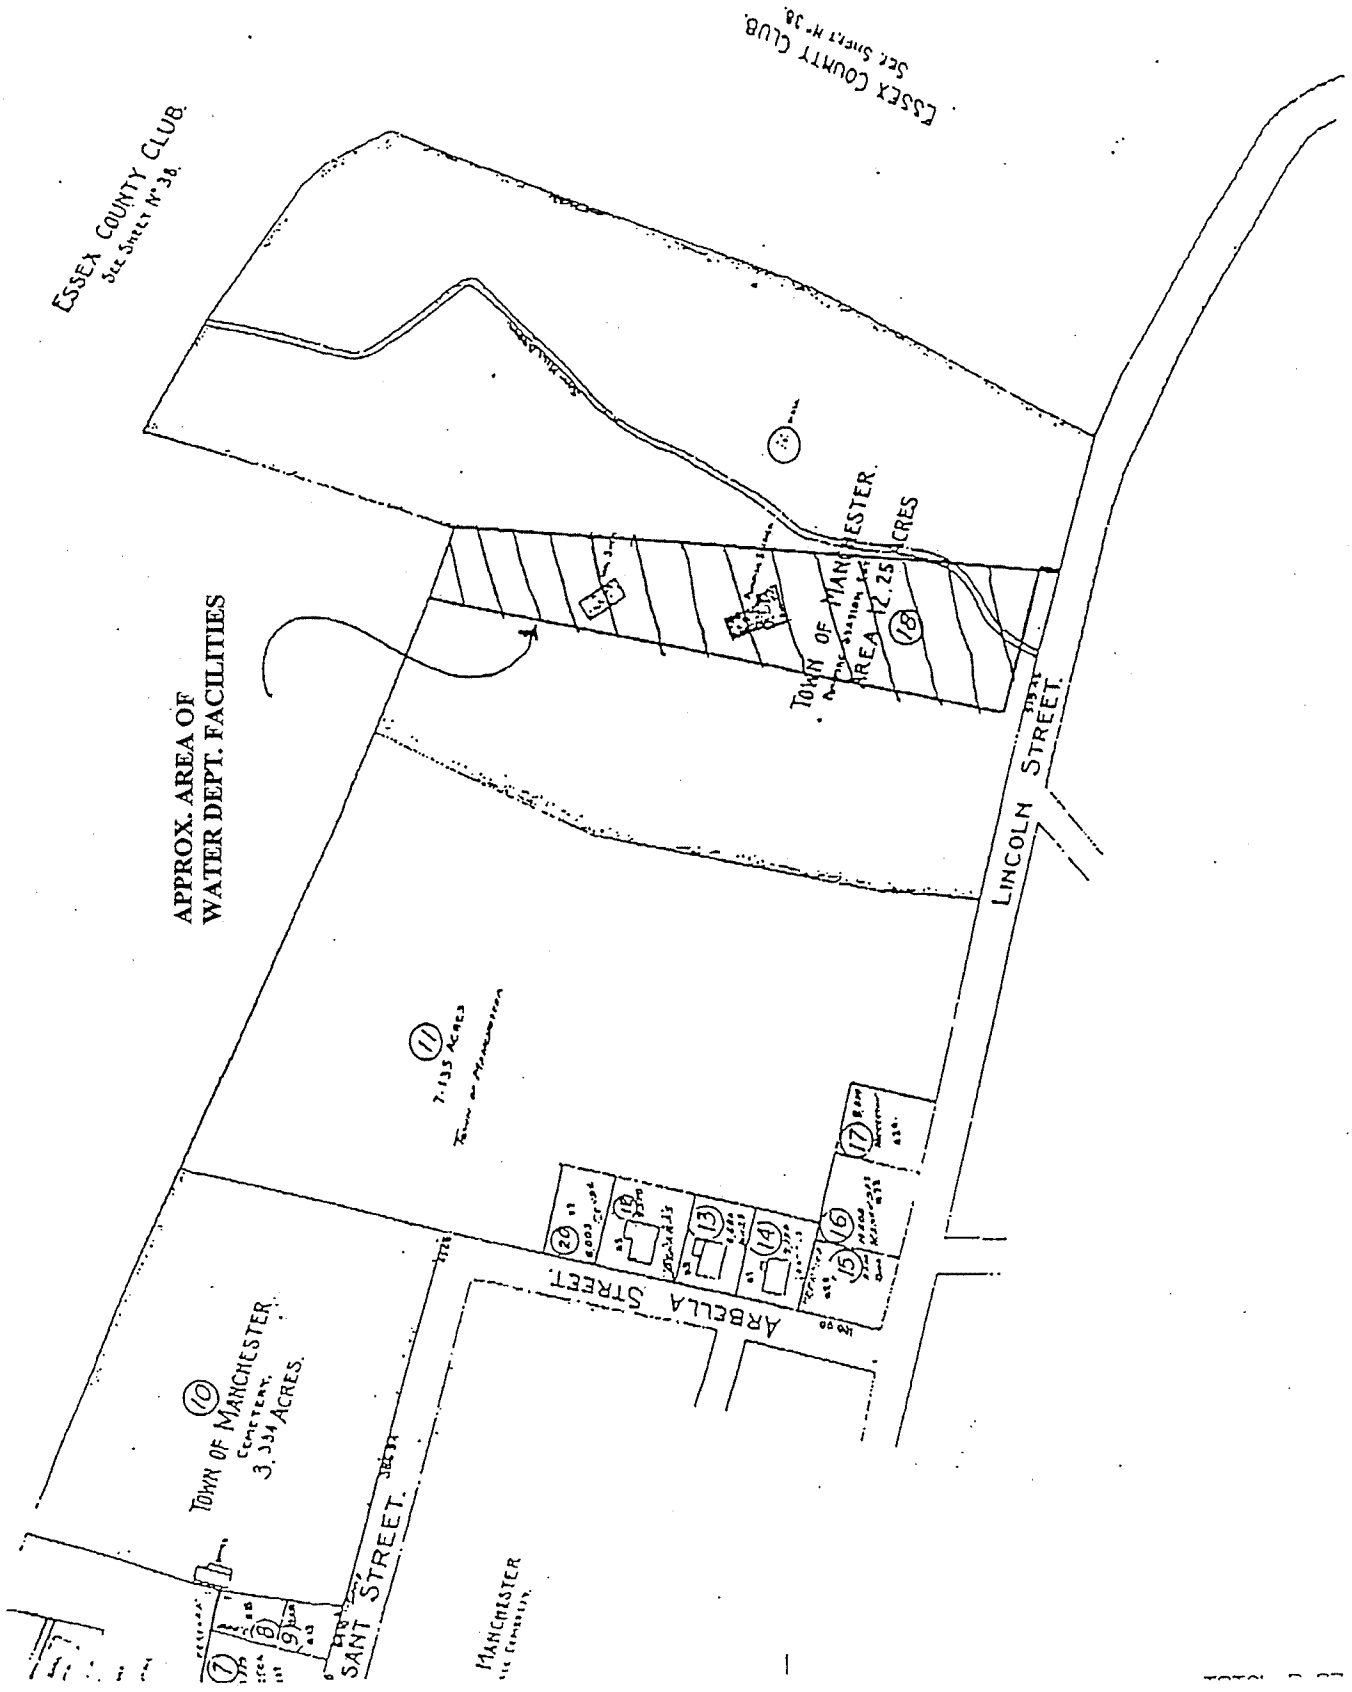
Moving football sleds and goal posts

Brush chipping and removal

Moving chairs for graduation related activities

Moving rubber mats for school activities

Repairing water and sewer leaks on school property



Moving and disposing of large or bulky items at the Transfer Station

Disposal of used electronics (computers)

Bituminous concrete paving of driveways and walks

1.3	**Designer Request for Services (RFS) Review & Approval (Vote Expected):**
	
	• C.Dell Angelo reviewed the overall project timeline for Massachusetts School Building Authority (MSBA) projects and noted this project is currently in the Design Request for Services (Slide 7)
	• C.Dell Angelo noted that at the next SBC meeting in May the SBC will vote on which members will be part of the Designer Selection Committee (Slide 8)
	  ○ A.Cameron Asked if this is the group that the committee would present their options to?
	  • M.Burton noted that selecting a Designer is a lot different than the OPM as the MSBA is in the driver's seat more so than the committee. The SBC will comprise only 3 voting members for the Design selection out of 18. M.Burton reviewed the general process and noted how the MSBA wants everyone to have an open mind and prefers that the Designer Selection committee members do not rank the options
	  ○ A.Cameron asked if the SBC members votes are weighted as there is only 3 of them?
	  • C.Dell Angelo noted no that is not the case but the MSBA wants to hear from the District and values their opinion
		Record	

- T.Whitman asked what happens if you have worked with firms and not had a positive experience
  - M.Burton noted that it is best to advocate for the positives of the firms and not the negatives
- P.Beaudoin noted that for the Manchester project the MSBA pushed for a new architect to be chosen and the SBC members did a good job of advocating for what the SBC wanted
- G.Brewster asked how do we ensure that there will be enough Designer interest in the project?
  - M.Burton noted he is not sure who will reply to the advertisement but noted he has started talking with the architect side of the Dore + Whittier team to get a sense of the workload of these firms as that is the most important factor that MSBA considers
- G.Brewster asked if there is a "weeding out" process prior to the selection
  - M.Burton noted no there is not but it is okay to have a preferred top half and discussion around the Designers just no formal rankings. This can happen after the proposals are in
- J.Binieris Asked if the workload is only MSBA projects or does it account for all the projects the firms have?
  - M.Burton noted that Karl Brown will start the meeting by sharing how many MSBA projects each firm has

- C.Dell Angelo reviewed the Designer RFS Schedule and noted how the MSBA provides this and they prefer that it is not changed drastically (Slide 9)
  - Submit ad to Central Register: 5/29/25
  - Ad appears in Central Register: 6/4/25
  - Applications due: 7/2/25
    - At least 3 proposals are required to move forward with the process
  - Applications sent to MSBA: 7/10/25
  - Application Reviews: **7/29/25**
  - Interviews: **8/12/25**
- M.Burton noted it is important that for whoever is on the Designer Selection Committee
- A.Cameron Asked when does the full SBC get to review and provide feedback on the proposals
  - C.Dell Angelo noted that the SBC will have two weeks to review and provide feedback to those members who will be voting
- G.Brewster asked if this RFS document is standard?
  - C.Dell Angelo noted that yes it is only the names and dates were changed and some basic information from the statement of interest was added

DORE + WHITTIER

Roll Call Vote: A motion to solicit the Designer RFS based on MSBA Review and Approval was made by Ruth and seconded by Pam

Name	Yes/No/Abstain & Absent
Michelle Cresta	Yes
Pam Beaudoin	Yes
Kim Provost	Yes
Jason Waldron	Advisor – No Vote
Theresa Whitman	Yes
John Binieris	Yes
Ruth Pereen	Yes
Andy Oldeman	Yes
Charlie Hay	Yes
Gordon Brewster	Yes
Tyler Virden	Yes
Adam Zaiger	Yes
Annie Cameron	Yes
Henry Oettinger	Yes
Ariel Fernando Brian	Yes
Jen Hocherman	Yes
Michael Gerhardt	Yes
Timonthy McDonald	Yes
David Pereen	Advisor – No Vote
Lisa O'Donnell	Advisor – No Vote

1.4 **Town Owned Land:**

- C.Dell Angelo reviewed the process of reviewing all possible sites (all town owned feasible land) for the project as is required by the MSBA (Slide 12)
  - MSBA Process required to identify all sites for consideration during Feasibility Phase
  - Once the designer is on board, we will review multiple sites with consultants and SBC
  - Started initial discussion with Essex Town Administrator
  - Some properties identified by Town Administrator and in Habeeb Report, will need to further review

Record

- M.Burton noted that although this does not happen until the PDP it is important to do as much work as possible as we wait for the Designer to join the team
- A.Cameron Asked what the qualifications are for the town owned land to be accepted?
    - M.Burton noted that they start with all town owned land and work through it to eliminate any that do not work given size, wetlands, etc..
- P.Beaudoin Asked when this process can start?
    - M.Burton noted they can start to gather potential sites now but it is really better to dive deep into this once the Designer is on board.
- G.Brewster noted it will be good to go back to the Manchester Memorial project and see what the project team did and if that school can support another school
- ? Asked if the need to explore this information is in the RFS
    - C.Dell Angelo noted yes it is
- ? Asked when Geotech and wetland consultants get involved in the project?
    - C.Dell Angelo noted once they join the project they will bring their consultants but it should be known that if multiple sites want to be reviewed deeply it will cost more money than just one site
- T.Whitman asked if older tests for sites can be used to help evaluate them? She also asked if there is anything the SBC can do to start looking into it?
    - P.Beaudoin noted that the project team will get all the information from the town and they will lay it out for the committee to review and provide feedback on
- M.Burton noted it is important to note that the MSBA only reimburses for costs that are in the property lines, he is not sure if property acquisition falls into that same bucket but the MSBA will not sign a Project Funding Agreement if the property is not 100% owned by the town
- A.Cameron asked if they plan to look at any private property?
    - C.Dell Angelo noted they were only planning on looking into town owned and it is not common for smaller projects like elementary schools
- G.Brewster asked if the Designer will establish a program with size and massing to help fit it into these potential sites?
    - M.Burton noted yes and there is also a MSBA template that uses a formula to spit out a school square footage based on enrollment
    - C.Dell Angelo also noted that the educational program also is an important factor in driving the size of the building
- A.Cameron asked about the Ipswich "Model School"
    - P.Beaudoin noted it is just a citizen petition to ask them to considered it and is not an official MSBA route

	• M.Burton noted it is a great concept but has not seen it work in practice and building code is always changing		
1.5	**Website:** • R.Rincon shared how the project team has developed a new website for the project to use (Slide 14). She also went through a live run through of the website showing the different tabs and the general layout of the website • R.Rincon noted that the site is ready to launch it just needs a domain name to be chosen ○ The committee agreed on: MERSDEssexelementaryproject.com • C.Dell Angelo asked for the committee members to review it when it is live and provide any feedback that they have	Record	

1.6	**Goal Setting:**
	• R.Rincon discussed the use of goal setting (Slide 16) and how they will be asking the community members about what their goals are for the project. She also noted they will have a survey question asking the SBC members about which working groups they would like to participate in.
	• C.Dell Angelo added that this is a great way for the project team to get to know the committee members and shared that working groups have been very useful in the past to work in a smaller setting. When there are larger SBC groups the working groups are especially useful
	• G.Brewster noted how on the Memorial Project they had a Design Working Group and asked if that can be one
	  ○ C.Dell Angelo noted yes it can be and asked for G.Brewster to add it under the "other category" on his survey
	• P.Beaudoin noted they will be adding a faculty member in the fall to the committee and also asked if the Designers still do visioning/programming sessions
	  ○ C.Dell Angelo noted yes that will be one of the first things to be conducted
		Record	

1.7	**Working Groups:** • Please see minutes from section 1.7	Record	
1.8	**Upcoming Meetings:**	Record	

<table>
<tr><td></td><td>

- C.Dell Angelo reviewed the upcoming SBC meetings (Slide 20) but noted that the May 27th meeting may have a conflict so the project team will send out an updated timeline based on discussion.
- C.Dell Angelo noted the May 27th will be removed and the June 24th will still be on with the July 22 meeting on standby
- C.Dell Angelo reviewed a timeline scenario for a new construction of K-5 (Slide 22)
- C.Dell Angelo noted she has already started working with P.Beaudoin on getting the Educational Program ready
  - A.Cameron noted that the program should be on par with the Manchester Memorial Project

</td><td></td><td></td></tr>
<tr><td>1.9</td><td>

Other Topics not Reasonably Anticipated 48 hours prior to the meeting:

- P.Beaudoin noted that the MSBA noted they would need a new signed Regional District Agreement if the District wanted to send Essex Elementary students to Manchester Memorial school
- M.Gerhardt asked how long the feasibility phase can go on
  - C.Dell Angelo noted that the Feasibility Study Agreement lasts for 913 days but extensions can be made
- M.Burton noted that if multiple sites want to be reviewed the Designer's may say more time is needed than the schedule

</td><td>Record</td><td></td></tr>
<tr><td>1.10</td><td>

Public Comment:

- J.Foster shared a thanks to the project team and SBC for undergoing this process

</td><td>Record</td><td></td></tr>

3. Designer RFS Review & Approval (Vote Expected)

*Motion to solicit the Designer RFS based on MSBA Review and Approval

REQUEST FOR DESIGNER SERVICES (RFS)

Manchester Essex Regional School District

Essex Elementary School

June 4th, 2025

Invitation: The ***Manchester Essex Regional School District*** ("Owner") is seeking the services of a qualified "Designer" within the meaning of M.G.L. Chapter 7C, Section 44 to provide professional design and construction administration services for the Essex Elementary School in Essex, Massachusetts. Selection of a Designer will be made by the Designer Selection Panel of the Massachusetts School Building Authority ("MSBA") in accordance with the MSBA's Designer Selection Procedures.

The Owner is seeking design services to conduct a Feasibility Study which will include the development and evaluation of potential alternative solutions and continue through the Schematic Design Phase of the preferred alternative initially. Subject to the acceptance of a Project by the MSBA and further subject to adequate funding authorized by the Owner, the contract between the Owner and the Designer may be amended to include continued designer services through design development, construction contract documents, bidding, award of construction contract(s), construction administration, final closeout and warranty period of the potential Project. (**See**: Designer Services Contract Amendment for Design/Bid/Build and Designer Services Contract Amendment for CM-at-Risk). A potential Project may include a renovation of the existing school, a renovation of and addition to the existing school and/or new construction. Upon the completion of a Feasibility Study (Module 3), and if the District's preferred option is determined to be new construction, the District may consider participation in the MSBA Model School Program.

The estimated construction budget for a potential Project may range from ***$66,000,000 to $74,000,000*** depending upon the Preferred Schematic solution that is recommended by the Owner and accepted by the MSBA. The Fee for Basic Services will be negotiated.

6. Goal Setting

"Designing/building a school that **meets the needs** of the district and the taxpayers."

"**Cost** efficiency – the Essex Elementary School will be next so both towns have to see that this can be done within a **reasonable** budget and in a way that does not prevent/preclude or substantially delay a future redo of EES."

"**Balance!** I want a good learning environment for students and staff that does not **cost** so much it is called Taj Mahal."

"**Educational program** for students – innovative and current to prepare students for a dynamic and ever-changing world."

"**Design** and **cost** are the two top items of most importance. Because of the constrained site conditions, the building layout and configuration are of paramount concern to assure the **mandates of the ed program** are met."

"Building what we need (not more than we need), on time and on **budget** Ensuring that design **meets educational needs**, Ensuring that we go to the towns knowing that we will get a YES vote for Construction."

"Budget, **sustainability** (maintenance and green construction) and a final product that will be serviceable, both physically and programmatically, for many years."

"To strike a compromise: between **program** and **cost** **energy efficiency** and simplicity; design and pragmatism."

"**21st Century learning** architecture conducive to learning and collaboration, **cost efficiency**, scheduling"

"**Excellence of the overall project**, resolving any political differences between Essex and Manchester regarding cost, keeping the existing auditorium, not reducing size of the existing gymnasium"

"Being proactive on **budget management** and communications. Ensuring **quality construction** Sensitivity to needs of multiple constituencies. Timely follow up from partners (OPM, Designer, Contractor). Detailed record keeping."

"A building designed to support **21st century learning**, a building process that is sensitive to the needs of the current school while in operation, **flexibility** of design (i.e., grade level configurations can change from year to year), traffic flow/patterns, parking, etc."

	Jen Hocherman		
	Michael Gerhardt		
	Timonthy McDonald		
	David Pereen	Advisor – No Vote	
	Lisa O'Donnell		
2.4	**Designer Selection Process (Vote Expected)** • C.Dell Angelo reviewed the Designer Selection Panel and noted how the committee must select three members to join it, the CEO, Superintendent & a School Committee Designee (Slide 6)		Record

- P.Beaudoin noted that she would nominate M.Cresta to take her second position and that a third would have to be voted for
- T.Whitman asked J.Binieres if he would want to take part
    - J.Binieres deferred to someone with more experience
- G.Brewster asked C.Dell Angelo who she recommends, and she noted that G.Brewster may be a good person to take part in this as he has a lot of experience in the industry and has participated in previous panels
- T.Virden noted that J.Hocherman would be a good candidate
    - J.Hocherman asked what the time commitment would be for this.
    - C.Dell Angelo reviewed the designer selection timeline (Slide 7)
- P.Beaudoin asked the group if there should be an Essex representative on the panel
    - C.Hay noted no that does not seem like it should be required, and they are hiring a Designer, and the important part should be being able to advocate for what the District wants
    - G.Brewster agreed that being able to have a strong voice in the meetings with the MSBA is very important
- C.Dell Angelo noted there are a lot of different paths this process can take depending on how many proposals the project receives and how strong they are. She also noted that the whole process is virtual now
- T.Whitman noted she is from Essex and is not concerned if there are no Essex representatives on the panel
- P.Beaudoin noted that last time they were very clear to the MSBA that they had to make a selection at the meeting

Roll Call Vote: A motion to approve the three voting members of the Designer Selection Panel (P.Beaudoin, M.Cresta & G.Brewster) made by C.Hay seconded by A.Cameron.

Name	Yes/No/Abstain & Absent
Michelle Cresta	Yes
Pam Beaudoin	Yes
Kim Provost	Yes
Jason Waldron	Advisor – No Vote
Theresa Whitman	Yes
John Binieris	Yes
Ruth Pereen	

2.5	**Memorial Elementary School Expansion Potential**
	
	• C.Dell Angelo reviewed the potential expansion of the Memorial Elementary School building (Slide 10 - 12)
	  ○ C.Hay asked what the political impact of this would be.
	  ○ A.Cameron asked what the impact would have had if they just closed EES and moved them all to MMES?
	  • G.Brewster noted they would be putting more kids into the same size space that it currently is
	  • P.Beaudon noted that the school is not designed for around 300 more students
	  ○ A.Cameron noted aside from educational space, the school would still have even worse parking and pick up issues along with outdoor space. A.Cameron noted that it may be smart to go through this process just to be able to prove that it is not feasible and knock this option out for feasibility study
	  • P.Beaudoin noted that goal of including this is to show that it is not an option, she noted that the		

Andy Oldeman	
Charlie Hay	Yes
Gordon Brewster	Yes
Tyler Virden	Yes
Adam Zaiger	
Annie Cameron	Yes
Henry Oettinger	Yes
Ariel Fernando Brian	
Jen Hocherman	Yes
Michael Gerhardt	
Timonthy McDonald	
David Pereen	Advisor – No Vote
Lisa O'Donnell	

- A.Cameron asked if there will be a larger group of SBC members that will review the proposals aside from the three selected?
  - C.Dell Angelo noted that they will meet with the selected members and the whole SBC can have a review and discussion also
  - A.Cameron thought that last time there was a larger working group that reviewed them all
- C.Dell Angelo reviewed the firms that attended the Designer Selection walkthrough at Essex Elementary School (Slide 8)

	district does not have a desire to rework the educational program but noted that it has to be included as they already submitted it to the MSBA • C.Dell Angelo noted that if they wanted to go through with this they would have to make a really strong case to the MSBA about why their educational program changed so drastically from the MMES that it can now accommodate all these new students ○ P.Beaudoin noted that the project team will review all the options to help find the most cost effective one via the MSBA process. She also noted that she does not think there will be any operational cost savings due to how many students there will be in the school ○ T.Verden asked if all the students who moved to MMES would the educational program be met • C.Hay noted no it would not ○ T.Whitman asked if it would meet health and safety standards and noted she knows it would not meet the classroom population number • It was noted that it would have to be reviewed ○ A.Cameron noted that having this information and why it would not work as an FAQ would be smart as it would be brought ○ G.Brewster noted that will politics and money aside there could be an opportunity to do an addition renovation project on the current MMES to accommodate the full Manchester-Essex program • C.Dell Angelo noted that this is a very high-level review, and it will take getting the designer on board to really get into the weeds and figure out what is possible and what isn't • T.Whitman noted that it will be important to include language so that a no cost option is not viable		
2.6	**Website:** • C.Dell Angelo reviewed the website and noted that it can be edited live and will host a lot of information for the project (Slide 13) • C.Dell Angelo noted it will be important for a list of FAQs to be developed	Record	
2.7	**Goal Setting:**	Record	

	• C.Dell Angelo reviewed the goal setting responses gathered from the committee (Slide 15-16)
	• A.Cameron noted that she is disappointed that educational program or anything student released is not larger on the word cloud
	  ○ C.Hay agreed but also noted how the MSBA process really makes the educational program very important and an important aspect of their project
	• C.Dell Angelo noted it could be a good idea to continue asking for the goal setting throughout the process to see how it changes
	• P.Beaudon shared how the SBC is not building an educational program as this is already created but is making a building for the future and the educational program helps keep this in check and the building should reflect what is important in the program. She noted it is not a cost driver but is a philosophy for the district
	  ○ C.Hay added that the district writes the educational program so they do have control over the philosophy and what will be included in the building		

2.8	**Working Groups:** • C.Dell Angelo reviewed the responses to the working group selections (Slide 18) • C.Dell Angelo noted they are very useful for having productive conversations and then bring them back to the SBC for review. She noted they will start organizing them and sending out invites once the designer is on board	Record	
2.9	**Upcoming Meetings:** • C.Dell Angelo reviewed the upcoming meetings (Slide 20)	Record	
2.10	**Other Topics not Reasonably Anticipated 48 hours prior to the meeting:** • None	Record	
2.11	**Public Comment:** • None	Record	
2.12	**Adjourn:**	Record	

Roll Call Vote: A motion to adjourn the meeting was made at 6:58 pm by T.Virden and seconded by H.Oettinger

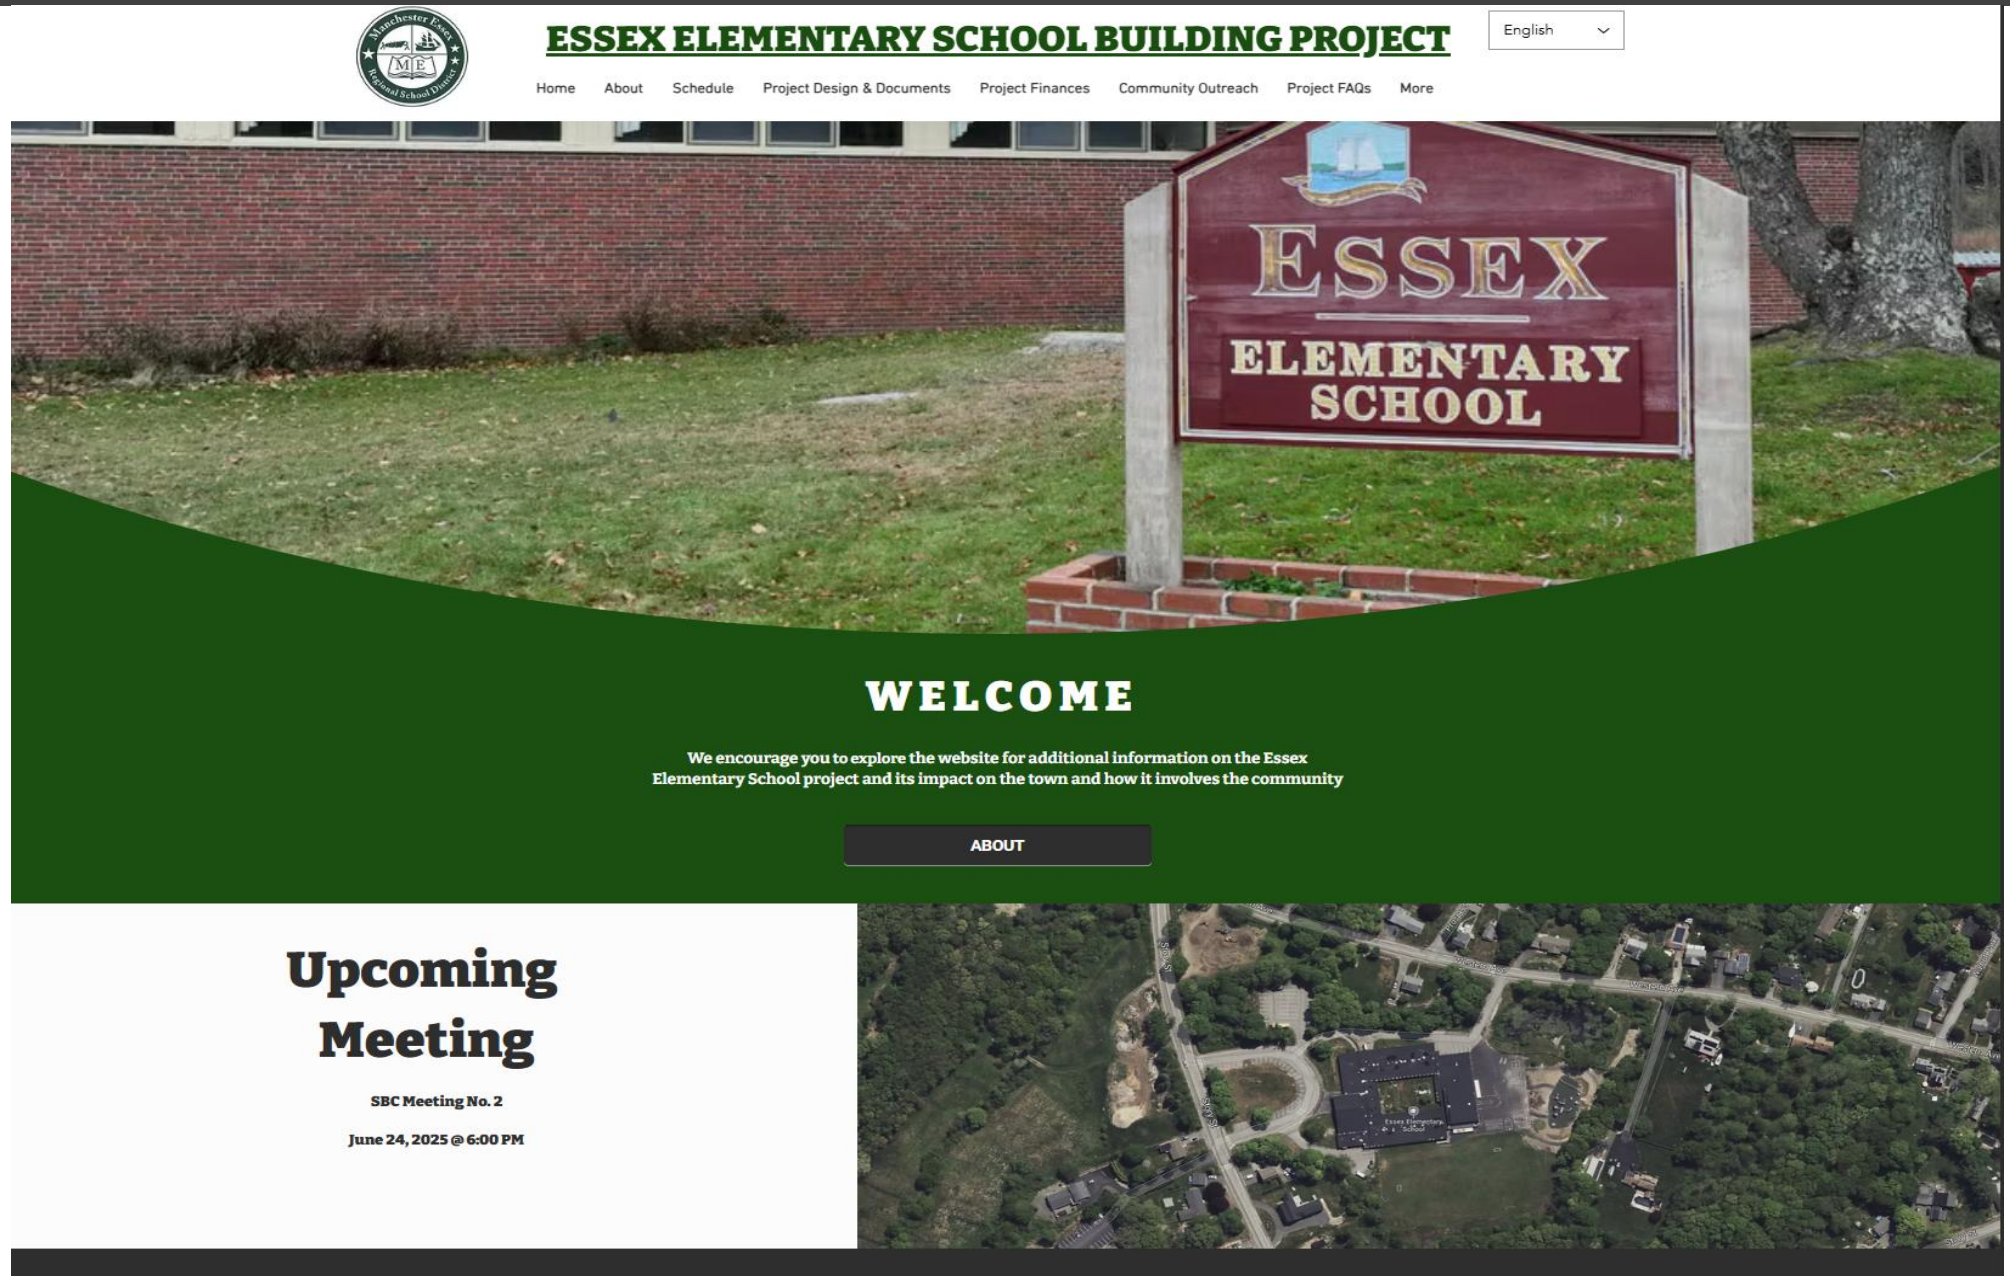
Manchester Memorial Elementary School Expansion Potential

- PSR phase planned expansion intended for northwest part of site
- Project progressed, flood plains and restrictions, approach revised
- PreK reduced from 4 to 2 moved to northeast part of site
- Potential expansion plans moved to northeast part of site
- If facility needed to be expanded rely on reprogramming
- Proposed expansion would be adding two classrooms at the northeast off the PreK wing and repurposed the two project rooms into general classrooms
- Would provide 4 additional classrooms to the school



Manchester Memorial Elementary School Expansion Potential

- If further expansion was needed, PreK program would need to be removed, PreK wing would become kindergarten, and existing k would become general classrooms
- Would add 6 total classrooms to the school and account for 1 additional classroom per grade
- Existing building foundations and structure not designed for an additional floor
- Current Parking-80 regular spaces, 6 handicap
- Current Pick up and drop off loop-40 cars to cue
- Where does Pre-K go?

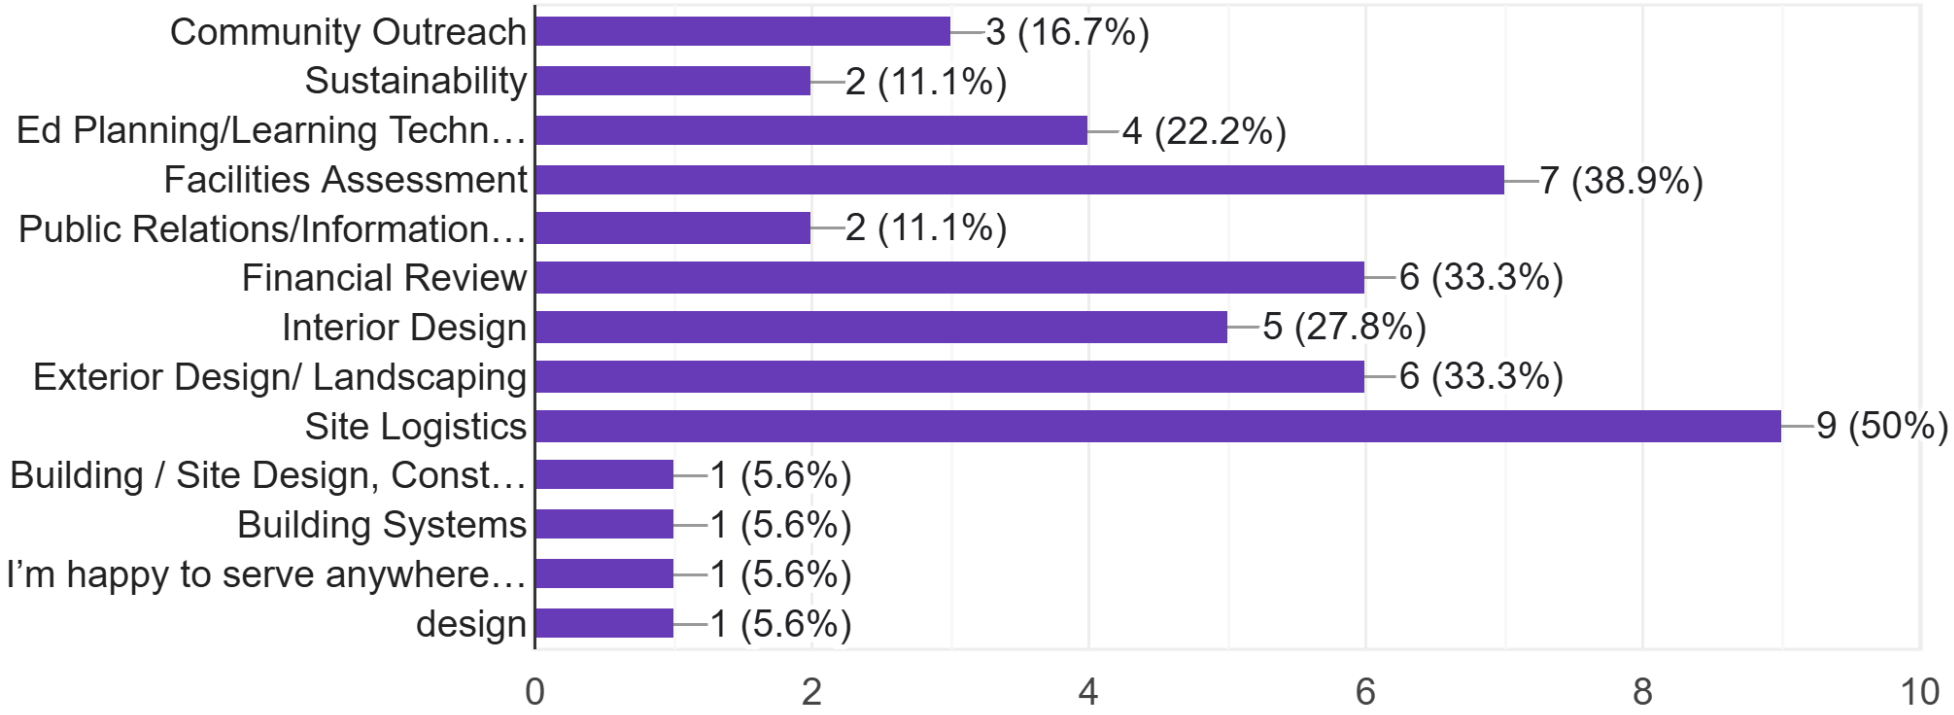
Goal Setting – Word Cloud

Goal Setting - Summary



- **Primary Goal: Value**
  - Balance between cost, quality, and functionality
  - Not just low-cost, but best overall return
- **Cost Efficiency & Budget Awareness**
  - Cost-effective design and construction
  - Realistic cost parameters
  - Difficult approval process anticipated
- **Design Priorities**
  - Resilient, sustainable, and flexible building
  - Reflect “Essex” identity
  - Interior design that supports long-term needs
- **Student-Centered Spaces**
  - Spaces for diverse academic and non-academic needs
  - Focused on best student experience
- **Community & Collaboration**
  - Engage community to foster pride and support
  - Equitable offerings compared to MBTS Memorial School
- **Long-Term Vision**
  - 50-year solution
  - Adaptable for future educational models
  - Explore site use and potential reuse of existing facilities
- **Key Values**
  - Sustainability, reliability, safety
  - Parity, diligence, and collaboration
  - Pride in ownership and community asset

Project:	Essex Elementary School	Project No:	
Subject:	School Building Committee Meeting	Meeting Date:	07/22/2025
Location:	Hybrid (Essex Elementary School Cafeteria & Zoom)	Time:	6:00 PM
Distribution:	Attendees, Project File	Prepared By:	Jacob Greco

Present	Name	Affiliation
√	Michelle Cresta	Director of Finance & Operations
√	Pam Beaudoin	Superintendent
√	Kim Provost	Principal
	Theresa Whitman	SBC Co-Chair
	John Binieris	SBC Co-Chair
	Ruth Pereen	Essex Board of Selectman Chair
√	Andy Oldeman	Manchester Finance Committee / Director of Engineering (Structural Engineer)
√	Charlie Hay	Architect School Building Experience
√	Gordon Brewster	Engineer, Sr. Proj. Manager, Owner's PM, former Member of MERMHS & Memorial building
√	Tyler Virden	Project Executive -Wise Construction / Paren
√	Annie Cameron	Former SC Member and Memorial SBC Member
	Ariel Fernando Brian	Architect - CBT
√	Jen Hocherman	Architect - Partner SV Design
√	Michael Gerhardt	Civil Engineer / Parent
	Timonthy McDonald	Architect - Onion Flats
√	David Pereen	Resident / Plumbing & Fire
√	Lisa O'Donnell	Design & Construction / Essex Planning Board
	Mike Burton	Project Director / Partner - DWMP
√	Christina Dell Angelo	Project Executive - DWMP
	John Albright	Project Manager - DWMP
	Rachel Rincon	Assistant Project Manager - DWMP
√	Jacob Greco	Assistant Project Manager - DWMP

Item No.	Action Item	Requested by	Ball in Court
3.4	DWMP to send out a report to the full building committee after the July 29th MSBA meeting, informing them of next steps for interviews and who will be interviewed.	SBC	DWMP

3.4	**Designer RFS Submissions Review**
	
	C.Dell Angelo reviewed the three (3) SBC members chosen to be on the Designer Selection Panel and the received proposals (Slide 6 & 7)
	• G.Brewster noted that the Maryann Thompson proposal was very aspirational and they lacked experience and the required team members
	• G.Brewster noted that he thought Lavalle Brensinger provided a good proposal and he was impressed with their experience and options for the Essex Project. He noted a weakness was the Project Architect with only 7 years of experience and also did not like how they had multiple project managers for different phases.
	• G.Brewster noted that JCJ had the strongest proposal and lied how on Manchester Memorial the Principal-in-Charge was very involved in the project and their Project Architect is very good. He also liked their experience and options for the Essex Project.
	• P.Beaudoin noted that G.Brewster summarized her view very well, she added that Lavallee's proposal was good but she focuses a lot on MSBA experience and especially with regional school districts which JCJ does have.
	• M.Cresta agreed
	• M.Gerhardt asked why the two firms that did not submit decided not to
	  ○ C.Dell Angelo noted that one firm shared that they had another project that was aligned more for what they wanted at that time. The other firm was smaller and lacked MSBA experience so they decided to not go after the project
	• A.Cameron asked for definitions of "Living - Building - Challenge" and "Mass Timber"
	  ○ C.Dell Angelo noted that it is a rigorous sustainability certification program that promotes regenerative design in the built environment, aiming for buildings that give more than they take. She also noted that Mass Timber uses wood for the structure of the building instead of steel as it is more sustainable
	• A.Cameron wants to make sure each firm gets a fair discussion
	  ○ A.Cameron noted that Maryann Thompson focused a lot more on sustainability than the educational
		Record	

process and lacks MSBA experience. She noted they lacked information on the public process and Chapter 149a
    - C.Hay noted that they are create wonderful designs but the MSBA process is extremely difficult and has a very steep learning curve that the MSBA may want to pay interest into
    - C.Dell Angelo noted that they also did not address the third enrollment option
  - A.Cameron noted that she is a fan of the Lavallee proposal and is curios to hear more of the negatives from G.Brewster. She also noted it will be good to reflect back on the process with JCJ and what they accomplished such as handling Covid, being successful with public outreach, and other things such as safety.
- C.Hay noted that it will be important for the three DSP members to be aligned with what they want during the DSP meeting
- G.Brewster asked if they will be able to use their past experience as leverage in the DSP meeting or only the proposals
  - C.Dell Angelo noted they can use their past experience and noted that this first DSP meeting will be similar to this SBC meeting right now and then the interview stage will really see the teams interact and get a better picture of them
- P.Beaudoin noted that she was listed as a reference on JCJ's project and shared that they have still been very helpful in the post construction as well as being strong leading up to the project and during the construction
  - P.Beaudoin also added that an advantage of JCJ is that if the Manchester Memorial expansion is chosen they will have a lot of knowledge and understanding for that
- C.Hay noted a lot of Lavallee's experience comes from other firms and their architects that joined them from other companies
  - G.Brewster added that a lot of the team members have a lot of experience but not a lot in the firm so they have not worked on many/if any <SBA projects together as a team
- J.Hocherman asked if the SBC and Project Team had a good feeling about JCJs MEP Engineers?

- C.Dell Angelo noted yes they use GGD which she has worked with a lot and they are great, they were also on the Manchester Memorial Project
- P.Beaudoin noted that in the Manchester Project she thought the District, Town Boards/Committees, the OPM, Designer & CM at Risk firm all worked well together
- M.Gerhardt noted he has worked with Lavallee a lot in the past but not on schools and with a different team but they were very great to work with and he thinks their proposal is comparable to JCJ and it should really come down the interview process. He also noted that with JCJ being centered around Connecticut if that caused any issues?
  - C.Dell Angelo noted they also have a Boston office which the PM was out of and all the project team from Connecticut made it to all the meetings they were required at
  - G.Brewster noted the process was very smooth regardless of location during the design process
- A.Fernando Brian noted his company attended the walkthrough and they decided to not follow through thinking JCJ would get the job. He noted that they should not discredit Maryann Thompson and shared that in the architect word she is extremely respected and they should have a fair shot at an interview
- A.Cameron asked the DSP members what their plan is after hearing the feedback
  - G.Brewster noted he will go with the groups choice but he does not see value in interviewing all three firms
  - P.Beaudoin noted she will be very interested in hearing from the designers as there is always importance in designing the building but there is a lot that happens outside of that with the public, MSBA & political process
    - C.Hay noted this will not be a high design process and what P.Beaudoin listed will be of the upmost importance
- J.Hocherman called out how important the experience to the Massachusetts public process is as it is so much different than the private world or any other states public process
- C.Dell Anglo noted that the project team is very important as they will be working with the everyone for the next 8 or so years
- A.Oldeman noted that he would be curious to see what Maryann Thompson would produce in an interview but

<table>
<tr><td></td><td>knows how critical the MSBA and MA process is. He also noted the budget will be a major factor for this and a lot of the sustainable aspects she has proposed will be expensive
• C.Hay shared how important the PDP and PSR phases are and the amount of paperwork that has to be created would be very daunting for a firm with no MSBA experience
• C.Dell Angelo noted that the Designer Selection Panel meeting is on July 29th and it is a public meeting if anyone wants to join</td><td></td><td></td></tr>
<tr><td>3.5</td><td>Upcoming Meetings

C.Dell Angelo reviewed the upcoming meetings (slide 13)</td><td></td><td></td></tr>

4.3	**Invoices & Commitments for Review and Approval (Vote Expected)**
	• C.Dell Angelo reviewed the basic MSBA Designer Contract and explained the current Feasibility Study Agreement along with the Budget Revision Request (BRR)No.1 (Slide 5)
	• M.Cresta noted she has reviewed this and agrees with it all and for the BRR it is just moving money from one bucket to another and not changing any totals
	• A.Cameron asked what is involved in the "other' budget category
	  ◦ C.Dell Angelo noted it could be anything from mailing costs, legal advice, extra site services not involved in the JCJ contract, or any other third-party services that are not normally part of the process
	• C.Hay asked if these costs are not to exceeds or hard numbers
	  ◦ C.Dell Angelo noted they can use the other category for any overages and any left over money will be pushed to the next phase
	• M.Gerhardt asks what occurs in the Environmental & Site category
	  ◦ J.LaPosta noted the MSBA only allows two categories for this phase and some of the services would be surveying, geotechnical reviews, wetlands, as examples but they are mostly investigative services
		Record

- P.Beaudoin noted it is all driven by what needs to be included in the report to the MSBA
- M.Gerhardt asked how these numbers and costs will be managed
  - C.Dell Angelo noted they will review the exhibits when they are finalized and compare them to other schools
  - C.Hay noted they are normally managed by the OPM and Designer with the input from the District and the project team will provide recommendations if they think they need to do any extra work above and beyond
  - J.LaPosta reviewed the MSBA prescribed list of site items and noted that the costs will be included on the contract before it is signed.

- DWMP Invoice No. 3 $22,921.50
- JCJ Contract - $900,000 ($600,000 for JCJ Services & $300,000 for Environmental/Site Consultants)
- Budget Revision Request #1

Roll Call Vote: A motion to approve the DWMP Invoice No. 3 ($22,921.50), JCJ Contract - $900,000 ($600,000 for JCJ Services & $300,000 for Environmental/Site Consultants), & the Budget Revision Request #1 made by C.Hay and seconded by M.Gerhardt.

Henry Oettinger	Yes
Lisa O'Donnell	Advisor - No Vote

4.4	**Designer Introduction: JCJ Architecture**
	
	● The JCJ team introduced themselves
	● The SBC Members introduced themselves
	● J.LaPosta reviewed their introduction slides and basic project scope/design imagery that JCJ created during the interview and application process (Slides 7 to 25)
	  ○ A.Cameron asked about the two schemes
	  ● J.Elliott noted that the first scheme may have regulatory wetland hurdles where the second scheme may have phasing logistic hurdles
	  ○ G.Brewster asked about the viability of using the existing building to meet current day standards not just code
	  ● J.LaPosta noted he truly does not know yet but he has not seem that solution work for most communities but they need to do the work here first to see. He noted that the current building has a good base but there are still a lot of existing issues.
	  ● C.Hay noted that the phasing aspect pushes the number way up also due to modulars
	  ○ M.Gerhardt asked if two story schools work for elementary schools
	  ● J.LaPosta noted that they do it often for elementary schools
	● A.Oldeman asked if there is still consideration of another site aside from Manchester Memorial and the current Essex Elementary
		Record

	○ C.Hay noted yes and it is important to review these and narrow it down as early as possible to conserve time and money ○ J.LaPosta noted they can rule sites out pretty easily based on size/viability and also added that if it is not town owned it will have to be purchased which is not reimbursable by the MSBA. LaPosta shared how they will create an evaluation criteria to compare all sites equally based on what the proposed school needs	
4.5	**Review Project Schedule** ● C.Dell Angelo reviewed the project schedule timeline, she noted that this has been reviewed high level with JCJ but they will be going into more detail prior to the next meeting (Slide 27) ● C.Dell Angelo reviewed what the MSBA Preliminary Design Program consists of (Slide 28) ○ Review Educational Plan ○ Educational Visioning ○ Space Summary ○ Existing Conditions Review ○ Preliminary Evaluations of Alternatives ● Where all the possible proposed school options are reviewed ● C.Hay asked for a request to have less than 19 options as they did during the Manchester Memorial as he found it was a little too much and was unproductive ● C.Dell Angelo noted that she is concerned with the Apple Street site give old farms have poor soil and pesticides ○ A.Cameron wants to make sure that the Apple Street site is reviewed very thoroughly to make sure that it is settled either way ● A.Cameron noted that the November 2026 Town Meeting makes her slightly nervous ○ C.Dell Angelo noted nothing is set in stone and this can be reviewed it was just based on the normal town meeting schedule ● P.Beaudoin asked that when the matrix for site evaluation is created can revising the regional agreement be included	Record

	○ C.Dell Angelo noted yes the criteria is up to the district and some items can be weighted to be more impactful than others. She thinks it should be included in the matrix	
4.6	**Introduce Visioning Plan** • M.Pirollo reviewed the visioning plan for the Essex Project (Slide 30 & 31) • C.Dell Angelo noted they plan on having a kick off meeting later this week or early next with P.Beaudoin to start the process and having a work plan in place	Record
4.7	**Review Working Groups** • C.Dell Angelo reviewed the currently proposed working groups (Slide 33 & 34) • C.Dell Angelo noted that they would like to schedule a communication working group soon as there will be a community meeting in October that needs to be reviewed • P.Beaudoin noted that they have a communication director now that can be involved • A.Cameron asked if J.LaPosta will be at the community meetings ○ J.LaPosta noted yes	Record
4.8	**Upcoming Meetings** • C.Dell Angelo reviewed the upcoming meetings for the SBC (Slide 36) • G.Brewster asked why all the meetings are not on Tuesdays ○ C.Dell Angelo noted there are some holidays and events within the district • L.O'Donnell noted that the Planning Board meets on first & third Wednesdays • A.Cameron asked for a revised schedule and invites for people's calendars once they are confirmed	Record
4.9	**Other Topics not Reasonably Anticipated 48 hours prior to the meeting:**	Record

<table>
<tr><td></td><td>

- A.Oldeman noted that Essex is not a Stretch Code opt-in but he thinks it will be good to set a sustainability goal early on in the process
  - C.Hay added that sustainability drives cost and Essex is very cost conscious
  - C.Dell Angelo noted that there is more reimbursement from the MSBA for having a green school

</td><td></td></tr>
<tr><td>4.10</td><td>Public Comment:</td><td>Record</td></tr>
<tr><td>4.11</td><td>Adjourn:

Roll Call Vote: A motion to adjourn the meeting was made at 7:23pm by C.Hay and seconded by M.Gerhardt

Proposed Working Groups

Financial Review	Design	Site Logistics
Michelle Cresta	John Binieris	Ruth Pereen
Mike Gerhardt	Theresa Whitman	Mike Gerhardt
Andy Oldeman	David Pareen	Lisa O'Donnell
Theresa Whitman	Gordon Brewster	Gordon Brewster
John Binieris	Ariel Brain	David Pareen
	Charlie Hay	Theresa Whitman
	Kim Provost	Jen Hocherman
	Michelle Cresta	
	Jen Hocherman	

SBC Meeting Agenda – August 26, 2025 @ 6:00 PM

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
   - SBC Meeting No. 3 20250722
3. Invoices & Commitments for Review and Approval (Vote Expected)
   - DWMP Invoice No. 3 $22,921.50
   - JCJ Contract - $900,000 ($600,000 for JCJ Services & $300,000 for Environmental/Site Consultants)
   - BRR #1
4. Designer Introduction: JCJ Architecture
5. Review Project Schedule
6. Introduce Visioning Plan
7. Review Working Groups
8. Upcoming Meetings
9. Other Topics not Reasonably Anticipated 48 hours prior to the meeting
10. Public Comment
11. Adjourn

Upcoming Meetings

- September 15, 2025
- September 30, 2025
- Community Meeting No. 1 October 8, 2025
- October 14, 2025
- October 28, 2025
- November 6, 2025
- Community Meeting No. 2 November 20, 2025
- November 25, 2025
- Community Meeting No. 3 December 9, 2025
- December 15, 2025

Project:	Essex Elementary School	Project No:	
Subject:	School Building Committee Meeting	Meeting Date:	09/15/2025
Location:	Hybrid (Essex Elementary School Cafeteria & Zoom)	Time:	6:00 PM
Distribution:	Attendees, Project File	Prepared By:	Jacob Greco

Present	Name	Affiliation
√	Michelle Cresta	Director of Finance & Operations
√	Pam Beaudoin	Superintendent
√	Kim Provost	Principal
√	Theresa Whitman	SBC Co-Chair
√	John Binieris	SBC Co-Chair
	Ruth Pereen	Essex Board of Selectman Chair
√	Andy Oldeman	Manchester Finance Committee / Director of Engineering (Structural Engineer)
√	Charlie Hay	Architect School Building Experience
	Gordon Brewster	Engineer, Sr. Proj. Manager, Owner's PM, former Member of MERMHS & Memorial building
√	Tyler Virden	Project Executive -Wise Construction / Paren
√	Annie Cameron	Former SC Member and Memorial SBC Member
√	Ariel Fernando Brian	Architect - CBT
√	Jen Hocherman	Architect - Partner SV Design
√	Michael Gerhardt	Civil Engineer / Parent
	Timonthy McDonald	Architect - Onion Flats
√	David Pereen	Resident / Plumbing & Fire
√	Lisa O'Donnell	Design & Construction / Essex Planning Board
√	Mike Burton	Project Director / Partner - DWMP
√	Christina Dell Angelo	Project Executive - DWMP
	John Albright	Project Manager - DWMP
	Rachel Rincon	Assistant Project Manager - DWMP
√	Jacob Greco	Assistant Project Manager - DWMP
√	James LaPosta	Principal - JCJ Architecture
√	Fawn Pellegrini	Senior Project Manager - JCJ Architecture
√	Jeff Elliott	Project Architect - JCJ Architecture
√	Mike Pirollo	Principal – MLP Integrated Design

Item No.	Action Item	Requested by	Ball in Court
5.6	Provide feedback on the site selection criteria	Project Team	SBC Members
5.3	Schedule meetings with the Facilities Assessment Building Systems subgroup to review consultant reports once they are completed	SBC	JCJ

- **Please click here for the presentation**
  - **This will be referenced in the meeting minutes with slide numbers called out to refer to.**
- **Below is a summation of key points, please view the recording here for full transcript and chapter summaries.**

Item No.		Description
5.1	**Call to Order & Intro:** Called to order by T.Whitman at 6:14pm, please refer to the attendee list.	Record
5.2	**Approval of August 26 - 2025, Meeting Minutes:** **Roll Call Vote:** A motion to approve the August 26, 2025, Meeting Minutes made by A.Cameron and seconded by C.Hay.	Record

Name	Yes/No/Abstain & Absent
Michelle Cresta	Yes
Pam Beaudoin	Yes
Kim Provost	Yes
John Binieris	Abstain
Theresa Whitman	Abstain

	Ruth Pereen	
	Andy Oldeman	Yes
	Charlie Hay	Yes
	Gordon Brewster	Yes
	Tyler Virden	Yes
	Annie Cameron	Yes
	Ariel Fernando Brian	Yes
	Jen Hocherman	Yes
	Michael Gerhardt	Yes
	Timonthy McDonald	
	David Pereen	Advisor – No Vote
	Henry Oettinger	Yes
	Lisa O'Donnell	Advisor – No Vote

5.3	**Work Plan**
	• F.Pellegrini introduced herself as she was not at the first meeting with JCJ.
	• F.Pellegrini shared the activity that has been conducted since the first meeting (Slide 5)
	• F.Pellegrini shared the current Preliminary Design Program (PDP) work plan (Slide 6)
	  ○ C.Dell Angelo noted that this is being shown for a general overview and not to be gone through line by line at this meeting. She also shared the upcoming SBC meetings and their general agendas which F.Pellegrini reviewed (Slide 7)
	• A.Cameron clarified that there are two community meetings
	  ○ C.Dell Angelo noted there are three: October 8th, November 20th, December 9th
	  ○ A.Cameron asked if they had three during the PDP for the last project
	  • C.Dell Angelo noted that they thought it would be important to share the PDP cost estimates or at the very least a range of them as C.Hay noted that maybe it won't be best to share those numbers
	  • F.Pellegrini noted they can use the cost just for comparison purposes and do not have to share direct costs
		Record

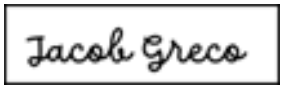
5.4	**Visioning Plan** • C.Dell Angelo reviewed the upcoming visioning plan and meetings (Slide 9) • M.Priollo added that the leadership group's goal is to take the high level plan they have and get more granular to help produce the building adjacencies. He noted that the visioning sessions are for getting input from a broader source • P.Beaudoin noted that if anyone is curious as to what the ed plan looks like it is posted to their website, there may be updates through the process which will be added	Record

5.5	**Existing Conditions**
	
	• F.Pellegrini shared an update on the existing conditions review for the Essex Elementary School (Slide 11)
	• T.Whitman asked how the facilities assessment subcommittee fall into this plan
	  ○ C.Dell Angelo noted that once the reports are received and reviewed by the project team, they can host a meeting with the subcommittee and then report out to the full SBC
	• A.Cameron asked if there is a gab in knowledge about the building or does the Habeeb report capture everything
	  ○ C.Dell Angelo noted that S.Hunt has been at the building for a long time and can provide information if there are any questions
	• C.Hay asked about the geotech and environmental surveys and thinks that Apple Street location deserves at least a day of environmental survey to see what the site conditions are like
	  ○ C.Dell Angelo noted that the next agenda topic will touch on this and cover the evaluation of the selected sites
	• P.Beaudoin asked what type of things will be conducted that the Habeeb report did not cover
	  ○ F.Pellegrini stated that with hazardous materials as an example they would come in and conduct a review to say what would have to be removed or remediated if they did an add/reno and this will follow suit for all disciplines
		Record

5.6	**Apple Street/Site Selection/Evaluation**
	
	• J.Elliott reviewed the three (3) selected potential sites for the future Essex Elementary School including both opportunities, constraints & unknowns (Slide 13 - 16)
	  ○ A.Cameron clarified that bringing utilities to the site is fully on the District but once it is on the site it is reimbursed
	  • J.LaPosta noted that everything on the property will be eligible to be reimbursed but there are caps on the reimbursement
	  ○ T.Virden added that a big part of evaluating the site will be access, traffic & how the site circulation will work
	  ○ C.Hay noted that it would be important to see the impact of how many people live around each site and see if one or the other will allow for more access for walking and biking. He added that Apple Street is a scenic way and is not supposed to be modified and there is also multiple bridges on both access roads. C.Hay also shared that Apple Street is a dangerous road and people drive too fast on it
	  ○ T.Whitman noted that Apple Street was brought forth by the town administrators and asked A.Cameron if the select board is still discussing this
	  • A.Cameron noted they are still not talking about it, but she shared how during the high school there were lots of comments about were all the locations reviewed, and she wants to make sure that they are for this project
	  • T.Whitman noted she has a list of all the town owned parcels and thinks they should go through an informal study of these to make sure they are not missing any locations
	  • P.Beaudoin said that she thinks they would need to make a request to the board of selectman to ask for any town parcels that meet the criteria and that they want to be considered for the project. She noted that the SBC cannot just choose town owned land to be used, it has to be provided and agreed to be leased by the board of the selectman
	  • A.Cameron stated that she did not think the regional high school sites were officially offered during the process
	  • P.Beaudoin asked what process they should follow to satisfy the requirement of reviewing these sites.
		Record

	She noted that the project team should write a letter to the board of selectmen to provide a list of available sites that they would be willing to provide • C.Dell Angelo reviewed the criteria matrix that they will use to evaluate the three sites and asked the SBC to review it and let the project team know if there is anything they want to add or remove (Slide 17) ○ C.Hay noted that they should add future capacity as a criteria option ○ P.Beaudoin said they could go back to the MSBA if there is a finalized development that comes to town • C.Dell Angelo noted this is very tough subject with the MSBA and it is very rare for them to increase any enrollment. She agreed with C.Hay they should add this to the criteria • J.Elliot shared the one they will use for evaluating the future options they will develop (Slide 18) ○ C.Dell Angelo noted that this could change also if any of the sites drop off or are added and this is just showing the format as a lookahead ○ C.Dell Angelo asked that the SBC provide any updates or changes to the criteria by the end of the week so the project team can review it and update it for the September 30th meeting	
5.7	**Communication Working Group - Report Out** • C.Dell Angelo reviewed the first communication working group discussions and the community meeting (Slide 20) • A.Cameron asked who will be leading the tours that are taking place before the community meeting ○ C.Dell Angelo noted the project team can be here along with K.Provost and said that they can provide a poll to see who is around	Record
5.8	**Other Topics not Reasonably Anticipated 48 hours prior to the meeting:** • T.Whitman stated that everyone should have gotten an invite to the shared folder for community emails and said that five (5) of the emails were about the Apple Street location	Record

DORE + WHITTIER



<table>
<tr><td></td><td>

- A.Cameron asked if they should start characterizing the letters for the record
  - T.Whitman noted yes and there were six (6) emails - five (5) against Apple Street location and one (1) against any new school and in favor of consolidation

</td><td></td></tr>
<tr><td>5.9</td><td>Public Comment:

Please review the recording here for public comment</td><td>Record</td></tr>
<tr><td>5.10</td><td>Adjourn:

Roll Call Vote: A motion to adjourn the meeting was made at 7:28 pm by A.Cameron and seconded by T.Virden

Work Plan Review

- JCJ Architecture activity since our last SBC Meeting:
  - Discussed scope of services and solicited fees from our Consultants
  - Progressed Contract For Designer Services
  - Collaboratively drafted the Feasibility and Schematic Work Plan
  - Created the Educational Visioning Work Plan
  - Scheduled the Educational Visioning Meetings (September and October)
  - Began Architectural Existing Conditions Review at Essex ES

Work Plan Review

Identified Sites

Current Essex Elementary School

12 Story Street, Essex

Current Manchester Memorial Elementary School

43 Lincoln Street, Manchester

Apple Street Site

30 Apple Street, Essex

Current Essex Elementary School

Opportunities

Established identity in the community
Developed site utilities
Multiple options for site access

Constraints

Construction activities on occupied school site
Wetlands & pond
Some topography on north side of site

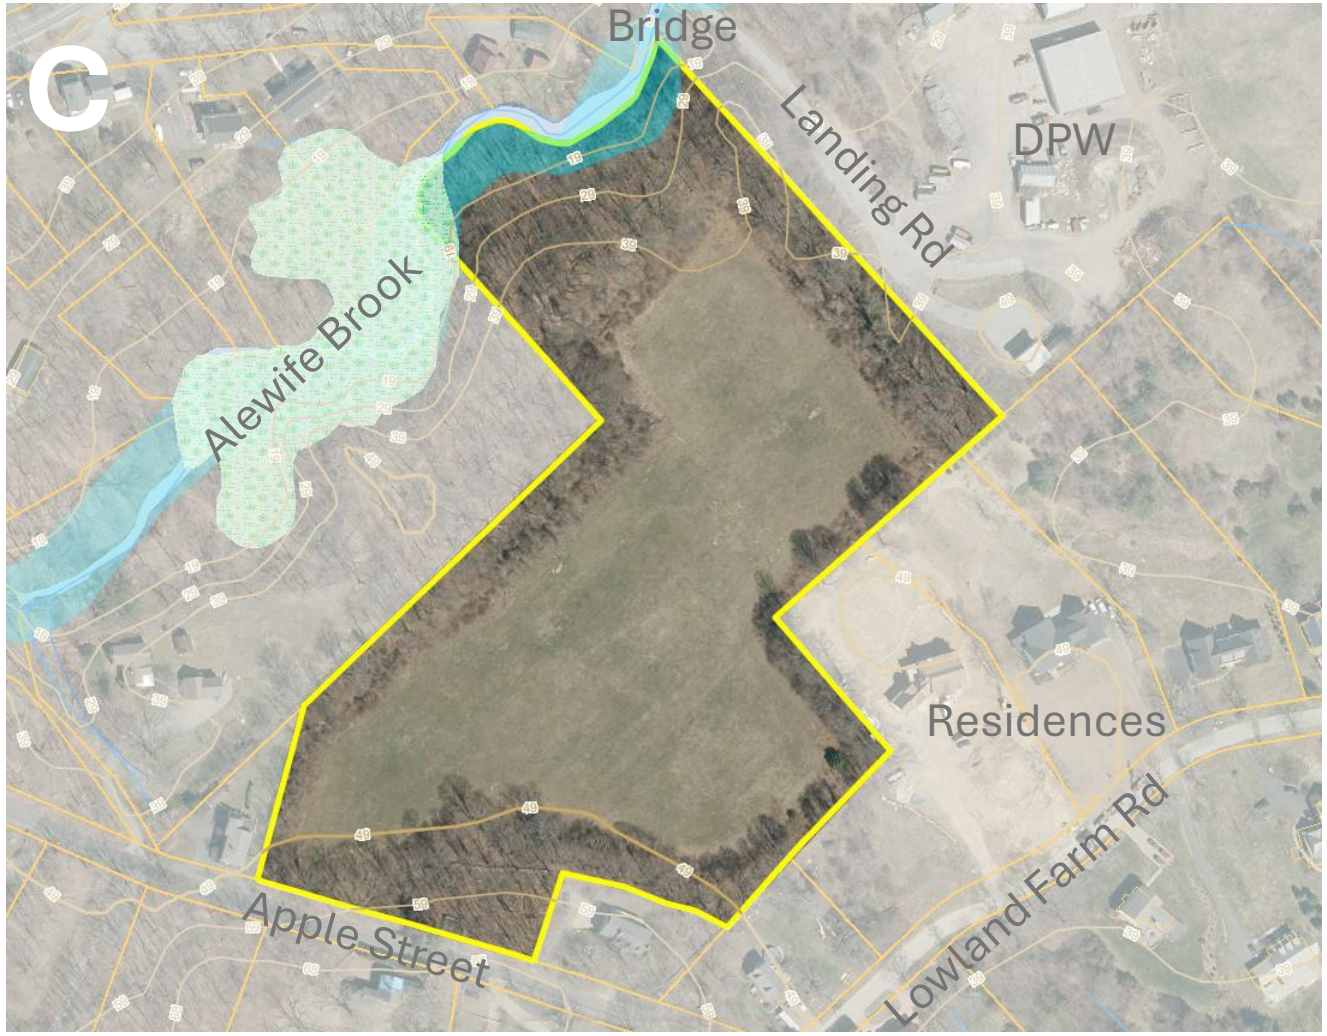
Unknowns

Soil conditions proximate to wetlands

Current Manchester Memorial ES

Opportunities

Developed site utilities



Constraints

Construction activities on occupied school site
Dense site with limited expansion options
Wetlands and flood zone
Transportation from Essex to Manchester Regional Agreement

Unknowns

MSBA funding considerations

Apple Street Site

Opportunities

No disruption to existing schools
Construction phasing

Constraints

Undeveloped site
Restricted site access
Impacts to adjacent residences

Unknowns

Environmental risks

Site Evaluation Criteria For Review

MEETING AGENDA

Meeting Date:	September 30, 2025
Meeting Time:	6:00PM – 8:00PM
Project Name:	Essex Elementary School
Project Number:	202306980020
Meeting Purpose:	School Building Committee Meeting
Location:	This meeting will be a hybrid meeting (both in-person and remote) at Essex Elementary School Cafeteria
Meeting Link:	https://us06web.zoom.us/j/85349809336

---

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
    - SBC Meeting No. 5 20250915
3. Invoices & Commitments for Review and Approval (Vote Expected)
    - DWMP Invoice No. 4 $21,180.00
4. Visioning Plan Update
5. Update of Site Selection Criteria
6. Sustainability Goals Discussion
7. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting

Project:	Essex Elementary School	Project No:	
Subject:	School Building Committee Meeting	Meeting Date:	09/30/2025
Location:	Hybrid (Essex Elementary School Cafeteria & Zoom)	Time:	6:00 PM
Distribution:	Attendees, Project File	Prepared By:	Jacob Greco

Present	Name (* Voting Member)	Affiliation
√	Michelle Cresta*	Director of Finance & Operations
√	Pam Beaudoin*	Superintendent
√	Kim Provost*	Principal
√	Theresa Whitman*	SBC Co-Chair
√	John Binieris*	SBC Co-Chair
√	Andy Oldeman*	Manchester Finance Committee / Director of Engineering (Structural Engineer)
√	Charlie Hay*	Architect School Building Experience
√	Gordon Brewster*	Engineer, Sr. Proj. Manager, Owner's PM, former Member of MERMHS & Memorial building
√	Tyler Virden*	Project Executive -Wise Construction / Paren
√	Annie Cameron*	Former SC Member and Memorial SBC Member
	Ariel Fernando Brian*	Architect - CBT
√	Jen Hocherman*	Architect - Partner SV Design
√	Michael Gerhardt*	Civil Engineer / Parent
	Timonthy McDonald*	Architect - Onion Flats
√	David Pereen	Resident / Plumbing & Fire
√	Lisa O'Donnell	Design & Construction / Essex Planning Board
√	Steve Hunt*	Facilities Manager
√	Emily Dwyer* (Pending SC Approval)	EES Teacher
√	Kim Field	EES Teacher
√	Rachelle Rousseau	EES Teacher
	Mike Burton	Project Director / Partner - DWMP
√	Christina Dell Angelo	Project Executive - DWMP
√	John Albright	Project Manager - DWMP
	Rachel Rincon	Assistant Project Manager - DWMP
√	Jacob Greco	Assistant Project Manager - DWMP
√	James LaPosta	Principal - JCJ Architecture
√	Fawn Pellegrini	Senior Project Manager - JCJ Architecture
√	Jeff Elliott	Project Architect - JCJ Architecture

√	Emily Czarnecki	Principal (Interiors) – JCJ Architecture
√	Mike Pirollo	Principal – MLP Integrated Design
√	Eric Haggstrom	Sustainability Director – JCJ Architecture
√	Kelley Tapia	Soden Sustainability

Item No.	Action Item	Ball in Court
6.4	Have School Committee Vote on new SBC Members	SBC
6.6	Schedule a Site Working Group	DWMP
6.7	Schedule a Sustainability Working Group	DWMP
6.6	Update the Site Selection Criteria	JCJ

- **Please click here for the presentation**
  - **This will be referenced in the meeting minutes with slide numbers called out to refer to.**
- **Below is a summation of key points, please view the recording here for full transcript and chapter summaries.**

Item No.		Description
6.1	**Call to Order & Intro:** Called to order by T.Whitman at 6:05pm, please refer to the attendee list.	Record
6.2	**Approval of September 15 - 2025, Meeting Minutes (Vote Expected):** **Roll Call Vote:** A motion to approve the September 15, 2025, Meeting Minutes made by E.Dwyer and seconded by A.Cameron Name | Yes/No/Abstain & Absent	Record

Michelle Cresta	Yes
Pam Beaudoin	Yes
Kim Provost	Yes
John Binieris	Absent
Theresa Whitman	Yes
Andy Oldeman	Yes
Charlie Hay	Yes
Gordon Brewster	Yes
Tyler Virden	Yes
Annie Cameron	Yes
Ariel Fernando Brian	Yes
Jen Hocherman	Abstain
Michael Gerhardt	Yes
Timonthy McDonald	Absent
Henry Oettinger	Yes
Steve Hunt	Absent
Emily Dwyer	Abstain
Kim Field	Advisor – No Vote
Rachelle Rousseau	Advisor – No Vote
David Pereen	Advisor – No Vote
Lisa O'Donnell	Advisor – No Vote

6.3	**Invoices & Commitments for Review and Approval (Vote Expected):** **Roll Call Vote:** A motion to approve the DWMP Invoice No. 4 ($21,180.00), made by A.Cameron and seconded by G.Brewster	Record

Name	Yes/No/Abstain & Absent
Michelle Cresta	Yes
Pam Beaudoin	Yes
Kim Provost	Yes
John Binieris	Absent
Theresa Whitman	Yes

Andy Oldeman	Yes
Charlie Hay	Yes
Gordon Brewster	Yes
Tyler Virden	Yes
Annie Cameron	Yes
Ariel Fernando Brian	Yes
Jen Hocherman	Abstain
Michael Gerhardt	Yes
Timonthy McDonald	Absent
Henry Oettinger	Yes
Steve Hunt	Absent
Emily Dwyer	Abstain
Kim Field	Advisor – No Vote
Rachelle Rousseau	Advisor – No Vote
David Pereen	Advisor – No Vote
Lisa O'Donnell	Advisor – No Vote

6.4 **Update to SBC Roster:**

- P.Beaudoin introduced the new members of the School Building Committee and noted that this will go to School Committee for official vote (Slide 6)
  - Emily Dwyer – EES Teacher (Voting Member)
  - Kim Field – EES Teacher (Advisor)
  - Rachelle Rousseau – EES Teacher (Advisor)
  - Steve Hunt – Facilities Manager (Voting Member)
- A.Cameron noted how five of the voting members (out of 17) are not district residences and shared how this is of concern for her with regarding optics and for functionality
  - T.Whitman listed the MSBA requirements for a School Building Committee
  - E.Dwyer added that it is the point of where the advocacy is coming from
  - P.Beaudoin shared what the makeup of the SBC was for the Memorial Project

	• T.Whitman added that if more Essex members are added they will need to match it with Manchester residences • A.Cameron proposed making K.Field the voting member, finding a Manchester lawyer to add, and promoting the two Essex advisors to voting members ○ K.Field noted that she does not want to represent Manchester as a voting member as she wants to advise this from the viewpoint of a teacher from EES not a Manchester resident • T.Whitman held a straw poll vote to proceed with a recommendation to the School Committee to approve the SBC roster as presented in Slide 6	

6.5	**Visioning Plan Update:**
	
	• M.Priollo provided an updated on the educational visioning that has occurred so far for the project (Slide 8 & 9)
	  ○ G.Brewster noted how visioning is critical for these projects and how the next step is to choose the option they want, he asked J.LaPosta how this helps JCJ narrow down the options for the SBC
	  • J.LaPosta noted it is foundational to the process and required by MSBA by way of helping finalize or adjust the educational program that P.Beaudoin will write and submit. He added that for site selection it has less of an impact but it will help inform them in some way
	  • G.Brewster added that the school visits may push people to the new school option after seeing them
	  • P.Beaudoin noted that the visits were more about the program and how the education was conducted in these and not necessarily the finishes of the building
	  • K.Field shared how the tours were focused on the educational aspect
	  • E.Dwyer noted by MSBA they have to look at all the options and cannot just drive right to a new building
	  • P.Beaudoin noted they already do have an educational plan already and they are using the tours and visioning to test the assumptions they already have
		Record

	• J.LaPosta added how the tours were meant to find schools that have a different set up educationally than both Memorial and Essex Elementary ○ A.Cameron asked where the work on the grade configuration is • P.Beaudoin noted they are working on it through the visioning sessions and she is working on it financially • C.Dell Angelo added that they will decide on this and bring it to the SBC by the end of October/ early November	
6.6	**Update of Site Selection Criteria:** • J.Elliott reintroduced the updated site selection criteria matrix from comments provided by the SBC (Slide 11). ○ A.Cameron reported out on an update of the possible sites in Essex that could be used. She noted that T.Whitman pulled a list of any site that was larger than 9.55 acres and the town reviewed the list and noted that the only site the Board of Selectman will propose is the Apple Street site ○ M.Gerhardt wanted to clarify that criteria of walkability should be for the Essex student population not Manchester as Memorial has great walkability but not for Essex residences • J.Elliott shared a walkability study for the surrounding neighborhoods for the three (3) proposed sites (Slides 12 - 14) • C.Hay noted they need the information from JCJ to fill it out properly • A.Cameron added that last time JCJ filled it out and the committee debated it ○ G.Brewster agreed ○ C.Dell Angelo noted they will take a try at filling it out and bring it back to the SBC • C.Hay noted they should review any criteria that members have questions on ○ C.Hay started with walkability and noted it should be red for Apple Street as it is too dangerous unless the school would take a stance to say that no walkers or bikers are allowed • P.Beaudoin noted they do not need to debate the danger but asked what the cost would be to create a safe way	Record

	• C.Hay asked if it can even be modified and noted that one of his comments was to add a cost of infrastructure criteria section • T.Whitman noted that if wanted A.Cameron can bring this issue to the Essex Board of Selectman about town improvements being wanted or not • C.Hay noted whether town betterment of school project either way it is the same tax payers • P.Beaudoin noted that it isnt and during the Memorial project they had to pull out of the senior center as it was being viewed as Essex paying for Manchester betterment and will be the same vice versa for Essex • L.O'Donnell shared that a scenic road designation is determined by a town meeting vote so she would assume they can remove it. She added that there is very loose rules and it mainly focuses on affecting trees and stone walls. L.O'Donnell thinks that if Apple Street really is the best site she would not let this deter the committee • C.Hay noted that even so it is another vote they would need to progress with it and taking land for entrances will make a political firestorm ○ P.Beaudoin noted that a bullet point should be added to just note that the selected site is ready to go for construction ○ C.Dell Angelo noted they can schedule a working group to go through the matrix with the project team and bring it back to the SBC	
6.7	**Introduction Sustainability Discussion:** • E.Haggstrom & K.Tapia shared the introduction to sustainability and the approach for the project including the available incentives and the associated requirements (Slides 16 - 22) ○ C.Dell Angelo noted that there is no decisions that need to be made now but she wanted to start the conversation given Essex did not opt-in to the stretch code as there is a stigma that this all costs more money but it really is not the case and can save the District more money by the end of the project	Record

	○ A.Cameron asked if Andy and all the people who know this agree ○ T.Whitman asked at what point in the commitment to the incentives are they guaranteed the money but not when do they get the money • E.Haggstrom noted that for the Mass Save it will be as early as Schematic Design and it will be locked in, same with the MSBA. ○ A.Cameron asked how schools are handling this for the IRA portion • E.Haggstrom noted it is really about evaluating how much risk the District wants to undertake as there is no way to know how it will change it the future ○ E.Haggstrom noted they provide a life cycle cost analysis to the committee that shows the cost of all these options for day 1, year to year, overall, etc.. ○ C.Dell Angelo asked for any committee members to reach out if they want to join the sustainability subgroup ○ R.Russo asked which comes first the site selection or the grade configuration • C.Dell Angelo noted that they are doing the site first so if the site comes off the table they do not have to study the grade configurations for those sites	
6.8	**Other Topics not Reasonably Anticipated 48 hours prior to the meeting:** • A.Cameron asked if they can have a map of the order of decisions for the community meeting ○ P.Beaudoin noted they will discuss this Friday at the communication working group • A.Cameron noted that they sold a product and educational experience to Manchester and it would be wrong to go back and now change it • P.Beaudoin noted it is important to talk about the pros and cons of both sites as they both came from town staff members • E.Dwyer noted that she went through this process in her district and it is important to get the load voices with different views to join the community meeting	Record

SBC Roster Changes

New Members:

- Emily Dwyer – EES Teacher (Voting Member)
- Kim Field – EES Teacher (Advisor)
- Rachelle Russo – EES Teacher (Advisor)
- Steve Hunt – Facilities Manager (Advisor)

- Ruth Pereen-Essex (stepped down)
- Adam Zaiger-Manchester (stepped down)

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
   - SBC Meeting No. 5 20250915
3. Invoices & Commitments for Review and Approval (Vote Expected)
   - DWMP Invoice No. 4 $21,180.00
4. Update to SBC Roster (Vote Expected)
5. Visioning Plan Update
6. Update of Site Selection Criteria
7. Introductory Sustainability Discussion
8. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
9. Public Comment
10. Adjourn

Draft Project Goals

1. Experiences and spaces that **promote students first** as the doers and leaders of their own learning
2. A learning **environment that captures** and **supports** the **energy of kids**
3. Space to **support** all iterations of **engagement** now and in the future (student – student; student –teacher; teacher – teacher)
4. School should serve as the **hub of the community**
5. Facility should support **extensions of learning**, including **before** and **after school** opportunities
6. A shared **large-scale school community** for parents and students to experience small group, large group, and whole school gathering

Visioning Next Steps

- Visioning Session (Child Development & Enrollment Scenarios) – 9/22
- School Tours – 9/26
- Program Workshop – 9/29
- Visioning Session (Teaching, Learning, Space) – 10/22

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
   - SBC Meeting No. 5 20250915
3. Invoices & Commitments for Review and Approval (Vote Expected)
   - DWMP Invoice No. 4 $21,180.00
4. Update to SBC Roster (Vote Expected)
5. Visioning Plan Update
6. Update of Site Selection Criteria
7. Introductory Sustainability Discussion
8. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
9. Public Comment
10. Adjourn

Site Evaluation Criteria Update

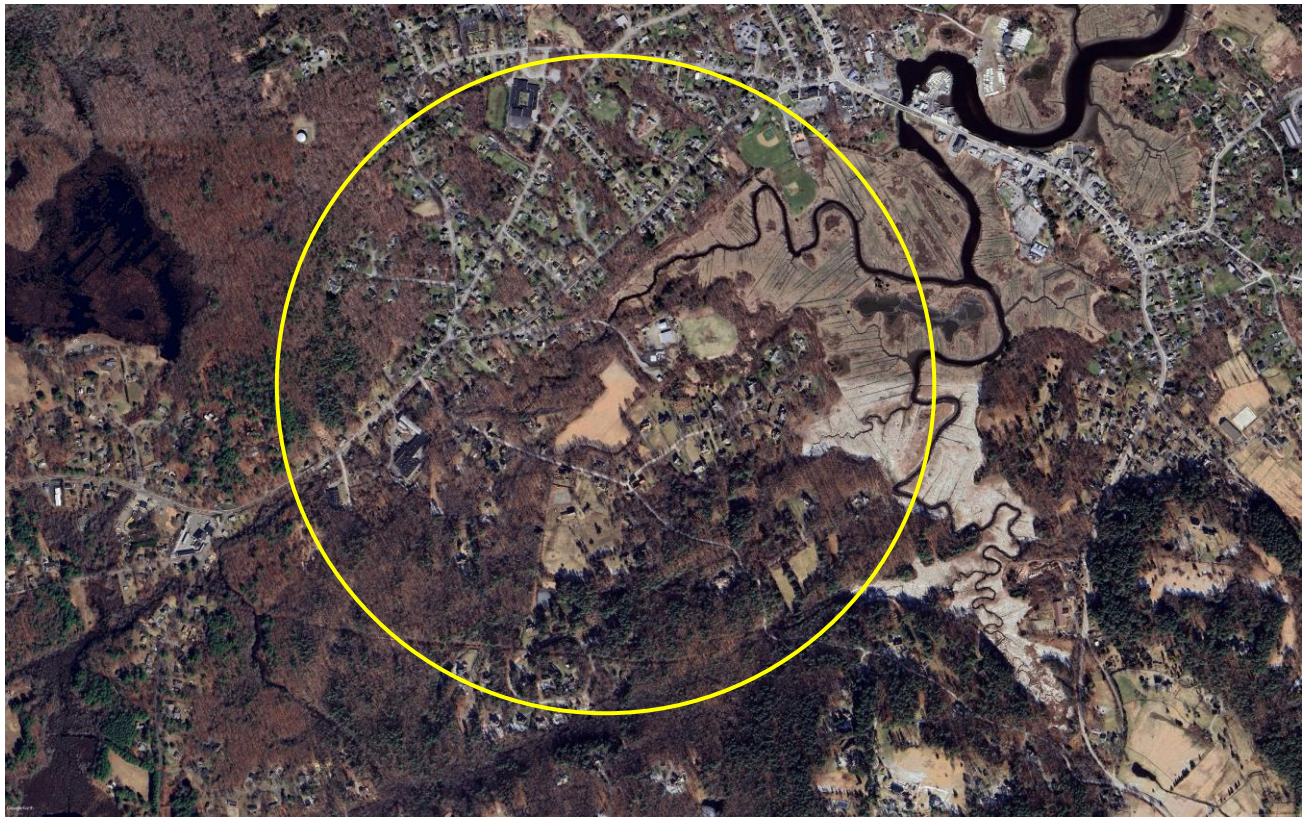
DRAFT

Walkability



Current Essex Elementary School
12 Story Street, Essex

Nearby Residences
Approximately 300 in a half-mile radius

Sidewalks
Story St, Western Ave and Winthrop St

Other Considerations
Half-mile walking radius includes a portion of Main Street

Walkability

Apple Street Site

30 Apple Street, Essex

Nearby Residences

Approximately 200 in a half-mile radius

Sidewalks

Distance to nearest sidewalk:

1,100’ to corner of Landing Rd & Martin St

1,300’ to corner of Apple St & Martin St

Other Considerations

Bridges at Landing Rd and Apple St

Apple St is zoned a Scenic Road

Nearby walking trail to Memorial Park

Walkability

Current Manchester Memorial Elementary School

43 Lincoln Street, Manchester

Nearby Residences

Approximately 500 in a half-mile radius

Sidewalks

Lincoln St, Summer St, Brook St, Vine St, Norwood Ave

Other Considerations

Adjacent to High School

Graded “Medium” for *Potential for Walkable Trips* per MassDOT

Approach: Design Team

We approach using a lens that **learning is the top priority**:

- Minimize first cost
- Minimize maintenance
- **Maximize value to district**
- Offer **training** opportunities (students, staff + teachers)
- Considering positioning now for **future incentives**
- Importance of **healthy indoor environments**
- Opportunities for teaching

MSBA Requirements (Project Advisory #81)

- **Minimum Requirements per MSBA Project Advisory #81:**
  - Achieve **Silver** using LEED-Schools v4.0 / v4.1
  - Achieve a minimum of 3 (out of 7) points in the following:
    - MR – Building Product Disclosure and Optimization, v4.1 – Material Ingredients (1 point)
      - Specify at least 20 different products from 5 different manufacturers that meet green certification standards
    - EQ – Low Emitting Materials, v4.1 (1 point)
      - Pursuing: Walls, Flooring, Ceilings
      - Optional: Paints + Coatings, Adhesives + Sealants, Walls, Furniture, Composite wood
    - EQ – Indoor Air Quality Assessment, v4.0 (1 point)
      - Perform pre-occupancy building flush-out

- **The school must meet the minimum energy efficiency requirements described in the**
- **MA DOER "Stretch Code Green Community" standards**

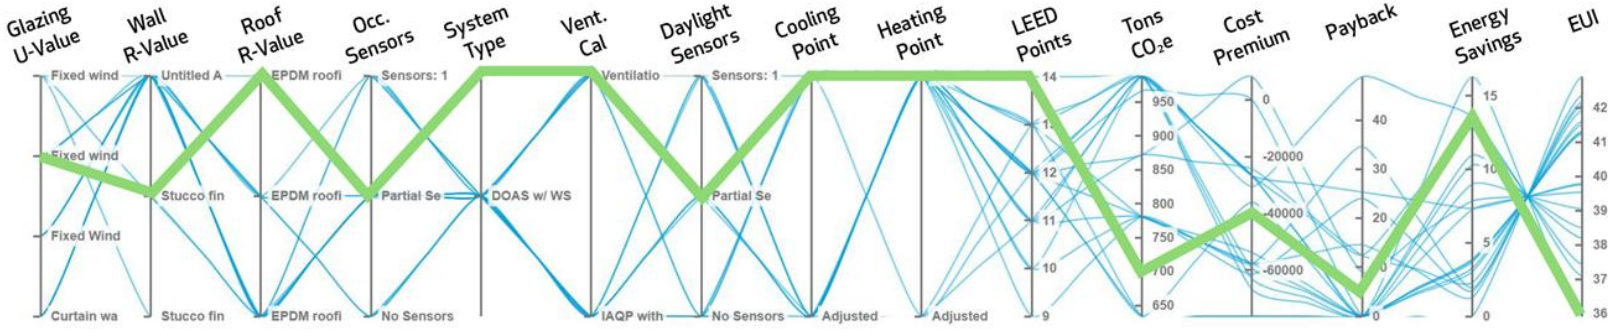
- **Be "solar ready"**

MSBA PA#81: Extra Reimbursement: 3% + 1%

- For an **extra 3% reimbursement** the project must meet the **Opt-In Specialized Stretch Energy Code**
  - To meet the Opt-In Code you can either be:
    - Net Zero (Zero Energy Pathway)
    - **All Electric Pathway - baseline assumption**
    - Mixed Fuel Pathway (not recommended b/c lose utility incentives)

- For an **additional 1% reimbursement** the project must earn additional material/air quality points (earn 5 of 7 available)
    - MR – Building Product Disclosure and Optimization, v4.1 – Material Ingredients (1 point)
    - EQ – Low Emitting Materials, v4.1 (1 point)
    - EQ – Indoor Air Quality Assessment, v4.0 (1 point)

Finding Value: IRA + Utility Rebates



- **Inflation Reduction Act (IRA):** provides a 25.5% tax credit (or grant in the case of non-taxable entities) for geothermal installations. *25.5% from the full system – from wells to diffusers for completed system*.

- **Mass Saves Utility Incentives:**
  - New Construction Path 1 requires EUI < 25, which will **require an all-electric** building design (no gas connection)

INCENTIVES

EUI Targets	Payable at End of Construction		Payable at End of 1 yr. post occupancy	
	Construction Incentive $/sf	Heat Pump Adder	Post Occupancy Incentive $/sf	Adder for Getting Under ZNE EUI Target
VARY BY PROJECT TYPE	Either $1.50/sf or $2.00/sf (depending on EUI target)	Air Source Heat Pumps: $800/ton Variable Refrigerant Flow (VRF): $1,200/ton Ground Source Heat Pumps: $4,500/ton	$1.50	$0.05/EUI point reduction/sf

Finding Value: Putting this all Together

- Triple glazing
- High-performance double glazing

- Passive House
- High-performance envelope

- Ground-source heat pump
- Air-source heat pump
- Traditional VAV

Cost Comparison

	INITIAL	REBATES	OPERATION & MAINTENANCE
Ground-source heat pump	$$$	$$$	$
Air-source heat pump	$$	$$	$$
Traditional VAV	$	–	$$$

Cutler Elementary School Comparison: Baseline MSBA vs. Opt-In Green Schools Program

Full Electrification	-$400,000	Lower up-front cost for equipment offset by additional wiring
Additional LEED Points	+$50,000	Cost for full-building flush-out
Utility Incentives	-$350,000	
4% Additional Reimbursement	-$2,700,000	
Total Savings to Town	**$3,400,000**	

Next Steps

- Register project with LEED
- Sustainability Workshop 1 with the District, Dore + Whittier and the Design Team

Discussion: Questions and Responses

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
   - SBC Meeting No. 5 20250915
3. Invoices & Commitments for Review and Approval (Vote Expected)
   - DWMP Invoice No. 4 $21,180.00
4. Update to SBC Roster (Vote Expected)
5. Visioning Plan Update
6. Update of Site Selection Criteria
7. Introductory Sustainability Discussion
8. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
9. Public Comment

MEETING AGENDA

Meeting Date: October 14, 2025
Meeting Time: 6:00PM – 8:00PM
Project Name: Essex Elementary School
Project Number: 202306980020
Meeting Purpose: School Building Committee Meeting
Location: This meeting will be a hybrid meeting (both in-person and remote) at Essex Elementary School Cafeteria
Meeting Link: https://us06web.zoom.us/j/85349809336

---

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
    - SBC Meeting No. 6 20250930
3. Invoices & Commitments for Review and Approval (Vote Expected)
    - JCJ Invoice No. 1 | ($27,000.00)
    - Minuteman EDDM | ($3,128.42)
    - DWMP Invoice No. 5 | ($46,225.50)
4. Community Meeting Report Out
5. Initial Ed Program and Space Summary Review
6. Site Logistics Working Group Report Out
7. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
8. Public Comment
9. Reflections & Actions Items
10. Adjourn

  - **This will be referenced in the meeting minutes with slide numbers called out to refer to.**
- **Below is a summation of key points, please view the recording here for full transcript and chapter summaries.**

<table>
<tr><th>Item No.</th><th></th><th>Description</th></tr>
<tr><td>6.1</td><td>Call to Order & Intro: Called to order by T.Whitman at 6:05pm, please refer to the attendee list.</td><td>Record</td></tr>
<tr><td>6.2</td><td>Approval of September 30 - 2025, Meeting Minutes (Vote Expected):

Roll Call Vote: A motion to approve the September 30, 2025, Meeting Minutes made by A.Cameron and seconded by C. Hay

Discussion included clarification that the prior meeting’s mention of outreach to the Select Board regarding Apple Street was premature, but no amendment was necessary.

6.4	**Community Meeting Report Out** The first public forum was held the prior week. • Attendance: approximately 40+ in person and 15–20 virtual participants. • Feedback was positive; residents appreciated transparency and engagement. • The presentation was clear, and questions were substantive and constructive. • Comments and community feedback will inform upcoming site analysis and design discussions.	

6.5	**Initial Space Summary Review**
	
	• C.Dell Angelo and P.Beaudoin described what the purpose and goals of the education program is, including some of the content
	  ○ The Educational Program outlines the teaching philosophy, grade structure, space needs, and instructional approach of the district.
	  ○ Serves as the foundation of the MSBA Feasibility Study and drives building size and space types.
	  ○ Includes:
	  ▪ Program structure (PreK–5)
	  ▪ Classroom size assumptions (18–22 students per room)
	  ▪ Core spaces: gymnasium, cafeteria, music, art, library, and small-group areas
		Record

- Special education and inclusion needs
- Flexibility for future changes in teaching methodology

Committee Discussion Highlights:

- The Ed Program is a descriptive planning tool — not a design document.
- Auditorium/cafetorium discussion: MSBA will not reimburse for auditoriums at the elementary level.
- Growth of special education services is noted as a design driver.
- Need for parity between Essex and Manchester Memorial facilities emphasized.
- Agreed that the program should reflect a 50-year outlook, not current enrollment alone.

- J.Elliott introduced the MSBA Space Summary and the Essex Elementary School existing floor plans (Slides 9 – 12)
  - The Space Summary aligns the Educational Program with MSBA space standards and identifies existing versus proposed spaces.
  - It defines the basis for reimbursement and evolves throughout feasibility.
  - Current work focuses on documenting existing spaces; proposed spaces will follow after MSBA enrollment confirmation.
  - Three enrollment scenarios are being modeled: 165, 250, and 515 students.

  Classrooms at Essex currently average 850–875 sq. ft., slightly below the MSBA guideline of 950 sq. ft.

Committee Discussion Highlights:

- Renovation adjustments will be made as data develops.
- Drafts of the Educational Program and Space Summary are expected within two weeks for School Building Committee acceptance and School Committee acceptance and approval.
- Consensus that these documents are “living” and will refine through schematic design.

6.6	**Site Logistics Working Group Report Out**
	
	• J.Elliott reviewed the site selection criteria matrix and the three (3) proposed sites (Slides 14 – 23)
	• J.Elliott summarized the site evaluation process, which began with sixteen potential parcels and was refined to seven, and then to three Town-owned viable options based on MSBA requirements, infrastructure availability, and environmental feasibility.
	• Remaining Sites Under Consideration:
	  ○ Essex Elementary School (Existing Site)
	  ○ Manchester Memorial Elementary School
	  ○ 30 Apple Street
	
	A. Essex Elementary School
	• Existing Conditions: Fully serviced site with established infrastructure.
	• Geotechnical Conditions: Sound foundation, typical for redevelopment.
	• Environmental: Known oil/fuel discharge in mechanical room (remediated and managed); some asbestos and lead in legacy materials.
	• Constructability: Adequate site area and access for phased construction.
	• Community Impact: Maintains neighborhood identity and walkability; minimal transportation disruption.
	• Risks: Primarily environmental abatement during construction—manageable within normal project scope.
	• Overall Rating: Predominantly *Green* on evaluation matrix.
	Schedule Risk: Low.
	
	B. Manchester Memorial Elementary School
	• Site Context: Fully developed, adjacent to Middle/High School campus.
	• Challenges: Limited space for additional construction; co-location would create traffic and parking constraints.
	• Regulatory: Complex permitting and inter-municipal implications.
	• Impact: Relocating Essex students here would increase transportation costs and reduce community accessibility.
	• Overall Rating: Multiple *Red* indicators for site capacity, traffic, and regulatory hurdles.
	Schedule Risk: High.
		Record

C. 30 Apple Street

- Description: Undeveloped parcel; potential for full new construction.
- Positives: Flat topography allows independent construction without disrupting school operations.
- Challenges:
- No existing water, sewer, or utilities.
- Access limitations—Apple Street width and bridge capacity inadequate for school traffic and construction loads.
- Likely need for eminent domain acquisition.
- Environmental unknowns: Possible contamination from nearby landfill and past agricultural use.
- Limited public support; multiple failed Town Meeting votes for Apple Street road and bridge improvements.
- Overall Rating: Predominantly *Red* and *Yellow* categories; significant cost, schedule, and political risk.
  Schedule Impact: Potentially jeopardizes the MSBA 913-day feasibility deadline.

Committee Discussion Highlights:

- Interest in understanding high-level cost differences but agreed Apple Street's infrastructure burden is prohibitive.
- Highlighted political and logistical barriers to eminent domain and roadwork approvals for Apple Street.
- Emphasis that Apple Street off-site improvements could jeopardize MSBA eligibility if schedule delays occur.
- Request for inclusion of cost escalation (e.g., 5% annually) in evaluation comparisons.
- An ask for whether Apple Street improvements appear in the Town's Capital Plan;
  - Response confirmed only bridge references, with no allocated funding.

Public Input Context:

- Noted that all three written public comments received opposed Apple Street and supported retaining Essex site.

Environmental Discussion

- Committee members reviewed matrix scoring and agreed Essex site's fuel tank issue could be rated "Yellow" rather than "Red." Consensus remained that Apple Street presented greater environmental and infrastructure uncertainty.

Community and Political Considerations

- Historic lack of Town Meeting support for Apple Street projects.

	• Concerns regarding eminent domain and off-site cost burdens falling solely on Essex.
	• Committee reaffirmed the importance of pursuing a solution with broad community backing and minimal political friction.
	
	Straw Poll and Next Steps
	• Informal Straw Poll Question: Should the Committee continue investigating 30 Apple Street as a viable site option?
	  ○ The straw poll was taken to gauge sentiment ahead of formal action. Yes, means continue pursuing Apple Street, No means remove from contention.
	  ○ The consensus favored unanimously on not studying Apple Street moving forward.
	  ○ Committee agreed to present findings and rationale to the Board of Selectmen before an official vote.
	• Next Steps:
	  ○ Prepare written summary and site comparison for Select Board meeting on Monday, October 20, 2025.
	  ○ Include cost, schedule, and MSBA compliance implications.
	  ○ Building Committee to hold a formal vote at next meeting to confirm removal or continuation of Apple Street.	

6.8	**Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting** Current Building Status: • Essex Elementary is functioning as a “shelter-in-place” building, meaning it can provide heat, food, and shelter during power outages. This term has been used loosely, and there are multiple levels of shelter-in-place designations, each with different requirements and costs. Committee Action: • Members will review infrastructure systems (foundations, steel, generator, etc.) as “homework” before the next Building Committee meeting. • Goal is to determine whether the same evaluation applies to new projects or if additional shelter requirements should be considered. Clarifications: • Not all schools officially designated as shelter-in-place perform the same functions; Essex currently provides essential services without formal designation. • Public safety designations and responsibility for shelter levels vary by town/district.	Record

<table>
<tr><td></td><td>

- Brendan Zabricki (Essex Town Manager), part of the regional emergency preparedness team, will clarify Essex Elementary's role in the broader emergency plan.

Next Steps:

- Align shelter capabilities and terminology with other district facilities for consistency and parity.
- Review and discuss findings of a future next Building Committee meeting.

</td><td></td></tr>
<tr><td>6.9</td><td>Public Comment:

To view public comment please click here</td><td>Record</td></tr>
<tr><td></td><td>Reflections & Action Items

Community Engagement:
• Proposed additional tours of Essex Elementary, potentially combined with the "Open Door Food Truck" event.
• Outreach to the Senior Center and Essex residents to increase awareness.
• Consideration of a similar tour for Memorial School to allow community comparison.
• Communications Working Group will schedule follow-up outreach and community meetings next week.</td><td></td></tr>
<tr><td>6.10</td><td>Adjourn:

Roll Call Vote: A motion to adjourn the meeting was made at 8:45 pm by C. Hay and seconded by T. Virden.

SBC Meeting Agenda – October 14, 2025 @ 6:00 PM

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
   - SBC Meeting No. 5 20250930
3. Invoices & Commitments for Review and Approval (Vote Expected)
   - JCJ Invoice No. 1 | ($27,000.00)
   - D+W Invoice No. 5 ($46,225.50)
   - Minuteman EDDM | ($3,128.42)
4. Community Meeting Report Out
5. Initial Ed Program and Space Summary Review
6. Site Logistics Working Group Report Out
7. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
8. Public Comment
9. Reflections & Actions Items
10. Adjourn

Site Selection Working Group Report Out

Identified Sites

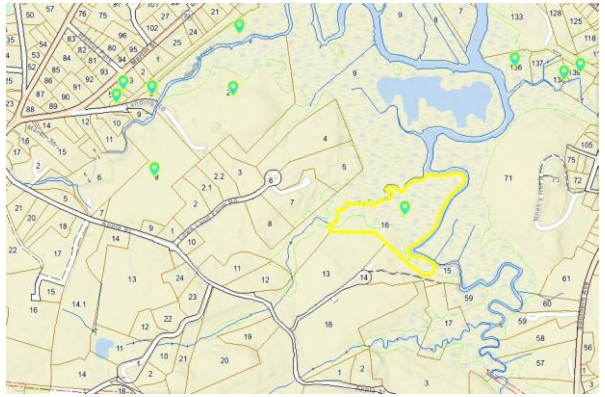
Statement of interest includes:

- Current Essex Elementary School
- Current Manchester Memorial Elementary School

Search of other potential sites in Essex:

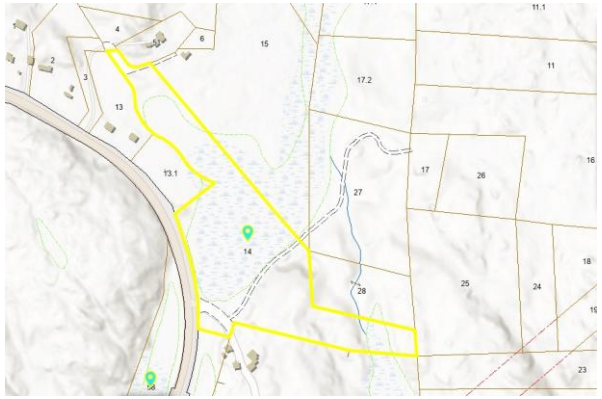
Town of Essex owned parcels	112
Minimum 9.75 acres	16
Street access & utilities	7
Not used by other town function	1

→ **30 Apple St**

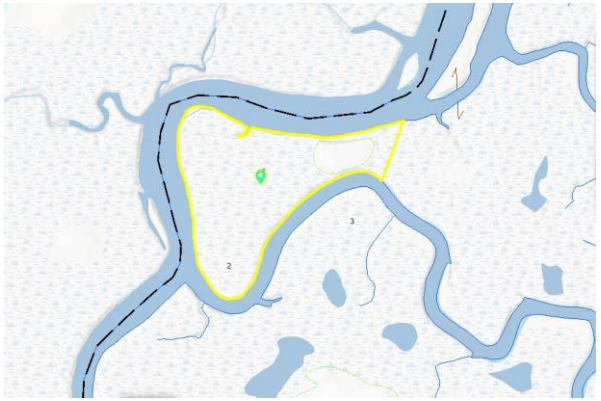


Town Hall, Spring Street Cemetery, Essex ES, Centennial Grove, DPW Transfer Station, Public Water Supply

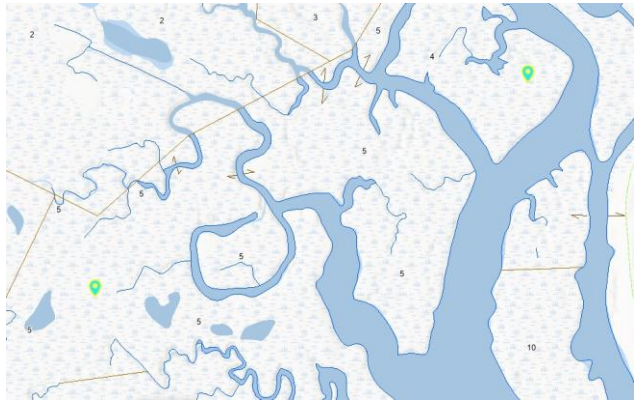
Identified Sites



Sites Lacking Infrastructure - Road Access and/or Town Sewer & Water

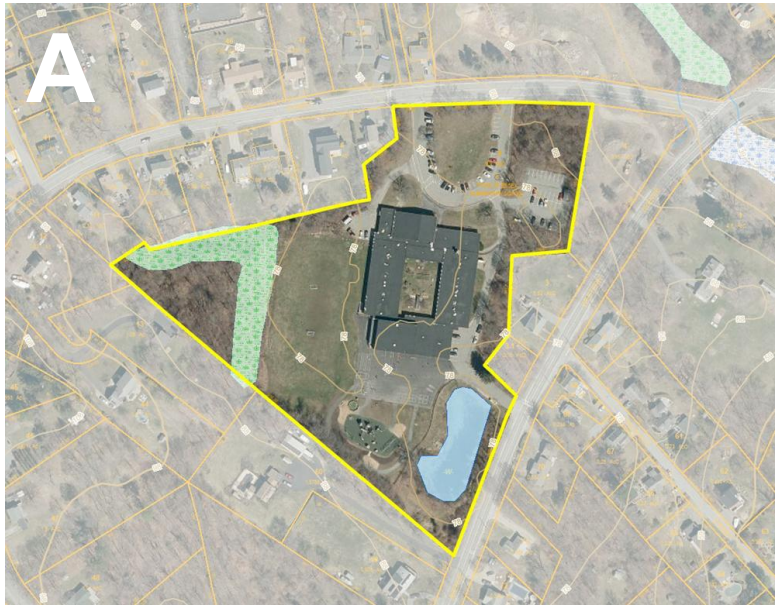


0-4 Conomo Point Rd (4 parcels)



0 Apple St Rear

0 Southern Ave



0 PODS Island

0 Hardy’s Creek Marsh (2 parcels)

Identified Sites

Current Essex Elementary School

12 Story Street, Essex MA

Current Manchester Memorial Elementary School

43 Lincoln Street, Manchester MA

Apple Street Site

30 Apple Street, Essex MA

Current Essex Elementary School -

Considerations:

Site Development

- Developed site utilities available currently supporting existing school. Capacities to be determined pending option selected (renovation, addition, or new construction).
- Site is adequately sized.
- Existing EES drawings show previous additions supported on footing foundations, no piles. Some exposed ledge visible. Geotechnical studies to acquire additional information.
- Recognized Environ. Condition (REC) - Oil release in Boiler Room; Business Environmental Risks (BERs) - Asbestos Containing Materials, Lead Based Paints, Urban Fill Soils
- Pond and wetland on site. MassDEP regulations for bank, and 100-ft buffer to wetlands. No additional town bylaws. No flood plain. Likely straightforward regulatory process.
- New building and site layout can be configured for future options.
- Project scope expected to have high level of MSBA reimbursement, similar to past MMES project
- Multiple site access points for construction. Likely lose play field during construction.

Current Essex Elementary School -

Considerations Continued:

Site Access
- Road widths currently acceptable for buses to existing EES
- Sidewalks on adjacent streets.
- Busing status quo

Community
- Current school site and grade configuration meet the Regional Agreement.
- Walking distance to Town Hall/Burnham Library and Memorial Park.
- Established identity for the community

Education
- Students likely lose play field during construction
- Potential construction phasing disruptions for options including renovations and additions.

Schedule
- No apparent schedule obstacles

Current Manchester Memorial ES

Considerations:

Site Development

- Developed site utilities in place to support existing school
- Site is adequately sized, however the MMES project fully built-out site leaving limited options for expansion.
- Existing MMES geotechnical report indicates ground improvement for footing support
- No identified environmental contaminants.
- Numerous jurisdictional areas (wetlands, flood plain, river/riverfront).
    - Site floodplain elevation includes rain garden and tennis courts. These areas also within 200-ft outer riparian zone, restricting area to be paved.
- Dense site already fully built-out with limited expansion options
- Additional work impact recent MMES project scope thereby reducing level of MSBA reimbursement.
- Construction activities on occupied school site with very limited available space.

Current Manchester Memorial ES

Considerations Continued:

Site Access
- Sidewalks on adjacent streets.
- Not walkable for students from Essex.
- Road widths currently acceptable for buses to MMES.
- Longer bus rides for some students from Essex to the MMES site
- Driveway to Summer St. will become service access only

Community
- Consolidation to MMES site would leave Essex without in-town K-4 per Regional Agreement
- Walking distance to Central St and adjacent to MS/HS
- Increased site density & vehicular traffic for school operations
- Loss of tennis courts likely to accommodate increased parking needs

Education
- Addition and/or renovation to MMES impact school operations and site circulation

Schedule
- Timeline to revise Regional Agreement and the regulatory process.

Apple Street Site

Considerations:

Site Development

- Simplified or no construction phasing for school operations
- New building and site layout can be configured for future options/growth.
- Off site utility developments needed are not MSBA Reimbursable:
  - Water on Apple St that will likely need increased capacity.
  - No sewer or drainage observed within Apple St.; Sewer Pump station in Landing Rd. likely needs upgraded capacity.
- No existing available geotechnical subsurface condition information. Geotechnical studies to acquire information.
- Recognized Environmental Condition (REC)- No groundwater monitoring program at the unlined Essex Landing Landfill; Business Environmental Risks (BERs) - Pesticides, former flower farm
- River/riverfront/flood plain on site to be managed with MEPA thresholds. No additional town bylaws.
- Two points of access available, with Landing Rd likely more appropriate for construction activity (verify bridge load capacity for construction vehicles).
- Noise of DPW adjacent to school.

Apple Street Site

Considerations Continued:

Site Access

- Existing road width to widen to support bus traffic, improve sightlines and safety for pedestrians and bikers
  - Adjust or rebuild two bridges
  - Move existing utility poles
  - Affect on resident properties
  - Not MSBA Reimbursable
- No sidewalks on Apple St or Landing Rd.
- Similar bus routing as current EES
- Existing challenges with buses maneuvering on Apple St.

Community

- No direct walking route or connecting sidewalks to town center (no positive aspects adjacent to DPW)
- Introducing school operations into smaller proportioned residential community

Education

- No disruption to existing schools
- Simplified or no construction phasing for school operations

Schedule

- Regulatory approval process, time, and cost for upgraded infrastructure.
- Past Town meetings regarding land acquisition have been unsuccessful twice.

8.3	**Invoices & Commitments for Review and Approval (Vote Expected):** There were no invoices for approval at this meeting.	Record
8.4	**Removal of Apple Street from Site Selection (Vote Expected):**	Record

- C. Dell Angelo noted that the SBCreviewed this topic in depth for weeks and the project team had reviewed and provided the completed matrix.
    - J. Elliott noted JCJ updated the environmental impact of the site on the criteria matrix for Apple Street to yellow based on the previous SBC meeting discussion and recommendation.
- C. Dell Angelo noted that at the straw poll vote at the last meeting, the SBC agreed to remove Apple Street from the site and the ask now is to make an official vote.
- A. Cameron asked what the SBC and project team will need to provide to the MSBA to prove that they have done enough work to eliminate this option.
    - C.Dell Angelo noted that we believe what the project team have compiled so far, based on the criteria matrix, and the discussion, is sufficient and as part of the PDP submission to the MSBA.
    - A. Cameron noted she understands at this high level point in the project that costs cannot be understood with the magnitude of changes that would need to occur to make Apple Street viable. Given the information that has been presented, A. Cameron believes that the MSBA and the Town will support the removal of Apple Street.
    - P. Beaudoin noted that the MSBA wants to ensure the District studies the options to determine the most cost effective and fiscally responsible project, and based on the data provided, it seems Apple Street has the most cost implications related to site selection.

Name	Yes/No/Abstain & Absent
Michelle Cresta	Yes
Pam Beaudoin	Yes

	<table><tr><td>Annie Cameron</td><td>Yes</td></tr><tr><td>Ariel Fernando Brian</td><td>Absent</td></tr><tr><td>Jen Hocherman</td><td>Yes</td></tr><tr><td>Michael Gerhardt</td><td>Yes</td></tr><tr><td>Timonthy McDonald</td><td>Yes</td></tr><tr><td>Henry Oettinger</td><td>Yes</td></tr><tr><td>Steve Hunt</td><td>Advisor – No Vote</td></tr><tr><td>Emily Dwyer</td><td>Yes</td></tr><tr><td>Kim Field</td><td>Advisor – No Vote</td></tr><tr><td>Rachelle Rousseau</td><td>Advisor – No Vote</td></tr><tr><td>David Pereen</td><td>Advisor – No Vote</td></tr><tr><td>Lisa O'Donnell</td><td>Advisor – No Vote</td></tr></table> **Roll Call Vote:** A motion to remove Site C, Apple Street, as a potential site for the Essex Elementary School Project was made by G. Brewster and seconded by H. Oettinger • **Yes: 13 | No: 0 | Absent/Abstain: 3** Discussion: • A. Cameron noted that there will be a narrative created to share with both boards of selectmen to explain why this choice was made ○ A. Cameron noted she has a draft that will be reviewed by both P. Beaudoin and T. Whitman	
8.5	**Space Summary & Education Program Progress** • C. Dell Angelo shared that the project team has previously outlined as part of the PDP deliverables, that the District needs to develop the Educational Program, which drives the development of the three space summaries, based on the three enrollment configurations. At our last meeting, we reviewed the introduction of the two deliverables.C.Dell Angelo added that the space summaries will be shared with the SBC by Thursday this week and they will be asked for its acceptance at the 11/6/2025 meeting. • J. Elliott reviewed the space summaries slides showing the original Manchester Memorial School version, as well as the draft	Record

version of the proposed new Essex Elementary School with variations from the MSBA guidelines (Slide 8 - 10).

- R. Russo asked why the kindergarten classes are not listed.
  - J. Elliott noted that there are two classrooms for kindergarten, they were just not shown on the high variations from the MSBA guidelines slide. J. Elliott noted that they are included in the overall space summaries.
  - P. Beaudoin noted that this is just showing the line items with variations.
- C. Hay noted that it seems like the special educationline is way over and was wondering since it is a District wide program could they be moved to Manchester?
  - P. Beaudoin noted that Manchester is running out of space currently for special education and the RISE program is the largest of the programs. She noted they used to be in Essex but now they are in Manchester due to ADA accessibility. She added that 23% of the district population is involved in special education
  - C. Dell Angelo noted that we have seen this is change in schools on other projects and that recently there has been an increase in the creation of and need for special education space.
- P. Beaudoin asked if the space summary included the PT/multipurpose room.
  - J. Elliott noted yes, it is around 1,200 square feet.
- A. Cameron noted that it seems the Essex project is a larger percentage than the MSBA guidelines compared to the Manchester version.
  - T. Whitman noted it would be helpful to see the justifications for this space
  - C.Dell Angelo said that the educational program that will be reviewed by the MSBA is the driver and justification for the space.
- A. Cameron noted that it should be considered that some of these spaces may be outsourced in the future.
  - P. Beaudoin noted that special education space needs have consistently gone up and they expect them to keep increasing in the future.
- A. Cameron asked how much space is really needed for the addition to the full K-5 at Manchester Memorial grade configuration?

- P. Beaudoin noted that there would be a need for an increase in around 6 classrooms plus Pre-K along with any configurations required for the common space to fit everyone.

- C. Hay asked if there has been any analysis on the core/common spaces in the Manchester building?
  - J. Elliott noted there would be an increase needed of around 13,000 square feet.
- T. Whitman asked where the physical impact is shown for the EES K-3 grade configuration for the students that go to Manchester Memorial?
  - P. Beaudoin said they can physically take on grades 4 & 5 at Manchester Memorial but there will be educational impacts
- G. Brewster asked that for the K-5 option at Manchester would they need to add 40,000 square feet?
  - J. Elliott noted that it is correct and the existing building would have very little renovation.
- M. Gerhardt noted some observations such as there is a 63% increase over the MSBA guidelines for the proposed EES K-5 option and the Manchester project was only 31%. He added that based on the shown space summaries the Manchester Memorial had 230 square feet/student and the proposed Essex Elementary School is currently at 290 square feet/student
  - J. Elliott noted that some of the larger spaces are the same size but serve a lower number of students, which skews the student/SF numbers.
- M. Gerhardt noted when he does the math, he is missing some 6,000 square feet for the Essex Elementary School K-5.
  - J. Elliott noted that the MSBA template does not always use the full 1.5x grossing factor for every square foot.
- M. Gerhardt asks if the square footage over the guidelines is completely non-reimbursable?
  - J. Elliott noted that the MSBA will track all the deviations, compare it to the educational program, and ask the District questions to decide whether they will reimburse some of the spaces or not. He added they will reimburse more than just the 45,000 square foot guideline shown but that the template does not show what those values are. The final reimbursement number will be incorporated into the final project cost.

-
    - C. Dell Angelo noted they will work closely with the MSBA and DESE and when the educational program shows a strong need for the space the MSBA can and will likely reimburse the spaces.
  - M. Gerhardt asks if it is realistic that grades 4 and5 could fit into the Manchester building?
    - P. Beaudoin noted that if that is the case they will need 16 to 18 general classrooms so some programs will have to be displaced, and space will have to be used differently than it was designed for if large group spaces have to be taken.
    - T. Whitman noted it is important to show that there will be impact to the Manchester program if grades 4 and5 are moved over.
  - P. Beaudoin asked based on the projected square footage for EES would the school be designed as a single story building, or stacked like Manchester and how does this affect the square footage totals?
    - J. Elliott noted it does not affect it greatly and the 1.5x grossing factor considers circulation for both horizontal and vertical spaces. He noted that EES could very well be two stories creatingupper and lower schools, he added this is very common.
  - A. Oldeman noted that he has seen any special education that has to be outsourced often ends up being a higher operating cost for the District rathern than keeping in house.
- T. Whitman asked to confirm that the SBC will be voting on this at the next meeting.
  - C. Dell Angelo noted yes, and they will be sending all space summary documents Thursday, and the educational program on Monday. The SBC will be voting on whether to accept these at the next meeting, and the School Committee will vote on whether to accept the space summaries and whether to approve the educational program. C. Dell Angelo added to send any questions directly to the project team.
- C. Hay asked if there will be any more review of the space summaries by the project team to lower the number?
  - P. Beaudoin noted there may be some confusion around this as they are not coming up with the numbers, they are created by the educational program that drives what spaces are needed and the space summary templates creates the square footage.

DORE + WHITTIER

- C. Dell Angelo added that the MSBA provides the educational program template, and the District develops the information that is required for the District.

- J. Hocherman asked if there are standards across MSBA projects about what percentage of the square footage over the guidelines is normally accepted for reimbursement.
  - C. Dell Angelo notes yes, they can provide information.
- McDonald asked if there is a way to articulate the overage from what MSBA will not participate in and what that the District can afford?
  - T. Whitman thinks that is something that will not be known till they go till the voters as everyone will have a different number, but the job of the SBC is to create the most cost-effective school for the District.
- P. Beaudoin noted that as an educator the most important aspect should be the classrooms even if that means reducing the size of items such as the gym even though that is also needed.
- A. Cameron asked when the decisions to pull back scope due to cost will occur?
  - C. Dell Angelo noted we have not even started designing alternatives yet so we are not ready to discuss cost at this high level. C. Dell Angelo added that JCJ needs these space summary sheets to start developing design alternatives, and as the alternatives are reviewed with the SBC, there might be instances where one or more alternatives might be removed from the options within the PDP phase to winnow down the amount of options. C.Dell Angelo noted that at PSR they will really be focusing on around a smaller amount of options and at the end of PSR they will be choosing the preferredoption and that is when costs really start to be reviewed.
- J. LaPosta noted that this is a long process, and the space summary templates are not static, they will change throughout the process even after they are accepted at PDP. He noted that their job is to design the most efficient plan and the refining from the SBC will start as soon as designing starts. He added that the MSBA will not accept the project if it does not meet the educational program so they cannot refine too much too soon. J. LaPosta also said that a lot of efficiencies can be found for the buildings once they start being designed.
- T. Whitman asked to confirm what the SBC is accepting again.
  - C.Dell Angelo noted they are accepting the spaces that support the educational program, and this will not be finalized until the end of Schematic Design with the MSBA. C. Dell Angelo added that the educational program

	is really the document that is being approved by School Committee as if it were to change the School Committee will need to revote to approve it. • P. Beaudoin noted there are no classroom numbers or square footages included in the education program. • E. Dwyer provided an example from her experience on the Pentucket SBC about how the indoor track space was supported by their education program the SBC decided that it should not be included.	
8.6	**Schedule Update** • C. Dell Angelo provided an update to the schedule for the Preliminary Design Program (PDP) and the Preferred Schematic Report (PSR) (Slide 12). ○ T. Whitman asked if the open-door food truck could be scheduled on the day that the tour and community meeting. • R.Russo noted that the food truck comes right a dismal before the school tours and the community meeting.	Record
8.7	**Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting (Occurred after approval of meeting minutes)** • Please note that this agenda topic was taken out of order and reviewed at the beginning of the meeting after previous meeting minutes were approved. • B. Zubricki, the Town Administrator for Essex, joined the meeting to discuss the town shelter aspect of the proposed Essex Elementary School. ○ P. Beaudoin noted this is a general inquiry into the Town of Essex asking whether they have any changes to the current shelter plans for the Essex Elementary School. ○ B. Zubricki noted that the Town's emergency plan is for the Essex Elementary School to be the local shelter, and they would bring in Red Cross. However, Cape Ann general area is working to make Gordon College a widespread shelter. B. Zubricki noted that they would	Record

	need a generator, ability to cook, and a large space for gathering with heating and cooling capabilities. o J. Hocherman asked if this would impact on the structural aspect and cost of the project. o F. Pellegrini noted yes it would increase the category required for the structure. She added that they can make the school prepared for these things without designating the building as a certain level shelter. o B. Zubricki agreed with this path. o C.Dell Angelo noted she sent an email to the SBC with all the requirements that would be needed. o The committee agreed to move forward with the existing shelter in place capabilities.	
8.8	**Public Comment:** There was no public comment.	Record
8.9	**Reflections & Action Items** • P.Beaudoin noted that there have been conversation regarding the Town Meeting schedules as outlined within the MSBA project schedule for Fall 2026. P. Beaudoin stated it would be helpful to schedule a time to review this timeline with the Leadership team as well as certain chair members from boards within each Town. o T. Whitman agreed that the SBC should be involved and suggested that we empower P. Beaudoin to meet with the two Town Administrators for an initial conversation. The group supported this path. o C.Dell Angelo noted they could create a working group if that would be helpful o P. Beaudoin noted she will start first with an offline group and bring it forward if needed.	
8.10	**Adjourn:** **Roll Call Vote:** A motion to adjourn the meeting was made at 7:51pm by G. Brewster and seconded by A. Cameron • **Yes: 14 | No: 0 | Absent/Abstain: 2**	Record

Name	Yes/No/Abstain & Absent
Michelle Cresta	Yes

Lisa O'Donnell	Advisor – No Vote

	• **Yes: 11 | No: 0 | Absent/Abstain: 5**	
9.4	**Space Summaries & Educational Program Acceptance (Vote Expected)** • C. Dell Angelo noted that she shared the space summaries last week and P. Beaudoin also provided the educational program. C. Dell Angelo added that both of those emails outlined important factors to consider while reviewing the documents. C. Dell Angelo noted that the goal tonight is for the SBC to accept these documents and from there they will go to School Committee for their acceptance of the space summaries and their approval of the educational program. ○ G. Brewster noted that originally, he struggled with understanding what was shared last week but after the information provided, he now understands how these numbers were generated. G. Brewster added that they are not the final numbers but how it is a starting point to reach the final square foot number. G. Brewster also noted he read a portion of the education program and was impressed with what he read. • P. Beaudoin noted that if anyone has questions about the education program, they should ask. P. Beaudoin noted that at a high level it is not about how many spaces there are and their sizes but is about how they use the spaces that they have and need. ○ A. Cameron noted the historic challenge has been that Essex is not a perfect 2/3rds to Manchester's whole so this could create issues such as needing 1.5 classrooms, which you cannot do, so you need to provide two. ○ A. Cameron asked if the admin still asserts that the classroom and small group instruction space that we designed at Memorial is still applicable in this school? • P. Beaudoin noted that is a modern education versus 1950's building design ○ A. Cameron asked how many revisions there has been since the Manchester Memorial education plan? • P.Beaudoin noted that the curriculum layout is still the same. The main changes are using breakout space and neighborhood-based classroom language. P. Beaudoin added that there are a lot more small group spaces needed, and flexibility is still a key.	

- A.Cameron agreed that there is a lot of language for flexible space. A. Cameron asked how you draw a limit through design and education to prevent overbuilding of these spaces?
  - E. Dwyer noted that one thing that was supported well in the educational program was the piece about differentiation. E. Dwyer added that sometimes you teach in large groups while at other times it is small groups and even within the smaller groups the students may learn better through visual or oral speech. E. Dwyer continued that there is a varying dynamic within the classroom and students gain value from having breakout time with teachers separate from the large classroom. E. Dwyer said that this is even more of an expectation now in education than it was five years ago.
  - P. Beaudoin stated that the underlying content from the education program came from the notes provided by the Director of Special Education, Director of Curriculum, K. Provost, staff, & the visioning sessions. P. Beaudoin noted that the educational program is really just a compiled narrative of this. P. Beaudoin said that even in spaces such as the cafeteria they have to accommodate students that cannot function in spaces that are large and loud. P. Beaudoin noted that this is not a specific space ask but is a type of space ask.
  - J. LaPosta noted that the statistics nationally mirror what Essex is seeing regarding the needs of students. He said that a lot of what the design input does is to not actually add space to the building but how the space is utilized. J. LaPosta noted that the use of specific furniture is greatly impactful along with the interior finish designs & colors of the spaces. Lastly, he noted that the implementation of systems such as audio enhancement can be very useful.

- A. Cameron asked if they currently have world language as it is in the educational program and how does the MSBA reimburse a program the district currently does not have?

- P. Beaudoin noted it is a program they used to have but it was cut due to funding and has always been a part of the program. P. Beaudoin does not think the MSBA will have an issue with it because it has always been a part of the programming in the past and will be in the future. P. Beaudoin added that they may not need their own classroom but will need a teacher planning space at the very least.

- A. Cameron asked about teacher planning rooms and if they are necessary as she does not think they are currently used often.
  - P. Beaudoin said that they are used by the teachers heavily as it acts as a "defacto" home base and stated that district wide there is a lack of space for teachers to work together, and this is an important item. P. Beaudoin said that the educators make the schools run and it is important for them to have adequate space
  - E. Dwyer shared an example of how when she works and collaborates with other teachers, they have to use one of their classrooms and create space to work. However, every week they have to restart & reset up the work because the classroom has to be utilized by the students the majority of the time.
    - K. Provost added that at the elementary level it is even more unproductive because they are using chairs and tables meant for small children not adults.
  - R. Russo noted it would be beneficial to have a shared space where they can store shared resources for their programs instead of everything living in their classrooms.
  - T. Whitman added that those adult spaces can be utilized for students also and are essentially flex space.
- A. Cameron asked if there is any scenario where they would not extend the Pre-K program to include two classrooms in the Essex Elementary School Project?
  - P. Beaudoin noted she could not recommend that and this year they have three classrooms and could have four classrooms if there was enough space. P. Beaudoin added that if the district has to go to universal Pre-K they will actually be under spaced even with the new classrooms.

- A. Cameron asked how the Manchester Memorial library commons have been functioning and if there is anything that would be done differently?
  - P. Beaudoin noted that she does not think so and it serves its purpose, but she does not think the school is utilizing the outdoor space associated with it enough. P. Beaudoin noted that school is still growing into the building and its space so she hopes that it will become utilized more.
- A. Cameron asked to clarify that project rooms are separate and different from art rooms.
  - P. Beaudoin noted yes, the project rooms can be signed out by classes to work on prolonged projects or be used for small presentations as some examples but are not designated for art classes.
- E. Dwyer noted that she has some questions about the details of the program specifics.
  - P. Beaudoin asked her to reach out separately to review the detailed aspects if the questions are not building & space related.
  - T. Whitman noted that it is okay for those discussions to take place outside the meeting as long as the SBC agrees that it is fine for changes to occur after they accept it.
    - C. Dell Angelo noted this is acceptable, common, as it is always changing, and that the project team can provide a summary of any changes that occur.

- M. Gerhardt asked if it was realistic that the Manchester Memorial School could actually handle the absorption of Essex's grades 4 & 5 without any changes?
  - P. Beaudoin noted yes, they can fit the kids in, but the building will not be used as it was designed. P. Beaudoin noted that they created a document that illustrates that classroom changes that would be needed.
  - A. Cameron asked if the quality of education will drop in this scenario?
    - P.Beaudoin noted yes, it would be overcrowded and is the worst option of the three for child development.
  - C. Dell Angelo added a reminder that the space summaries will be further refined and will not be locked in until the schematic design package is submitted. C. Dell Angelo noted that in the next agenda topic they will seem some of the first proposed options but added that based on the criteria these

will be graded on some options will be removed and some may expand into multiple different iterations or versions. C. Dell Angelo said that some of the options may not meet the educational program and therefor will be removed by the committee.
    - M. Gerhardt noted that is his point and asked if there should be a space summary, that is K-3 at Essex with an expansion of 4 & 5 at Manchester? M. Gerhardt noted that it seems like they are missing a piece.
    - C. Dell Angelo responded by explaining that the three space summaries are based on the three agreed upon enrollment configurations with the MSBA. These are laid out through the statement of interest and the feasibility study agreement.
- C. Hay noted he does not think that the space summaries are flawed and it may be that not putting an addition on the Manchester Memorial building is flawed. He added that this will all be fleshed out during the discussions around those options.
    - P. Beaudoin noted that it may just be that the original assertion that this is a feasible grande configuration is flawed.
- M. Gerhardt asked if they accept these space summaries and move forward with them is the SBC now taking off the option of expansion at the Manchester memorial building for the Essex K-3 grade configuration?
    - C. Hay answered by saying no and that these options will be fully vetted and reviewed for three more phases so everything will be considered.
    - J. LaPosta added as a reminder that any work at the Manchester Memorial building would not be reimbursable by the MSBA.
- T. Whitman asked to clarify if what she understands is correct. T. Whitman noted that the space summary is MSBA's template for reimbursable space, but any addition for that configuration, any editing or modifications you need to do at the Memorial School for just the forth & fifth grades to go over there wouldn't be reimbursable. Therefore, it's okay that they're not included in that space summary, because the SBC is not arguing that they would be reimbursable in any way?
    - J. LaPosta noted that in the MSBA's eyes the project for the K-3 grade configuration is only about the Essex students in those grades. The MSBA will not

	care what the District decides to do with the students in grades 4 & 5. J. LaPosta noted they will have an exception to undoing work they paid for at the Manchester Memorial Building and they may want money back. • M. Gerhardt asked what if they do not do any construction to the building, would the MSBA have any issues with reworking the educational plan that they just funded a building for? ▪ P. Beaudoin noted the MSBA does not approve or fund the educational plan they approve and fund the physical building. The purpose of the educational plan is to keep the project team in check and give them a basis for the design. ▪ C. Hay noted that the program they sold for Manchester is gone for the MSBA and they currently only care bout the Essex educational plan. • C. Dell Angelo noted that this is why there are three grade configurations or plans that need to be studied and that it is up to the District to figure out the best option. • C. Hay noted that every District and Town has a different view on education and how to teach so the MSBA does not care how you teach they just care about the space summaries, and the educational program is a roadmap to get to those space summaries. ○ T. Whitman asked if the grade configuration option to keep grades K-3 at an Essex site and move grades 4 & 5 to Manchester with no additions or work to the Manchester Memorial building will meet the educational program? • P. Beaudoin said that the only option that will meet with the educational program is the full K-5 school on the current Essex site. P. Beaudoin noted that this is because their program consists of the regional agreement and this is the only option that does not deviate from that. P. Beaudoin noted that they are not deviating from that either unless there is a cost-efficient reason to cause the committee to vote in that direction. • C. Dell Angelo noted she talked to the MSBA about the three design configurations and asked if it is viable to take of the Manchester Memorial site at the PDP phase due to information gathered so far.	

C. Dell Angelo noted that the MSBA heard from the district that there was a large contingent of the community that wanted it to be reviewed so it has to be carried till PSR and that is when it can be eliminated if necessary.
    - C. Hay noted that no one should worry about carrying the Manchester Memorial options through PDP because once the project is into the PSR they can start removing options.
- A. Cameron asked if the current special education programs will have a large lifespan to support these new spaces
    - P. Beaudoin noted they have longevity and if the cohort changes, they could morph, but she does not predict that and sees these programs increasing in need.
    - K. Provost noted that legally you cannot run the K-5 program in one room due to age restrictions so that is why they often take up multiple rooms.
- P. Beaudoin reviewed the graphic she passed out showing the configuration of the Manchester memorial building if Essex grades 4 & 5 were added in.
- P. Beaudoin noted there is a whole community section in the educational program and noted she built in the goal of adding community track and field space.
    - A. Cameron said it is good to throw everything in and see what can actually be done.

Roll Call Vote: A motion to accept the presented space summaries and educational plan to be sent to the school committee for their acceptance and approval respectively made by P. Beaudoin and seconded by H. Oettinger.

Discussion: No further discussion.

9.5	**Preliminary Evaluation of Alternatives Review**
	
	• J. Elliott reviewed the preliminary evaluation of alternatives including the seven proposed options for the three different grade configurations along with the draft evaluation matrix (Slide 10 - 18). Please view the presentation to see each induvial option along with the associated facts and considerations.
	  ○ C. Hay asked if there should be another option showing an addition at Manchester Memorial?
	  • J. Elliott noted that the MSBA's project would just be the K-3 at Essex and would not include the work done in Manchester.
	  • P. Beaudoin noted that if there was an addition at the Manchester Memorial for the EES K-3 option it would have to be a completely separate district-led project and not included with the Essex MSBA project.
	  • C. Dell Angelo agreed but said it would be an important consideration to be included for that EES K-3 option.
		Record

- P. Beaudoin noted that these options are not on here because they are viable, the goal is to decide if they are or not.
- E. Dwyer asked with renovations how does something such as abatement work?
  - J. Elliott said it would be done during the summer or multiple summers. There would be multiple phases with the exact quantity that is unknown at this time.
- A. Cameron asked how major system upgrades happen during the addition/renovations?
  - J. Elliott noted it would be completed during summers.
  - J. LaPosta said that it can also be done in phases but that adds cost.
- J. LaPosta added that unlike the code upgrade option, the addition/renovation options allow for adjacency changes and rework within the walls of the building.
- M. Gerhardt noted that the new construction options seem to infringe on wetland areas and asked if the project team is engaging anyone to review it.
  - J. Elliott noted yes, they are conducting wetland flagging and will review this, J. Elliot noted that if the new option cannot go in the shown location it would have to become a multi-phased new construction option instead of just the two phases listed
- A. Oldeman asked what the gross area of Manchester Memorial was?
  - C. Dell Angelo noted 77,000 square feet
- C. Dell Angelo noted that all the playgrounds will need to be expanded in the full K-5 at Manchester Memorial along with all the base building additions.
- T. Whitman noted that the expanded car park on option B1.1 looks like it would create issues with the Manchester Con Com and the storm water management plan.
- C. Dell Angelo noted that on option B1.1 any of the existing buildings that are touched by the MSBA will implement a cost recovery from the original project, and it will reduce their grant.

- T. Whitman noted that at the most recent school committee meetings the currently proposed grade configurations were shared and the final comment from the committee was "why is this even being reviewed and when can it be removed?". T. Whitman noted that the school committee may conduct their own vote to not amend the regional agreement in parallel to the SBCs process.

- C.Dell Angelo asked the SBC members to review the evaluation criteria matrix as homework and let the project team know of any additions and/or changes.
- J. LaPosta noted the most helpful and productive route now is to finalize the criteria matrix to be able to evaluate the alternatives.
- P. Beaudoin asked if she is correct if the addition at the Manchester Memorial is within 20,000 total square feet of the new building at the Essex site?
    - J. Elliott noted it is close to that; the fully new construction option of K-5 at Essex's current site would be around 33,000 square feet larger than the K-5 addition at the Manchester memorial building.
    - A. Cameron asked if option B1.1 really accommodates everything needed?
    - P. Beaudoin noted yes but it is still going to be a tight fit.
    - M. Gerhardt noted that what happens is that you do not have to build a whole new cafeteria or gymnasium and that is why so much square footage is saved.
    - P. Beaudoin added that the common spaces would not fit the full student population anymore.
    - A. Cameron noted that for option B1.1 if one or two developments occurred there would be severe lack of space as there is no room for another addition at the Manchester Memorial site.
        - J. Elliott noted that is a good point and there would be no room for a future 20% expansion.
- T. McDonald asked about the structure of the building, the ceiling height, the classroom size and layout for options A0.1/A0.2. T. McDonald asked when a study of how this would really work is presented?
    - J. LaPosta noted this would all occur in the next phase, the PSR.
- A. Oldeman noted that these are the required steps per the MSBA and they have to go through them. A. Oldeman said that at the Memorial project the code upgrade was actually more expensive.
- P. Beaudoin noted she has received questions about how the SBC and project team will study the impact of traffic of adding more students to the Manchester memorial building. P. Beaudoin also asked if the building would look very institutional.
    - J. LaPosta noted their goal is to always make the best building they can and they will review the traffic.
- M. Gerhardt asked if a criteria item could be that a follow-up project would be needed?
    - C. Dell Angelo noted yes everything can be a criteria item and that would be an important one.

9.6	**Schedule Update**
	
	• C. Dell Angelo reviewed the upcoming schedule for PDP and PSR (Slide 19)
	  ○ T. Whitman noted that if grade configurations are decided in March that would not be enough time to add it to the spring town meeting.
	  • C. Dell Angelo noted that there would not need to be a town meeting to vote for that unless the school committee votes to amend the regional agreement.
	  ○ C. Hay noted he is uneasy with providing costs at this high level.
	  • C.Dell Angelo noted that they have to provide costs in the PDP document which will be public, but they can present ranges to the public in community meetings or even just different amounts of dollar signs.
	  • J. LaPosta noted that it is really for comparative use between the options to help get a better understanding of the range for each option.
	  • C. Dell Angelo added that the cost estimators are extremely conservative at this level also.

MEETING AGENDA

Meeting Date:	November 25, 2025
Meeting Time:	6:00PM – 8:00PM
Project Name:	Essex Elementary School
Project Number:	202306980020
Meeting Purpose:	School Building Committee Meeting
Location:	This meeting will be a hybrid meeting (both in-person and remote) at Essex Elementary School Cafeteria

Meeting Link: https://us06web.zoom.us/j/85349809336

---

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
    - SBC Meeting No. 8 20251028
    - SBC Meeting No. 9 20251106
3. Invoices & Commitments for Review and Approval (Vote Expected)
    - Minuteman Press Invoice | $3,127.81
4. Community Meeting #2 Feedback
5. Sustainability Working Group Update
6. Work Plan Review (Vote Expected)
7. Further Evaluate Alternatives
8. Schedule Update
9. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
10. Public Comment
11. Reflections & Actions Items
12. Adjourn

DORE + WHITTIER

Project:	Essex Elementary School	Project No:	
Subject:	School Building Committee Meeting	Meeting Date:	11/25/2025
Location:	Hybrid (Essex Elementary School Cafeteria & Zoom)	Time:	6:00 PM
Distribution:	Attendees, Project File	Prepared By:	

Present	Name (* Voting Member)	Affiliation
√	Michelle Cresta*	Director of Finance & Operations
√	Pam Beaudoin*	Superintendent
√	Kim Provost*	Principal
	Theresa Whitman*	SBC Co-Chair
	John Binieris*	SBC Co-Chair
√	Andy Oldeman*	Manchester Finance Committee / Mechanical Engineer
	Charlie Hay*	Architect School Building Experience
√	Gordon Brewster*	Engineer, Sr. Proj. Manager, Owner's PM, former Member of MERMHS & Memorial building
√	Tyler Virden*	Project Executive -Wise Construction / Paren
√	Annie Cameron*	Former SC Member and Memorial SBC Member
√	Ariel Fernando Brian*	Architect - CBT
	Jen Hocherman*	Architect - Partner SV Design
	Michael Gerhardt*	Civil Engineer / Parent
√	Timonthy McDonald*	Architect - Onion Flats
√	Henry Ottenginer*	Manchester Conservation Committee / Education Background
	David Pereen	Resident / Plumbing & Fire
√	Lisa O'Donnell	Design & Construction / Essex Planning Board
	Steve Hunt*	Facilities Manager
√	Emily Dwyer*	EES Teacher
√	Kim Field	EES Teacher
√	Rachelle Rousseau	EES Teacher
	Mike Burton	Project Director / Partner - DWMP
√	Christina Dell Angelo	Project Executive - DWMP
√	John Albright	Project Manager - DWMP
√	Rachel Rincon	Assistant Project Manager - DWMP
√	Jacob Greco	Assistant Project Manager - DWMP
√	James LaPosta	Principal - JCJ Architecture
√	Fawn Pellegrini	Senior Project Manager - JCJ Architecture
√	Jeff Elliott	Project Architect - JCJ Architecture
	Emily Czarnecki	Principal (Interiors) – JCJ Architecture

	Mike Pirollo	Principal – MLP Integrated Design
√	Eric Haggstrom	Sustainability Director – JCJ Architecture
	Kelley Tapia	Soden Sustainability

Item No.	Action Item	Ball in Court
10.7	Project team to send out filled in Criteria Matrix	DWMP/JCJ

- **Please click here for the presentation**
  - **This will be referenced in the meeting minutes with slide numbers called out to refer to.**
- **Below is a summation of key points, please view the recording here for full transcript and chapter summaries.**

Item No.		Description
10.1	**Call to Order & Intro:** Called to order by P. Beaudoin at 6:03pm, please refer to the attendee list.	Record
10.2	**Approval of October 28, 2025 & November 6, 2025, Meeting Minutes (Vote Expected):** ~~**Roll Call Vote:**~~ A motion to approve the October 28, 2025 & November 6 - 2025, Meeting Minutes was made by E. Dwyer and seconded by H. Oettinger. Discussion: None.	Record

10.4	**Community Meeting No. 2 Feedback** • C. Dell Angelo noted that ~~the~~ community meeting No. 2 was conducted last week. The attendance was lower than the ~~first~~first, most likely due to the fact that the Apple Street site location was removed from the options. Community Meeting No. 3 will be held at Manchester Memorial Elementary School on December 9th with school tours before it. • G. Brewster noted that it was a good meeting although lightly attended	Record
10.5	**Sustainability Working Group Update**	Record

- E. Haggstrom ~~reviewed~~ shared an update from the sustainability working group including recommended incentives targets, an overview of LEED, and other general topics (Slides 7 - 26).
    - T. McDonald commented that aside from the operational energy ~~savings~~savings, the optimized stretch code is important when connected to the climate targets that the state is trying to reach by changing the code. It is a different perspective now than when the Manchester Memorial project was underway.
        - E. Haggstrom noted that the code has been developed more in MA to be more stringent since the Manchester Memorial Elementary School (MMES) Project as it is built around the state's goal of reaching decarbonization by 2050. The stretch code in MA really sets the baseline for what the building will have, whereas the Opt-In Stretch Code will add another layer that will help the building be all electric and get the needed incentives.
    - A.Cameron noted that Essex is no longer doing the stretch code and asked if this is something the town should change in the coming years.
        - E. Haggstrom noted the town does not have to change anything at a municipal level, but the MSBA does require th~~e~~at the stretch code t~~o get~~be met.
    - A. Brain asked if a mixed fuel pathway is taken, will they still get the incentive points?~~.~~
        - E. Haggstrom noted yes, but all utility incentives would be gone, and it has been found that all electric is the most cost-effective option.
    - G. Brewster asked why the Essex project would be buying the charging stations when Manchester purchased them separately after the project was completed.
        - E. Haggstrom noted that they want to include it in the design to see what the most cost-effective option will be, either including it in the project or purchasing them separately after the project as Manchester did.
    - G. Brewster noted on the current Essex site there are multiple ~~different types of~~ construction options being proposed and asked how this affects the LEED evaluation.
        - E. Haggstrom noted that it depends on how much addition is included in the addition/renovation options as they will have to bring any renovated building up to the stretch code, but the LEED approach will be very similar.

- T. McDonald asked what the EUI target ~~was~~ for the Manchester Memorial Project was and noted that the Essex building may be 20% to 30% more efficient with today's technology.
    - E. Haggstrom noted he does not know what the EUI was for the MMES but does not think the Essex project will be significantly higher than Manchester Memorial as it is a very efficient building. The Essex project will be targeting an EUI of 25.
- T. Virden asked if there are any towns or cities where the grid may not be able to meet the requirements of these new projects.
    - E. Haggstrom noted he has ~~s~~ not run into any grid issues or them not being able to support the needs
    - A. Oldeman added that sometimes the services do have to be upgraded to support a new building and that may be an easy lift or more complicated and expensive as it differs on every project.
- A. Oldeman noted that although air source heat pumps have been making advancements, they are still not guaranteed to be as reliable as some older options are like a gas fired water heater.
- A. Brain noted that LEED version 5 has new points for climate resiliency and thinks those may be easy points to obtain if the project updates to that version. A. Brain also noted that it would be good for the project to target a LEED Gold and if it ended up being LEED Silver that would still be okay and asked if there was any incentive from the state to get LEED Gold.
    - E. Haggstrom noted ~~no~~ there is no incentive from the state for LEED Gold and the process decided on by the working group was to target LEED Silver as they did in Manchester with a possibility for LEED Gold if certain pieces fall correctly.
- A. Cameron noted that all this discussion about the LEED scorecard is for 12 Story Street and asked if this should be a consideration on the criteria matrix as it would be harder to achieve the same points at the MMES site.
    - J. Elliott noted they did add a line to the matrix criteria under site for~~:~~ "meets sustainability goals". In Manchester there is a footprint issue which could complicate the process but for the majority of the other criteria they do not see a differentiator.

DORE + WHITTIER

10.6	**Work Plan Review (Vote Expected)** • C. Dell Angelo noted this agenda item is part of the checklist process needed to submit the Preliminary Design Program and is an approval of the Microsoft Project Schedule for the project. A motion to approve the work plan for the Preliminary Design Program was made by E. Dwyer and seconded by G. Brewster Discussion: None Roll Call Vote:	Record

- **Yes: 11 | No: 0 | Absent/Abstain: 5**

10.7	**Further Evaluation of Alternatives**
	
	• J. Elliot reviewed the current Preliminary Design Alternatives and updates that have been made since the last meeting where they were shown (Slides 29 - 39).
	  ○ K .Field asked why the bus looks like it is pulling in the same direction as the cars are pulling out on option A0.1.
	  • J. Elliott noted it is two-way traffic, but it will have to be reviewed further for sight lines and turn radius.
	  ○ C. Dell Angelo noted that the project team can make an attempt to fill out the criteria matrix and can share it with the committee to be reviewed at the next meeting.
	  ○ P. Beaudoin ~~noted~~ shared that if the project moves forward at the MMES site, the students from Essex would need five (5) buses due to the elimination of all the current walking students.
	  ○ H. Oettinger asked if any of the Essex site options have routes where the buses and parent pick-up/drop-off do not intersect.
	  • J. Elliott noted that the existing access points could remain which would keep them separate.
	  • J. LaPosta noted that these are just diagrams on how they would be. T~~t~~he intersections would have to be designed further.
	  ○ E. Dwyer commented that some of these traffic arrows are going in the wrong direction and most of the plans should have the bus arrows reversed.
		Record

10.8	**Schedule Update** • C.Dell Angelo reviewed the upcoming meetings and schedule (Slides 41-42)	Record

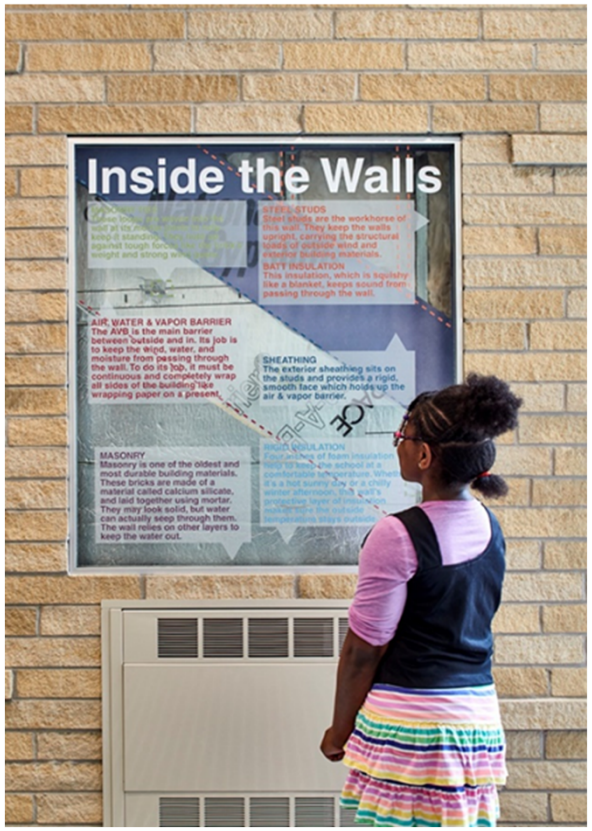
- **Essex Elementary School**
- Manchester Essex Regional School District

- Sustainability Working Group Report Out

- November 25, 2025

Overview

1. Goals of the Sustainability Working Group
2. Recommended Incentives Target
3. Introduction to LEED
4. Preliminary Draft LEED Scorecard
   Story Street Site
5. Review of Point Targets by Category
6. MMES Site Challenges
7. Open Discussion
8. Next Steps

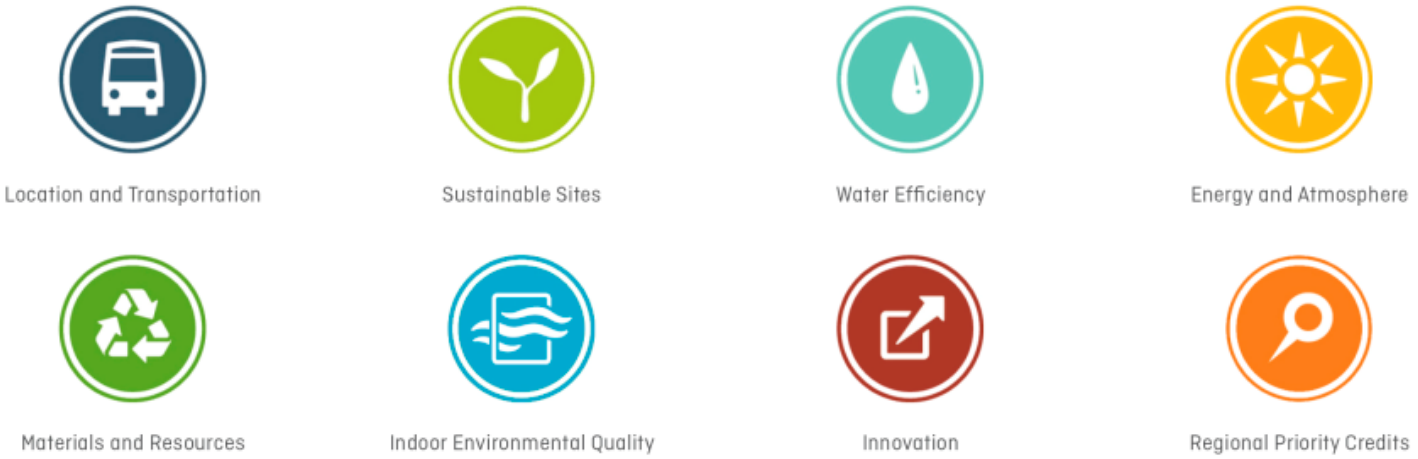


Goals of the Sustainability Working Group

- **Prioritize Learning**
  - Create spaces that **improve learning outcomes**
  - Provide **healthy indoor environments**
  - Offer **training** opportunities for students, staff, and teachers

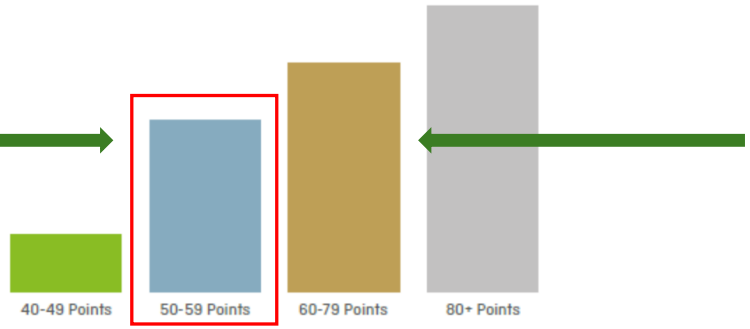
- **Maximize Value to the District**
  - Minimize first-cost, operational, and maintenance costs
  - Maximize available incentives

- **Align with Manchester Memorial**



Recommended Incentive Targets

- **Required:**
  - Achieve **Silver** using LEED-Schools v4.0 / v4.1
  - Achieve a minimum of 3 (out of 7) points in the following:
    - MR – Building Product Disclosure and Optimization, v4.1 – Material Ingredients (1 point)
    - EQ – Low Emitting Materials, v4.1 (1 point)
    - EQ – Indoor Air Quality Assessment, v4.0 (1 point)
  - Meet the MA DOER "Stretch Code Green Community" standards
  - Be "solar ready"



- **Recommendation**
  - Meet the MA DOER "Opt-In Specialized Stretch Energy Code" (All-electric pathway) - **3% Additional Reimbursement**
  - Earn 5 (out of 7) of the points listed above (MR/EQ) – **1% Additional Reimbursement**
  - Target Mass Saves Path 1 Incentives Program (preliminary EUI target of 25 and Full Electrification)

Introduction to LEED

The number of points that a project earns determines its level of LEED® certification.

Essex MSBA Minimum Target + Manchester Memorial (MMES) Target

Manchester Memorial (MMES) Achieved Gold!

Preliminary Draft Scorecard

LEED v4 for BD+C: Schools

Certified: 40 to 49 points, **Silver:** 50 to 59 points, **Gold:** 60 to 79 points, **Platinum:** 80 to 110

LEED Silver required per MSBA #61

- **Preliminary Draft Score Card**
- 12 Story Street Site

- **Initial Results:**
- Location and Transportation **4**
- Sustainable Sites **10**
- Water Efficiency **5**
- Energy and Atmosphere **14**
- Materials and Resources **5**
- Indoor Environmental Quality **8**
- Innovation **6**
- Regional Priority **2**

- **Proposed Target: 54 points** (Silver 50 - 59)

Scorecards are preliminary drafts for discussion purposes only. Design team will continue to evaluate and revise these scorecards as the design develops

Location & Transportation [4]

MMES ✅
- Sensitive Land Protection (1)

MMES ✅
- Surrounding Density & Diversity of Uses (2)

- Bicycle Facilities (Maybe 1)

MMES ✅
- Provide bike parking and bike lanes on site consistent with MMES

MMES ✅
- Provide shower and changing facilities consistent with MMES
- Team to continue to evaluate options for covered bike parking

MMES ✅
- Green Vehicles (1)
  - 10% of parking spaces to be EV Ready (Required by MA DOER Stretch Energy Code – MSBA Minimum)
  - Evaluate the cost difference between District providing charging stations or purchasing PPA after construction

MMES

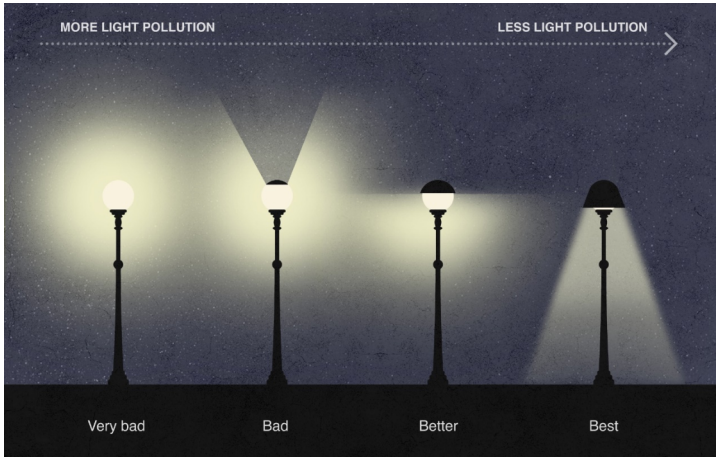
Sustainable Sites [10]

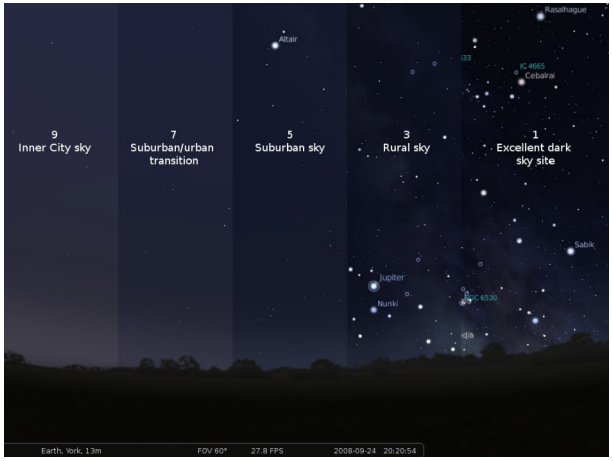
MMES ✅
- Site Assessment (1) – Required by MSBA

MMES ✅
- Site Development – Protect or Restore Habitat (1)
  - *This point will not be possible for Addition/Renovation Options at Story St*

MMES ✅
- Open Space (1)

MMES ✅
- Rainwater Management (3)
  - System to be designed to accommodate 90th Percentile Storm (10-year storm)
  - Team continuing to evaluate use of Rain Gardens consistent with MMES





MMES

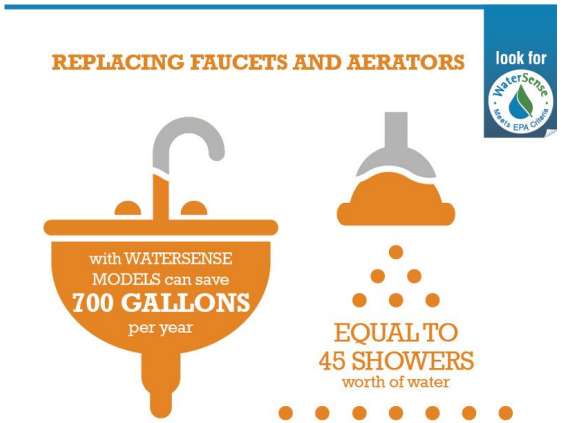
Sustainable Sites [10]

MMES ✅
- Heat Island Reduction (2)
  - Integrate roof and paving materials consistent with MMES

MMES ✅
- Light Pollution Reduction (1)

MMES ✅
- Joint Use of Facilities (1)

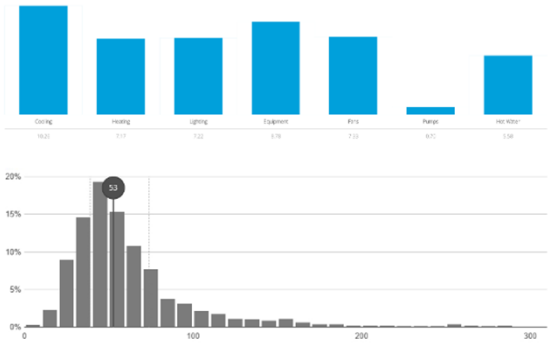
Water Efficiency [5]

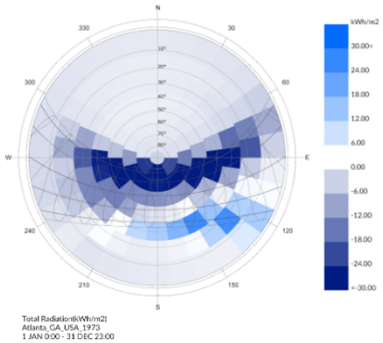


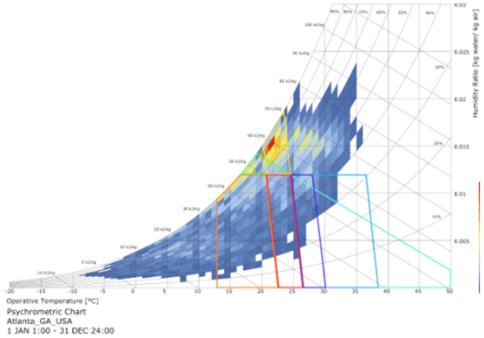
MMES ✅
- Outdoor Water Use Reduction (2)
  - No irrigation consistent with MMES

MMES ✅
- Indoor Water Use Reduction (2)
  - Utilize the same fixtures as MMES

MMES ✅
- Water Metering







Energy and Atmosphere [14]

MMES ✅
- Enhanced Commissioning (5)
  - Required by MSBA

MMES ✅
- Optimize Energy Performance (8)
  - *LEED has raised their benchmark since completion of MMES making it harder to achieve. MMES achieved 11 points*

MMES ✅
- Advanced Energy Metering (1)

Materials and Resources [5]

- Building Life Cycle Impact Reduction (1)
  - JCJ can perform an initial Life Cycle Assessment evaluating Embodied Carbon
  - **Recommendation:** Target 5% reduction to Embodied Carbon to achieve (1) additional point and (1) bonus Rregional Priority point

- Building Product Disclosure and Optimization (BPDO) – Environmental Product Declarations (EPDs) (1)

MMES ✅

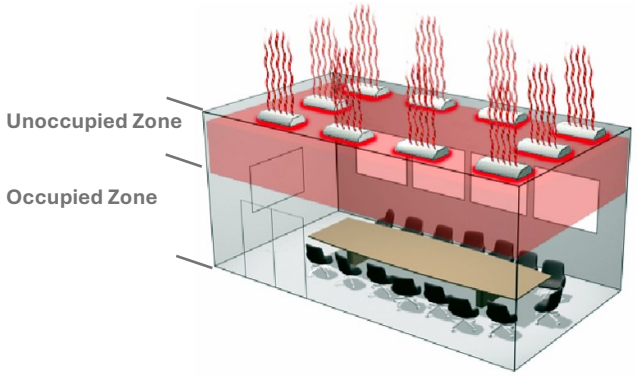
- BPDO – Material Ingredients (1)
  - Aligned with additional MSBA reimbursement incentive

MMES ✅

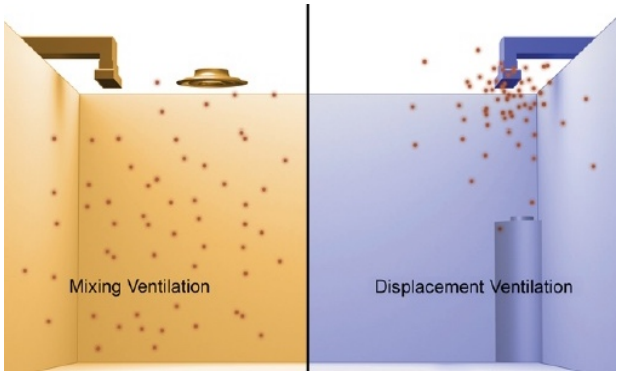
- Construction and Demolition Waste Management (2)

MMES ✅

Indoor Environmental Quality [8]



MMES ✅
- Enhanced Air Quality Strategies (2)



MMES ✅
- Low-Emitting Materials (3)
  - Aligned with additional MSBA reimbursement incentive

MMES ✅
- Construction Indoor Air Quality Management Plan

MMES ✅
- Indoor Air Quality Assessment (1)
  - Aligned with additional MSBA reimbursement incentive

MMES ✅
- Interior Lighting

Displacement Ventilation was implemented at MMES to provide improved energy efficiency and air quality

Innovation [6] & Regional Priority [2]

MMES ✅
- Sustainable Purchasing: Lamps (1)

MMES ✅
- LEED Operations & Maintentance (O+M) Starter Kit (1)
  - To expand on existing MMED O+M Starter Kit

MMES ✅
- Exceptional Peformance: BPDO – Material Ingredients (1)
- Exceptional Peformance: Low Emitting Materials (1)

MMES ✅
- Exceptional Performance: BPDO – EPD (1)

MMES ✅
- LEED Accredited Professional (1)

MMES ✅

MMES ✅
- Open Space (1)
- Optimize Energy Performance (8 pt minimum) (1)

Preliminary Draft Scorecard

LEED v4 for BD+C: Schools

LEED Silver required per MSBA #81

- **Preliminary Draft Score Card**
- 43 Lincoln Street Site

- **Initial Results:**
- Location and Transportation **4**
- Sustainable Sites **8**
- Water Efficiency **5**
- Energy and Atmosphere **14**
- Materials and Resources **5**
- Indoor Environmental Quality **8**
- Innovation **6**
- Regional Priority **1**

- **Proposed Target: 51 points** (Silver 50 - 59)

Scorecards are preliminary drafts for discussion purposes only. Design team will continue to evaluate and revise these scorecards as the design develops

MMES Site Challenges

- Site Development – Protect or Restore Habitat
  - *This point will not be possible for Addition/Renovation Options at MMES Site*
- Open Space & Regional Priority Point
  - *This point will be challenging for the MMES Site*
- Rainwater Management
  - *Relocation and/or expansion of Rain Gardens at MMES site will be challenging given site constraints*
- Optimize Energy Performance & Incentive Programs
  - *Although MMES is very energy efficient, it was built prior to the adoption of the DOER Stretch Energy Code and the changes in Utility incentives which requires Full Electrification. The use of natural gas at MMES will add complexity and potential cost to achieve these credits and incentives. Addition/Renovation also adds complexity to the LEED credit process.*
- Building Life-Cycle Impact Reduction & Regional Priority Point
  - *Connection to existing MMES building may limit construction techniques due to compatibility with existing construction and may add additional complexity and cost. Team will continue to study this if this site is selected.*

Open Discussion

Next Steps

- Submit PDP to MSBA in Jan 2026
- Submit PSR to MSBA in April 2026
- Schematic Design Development occurs May through November 2026
  - Mass Save Program– Complete the MOU

    (Memorandum of Understanding)
  - Sustainability Working Group Meeting #3

    Early to mid Schematic Design

    Refinement of LEED scorecard to align with proposed site and design

MMES

Design Alternatives

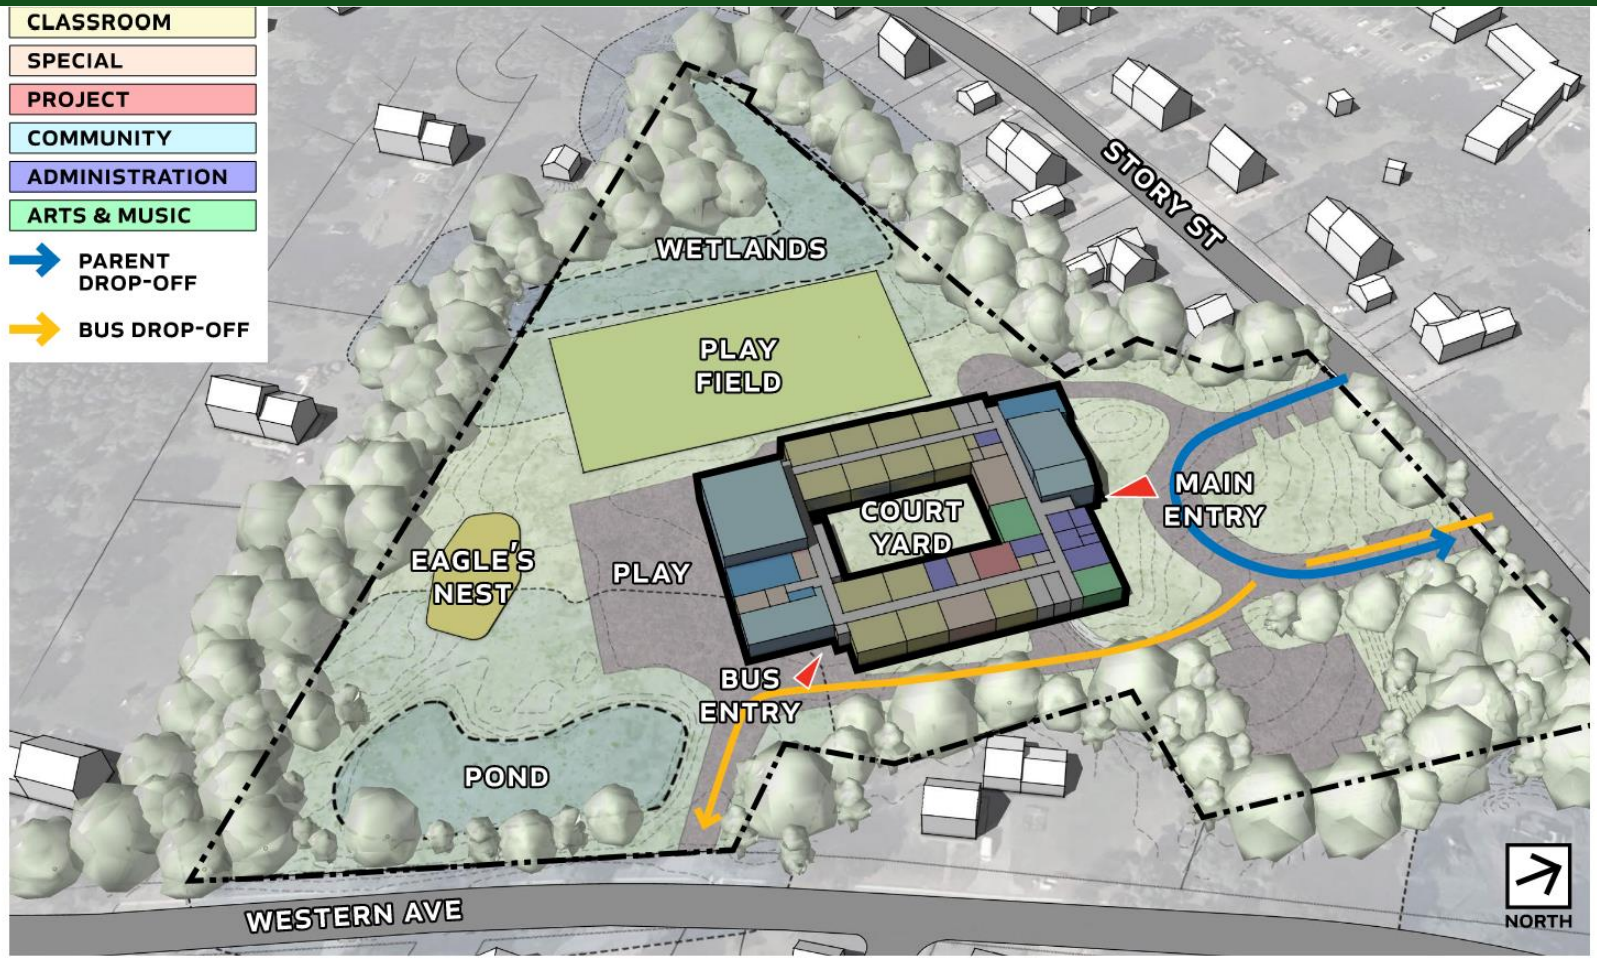
OPTION A0.1

PRE-K – 3
165 STUDENTS + 30 PRE-K
CODE UPGRADE/BASE REPAIR

53,036 GFA RENOVATION

CONSIDERATIONS



- EXISTING BUILDING IS SMALLER THAN TARGET
- CORE CLASSROOMS ARE UNDERSIZED
- GYM IS UNDERSIZED
- CONSTRUCTION WILL REQUIRE NUMEROUS SMALL PHASES IN AN OCCUPIED BUILDING
- MOVING GRADES 4-5 TO MMES CREATES SWING SPACE (4 CLASSROOMS)
- K-3 REQUIRES MODIFICATION TO THE REGIONAL AGREEMENT

Design Alternatives

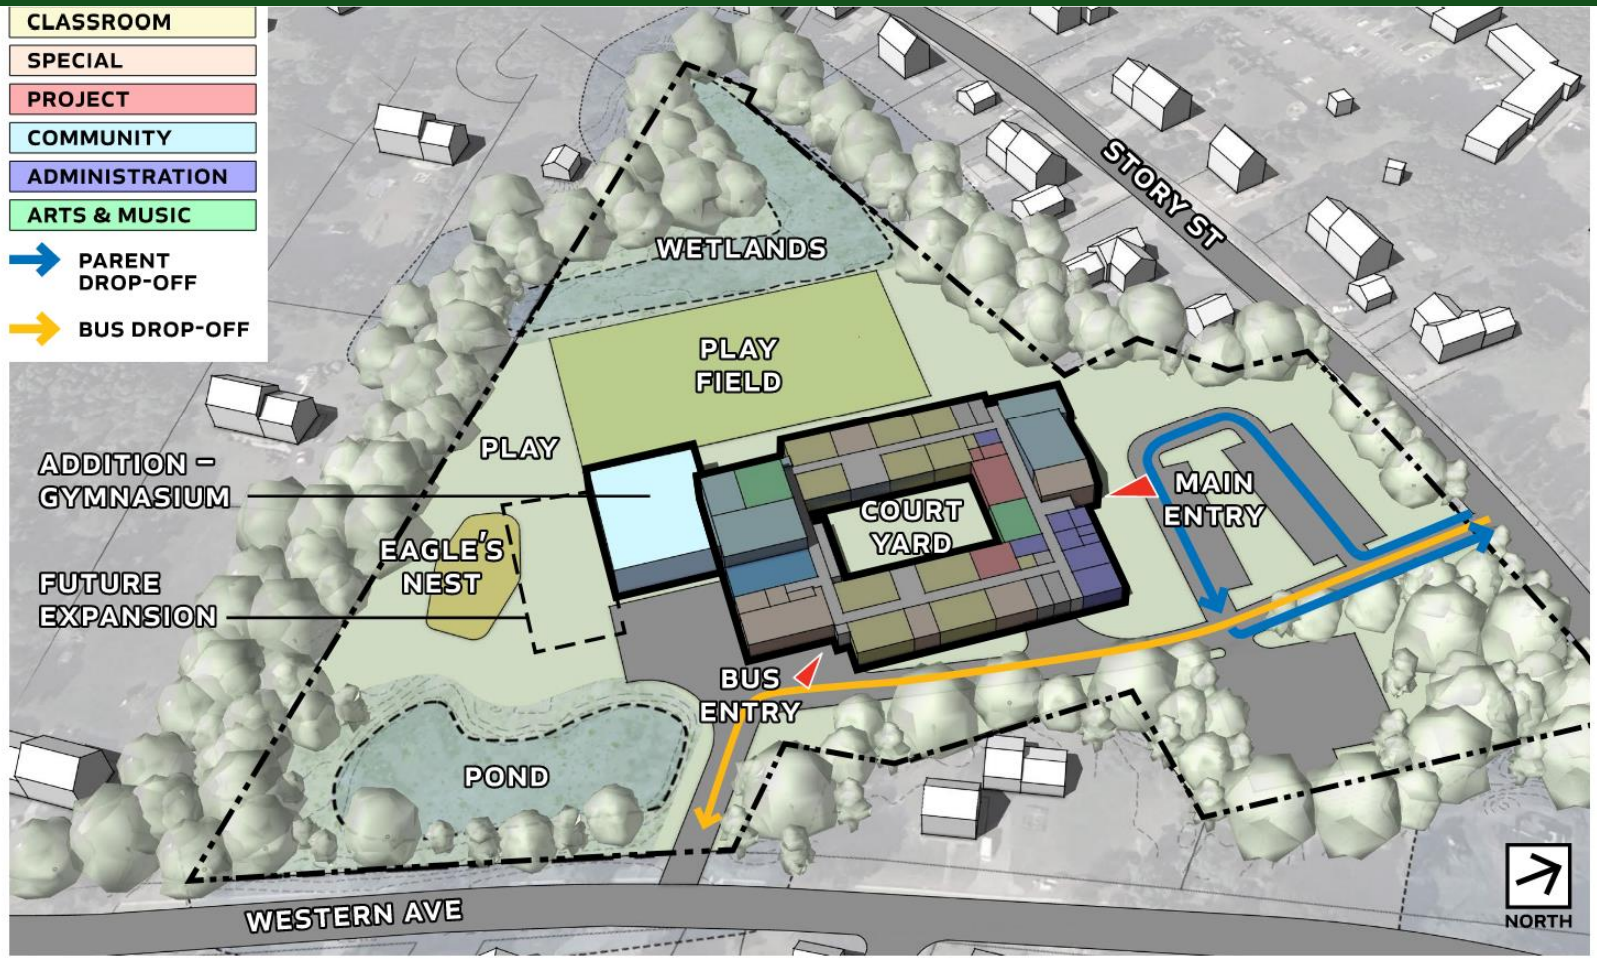
OPTION A0.2

PRE-K – 5
250 STUDENTS + 30 PRE-K
CODE UPGRADE/BASE REPAIR

53,036 GFA RENOVATION

CONSIDERATIONS

- EXISTING BUILDING IS SMALLER THAN TARGET
- CORE CLASSROOMS ARE UNDERSIZED
- GYM IS UNDERSIZED
- CONSTRUCTION WILL REQUIRE NUMEROUS SMALL PHASES IN AN OCCUPIED BUILDING
- MODULAR CLASSROOMS WILL BE REQUIRED TO PROVIDE SWING SPACE



Design Alternatives

OPTION A1.1

PRE-K – 3
165 STUDENTS + 30 PRE-K
ADDITION/RENOVATION

53,036 GFA RENOVATION
7,741 GFA ADDITION

TOTAL: 60,777 GFA

CONSIDERATIONS

- FULL-SIZE GYM COULD BE ACCOMMODATED IN AN ADDITION
- CONSTRUCTION WILL REQUIRE NUMEROUS SMALL PHASES IN AN OCCUPIED BUILDING
- MOVING GRADES 4-5 TO MMES CREATES SWING SPACE (4 CLASSROOMS)
- K-3 REQUIRES MODIFICATION TO THE REGIONAL AGREEMENT

OPTION A1.2

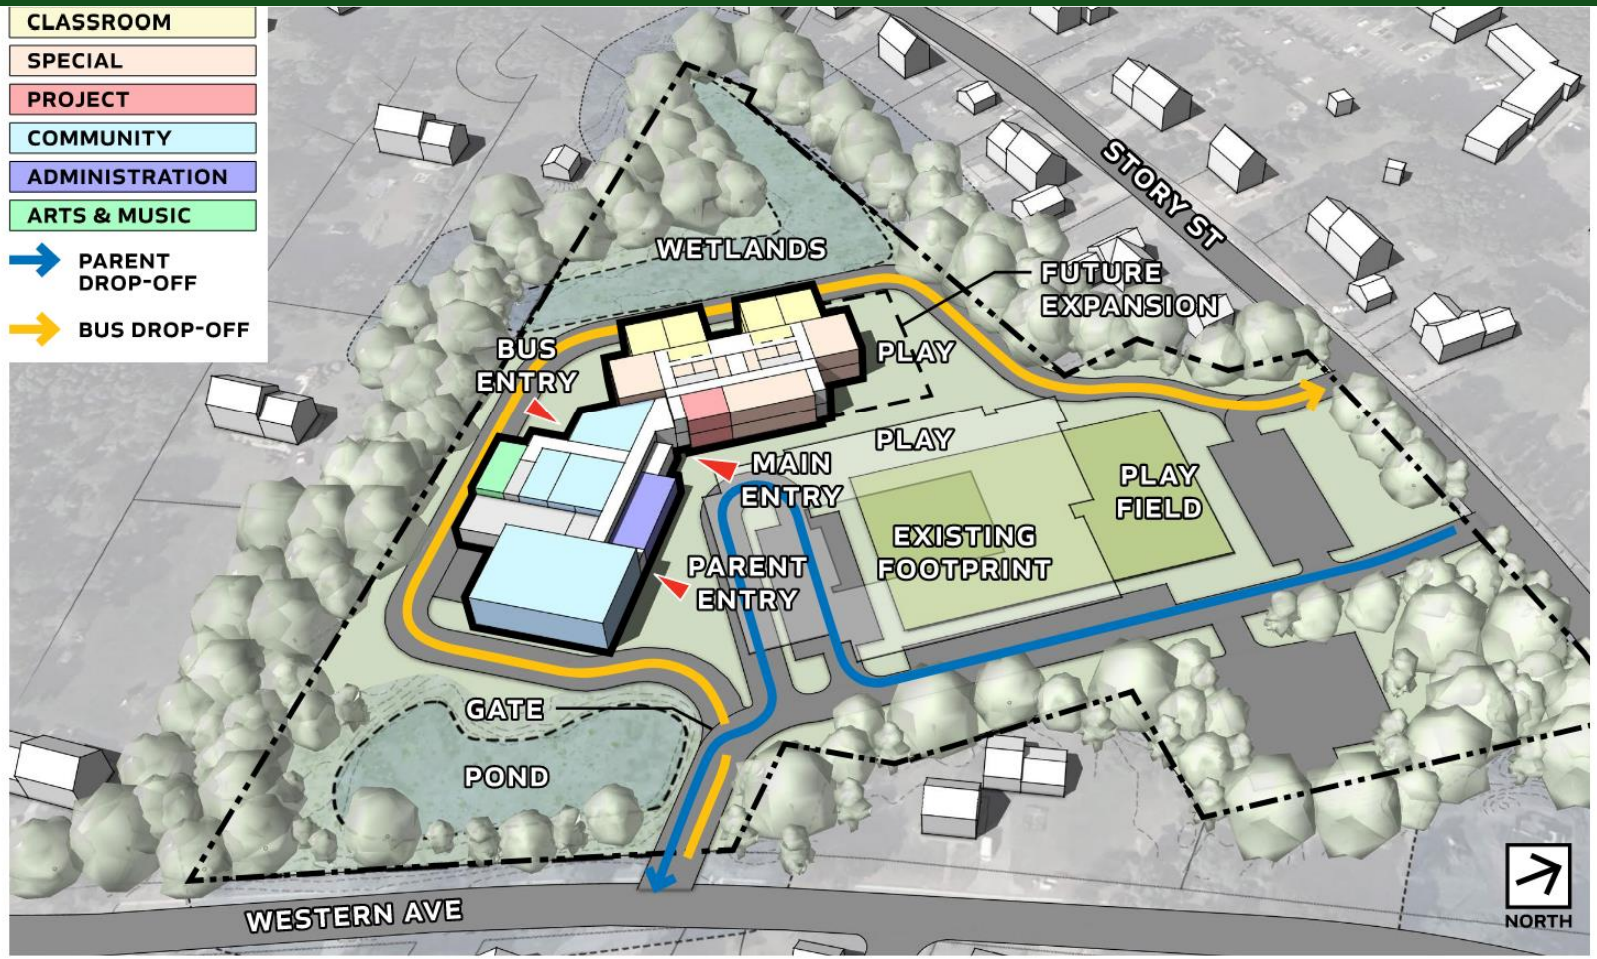
PRE-K – 5
250 STUDENTS + 30 PRE-K
ADDITION/RENOVATION

53,036 GFA RENOVATION
20,637 GFA ADDITION

TOTAL: 73,673 GFA

CONSIDERATIONS

- FULL-SIZE GYM COULD BE ACCOMMODATED IN AN ADDITION
- CONSTRUCTION WILL REQUIRE NUMEROUS SMALL PHASES IN AN OCCUPIED BUILDING
- SWING SPACE (4 CLASSROOMS) COULD BE ACCOMMODATED IN AN ADDITION



Design Alternatives

OPTION A2.1

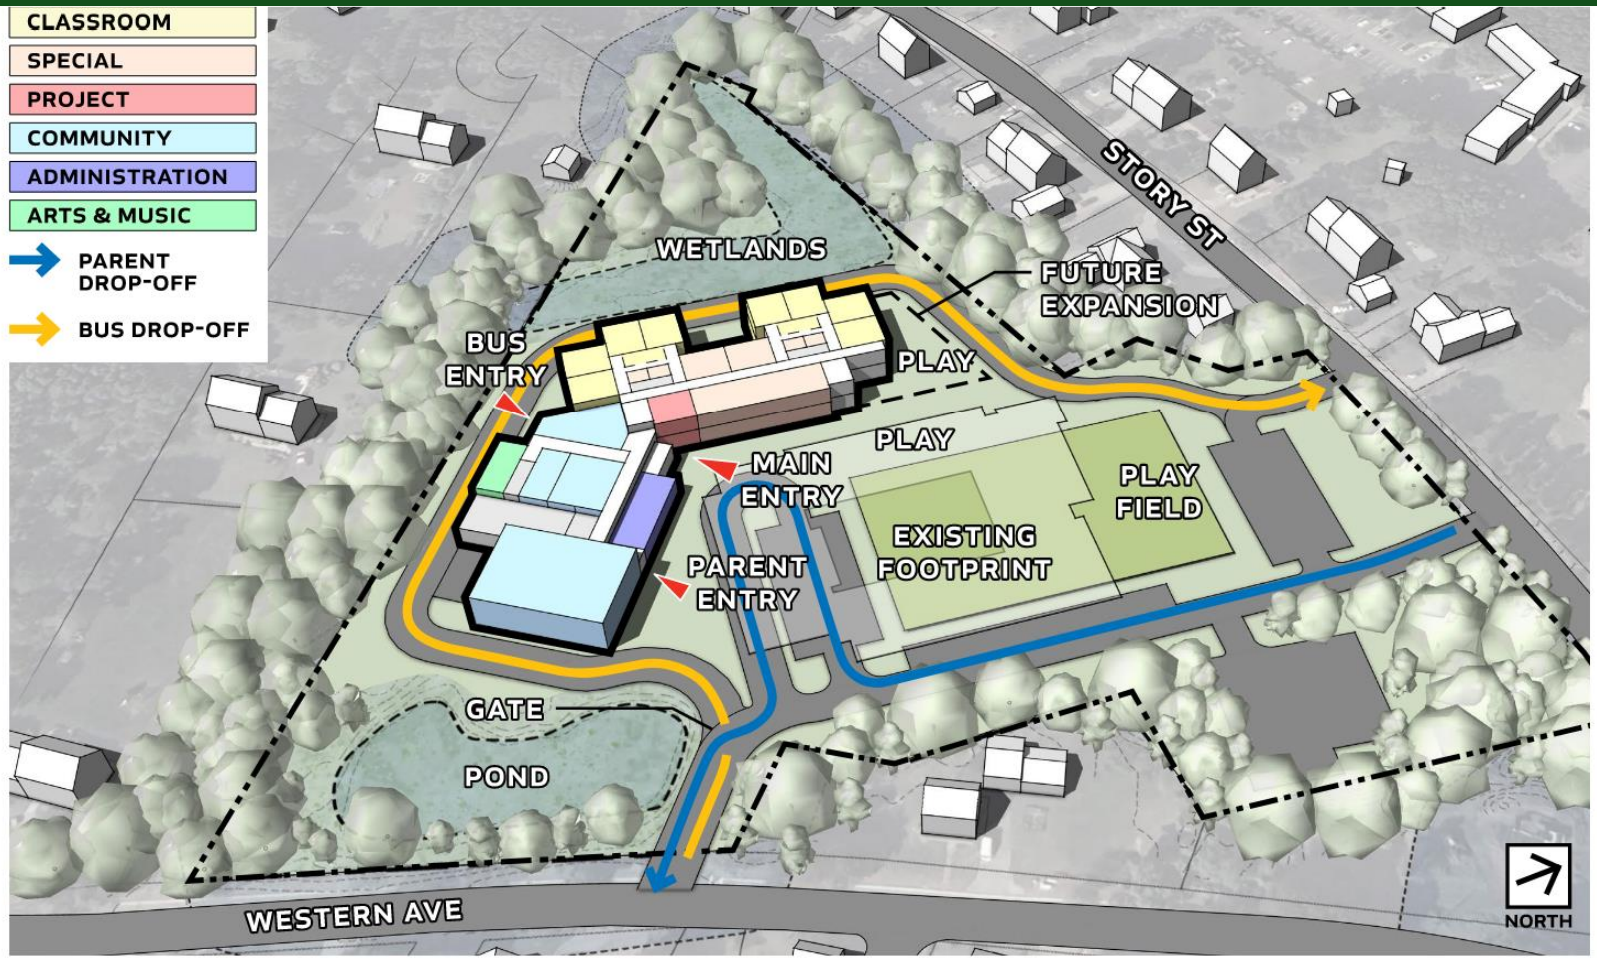
PRE-K – 3
165 STUDENTS + 30 PRE-K NEW

60,777 GFA NEW

TOTAL: 60,777 GFA

CONSIDERATIONS

- SITE LAYOUT PROVIDES FULL PERIMETER ACCESS AND IMPROVED SIGHT LINES
- DESIRED ROOM SIZES AND ADJACENCIES CAN BE OPTIMIZED
- ACCESS TO COMMUNITY SPACES EASILY CONTROLLED
- TWO-STORY BUILDING REDUCES FOOTPRINT TO MAXIMIZE SITE POTENTIAL
- K-3 REQUIRES MODIFICATION TO THE REGIONAL AGREEMENT



Design Alternatives

OPTION A2.2

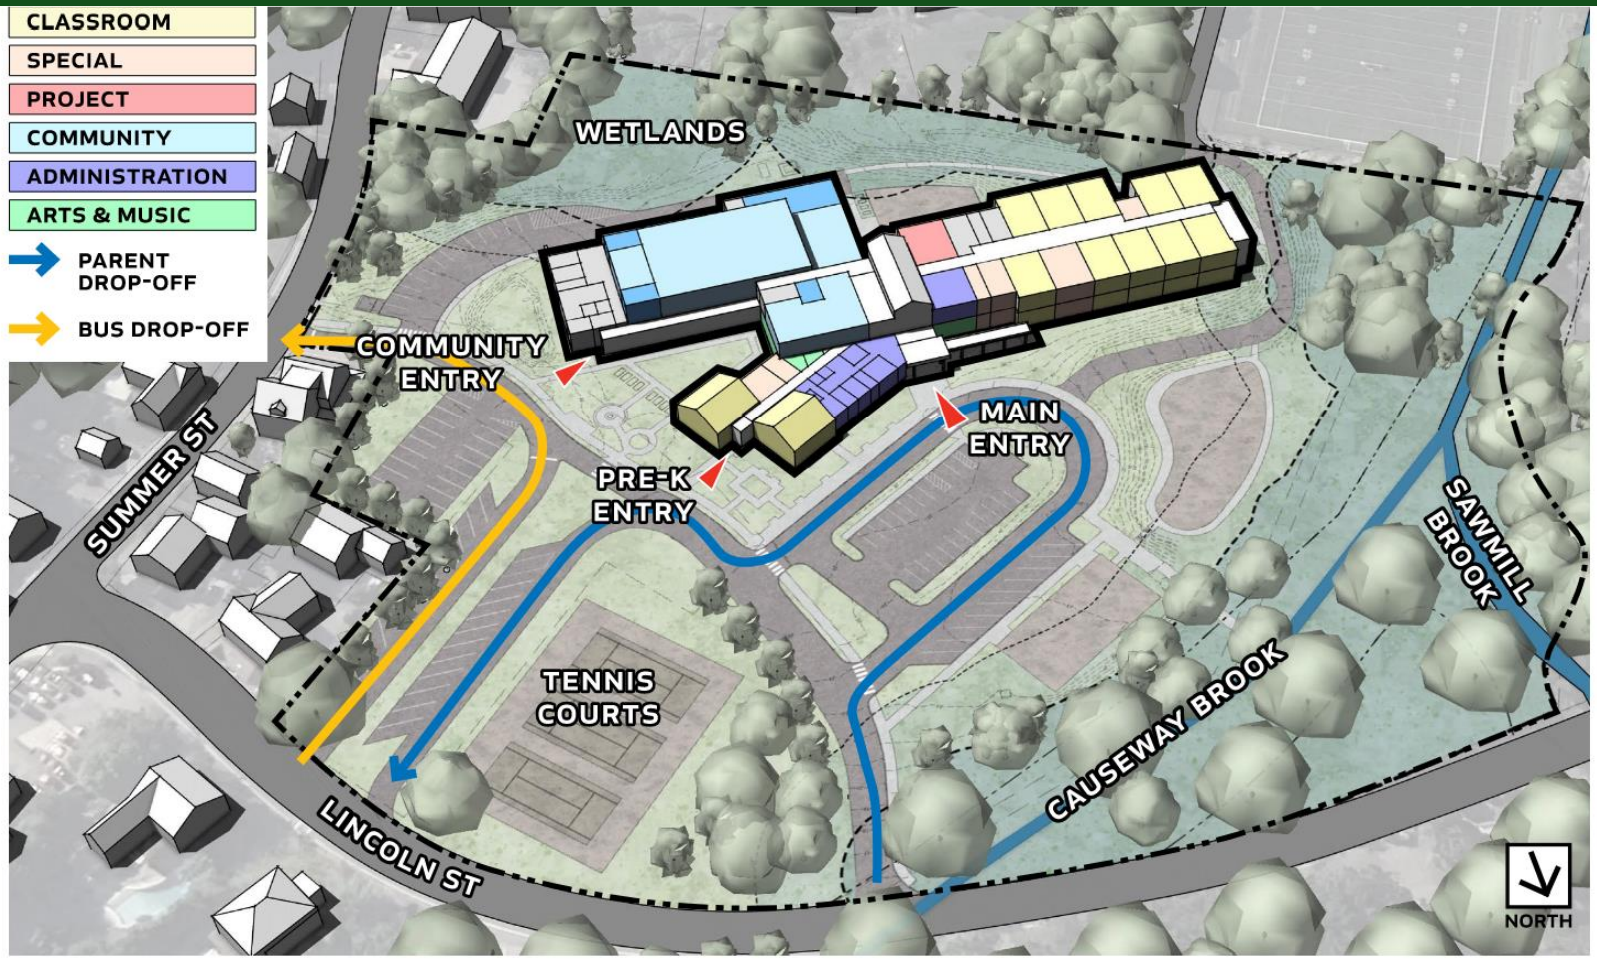
PRE-K – 5
250 STUDENTS + 30 PRE-K NEW

73,673 GFA NEW

TOTAL: 73,673 GFA

CONSIDERATIONS

- SITE LAYOUT PROVIDES FULL PERIMETER ACCESS AND IMPROVED SIGHT LINES
- DESIRED ROOM SIZES AND ADJACENCIES CAN BE OPTIMIZED
- ACCESS TO COMMUNITY SPACES EASILY CONTROLLED
- TWO-STORY BUILDING REDUCES FOOTPRINT TO MAXIMIZE SITE POTENTIAL



Design Alternatives

EXISTING MANCHESTER MEMORIAL

PRE-K – 5

MEETING AGENDA

Meeting Date:	December 15, 2025
Meeting Time:	6:00PM – 8:00PM
Project Name:	Essex Elementary School
Project Number:	202306980020
Meeting Purpose:	School Building Committee Meeting
Location:	This meeting will be a hybrid meeting (both in-person and remote) at Essex Elementary School Cafeteria
Meeting Link:	https://us06web.zoom.us/j/85349809336

1. Call to Order & Intro
2. Previous Topics & Meeting Minutes (Vote Expected)
    - SBC Meeting No. 10 – November 25, 2025
3. Invoices & Commitments for Review and Approval (Vote Expected)
    - Dore + Whittier Management Partners | $51,587.00
    - JCJ Architecture | $58,635.00
4. Community Meeting #3 Feedback
5. Final Review of Alternatives with Preliminary Costs
6. Schedule Update
7. Other Topics not Reasonably Anticipated 48 Hours Prior to the Meeting
8. Public Comment
9. Reflections & Actions Items
10. Adjourn

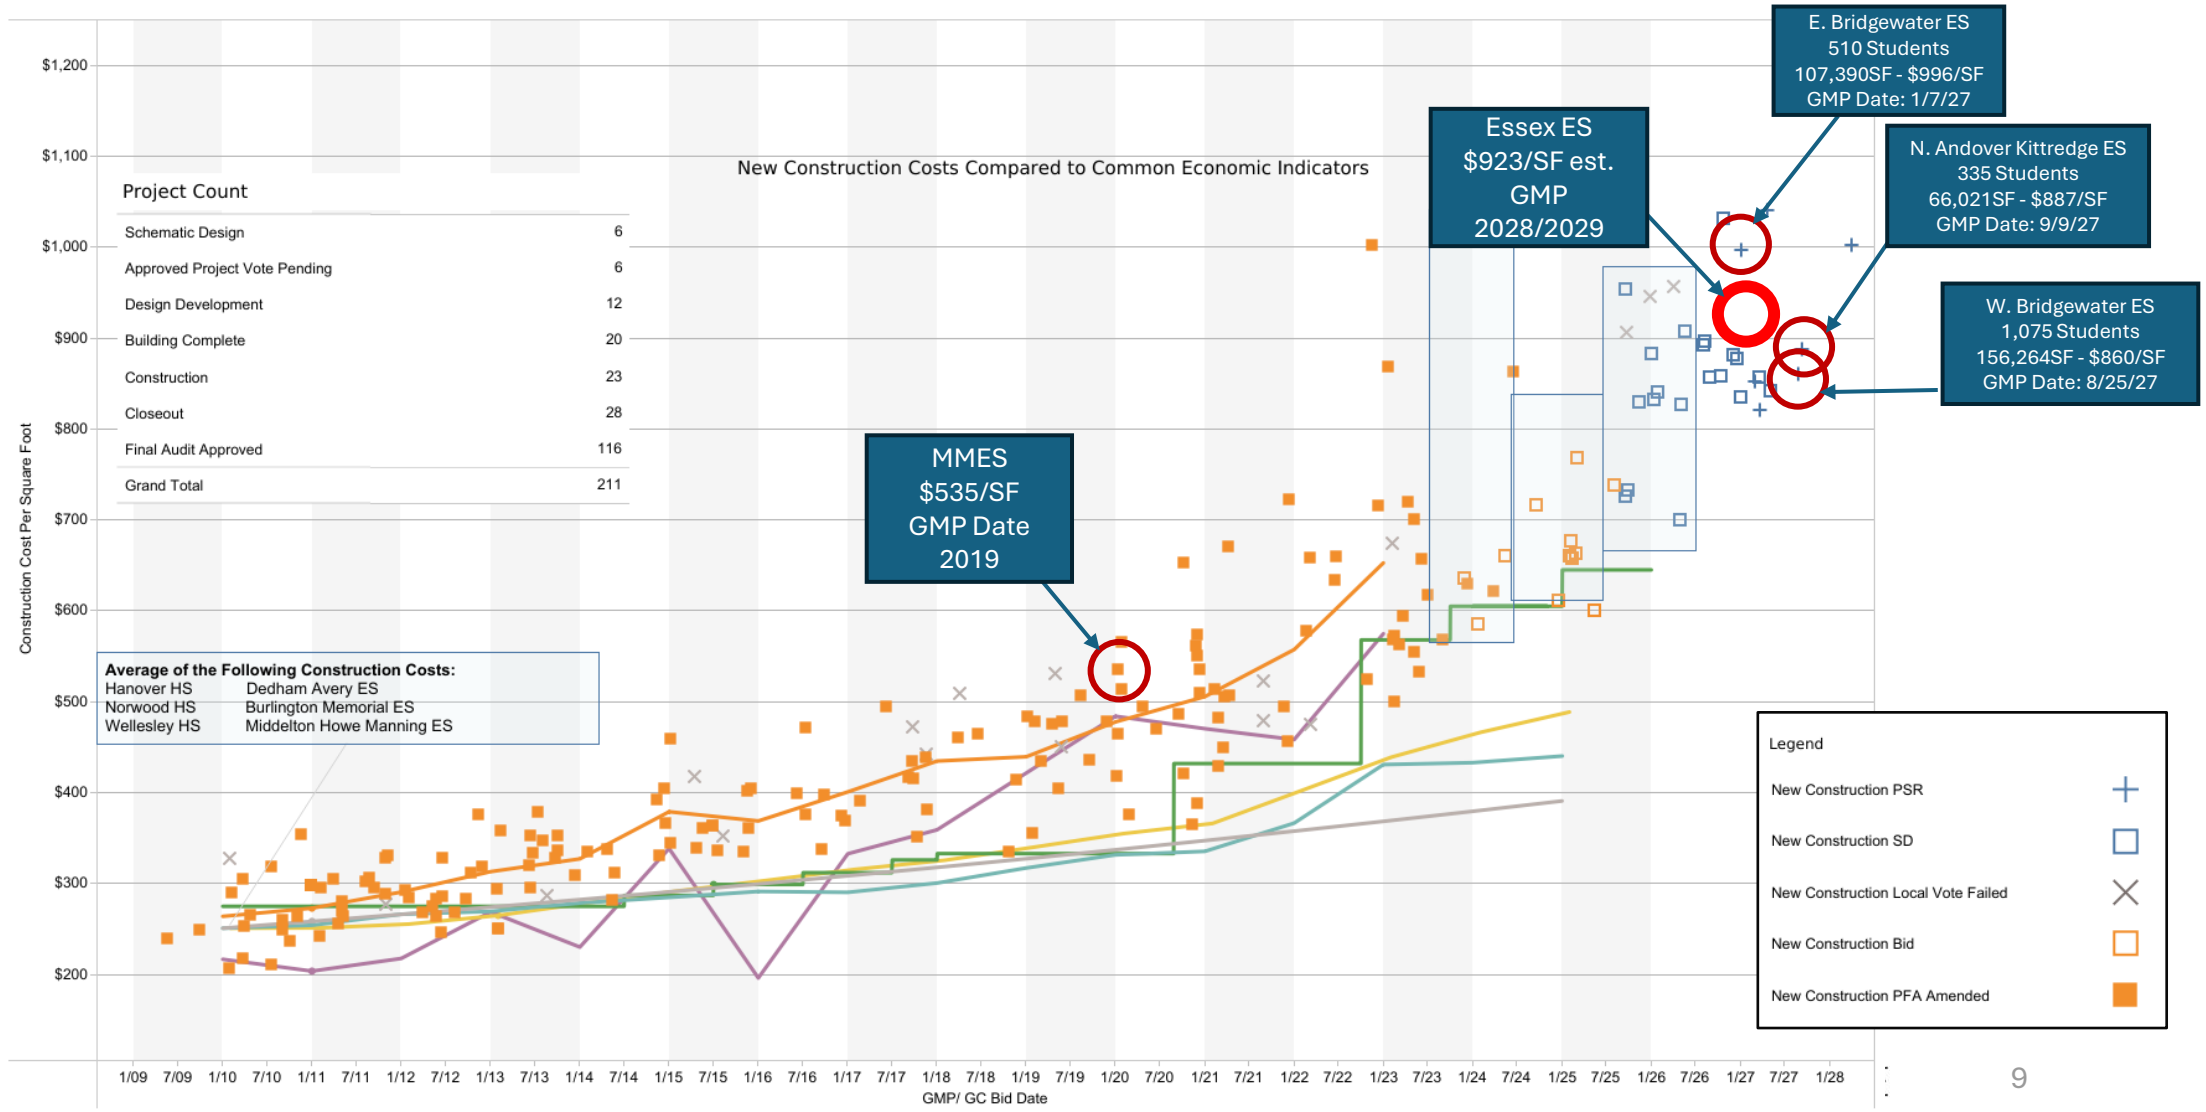
Preliminary Design Program Pricing Exercise



The costs for the various PDP Options indicated above are intended to be an analysis of the relative costs between options and **NOT** a prediction of the actual final cost of any individual option. Major variables such as geotechnical, site grading, structural system and final MEP systems have yet to be designed in detail so costs will vary significantly from the benchmark cost estimating included as part of this PDP cost analysis.

The costs outlined in this report should not be represented as the FINAL construction budget.

This PDP Design Submission cost estimate was produced from narratives and outline drawings dated November 06, 2025, prepared by JCJ Architecture and their design team.

Preliminary Design Program Pricing Exercise

Construction Cost per SF Averages per MSBA Data

MSBA Process

Massachusetts School Building Authority

Funding Affordable, Sustainable, and Efficient Schools in Partnership with Local Communities

Who is the Massachusetts School Building Authority (MSBA)?

A quasi-independent government authority created to reform the process of funding capital improvement projects in the Commonwealth's public schools.

The MSBA strives to work with local communities to create affordable, sustainable, and energy efficient schools across Massachusetts.

Collaborating with municipalities to equitably invest in finding the right-sized, most fiscally responsible and educationally appropriate solutions to create safe, sound, and sustainable learning environments.

MSBA Process

Massachusetts School Building Authority

Funding Affordable, Sustainable, and Efficient Schools in Partnership with Local Communities

Where do MSBA grant funds come from? How are they issued?

The MSBA has a dedicated revenue source of 1% from the state's 6.25% annual sales tax collections.

Grant funds are issued to the district using a "pay-as-you-go" reimbursement system for the duration of the project.

More than $16.6 billion issued to-date to cities, towns, and regional school districts for school construction projects.

MSBA Process

How does MSBA determine the level of financial support for projects?

Reimbursement rates are calculated based on a formula that is established in M.G.L ch.70B § 10

The formula starts all districts at a base rate of 31% (of eligible project costs).

The base rate may be adjusted based on three socioeconomic factors:

- **Community income factor**
- **Community property wealth factor**
- **Community poverty factor**

Essex ES Base Rate is 31%

6% potentially available from Green School (4%) incentive points and District maintenance policy (2%)

MSBA Process

What does “eligible project cost” mean?

The MSBA uses a total project budget template to apply and calculate their funding policies to determine the grant amount

The MSBA’s reimbursement rate is applied to “eligible project costs” to determine the MSBA’s participation on each budget line-item.

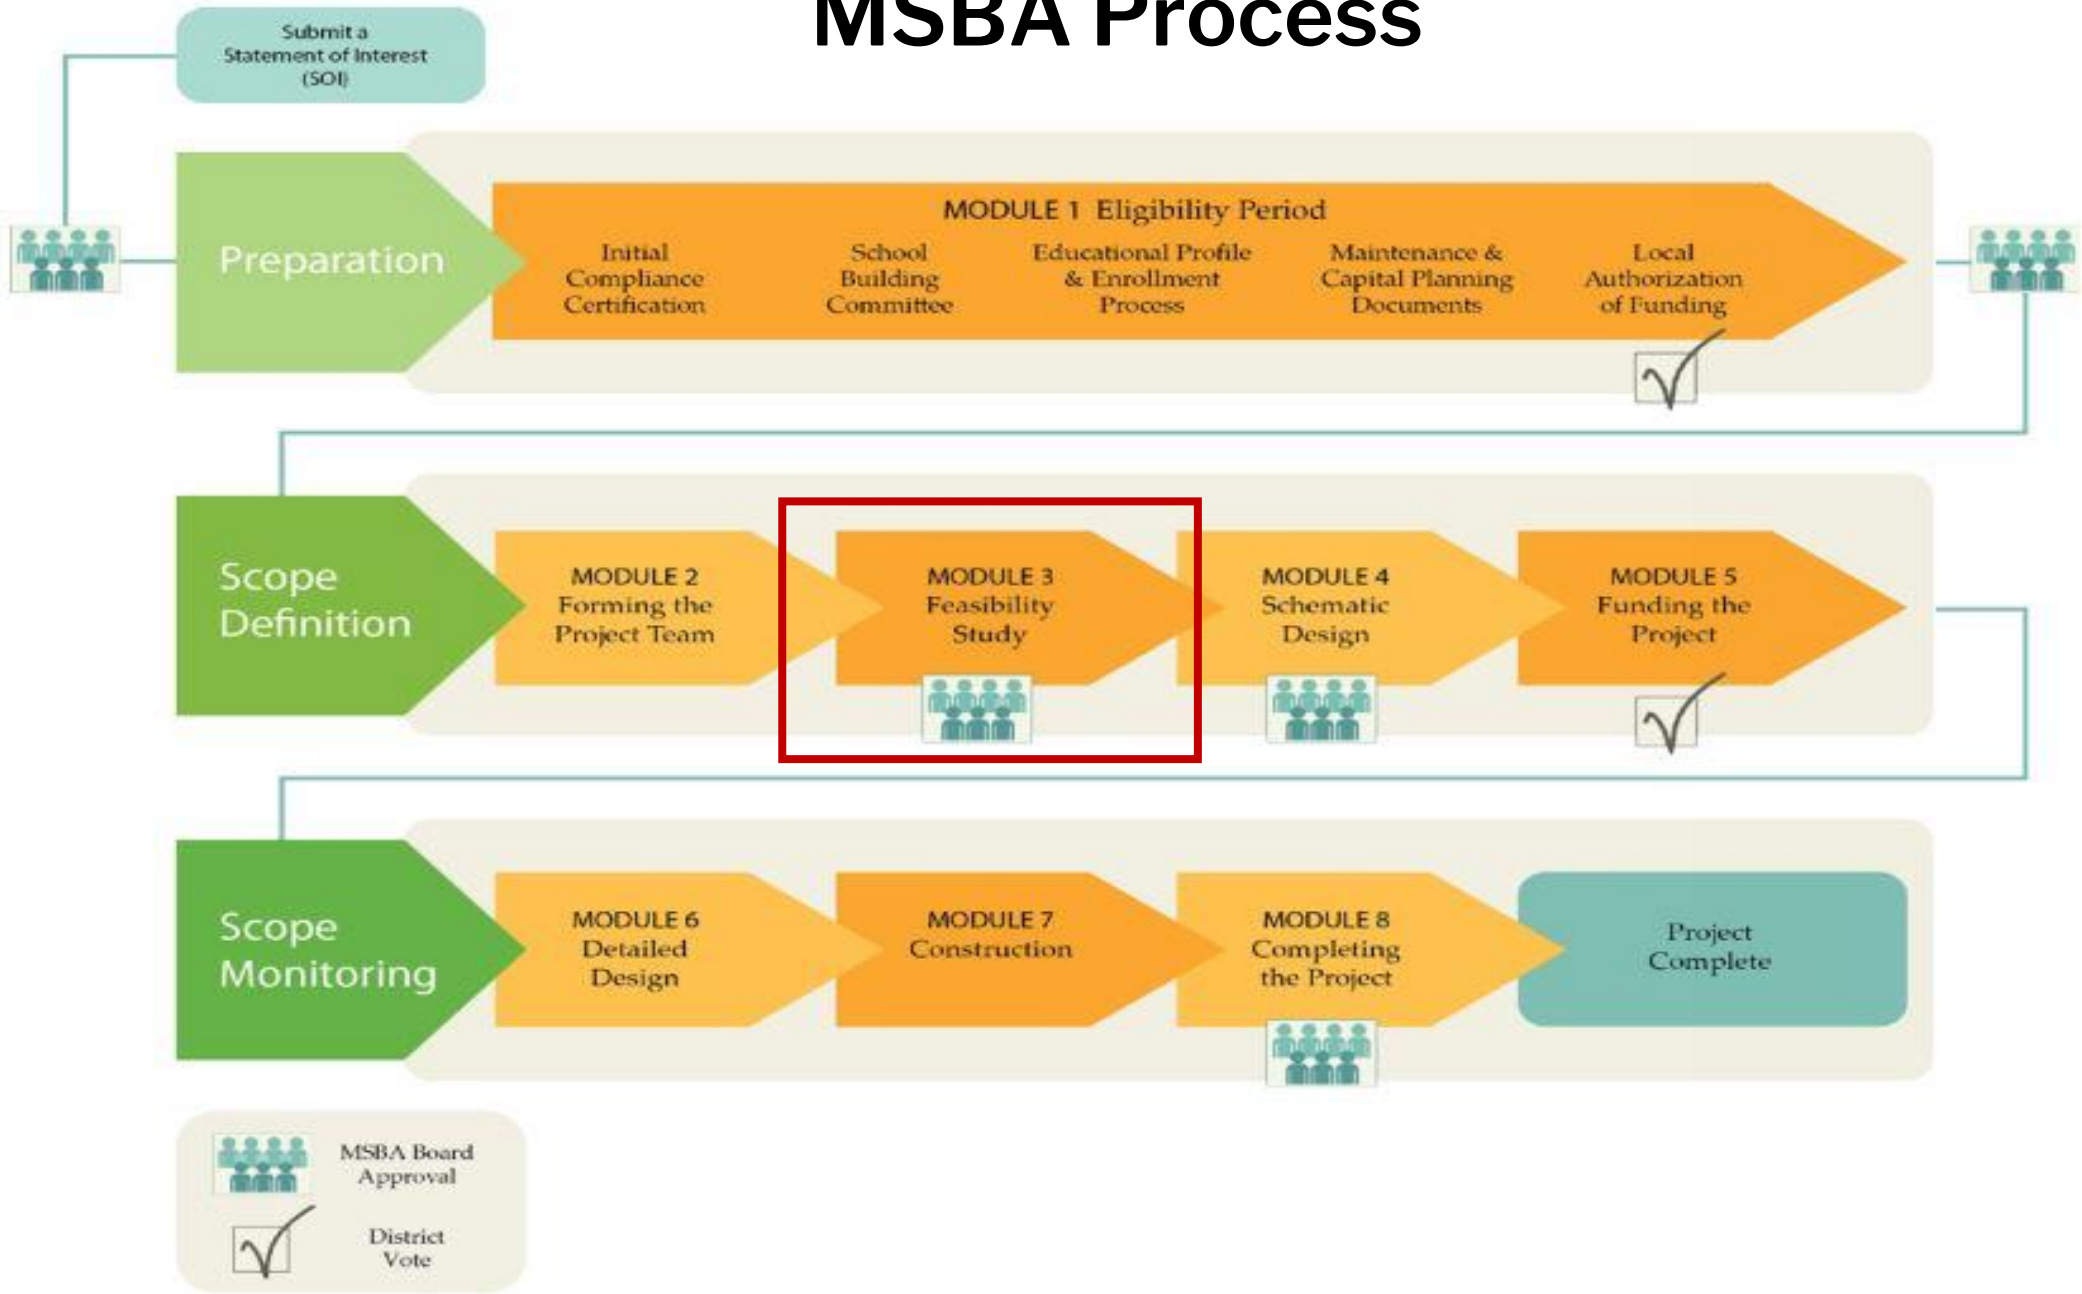
- **Construction and Site $605/sf + $73/sf**
- **Furniture, Fixtures & Equipment (FF&E) $1,995/sf**
- **Technology Equipment $1,570/sf**

There are funding caps on certain budget items, as well as “categorically ineligible” items that the MSBA will not participate in.

- **Pools, Field Houses, Elementary School Auditoriums, Central Offices, Senior Centers, site acquisition, and offsite improvements**

MSBA Process

These caps and ineligible costs will have an impact to the final (or "effective") reimbursement.



Memorial E.S. Example:

- **Base Rate of 31%**
- **CM@ Risk 1% (no longer applicable)**
- **Maintenance 1.93%**
- **Energy Efficient School 2% (has increased)**

MSBA reimbursement rate 35.93%

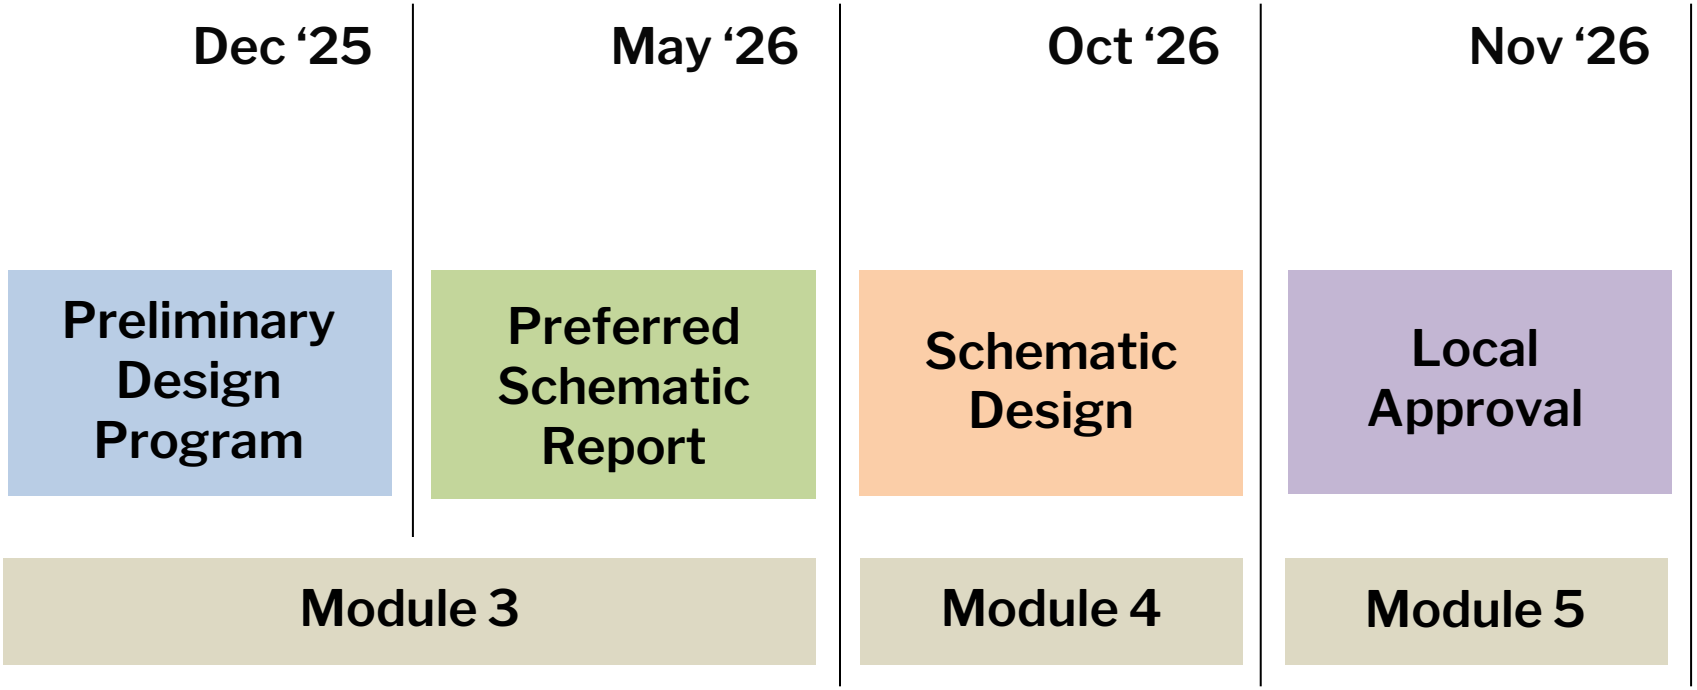
"Effective" reimbursement rate ~23% = $11.5 Million from the State

MSBA Process

Feasibility Phase Process

Preliminary Design Program (PDP)

- Identify the issues/articulate the educational plan
- List options to be studied in PSR



Preliminary Schematic Report (PSR)

- Evaluate the site and building options/select a preferred option

Schematic Design (SD)

- Develop schematic drawings and specifications to establish the project budget

Feasibility Phase Schedule

Community input is important throughout the process

Feasibility Phase Process

Local Approvals

- *Receive local funding approval in Essex and Manchester-by-the-Sea*
  - Approval November 2026
  - Depending upon preferred option

If Project is Approved

Proceed to detailed design and construction

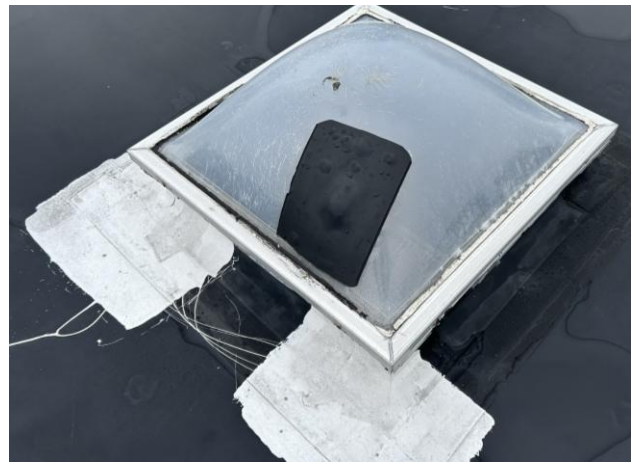
Feasibility Phase Requirements

MSBA Requires Development of Several Options including:		
Renovation Only	Addition/Renovation	New Construction

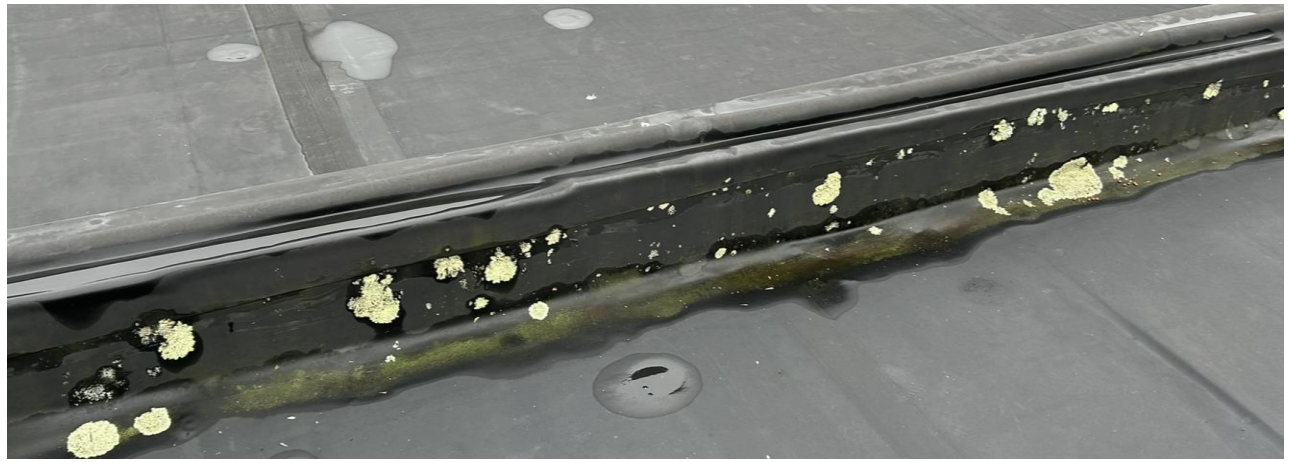
Feasibility Phase Requirements

Feasibility Study Enrollment Configurations to be Studied for Essex Students		
Grades PreK-3 165 Students *Sited in Essex w/Grades 4 & 5 Integrated into Memorial*	Grades PreK-5 250 Students Sited in Essex	Pre-K to 5 515 Students Sited at Manchester Memorial with all Essex & Manchester students in one school
SC Program Vote/Redistricting		SC Program Vote/Redistricting
SC Vote to Amend Regional Agreement		SC Vote to Amend Regional Agreement
Essex & Manchester Town Meeting Vote to Approve Regional Agreement Amendment		Essex & Manchester Town Meeting Vote to Approve Regional Agreement Amendment

Essex & Manchester Town Meeting Full Project Vote & Debt Exclusion Vote



Building History



The Essex Elementary School building

1. Total building is approximately 52,900 SF
2. Originally built in 1957 (68 Years)
3. Addition provided in 1975 (50 Years) (media center and gymnasium)
4. The design team's existing investigations began and are ongoing.
5. Mechanical, electrical & plumbing systems has exceeded life expectancy
6. Roofing, windows and building materials are deteriorating

Existing Conditions

The roofing system is at life expectancy. There are several repairs, underlayment appears compromised, and water is ponding, so moisture is not shedding quickly.

Existing Conditions

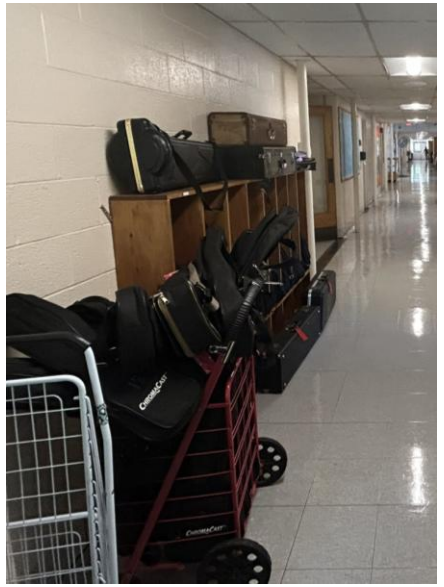
Shedding water away from the school building through roofing and site drainage is important.
Moisture accelerates:

- Spalling at the existing roof eave
- Lichen on the masonry
- Compromises at the concrete foundation
- Plant growth occurring in unplanned or undesirable areas
- Deterioration of the original wood windows

Existing Conditions

Accessibility is being reviewed to enable students, staff and visitors of various abilities to enter the school together (not separate due to physical need, or otherwise). Some of the items included in this review of the site conditions and the school interior include:

- Exterior grade changes
- Interior level changes
- Pitch of sloped walkways and ramps
- Handrail design
- Push/pull clearances at doorways
- Circulation space & turn around space
- Mounting heights of accessories, plumbing, and equipment
- Furniture
- Signage



Existing Conditions

- Mechanical, electrical, plumbing systems are beyond or at life expectancy.
- Exhaust fans, unit ventilators and boiler are worn.
- Portable fans are seen throughout the school to supplement air circulation
- Interior finishes are buckling.
- Wood windows are deteriorating.
- The water heating system is at the end of its useful life. The mixing value is leaking.

- Considerations include:
- Efficiency of operation (operational costs for the District)
- Efficiency to heat, cool, dehumidify and provide fresh air circulation
- Availability of parts quickly for future repairs

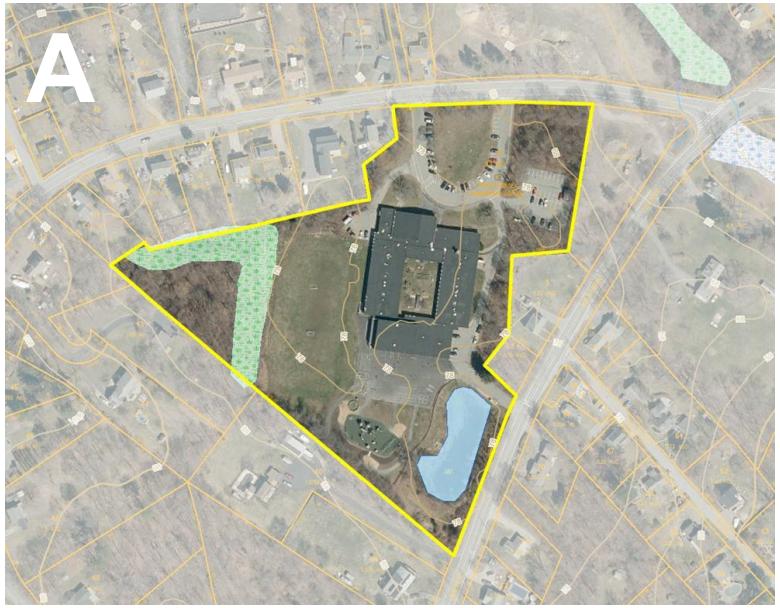
Existing Conditions

Existing Conditions

Entry and exit sequence for students, staff, and visitors is being reviewed with the District to support the operational needs.

Identified Sites

Statement of interest includes:



- Current Essex Elementary School
- Current Manchester Memorial Elementary School

Search of other potential sites in Essex:

Town of Essex owned parcels	112
Minimum 9.75 acres	16
Street access & utilities	7
Not used by other town function	1 → 30 Apple St

Town Hall, Spring Street Cemetery, Essex ES, Centennial Grove, DPW Transfer Station, Public Water Supply

Identified Sites

Current Essex Elementary School

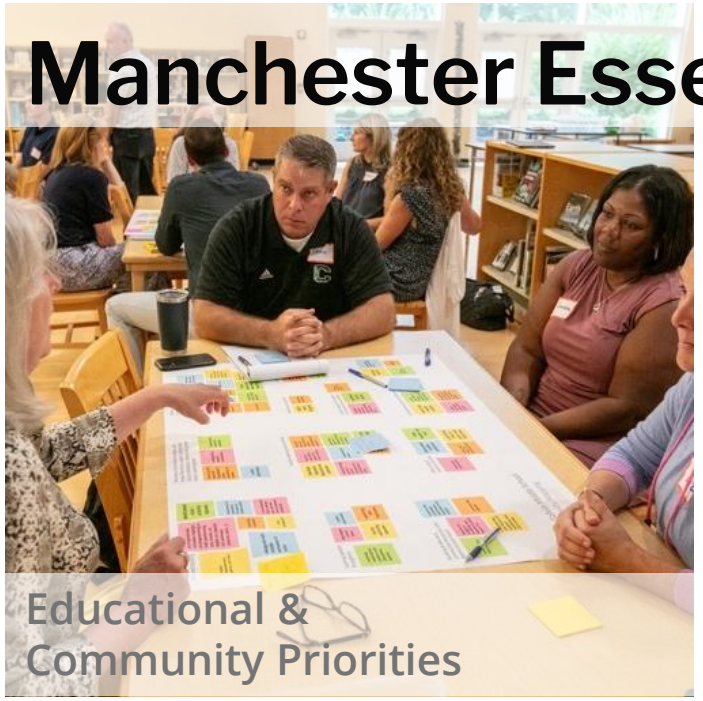
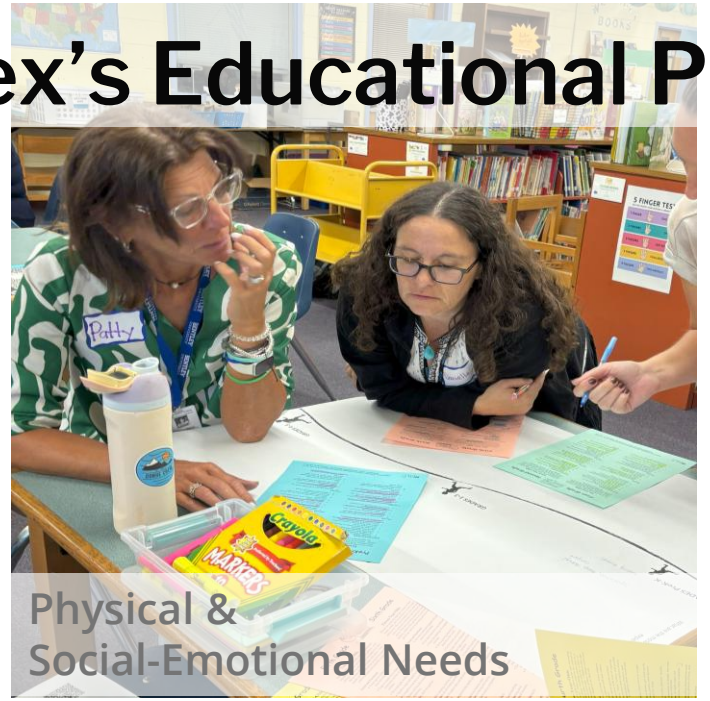
DRAFT

Educational Programming



During the Feasibility phase, the District and its team collaborate to document their Educational Program.

- **The Educational Program enables an evaluation and creation of an initial space summary.**
- **Then the team evaluates the site and grade configuration alternatives to recommend the most cost effective and educationally appropriate preferred solution.**



The Educational Program is developed through programming workshops to:

- **Build a shared understanding**
- **Envision through an educational and scenario-based lens**
- **Align renovated or new spaces with the educational program**

MSBA Process

Massachusetts School Building Authority

Funding Affordable, Sustainable, and Efficient Schools in Partnership with Local Communities

Who is the Massachusetts School Building Authority (MSBA)?

A quasi-independent government authority created to reform the process of funding capital improvement projects in the Commonwealth's public schools.

The MSBA strives to work with local communities to create affordable, sustainable, and energy efficient schools across Massachusetts.

Collaborating with municipalities to equitably invest in finding the right-sized, most fiscally responsible and educationally appropriate solutions to create safe, sound, and sustainable learning environments.

MSBA Process

Massachusetts School Building Authority

Funding Affordable, Sustainable, and Efficient Schools in Partnership with Local Communities

Where do MSBA grant funds come from? How are they issued?

The MSBA has a dedicated revenue source of 1% from the state's 6.25% annual sales tax collections.

Grant funds are issued to the district using a "pay-as-you-go" reimbursement system for the duration of the project.

More than $16.6 billion issued to-date to cities, towns, and regional school districts for school construction projects.

MSBA Process

How does MSBA determine the level of financial support for projects?

Reimbursement rates are calculated based on a formula that is established in M.G.L ch.70B § 10

The formula starts all districts at a base rate of 31% (of eligible project costs).

The base rate may be adjusted based on three socioeconomic factors:

- **Community income factor**
- **Community property wealth factor**
- **Community poverty factor**

Essex ES Base Rate is 31%

6% potentially available from Green School (4%) incentive points and District maintenance policy (2%)

MSBA Process

What does “eligible project cost” mean?

The MSBA uses a total project budget template to apply and calculate their funding policies to determine the grant amount

The MSBA’s reimbursement rate is applied to “eligible project costs” to determine the MSBA’s participation on each budget line-item.

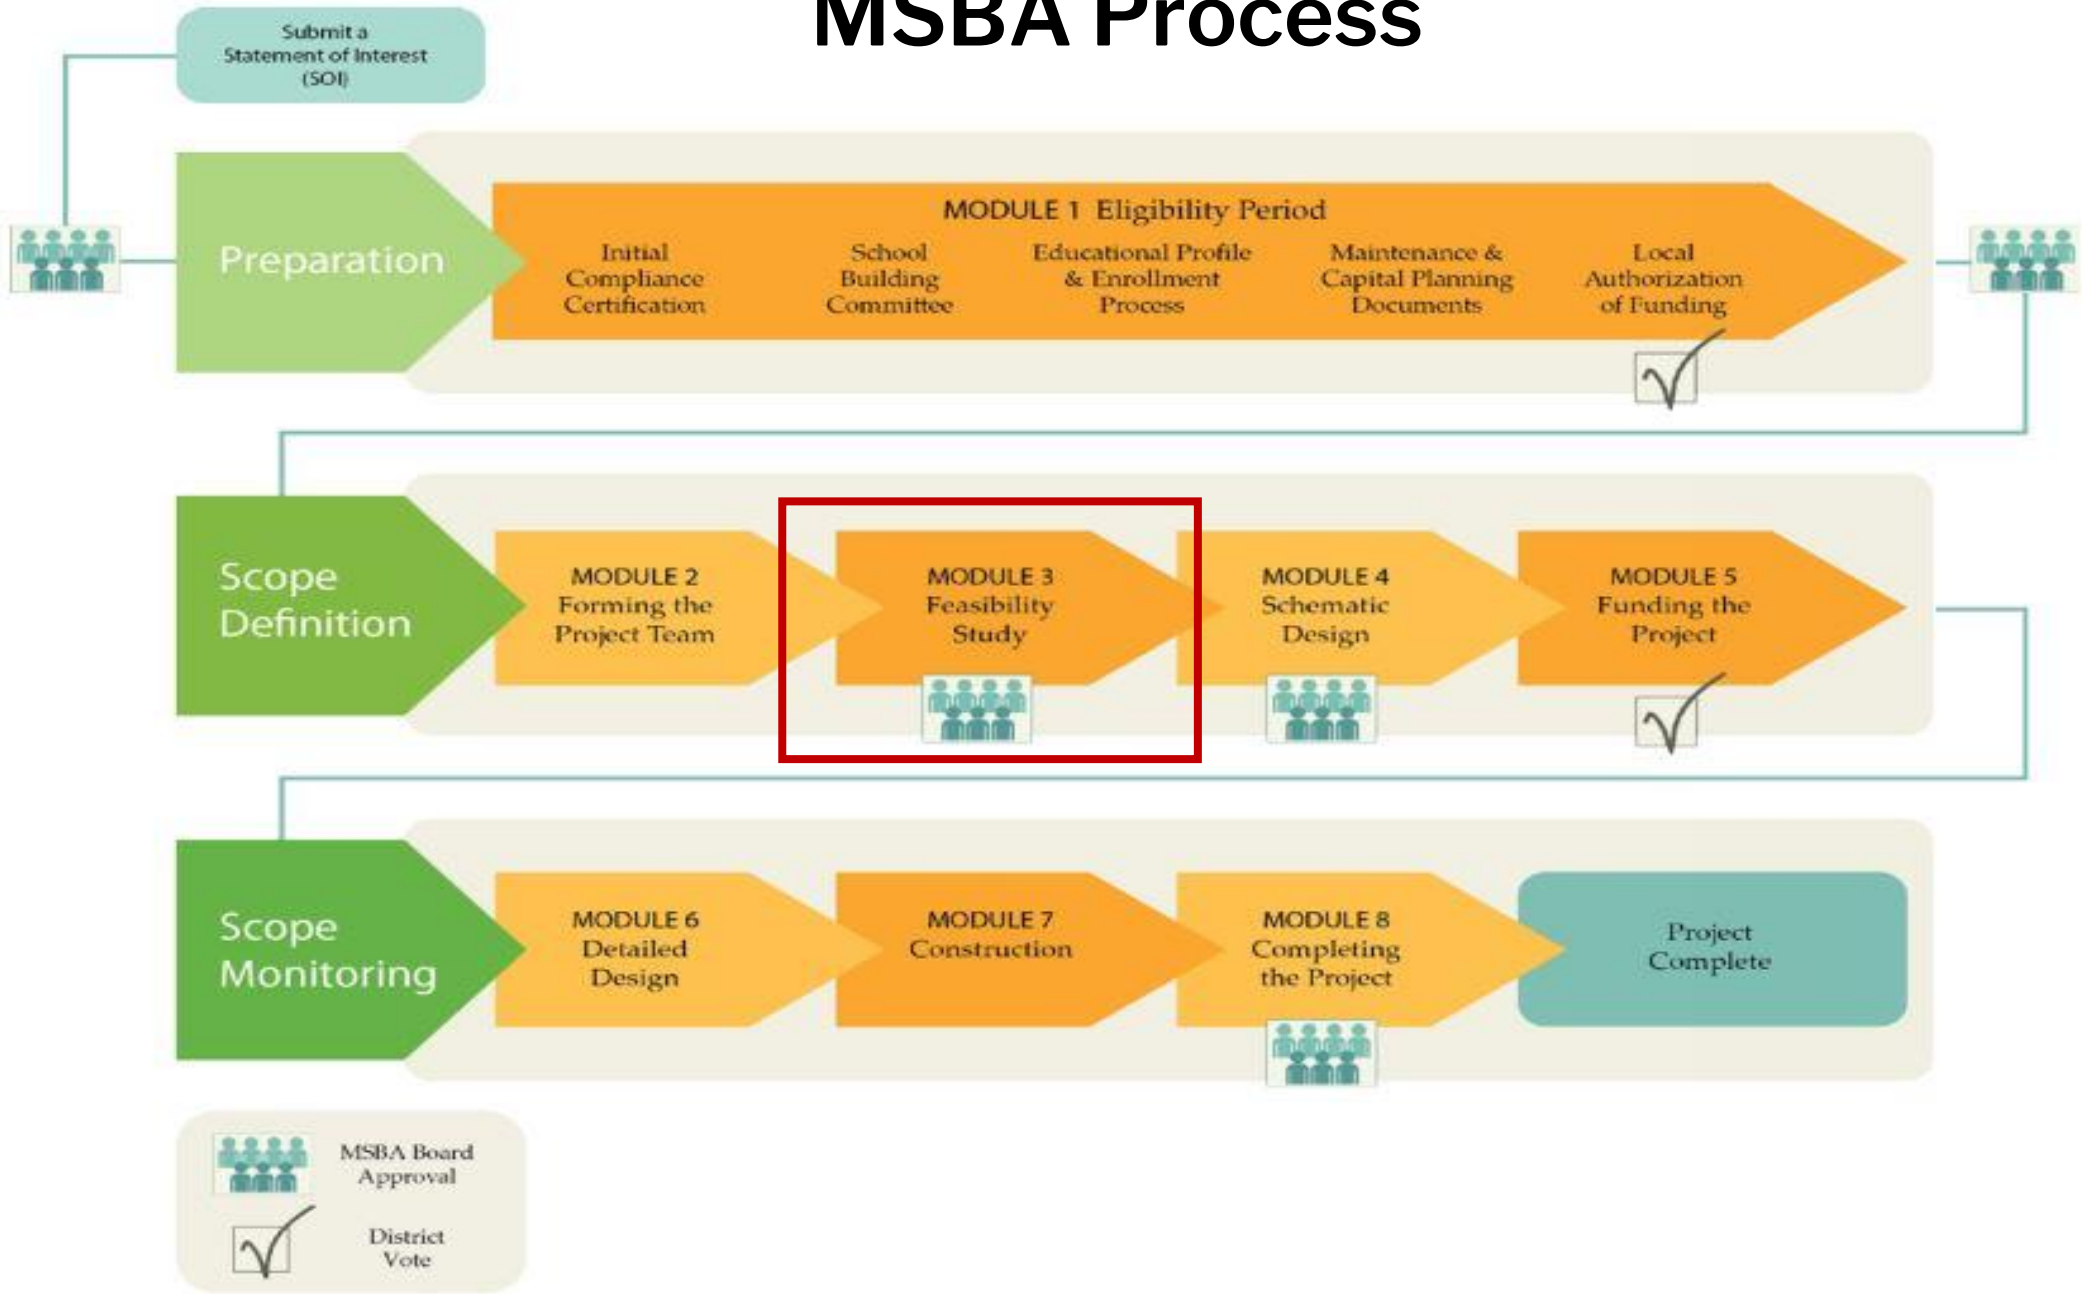
- **Construction and Site $605/sf + $73/sf**
- **Furniture, Fixtures & Equipment (FF&E) $1,995/sf**
- **Technology Equipment $1,570/sf**

There are funding caps on certain budget items, as well as “categorically ineligible” items that the MSBA will not participate in.

- **Pools, Field Houses, Elementary School Auditoriums, Central Offices, Senior Centers, site acquisition, and offsite improvements**

MSBA Process

These caps and ineligible costs will have an impact to the final (or "effective") reimbursement.



Memorial E.S. Example:

- **Base Rate of 31%**
- **CM@ Risk 1% (no longer applicable)**
- **Maintenance 1.93%**
- **Energy Efficient School 2% (has increased)**

MSBA reimbursement rate 35.93%

"Effective" reimbursement rate ~23% = $11.5 Million from the State

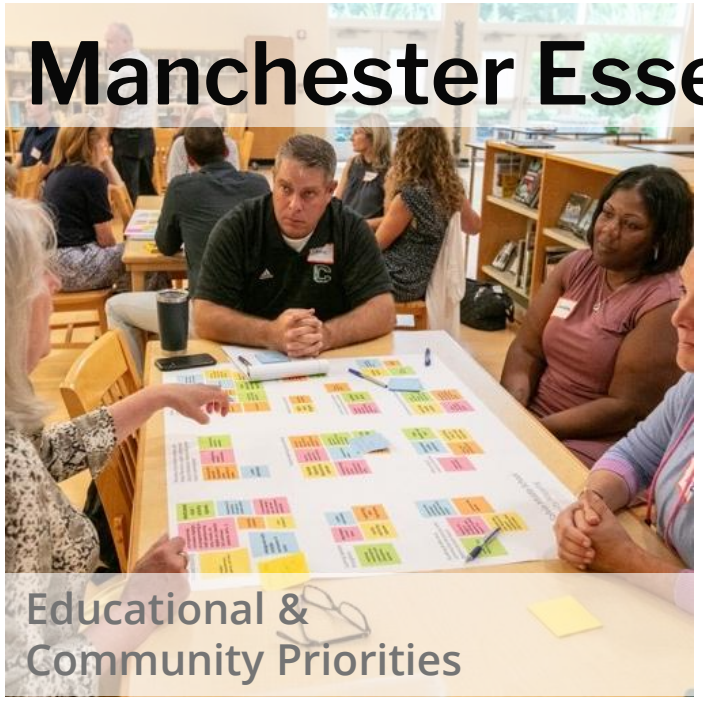
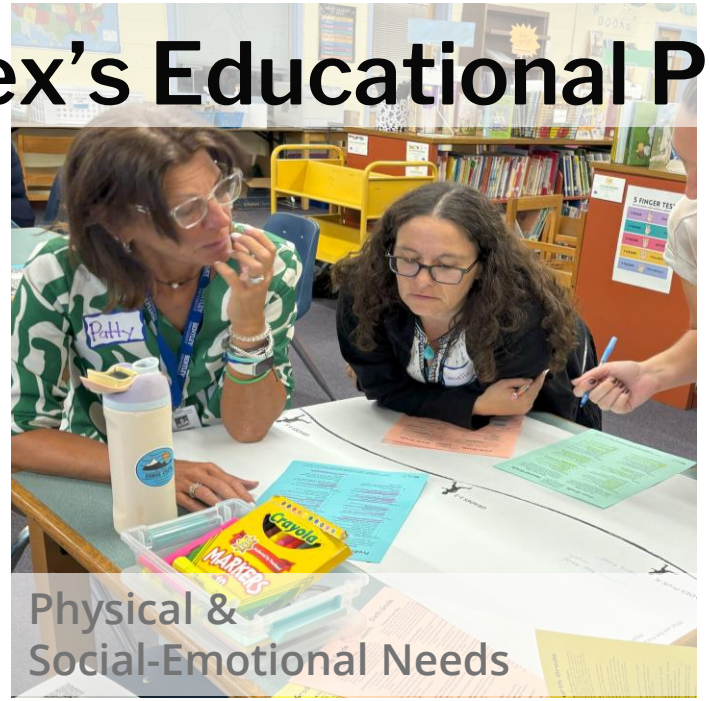
Educational Programming



During the Feasibility phase, the District and its team collaborate to document their Educational Program.

- **The Educational Program enables an evaluation and creation of an initial space summary.**
- **Then the team evaluates the site and grade configuration alternatives to recommend the most cost effective and educationally appropriate preferred solution.**



The Educational Program is developed through programming workshops to:

- **Build a shared understanding**
- **Envision through an educational and scenario-based lens**
- **Align renovated or new spaces with the educational program**

MEETING NOTES

Meeting Date: September 12, 2025
Project Name: Essex Elementary School Project
Subject: EES Communications Working Group Meeting

Communication Working Group Members

Christina Dell Angelo	DWMP - Project Manager
Mike Burton	DWMP- Partner
Jacob Greco	DWMP - Assistant Project Manager
John Albright	DWMP – Project Manager
Jim LaPosta	JCJ – Design Principal
Fawn Pellegrini	JCJ – Associate Principal
Jeff Elliott	JCJ – Associate Design Principal
Lisa O'Donnell	Essex Planning Board
Kim Provost	Essex Elementary School Principal
Pam Beaudoin	MERSD Superintendent
Annie Cameron	Manchester Con Com
Michelle Cresta	MERSD Director of Finance & Operations
Theresa Whitman	SBC Co-Chair

Meeting Summary

- The communications working group discussed plans for a community forum scheduled for October 8th at Essex Elementary School. They reviewed promotional materials, including a flyer with a QR code for the Zoom meeting and a postcard for direct mail distribution to Manchester and Essex residents. P.Beaudoin confirmed that save-the-date announcements would be sent through Parent Square and social media, with the meeting time corrected from 6:30 PM to 6:00 PM.
- The team discussed distributing information about community meetings through various channels. P. Beaudoin confirmed they would send updated branding materials, including a new seal and forest

green colors, for use on social media and newsletters. C. Dell Angelo and K. Provost agreed to share the save-the-date information across Facebook, Blackboard, Parent Square, and principal newsletters. Theresa suggested additional distribution methods, including town-based Facebook groups, local newspapers, and town hall mailing lists. The team planned to send direct mailers for each meeting, with further reminders through Parent Square two weeks before the event.

- The team discussed organizing town hall communications and distribution efforts for the upcoming community meeting. T. Whitman and others agreed to handle message board postings at both Essex and Manchester town halls, with T. Whitman coordinating distribution of approximately 30 flyers through local bulletin boards. P. Beaudoin confirmed that Minuteman Press would handle postcard printing and distribution, with M. Cresta providing contact information for their coordinator. The group also established that written communication would be used when dealing with the Gloucester Times, with P. Beaudoin offering to share Steve Henneman's contact information for press releases.
- The team further discussed the community meeting, focusing on explaining the MSBA process, project acceptance, and financial support for the district. C. Dell Angelo outlined the agenda, emphasizing the need to introduce the team, review the timeline, and discuss the preliminary design phase, including existing conditions and educational programs. They agreed to provide a detailed agenda, post the slide deck online, and create flyers with key topics for community forums. J. LaPosta stressed the importance of reassuring the community that no design decisions have been made and that multiple enrollment scenarios will be studied.
- The group discussed recording protocols for upcoming visioning sessions and community meetings. P. Beaudoin expressed concerns about recording educator feedback sessions, while T. Whitman noted the importance of balancing transparency with professional input. The discussion clarified that while community meetings would be open to the public, visioning sessions would focus on educator input and might not need recording. The group agreed to target PTOs and school councils for community representation, with C. Dell Angelo confirming that SBC members were invited to previous sessions from other projects she had worked on.

Sincerely,

Jacob Greco

Michelle Cresta	MERSD Director of Finance & Operations
Theresa Whitman	SBC Co-Chair

Meeting Summary

- The team reviewed a slide deck for an upcoming community meeting about the Essex Elementary School project, which will follow the same agenda as the previous memorial project meeting. C. Dell Angelo explained that P. Beaudoin will kick off the presentation, followed by introductions from Dore & Whittier and JCJ, before discussing the MSBA process, reimbursement rates, and eligible project costs. The team noted that MSBA has increased their construction and site cost cap, as well as the cap for furniture, fixtures, and equipment, which is good news for the project. They also discussed the potential impact of various caps and ineligibles on the final reimbursement rate, using the memorial

project as an example. The team is considering whether to include estimated project timeline dates on the slide.

- The team discussed the scope and presentation of a feasibility study for a school project, focusing on the needs of Essex Elementary students. They clarified that the study would address pre-K through 5th grade needs, with Memorial School considered as a potential site. P. Beaudoin shared a slide format she had been using to explain the options and scenarios, and the group agreed to refine the presentation to avoid confusion about the scope of the feasibility study.
- The team discussed adding town votes and regional agreement details to a presentation slide, with P. Beaudoin agreeing to include "Essex Town vote" and "Manchester Town vote" to illustrate the complexity of the options. J. LaPosta emphasized the importance of clear presentation for the website, suggesting a visual funnel to show the multiple votes required for different projects. C. Dell Angelo mentioned that J. Greco was working on recreating the slide format and that the presentation would cover MSBA process, enrollments, existing conditions, and building details, with the team planning to clean up the format before the community meeting.
- The team discussed sharing photos and videos of school facilities to illustrate maintenance issues and the need for potential improvements. A. Cameron expressed concern about a community member's misleading claims about the school's structural condition and requested that any visual materials clearly highlight deterioration issues. J. LaPosta explained that while the school is well-maintained, its systems, including roofing and windows, are past their useful life and would require rebuilding.
- The team discussed using Mentimeter for gathering community feedback on school configurations and sites but decided against it due to concerns about self-selecting participants and potential misinterpretation of results. They agreed to collect opinions during the Q&A portion of the upcoming meeting instead, with L. O'Donnell noting that community members would be forthcoming with their views. J. LaPosta emphasized the importance of being prepared to act on any feedback collected, and C. Dell Angelo mentioned that feedback could be valuable for future community engagement efforts.
- The group discussed the evaluation of potential school sites and grade configuration options. They clarified that the current focus is on determining which physical sites are viable for further study, separate from the actual grade configuration decisions. J. LaPosta explained that while Apple Street may be eliminated due to infrastructure concerns, the Manchester Memorial site likely needs to be carried forward due to its previous identification in the statement of interest (SOI). The team agreed to seek clarification from MSBA about the process for eliminating sites and to communicate that they are still in the physical site analysis phase, focusing on land viability rather than specific configuration options.

Sincerely,

Jacob Greco

Kim Provost	Essex Elementary School Principal
Pam Beaudoin	MERSD Superintendent
Annie Cameron	Manchester Con Com
Michelle Cresta	MERSD Director of Finance & Operations
Theresa Whitman	SBC Co-Chair

Meeting Summary

- The project team discussed updates to their timeline and schedule for the PDP phase of the feasibility study. They announced that Apple Street is no longer under consideration as a site, and explained that the PDP submission to the SBC will be at the end of December, with a community meeting scheduled for January to review alternates and discuss configuration. The team also noted that the PDP phase is not linked to a board meeting with MSBA, allowing for more time in reviewing alternates compared to the PSR and SD packages.
- The group discussed the cost and effectiveness of direct mailers for upcoming community meetings, with L. O'Donnell emphasizing their value for reaching unaware residents despite the high cost of

$3,000. A. Cameron suggested including a timeline on mailers to clarify the series of meetings, and C. Dell Angelo confirmed that the budget of $150,000 includes funds for such promotional materials. The group agreed to consider sending mailers for the next two meetings, with electronic reminders for the third, to maintain engagement throughout the process.

- The group discussed scheduling for community engagement meetings and mailers. They confirmed January 28th as the date for the third community meeting, though P. Beaudoin expressed some concerns about potential scheduling conflicts. The team also discussed the timing of an upcoming School Building Committee meeting, which was tentatively scheduled for either January 21st or 22nd, pending confirmation of the date.
- The team discussed creating a single mailer to cover multiple community meetings, building tours, and budget-related events scheduled between November 20th and January. L. O'Donnell suggested using a full letter-size sheet with a calendar format and stars to highlight key dates, which C. Dell Angelo and P. Beaudoin agreed with. They agreed to work with their teams to develop this concept, incorporating a QR code and posters for additional distribution.
- The working group decided to hold a recap meeting on December 9th at Memorial School, which will include a presentation of previous community meetings and a school tour. They also agreed to create flyers for November-December and January-February meetings. The possibility of providing childcare at future meetings was considered. Additionally, they addressed a request from the Board of Selectmen in Essex regarding cost estimates for the Apple Street project, with C. Dell Angelo and J. LaPosta explaining that accurate costs cannot be provided due to unknown factors.

Sincerely,

Jacob Greco

Meeting Summary

- C. Dell Angelo announced details for an upcoming community meeting on Thursday evening, which will include a building tour at 4:30 PM and a meeting starting at 6 PM. The agenda will cover project overview, site review, and alternatives, with P. Beaudoin introducing the building and school committees, followed by C. Dell Angelo presenting the feasibility phase schedule.
- The meeting focused on reviewing requirements for studying different types of buildings, including renovation, addition, and new construction, as part of a feasibility study agreement with the MSBA. C. Dell Angelo explained that the community had requested this study, which is being reviewed with the school building committee and will continue through the PDP and PSR phases. The discussion also

covered the need for an amendment to the regional agreement for Pre-K through 3 and Pre-K through 5 options at the memorial site, which requires votes in both towns. The JCJ team was set to present information on various sites studied, including opportunities and constraints, and to update details about the elimination of the Apple Street site from consideration.

- The team discussed including a criteria matrix slide with red, green, and yellow indicators to visually represent data, with J. Elliott working on incorporating this into the Apple Street site considerations. C. Dell Angelo emphasized the importance of communicating that the school building committee considered community feedback about the Apple Street site during their site evaluation process. J. LaPosta confirmed they would present a high-level overview of the developed options, explaining that these are not yet designed, and outlined the next steps, including a community meeting in December at the Memorial Project Site, seeking SBC PDP approval on January 6th, and a fourth community meeting at the Essex site on January 28th.
- The team discussed plans for an upcoming community meeting, confirming that tours of Manchester will be offered at 4:30 PM for those who haven't seen the school, followed by an agenda repeating the content of Meetings 1 and 2. C. Dell Angelo noted that the community would likely be interested in the alternatives analysis and different options, while emphasizing that, according to the feasibility study agreement with MSBA, the memorial site must be carried through the PDP phase before the SPC can eliminate it or consider enrollment changes.
- T. Whitman suggested making the timing of decisions clearer, particularly for those unfamiliar with acronyms like PDP. C. Dell Angelo proposed adding a slide explaining the MSBA process and its modules before the schedule slide. T. Whitman also emphasized the need to differentiate community meetings 1 and 2 to encourage attendance at the second meeting.
- The group discussed timeline planning for a fall 2026 project, with C. Dell Angelo suggesting a tentative date and a caveat about schedule changes. They had a constructive conversation about borrowing strategy, with P. Beaudoin and others discussing the possibility of staggered small bonds to align with debt schedules of the two towns. The team is preparing a presentation for Thursday night, with C.Dell Angelo confirming they have a clear agenda and are making final touches.
- The group discussed engaging KartoonEDU for creating informational videos about the implications of votes and debt exclusions, which would be fact-based and well-received. They planned to review a fee proposal for his services at the next communications working group meeting. P. Beaudoin mentioned working with KartoonEDU on regional superintendent pieces, and C. Dell Angelo highlighted his experience with MSBA projects. The team also discussed collaborating with 1623 Studios for a walkthrough of the Essex school, with Christina and others potentially assisting if professionals were unavailable. A. Cameron requested access to the slide deck for review once completed.

Sincerely,

Jacob Greco

Meeting Summary

- The team discussed the upcoming community meeting in Manchester, confirming they would present the same information as shared in the first two community meetings. R. Rincon explained she had combined the slides to streamline the presentation, which will cover the MSBA process, project timeline, and design alternatives for the three potential school sites. A. Cameron emphasized the importance of having representatives from both Manchester and Essex communities present at the same time to facilitate cross-community dialogue.
- C. Dell Angelo confirmed that mailers and electronic communications were distributed to both towns, and they noted that future meetings would continue to be held in a hybrid format with online

participation options. P. Beaudoin expressed concerns about low engagement from Manchester's boards, though A. Cameron suggested this might be due to the current preference for virtual meetings rather than a lack of interest. C. Dell Angelo proposed emphasizing the importance of community participation in future meetings and highlighting the availability of recordings and other resources on the project website.

- The group discussed informational video pillars for MSBA projects from KartoonEDU, priced at $795 each. P.Beaudoin suggested creating a combination video covering the PDP and PSR process after the holidays, followed by separate videos for schematic design and budget implications in the fall. A .Cameron agreed noting that the pricing was reasonable, noting that nine videos would cost approximately $7,200.
- The group discussed plans for a memorial site and upcoming meetings. C. Dell Angelo noted that the first walkthrough was well-attended and suggested showing the difference between the Essex School and a new school. A. Cameron encouraged people to attend the upcoming SBC meeting in person, where they will review the final evaluation of alternatives and discuss preliminary cost estimates. C. Dell Angelo mentioned that the project team is working on the preliminary design program submission to MSBA, which will be finalized and sent for review around the holidays, with approval sought in January.

Agenda Item	Description
1.	**Review Site Selection Criteria Matrix** - The team reviewed site development criteria for three potential locations, focusing on Essex Elementary. J. Elliott presented slides detailing site characteristics, environmental concerns, and utility availability. The group discussed the need to verify electrical infrastructure capacity for an all-electric building. P. Beaudoin requested information about asbestos locations for

	parent concerns, and F. Pellegrini explained that Phase 1 environmental studies are ongoing, with Phase 2 testing to follow in the schematic design phase. The team also addressed the presence of a 100-foot wetlands buffer and clarified that it's not a complete no-fly zone for construction. - The team discussed the impact of different facility options on education and regional agreements, noting that disruptions would vary depending on the chosen path, whether renovation, addition, or new construction. J. LaPosta highlighted that even minimal options would result in some site loss for construction purposes, while C. Dell Angelo suggested keeping site viability considerations separate from configuration to allow for more detailed analysis in future phases. The group agreed to emphasize that outcomes depend on the selected option and to refine language to reflect these dependencies.
2.	**Review Current Essex Elementary Site, Manchester Memorial Site, & Apple Street Site** - The team discussed the viability of two school sites: Essex Elementary and Manchester Memorial. They agreed to focus on the land itself rather than the current buildings, as they need to study all options. P. Beaudoin offered to check for available flex space in the area for potential temporary relocation during construction. J. Elliott presented a detailed analysis of Manchester Memorial's site, noting constraints like environmental regulations and limited space. The team acknowledged the high costs and challenges of previous projects at this site. F. Pellegrini raised concerns about meeting MSBA silver rating requirements due to space limitations. The discussion concluded with considerations for site access, transportation impacts, and the need for a physical connection between new and existing buildings at Manchester Memorial. - The team discussed site options for a new school, focusing on the Memorial site, Apple Street, and potential impacts of consolidating students. They determined that the Memorial site's limited space and the need to relocate tennis courts made

	it challenging for consolidation. Apple Street was seen as a viable option physically but faced significant challenges with access, utilities, and potential environmental concerns. The team agreed to update their presentation slides with additional considerations, including busing issues and neighborhood impacts, for review at the upcoming SBC meeting on Tuesday. They also planned to provide documentation on why other potential sites were not considered further.

Sincerely,

Jacob Greco

Essex Elementary School

October 30, 2025
School Sustainability Group Workshop #1 Meeting Notes

Meeting Date: October 23, 2025

Attendees:
JCJ: Dustin Lombardi, Eric Haggstrom, Fawn W. Pellegrini
Soden: Colleen Soden, Kelley Tapia
DW: Christina Dell Angelo, John Albright, Jacob Greco
MERSD: Kimberly Provost, Pam Beaudoin, Michelle Cresta
SBC: Mike Gerhardt

Notes – to be used in conjunction with the slide deck

The meeting started with introductions of attendees from Dore + Whittier, JCJ Architecture, Soden Sustainability, and the individuals on the SBC Sustainability Working Group

Workshop Purpose

The purpose of the meeting was to review requirements of the Massachusetts School Building Authority (MSBA) to meet LEED Silver rating, discuss the sustainable measures implemented at the Manchester Memorial Elementary School (MMES), and for the design team to share the proposed sustainable measures for the renovated or new Essex Elementary School. The sustainability workshop introduced key sustainability frameworks and considerations to inform decision-making for the new Essex Elementary School building. The team emphasized aligning sustainability strategies with educational value, cost-effectiveness, and long-term operational benefits.

Design Team's Sustainability Approach

- Focused on learning as the primary outcome.
- Emphasized healthy indoor environments, training opportunities, and maximizing value.
- Aimed to balance minimizing first costs with reducing long-term operations and maintenance costs.

Minimum MSBA Requirements

- Achieve LEED BD+C: Schools Silver under v4.0 with select credits upgraded to v4.1
- Required points:
    - Material Ingredients (20+ compliant products from 5 manufacturers)
    - Low Emitting Materials
    - Indoor Air Quality Assessment
- Must meet MA DOER Stretch Code and be solar-ready.

Incentives Overview

MSBA Enhanced Reimbursement:

- 3% for Opt-In Specialized Energy Code (Net Zero or All-Electric)
- 1% for additional indoor air/material quality credits
- Mass Save Incentives: Achieve EUI < 25 for meaningful savings
- Key Message: Incentives can offset added costs and maximize long-term value.
- Additional conversation: It is assumed, but confirmation from the SBC is needed, that there is agreement to move forward with 3% + 1% = 4% incentives.

Sustainable Design Opportunities

Construction – best practices

- Divert waste from landfill.
- Implement construction-phase air quality plans.

Site Design

- Protect sensitive lands and floodplains.
- Target 90th percentile stormwater events.
- Use native planting; no irrigation.
- EV charging: match or exceed 2 stations from Manchester Memorial.
    - Electric vehicle charging. The building code has been modified since the design of Manchester which provided one station with two plug-in points. Now, code requires 10% spaces to be EV ready.
    - EV-ready means installing conduit and power capacity now, leaving chargers for future installation — lower upfront cost, but less immediate benefit.
    - EV-installed provides immediate functionality and community value but has higher initial cost.
    - Quantity of spaces depends on the number of parking spots in the final design.
    - Discussion question: How might EV charging at the school serve both staff and the wider community, and what's the most value-forward way for us to plan for that—EV-ready or EV-installed now?
- Working Group confirmed design team shall provide covered bike parking and bike lanes.
    - Discussion question: Investing in covered bike racks and safe on-site bike lanes can reduce parking demand and support healthy, low-carbon transportation. As more families and staff look to bike to school, how should we plan for these features to support long-term use—and what level of investment feels appropriate now?
- Perform resiliency assessments for flood, fire, storms.
    - For every project site under consideration in the PSR (Preferred Schematic Report Feasibility Study) phase, the District and Design team must perform a written risk assessment / evaluation for environmental hazards specific to each site including (but not limited to) flooding, high winds, storm surges, power outages, extreme heat and

cold, winter storms, rain, snow, and any other applicable site vulnerability relative to site resiliency or climate change for the anticipated useful life of the building.
    - Will help gather sufficient information to make informed decisions regarding site selection, building location and massing, floor elevations of occupied areas and elevations of critical mechanical equipment, stormwater retention, building materials, emergency back-up systems, systems selection and any other relevant site and building design consideration.
- Light pollution mitigation – best practices
- Open space and rainwater management – both credits are based on the specific site selected. The intent of the Open space credit is to include exterior open space in the design that encourages interaction with the environment, social interaction, passive recreation, and physical activities. (can be hardscape and green).
- Rainwater management is a combination of both subsurface (person-made) filtration and storage as well as thoughtful + useful landscaping.
    - Raingardens; these help reduce the person-made infrastructure by slowing the waterflow and allowing water to infiltrate the soil gradually. This reduces peak flow into the municipal stormwater system — which is often what drives infrastructure costs up.
    - The potential benefits are smaller underground pipes, cleaner water entering local waterways, create hands-on learning spaces for students to learn about science, ecology, and climate resilience.
- MERSD team noted that they have not heard of challenges with the raingarden at MMES. Design Team will pursue raingardens for the EES project.
    - Mike G suggested permeable pavement.
    - Dustin L asked if Essex had Friends of Trees similar to Manchester-by the-Sea. The MERSD individuals stated they do not believe a similar group exists in Essex.

Water

- Target 35% indoor water use reduction.
    - Plumbing fixture flows are listed below – all recommendations match Manchester, with the exception of toilets. MMES toilet's were designed as 1.1 gpf.
    - MERSD team noted they have not heard challenges with the 1.1 gpf toilets and confirmed design team shall proceed with this for the EES project.
- Specify low-flow, code-compliant fixtures.
- Meter domestic hot water and plumbing.
    - Manchester metered:
        - Whole building (prereq)
        - HVAC heating boiler make-up water (Essex may choose to meter the plumbing fixtures)
        - Domestic hot water use

Energy & Carbon

- Target EUI < 25.

- Explore displacement ventilation system.
- Aim for 5% WBLCA reduction in embodied carbon with newer material technologies.
- Commissioning – A Commission team is required by MSBA. The Target for schools is typically 25 EUI. EUI of 25 or lower is threshold for Path 1 incentives with MASS.
- LEED Optimize has gotten harder since MMES.
- Displacement ventilation provides air at flow at floor level rather than at the ceiling. One advantage is the fresh, conditioned air (heat or cool) is at the space occupied by students and staff (as opposed to high at the ceiling).
- Not done at MMES but proposed for EES is mindfulness of embodied carbon. JCJ has the ability and software to provide this review. Just doing the study earns 1-point on the LEED scorecard.

Health & Wellness

- Use Red List-free, HPD/EPD-verified materials.
- Perform IAQ flush-out pre or post-occupancy.
- MERV 13+ filters, CO_2 monitoring, operable windows.
- Maximize daylight, use LED lighting and glare controls.
- Design team encourages operable windows. This typically needs to be balanced with control of the HVAC system. JCJ suggests one operable window in each classroom has been successful on our school projects.

Operations

- Plan for joint-use community facilities
- Adapt Manchester Memorial's LEED O+M Starter Kit.

Next Steps

- Sustainability Working Group to report to School Building Committee.
- Next SWG Meeting: November 17, 2025.
    - Design team to share LEED scorecard progress
- MSBA Submission Timeline:
    - PDP: January 2026
    - PSR: April 2026
- Schematic Design Phase: May–November 2026
    - Finalize Mass Save Memorandum of Understanding.

Action Items / Recommendations

- Pursue all available incentives.
- Match or exceed Manchester Memorial's sustainability benchmarks.
- Consider regenerative strategies that support curriculum and resilience.

MEETING AGENDA

Meeting Date:	November 17, 2025
Meeting Time:	10:30AM – 12:00PM
Project Name:	Essex Elementary School Project

PDP Cost Estimate

INTRODUCTION

NOTE: The costs for the various PDP Options indicated above are intended to be an analysis of the relative costs between options and NOT a prediction of the actual final cost of any individual option. Major variables such as geotechnical, site grading, structural system and final MEP systems have yet to be designed in detail so costs will vary significantly from the benchmark cost estimating included as part of this PDP cost analysis. The costs outlined in this report should not be represented as the FINAL construction budget.

This PDP Design Submission cost estimate was produced from narratives and outline drawings dated November 06, 2025 prepared by JCJ Architecture and their design team.

This estimate includes all direct construction costs, CM fees and design contingency. Cost escalation assumes start dates indicated.

Bidding conditions are expected to be public bidding under 149a of the Massachusetts General Laws to pre-qualified construction managers, and pre-qualified sub-contractors, open specifications for materials and manufacturers.

The estimate is based on prevailing wage rates for construction in this market and represents a reasonable opinion of cost. It is not a prediction of the successful bid from a contractor as bids will vary due to fluctuating market conditions, errors and omissions, proprietary specifications, lack or surplus of bidders, perception of risk, etc. Consequently the estimate is expected to fall within the range of bids from a number of competitive contractors or subcontractors, however we do not warrant that bids or negotiated prices will not vary from the final construction cost estimate.

ITEMS NOT CONSIDERED IN THIS ESTIMATE

Items not included in this estimate are:

- All professional fees and insurance
- Building Permit costs
- Rock excavation
- Land acquisition, feasibility, and financing costs
- All Furnishings, Fixtures and Equipment
- Items identified in the design as Not In Contract (NIC)
- Items identified in the design as by others
- Owner supplied and/or installed items (e.g. draperies, furniture and equipment)
- Utility company back charges, including work required off-site
- Work to City streets and sidewalks, (except as noted in this estimate)

RE: Preliminary Design Program (PDP) – Traffic Feasibility
Manchester Essex Regional School District
Essex Elementary School – Essex, Massachusetts

INTRODUCTION

Greenman-Pedersen, Inc. (GPI) has prepared this *Feasibility Study* for the Essex Elementary School, currently located at 12 Story Street in Essex, Massachusetts. The Essex Elementary School currently services 215 students in Grades K-5 from the Manchester-Essex Regional School District (MERSD). The MERSD has received funding through the Massachusetts School Building Authority (MSBA) to conduct a Feasibility Study for the siting of a new school. This Feasibility Study, as such, evaluates the potential for three sites to accommodate three distinct enrollment configurations from a traffic and circulation perspective.

The following school sites were included within the initial traffic and circulation screening process:

- **Essex Elementary School Site** – The Essex Elementary School (EES) is currently located at 12 Story Street in Essex, MA and services 215 students in Grades K-5.
- **Manchester Memorial Elementary School Site** – The Manchester Memorial Elementary School (MMES) is currently located at 43 Lincoln Street in Manchester, MA and services 304 students in Grades PreK-5.
- **Apple Street Site** – The Apple Street site is located at 30 Apple Street in Essex, MA. The site is currently undeveloped and does not service any students at this time.

Each of these sites were then qualitatively evaluated, in regard to traffic and circulation, with respect to six attributes to identify the suitability of each site to accommodate the three enrollment options summarized as:

- **Option 1 –** Grades PreK–3 (165 students) sited in Essex, with Grades 4–5 integrated into Manchester Memorial Elementary;
- **Option 2 –** Grades PreK–5 (250 students) sited in Essex; and
- **Option 3 –** Grades PreK–5 (515 students) sited at Manchester Memorial Elementary, consolidating all Essex and Manchester students into one campus.

A total of nine design alternatives were initially identified for evaluation, representing different combinations of site location and enrollment configuration, ranging from code upgrades to new construction. They are as follows:

- A0.1 Essex Elementary School Code Upgrade / Base Repair - Grades PreK–3 (165 students)
- A0.2 Essex Elementary School Code Upgrade / Base Repair - Grades PreK–5 (250 students)
- A1.1 Essex Elementary School Addition / Renovation - Grades PreK–3 (165 students)
- A1.2 Essex Elementary School Addition / Renovation - Grades PreK–5 (250 students)
- A2.1 Essex Elementary School New Construction - Grades PreK–3 (165 students)
- A2.2 Essex Elementary School New Construction - Grades PreK–5 (250 students)
- B1.1 Manchester Memorial Elementary School Addition/Renovation – Grades PreK-5 (515 students)
- C2.1 Apple Street Site New Construction - Grades PreK–3 (165 students)
- C2.2 Apple Street Site New Construction - Grades PreK–5 (250 students)

Each site and enrollment option was evaluated through a qualitative traffic and circulation lens, focusing on the following attributes:

- **Infrastructure** - Evaluates existing access to the site, roadway conditions, and functional classifications to understand how well each site integrates with the surrounding network. Consideration was also given to roadway geometry, traffic control, and overall connectivity to the regional system.
- **Walkability** - Assesses the availability and condition of sidewalks, crossings, and bicycle accommodations to determine the potential for non-motorized travel. Sites located closer to the student population inherently support higher walking and biking rates, reducing congestion and promoting healthy, sustainable travel choices.
- **Safety** - Reviews crash patterns and potential conflict points between motorists, pedestrians, and bicyclists in the surrounding area. This criterion identifies broad safety risks that may influence school access and circulation, recognizing that detailed design measures can address site-specific issues later.
- **Bussing Efficiency** - Considers the ability of each site to accommodate bus circulation, loading and unloading operations, and queuing within the site. The evaluation also accounts for the regional impacts of bus routing, stacking limitations, and potential delays during peak drop-off and pick-up periods.
- **Neighborhood Traffic Impact** - Examines the potential for school-related traffic to exacerbate congestion on adjacent or regional commuter routes. Sites with limited on-site queuing storage may increase conflicts between local and through traffic, leading to safety and operational concerns.
- **Adequate Parking** - Evaluates the site's capacity to provide sufficient parking for staff and visitors under current and projected enrollment scenarios. Consideration is given to internal circulation, and pedestrian safety within lots.

Although evaluated independently, all six of the traffic evaluation pillars are inextricably linked. Congestion affects safety and walkability. Student density affects walkability and drop-off queues. Therefore, the ideal alternative is one that ranks positively for all six criteria.

The following *Feasibility Study* describes existing transportation conditions at each site, projects future trip generation and parking demand for each enrollment alternative, and applies the evaluation criteria to qualitatively "score" each alternative. This approach ensures that site and alternative selection reflects a balanced understanding of safety, accessibility, operational efficiency, and neighborhood context.

SITE A – ESSEX ELEMENTARY SCHOOL

EXISTING CONDITIONS

GPI conducted a site visit on Tuesday, September 23, 2025, to observe the site circulation associated with the weekday morning drop-off, weekday afternoon pick-up, and general queue lengths around the school site. Both morning drop-off and afternoon pick-up observations occurred during partly cloudy conditions with a temperature in the upper 60's. The favorable weather conditions appeared to encourage walking and biking activity in the surrounding area. GPI team members observed operations at and immediately adjacent to the site.

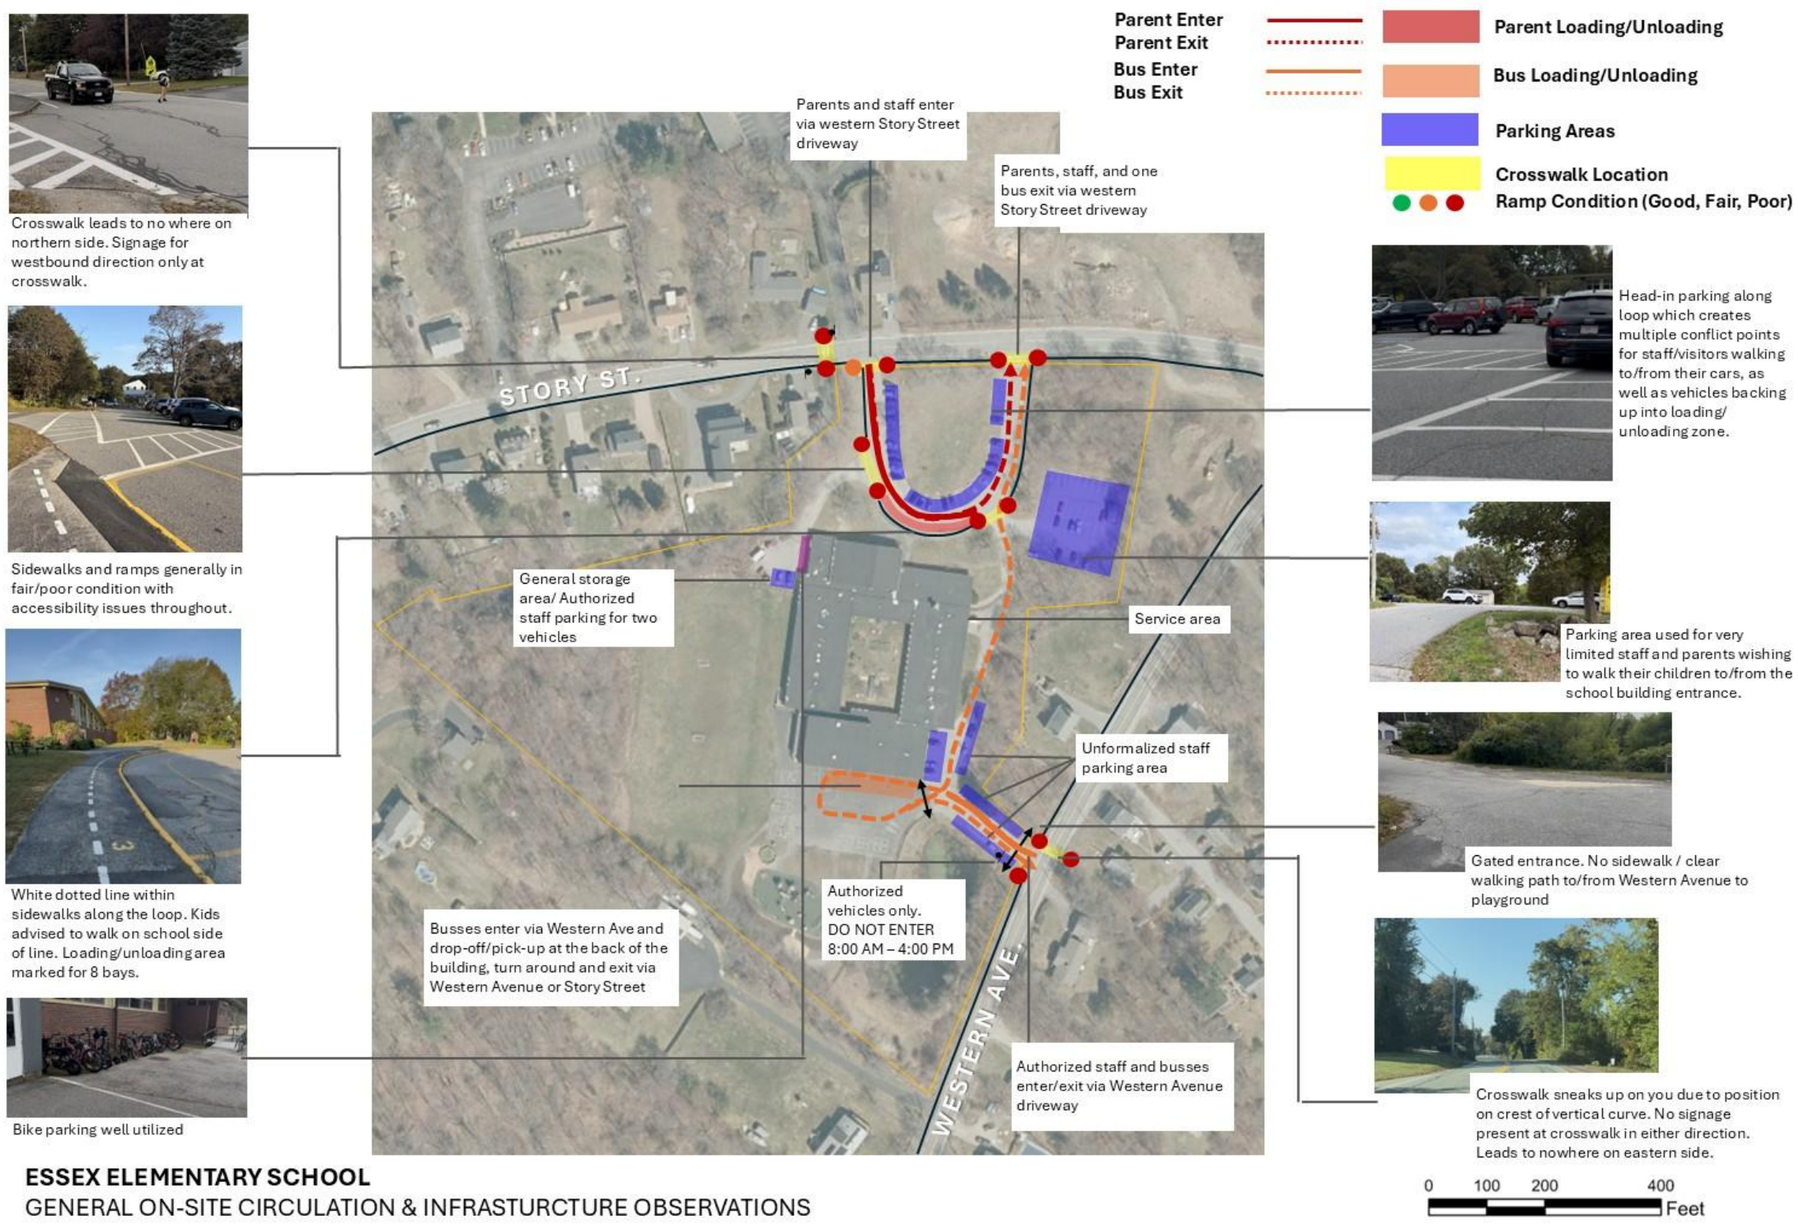
The elementary school operates from 8:25 AM to 2:55 PM. Students may arrive at school no earlier than 8:05 AM, as no supervision is provided prior to that time.

General site layout and circulation for the Essex Elementary School is depicted in **Figure 1**.

EXISTING SITE ACCESS/EGRESS AND LAYOUT

Vehicular access to the Essex Elementary School site is provided via two driveways on Story Street that form a one-way circulation loop north of the school building. The western driveway functions as the entrance-only access point, while the eastern driveway serves as the exit. Both driveways are clearly delineated with directional signage. The internal loop provides direct access to the parent drop-off/pick-up zone, as well as staff parking areas. The loop is designed for counterclockwise circulation and consists of a single travel lane with curbside loading/unloading area adjacent to the main school entrance and head-in parking spaces along the interior for staff parking. The loading/unloading area is currently striped to accommodate eight vehicles. However, with the prevalence of larger SUVs, the area functions more comfortably for six vehicles.

West of the school building, a short spur driveway extends off of the main circulation loop, providing access to a small parking area designated for a few staff members (2 formal spaces). This area also contains storage facilities, dumpsters, and bicycle parking, and terminates in a dead end with no through circulation. During morning observations, students were observed walking into this area, suggesting that it is occasionally used as an informal pedestrian route despite its service-oriented function.



East of the school, a secondary spur extends off of the main circulation loop, providing access to an upper parking lot that accommodates additional staff and parent parking. This secondary spur also provides access to service areas and additional staff parking (7 formal spaces and approx. 6 informal spaces) before connecting to Western Avenue via a secondary full access/egress driveway.

Bus loading and unloading occurs south of the building in the paved play area.

PARKING – LAYOUT, SUPPLY, AND DEMAND

The Essex Elementary School campus provides approximately 83 formal parking spaces distributed across several on-site areas. The primary parking supply is located along the interior of the parent circulation loop, configured as head-in spaces primarily utilized by staff during the school day. Additional parking is available in an upper lot east of the school building, which accommodates both staff and parent parking. A smaller spur off the western side of the loop provides a limited number of staff spaces and also contains school maintenance facilities, storage areas, dumpsters, and bicycle parking.

Figure 1. General On-Site Observations – Essex Elementary School

Formal parking for seven vehicles is also provided along the southeastern side of the school building. During observations, some informal parking activity was noted in this general area, suggesting occasional overflow or convenience-based use by staff.

Overall parking utilization was approximately 60 percent, indicating sufficient capacity for daily operations.

Parking circulation is generally intuitive. However, the current layout, where the circulation loop and active loading/unloading area are positioned between the parking spaces and the school building, requires staff to cross the active drive to reach the building entrance. This configuration introduces numerous pedestrian–vehicle conflict points along the loop, especially during high-traffic periods. Reconfiguration of the parking and circulation pattern to reduce crossing activity and separate loading operations from staff parking would improve overall safety and operational efficiency.

BUSSING

Students enrolled in grades K-5 who reside more than 2 miles from their neighborhood school qualify for district-paid transportation. Two buses and a few vans currently service the Essex Elementary School. These buses generally drop students off around 8:25 AM during the drop-off period and depart the school between 2:50 – 3:00 PM during the PM drop-off period. Buses enter via the secondary entrance on Western Avenue and load/unload students building-side on the paved play area south of the school. They then turn around in that area to exit. In the morning, one bus was observed exiting via Story Street, but in the afternoon, both buses exited via Western Avenue. It was observed that buses have difficulty making a left out of the secondary drive onto Western Avenue due to the existing geometry.

ON-SITE PEDESTRIAN AND BIKE INFRASTRUCTURE

A sidewalk is provided along the outside edge of the internal circulation loop. The sidewalk is generally in poor condition, with uneven surfaces, cracking, and areas of insufficient width that render it noncompliant with accessibility standards. An asphalt berm delineates the sidewalk from the adjacent travel lane. A dashed white line is painted along the center of the sidewalk around the loop, and students have been instructed to walk on the school side of this line to minimize potential conflicts with vehicles.

The two spur driveways that intersect the loop create breaks in the sidewalk, which are bridged by marked crosswalks. However, both crossings are relatively long, particularly the western one, and exhibit faded pavement markings. The geometry of the loop often results in vehicles cutting through these crosswalks during drop-off and pick-up, increasing potential conflict points between pedestrians and vehicles. Curb ramps on-site are generally in poor condition and do not meet ADA accessibility requirements.

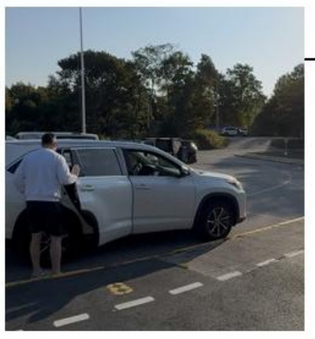
Despite these limitations, a notable level of walking and biking activity was observed. The site lacks dedicated bicycle facilities, and students are instructed to walk their bikes or scooters while on school grounds. Nevertheless, several students were observed riding bicycles and scooters on the sidewalk and even within the loop itself, creating safety concerns due to the close proximity of moving vehicles.

MORNING DROP-OFF OBSERVATIONS

Parent drop-off activity begins around 8:05 AM, when staff supervision becomes available. The first vehicle arrivals were recorded at approximately 7:50 AM, with activity picking up around 8:07 AM. As discussed, the active unloading zone comfortably accommodates six large vehicles at a time, though

it is marked for eight spaces. Two staff members assist with unloading students at the curb, helping to maintain flow within the loop. Once out of the vehicle, students are directed either to the rear playground or the cafeteria depending on weather conditions. The maximum queue length reached six vehicles, all contained within the designated unloading area, and the site was fully cleared by 8:23 AM. Buses departed shortly thereafter, around 8:27 AM. Approximately 52 vehicles participated in the morning drop-off, many carrying multiple students. Observed active transportation included roughly 13 walkers, 11 bicyclists, and 3 scooter riders.

However, several operational issues were identified during this period. Many parents did not pull fully forward within the designated unloading area, creating clustering near the main entrance and causing inefficient use of curb space. Vehicles were observed stopping within crosswalks west of the main entrance and dropping students mid-crosswalk, and some students exited from the driver's side of vehicles, creating unsafe conditions. Parents frequently positioned vehicles away from the curb, reducing lane capacity and causing passing conflicts within the loop. The predominance of large SUVs further limited visibility and contributed to inefficiencies. Additionally, several students were seen riding bikes and scooters on sidewalks despite school guidance to walk them once on campus.

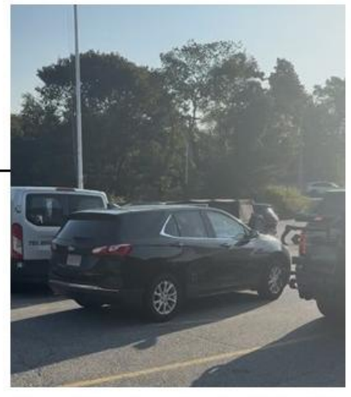


General AM drop-off observations are depicted in **Figure 2**.

Figure 2. AM Drop-Off Observations – Essex Elementary School

ESSEX ELEMENTARY SCHOOL
AM DROP-OFF OBSERVATIONS

Parents dropping off children within the crosswalks. The way the crosswalk is located on the western side, vehicles are bounded to encroach.



In many instances, parents do not pull up all the way to the front of the drop-off zone.

When parents don't pull all the way up (which is often), others pull in front of them which creates conflicting weaving maneuvers.

Some parents bypass drop-off zone and park in eastern lot and then walk their children to building.

Some vehicles observed not "hugging" curb line and restricting bypass area on left.

AFTERNOON PICK-UP OBSERVATIONS

Afternoon pick-up operations at Essex Elementary begin at approximately 2:50 PM, when walkers and bicyclists are released from the building. Parent vehicle activity begins to increase roughly 15 to 20 minutes prior, with the first arrivals typically observed around 2:30 PM. By 2:35 PM, the designated loading and unloading area within the internal loop is fully occupied, and the queue extends toward the loop entrance. At peak pick-up (approximately 2:50–2:55 PM), the maximum observed number of queued vehicles reached roughly 34. This included 10 vehicles on site (6 in designed loading area and 4 between loading area in Story Street) plus 24 vehicles queued off-site onto Story Street. The maximum queue west of the school was 13 vehicles and east of the school was 11 vehicles.

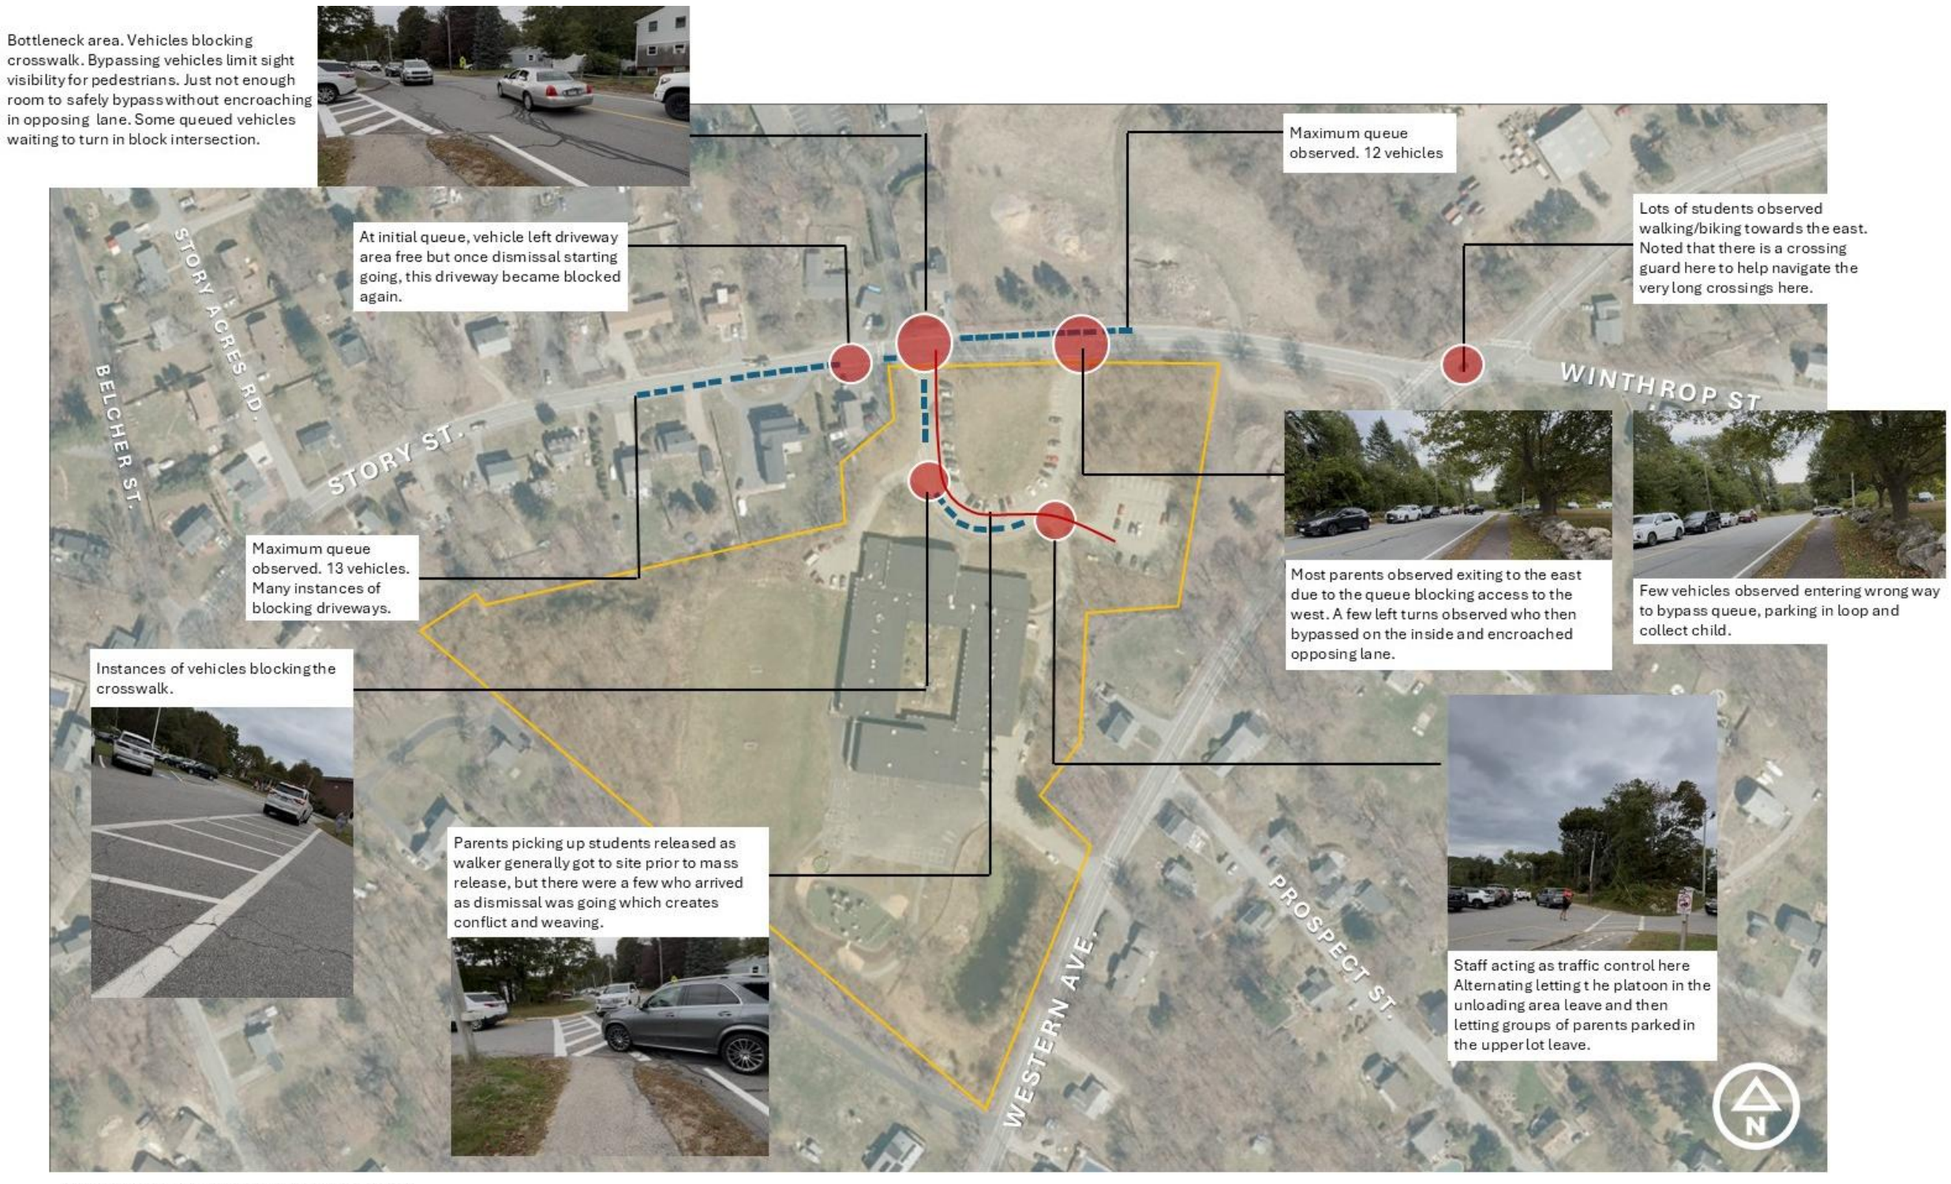
The queueing patterns along Story Street create several operational and safety challenges.

- Through vehicle drivers approaching the queue often attempt to bypass queued vehicles by encroaching into the opposing travel lane in both directions, as queued vehicles typically hug the outer edge of the curb. The limited roadway width, particularly west of the school where the cross-section narrows to approximately 22 feet curb-to-curb, does not provide sufficient space for these maneuvers to occur safely. This condition increases the risk of sideswipe and head-on conflicts.
- During peak pick-up, vehicles often queue well beyond the entrance driveway, extending past multiple residential properties. As a result, several private driveways are repeatedly blocked, restricting resident access and contributing to driver frustration.
- The crosswalk located just west of the school's entrance driveway, which provides pedestrian access to the school grounds, is frequently obstructed by queued vehicles. Even when not directly blocked, the line of stopped vehicles often obscures sight lines for both pedestrians and approaching drivers. This issue is further compounded by bypassing behavior, as eastbound motorists attempting to pass the queue have limited visibility of pedestrians entering or within the crosswalk until they are already within the travel lane, creating a high-risk conflict point.

Parents employ two primary strategies during afternoon pick-up. They either queue to use the designated loading area within the loop as intended, or park in the upper lot east of the school. Parents who park in the upper lot typically bypass the main queue on Story Street, enter the site, and circulate directly to the lot. They then exit their vehicles, walk to the front entrance to collect their children, and return to their vehicles before departing via Story Street. While this approach reduces congestion off-site, it introduces several issues. As mentioned, bypassing the queue along Story Street is problematic due to the narrow roadway width, particularly west of the school, where the cross-section provides insufficient room for vehicles to safely pass queued traffic. This maneuvering creates potential conflicts between through vehicles and those waiting to turn into the site. On site, vehicles entering and exiting the upper lot also interact with the active circulation loop, resulting in intermittent conflicts with parents exiting the designated loading area. These overlapping movements disrupt the flow of traffic and contribute to overall inefficiencies during pick-up.

Fortunately, these conflicts are largely mitigated by the presence of a staff member who serves as on-site traffic control. This individual actively manages the interaction between vehicles exiting the upper lot and those leaving the loading area, alternating movements between the two streams to maintain safe and orderly operations. A police officer was present at the Western Avenue exit to assist with bus departures, while a crossing guard stationed at the Western Avenue / Story Street / Winthrop Street intersection facilitated pedestrian crossings.

The school employs a structured pick-up system to manage vehicle loading and student release efficiently during afternoon pick-up. Parents display identification placards on their vehicle dashboards to facilitate the student pick-up process. A staff member positioned at the lower end of the loop uses a walkie-talkie to relay parent names to additional staff stationed at the front of the school building.



Upon notification, students are organized by assigned numbers corresponding to designated pick-up points along the curb. Once their number is called, students proceed to their parent's vehicle, enter, and depart. While some groups, particularly those involving younger students, required slightly longer loading times, the overall operation was observed to function efficiently and with good coordination among staff.

The on-site circulation pattern itself contributes to several recurring operational issues. As the internal loop serves simultaneously as a travel lane, loading/unloading area, and access route for staff parking, space becomes highly constrained during pick-up.

Most vehicles exiting the site were observed turning right on Story Street to avoid the westbound queue waiting to enter the site. However, a small number of drivers were observed turning left and encroaching across the centerline to bypass queued traffic, further compounding circulation issues. The afternoon pick-up period was clear by 3:04 PM. This indicates neighborhood traffic is impacted for about thirty minutes.

General PM pick-up observations are depicted in **Figure 3**.

Figure 3. PM Pick-Up Observations – Essex Elementary School

ESSEX ELEMENTARY SCHOOL
PM PICK-UP OBSERVATIONS

SURROUNDING ROADWAY NETWORK

Story Street

Story Street, within the vicinity of the school, is oriented generally in an east–west direction and is classified as a local roadway under local jurisdiction. Story Street provides connection between Route 22 to the southwest and Western Avenue/Winthrop Street to the northeast.

Pavement width varies along its length. East of the school, extending to its terminus at the intersection with Western Avenue and Winthrop Street, Story Street measures approximately 30 feet curb-to-curb, consisting of 1-foot shoulders and 14-foot travel lanes in each direction. Bi-directional travel is delineated via a single yellow centerline. A 5-foot sidewalk, generally in fair to poor condition with cracked, uneven surfaces, is provided along the southern side of the roadway, separated from the travel way by a narrow 2-3 foot grass buffer. Asphalt berms are located along both roadway edges. These conditions extend westward to the school, where the roadway starts to narrow considerably. West of the school, the curb-to-curb width reduces to approximately 22 feet, consisting of 0.5-foot shoulders and 10.5-foot travel lanes. The sidewalk continues along the southern side, however, the grass buffer is removed, resulting in limited separation between pedestrians and vehicular traffic. Sidewalks west of the school appears to be in slightly better condition than those east of the school. The wider cross-section to the east of the school creates an environment that feels less constrained and more conducive to higher vehicle speeds, while the narrower cross-section to the west produces a more confined setting. This variation in width contributes to operational challenges during afternoon pick-up periods, when queuing and bypassing behaviors occur. The available roadway width west of the school is insufficient for vehicles to pass queued traffic safely, often requiring drivers to yield to one another.

Other than the school itself, land use along Story Street is primarily residential with several condominium complexes located along the northern side. Traffic volumes and vehicle speeds appeared to be consistent with those typically observed on neighborhood roadways, generally low and moderate in nature. The constrained roadway width along much of the corridor further contributes to these lower operating speeds.

A midblock crosswalk is located along Story Street just west of the entrance-only driveway to the school. The crossing includes a pedestrian curb ramp on the southern side but lacks a corresponding ramp on the northern side, rendering the crosswalk inaccessible for individuals with mobility impairments. Pedestrian warning signage is present at and in advance of the crosswalk for eastbound traffic, however, no comparable signage is provided for westbound drivers, reducing visibility and driver awareness from that direction. In addition, queued vehicles waiting to access the school site in the afternoon pick-up often block the crosswalk or are queued in a position that blocks the view of the crosswalk from bypassing vehicles, creating safety concerns.

An additional midblock crosswalk is located just east of Belcher Street across Story Street (approximately 1,000 feet west of the school). This crossing is situated along a horizontal curve, which limits sight distance particularly for eastbound drivers approaching the crosswalk. The curve and roadside vegetation further restrict visibility of pedestrians waiting to cross from the southern side. Advance pedestrian warning signage is provided for westbound travel, and both advance and at-crosswalk signage are present for eastbound traffic. The sidewalk along the southern side of Story Street terminates at the crosswalk, and the ramps serving the crosswalk appear to be in good condition and ADA compliant.

No bicycle accommodations are present along Story Street.

Along Story Street, static "20 MPH When Children Are Present" school zone signage is provided in both directions approaching the school. Similar to Western Avenue, remnants of older school zone signs remain in place and should be removed to reduce sign clutter and improve overall message clarity within the school zone.

Western Avenue

Western Avenue, within the vicinity of the school, is oriented generally in a north-south direction and is classified as a local roadway under local jurisdiction. Western Avenue provides connections between Martin Street (Route 22) to the southwest and Main Street (Route 133) to the northeast.

Curb-to-curb width along Western Avenue is fairly consistent at around 26 feet, providing one-foot shoulders and 12-foot lanes in each direction. Bi-directional travel is delineated via a double yellow centerline. A five-foot sidewalk, generally in fair to poor condition with cracked, uneven surfaces, is provided along the western side of the roadway and is delineated via a crumbling asphalt berm.

Although classified as a local roadway, Western Avenue appears to function more as a collector and serves as a logical cut-thru route connecting Route 133 to the northeast with Route 22 to the southwest. While land use along Western Avenue is primarily residential in nature, the wider roadway cross-section and greater building setbacks create a context that promotes higher travel speeds. As a result, both traffic volumes and speeds were observed to be higher on Western Avenue than on Story Street. There was also a decent amount of truck traffic observed. These conditions suggest that primary access to the school site should continue to be provided via Story Street, while enhanced pedestrian crossing treatments may be warranted along Western Avenue to improve safety and accessibility.

A midblock crosswalk is located along Western Avenue just north of the secondary school driveway. The crossing includes a pedestrian curb ramp on the western side but lacks a corresponding ramp on the eastern side, rendering the crosswalk inaccessible for individuals with mobility impairments. Pedestrian warning signage is present at and in advance of the crosswalk for northbound traffic, however, no comparable signage is provided for southbound drivers, reducing visibility and driver awareness from that direction which is particularly concerning given the crosswalk lies at the crest of a vertical curve. Therefore, a police officer detail was stationed here to facilitate minimal crossings at this location.

Another midblock crossing is located approximately 900 feet south of the school just north of Walnut Park Road. Similar to the crossing at the school, this location lacks pedestrian curb ramps and pedestrian warning signage, limiting its accessibility and visibility.

There are no bicycle accommodations provided along Western Avenue.

Updated school zone signage is installed along Western Avenue in both directions (approximately 175 feet north of Story Street and approximately 200 feet north of Walnut Park Road). The signage is equipped with flashing beacons and corresponding "20 MPH When Flashing" panels, supplemented by speed feedback displays to enhance driver awareness. However, several outdated school zone signs remain along Western Avenue, contributing to visual clutter and potentially diminishing the effectiveness of the newer devices.

Story Street at Western Avenue / Winthrop Street

East of the school, Story Street terminates at the intersection of Story Street, Western Avenue, and Winthrop Street. At this location, Story Street and Winthrop Street intersect Western Avenue from the west and east, respectively, forming a four-way unsignalized intersection. Both the Story Street and

Winthrop Street approaches operate under stop control, while Western Avenue operates free-flow. The intersection geometry is skewed, with both side streets meeting Western Avenue at shallow angles. This configuration results in excessively wide curb radii in the northwest and southeast corners, encouraging higher-speed turning movements, particularly for vehicles turning right from southbound Western Avenue onto westbound Story Street.

On both the Story Street and Winthrop Street legs, bidirectional travel is divided by a small raised or painted island intended to discourage encroachment from opposing directions. North of the intersection, a sidewalk is provided along the eastern side of Western Avenue, while south of the intersection, the sidewalk shifts to the western side. Sidewalks are also provided along the southern side of Story Street and the northern side of Winthrop Street. As a result, marked crosswalks are present along the northern leg of Western Avenue and the Story Street leg of the intersection.

The curb ramps serving these crosswalks are in poor condition and do not meet ADA accessibility standards. The ramps located in the northwest corner are of particular concern due to the absence of vertical curb delineation; instead, the area is defined solely by white paint. Combined with the wide curb radii, this design creates a hazardous condition where southbound vehicles turning onto Story Street often do so at elevated speeds, posing safety risks for crossing pedestrians.

SAFETY ASSESSMENT

Collision data for the immediate area surrounding Essex Elementary School were obtained from the *MassDOT IMPACT Crash Data Portal* for the latest complete five years (2020-2024). Data indicates a relatively low frequency of incidents, with the few that have occurred generally tied to isolated or non-recurring factors. One crash was reported at the intersection of Western Avenue at Story Street/Winthrop Street involving a single vehicle that struck a deer. Two additional crashes occurred along Western Avenue south of the school, both outside of school hours and classified as single-vehicle incidents caused by driver distraction. Another crash was documented on Story Street southwest of Belcher Street, identified as a single-vehicle roadway departure due to adverse weather conditions.

The most notable incident occurred directly in front of the school on Story Street and involved a same-direction sideswipe at approximately 2:45 PM, coinciding with afternoon pick-up. This crash likely reflects the constrained roadway conditions observed during peak pick-up periods, when limited pavement width cannot safely accommodate queued, through, and bypassing vehicles simultaneously.

SITE OPPORTUNTITIES AND CONSTRAINTS

PROS

- The Essex Elementary site is located in a predominantly residential setting with lower traffic volumes and fewer speeding vehicles.
- The surrounding area is generally conducive to walking, even where sidewalks are substandard, due to the lower intensity of vehicular traffic.
- There is ample space on-site for reconfiguration, and overall parking availability is good.

CONS

- Sidewalks, curb ramps, and crosswalks in the vicinity are in poor condition, and off-site pedestrian connections require substantial improvement.

- The intersection of Western Avenue at Story Street/Winthrop Street is of particular concern, featuring wide curb radii and long crosswalks that encourage high-speed turning movements. Combined with substandard ramps and a lack of delineation, these conditions create an unsafe environment for pedestrians.
- School zone signage and pavement markings are outdated and lack consistency.
- Pick-up queues routinely block residential driveways and result in bypassing maneuvers by through traffic.
- School buses experience difficulty executing left turns onto Western Avenue due to turning radius and sight line constraints.
- Parking along the internal loop results in frequent pedestrian–vehicle and vehicle–vehicle conflicts, particularly during loading and unloading.

CRITICAL NEEDS

Priority improvements for the Essex Elementary site include:

- Upgrading sidewalks, ramps, and crosswalks both on-site and along approach routes to improve accessibility and safety.
- Revising the bus entrance/exit configuration to accommodate safer turning movements.
- Enhancing crosswalks on Story Street and Western Avenue with Rectangular Rapid Flashing Beacons (RRFBs) and ADA-compliant ramp connections.
- Updating school zone signage and advance warning signs to reinforce driver awareness.
- Increasing on-site queue storage to reduce driveway blockages and mitigate conflicts with through traffic during pick-up periods.
- Implementing intersection improvements at Western Avenue and Story Street/Winthrop Street to tighten curb radii, shorten crossing distances, and enhance accessibility.
- Reconfiguring on-site parking to minimize conflicts between pedestrians and vehicles.
- Considering traffic control at the Story Street entrance to facilitate orderly vehicle movement and provide safe pedestrian crossings.

SITE B – MANCHESTER MEMORIAL ELEMENTARY SCHOOL

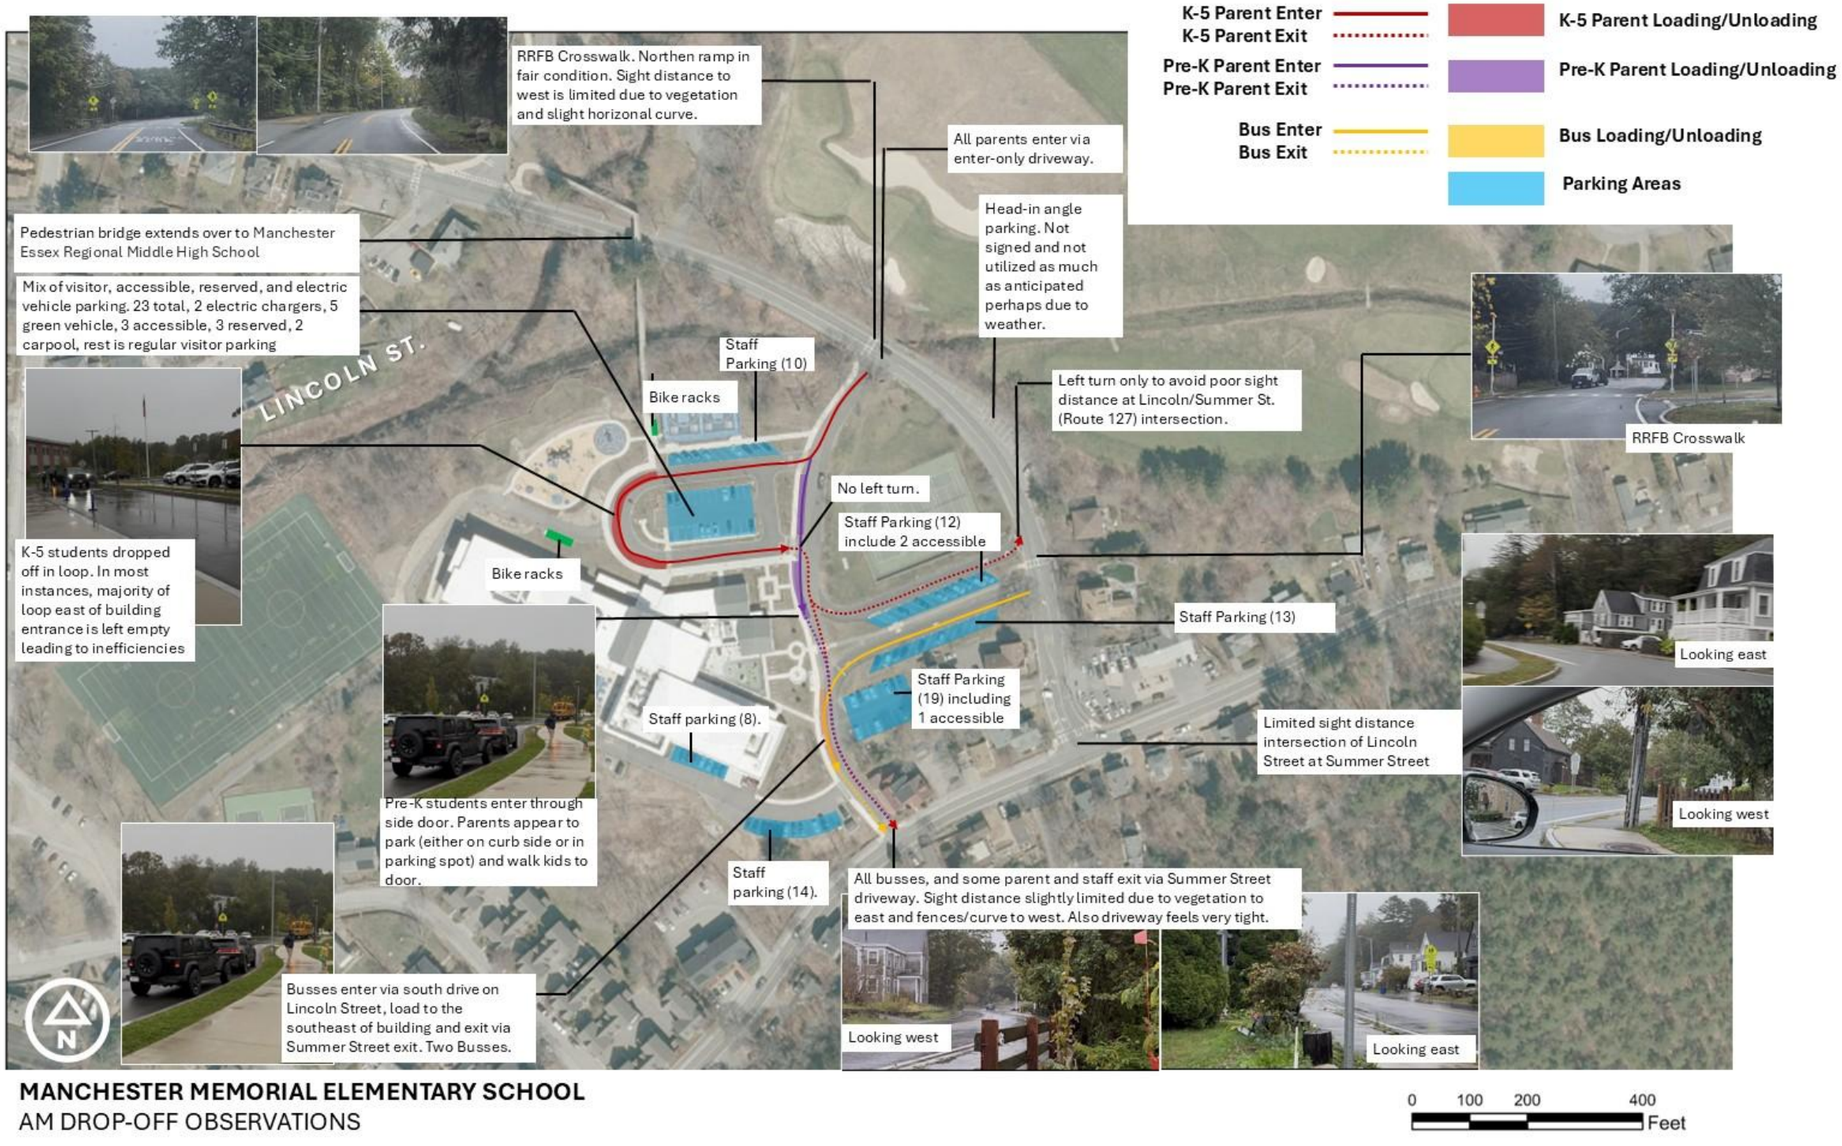
EXISTING CONDITIONS

GPI conducted a site visit on Thursday, September 25, 2025, to observe the site circulation associated with the weekday morning drop-off, weekday afternoon pick-up, and general queue lengths around the school site. Both morning drop-off and afternoon pick-up observations occurred during heavy rain conditions with a temperature in the lower 60's. Given the rainy conditions, it is likely that more parent vehicle traffic accessed the site compared to a day with more favorable weather conditions, resulting in fewer pedestrians and cyclists and longer queues being observed. GPI team members observed operations at and immediately adjacent to the site.

The elementary school operates from 8:25 AM to 2:55 PM. Students may arrive at school no earlier than 8:05 AM, as no supervision is provided prior to that.

General site layout and circulation for the Manchester Memorial Elementary School is depicted in **Figure 4**.

EXISTING SITE ACCESS/EGRESS AND LAYOUT



Vehicular access to the Manchester Memorial Elementary School site is provided via two entrance-only driveways on Lincoln Street, the north of which acts as the main entrance by which all parents (if dropping off and picking up via the loop) and some staff enter. The southern entrance-only driveway on Lincoln Street is utilized by buses, staff, and some parents (if wishing to park and then walk to collect their children). A dedicated left turn lane is provided along the Lincoln Street northbound approach to facilitate this movement.

Two egress points are provided, one on Lincoln Street (just north of the southern entrance only driveway) and another that exits onto Summer Street (Route 127) to the south of the school. The Lincoln Street exit is restricted to left turns to route vehicles away from the intersection of Lincoln Street at Summer Street (Route 127) which exhibits poor sight lines.

Traffic circulation, once on site, differs by grade. K-5 parents enter via the primary driveway and circulate counter-clockwise around the pick-up/drop-off loop near the main entrance. Students exit/enter vehicles primarily around the western end of the loop. Parents then turn right at the end of the loop and either exit via Lincoln Street or Summer Street. Pre-K parents typically enter via the primary driveway and bypass the drop-off/pick-up loop and park curbside near the Pre-k building entrance. Following pick-up or drop-off, Pre-K parents will exit via Lincoln Street or Summer Street. Some parents were also observed entering the primary driveway, bypassing the loop and utilizing available parking along the exiting driveway to Lincoln Street. Parents would then park and walk to collect their children and then exit via Lincoln Street. Other parents were observed entering the site via the secondary entrance on Lincoln Street and utilizing available parking in that drive aisle. Parents would then park, collect their children and then exit via the Summer Street exit. It should be noted that the majority of parents utilized the pick-up/drop-off loop.

South of the building, a short spur drive aisle extends off the main internal road, providing access to parking designated for staff. This area also contains storage facilities, dumpsters, and terminates in a dead end with no through circulation other than a sidewalk that provides access to the Brooks Street play fields.

Figure 4. General On-Site Observations – Manchester Memorial Elementary School

Buses enter via the secondary entrance via Lincoln Street. Loading and unloading occurs to the southeast of the building, curbside along the main internal road. Buses exit via the Summer Street (Route 127) drive.

PARKING – LAYOUT, SUPPLY, AND DEMAND

The Manchester Memorial Elementary School campus provides approximately 99 formal parking spaces distributed across several on-site areas. In the middle of the pick-up/drop-off loop, there is parking available for visitors and electric vehicles (23 spaces). There are several accessible spaces as well. Parking throughout the rest of the site is intended for staff use, but some parents will park in these spots if they are available during drop-off/pick-up to retrieve their children from the school building.

Parking elsewhere on site is typically designated for staff. Off the north side of the pick-up/drop-off loop, there are head-in angled parking spaces (10 spaces). Head-in angled parking is also located along the southern side of the exit drive aisle to Lincoln Street (12 spaces) and the entrance drive aisle via the secondary Lincoln Street access point (13 spaces). A smaller parking lot is available just south of the secondary Lincoln Street access drive aisle (19 spaces). Additional head-in parking is located to the south side of the roadway spur that travels on the south side of the building (22 spaces).

Parking circulation is generally intuitive through the current layout. Crosswalks are generally present at key locations to facilitate safe crossings to/from parking areas. The only potential issue area is the head-in angled parking situated to the north of the pick-up/drop-off loop which is typically blocked by queued vehicles.

BUSSING

Students enrolled in grades K-5 who reside more than 2 miles from their neighborhood school qualify for district-paid transportation. Two buses and a few vans currently service the Manchester Memorial Elementary School. These buses generally drop students off between 8:05 – 8:15 AM during the drop-off period and depart the school between 2:50 – 3:00 PM during the PM pick-up period.

Buses access the campus via the southern Lincoln Street driveway, load and unload along the southeast side of the building, and exit via Summer Street (Route 127). During observations, it was noted that when buses were actively loading or unloading, internal blockages occurred that temporarily blocked parent vehicles attempting to exit via the Summer Street driveway. This congestion caused queues to extend back through the internal circulation area, limiting the ability of vehicles to exit via Lincoln Street as well. While these conditions typically dissipated quickly once bus operations concluded, they nonetheless contributed to short-term inefficiencies within the site.

Although bus loading and unloading operations are physically separated from parent loading and unloading activities, the bus area is situated along the departure route used by parent vehicles. As a result, parent circulation is indirectly affected by bus activity. For both safety and operational efficiency, it may be beneficial to designate a completely separate bus loading/unloading area that does not intersect the parent vehicle departure path. Such a configuration would improve circulation flow, reduce potential conflicts, and enhance overall site safety during peak drop-off and pick-up periods.

ON-SITE PEDESTRIAN AND BIKE INFRASTRUCTURE

Sidewalks, curb ramps, and crosswalks throughout the Manchester Memorial Elementary School site are generally in good condition and compliant with ADA accessibility standards. Internal pedestrian connections are well defined, and the site benefits from more modern design standards compared to Essex Elementary. Crosswalks are provided at key locations to safely facilitate pedestrian movement between parking areas and building entrances. An approximately 8-foot-wide sidewalk extends around the entire internal loop and continues along the western side of the main internal roadway, providing continuous and accessible circulation. Additional sidewalk spurs branch off from the main walkway to connect directly to school entrances, play areas, and other key destinations on-site. A sidewalk is also provided between the parking aisles east of the school, offering safe access across the lot and building entrances.

In addition, a pedestrian bridge spans over Lincoln Street, providing a grade-separated connection between the elementary school and the adjacent Manchester Memorial Middle/High School campus. This bridge allows safe pedestrian crossings of Lincoln Street, which carries higher traffic volumes during school peak periods.

Bicycle racks are provided along the eastern side of the building and near the northern side of the campus, adjacent to the pedestrian bridge and playground area, offering convenient and visible locations for students arriving by bike.

Despite the presence of these high-quality facilities, only limited walking and biking activity was observed at the time of the site visit, likely due to the heavy rain conditions during the observation period.

MORNING DROP-OFF OBSERVATIONS

Morning drop-off operations at Manchester Memorial Elementary School begin around 7:55 AM, when the first parent vehicles were observed accessing the site. This timing follows the dissipation of peak traffic associated with the nearby Manchester Memorial Middle/High School, located to the west along Lincoln Street. At approximately 7:39 AM, queues generated by the middle and high school extended southerly beyond the pedestrian bridge located just north of the elementary school's primary entrance, indicating that Lincoln Street was already operating under constrained conditions prior to the start of elementary school drop-off activity.

K–5 Parent Drop-Off

The primary parent drop-off activity occurs within the pick-up/drop-off loop adjacent to the school's main entrance, which operates in a one-way, counterclockwise pattern. Students are permitted to enter the building beginning at 8:05 AM, marking the onset of the main drop-off period. It should be noted that the pick-up/drop-off loop in total is about 500 feet, indicating that 20 vehicles could queue in this area. However, parents were not observed pulling all the way to the front of the loop. Most parents utilize the western edge of the loop adjacent to the main entrance for curbside unloading, while the southeastern side remains underutilized. This shortens the loop queue storage to about 365 feet (14 vehicles). Blue cones were observed east of the doorway, likely positioned to block the fire lane, which may contribute to the uneven distribution of vehicles along the curb.

By approximately 8:10 AM, the loop reached capacity, with vehicles queued back to the main internal road and one vehicle observed blocking the crosswalk at the northeastern end of the loop. As drop-off activity intensified, some parents bypassed the loop and parked temporarily in nearby spaces to escort students into the building, creating intermittent pedestrian–vehicle conflicts. By 8:13 AM,

queues had extended onto Lincoln Street in both directions, with maximum spillback observed at approximately 13 vehicles to the northwest and 16 vehicles to the southeast.

Off-site queuing along Lincoln Street during the morning drop-off presents several safety concerns.

- The horizontal curve located on Lincoln Street northwest of the school entrance significantly limits sight distance for drivers approaching queued vehicles along Lincoln Street. Motorists traveling south-eastbound toward the school have a restricted view of stopped or slowing traffic near the entrance until they are relatively close to it. This condition increases the potential for rear-end collisions, which may be more severe given the higher vehicle speeds observed along this corridor. In addition, impatient drivers were observed attempting to bypass the queue in both directions by entering the opposing travel lane, resulting in encroachment into oncoming traffic. These maneuvers substantially elevate the risk of sideswipe and head-on crashes. The safety concern is further exacerbated by speeding behavior observed in both directions, particularly among north-westbound drivers who tend to accelerate rapidly after passing queued traffic.

- Queued vehicles were frequently observed physically blocking the marked crosswalks near the school entrance or obstructing pedestrian visibility for those attempting to cross. This issue is compounded by bypassing vehicles, whose position within the opposing travel lane further limits their ability to detect pedestrians entering the crosswalk. The combination of blocked sight lines, obstructed crossings, and elevated vehicle speeds creates a high-risk environment for pedestrians, particularly during the busiest drop-off periods when both vehicular and pedestrian activity are at their peak.

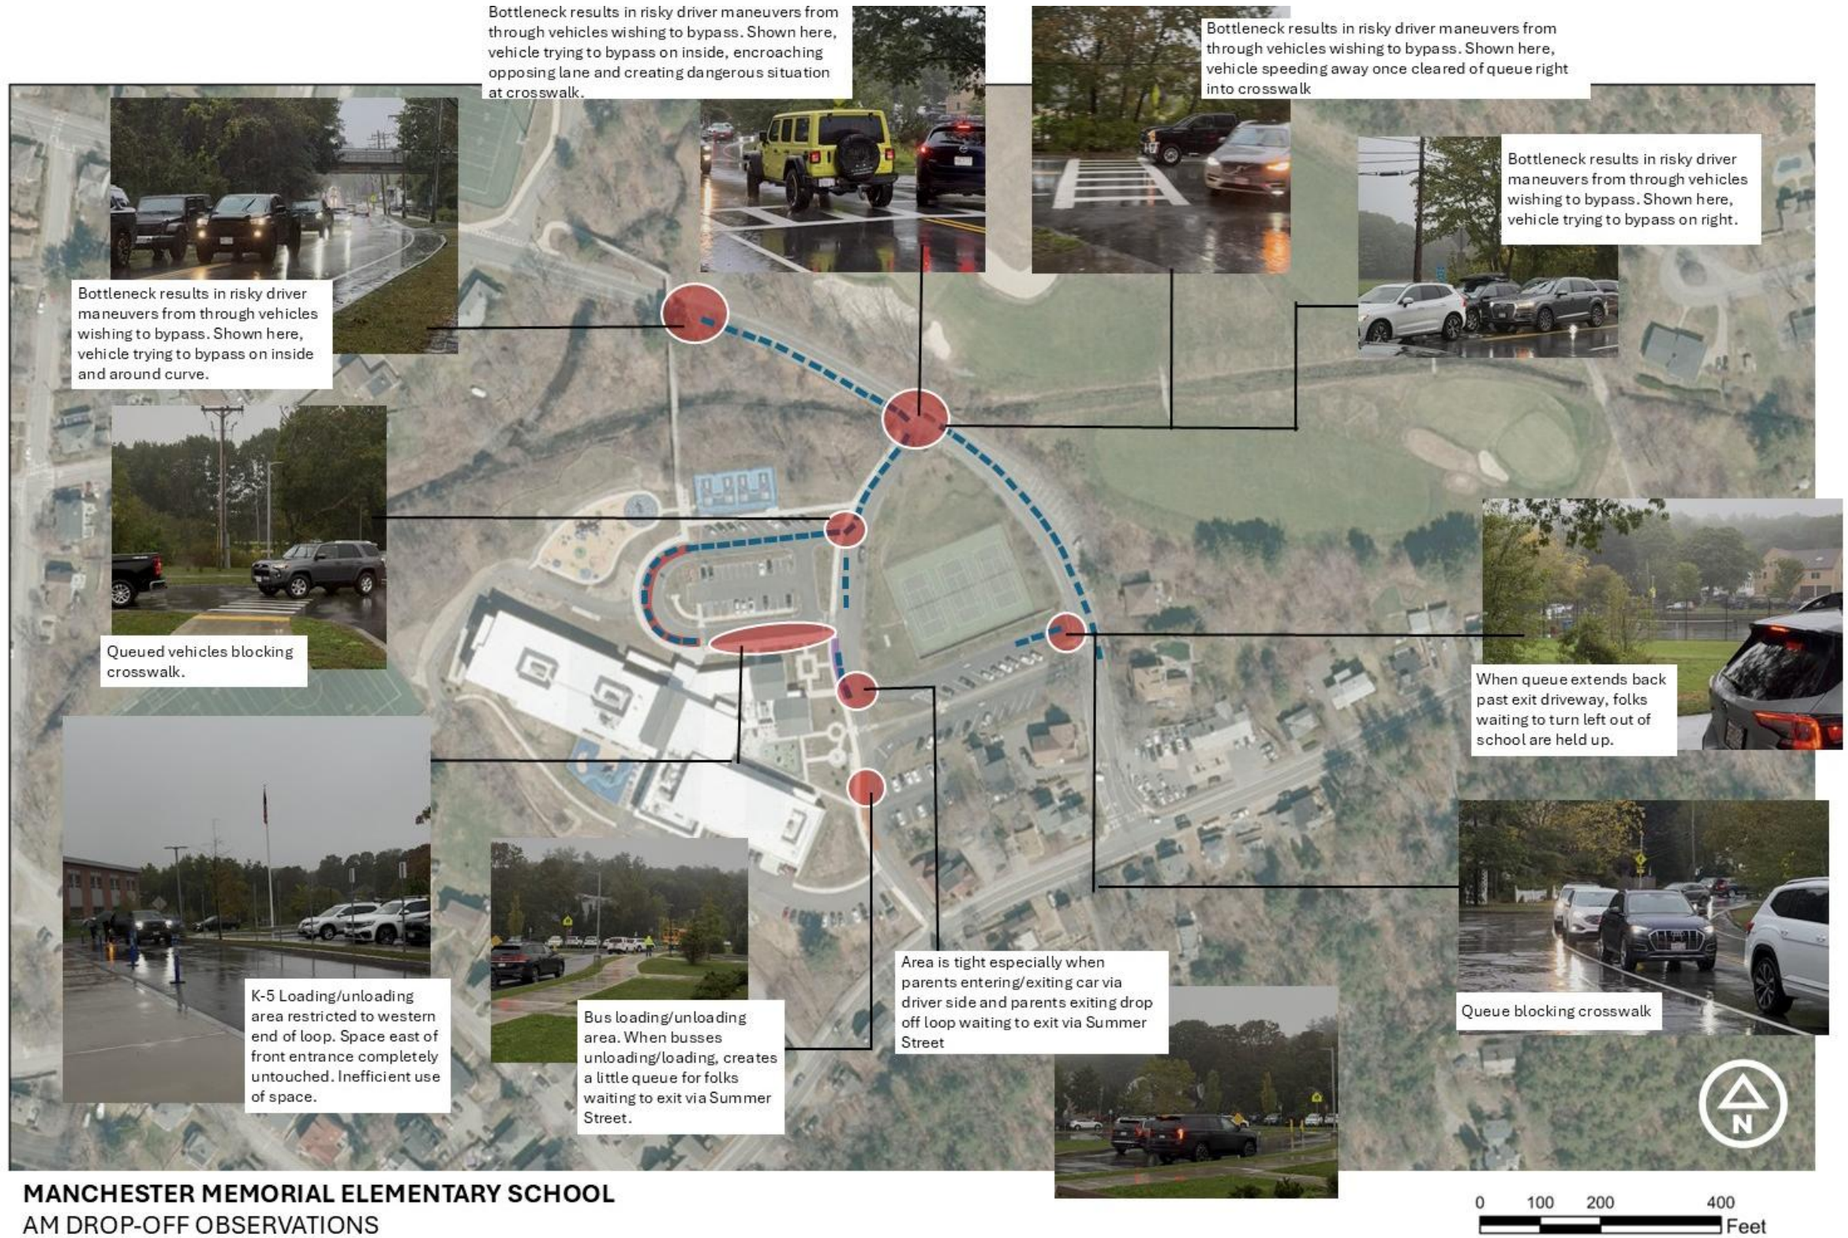
- As north-westbound queues on Lincoln Street increased during the morning drop-off period, many vehicles exiting the site via the Lincoln Street driveway were observed making prohibited right turns toward the intersection of Lincoln Street and Summer Street. This maneuver appears to be a driver response to congestion, as motorists sought to bypass the northbound queue and avoid re-entering slow-moving traffic. However, the intersection of Lincoln Street at Summer Street exhibits limited sight distance due to its horizontal curvature and roadside vegetation, making these prohibited right turns particularly hazardous. The combination of noncompliance with posted restrictions, constrained visibility, and elevated vehicle speeds along Lincoln Street introduces additional safety and operational concerns for both exiting school traffic and general roadway users.

Pre-K Parent Drop-Off

Pre-K drop-off operations occur separately from the main K–5 loop. Parents park along the curb near the side entrance on the east side of the building, exit their vehicles, and walk their children to the door. This area is compact and quickly becomes congested, with limited space for circulation once multiple vehicles are present. Parents were observed walking around vehicles to open doors or crossing the internal drive to access the entrance. As a result, the Pre-K area presents several pedestrian and vehicle conflict points during peak activity, despite being physically separated from the K–5 loading zone.

Bus & Van Operations

Two school buses serve the Manchester Memorial Elementary School during morning drop-off. Buses enter the site via the southern Lincoln Street driveway, load and unload along the southeast side of the building, and exit via the Summer Street driveway. While bus operations are generally efficient, their presence temporarily constrains circulation for parent vehicles attempting to exit the site via



Summer Street. During loading and unloading, queues of parent vehicles were observed forming behind the buses, which in turn limited the ability of vehicles to exit via Lincoln Street. These conditions typically dissipate once buses depart but contribute to short-term inefficiencies during the 8:05 – 8:15 AM window.

Overall AM Conditions

By the time the first bell rang at 8:25 AM, several vehicles remained queued on-site, resulting in late arrivals for some students. Overall, morning operations at Manchester Memorial Elementary School are characterized by poorly utilized on-site queue capacity, external congestion influenced by adjacent school traffic, and overlapping movements between buses, Pre-K, and parent vehicles.

General AM drop-off observations are depicted in **Figure 5.**

Figure 5. AM Drop-Off Observations – Manchester Memorial Elementary School

MANCHESTER MEMORIAL ELEMENTARY SCHOOL
AM DROP-OFF OBSERVATIONS

AFTERNOON PICK-UP OBSERVATIONS

Afternoon pick-up at Manchester Memorial Elementary School begins around 2:50 PM. The start of elementary dismissal closely coincides with the afternoon release from the nearby Manchester Memorial Middle/High School, located just west along Lincoln Street. By approximately 2:15 PM, traffic associated with the Manchester Memorial Middle/High School had already backed up beyond the elementary school entrance, constraining access to the site. Conditions began to improve by about 2:25 PM, allowing elementary school parents to begin arriving around 2:28 PM.

K–5 Parent Drop-Off

The primary parent pick-up activity occurs within the pick-up/drop-off loop adjacent to the school's main entrance, which operates in a one-way, counterclockwise pattern. By 2:45 PM, the parent loop had reached full capacity, and by 2:49 PM, queues extended onto Lincoln Street, primarily to the northwest of the school. The longest observed queue occurred around 2:53 PM, when approximately 23 vehicles were stacked northwest of the school, extending nearly to the intersection of Lincoln Street at Vine Street.

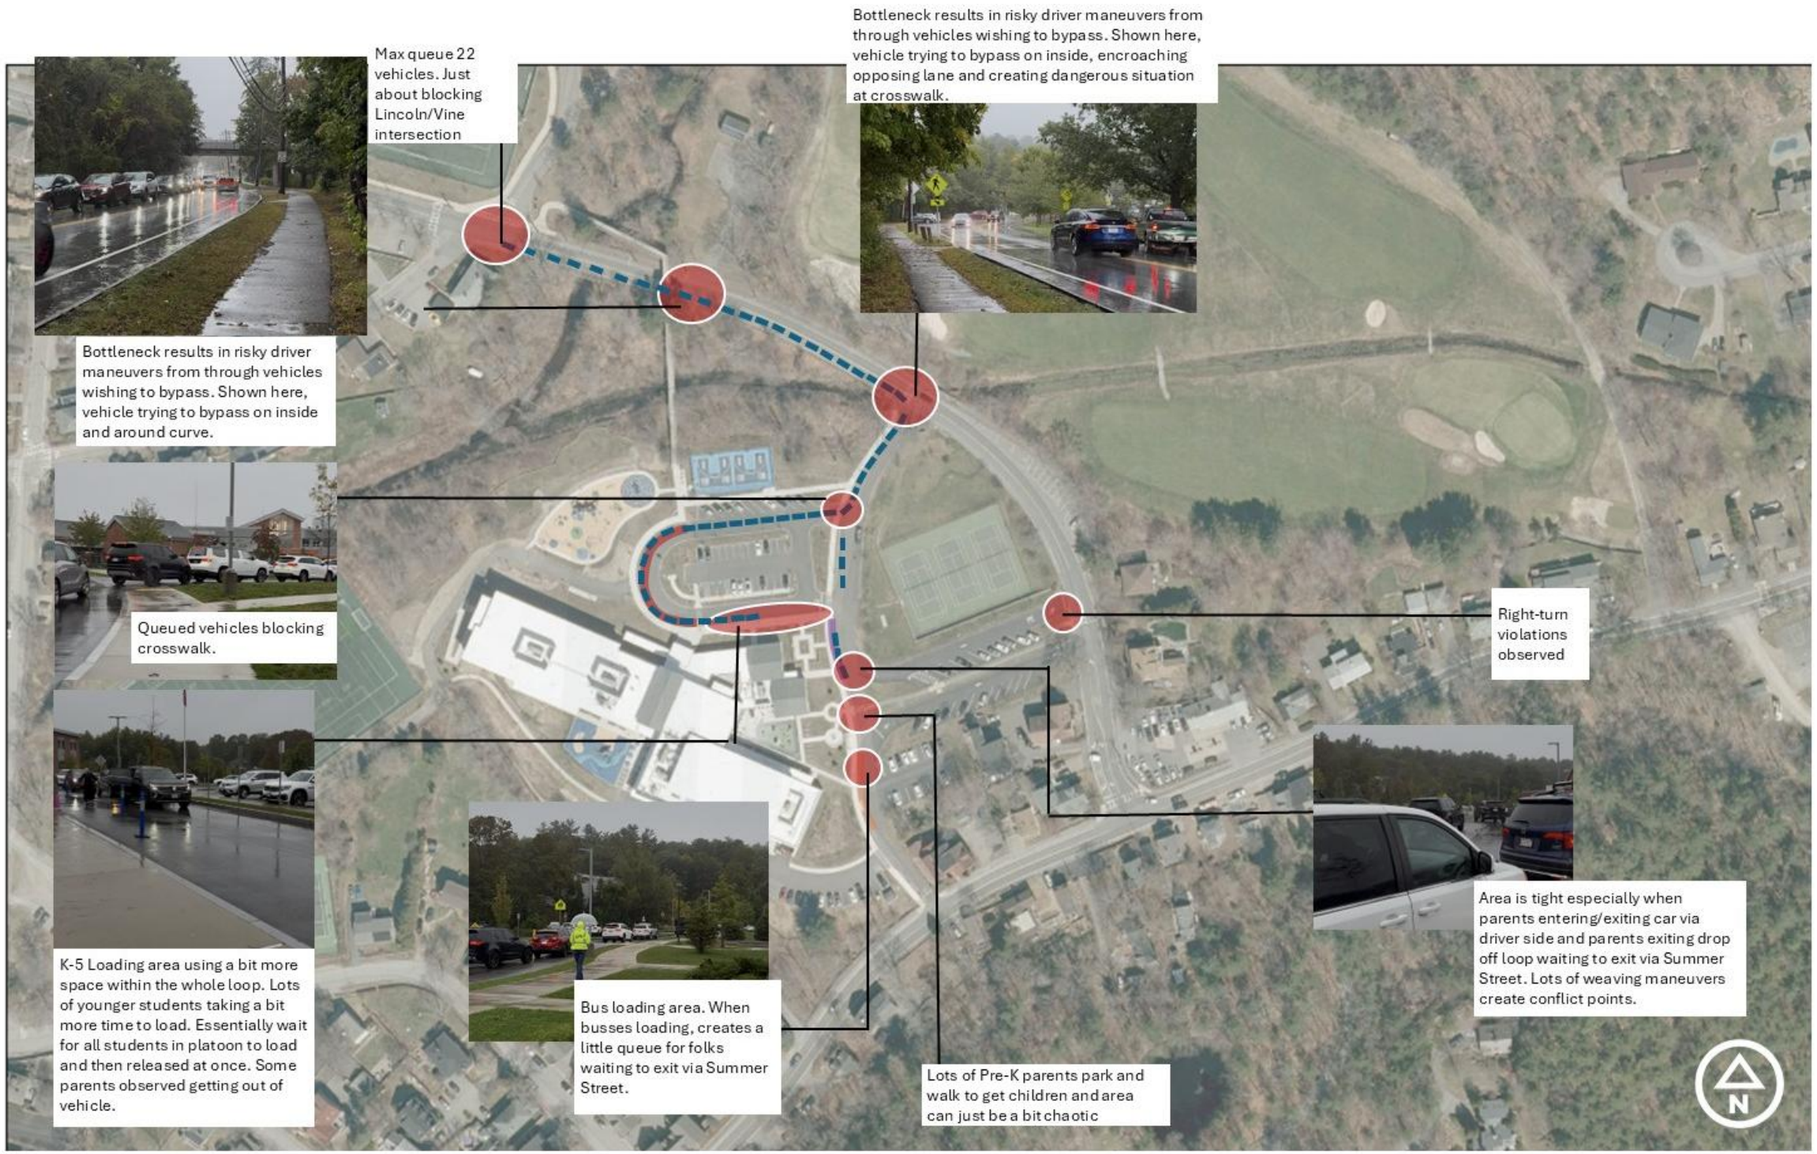
Within the loop, the K–5 loading area occupied slightly more curb space than during the morning drop-off period. Younger students required additional time to load, and staff managed pick-up using a "platoon" system, essentially releasing small groups of students to the curb as parents arrived. Some parents exited their vehicles to assist their children, which temporarily slowed operations and contributed to dwell time at the curb. Despite these challenges, the coordinated staff system, including a staff member circulating the queue with a clipboard to record parent names for efficient student release, kept operations relatively organized.

- The off-site queuing observed during the afternoon period results in similar safety issues to those documented during the morning operations along Lincoln Street.
- Commuting vehicles were frequently observed bypassing queued traffic by entering the opposing travel lane, increasing the risk of sideswipe and head-on collisions, particularly given the higher operating speeds observed along this corridor.
- The queue forms along a horizontal curve west of the school entrance, meaning that approaching drivers from the northwest often cannot see the back of the queue until they are relatively close, heightening the potential for rear-end crashes.
- In addition, queued vehicles were observed physically blocking the crosswalks near the school entrance or obstructing sight lines for pedestrians attempting to cross. These visibility issues are further compounded by bypassing vehicles, whose position in the opposing lane limits their ability to detect pedestrians until they are already within the crossing area.
- Since the queue was primarily situated northwest of the school (i.e. no queue for left-turning vehicles to have to it in), most vehicles abided by the left-only restriction at the Lincoln street exit, but right-turning vehicles were still observed.

Pre-K Parent Pick-Up

Pre-K pick-up operations occur concurrently but in a separate area near the side entrance on the southeast side of the building. Many Pre-K parents park and walk to the door to collect their children. During pick-up, weaving movements were observed where Pre-K and K–5 parents exited simultaneously, creating conflict points within the internal circulation network. These overlapping maneuvers occasionally caused localized congestion and momentary standstills near the merge point with the main loop.

Bus and Van Operations



Buses and vans continue to load along the southeast side of the building, accessed via the southern Lincoln Street driveway and exiting via Summer Street. During the afternoon period, these operations temporarily blocked internal circulation for vehicles waiting to exit, creating short-term backups that dissipated once the buses departed. While bus and parent loading areas are physically separated, the bus activity still occurs along the primary departure route used by parent vehicles, resulting in short-term inefficiencies and increased potential for interaction between the two traffic streams.

Overall PM Conditions

By 3:03 PM, the afternoon queue was contained on-site and by 3:07 PM, the afternoon queue had completely dissipated. Compared to the AM, the PM appeared to operate better as off-site queues were primarily in the northwest direction only and better use of the pick-up/drop-off loop allowed more on-site storage.

General PM pick-up observations are depicted in **Figure 6.**

Figure 6. PM Pick-Up Observations – Manchester Memorial Elementary School

SURROUNDING ROADWAY NETWORK

Lincoln Street

Lincoln Street, within the vicinity of the school, is oriented generally in a southeast–northwest direction and is classified as a major collector under local jurisdiction. Lincoln Street provides connection between School Street to the northwest and Summer Street (Route 127) to the southeast.

Pavement width varies along its length. Southeast of the school, extending to its terminus at the intersection with Summer Street (Route 127), Lincoln Street measures approximately 34 feet curb-to-curb, consisting of 1-foot shoulders, 11-foot through travel lanes and a 10-foot turn lane. At the school, there is a northbound dedicated left-turn lane to facilitate turns into the secondary site driveway. Bi-directional travel is delineated via a double yellow centerline.

A 5-foot sidewalk, generally in good condition, is provided along the northeastern side of the roadway, separated from the travel way by a narrow 2- to 3-foot grass buffer. Granite curbs are located along both roadway edges. These conditions extend northwestward to the school's Lincon Street exit driveway, where the roadway starts to narrow considerably (dropping the turn lane). Northwest of the Lincon Street exit driveway, the curb-to-curb width reduces to approximately 26 feet, consisting of 2-foot shoulders and 11-foot travel lanes. The sidewalk and grass buffer continues along the northeastern side. No sidewalk is provided along the school side of Lincoln Street within the vicinity of the school, requiring school related pedestrians to cross Lincoln Street to access sidewalk facilities.

There are two midblock crossings along Lincoln Street within the vicinity of the school. One is located just north of the primary school entrance. The crossing has pedestrian curb ramps on both sides but detectable warning panels are available on the southwestern side only. The crosswalk has a solar powered Rectangular Rapid Flashing Beacon (signs provided for each direction) system that is activated via a pedestrian push-button. Sight distance for the crosswalk approaching from the northwest is limited due to the horizontal curve and vegetation. There is no advanced pedestrian warning signage.

The other midblock crossing is located just north of the secondary entrance of the school. Curb ramps are provided, and both have detectable warning panels present. The crosswalk has a solar powered Rectangular Rapid Flashing Beacon (signs provided for each direction) system that is activated via a pedestrian push-button. Sight distance for the crosswalk approaching from the northwest is slightly limited due to the horizontal curve and vegetation. There is no advanced pedestrian warning signage.

While no dedicated bicycle accommodations are present along Lincoln Street, there is "Share the Road" signage located right in front of the school.

Just north of the Lincoln Street/Summer Street intersection, there is a static 20 MPH School zone sign assembly indicating a 20 MPH zone "When Children are Present MON-FRI". A 20 MPH sign is provided for the south-eastbound direction west of the middle/high school. "SLOW SCHOOL ZONE" pavement markings are stenciled on the pavement in both directions approaching the crosswalk at the primary entrance of the elementary school.

Land use along Lincoln Street consists primarily of the Manchester Memorial Elementary School and the adjacent Manchester Memorial Middle/High School, located less than 1,000 feet north of the elementary campus. Beyond these institutional uses, the surrounding area is predominantly residential in character, consisting of single-family homes with driveways that directly access Lincoln Street.

Lincoln Street functions as a key connector through Manchester and is frequently used as a cut-through route linking Route 127 (Summer Street) to Route 128 via School Street. As a result, the

corridor carries higher traffic volumes and experiences a greater proportion of commuter traffic compared to the local streets surrounding the Essex Elementary School site. During off-peak periods, speeding is prevalent along Lincoln Street, particularly near the horizontal curve west of the elementary school entrance. The combination of higher vehicle speeds and overall traffic intensity makes the corridor less suitable for accommodating additional access or circulation demands associated with an expanded school site.

Summer Street (Route 127)

Summer Street (Route 127), within the vicinity of the school, is oriented generally in an east-west direction and is classified as a minor arterial under MassDOT jurisdiction. Summer Street (Route 127) provides connections between Beverly to the southwest and Gloucester to the northeast.

Curb-to-curb width along Summer Street is fairly consistent within the vicinity of the site at around 28 feet, providing 2-foot shoulders and 12-foot lanes in each direction. Bi-directional travel is delineated via a double yellow centerline. A five-foot sidewalk, generally in good condition, is provided along the northern side of the roadway. West of Lincoln Street, sidewalk is delineated via a granite curb only, while east of Lincoln Street, there is a 2- to 3-foot grass buffer separating vehicle and pedestrian travel.

There are no crosswalks servicing the school along Summer Street.

While no dedicated bicycle accommodations are present along Summer Street, there is “Share the Road” signage present.

Both just east and west of Lincoln Street, there is school zone ahead signage provided along Summer Street alerting drivers to the school’s location.

Land use along Summer Street within the vicinity of the site is predominantly residential, but there are several businesses, such as a gas station in the northeast corner of the intersection of Lincoln Street/Summer Street (Route 127) and a physical therapy business just west of the elementary school’s Summer Street exit.

Summer Street (Route 127) functions as a regional commuter route providing access between downtown Manchester, Route 128, and neighboring communities along the North Shore. The corridor carries moderate traffic volumes and generally maintains steady travel speeds throughout the day. Given its role as a key regional connector, it is important to minimize potential disruptions to commuter traffic flow when considering site access modifications or operational changes related to the school. Any future design interventions along Route 127 should balance the need for safe and efficient school access while maintaining consistent regional mobility along this corridor, and would require coordination with MassDOT, given the agency’s jurisdictional ownership of the roadway.

Lincoln Street at Summer Street (Route 127)

Southeast of the school, Lincoln Street terminates at the intersection of Summer Street (Route 127). Lincoln Street intersects Summer Street from the north to form an unsignalized, three-way intersection. Lincoln Street is stop sign controlled while Summer Street is free-flowing. A single general-purpose travel lane is provided for each Summer Street approach. The Lincoln Street approach provides a dedicated left-turn lane and a dedicated right-turn lane.

Sidewalk is available along the northern side of Summer Street and the northeastern side of Lincoln Street. A crosswalk is provided along the Lincoln Street approach. Curb ramps are provided but only the eastern one has a detectable warning panel.

The built environment at this intersection, specifically the presence of a residence, vegetation, and fencing in the northeast corner, as well as significant vegetation to the east, significantly restricts sight distance for drivers on Lincoln Street. Due to these limited sight lines and associated safety concerns, vehicles exiting the school via the Lincoln Street driveway are restricted to left turns only to prevent additional right-turn movements toward this constrained intersection. These obstructions make it very difficult for Summer Street motorists to see exiting Lincoln Street vehicles.

Lincoln Street at MMES Primary Entrance

The Manchester Memorial Elementary School (MMES) Primary Entrance intersects Lincoln Street from the southwest, forming an unsignalized three-way intersection. Both Lincoln Street approaches provide a single general-purpose travel lane, while the MMES entrance operates one-way away from the intersection and therefore has no inbound approach. As previously noted, a sidewalk is available along the northern side of the primary entrance drive and the northeastern side of Lincoln Street, with a marked crosswalk with an RRFB provided just north of the intersection.

The intersection is located along a horizontal curve and experiences notable queuing during peak school drop-off and pick-up periods as parents wait to turn into the school entrance. During off-peak hours, operations are generally unimpeded. However, peak-period queuing can lead to driver frustration and instances of speeding once vehicles clear the queue, creating potential safety concerns. Additionally, during the morning peak, vehicles traveling in both directions have been observed attempting to bypass queued traffic, despite the roadway not being wide enough to safely accommodate four vehicles side by side.

Lincoln Street at MMES Secondary Entrance

The Manchester Memorial Elementary School (MMES) Secondary Entrance intersects Lincoln Street from the west, forming an unsignalized three-way intersection. The south-eastbound Lincoln Street approach provides a single general-purpose travel lane while the north-westbound approach provides a through travel lane and a dedicated left-turn lane. The MMES entrance operates one-way away from the intersection and therefore has no inbound approach. Lane assignment signage along the Lincoln Street north-westbound approach is provided. As previously noted, a sidewalk is available along the northern side of the secondary entrance drive and the northeastern side of Lincoln Street, with a marked crosswalk with an RRFB provided just north of the intersection.

The intersection sits along a horizontal curve with vegetation on the inside of the curve that slightly limits sight distance, making it difficult for northwest-bound left-turning vehicles to see approaching southeast-bound vehicles, and vice versa.

Lincoln Street at MMES Exit Drive

The Manchester Memorial Elementary School (MMES) Exit intersects Lincoln Street from the west, forming an unsignalized three-way intersection. Both Lincoln Street approaches provide a single general-purpose travel lane and are free-flowing, while the MMES exit consists of a dedicated left-turn lane only under stop control. As previously noted, a sidewalk is available along the southern side of the exit drive and the northeastern side of Lincoln Street, with a marked crosswalk with an RRFB provided just south of the intersection.

The intersection sits along a horizontal curve with vegetation on the inside of the curve that slightly limits sight distance, making it difficult for exiting vehicles to see approaching southeast-bound vehicles, and vice versa. Despite signage restricting right turns and a curb deflection designed to guide drivers to turn left, right-turn movements are frequently observed when queues from the primary entrance extend back to this intersection.

Summer Street (Route 127) at MMES Exit Drive

The Manchester Memorial Elementary School (MMES) Exit intersects Summer Street (Route 127) from the north, forming an unsignalized three-way intersection. Both Summer Street approaches provide a single general-purpose travel lane and are free-flowing, while the MMES exit consists of a shared left-/right-turn lane under stop control. Sidewalk is provided along the western side of the exit drive and the northern side of Summer Street. A crosswalk is provided along the exit drive approach.

The exit drive is relatively constrained, with a building located immediately to the east and fencing to the west, resulting in limited sight distance. Drivers must pull forward into Summer Street to adequately view oncoming traffic. While speed data are not currently available, anecdotal observations suggest that Summer Street experiences higher traffic volumes at moderate travel speeds, which may contribute to driver hesitation and operational inefficiencies at the school exit.

SAFETY ASSESSMENT

Collision data for the immediate area surrounding the Manchester Memorial Elementary School were obtained from the *MassDOT IMPACT Crash Data Portal* for the latest complete five years (2020-2024). A review of available crash data indicates that three reported crashes occurred at the intersection of Lincoln Street and Summer Street (Route 127) during the most recent analysis period. Of these, one resulted in a non-fatal injury and two involved property damage only. One of the property-damage-only crashes occurred around 3:30 PM, and the injury crash occurred at approximately 1:00 PM, both within typical school operating hours, suggesting a possible connection to school-related traffic activity. Two of the crashes were angle-type collisions, while the third was a single-vehicle crash.

An additional non-fatal injury crash was reported at the Summer Street intersection with the school exit driveway around 8:25 AM, which also likely correlates with school drop-off traffic. This incident was classified as an angle-type collision involving a vehicle exiting the school driveway and a through vehicle traveling along Summer Street. Collectively, these crashes highlight the limited sight distance and operational challenges at the Lincoln Street and Summer Street intersection and reinforce the rationale for restricting right-turn movements from the school's Lincoln Street driveway.

Although the overall crash frequency at this location is relatively low, nearly half of the reported incidents involved injuries, and several occurred during peak school operating hours, indicating a probable relationship to school-related traffic conditions. Therefore, care should be taken to minimize any potential increase in crash risk associated with future changes to traffic patterns, including those related to increased school enrollment or expanded site activity.

SITE OPPORTUNTITIES AND CONSTRAINTS

PROS

- Manchester Memorial benefits from newer infrastructure, including well-maintained sidewalks, ramps, and crosswalks that enhance accessibility and pedestrian safety.

- The site features a generally organized internal circulation pattern and is located in close proximity to the middle and high schools, which may be convenient for families with students across multiple grade levels.

- The school ground provides space for potential reconfiguration or future operational improvements.

CONS

- The school's proximity to the middle and high schools also presents operational challenges, as afternoon traffic from those campuses frequently backs up past the elementary school entrance, contributing to congestion and delay.
- Lincoln Street experiences higher commuter volumes and frequent speeding, particularly around the horizontal curve near the site entrance, creating potential safety concerns.
- Internal queuing conflicts between K-5, Pre-K, and bus loading operations contribute to congestion and reduce overall circulation efficiency and safety.

CRITICAL NEEDS

Priority improvements for the Manchester Memorial Elementary site include:

- Enhancing loading and unloading efficiency and reducing conflicts at key points within the circulation loop.
- Increasing on-site queuing capacity to help mitigate backups extending onto Lincoln Street.
- Implementing "Do Not Block Intersection" pavement markings to maintain clear access at critical points.
- Enforcing the existing no-right-turn restriction at the Lincoln Street exit due to limited sight distance at the Lincoln Street / Summer Street intersection.
- Trimming vegetation near school entrances/exit to improve sight lines.
- Relocating the bus load/unloading area to reduce internal blockages and exploring staggered release times or separate loops for Pre-K and K-5 students to minimize conflicts.
- Expanding on-site parking to better accommodate Pre-K parent activity and reduce circulation pressure within the loop.

SITE C – APPLE STREET SITE

EXISTING CONDITIONS

No school currently exists along Apple Street; therefore, site observations were not conducted. Instead, a desktop review of roadway conditions was performed.

SURROUNDING ROADWAY NETWORK

Apple Street is functionally classified as a local road under local jurisdiction. It connects Western Avenue (Route 22) to the northwest with Southern Avenue to the southeast, which ultimately provides access to the Route 128 on-ramps. Although classified as a local roadway, Apple Street is frequently used as a cut-through route. The roadway is relatively narrow (23' pavement width) and bordered by roadside obstructions such as trees, utility poles, fences, and stone walls. It also features both horizontal and vertical curvature, resulting in areas of limited visibility.

There are no pedestrian or bicycle accommodations along the corridor. Land use is primarily residential on the northern side, with conservation woodland to the south. Given these constraints, siting a school along Apple Street would require extensive off-site improvements, including roadway widening, sidewalks, and intersection enhancements, to safely and efficiently accommodate school traffic, pedestrian activity, and access needs.

SAFETY ASSESSMENT

Collision data along Apple Street were obtained from the *MassDOT IMPACT Crash Data Portal* for the latest complete five years (2020-2024). A review of available crash data indicates that eleven reported crashes occurred along the Apple Street corridor during the most recent analysis period. All crashes resulted in property damage only. Of the crashes reported within the broader study area, four involved speed-related driver contributing factors. Crash types were predominantly single-vehicle collisions (nine), with two sideswipe (opposite direction) crashes also reported. The prevalence of single-vehicle and sideswipe collisions, coupled with multiple speed-related contributing factors, suggests that excessive travel speeds and constrained roadway geometry may be influencing driver behavior and contributing to crash risk.

SITE OPPORTUNTITIES AND CONSTRAINTS

PROS

- The Apple Street site presents a unique opportunity to design and construct a new school campus from the ground up, allowing for a purpose-built layout that meets modern standards for access, circulation, parking, and safety.
- The blank-slate nature of the site enables flexibility in designing efficient vehicular, bus, and pedestrian circulation patterns that minimize internal conflicts and meet current ADA, Complete Streets, and Safe Routes to School guidelines.
- With appropriate site planning, the school could be designed to incorporate new pedestrian and bicycle infrastructure, addressing gaps that currently exist in the surrounding area.

CONS

- Apple Street currently functions as a cut-through route between Western Avenue (Route 22) and Southern Avenue, resulting in higher-than-typical local traffic volumes and speeding behavior.
- The roadway is narrow, with limited shoulders and numerous roadside obstructions (including trees, utility poles, fences, and stone walls), creating safety and visibility concerns for both vehicles and potential pedestrians.
- Horizontal and vertical curvature along the corridor further limits sight distance in several locations.
- There is no existing pedestrian or bicycle infrastructure along Apple Street, and no school currently exists at this location, meaning substantial off-site improvements would be required to provide safe multimodal access.
- Past crash history indicates multiple incidents related to speeding, reinforcing safety concerns for introducing school-related traffic without significant roadway improvements.

CRITICAL NEEDS

Priority considerations for the Apple Street site include:

- Costly, comprehensive roadway reconstruction to address alignment, width, and roadside safety concerns.

- Installation of continuous sidewalks, crosswalks, and bicycle accommodations to provide safe non-motorized access to the site.
- Traffic calming measures such as speed feedback signage, chicanes, or raised crossings to reduce vehicle speeds and improve safety for all users.
- Intersection improvements at both Western Avenue and Southern Avenue to manage increased school-related traffic volumes and ensure safe access and egress.
- Coordination with local and state agencies to ensure that off-site roadway improvements are incorporated into any site development plan.

Based on this review, siting a school along Apple Street would require extensive off-site improvements, including roadway widening, sidewalks, and intersection enhancements, to safely and efficiently accommodate school traffic, pedestrian activity, and access needs, and therefore, is not recommended from a traffic perspective.

ENROLLMENT IMPLICATIONS

Enrollment levels directly influence vehicular trip generation, on-site queuing during student drop-off and pick-up periods, and overall parking demand. To evaluate how future enrollment could affect operations, several enrollment options have been identified and analyzed in relation to site capacity and circulation efficiency.

At present, Essex Elementary (Site A) accommodates 215 students and 43 employees, 37 of whom are full-time staff, representing a 0.86 full-time to total employee ratio. Manchester Memorial Elementary (Site B) currently accommodates 305 students and 68 employees, 57 of whom are full-time staff, representing a 0.84 full-time to total employee ratio. Full-time employees are assumed to be present during both the AM drop-off and PM pick-up periods, contributing to trip generation during these peak hours. Part-time employees, by contrast, are expected to arrive and depart intermittently throughout the day, influencing parking turnover but not substantially contributing to queuing demand.

Three enrollment options were identified to assess how varying school sizes could impact circulation, queuing, and parking demand:

- Option 1: 165 students (Essex)
- Option 2: 250 students (Essex)
- Option 3: 515 students (Manchester)

While future staffing levels are not yet known, estimates were developed based on existing student-to-staff ratios at the current schools. Using these ratios:

- A 165-student school is projected to have approximately 33 staff members, 28 of whom are full-time.
- A 250-student school is projected to have approximately 50 staff members, 43 of whom are full-time.
- A 515-student school is projected to have approximately 115 staff members, 97 of whom are full-time.

These projections provide a consistent baseline for evaluating future trip generation, AM and PM peak-hour queuing, and parking demand. The resulting data will inform whether modifications to site access, parking supply, or circulation design are necessary to accommodate future enrollment growth.

TRIP GENERATION

In order to determine queue storage needs, one must first understand the number of vehicles expected to access the site as a result of the enrollment options. During the feasibility phase of the analysis, project-generated vehicle trips are estimated based on trip rates contained in the Institute of Transportation Engineers (ITE) Trip Generation Manual.

Trip generation rates contained in the Institute of Transportation Engineers (ITE) publication Trip Generation, 11th Edition were used to estimate the number of trips that would be generated by an elementary school of each enrollment option during the weekday AM drop-off, weekday afternoon pick-up, and weekday PM peak hour. Land Use Code (LUC) 520 – Elementary School was utilized to develop trip estimates for the different enrollment options.

- 165 students K-3
- 250 students K-5
- 515 students K-5

Essex Elementary Site

Based on ITE data, the current 215-student K-5 school generates approximately 159 vehicle trips (86 entering and 73 exiting) during the weekday AM peak hour, 95 vehicle trips (44 entering and 51 exiting) during the weekday afternoon pick-up peak hour, and 34 vehicle trips (16 entering and 18 exiting) during the weekday PM commuter peak hour

Based on ITE data, a 165-student K-3 school would generate approximately 122 vehicle trips (66 entering and 56 exiting) during the weekday AM peak hour, 73 vehicle trips (33 entering and 39 exiting) during the weekday afternoon dismissal peak hour, and 26 vehicle trips (12 entering and 14 exiting) during the weekday PM commuter peak hour. A 165-student enrollment represents a decrease in vehicle trips accessing the site. Therefore, it can be expected that queue lengths will be shorter in this enrollment option.

Based on ITE data, a 250-student K-5 school would generate approximately 185 vehicle trips (100 entering and 85 exiting) during the weekday AM peak hour, 110 vehicle trips (51 entering and 59 exiting) during the weekday afternoon pick-up peak hour, and 40 vehicle trips (18 entering and 22 exiting) during the weekday PM commuter peak hour. A 250-student enrollment represents an increase in vehicle trips accessing the site. Therefore, it can be expected that queue lengths will be longer in this enrollment option.

ITE Trip Generation rates for each enrollment option are depicted in Table 1. Table 1 also shows the net increase of trips for each enrollment option as some traffic already exists at the Essex Elementary School. As shown, a 165-student enrollment represents a net decrease and a 250-student enrollment represents a modest increase in trip generation as compared to existing conditions.

TABLE 1
Trip Generation Rates Related to Essex Elementary Enrollment Options

Time Period / Direction	Existing EES (215 Students) [a]	EES Enrollment Option (165 Students) [b]	Net Increase in Trips [c]	EES Enrollment Option (250 Students) [d]	Net Increase in Trips [e]
Weekday Daily	488	375	-113	568	80
Weekday AM:					
Enter	86	66	-20	100	14
Exit	73	56	-17	85	12
Total	159	122	-37	185	26
Weekday Dismissal (Pick-Up):					
Enter	44	33	-11	51	7
Exit	51	39	-12	59	8
Total	95	73	-22	110	15

Exit	18	14	-4	22	4
Total	34	26	-8	40	6

[a] Based on ITE Trip Generation rates for LUC 520 (Elementary School) based 215 students.

[b] Based on ITE Trip Generation rates for LUC 520 (Elementary School) based 165 students.

[c] Represents increase number of trips compared to existing conditions for 165 student enrollment.

[d] Based on ITE Trip Generation rates for LUC 520 (Elementary School) based 250 students.

[e] Represents increase number of trips compared to existing conditions for 250 student enrollment.

Manchester Memorial Site

Based on ITE data, and as depicted in Table 2, the current 305-student K-5 school generates approximately 226 vehicle trips (122 entering and 104 exiting) during the weekday AM peak hour, 134 vehicle trips (62 entering and 72 exiting) during the weekday afternoon pick-up peak hour, and 49 vehicle trips (22 entering and 26 exiting) during the weekday PM commuter peak hour

Based on ITE data, a 515-student K-5 school would generate approximately 381 vehicle trips (206 entering and 175 exiting) during the weekday AM peak hour, 227 vehicle trips (104 entering and 122 exiting) during the weekday afternoon dismissal peak hour, and 64 vehicle trips (29 entering and 35 exiting) during the weekday PM commuter peak hour. A 515 student enrollment represents an increase in vehicle trips accessing the site. Therefore, it can be expected that queue lengths will be longer in this enrollment option.

TABLE 2
Trip Generation Rates Related to Manchester Memorial Elementary Enrollment Options

Time Period / Direction	Existing MMES (305 Students) [a]	MMES Enrollment Option (515 Students) [b]	Net Increase in Trips [c]
Weekday Daily	692	1169	477
Weekday AM:

Total	49	82	33

[a] Based on ITE Trip Generation rates for LUC 520 (Elementary School) based 305 students.

[b] Based on ITE Trip Generation rates for LUC 520 (Elementary School) based 515 students.

[c] Represents increase number of trips compared to existing conditions for 515 student enrollment.

ANTICIPATED QUEUING

Trip generation rates were applied to estimate potential queuing during the PM pick-up period, which typically represents the worst-case operational condition, as most parents arrive prior to pick-up and remain on site until students are released. This pre-dismissal arrival pattern often results in queues extending onto surrounding roadways, where vehicles block driveways or occupy travel lanes, creating disruptions to local commuting traffic and introducing potential safety concerns for both motorists and pedestrians.

For the purpose of this feasibility study, PM entering trips were assumed to primarily consist of parents arriving to pick up their children. Basic queuing theory calculations were used to estimate the total queue storage area required to accommodate the anticipated number of parent pick-up vehicles for

each enrollment option. These calculations assumed that the majority of parents would arrive prior to dismissal, which was consistent with field observations conducted at both the Essex and Manchester sites.

The pick-up queue storage requirement consists of two components: (1) a storage area for parents waiting in line prior to student release and (2) a loading/unloading zone where active student pick-up occurs. For efficient and safe operations, the *Safe Routes to School Guide for Student Drop-Off and Pick-Up* recommends that three to four vehicles be loaded or unloaded at any given time. However, both study sites are currently utilizing a six-vehicle loading/unloading zone, which was reflected in the queuing analysis.

Assuming a single queue with six active loading spaces ("servers"), an arrival rate of 0.8 to 2.6 vehicles per minute over a ten-minute post-dismissal window (depending on enrollment scenario), and a service rate of two minutes per vehicle fleet, maximum queues (in vehicles) were estimated for each enrollment option. Typically, approximately 22 feet per vehicle is used to calculate the necessary length to plan for queue storage. Table 3 depicts maximum queues in terms of vehicles and feet for each enrollment option.

TABLE 3
Estimated Maximum Queue Lengths per Enrollment Option

Site	Enrollment	Maximum Queue (Vehicles)	Maximum Queue (feet)
Essex	215 (Current)	33	726
Essex	165	25	550
Essex	250	38	836
Manchester	305 (Current)	47	1034
Manchester	515	78	1716

The layout of each potential school site was reviewed to assess its ability to provide a sufficient queue storage area for each of the enrollment options based on the calculations described above. More discussion is included in the Site / Enrollment Alternatives Evaluation section of the report.

PARKING DEMAND

Each enrollment scenario also generates varying parking demands, which is an important factor in evaluating the suitability of each site. Ensuring that each alternative provides sufficient parking to meet projected needs is essential to maintaining safe and efficient operations during both school hours and special events.

ITE Parking Data

GPI utilized parking demand generation rates contained in the ITE publication Parking Generation, 6th Edition[1] to estimate the potential parking demand generated by each enrollment option based on LUC 520 (Elementary School). Parking demand was estimated based on both number of students and number of staff members. As noted previously, while future staffing levels are not yet known, estimates were developed using current student-to-staff ratios at the existing schools:

- A 165-student school is projected to have approximately 33 staff members, 28 of whom are full-time.

[1] *Parking Generation Manual, 6th Edition*; Institute of Transportation Engineers; October 2023.

- A 250-student school is projected to have approximately 50 staff members, 43 of whom are full-time.
- A 515-student school is projected to have approximately 115 staff members, 97 of whom are full-time.

For conservative purposes, parking generation rates based on the total number of staff members were utilized as they are higher than observed conditions.

TABLE 4
Parking Demand Rates Related to Essex Elementary Enrollment Options

Enrollment Condition	Existing (215 Student Enrollment)		Projected (165 Student Enrollment)		Projected (250 Student Enrollment)	
	Based on 215 K-5 Students [a]	Based on 43 Staff [b]	Based on 165 K-3 Students [a]	Based on 33 Staff [c]	Based on 250 K-5 Students [a]	Based on 50 Staff [d]
Parking Demand Rate (per student/staff)	0.14	1.18	0.14	1.18	0.14	1.18
Parking Demand	30	51	23	39	35	59

[a] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of students.
[b] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of staff. Staff numbers obtained from school website information.
[c] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of staff. The projected number of staff was estimated by applying the existing student-to-staff ratio to the projected student enrollment.
[d] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of staff. Staff numbers obtained from school website information. The projected number of staff was estimated by applying the existing student-to-staff ratio to the projected student enrollment.

TABLE 5
Parking Demand Rates Related to Manchester Memorial Elementary Enrollment Options

Enrollment Condition	Existing (305 Student Enrollment)		Projected (515 Student Enrollment)	
	Based on 305 K-5 Students [a]	Based on 68 Staff [b]	Based on 515 K-3 Students [a]	Based on 115 Staff [c]
Parking Demand Rate (per student/staff)	0.14	1.18	0.14	1.18
Parking Demand	43	81	72	115

[a] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of students.
[b] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of staff. Staff numbers obtained from school website information.
[c] Based on ITE Parking Demand Generation rates for LUC 520 (Elementary School) based on number of staff. The projected number of staff was estimated by applying the existing student-to-staff ratio to the projected student enrollment.

As shown in Tables 4 and 5, the parking demand rates based on number of staff members resulted in higher parking demand estimates than based on number of students; therefore, the parking demand

rates based on staff were utilized to provide the most conservative (worse case) estimate of the potential parking demand generated by each of the enrollment options.

Based on ITE information, the greatest parking demand for the Essex site alternatives is 59 spaces, which the site already provides, as shown in Table 4. The greatest parking demand for the Manchester site is 115 spaces, which is greater than the existing spaces on site by 16, as shown in Table 5. It should be noted that during the site observations existing parking was approximately 50% and 61% utilized at the Essex and Manchester Memorial Elementary schools, respectively.

The detailed parking demand calculation worksheets are included in the Attachments.

It should be noted that the ITE parking demand data and methodology only includes vehicles that are in designated spaces, not queued vehicles that are associated with student pick-up or drop-off. This is because pick-up/drop-off vehicles are transient and do not occupy parking spaces for an extended duration. Parking demand, by contrast, reflects sustained use, such as staff or long-term visitor parking, and should be evaluated independently of short-term circulation activity.

SITE / ENROLLMENT ALTERNATIVES EVALUATION

Each site/enrollment alternative was evaluated using six key criteria related to infrastructure, accessibility, safety, and operational efficiency. To facilitate consistent comparison across alternatives, each criterion was assigned a qualitative rating based on how each proposed design is expected to perform relative to existing conditions.

Ratings range from Highly Advantageous to Highly Disadvantageous, as defined below:

- **Highly Advantageous:** The proposed design represents a substantial improvement over existing conditions, addressing key deficiencies and significantly enhancing operational safety, access, and efficiency.
- **Advantageous:** The proposed design provides a moderate improvement over existing conditions, offering measurable benefits with only minor residual issues.
- **Neutral:** The proposed design would perform similarly to existing conditions, maintaining current levels of access, safety, and efficiency with no major improvements or degradations.
- **Disadvantageous:** The proposed design would worsen existing conditions in some areas, introducing new operational or safety concerns that would require mitigation.
- **Highly Disadvantageous:** The proposed design would significantly worsen existing conditions, creating substantial operational, safety, or access challenges that may not be easily resolved through design refinement.

The rationale for assigning each rating under the six evaluation categories is summarized in the following sections.

INFRASTRUCTURE

Assesses roadway conditions, access points, traffic control, and integration with the surrounding network. In general, schools located on local or low-speed roadways are considered more favorable than those located on regional commuting routes, as they experience lower traffic volumes and fewer conflicts with through traffic.

- **Highly Advantageous:** The proposed design substantially improves access, roadway geometry, and circulation efficiency compared to existing conditions.
- **Advantageous:** The proposed design improves access and circulation but requires minor off-site enhancements.
- **Neutral:** The proposed design maintains existing access and circulation patterns without major improvement or degradation.
- **Disadvantageous:** The proposed design introduces new access challenges or operational inefficiencies that degrade overall performance.
- **Highly Disadvantageous:** The proposed design creates severe access limitations or conflicts that significantly reduce operational functionality.

WALKABILITY

Evaluates pedestrian and bicycle accommodations, crossings, and connectivity to surrounding neighborhoods. Schools that allow a greater portion of the student population to walk or bike to school are considered more favorable than those that require cross-town travel, as consolidation or relocation may reduce the number of students within walking distance and increase reliance on vehicle trips.

- **Highly Advantageous:** The proposed design introduces new or significantly improved pedestrian and bicycle infrastructure, greatly enhancing safety and accessibility.

- **Advantageous:** The proposed design moderately improves pedestrian facilities, such as upgraded sidewalks or safer crossings.
- **Neutral:** The proposed design maintains existing pedestrian facilities with no substantial improvements or degradation.
- **Disadvantageous:** The proposed design reduces pedestrian safety or accessibility by introducing new conflicts or barriers.
- **Highly Disadvantageous:** The proposed design eliminates or severely impairs pedestrian and bicycle access compared to existing conditions.

SAFETY

Examines anticipated changes in crash potential, conflict points, and overall operational safety for all users. Schools located in areas with less frequent and less severe crash histories are considered more favorable than those along corridors with higher crash frequencies or more severe collision patterns, as baseline roadway safety directly influences school access and overall operational risk.

- **Highly Advantageous:** The proposed design significantly enhances safety by reducing conflict points and improving visibility, crossings, or traffic control.
- **Advantageous:** The proposed design moderately improves safety through improved organization or targeted upgrades.
- **Neutral:** The proposed design performs comparably to existing conditions with no major safety benefit or detriment.
- **Disadvantageous:** The proposed design introduces additional conflicts or risks relative to existing conditions.
- **Highly Disadvantageous:** The proposed design substantially increases safety risks or creates unmitigated high-conflict conditions.

BUSSING EFFICIENCY

Assesses bus routing, loading/unloading areas, and interactions with parent traffic. Schools located within neighborhood contexts are generally preferred over those requiring cross-town travel, as they reduce the number of students dependent on bus service. Sites that require district-wide consolidation increase the number of bus trips, extend student travel times, require larger on-site bus loops, and place additional strain on bus availability and driver resources, which are often limited and costly.

- **Highly Advantageous:** The proposed design provides a dedicated, efficient, and conflict-free bus circulation system with ample storage and maneuverability.
- **Advantageous:** The proposed design improves bus operations or separation but retains some minor conflicts or space constraints.
- **Neutral:** The proposed design maintains existing bus operations with no significant changes.
- **Disadvantageous:** The proposed design reduces bus efficiency or increases conflicts with parent traffic.
- **Highly Disadvantageous:** The proposed design lacks defined bus facilities or creates severe operational and safety conflicts.

NEIGHBORHOOD TRAFFIC IMPACT

Evaluates the extent to which school-related traffic affects adjacent roadways and neighborhood congestion, and the extent to which pick-up/drop-off queues spill onto adjacent roadways.

- **Highly Advantageous:** The proposed design substantially reduces off-site queuing and neighborhood congestion compared to existing conditions.

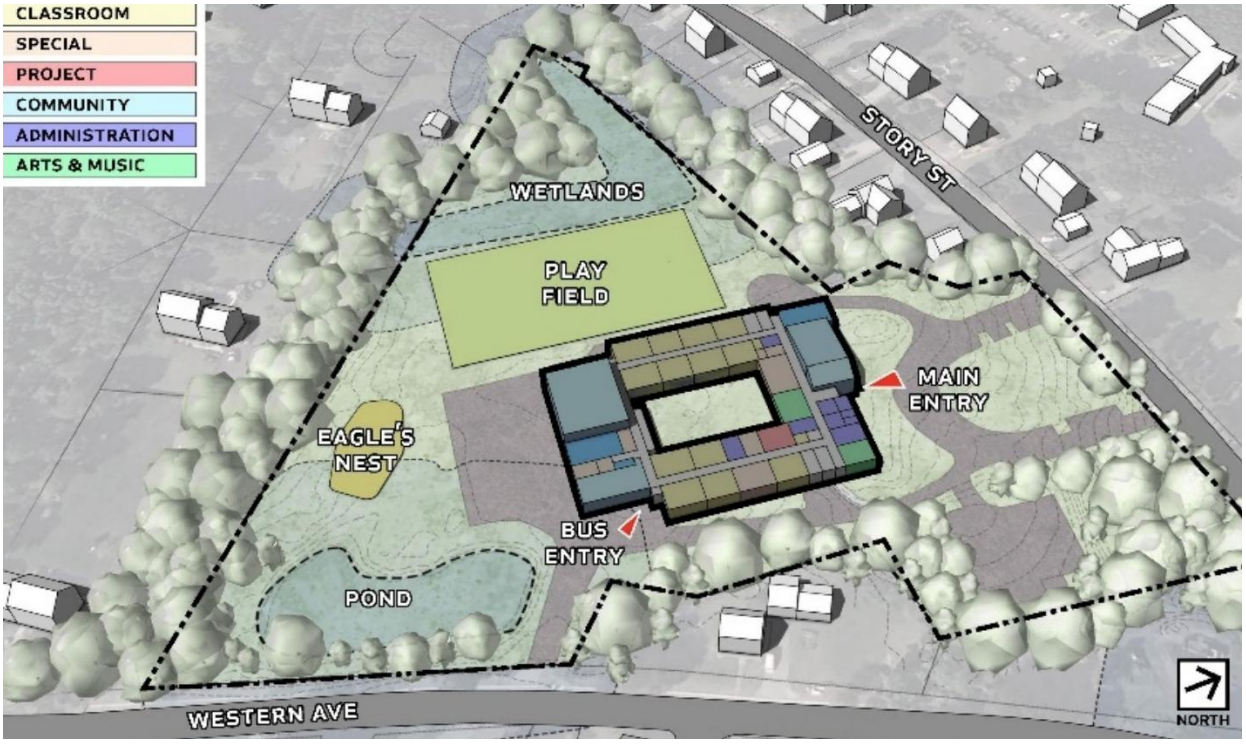
- **Advantageous:** The proposed design moderately improves traffic flow or reduces localized impacts.
- **Neutral:** The proposed design performs similarly to existing conditions with no major change in neighborhood impacts.
- **Disadvantageous:** The proposed design increases queuing or congestion along adjacent streets.
- **Highly Disadvantageous:** The proposed design causes significant off-site queuing or congestion that impairs neighborhood traffic flow and safety.

ADEQUATE PARKING

Assesses whether the site can accommodate projected parking demand and support safe circulation within parking areas.

- **Highly Advantageous:** The proposed design provides ample, well-organized parking that exceeds projected demand and minimizes conflicts.
- **Advantageous:** The proposed design meets projected demand with modest improvements in organization or accessibility.
- **Neutral:** The proposed design provides parking capacity similar to existing conditions with minimal change in efficiency.
- **Disadvantageous:** The proposed design provides insufficient parking or increases internal circulation conflicts.
- **Highly Disadvantageous:** The proposed design results in significant parking shortages or unsafe configurations that degrade operations.

This framework allows each alternative to be evaluated consistently relative to existing conditions at both the Essex and Manchester sites. As previously noted, the Apple Street alternatives were removed from consideration due to the extensive off-site and on-site improvements that would be required to feasibly site a school in that location. Therefore, the following sections represent an evaluation of the following alternatives:



- A0.1 Essex Elementary School Code Upgrade / Base Repair - Grades PreK–3 (165 students)
- A0.2 Essex Elementary School Code Upgrade / Base Repair - Grades PreK–5 (250 students)
- A1.1 Essex Elementary School Addition / Renovation - Grades PreK–3 (165 students)
- A1.2 Essex Elementary School Addition / Renovation - Grades PreK–5 (250 students)
- A2.1 Essex Elementary School New Construction - Grades PreK–3 (165 students)
- A2.2 Essex Elementary School New Construction - Grades PreK–5 (250 students)
- B1.1 Manchester Memorial Elementary School Addition/Renovation – Grades PreK-5 (515 students)

ALTERNATIVE A0.1

OVERVIEW

Option A0.1 represents a code upgrade/base repair to the existing Essex Elementary School building and maintains the existing site layout and circulation pattern. As such, the traffic constraints and operational challenges observed today would generally persist. However, under this option, enrollment would be reduced from 215 students to 165 students, resulting in fewer staff and parent trips during the peak drop-off and pick-up periods. The decrease in total vehicles accessing the site would, in turn, reduce parking demand and shorten on-site and off-site queues compared to existing conditions. While this option would not address existing circulation inefficiencies, the reduction in overall activity would likely yield modest improvements in traffic operations.

Figure 7. A0.1 Essex Elementary School Code Upgrade / Base Repair (165 students)

EVALUATION

Overall, Option A0.1 performs comparably to existing conditions. While reduced enrollment modestly improves queuing and parking demand, the lack of geometric or operational changes limits meaningful improvement across evaluation criteria.

Criterion	Rating	Rationale
Infrastructure	Neutral	Same as existing conditions. The site is located on a local roadway with low speeds and volumes. Sight distance is generally good, though minor vegetation clearing is needed to the east of the school.
Walkability	Neutral	No changes to existing sidewalk network or pedestrian facilities. Upgrades would be needed to at least meet ADA standards.
Safety	Neutral	Maintains existing circulation and access patterns; no improvements to address current on-site safety issues. Crash history within surrounding area is minimal.
Bussing Efficiency	Neutral	Same operational constraints as existing conditions. The Western Avenue driveway would require upgrades to improve turning movements. Same number of buses expected.
Neighborhood Traffic Impact	Neutral	While enrollment reduction lowers trip generation, PM queues would likely still extend onto Lincoln Street, resulting in temporary congestion.
Adequate Parking	Neutral	Parking demand decreases with lower enrollment, and the site has ample parking to satisfy demand, but the layout remains inefficient, with conflicts between parked and circulating vehicles.

ALTERNATIVE A0.2

OVERVIEW

Option A0.2 also represents a code upgrade/base repair to the existing Essex Elementary School building and maintains the existing site layout and circulation pattern. As such, the same access, egress, and internal circulation limitations present today would remain. Under this option, however, enrollment would increase from 215 students to 250 students, resulting in a corresponding rise in staff and parent-generated trips during the peak drop-off and pick-up periods. The additional vehicle activity would increase parking demand and the potential for longer queues both on and off site. Without geometric or operational modifications to the site, these conditions could exacerbate existing congestion and delay during the AM drop-off and PM pick-up periods.

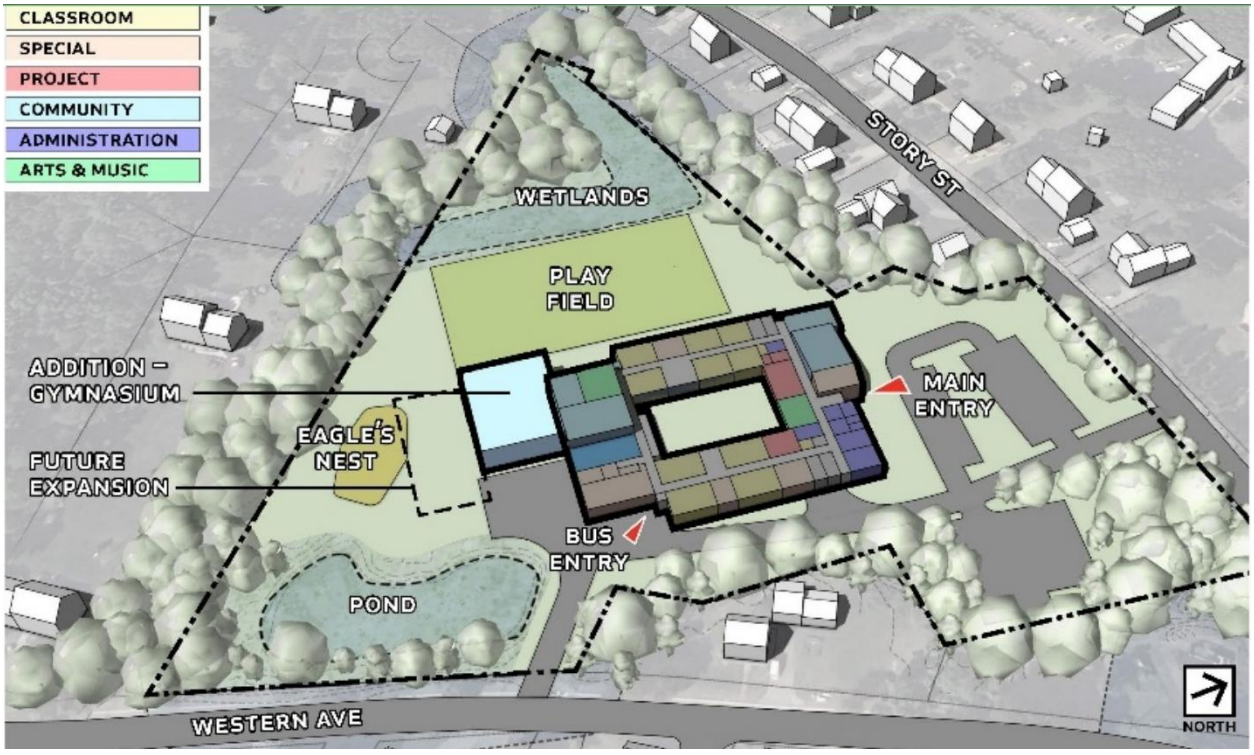
Figure 8. A0.2 Essex Elementary School Code Upgrade / Base Repair (250 students)

EVALUATION

Option A0.2 generally performs similarly to existing conditions; however, increased enrollment would elevate trip generation, resulting in additional off-site queuing since the design does not provide any new on-site queue storage or circulation improvements.

Criterion	Rating	Rationale
Infrastructure	Neutral	Same as existing conditions. The site is located on a local roadway with low speeds and volumes. Sight distance is generally good, though minor vegetation clearing is needed to the east of the school.
Walkability	Neutral	No changes to existing sidewalk network or pedestrian facilities. Upgrades would be needed to at least meet ADA standards.
Safety	Neutral	Maintains existing circulation and access patterns; no improvements to address current on-site safety issues. Crash history within surrounding area is minimal.
Bussing Efficiency	Neutral	Same operational constraints as existing conditions. The Western Avenue driveway would require upgrades to improve turning movements. Same number of buses expected.
Neighborhood Traffic Impact	Disadvantageous	Increased enrollment and trip generation would increase off-site queues given that no additional on-site storage is provided. This leads to greater neighborhood impact than existing conditions.
Adequate Parking	Neutral	Parking demand would increase modestly with the greater enrollment but can be accommodated within the existing on-site supply. However, the current parking layout remains inefficient and contributes to internal conflicts.

ALTERNATIVE A1.1



OVERVIEW

Option A1.1 represents an addition/renovation option with an addition located off of the southwest of the existing Essex Elementary School building. Under Option A1.1, primary access and egress would remain on Story Street; however, the existing entry-only and exit-only driveways would be consolidated into a single full-access driveway located where the current exit-only drive exists. A new internal counter-clockwise circulation loop with head-in parking bays is proposed to improve organization and provide additional on-site queue storage. While this layout increases queuing capacity, pedestrians would likely be required to cross active queuing areas, introducing potential safety and operational conflicts during peak periods.

The proposed design reduces the size of the bus turnaround area that is currently used today, which may result in constrained maneuvering space. Another option would be for buses to enter via Story Street and exit via Western Avenue. While this reduces pressure on the constrained on-site turnaround area, it would force buses to mix with parent traffic during the AM drop-off and PM pick-up peaks, making them susceptible to the same queues at the loop. To avoid delay, buses would likely need to arrive earlier than parent vehicles, which could shift route timings and require adjustments to bus schedules.

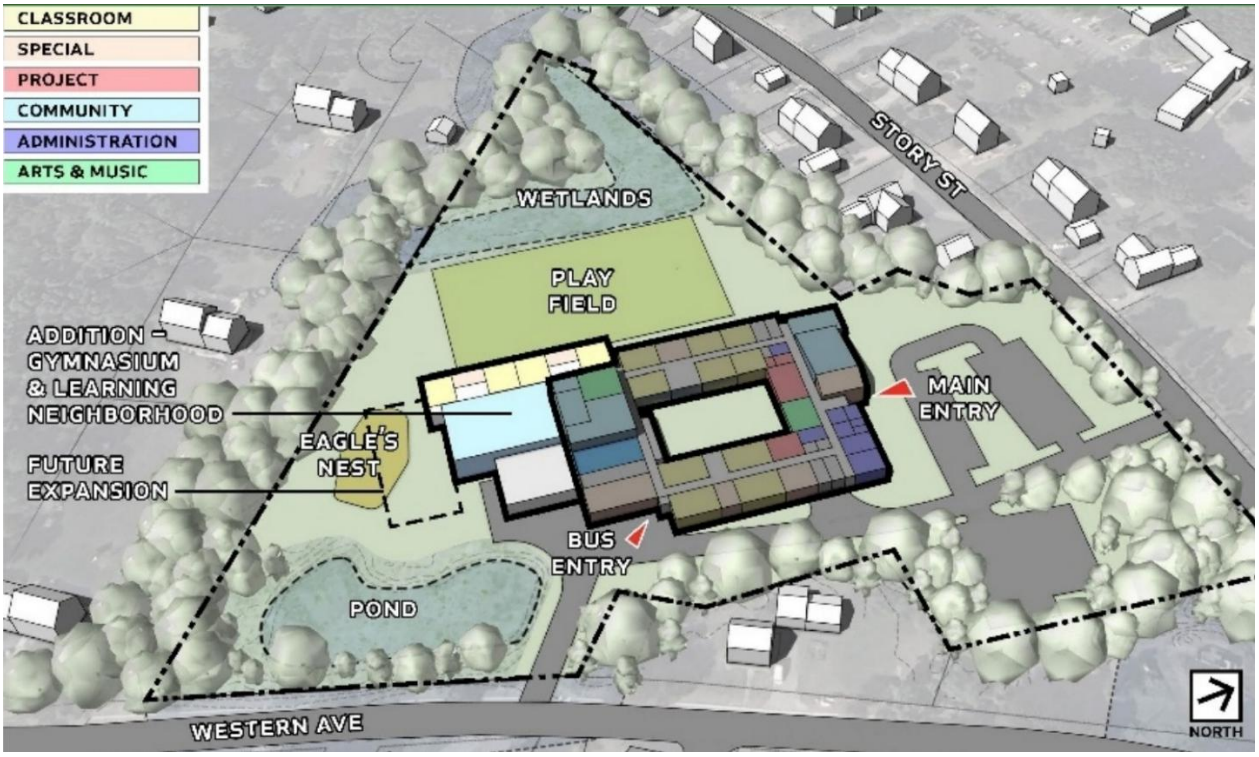
With additional on-site queue storage and a reduced enrollment of 165 students, this option has the potential to minimize neighborhood spillback and improve traffic operations compared to existing conditions. Parking is better organized and is expected to adequately satisfy demand, as the current site accommodates sufficient parking even at a higher enrollment level.

Figure 9. A1.1 Essex Elementary School Addition / Renovation - Grades PreK–3 (165 students)

EVALUATION

Option A1.1 provides moderate improvement over existing conditions through better circulation, new on-site pedestrian facilities such as sidewalks and crosswalks, and reduced neighborhood impacts due to reduced enrollment and additional on-site queuing storage. However, the reduced bus turnaround area limits maneuverability and may require alternate routing which could introduce conflicts with parent traffic. Potential pedestrian–vehicle conflicts within the loop and added gridlock risk at the single access/egress driveway would require a traffic control officer during peak periods to maintain safe and efficient operations.

Criterion	Rating	Rationale
Infrastructure	Neutral	Consolidates access into a single driveway on Story Street, improving distance from nearby residences but introducing a single conflict point for all site traffic. Will require vegetation clearing to improve sight lines and a traffic control officer to assist during peak periods.
Walkability	Advantageous	Provides opportunity for new on-site pedestrian facilities, including improved sidewalks and crossings. However, pedestrians will still need to cross active drive aisles, which could create localized conflicts.
Safety	Advantageous	Improves on-site safety through better circulation organization and queue management. Site is in an area with low crash history, though some parking-related conflicts may persist.
Bussing Efficiency	Disadvantageous	Reduces the size of the existing bus turnaround, limiting maneuverability. Alternate configuration (enter via Story Street exit via Western Avenue) introduces operational conflicts with parent traffic.
Neighborhood Traffic Impact	Advantageous	Increased on-site queue storage and reduced enrollment are expected to minimize off-site spillback and reduce neighborhood congestion. Relocating the driveway farther from residences also lessens local impacts.
Adequate Parking	Neutral	Parking demand decreases with lower enrollment, and the site has ample parking to satisfy demand, though layout may still result in conflicts between parked and circulating vehicles.



ALTERNATIVE A1.2

OVERVIEW

Option A1.2 also represents an addition/renovation option with a larger addition located off of the southwest/south of the existing Essex Elementary School building. Similar to Option A1.1, primary access and egress would remain on Story Street; however, the existing entry-only and exit-only driveways would be consolidated into a single full-access driveway located where the current exit-only drive exists. A new internal counter-clockwise circulation loop with head-in parking bays is proposed to improve organization and provide additional on-site queue storage. While this layout increases queuing capacity, pedestrians would likely be required to cross active queuing areas, introducing potential safety and operational conflicts during peak periods. The bus turnaround area is further minimized under this alternative, resulting in tighter circulation for buses and larger vehicles, which could pose operational challenges during peak periods. Similar to Option A1.2 an option would be for buses to enter via Story Street and exit via Western Avenue. While this reduces pressure on the constrained on-site turnaround area, it would force buses to mix with parent traffic during the AM drop-off and PM pick-up peaks, making them susceptible to the same queues at the loop. To avoid delay, buses would likely need to arrive earlier than parent vehicles, which could shift route timings and require adjustments to bus schedules.

Although on-site queuing capacity is increased, pedestrians would continue to traverse active queuing areas, presenting potential conflicts during drop-off and pick-up. With a higher enrollment of 250 students, this option would generate more parent and staff trips compared to Option A1.1, which may offset some of the queuing benefits. Parking remains well-organized and is expected to meet projected demand, but continued monitoring of circulation efficiency and pedestrian safety would be recommended if this option advances.

Figure 10. A1.2 Essex Elementary School Addition / Renovation - Grades PreK–5 (250 students)

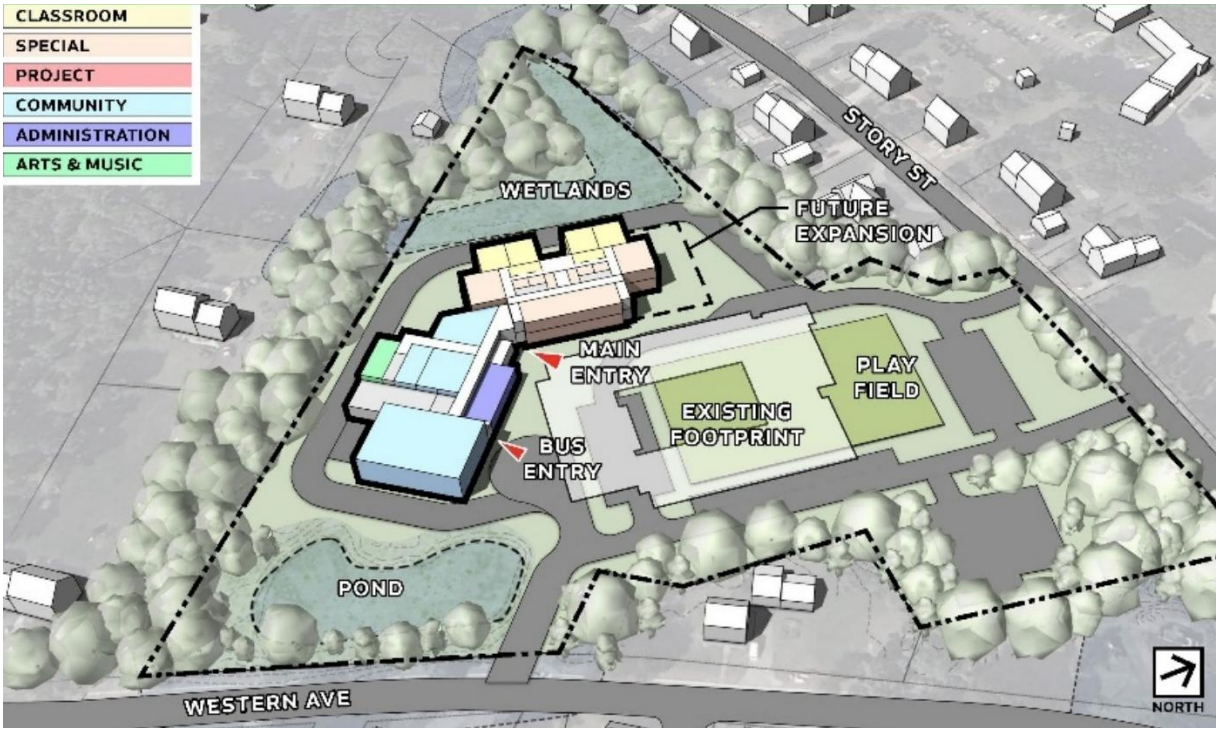
EVALUATION

Option A1.2 provides moderate improvement over existing conditions through better circulation, and new on-site pedestrian facilities such as sidewalks and crosswalks. Although additional on-site storage is provided, the benefits may be offset by increased enrollment and elevated trip generation, which could result in longer queues and higher congestion levels both on and off site. However, the bus turnaround area is further reduced limiting maneuverability which may require alternate routing which could introduce parent traffic conflicts. Potential pedestrian–vehicle conflicts within the loop and added gridlock risk at the single access/egress driveway would require a traffic control officer during peak periods to maintain safe and efficient operations.

Criterion	Rating	Rationale
Infrastructure	Neutral	Consolidates access into a single driveway on Story Street, improving distance from nearby residences but introducing a single conflict point for all site traffic. Will require vegetation clearing to improve sight lines and a traffic control officer to assist during peak periods.
Walkability	Advantageous	Provides opportunity for upgraded on-site pedestrian facilities, including improved sidewalks and crossings. However, pedestrians will still need to cross active parking drive aisles, which could create localized conflicts.
Safety	Advantageous	Improves on-site safety through better circulation organization and queue management. Site is in an area with low crash history, though some parking-related conflicts may persist.
Bussing Efficiency	Disadvantageous	Further reduces the size of the existing bus turnaround, limiting maneuverability. Alternate configuration (enter via Story Street exit via Western Avenue) introduces operational conflicts with parent traffic.
Neighborhood Traffic Impact	Neutral	Increased on-site queue storage offsets some added trip generation from higher enrollment. Off-site queuing expected to improve slightly compared to existing conditions, aided by relocating the driveway farther from residences.
Adequate Parking	Neutral	Parking demand increases modestly with higher enrollment, but the site has ample parking to satisfy demand. Layout may still cause conflicts between parked and circulating vehicles.

ALTERNATIVE A2.1

OVERVIEW



Option A2.1 represents a new construction scenario with a 165 student K-3 enrollment option, with a new school building sited to the southwest of the existing structure. Site access would be provided via an entrance-only driveway located toward the western portion of the Story Street frontage. Parents dropping off or picking up students would circulate counterclockwise around a large internal loop, loading and unloading near the main entrance before exiting via an exit-only driveway located toward the eastern portion of the Story Street frontage.

Head-in parking areas would be distributed throughout the site, including a lot along the Story Street frontage, an area directly in front of the building designated for accessible, administrative, and visitor parking, and additional parking along the eastern side of the circulation loop. The existing parking lot to the east of the site would also remain. Play fields would be located within the interior of the circulation loop, creating a central, secure open space for recreation. However, the circulation loop separates the building from the play areas, requiring pedestrians to cross active drive aisles to access these spaces.

Buses would access the site via Western Avenue, utilizing a dedicated bus loop that operates independently from parent traffic. A perimeter drive would surround the site, providing continuous service and emergency access.

This option provides significant operational benefits, including greater flexibility to accommodate extended on-site queuing that minimizes neighborhood impacts, ample and better-organized parking, fully separated parent and bus access and egress, and the opportunity to incorporate modern pedestrian and bicycle facilities throughout the site.

Figure 11. A2.1 Essex Elementary School New Construction - Grades PreK–3 (165 students)

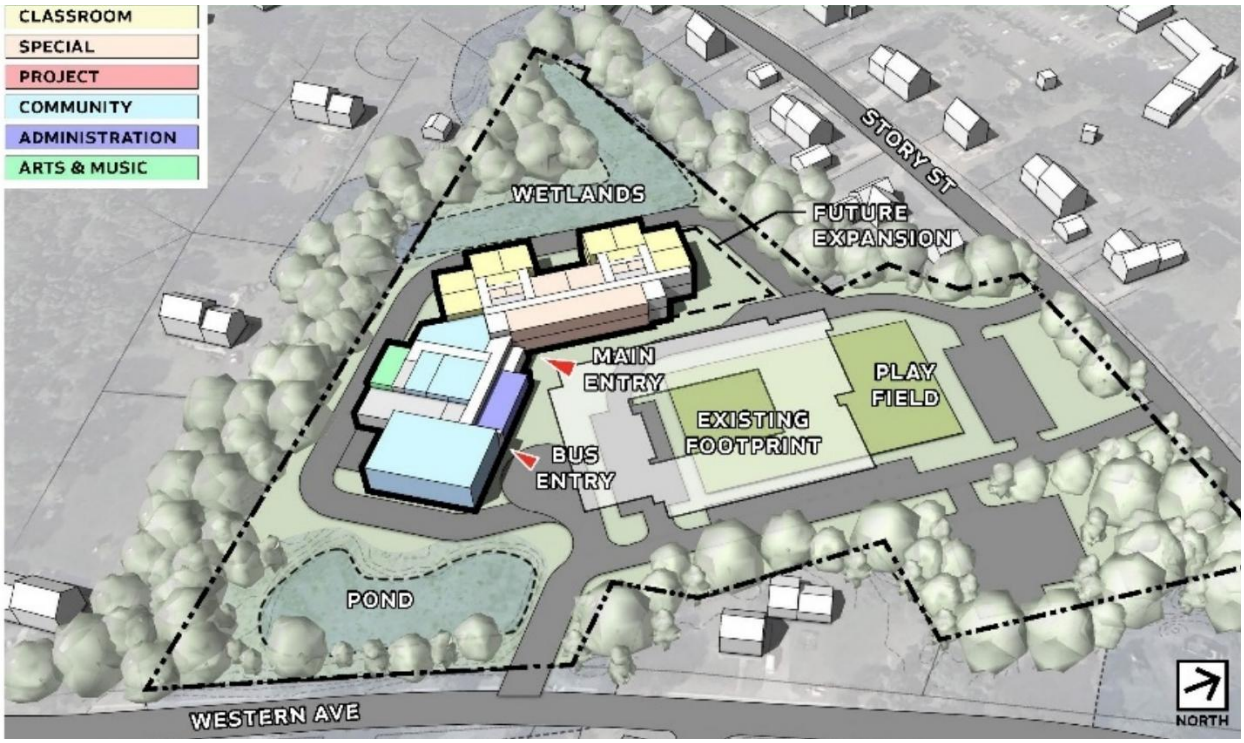
EVALUATION

Option A2.1 represents a significant improvement over existing conditions by providing fully separated parent and bus circulation, a substantial increase in on-site queue storage, and modern on-site pedestrian facilities including sidewalks and crosswalks. Although pedestrians must cross active drive aisles to access the play fields, overall circulation and safety are greatly enhanced. The new layout minimizes neighborhood impacts, improves emergency access through a perimeter drive, and provides ample, well-organized parking to meet demand.

Criterion	Rating	Rationale
Infrastructure	Highly Advantageous	Provides separate access and egress for buses and parents, located on a low-speed, low-volume roadway. The new layout significantly increases on-site storage and reduces conflict points.
Walkability	Advantageous	Allows for modern on-site pedestrian facilities and defined crossings. Pedestrians walking to/from school will not be required to cross vehicle flows on-site; however, pedestrians must cross active drive aisles to reach play areas, creating potential conflicts.
Safety	Highly Advantageous	Greatly enhances on-site safety through improved circulation organization and queue management. The site's low crash history and new perimeter drive improve emergency access, though pedestrian crossings to play areas require attention.
Bussing Efficiency	Highly Advantageous	Dedicated bus loop on Western Avenue fully separates bus and parent operations. Driveway improvements will facilitate safe turning movements.
Neighborhood Traffic Impact	Highly Advantageous	Substantial on-site queue capacity and reduced enrollment minimize off-site spillback and congestion on surrounding streets.
Adequate Parking	Highly Advantageous	The site provides ample, well-organized parking that satisfies demand while minimizing conflicts between parked and circulating vehicles.

ALTERNATIVE A2.2

OVERVIEW



Option A2.2 represents new construction designed to accommodate a 250 K–5 student enrollment. The layout and circulation configuration are identical to Option A2.1, with a new school building located to the southwest of the existing structure. Access to the site would be provided via an entrance-only driveway toward the western portion of the Story Street frontage, with parents circulating counterclockwise around a large internal loop to drop off and pick up students near the main entrance before exiting via an exit-only driveway located toward the eastern portion of the frontage.

Head-in parking areas would remain distributed throughout the site, including along Story Street, in front of the building for accessible and visitor spaces, and along the eastern side of the loop. The existing parking lot to the east of the site would remain in use, and play fields would continue to be located within the interior of the circulation loop. However, the circulation loop separates the building from the play areas, requiring pedestrians to cross active drive aisles to access these spaces.

Buses would continue to enter and exit via Western Avenue using a dedicated bus loop that remains fully separated from parent circulation. A perimeter drive would provide service and emergency access around the site.

With an increased enrollment of 250 students, this option would result in higher trip generation, longer queues, and greater parking demand compared to Option A2.1. However, the overall site design provides sufficient flexibility and on-site storage to accommodate this increase without substantial operational degradation. Maintaining separate parent and bus circulation would continue to support safe and efficient traffic flow, though queue management and pedestrian crossing controls should be carefully considered during design development.

Figure 12. A2.2 Essex Elementary School New Construction - Grades PreK–5 (250 students)

EVALUATION

Option A2.2 maintains the strong operational and safety benefits of Option A2.1, including fully separated bus and parent circulation, extensive on-site queue storage, and modern pedestrian facilities such as sidewalks and crosswalks. Although additional on-site storage is provided, the higher enrollment and increased trip generation may reduce some of these benefits in comparison to the lower-enrollment option; however, overall performance still represents a substantial improvement over existing conditions. Pedestrians must continue to cross active drive aisles to access play fields, but overall site organization, safety, and traffic flow remain significantly enhanced.

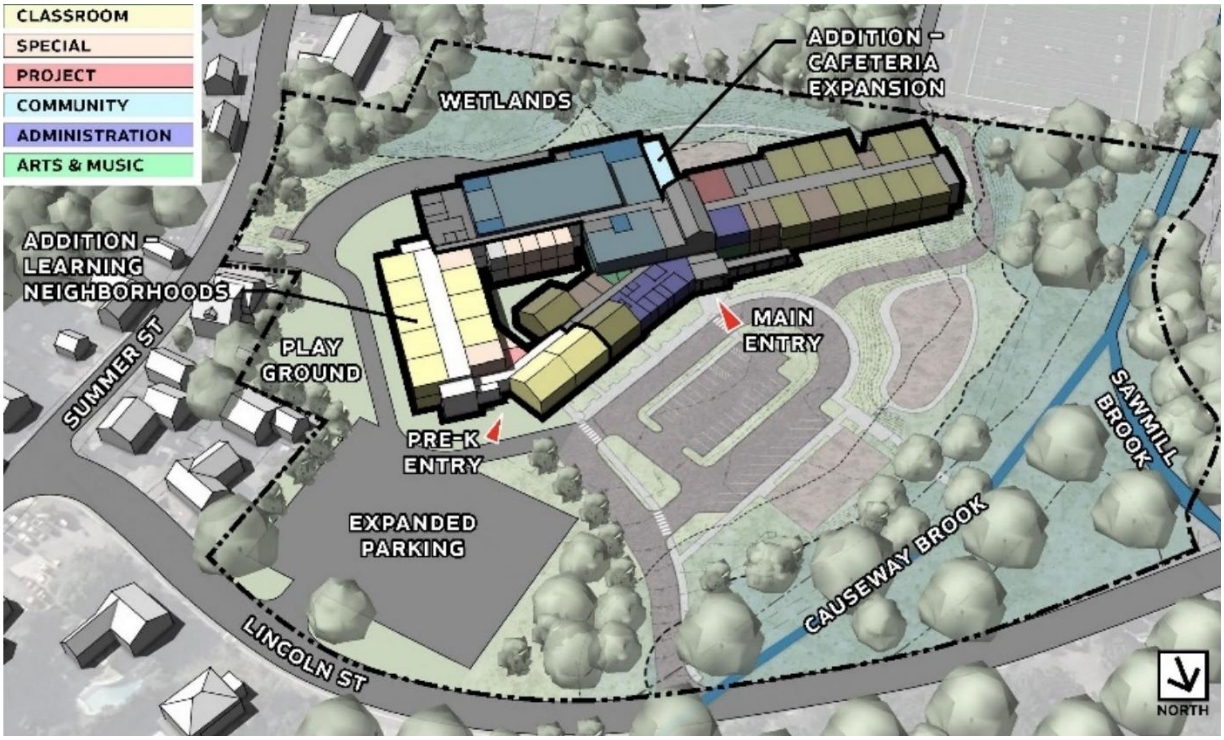
Criterion	Rating	Rationale
Infrastructure	Highly Advantageous	Creates full separation of bus and parent traffic with improved access and on-site circulation. Located on a low-speed, low-volume roadway with generous queuing and parking capacity.
Walkability	Advantageous	Allows for modern on-site pedestrian facilities and defined crossings. Pedestrians walking to/from school will not be required to cross vehicle flows on-site; however, pedestrians must cross active drive aisles to reach play areas, creating potential conflicts.
Safety	Highly Advantageous	Greatly enhances on-site safety through improved circulation organization and queue management. The site's low crash history and new perimeter drive improve emergency access, though pedestrian crossings to play areas require attention.
Bussing Efficiency	Highly Advantageous	Dedicated bus loop on Western Avenue fully separates bus and parent operations. Driveway improvements will facilitate safe turning movements.
Neighborhood Traffic Impact	Advantageous	Increased on-site queue storage offsets additional trips associated with higher enrollment, minimizing off-site spillback and neighborhood congestion.
Adequate Parking	Highly Advantageous	Parking supply and layout accommodate increased demand, with sufficient organization to reduce conflicts between parked and circulating vehicles.

ALTERNATIVE B1.1

OVERVIEW

Option B1.1 represents an addition and renovation scenario at the existing Manchester Memorial Elementary School designed to accommodate an enrollment of 515 K–5 students. This option assumes that all current Essex Elementary students would attend school in Manchester. The concept introduces a sizeable addition to the northeast of the existing building and a cafeteria expansion to the south.

Primary site access would remain via the existing entrance-only driveway located near the middle of the parcel frontage on Lincoln Street. Parents would enter via this driveway and circulate around the existing loop to the current loading and unloading area. From there, vehicles could exit either to Summer Street or Lincoln Street via a new entrance/exit driveway positioned toward the eastern edge of the parcel on Lincoln Street.



It should be noted that this option does not indicate any increase in on-site queuing storage, meaning that parent vehicles would continue to rely on the existing loop configuration for pick-up and drop-off operations. Existing parking around and within the loop would remain, while parking elsewhere on the site would be consolidated into a large, expanded parking area in the northeast corner of the property. This design would remove the secondary entrance and exit on Lincoln Street, replacing it with a single full-access/egress driveway.

Despite the reconfiguration, the proposed layout is expected to experience similar operational challenges as today, particularly related to conflicts between K–5 and Pre-K traffic, unless all Pre-K parents are required to park in the large parking lot and walk students to the door and thus enter/exit via the secondary driveway.

The design also does not identify a defined location for bus operations, which will become increasingly critical given that additional buses would likely be required to accommodate the expanded student population resulting from the Essex consolidation.

Overall, while the plan improves parking organization, it does not expand on-site queue storage to match the substantial enrollment increase. As a result, off-site queuing and congestion on Lincoln Street and Summer Street are expected to worsen under this condition. To maintain safe and efficient operations, this alternative would require careful consideration of bus staging, parent circulation separation, and extended on-site queuing capacity during later design phases.

Figure 13. B1.1 Manchester Memorial Elementary School Addition/Renovation – Grades PreK-5 (515 students)

EVALUATION

Option B1.1 performs less favorably compared to existing conditions due to the substantial enrollment increase and lack of expanded on-site queue storage or dedicated bus facilities. These limitations are expected to exacerbate off-site queuing and congestion along Lincoln Street, particularly during peak drop-off and pick-up periods. The design improves parking organization with a large consolidated lot but introduces challenges for bus operations and parent circulation, as additional buses will likely be needed to accommodate the combined student population. Relocating Essex students to Manchester would also significantly reduce the number of children able to walk or bike to school, increasing reliance on bussing and parent drop-off. Without further design refinements to expand on-site storage, separate traffic flows, and mitigate travel demand, this option may result in degraded operational efficiency and safety.

Criterion	Rating	Rationale
Infrastructure	Disadvantageous	No increase in on-site queue storage. The site connects to a high-volume roadway with observed speeding and limited sight distance. Additional traffic exiting onto Lincoln Street would increase congestion unless right turns are restricted to avoid the Lincoln/Summer Street intersection.
Walkability	Disadvantageous	Although sidewalks and crosswalks are modern and well maintained, consolidating Essex students at this site would significantly reduce walkability for many students and generate additional vehicle trips.
Safety	Disadvantageous	Maintains similar conditions to today within an area with a higher crash history. Increased off-site queuing could heighten safety risks as frustrated drivers attempt unsafe maneuvers to bypass congestion.
Bussing Efficiency	Highly Disadvantageous	No dedicated bus area identified. Additional bus storage and loading/unloading zones are needed to accommodate Essex students who would now be transported to Manchester.
Neighborhood Traffic Impact	Highly Disadvantageous	The site is located along a regional commuter route and already experiences significant off-site queuing. With higher enrollment and no new on-site storage, traffic and safety issues are expected to worsen substantially.
Adequate Parking	Advantageous	The expanded consolidated parking area provides ample capacity to meet projected demand and improves organization compared to existing conditions.

SITE / ENROLLMENT RECOMMENDATION – TRAFFIC PERSPECTIVE

Evaluations across all six criteria were compared for each alternative to determine which site and enrollment option are best suited from a traffic and circulation perspective, considering factors such as access, safety, queuing capacity, pedestrian connectivity, and overall operational efficiency. This comparison is shown in Table 6.

From a traffic and access perspective, the new construction alternatives at the Essex Elementary site (Options A2.1 and A2.2) are the most favorable. These options provide fully separated bus and parent circulation, expanded on-site queue storage, improved pedestrian connectivity, and overall safer, more efficient operations compared to both existing conditions and other alternatives. The Essex site itself is also inherently better suited for school operations, as it is located on a low-speed, residential roadway with lower traffic volumes and fewer conflicts with regional commuter traffic.

In contrast, the Manchester Memorial site (Option B1.1) is already constrained by significant off-site queuing and congestion along Lincoln and Summer Streets. The projected enrollment increase and additional traffic associated with consolidation would exacerbate these issues unless substantial new on-site queue storage and circulation improvements are introduced. Without major design interventions, the Manchester site would continue to experience operational inefficiencies, safety concerns, and increased bussing demand, making it less suitable from a transportation standpoint.

In conclusion, from a traffic perspective, the new construction alternatives at the Essex site would provide measurable operational and safety benefits regardless of the enrollment option considered, as both lower and higher enrollment scenarios are supported by the expanded on-site storage, improved circulation, and separated bus and parent access these designs provide.

TABLE 6

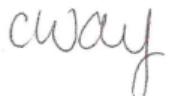
ACKNOWLEDGEMENT



Mabbett & Associates, Inc. (Mabbett®) prepared this ASTM International *Standard Practice for Phase I Environmental Site Assessments E1527-21* Phase I Environmental Site Assessment (Phase I ESA) of the approximately 9.75-acre subject property identified as Essex Elementary School at 12 Story Street in Essex, Essex County, Massachusetts. Mabbett prepared this report under subcontract to JCJ Architecture (JCJ) for the Essex Elementary School Architectural Feasibility Study.

This Phase I ESA has been prepared for use by JCJ and the Manchester Essex Regional School District. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; Mabbett does not accept any responsibility for the consequences of such use(s). Furthermore, reliance by any party not identified in the agreement, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to Mabbett.

Mabbett prepared this Phase I ESA report using reasonable efforts to identify Recognized Environmental Conditions (RECs) associated with hazardous substances or petroleum products in, on, or at the subject property. Findings contained within this report are based on information collected from observations made on the day of the subject property reconnaissance and from reasonably ascertainable information obtained from selected public agencies and other referenced sources.

Mabbett declares that, to the best of our professional knowledge and belief, the Mabbett staff who performed this Phase I ESA meet the definition of *Environmental Professional* as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and these Mabbett staff have the specific qualifications based on education, training, and experience to assess a *property* of its nature, history, and setting. Mabbett has developed and performed all of the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This Phase I ESA Report has been prepared by:

Mabbett & Associates, Inc.
Cassidy Way, QEP, CHMM
Project Environmental Scientist/Project Manager

This Phase I ESA Report has been internally reviewed and approved for submittal by:

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett & Associates, Inc. (Mabbett) on behalf of JCJ Architecture (JCJ) to support the Manchester Essex Regional School District's decision making regarding capital investments at Essex Elementary School. The subject property for this Phase I ESA is Essex Elementary School addressed 12 Story Street, which encompasses approximately 9.75 acres of land in Essex, Massachusetts.

Subject Property Description

Essex Elementary School was originally constructed in 1958, with a gymnasium addition around 1975. The subject property is currently developed with an approximately 53,036 square foot elementary school that has a centrally located courtyard, sub-grade boiler room, classrooms, a kitchen, and cafeteria.

Subject Property History

The subject property was undeveloped land in 1888. By 1893, one structure was present on the northern boundary of the subject property by Story Street. Between 1915 and 1919, a roadway bisected the northern portion of the site and had as many as 4 structures built on it. This roadway was gone by 1938. The subject property appeared to have been historically used as agricultural land. The buildings on the subject property were razed sometime between 1952 and the construction of the new elementary school in 1958. The manmade pond in the southern corner of the subject property had also been built at this time. A gymnasium was added to the subject property around 1975.

Surrounding Areas

The area surrounding the subject property consisted of residential use lands.

Conclusions

The Phase I ESA included a reconnaissance at the subject property by Mabbett on September 24, 2025. Mabbett obtained information about environmental conditions that could potentially be considered a Recognized Environmental Condition (REC); reviewed historical maps of the subject property and vicinity; interviewed senior custodian Jason Billadeau, who was familiar with current and recent environmental history at the subject property; reviewed environmental database listings for the subject property and vicinity; performed a review of available files from the Massachusetts Department of Environmental Protection (MassDEP); and reviewed documents provided by Essex Elementary School. This information was used to develop an opinion with regard to the presence or absence of RECs at the subject property.

The Phase I ESA findings are summarized in the following list:

- **RECs**

  During the site reconnaissance, a red colored petroleum staining was observed on the concrete floor of the boiler room, which was located sub-grade in the northeastern portion of the Essex Elementary School. Additionally, a slight petroleum sheen was observed within a pit filled with groundwater in the boiler room. According to Manchester Essex Schools Maintenance Supervisor, after periods of heavy precipitation, groundwater can seep through the concrete floor and enter the boiler room. Parts of the boiler room floor were observed to be visibly wet during the site reconnaissance. The oily sheen may have originated from a heating oil underground storage tank (UST) or aboveground storage tank (AST) previously associated with the boiler room; however, Mabbett was unable to confirm its size, contents,

or historical location at the subject property. The indications observed of an oil release within the boiler room and the potential for that release to have impacted groundwater represents a REC.

- **Historical Recognized Environmental Conditions (HRECs)**

  No HRECs were identified on or affecting the subject property.

- **Controlled Recognized Environmental Conditions (CRECs)**

  No CRECs were identified on or affecting the subject property.

- **Data Gaps**

  According to a municipal record, the Conservation Commission was requested to determine the applicability of the Wetlands Protection Act for the removal of underground heating oil storage tanks at 12 Story Street in March 2002. Mabbett was unable to obtain documentation confirming the removal of a UST at the subject property nor environmental conditions associated with the removal of an UST. No records were available for review pertaining to its size, location, or contents. A vent pipe, but no fill pipe, was observed exiting the northeastern wall of the Essex Elementary School near the current generator. Suspected UST piping was observed entering through the wall of the boiler room; however, the source and purpose of this piping could not be confirmed. The lack of information and documentation pertaining to this UST record represents a data gap.

- **Business Environmental Risks (BERs)**

  Regulated Building Materials: According to the 2023 Asbestos Hazard Emergency Response Act (AHERA) Inspection Report, documented asbestos containing material (ACM) are present throughout the elementary school. Considering the age of the existing school building, lead-based paint (LBP) was presumably used during original construction and subsequent upkeep through 1978, and such coatings are anticipated to be present on a significant portion of interior and exterior surfaces. The documented presence of ACM and presumed presence of LBP represents a business environmental risk (BER) due to the added cost of abatement during future demolition or renovation of the building.

  Fill Soils: The U.S Department of Agriculture (USDA) Web Soil Survey identified the soils located beneath the elementary school and southeast of the elementary school as Urban land (i.e., urban fill). The potential for the quality of fill materials to result in elevated environmental premiums for off-site management during future redevelopment activities is considered a BER.

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (ESA) report presents the results of non-intrusive environmental due diligence activities performed according to the ASTM International *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) at the subject property, identified as the Essex Elementary School encompassing approximately 9.75 acres at 12 Story Street in Essex, Essex County, Massachusetts. A Subject Property Locus Map is provided as Figure 1-1. A Subject Property Plan is provided as Figure 1-2.

1.1 Purpose

The purpose of performing a Phase I ESA is to render an opinion, to the extent practical, as to whether current or historical evidence indicates the presence of Recognized Environmental Conditions (RECs) at the subject property. The Phase I ESA findings are intended to help KBA with decision making regarding potential environmental liabilities at the subject property. The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The following paragraphs describe the different types of RECs defined by ASTM E1527-21.

ASTM E1527-21 defines a REC as:

- the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;
- the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or
- the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The term REC is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

ASTM E1527-21 defines a Historical REC as:

> *"A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (i.e., activity and use limitations or other property use limitations)."*

ASTM E1527-21 defines a Controlled REC as:

> *"A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (i.e., activity and use limitations or other property use limitations)."*

ASTM E1527-21 defines a Business Environmental Risk (BER) as:

> *"A risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations."*

Although the subject property is not considered "commercial real estate," the identification of BERs is considered relevant to this assessment because non-scope environmental concerns at the subject property could have cost implications on potential future development efforts by the Manchester Essex Regional School District.

1.2 Detailed Scope of Services

This Phase I ESA was completed with a level of care and skill ordinarily practiced by the environmental consulting professional currently providing similar services under comparable circumstances in accordance with the provisions of ASTM E1527-21. Any significant additions, deletions, or exceptions to ASTM E1527-21 are noted below, or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the subject property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports;
- Use of the subject property, adjoining properties, and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports, and interviews;
- Observations regarding current usage and conditions include: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes, and wastewater;
- Use of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on, or at the property;
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the subject property;
- Potential for subsurface vapor migration in, on, or at the subject property; and
- Potential PFAS at the subject property.

1.3 Significant Assumptions

No significant assumptions were made during the preparation of this Phase I ESA.

1.4 Limitations and Exceptions

Mabbett prepared this Phase I ESA report using reasonable efforts to identify RECs associated with hazardous substances or petroleum products in, on, or at the subject property. Findings contained within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from selected public agencies and other referenced sources.

No exceptions to ASTM E1527-21 were noted during this assessment.

The ASTM E1527-21 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- Uncertainty Not Eliminated: A Phase I ESA cannot wholly eliminate uncertainty regarding the potential for RECs associated with a property since no actual environmental samples are collected for analysis.
- Not Exhaustive: A Phase I ESA is not an exhaustive assessment of the environmental conditions on a property.
- Past Uses of the Property: A Phase I ESA does not require review of standard historical sources at less than five-year intervals. Therefore, past uses of the property may not be discovered.

Other limitations are as follows:

- The observations described in this report were made under the conditions stated herein. Observations were based solely upon the non-intrusive services described herein.

Users of this report may refer to ASTM E1527-21 for further information regarding these and other limitations.

Mabbett makes no representation or warranty that the past or current operations at the subject property are, or have been, in compliance with all applicable federal, state, and local laws, regulations, and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, Mabbett is not responsible for consequences or conditions arising from facts not fully disclosed to Mabbett during the assessment.

Per ASTM E1527-21, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of RECs associated with the subject property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for Landowner Liability Protections under the Comprehensive Environmental Response, Compensation, and Liability Act. Mabbett makes no representations or warranties regarding a User's qualification for liability protection under any federal, state, or local laws or regulations.

In accordance with ASTM E1527-21, this report is presumed to be valid for a 6-month period. If the report is older than 6 months, the following information must be updated for the report to be valid: (1) regulatory review, (2) subject property reconnaissance, (3) interviews, (4) specialized knowledge, and (5) environmental liens. Reports older than one year may not meet ASTM E1527-21 requirements and, therefore, the report must be updated to reflect current conditions and property-specific information. Other limitations and exceptions that are specific to the scope of this report may be found in the corresponding sections.

1.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of and may be relied upon by the JCJ, the Manchester Essex Regional School District, or third parties authorized in writing by JCJ. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual subject property conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of the JCJ, is at the sole risk and expense of such third party.

Mabbett makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied.

2.0 SUBJECT PROPERTY DESCRIPTION

The subject property description was researched and developed by Mabbett representative Cassidy Way, QEP, CHMM, who meets ASTM's *Environmental Professional* qualification as defined in ASTM E1527-21 and who performed a site reconnaissance of the subject property on September 24, 2025. A Subject Property Locus map is provided as Figure 1-1. A detailed Subject Property Map depicting current subject property features is provided as Figure 1-2.

2.1 Location and Legal Description

12 Story Street (the subject property) was identified by the Town of Essex Assessor as Parcel 129-5 and encompassed approximately 9.75 acres owned by the Town of Essex Elementary School. The subject property was described as having an improved educational site use.

2.2 Current Use and Improvements at the Subject Property

The subject property was developed with the Essex Elementary School that was originally constructed in 1958. The school was developed with an approximately 53,036 square-foot school building with a primarily brick exterior.

Exterior portions of the subject property included a playground, athletic fields, parking areas, and landscaped areas.

The subject property was accessible from Story Street to the north and Western Avenue to the southeast. Access to the subject property was controlled via thick forested trees and shrubs but was not restricted by fencing.

2.3 Surrounding Area General Characteristics

The subject property was located in a residential area. The Site vicinity was used for residential purposes.

2.4 Physical Setting

2.4.1 Topography

Based on the U.S. Geological Survey (USGS) 7.5-Minute Series Marblehead North Topographic Quadrangle map, dated 2024, the elevation of the ground surface at the subject property is approximately 50 to 80 feet (ft) above mean sea level. The subject property was sloped downwards toward the northeast. This information was confirmed during Mabbett's site reconnaissance on September 24, 2025.

2.4.2 Geology

According to the USGS Bedrock Geologic Map of Massachusetts, bedrock underlying the general area of the subject property was characterized Cape Ann Complex, specifically as Beverly Syenite consisting of quartz-poor facies (SOcb) and Alkalic granite to quartz syenite containing ferro-horneblende (SOcgr). Bedrock outcrops were observed at the subject property during Mabbett's site reconnaissance on September 24, 2025. The outcrops were located in the school courtyard and in the school's crawlspace area.

2.4.3 Wetlands and Surface Water

According to the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) Map Viewer, accessed on September 19, 2025, freshwater forested/shrub wetlands were present on the easternmost portion of the subject property. Additionally, a freshwater pond was located on the southern portion of the subject property. The wetlands map is included in Appendix A.

Freshwater emergent wetlands, forested/shrub wetlands, and riverine were mapped to the north of the subject property. Estuarine and marine wetland was mapped east/southeast of the subject property.

This information was confirmed during Mabbett's site reconnaissance on September 24, 2025.

2.4.4 Groundwater

Based on the elevation contour maps, regional topography, and the location of nearby water bodies, groundwater underlying the subject property is inferred to likely flow to the east towards Alewife Brook and the Essex Bay.

Actual groundwater flow direction underlying the subject property may vary due to the topography, presence of underground utilities such as sewers, storm drains, and heterogeneous subsurface soil conditions. Measuring the actual depth to groundwater and flow direction is beyond the scope of an ASTM E1527-21 Phase I ESA.

2.4.5 Flood Zone

The subject property was located on the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map FIRMette panels 25009C0293H dated July 8, 2025. According to FEMA, the subject property was located within an area of minimal flood hazard (Zone X). A copy of the FIRMette is provided in Appendix A.

2.4.6 Soils

The soil at the subject property underlying the buildings were classified by the USDA Natural Resources Conservation Service as Ridgebury fine sandy loam (70B), Scituate fine sandy loam that is very stony (316B), Canton fine sandy loam (420B), and Urban land (602). The urban land was mapped beneath the school building. A copy of the USDA soil map is provided in Appendix A.

Subject property soils that were not covered with hardscape were vegetated with grass, shrubs, and trees. No significant soil erosion or stained soil was noted during the site reconnaissance.

3.0 SITE RECONNAISSANCE

A site reconnaissance was performed to obtain information about environmental conditions at the subject property and at adjacent properties that could impact the subject property.

3.1 Methodology

On September 24, 2025, Mabbett representative Cassidy Way, QEP, CHMM, who meets the ASTM's *Environmental Professional* qualification, met in-person with Dustin Lombardi, Associate I Sr. Architect at JCJ, and Steve Hunt, Maintenance Supervisor for the Manchester Essex Schools. Mr. Hunt escorted Mabbett during the site reconnaissance. Information provided by Mr. Hunt is incorporated throughout this report.

Mabbett walked the subject property with the purpose of assessing potential RECs, BERs, and *de minimis* conditions. The site reconnaissance efforts consisted of making visual observations of conditions on the ground surface, building exteriors, and building interiors at the subject property, with a focus on identifying sumps, drains, improperly stored chemicals, and signs of chemical spills that may serve as a conduit between the building and the environment or a potential environmental hazard. The methodology involved walking through the main areas of interest within the building, including but not limited to, kitchens, custodial closets, classrooms, chemical storage areas, and boiler room. The focus of the site reconnaissance was on areas where hazardous substances or petroleum products are or may have been stored, used, treated, discharged, or disposed; maintenance and repair areas; boiler rooms; and a representative sample of occupant spaces. Mabbett toured the exterior grounds, observing all sides of the building. Mabbett also observed the adjoining properties from public thoroughfares. No intrusive activities were performed during the site reconnaissance.

The following sections present a summary of observations made during the site reconnaissance. Representative photographs are provided in Appendix B.

3.2 Observations of Subject Property Improvements

3.2.1 Buildings

The subject property was developed with one primarily brick building that was square shaped with an interior courtyard. The remaining property consisted of a grass athletic field, paved courts, a playground, a pond, a forested area, and paved parking areas.

Observed building materials included vinyl floor tiles, concrete block walls, ceiling tiles, and carpet. Utility rooms, including a boiler room, were present in the basement/subfloor level of the subject property.

3.2.2 Stormwater

Stormwater was managed onsite through catch basins and/or infiltration. Mr. Hunt believed that the sump in the boiler room and any floor drains at the subject property drained to the municipal sewer system.

The only pooling observed during the site visit was on the roof of the school due to recent rainfall.

3.2.3 Roads/Parking

The subject property was accessible from Story Street to the north and Western Avenue to the east. Paved parking areas were present on the north and east sides of the site building.

3.2.4 Heating and Cooling Sources

The subject property was heated via natural gas and steam. The subject property is cooled via chiller units.

3.2.5 Sanitary Sewerage

The subject property was connected to the Town of Essex municipal sewerage system.

The subject property was previously serviced by a septic tank that was located along the northeastern exterior of the school building and a leach field in the northeastern portion of the subject property. A permit to abandon the septic system was submitted in August 2005. The septic tank and pump chamber were removed in September 2005. No evidence of the historical septic system was observed during the site reconnaissance.

3.2.6 Water Supply

Essex Elementary School obtained its potable water from Town of Essex, who obtains its water three groundwater wells in Essex. The water is treated at the Essex Water Treatment Plant, which was constructed in 1982.

No potable water wells were observed on the subject property during the site reconnaissance. According MassDEP well database, several domestic and monitoring wells were identified on Western Avenue to the south of the subject property.

3.3 Underground Storage Tanks

According to a Conservation Commission record, the Conservation Commission was requested to determine the applicability of the Wetlands Protection Act for the removal of underground heating oil storage tanks at 12 Story Street in March 2002. No other information was reviewed pertaining to this tank.

Suspected fill and vent pipe locations were observed from within the boiler room and a suspected vent pipe was observed on the exterior wall of the subject property; however, their connection to a historical UST could not be confirmed. No fill pipe were observed along the exterior of the subject. Mabbett suspects the UST in question may have been an AST in the boiler room, which is below grade, thus its classification as a UST.

The lack of available information regarding the location and status of the UST and the subsurface conditions in the vicinity of the UST is considered a significant data gap.

3.4 Aboveground Storage Tanks

No evidence of ASTs was observed nor historically recorded for the subject property. A backup generator was observed along the eastern exterior of the subject property that had a diesel reservoir. No evidence of past or present releases was observed at this generator.

3.5 Hazardous Substance Use, Storage, and Disposal

The subject property did not maintain a designated hazardous waste storage area to temporarily store waste. Chemicals observed included paints, cleaners, and boiler chemicals. No improperly used, stored, or disposed of hazardous substances were observed during the site reconnaissance.

3.6 Non-Hazardous Solid Wastes and Disposal

Non-hazardous solid waste generated during routine Essex Elementary School operations was contained in dumpsters on the western exterior subject property. The dumpsters were designated for recyclable and non-recyclable waste. According to Mr. Hunt, these receptacles are emptied weekly or as needed. No improper handling of non-hazardous solid waste was observed during Mabbett's site reconnaissance.

3.7 Electrical Equipment and Polychlorinated Biphenyls (PCBs)

The Essex Elementary School representative was unsure if PCB-containing oils were ever used at the subject property. Electrical transformers and hydraulic reservoirs observed at the subject property visually appeared to be in good condition with no signs of leakage.

3.8 Stained Surfaces and Distressed Vegetation

Mabbett observed stained surfaces on the boiler room floor. The staining had a red, oily appearance. Additionally, a slight sheen was observed in a pit in the boiler room filled with groundwater. No obvious odor was observed. According to Mr. Hunt, in periods of heavy precipitation, groundwater would seep through the concrete floor and enter into the boiler room. Parts of the floor were observed as wet during the site reconnaissance. The apparent oil release in the boiler room represents a REC.

3.9 Underground Structures

Mabbett observed two internal grease traps located beneath kitchen sinks and one external grease trap. According to Mr. Hunt, these grease traps are cleaned out annually.

3.10 Per- and Poly-fluoroalkyl Substances (PFAS)

Mabbett conducted an assessment of potential sources of PFAS at or near the subject property. PFAS environmental contamination may come from a number of sources; including, but not limited to firefighting foam, waterproofing materials, wetting agents, and other industrial and consumer products. Department of Defense (DoD) facilities have also been associated with high levels of PFAS in groundwater due to training and firefighting activities, as well as other facility activities that are part of the DoD's mission. As a result, PFAS are nearly ubiquitous and have been found in rainwater and encountered in many environments and media including groundwater, soils, surface water, sediment, and human and animal tissues.

Mabbett searched USEPA, and other sources for identified PFAS sites within and in vicinity of the subject property (USEPA, 2025; EWG, 2025; Northeastern, 2025). The closest known PFAS sites was the Essex Water Department (EWG). According to the Essex Water Quality Report, no PFAS were detected during quarterly 2024 sampling.

Mabbett found no reference to the use of PFAS-containing materials, historical fires, or firefighting responses at the subject property or adjacent properties. Mabbett found no specific potential sources of PFAS at the subject property or adjacent properties, or indications of past property uses associated with PFAS use from the historical data as summarized in Section 5.1.4 through 5.1.6 of this report.

The available information reviewed by Mabbett did not identify historical releases of PFAS at the subject property; however, the presence of PFAS in soils and groundwater due to the use of town water for past irrigation purposes cannot be ruled out due to previous PFAS detections in municipal water.

4.0 USER PROVIDED INFORMATION

The following section summarizes the Phase I ESA User Questionnaire completed by the Manchester Essex Schools Maintenance Supervisor, Steve Hunt. The completed User Questionnaire is provided in Appendix C.

4.1 Owner, Property Manager, and Occupant Information

The subject property is owned and managed by the Town of Essex and occupied by the Essex Elementary School.

4.2 Title Records

The Essex Elementary School representative was not aware of any deed restrictions, environmental land use restrictions, environmental liens, or activity and use limitations on file for the subject property.

4.3 Environmental Permits and/or Violations

The Essex Elementary School representative was not aware of any state- or municipal-issued violations for the subject property.

As discussed in Section 3.3, the Essex Elementary School representative indicated that they were not knowledgeable of the former location of the historical UST.

4.4 Specialized Knowledge or Experience of the Owner

The Essex Elementary School representative did not have any specialized knowledge of the subject property.

4.5 Significant Valuation Reduction for Environmental Issues

The Essex Elementary School representative was not aware of significant valuation reduction due to environmental issues at the subject property, which is owned by the Town of Essex.

4.6 Reason for Performing Phase I ESA

This Phase I ESA is being completed in support of Manchester Essex Regional School District feasibility studies for the potential reuse of the subject property during either renovations or the construction of a new high school.

4.7 Other Owner-Provided Documents

Steve Hunt provided Mabbett with copies of the Safety Data Sheets (SDSs) of products used at the subject property. Products used included Multi-Clean cleaning products, Alkaline liquid cleaning product, liquid acrylic floor finish, sanitizer, descaling agent, rinse aid, dish machine detergent, and liquid bactericide and sanitizer.

Mabbett was also provided with a copy of the *Asbestos Hazard Emergency Response Act (AHERA) 3 Year Reinspection Report* dated January 2023 and prepared by Atlas Technical Consultants LLC. This document identified locations of known asbestos at the subject property, including floor tile and tile mastic, joint compound and associated gypsum wall board, pipe insulation, purple sink sealant, black sink sealant, grey sink sealant, interior door frame caulking, and other mastics.

No other owner-provided documents were available for Mabbett review.

5.0 RECORDS AND DATABASE REVIEW

Mabbett obtained and reviewed available environmental records for the subject property and adjoining properties. The records were reviewed to identify properties where chemical releases were reported to have occurred and to assess whether those releases create a REC at the subject property.

5.1 Standard Environmental Records

Mabbett contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut, to conduct a search for available federal and state environmental records in compliance with ASTM E152721. EDR provided Mabbett with the database search results in an EDR Radius Report on September 16, 2025. EDR searched federal and state databases for records of properties with a history of a chemical release or chemical storage and located within the minimum search distance from the subject property as required by ASTM E1527-21. Records identified within these search distances from the subject property are summarized in Table 5-2. The databases for which no records were identified are presented in the full EDR report in Appendix D. The EDR report identified 3 "orphan" listings.

TABLE 5-1
Summary of Environmental Records Identified in the EDR Radius Report

Database	Records for the Subject Property	Search Distance (miles from the subject property)	Number of records within the search distance					Total Records Identified
			<1/8 mile	1/8 – 1/4 mile	1/4 – 1/2 mile	1/2 – 1 mile	>1 miles

NOTES:
TP = Target Property (the *subject property* per ASTM E1527-21)
NR = Not Required by ASTM E1527-21

5.1.1 Findings for the Subject Property

The subject property was identified within the Asbestos, ERNS, and Facility Index System/Facility Registry System (FINDS) databases.

In 2006, approximately 1,000 square ft (4,000 linear ft) of asbestos was removed from classrooms and crawlspaces. In 2017, approximately 12 linear ft of asbestos pipe wrap was removed from the subject property. Approximately 8 linear ft of asbestos from cement pipes was removed in July 2021. This asbestos was located outdoors.

The subject property was listed in the ERNS database under NRC Report Number 891302. In November 2008, a caller reported that an oil truck was driving down the road and spilled materials onto the ground while driving unknowingly. An estimated 50 gallons of fuel oil was reported as released. Absorbents were applied and the release was cleaned up. Based on this listing, the release occurred in Story Street, not on the subject property.

5.1.2 Findings for Adjoining and Surrounding Properties

Table 5-2 below describes properties identified in the EDR federal or state databases that are located within 0.25 miles of the subject property. Table 5-2 organizes findings by the EDR Map ID number.

As previously described in Section 2.4.3, groundwater flow at the subject property and immediate vicinity is inferred generally flow towards the east. Based on this groundwater flow direction, Mabbett was able to categorize the following properties identified in EDR databases as likely to be hydrologically upgradient, cross-gradient, or downgradient from the subject property. Contaminants released at upgradient or cross-gradient properties, and where the contaminants have reached groundwater, could have the potential to migrate in groundwater beyond the boundary of that property to reach the subject property. Contaminated groundwater that migrates beneath the subject property has the potential to impact environmental conditions.

Contaminants released to soil at upgradient or cross-gradient properties may migrate beyond the adjoining/surrounding property boundaries in sediment-laden stormwater. However, stormwater from these properties would not likely reach the subject property because of the many physical obstructions between the properties and the subject property; these obstacles include but are not limited to roads, curbs, and stormwater catch basins.

Contaminants released to groundwater at downgradient properties are assumed not to be a threat to environmental conditions at the subject property because the groundwater beneath these properties flows away from, and would not reach, the subject property.

TABLE 5-2
Records Identified in the EDR Radius Report

EDR Map ID(s)	Property Name(s) and Address	Database Listing(s)	Distance from Subject Property (feet)	Direction from Subject Property	Gradient Relative to Groundwater Flow in Area	REC? (Y/N)	Basis for REC Conclusion
5	17 Story Street	SHWS, RELEASE	125 ft	NNW	Crossgradient	N	Class A-1 RAO submitted in 1995.
6	60 Western Ave	SHWS, RELEASE	165 ft	NNW	Crossgradient	N	Class A-2 RAO submitted in 2001.

5.1.3 Aerial Photographs

Mabbett reviewed aerial photographs provided by EDR of the subject property and surrounding area. Aerial photographs were available for the years 1938, 1952, 1960, 1965, 1972, 1978, 1986, 1995, 2010, 2014, 2018, and 2023. Historical Aerial Photographs are provided in Appendix E. Certain details of the aerial photographs were difficult to ascertain due to the resolution and/or wide scale of the aerial photographs.

In the earliest aerial photograph dated 1938, the subject property was used as farmland. Two to three structures were present on the northern portion of the subject property near Story Street. Much of the nearby land appeared utilized for agricultural purposes.

No significant changes were noted on the subject property until 1960. The Essex Elementary School had been constructed at this time, along with the manmade pond on the southern corner of the subject property. The gymnasium addition was clearly present on aerial photographs by 1986. Of not, this addition reportedly occurred in 1975, but due to the quality of the aerial photograph dated 1978, was not confirmed until 1986. By 1995, a playground had been constructed by the southern property boundary. No significant changes were noted in the remaining aerial photographs dated through 2023.

The review of aerial photographs did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.4 Historical USGS Topographic Maps

Historical USGS topographic maps provided by EDR were available for the subject property, adjoining areas, and the surrounding area for the years 1888, 1893, 1915, 1919, 1943, 1945, 1950, 1956, 1966, 1985, 1997, 2005, 2012, 2015, 2018, and 2021. The Historical Topo Map Report is included in Appendix E.

In the earliest topographic maps dated 1888 the subject property was depicted as undeveloped. By 1893, one structure was mapped on the northern boundary of the subject property by Story Street. Alewife Brook was mapped northeast of the subject property. Between 1915 and 1919, several structures and a roadway are depicted bisecting the subject property. By 1945, the roadway was no longer present and only one structure was depicted.

By 1966, the Essex Elementary School was depicted, along with the manmade pond in the southern corner of the subject property. By 1985, the gymnasium had been added to the subject property, bringing it to its current configuration. No significant changes were noted on the subject property in the remaining topographic maps dated through 2021.

The review of historical USGS topographic maps did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.5 Historical City Directories

Historical City Directories provided by EDR were available for the subject property and for select addresses within the surrounding area for the years 1988, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020. A copy of the City Directory search is provided in Appendix E.

The subject property (12 Sory Street) was listed with the following occupants:

- 1988: Unlisted
- 1992: Cape Ann Collaborative
- 1995, 2000: Town of Essex School Department
- 2005: Unlisted
- 2010: Essex Elementary School, Essex School Superintendent
- 2014: Manchester Essex Regional School District

- 2017: Town of Essex
- 2022: Essex Elementary School, Manchester Essex Regional School District, Jennifer Roberts, Joan Endicott, John Kwiatek, Kanitah Conley, Linda Parady, Adrienne MacNeill

The Historical City Directory information did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.6 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were requested for the subject property from EDR but were not available for the subject property and surrounding areas. The Sanborn "Unmapped Property" document provided by EDR is provided in Appendix E.

5.1.7 Municipal Records

Mabbett requested current and historical environmentally pertinent information associated with the subject property from the Town of Essex in September 2025. Departments contacted included the Fire Department, City Clerk, Board of Health, Conservation Department, and Building Department.

Mabbett reviewed available permits from the Town of Essex Building Department. These permits included electrical and building permits.

Grease trap pumping records were reviewed at the Essex Board of Health for 2024.

In 1995, a complaint was filed for a septic odor in front of the school building. In September 2005, the septic tank and pump chamber at the subject property were abandoned. The septic tank was located on the northeastern wall of the school building with its associate leach field located further northeast of the septic tank. Of note, two unlabeled tanks were also depicted next to the corner of the school. Their use, contents, and sizes could not be ascertained by this document.

In 1997, the MassDEP commented on a NPDES permit application for the discharge of up approximately 20 gallons of boiler blowdown to a slump in the basement of the school. MassDEP was concerned about chemicals from the boiler within the discharge, the possibility of sewage entering the discharge, and the overall water quality standards of the discharge.

In May 2005, an indoor air quality assessment was performed. The presence of volatile organic compounds (VOCs) was not detected in any of the rooms analyzed.

In 2002, fecal coliform was detected in the pond at the subject property.

In March 2002, the Essex Conservation Commission was requested to "determine the applicability of the Wetlands Protection Act for the removal of underground heating oil storage tanks at the Essex Elementary and Middle School, 12 Story Street." No other information about the heating oil tank(s) was available for review.

Files reviewed from the Building Department and Board of Health are included in Appendix A.

5.1.8 Other Historical Sources

No other readily available historical sources were available for review.

6.0 SUBSURFACE VAPOR MIGRATION

Mabbett conducted a qualitative screening for potential Vapor Encroachment Conditions (VEC) that may affect the subject property. The screening used information about the current and historical usage of the subject property available from the EDR Radius Report to evaluate Chemicals of Concern (COCs), including petroleum hydrocarbons and non-petroleum chemicals. A copy of the EDR report is provided in Appendix D.

ASTM E 2600-10 defines an area of concern (AOC) with a minimum search radius of 1,760 ft (0.3 mile) from the subject property boundary when identifying properties contaminated with non-petroleum COCs that could potentially present a vapor intrusion risk at the subject property. For sites contaminated with petroleum hydrocarbon COCs, the AOC minimum search radius is 528 ft (0.1 mile) from the subject property boundary.

Mabbett considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the subject property, the physical setting, and the regulatory agency database information (summarized in Section 5.0). To pose a vapor encroachment risk, releases must have contaminants that have migrated to groundwater, and the groundwater must have the potential to flow beneath the subject property. Additionally, the contaminant released must have the potential to migrate upward from groundwater to soil gas and then to the atmosphere.

Neither the subject property nor hydrologically upgradient or cross-gradient properties were identified as having releases of petroleum and non-petroleum COCs meeting these criteria within proximity to the Essex Elementary School building. Due to the suspected oil release, the risk of vapor encroachment conditions existing at the subject property is considered medium.

7.0 INTERVIEWS

Mabbett interviewed the individuals listed in Table 7-1 for information regarding environmental conditions at the subject property. Information from the interview is incorporated throughout this Phase I ESA.

TABLE 7-1
Interviews Completed for this Phase I ESA

Role	Name	Title/Company	Years in Current Role	Interview Type
Maintenance Supervisor	Steve Hunt	Manchester Essex Schools	19+ years	In-person site reconnaissance; user questionnaire

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 Lead Based Paint

Lead-based paint (LBP) was commonly used prior to their ban in 1978. As such, it is possible that LBP is present on surfaces that were painted prior to 1978. Painted surfaces with cracking and peeling paints were observed during Mabbett's site reconnaissance.

8.2 Asbestos Containing Materials

Asbestos has historically been used in a wide range of building materials, including roofing shingles, ceiling and floor tiles, paper products, pipe insulation, asbestos cement products, and more.

Mabbett was provided with a copy of the *Asbestos Hazard Emergency Response Act (AHERA) 3 Year Reinspection Report* dated January 2023 and prepared by Atlas Technical Consultants LLC. This document identified locations of known asbestos at the subject property, including floor tile and tile mastic, joint compound and associated gypsum wall board, pipe insulation, purple sink sealant, black sink sealant, grey sink sealant, interior door frame caulking, and other mastics.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Mabbett performed a Phase I ESA of Essex Elementary School (the subject property) at 12 Story Street in Essex, Essex County, Massachusetts in conformance with the scope and limitations of ASTM E1527-21. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This Phase I ESA Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett on behalf of the JCJ and the Town of Essex to support decision making about architectural feasibility at Essex Elementary School. The subject property for this Phase I ESA encompasses approximately 9.75 acres of land.

The Phase I ESA findings are summarized as follows:

- **Recognized Environmental Conditions (RECs)**

  During the site reconnaissance, a red colored petroleum staining was observed on the concrete floor of the boiler room, which was located sub-grade in the northeastern portion of the Essex Elementary School. Additionally, a slight petroleum sheen was observed within a pit filled with groundwater in the boiler room. According to Manchester Essex Schools Maintenance Supervisor, after periods of heavy precipitation, groundwater can seep through the concrete floor and enter the boiler room. Parts of the boiler room floor were observed to be visibly wet during the site reconnaissance. The oily sheen may have originated from a heating oil underground storage tank (UST) or aboveground storage tank (AST) previously associated with the boiler room; however, Mabbett was unable to confirm its size, contents, or historical location at the subject property. The indications observed of an oil release within the boiler room and the potential for that release to have impacted groundwater represents a REC.

- **Historical Recognized Environmental Conditions (HRECs)**

  No HRECs were identified on or affecting the subject property.

- **Controlled Recognized Environmental Conditions (CRECs)**

  No CRECs were identified on or affecting the subject property.

- **Data Gaps**

- According to a municipal record, the Conservation Commission was requested to determine the applicability of the Wetlands Protection Act for the removal of underground heating oil storage tanks at 12 Story Street in March 2002. Mabbett was unable to obtain documentation confirming the removal of a UST at the subject property nor environmental conditions associated with the removal of an UST. No records were available for review pertaining to its size, location, or contents. A vent pipe, but no fill pipe, was observed exiting the northeastern wall of the Essex Elementary School near the current generator. Suspected UST piping was observed entering through the wall of the boiler room; however, the source and purpose of this piping could not be confirmed. The lack of information and documentation pertaining to this UST record represents a data gap.

- **Business Environmental Risks (BERs)**

  Regulated Building Materials: According to the 2023 Asbestos Hazard Emergency Response Act (AHERA) Inspection Report, documented asbestos containing material (ACM) are present throughout the elementary school. Considering the age of the existing school building, lead-based paint (LBP) was presumably used during original construction and subsequent upkeep through 1978, and such coatings are anticipated to be present on a significant portion of interior and exterior surfaces. The documented presence of ACM and presumed presence of LBP represents a business environmental risk (BER) due to the added cost of abatement during future demolition or renovation of the building.

Fill Soils: The U.S Department of Agriculture (USDA) Web Soil Survey identified the soils located beneath the elementary school and southeast of the elementary school as Urban land (i.e., urban fill). The potential for the quality of fill materials to result in elevated environmental premiums for off-site management during future redevelopment activities is considered a BER.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/19/2025 at 7:18 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Essex County, Massachusetts, Southern Part
Survey Area Data: Version 21, Aug 27, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 22, 2022—Jun 5, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Re : BUILDING CODE COMPLIANCE LETTER
H&A JN 1308.02

Dear Avi,

The following is the Building Code Compliance Letter for the Building Inspector:

The Essex Elementary School was constructed in two phases. The original one story building of 31,280 SF was constructed in 1957. A one story addition of 11,500 SF was completed in 1975. Within this new addition, in the South West corner contains the Gymnasium, the Boys' Locker Room and the Girls' Locker Room. The Existing Girls' Locker Room is the subject of this renovation.

The Girls' Locker Room is being divided into two sections length wise, leaving the area that is currently used for lockers as the area to be renovated into two rooms, Area #1 at 136 SF and Area #2 at 159 SF. Door #1 is a new one-hour fire rated door that leads in to the Primary corridor. This Primary corridor is on the other side of the North wall of Areas #1 and #2. This corridor is a transitional element for the new 1975 addition. The North wall of Areas #1 and #2 is also a Load Bearing wall and has a one-hour fire rating. This was evidenced by checking the existing plans and checking the adjacent doors leading into the Primary corridor. These doors are one-hour fire rated. The school does not have a Sprinkler System.

Please note the following summary by categories below:

Fire Rated Walls:	The perimeter walls of the Girls' Locker Room is a concrete block one-hour fire rated wall with the North wall load bearing. All fenestrations will maintain a one-hour fire rating.
Fire Rated Doors:	The one new door and hardware leading into the Primary Corridor from Area #1 is also one-hour fire rated. All existing doors remain the same.
Fire Rated Windows:	The Windows in the North wall of Areas #1 and #2 are one-hour fire rated. Glass will not exceed 1296 square inches pre window.

Roger L. Young
Assistant Superintendent for Finance/Facilities
Manchester-Essex Regional School District
P.O. Box 1407
Manchester, MA 01944

Dear Mr. Young:

Enclosed are copies of the reports by Sharon Lee, Environmental Analyst of our Emergency Response/Indoor Air Quality Program, on her visit to conduct indoor air assessments at the Essex Elementary and Middle School and Modular Annex. The reports show that there were problems identified. Please refer to the recommendation sections for advice on how to correct these problems.

If you have any questions regarding the report or if we can be of further assistance in this matter, please feel free to call us at (617) 624-5757.

Sincerely,

Suzanne K. Condon, Associate Commissioner
Center for Environmental Health

Enclosure
cc: Mike Feeney, Director, Emergency Response/Indoor Air Quality, CEH

Senator Bruce E. Tarr
Representative Anthony J. Verga

ings to reduce the likelihood of symptoms in sensitive individuals (NIOSH, 1997). A question and answer sheet concerning latex allergy is attached as Appendix B (NIOSH, 1998).

Also was the amount of materials stored inside classrooms (Picture 23). In classrooms throughout the school, items were seen on windowsills, tabletops, counters, bookcases and desks. The amount of items stored in classrooms provides a means for dusts, dirt and other potential respiratory irritants to accumulate and make it difficult for custodial staff to clean.

Conclusions/Recommendations

In view of the findings at the time of the visit, the following recommendations are made:

1. Examine each univent for function. Operate univents while classrooms are occupied. Check fresh air intakes for repair and increase the percentage of fresh air intake if necessary.
2. Examine exhaust vents for function and make repairs as necessary.
3. Operate all ventilation systems that are operable throughout the building (e.g., gym, auditorium, classrooms) continuously during periods of school occupancy independent of thermostat control to maximize air exchange.
4. Remove all obstructions from univents and exhaust vents to facilitate airflow. Close classroom doors to improve air exchange.
5. Remove debris and dust accumulated on the ventilation grilles.
6. Consult a ventilation engineer concerning re-balancing of the ventilation systems and the calibration of univent fresh air control dampers throughout the school. Ventilation industrial standards recommend that mechanical ventilation systems be balanced every five years (SMACNA, 1994).

7. For buildings in New England, periods of low relative humidity during the winter are often unavoidable. Therefore, scrupulous cleaning practices should be adopted to minimize common indoor air contaminants whose irritant effects can be enhanced when the relative humidity is low. To control for dusts, a high efficiency particulate arrestance (HEPA) filter equipped vacuum cleaner in conjunction with wet wiping of all surfaces is recommended. Avoid the use of feather dusters. Drinking water during the day can help ease some symptoms associated with a dry environment (throat and sinus irritations).

8. Examine the feasibility of increasing HVAC filter efficiency. Note that prior to any increase of filtration, each unit should be evaluated by a ventilation engineer as to whether they can maintain function with more efficient filters.

9. Identify and repair sources of water leaks. Replace water-damaged ceiling tiles. These ceiling tiles can be a source of microbial growth. Examine the non-porous surface beneath the removed ceiling tiles and disinfect with an appropriate antimicrobial.

10. For removal of tiles directly adhered to the ceiling, such removal would be considered a renovation activity that can release particulates and spores in particular, if the material is moldy. Replacement of ceiling tiles may also involve glues that contain VOCs. In order to minimize occupant exposure, repairs should be done while the building is unoccupied.

11. Examine plants in classrooms for mold growth in water catch basins. Disinfect water catch basins if necessary. Remove plants from ventilation sources.

12. Remove plants growing against building and its foundation to prevent water intrusion through brickwork.

13. Ensure water is flowing in the ramp and crawlspace water channels. Examine and remove any debris that may impede water movement.

RECEIVED

14. *Operate* auxiliary fan in classroom 9 at least 15-20 minutes prior and following any science laboratory projects.

15. Ensure doors leading to the storage and crawlspace remain closed to prevent the movement of odors and materials into occupied areas.

16. Refrain from using food as materials for projects.

17. Relocate or consider reducing the amount of materials stored in classrooms to allow for more thorough cleaning of classrooms. Clean items regularly with a wet cloth or sponge to prevent excessive dust build-up.

18. Consider discontinuing the use of tennis balls on furniture and replacing tennis balls with alternative "glides". Refer to Picture 24 for an example.

19. Extend exhaust pipe above ventilation equipment to prevent entrainment of odors and particles.

20. Consider adopting the US EPA document, *Tools for Schools* (US EPA, 2000b), as a means to maintaining a good indoor air quality environment in the building. This document can be downloaded from the Internet at http://www.epa.gov/iaq/schools/index.html.

21. Refer to resource manuals and other related indoor air quality documents for further building-wide evaluations and advice on maintaining public buildings. Copies of these materials are located on the MDPH's website: http://www.state.ma.us/dph/beha/iaq/iaqhoFtme.htm.

Attn: Principal Eric Gordon

Dear Mr. Gordon,

On October 28, our Administrator approved an emergency waiver to allow emergency pesticide treatment for yellow jackets in one of the school classrooms. This application and approval process follows the 2000 MA *Act to Protect Children and Families from Harmful Pesticides*.

It is a requirement of the *Act to Protect Children and Families from Harmful Pesticides* that all schools develop and implement an Integrated Pest Management (IPM) Plan. Included with your emergency waiver application was a copy of an Indoor Pest Management Plan. Sections one through six (1-6) of the school plan received by the BOH have not been completed. This may be deemed noncompliance with the *Act to Protect Children and Families from Harmful Pesticides.* Please complete the plan immediately and send a copy to the BOH for our records.

If you have any questions, please contact our Administrator at 978 768-7614.

Sincerely,
ESSEX BOARD OF HEALTH

REASON FOR INSPECTION/VISIT COMPLAINT OF SEPTIC ODOR IN FRONT OF SCHOOL. COMPLAINT RECEIVED FROM DAVE FERRIS, DEP

CONTACT PEOPLE AT SITE Principal Michael Jacobson
Head Custodian Bill Caldwell

RESULTS OF INSPECTION/VISIT 2-16-95 No noticible odor noted in school. Odor was noted outside in area of upper parking lot. I walked this area + didn't see any evidence of break-out. I will try walking area again + follow brook to see if problem in this area. No evidence of water or overflow was noted near 3 sewer covers in front area of building - the odor did not appear to be in this area although the wind was blowing from this direction up to upper parking lot.

SUMMARY OF FINDINGS Checked file to determine type of system - refer to 11/4/93 report where similar complaint was filed.

(SEE OTHER SIDE)

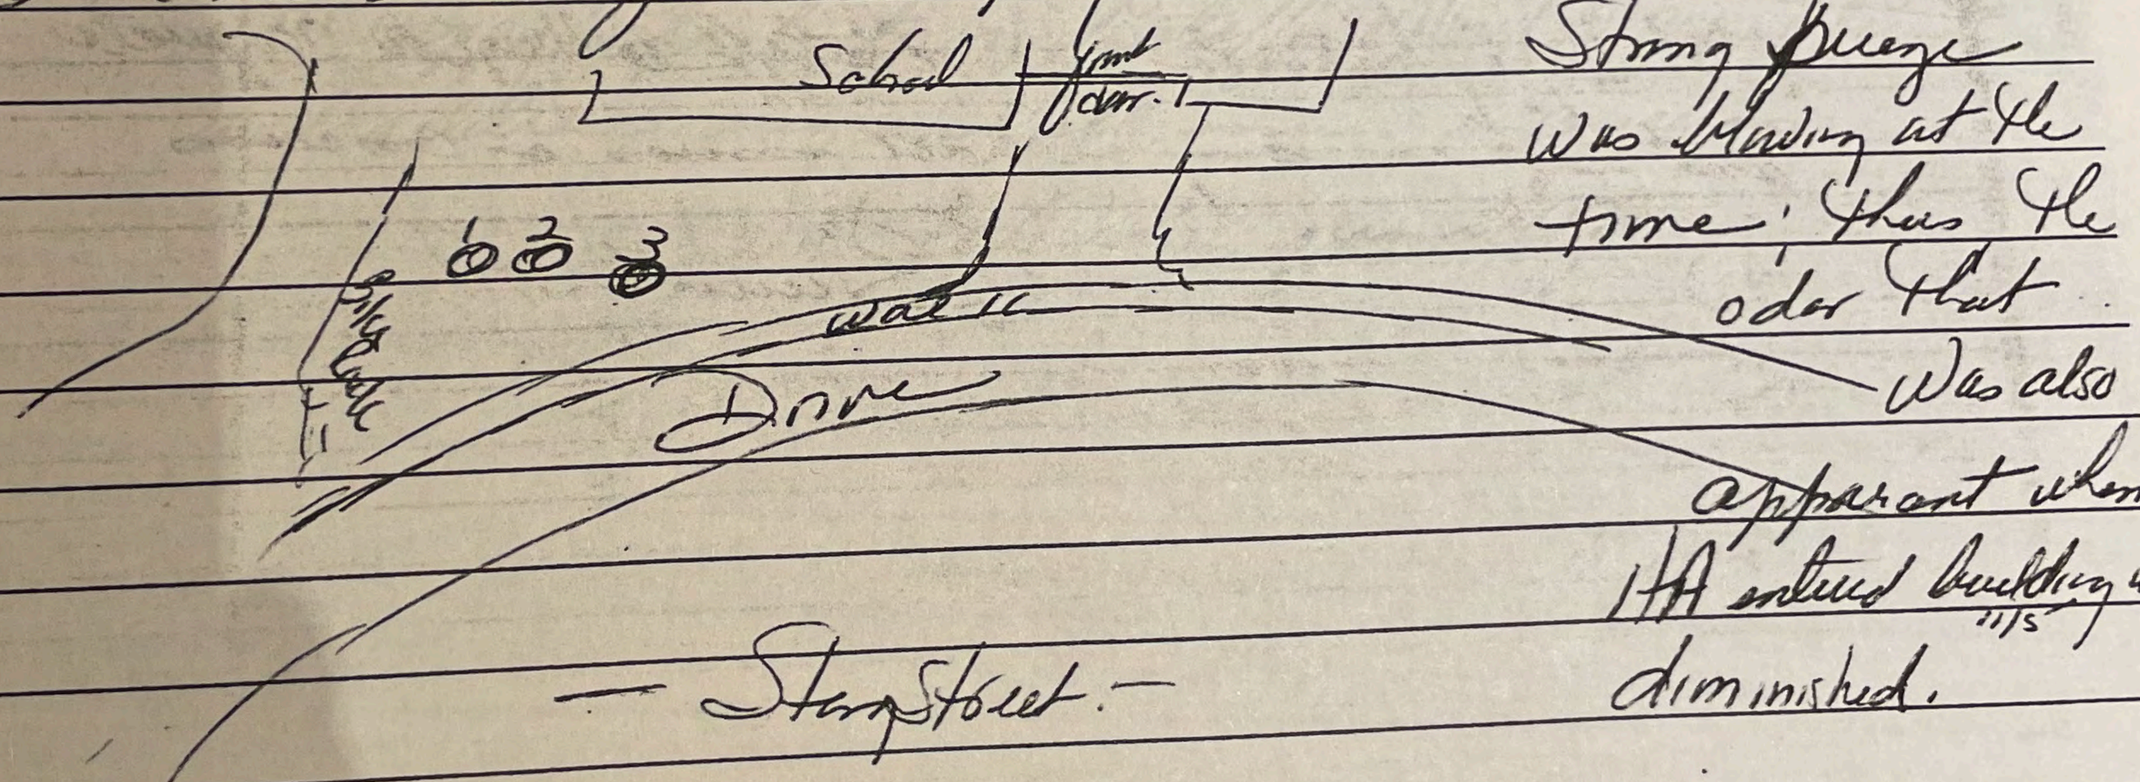
INSPECTION OF Emanating Septic Odor

NAME Essex Elementary School DATE 11/4/93

ADDRESS Story Street



REMARKS: 11/4/93 Late evening after a public meeting, the current odor of septage was noted near "Sewer Covers" in front lawn from along the drive/walkway. No standing water or overflow evident.

11/5/93 AM Site visit to School to investigate above incident

Spoke with Principal Michael Jackson

Head Custodian William Caldwell.

Although neither had noticed a smell, there was odor close to the metal covers seeming to come through the "finger" holes on all covers especially the 3rd cover which fit less tightly than the other two. A strong breeze was blowing at the time; thus the odor that was also apparent when I/A entered building was diminished.

System is pumped each summer by Woodmansie. Mike Roy called re pumping today. States "they weren't bad this summer" and that at last pumping of a Tank (cover 1+2) & a Pump Chamber (cover #3) which "goes to" same set of leaching cesspools and tank. Custodian believes there is a plan on file for next week. School Budget 457 (area)

Baletta CHO
INSPECTOR

1) Will check pump chamber for possible
failed pump & then pump system
for repair.

2) Will investigate installation of Cement cover
(+3' diameter circular 'slab' type) to prevent
opening or smell escape

3) ? Venting of field which would avoid
back up of fumes. ? Pump chamber vented
through building plumbing.

4) Scheduled complete & Thorough Foundation &
Food Service Inspection provided 11/10
(Staff time today was limited).

Overall — a very pleasant, bright and clean facility
with Happy students and staff willing to cooperate
and address any and all issues or concerns

INDOOR AIR QUALITY ASSESSMENT

Essex Elementary and Middle School
12 Story Street
Essex, MA 01929

RECEIVED
MAY 23 2005
TOWN OF ESSEX
BOARD OF HEALTH

Prepared by:
Massachusetts Department of Public Health
Center for Environmental Health
Emergency Response/Indoor Air Quality Program
May 2005

Background/Introduction

At the request of Roger Young, Business Manager, Manchester Essex Regional School District, the Massachusetts Department of Public Health (MDPH)'s Center for Environmental Health (CEH) provided assistance and consultation regarding indoor air quality at the Essex Elementary School (EES), 12 Story Street, Essex, Massachusetts. On May 7, 2004, a visit to conduct an indoor air quality assessment was made to this school by Sharon Lee, an Environmental Analyst in CEH's Emergency Response/Indoor Air Quality Program (ER/IAQ).

The EES is a single story brick building constructed in 1956. An addition containing the gym and library was constructed in 1976. Art and technology rooms occupy the basement. Classroom windows are openable throughout the building. Modular classrooms connected to the main building were added to the school around 2003. The modulars are the subject of a separate report. The main building is the subject of this report.

An indoor air quality investigation was conducted by an environmental consultant, HUB Testing Laboratory (HUB), on November 11, 2003. Their report indicated that carbon dioxide levels in many areas were elevated (HUB, 2003). No specific recommendations for remediation of the ventilation system were made in the HUB report.

Methods

Air tests for carbon monoxide, carbon dioxide, temperature and relative humidity were conducted with the TSI, Q-Trak, IAQ Monitor, Model 8551. Air tests for airborne particle matter with a diameter less than 2.5 micrometers were taken with the TSI, DUSTTRAK™

located in the top of the unit. Univents were not operating throughout the school at the time of the assessment. Obstructions to airflow, such as desks and other items located on or in front of univents, were also observed (Picture 4). To function as designed, univents must remain free of obstructions and allowed to operate.

Exhaust ventilation is provided by wall-, closet- or ceiling-mounted exhaust vents (Pictures 5 and 6), which are ducted to motorized rooftop fan units (Picture 7). Exhaust vents were either off, drawing weakly and/or blocked with materials in a number of classrooms surveyed (Picture 8). In addition, some wall vents are located near hallway doors (Picture 6). When hall doors are open, the exhaust is apt to draw hallway air rather than classroom air. As with the univents, exhaust vents must remain free of obstructions and allowed to operate. Classroom doors should also remain closed to facilitate air exchange.

Please note, some areas do not have mechanical or passive ventilation or openable windows (Table 1). A fresh air source is necessary for the dilution of indoor air pollutants. Without a source of fresh air, pollutants will persist in the indoor environment. This may lead to indoor air quality/comfort complaints.

To maximize air exchange, the MDPH recommends that ventilation equipment operate continuously during periods of school occupancy. In order to have proper ventilation with a mechanical supply and exhaust system, the systems must be balanced to provide an adequate amount of fresh air to the interior of a room while removing stale air from the room. It is recommended that existing ventilation systems be re-balanced every five years to ensure adequate air systems function (SMACNA, 1994). The date of the last servicing and balancing was not available at the time of the assessment.

The Massachusetts Building Code requires that each room have a minimum ventilation rate of 15 cubic feet per minute (cfm) per occupant of fresh outside air or openable windows (SBBRS, 1997; BOCA, 1993). The ventilation must be on at all times that the room is occupied. Providing adequate fresh air ventilation with open windows and maintaining the temperature in the comfort range during the cold weather season is impractical. Mechanical ventilation is usually required to provide adequate fresh air ventilation.

Carbon dioxide is not a problem in and of itself. It is used as an indicator of the adequacy of the fresh air ventilation. As carbon dioxide levels rise, it indicates that the ventilating system is malfunctioning or the design occupancy of the room is being exceeded. When this happens a buildup of common indoor air pollutants can occur, leading to discomfort or health complaints. The Occupational Safety and Health Administration (OSHA) standard for carbon dioxide is 5,000 parts per million parts of air (ppm). Workers may be exposed to this level for 40 hours/week, based on a time-weighted average (OSHA, 1997).

The MDPH uses a guideline of 800 ppm for publicly occupied buildings. A guideline of 600 ppm or less is preferred in schools due to the fact that the majority of occupants are young and considered to be a more sensitive population in the evaluation of environmental health status. Inadequate ventilation and/or elevated temperatures are major causes of complaints such as respiratory, eye, nose and throat irritation, lethargy and headaches. For more information concerning carbon dioxide, please see Appendix A.

The temperature measurements ranged from 71° F to 80° F, which were within or slightly above the MDPH recommended comfort guidelines (Table 1). The MDPH recommends that indoor air temperatures be maintained in a range of 70° F to 78° F in order to provide for the comfort of building occupants. In many cases concerning indoor air quality, fluctuations of

temperature in occupied spaces are typically experienced, even in a building with an adequate fresh air supply. In addition, temperature control is often difficult without operating the ventilation systems as designed (e.g., univents/exhaust vents deactivated/obstructed).

The relative humidity measurements ranged from 42 to 56 percent, which were within the MDPH recommended comfort range. The MDPH recommends a comfort range of 40 to 60 percent for indoor air relative humidity. The sensation of dryness and irritation is common in a low relative humidity environment. Relative humidity levels in the building would be expected to drop during the winter months due to heating. Low relative humidity is a very common problem during the heating season in the northeast part of the United States.

Microbial/Moisture Concerns

A number of rooms had water-stained ceiling tiles, indicating roof and/or plumbing leaks (Picture 9). Water-damaged ceiling tiles can provide a source of mold growth and should be replaced after a water leak is discovered and repaired. The school has a ceiling tile system where tiles are glued directly to the ceiling. Replacement of these ceiling tiles is difficult, since their removal appears to necessitate the destruction of the tile. Appropriate measures should be taken to minimize the aerosolization of particulates from tile removal/replacement.

The American Conference of Governmental Industrial Hygienists (ACGIH) and United States Environmental Protection Agency (US EPA) recommend that porous materials be dried with fans and heating within 24 to 48 hours of becoming wet (ACGIH, 1989; US EPA, 2001). If items are not dried within this time frame, mold growth may occur. The application of a mildewcide to mold colonized porous materials is not recommended.

Plants were noted in several classrooms. Some plants were placed near ventilation sources (Picture 10), while others were placed on porous materials (Picture 11). Plants can be a source of pollen and mold, which can be respiratory irritants for some individuals. Plants should also be located away from univents to prevent the aerosolization of dirt, pollen or mold. Plants should also be properly maintained and equipped with drip pans.

Efflorescence was noted on walls of the ramp way leading to the art area (Picture 12). The ramp way is built below ground and the exterior portion of the wall is in contact with soil (Picture 13). Efflorescence is a characteristic sign of water damage to building materials such as cement or plaster, but it is not mold growth. As moisture penetrates and works its way through exterior walls, water-soluble compounds dissolve, creating a solution. As the solution moves to the surface of the interior wall, water evaporates, leaving behind white, powdery mineral deposits. Efflorescence noted on these walls is likely the result of moisture from the soil in contact with the building.

To prevent groundwater seepage, this area was constructed with a series of channels through which groundwater could flow. These channels run along the ramp and through the crawlspace (Picture 14). Water in the channels did not appear to be stagnant at the time of the assessment. However, periodic inspections should be conducted to ensure debris is not blocking or hindering groundwater flow. Disruption of the flow may result in flooding and/or odors.

Several pathways exist for crawlspace air to migrate into occupied areas. Crawlspaces function as chaseways for pipes to run traverse a building. Pipes connect the boiler to classroom univents. MDPH staff randomly examined some univents. Spaces and holes were observed around pipes and within the air handling cabinet. These breaches can serve as pathways to draw air, odors and particulates from exterior wall cavities and the crawlspace into classrooms.

Heated air from HVAC system pipes can create drafts that rise from the crawlspace into classrooms. These drafts can also draw mold, spores and associated odors from the crawlspace.

A number of other conditions observed along the building exterior may be conducive to water penetration through the building envelope. One wall in the school courtyard had substantial clinging plant growth (Picture 15). Clinging plants can cause damage to brickwork through the insertion of tendrils into brick and mortar. Water can penetrate into the brick along the tendrils, which can subsequently freeze and thaw during the winter. This freezing/thawing action can weaken bricks and mortar, resulting in damage. This type of plant growth on brickwork is not recommended.

As discussed, a crawlspace is located in the school. The basement level storage area opens to the crawlspace area. The storage and crawlspace areas are accessible either via the technology room or by way of a staircase that leads from the main level to the basement (Picture 16). At the time of the assessment, the door to the storage area was not secured. In addition, the door to the stairway from the main level was open. Open doors, breaches and other openings (e.g., utility holes) allow for crawlspace odors and materials to penetrate occupied areas of the school. Doors should remain closed and breaches should be sealed to prevent movement of materials from the unoccupied storage and crawlspace areas to occupied areas of the school.

Shrubbery and other plants were also observed to be growing in cracks and crevices in close proximity to the foundation walls (Picture 17). The growth of roots against the exterior walls can bring moisture in contact with wall brick and eventually lead to cracks and/or fissures in the foundation below ground level. Over time, this process can undermine the integrity of the

building envelope and provide a means of water entry into the building through capillary action through foundation concrete and masonry (Lstiburek & Brennan, 2001).

Other Concerns

Indoor air quality can also be adversely impacted by the presence of respiratory irritants, such as products of combustion. The process of combustion produces a number of pollutants. Common combustion products include carbon monoxide, carbon dioxide, water vapor and smoke (fine airborne particle material). Of these materials, exposure to carbon monoxide and particulate matter with a diameter of 2.5 micrometers (μm) or less (PM2.5) can produce immediate, acute health effects upon exposure. To determine whether combustion products were present in the school environment, MDPH staff obtained measurements for carbon monoxide and PM2.5.

Carbon monoxide is a by-product of incomplete combustion of organic matter (e.g., gasoline, wood and tobacco). Exposure to carbon monoxide can produce immediate and acute health affects. Several air quality standards have been established to address carbon monoxide pollution and prevent symptoms from exposure to these substances. The MDPH established a corrective action level concerning carbon monoxide in ice skating rinks that use fossil-fueled ice resurfacing equipment. If an operator of an indoor ice rink measures a carbon monoxide level over 30 ppm, taken 20 minutes after resurfacing within a rink, that operator must take actions to reduce carbon monoxide levels (MDPH, 1997).

ASHRAE has adopted the National Ambient Air Quality Standards (NAAQS) as one set of criteria for assessing indoor air quality and monitoring of fresh air introduced by HVAC

systems (ASHRAE, 1989). The NAAQS are standards established by the US EPA to protect the public health from six criteria pollutants, including carbon monoxide and particulate matter (US EPA, 2000a). As recommended by ASHRAE, pollutant levels of fresh air introduced to a building should not exceed the NAAQS (ASHRAE, 1989). The NAAQS were adopted by reference in the Building Officials & Code Administrators (BOCA) National Mechanical Code of 1993 (BOCA, 1993), which is now an HVAC standard included in the Massachusetts State Building Code (SBBRS, 1997). According to the NAAQS established by the US EPA, carbon monoxide levels in outdoor air should not exceed 9 ppm in an eight-hour average (US EPA, 2000a).

Carbon monoxide should not be present in a typical, indoor environment. If it *is* present, indoor carbon monoxide levels should be less than or equal to outdoor levels. Outdoor carbon monoxide concentrations were non-detect or ND (Table 1). Carbon monoxide levels measured in the school were also ND.

The US EPA also established NAAQS for exposure to particulate matter. Particulate matter is airborne solids that can be irritating to the eyes, nose and throat. The NAAQS originally established exposure limits for particulate matter with a diameter of 10 μm or less (PM10). According to the NAAQS, PM10 levels should not exceed 150 micrograms per cubic meter ($\mu g/m^3$) in a 24-hour average (US EPA, 2000a). This standard was adopted by both ASHRAE and BOCA. Since the issuance of the ASHRAE standard and BOCA Code, US EPA proposed a more protective standard for fine airborne particles. This more stringent, PM2.5 standard requires outdoor air particulate levels be maintained below 65 $\mu g/m^3$ over a 24-hour average (US EPA, 2000a). Although both the ASHRAE standard and BOCA Code adopted the

PM10 standard for evaluating air quality, MDPH uses the more protective proposed PM2.5 standard for evaluating airborne particulate matter concentrations in the indoor environment.

Outdoor PM2.5 concentrations were measured at 12 μg/m^3 (Table 1). PM2.5 levels measured indoors were in a range of 13 to 38 μg/m^3. Frequently, indoor air levels of particulates can be at higher levels than those measured outdoors. A number of mechanical devices and/or activities that occur in schools can generate particulates during normal operations. Sources of indoor airborne particulates may include but are not limited to particles generated during the operation of fan belts in the HVAC system; cooking in the cafeteria stoves and microwave ovens; use of photocopiers, fax machines and computer printing devices; operation of an ordinary vacuum cleaner and heavy foot traffic indoors.

Indoor air quality can also be negatively influenced by the presence of materials containing volatile organic compounds (VOCs). VOCs are carbon-containing substances that have the ability to evaporate at room temperature. Frequently, exposure to low levels of total VOCs (TVOCs) may produce eye, nose, throat and/or respiratory irritation in some sensitive individuals. For example, chemicals evaporating from a paint can stored at room temperature would most likely contain VOCs. In an effort to determine whether VOCs were present in the building, air monitoring for TVOCs was conducted. An outdoor air sample was taken for comparison. Outdoor TVOC concentrations were ND. Indoor TVOC concentrations were ND in all but one area (Table 1). Room D, a resource room near the Psychology office, had a TVOC measurement of 0.2 ppm (Table 1).

Please note, TVOC air measurements are only reflective of the indoor air concentrations present at the time of sampling. Indoor air concentrations can be greatly impacted by the use TVOC containing products. While no TVOC levels measured exceeded background levels,

to any increase of filtration, univents should be evaluated by a ventilation engineer to ascertain whether units can maintain function with more efficient filters.

A number of exhaust/return vents, univent supply vents and personal fans were observed to have accumulated dust (Pictures 19 and 20). If exhaust vents are not functioning, backdrafting can occur, which can re-aerosolize accumulated dust particles. Re-activated univents and fans call also aerosolize dust accumulated on vents/fan blades.

Of note was the use of food as project materials (Picture 21). Exposed food products and reused food containers can attract a variety of pests. The presence of pests inside a building can produce conditions that can degrade indoor air quality. For example, rodent infestation can result in indoor air quality related symptoms due to materials in their wastes. Mouse urine is known to contain a protein that is a known sensitizer (US EPA, 1992). A sensitizer is a material that can produce symptoms in exposed individuals, including nose irritations and skin rashes. Pest attractants should be reduced/eliminated. Proper food storage is an integral component in maintaining indoor air quality. Food should be properly stored and clearly labeled. Reuse of food containers (e.g., for art projects) is not recommended since food residue adhering to the container surface may serve to attract pests.

In an effort to reduce noise from sliding chairs, tennis balls had been spliced open and placed on chair legs (Picture 22). Tennis balls are made of a number of materials that are a source of respiratory irritants. Constant wearing of tennis balls can produce fibers and off-gas VOCs. Tennis balls are made with a natural rubber latex bladder, which becomes abraded when used as a chair leg pad. Use of tennis balls in this manner may introduce latex dust into the school environment. Some individuals are highly allergic to latex (e.g., spina bifida patients) (SBAA, 2001). It is recommended that the use of materials containing latex be limited in

buildings to reduce the likelihood of symptoms in sensitive individuals (NIOSH, 1997). A question and answer sheet concerning latex allergy is attached as Appendix B (NIOSH, 1998).

Also was the amount of materials stored inside classrooms (Picture 23). In classrooms throughout the school, items were seen on windowsills, tabletops, counters, bookcases and desks. The amount of items stored in classrooms provides a means for dusts, dirt and other potential respiratory irritants to accumulate and make it difficult for custodial staff to clean.

Conclusions/Recommendations

In view of the findings at the time of the visit, the following recommendations are made:

1. Examine each univent for function. Operate univents while classrooms are occupied. Check fresh air intakes for repair and increase the percentage of fresh air intake if necessary.
2. Examine exhaust vents for function and make repairs as necessary.
3. Operate all ventilation systems that are operable throughout the building (e.g., gym, auditorium, classrooms) continuously during periods of school occupancy independent of thermostat control to maximize air exchange.
4. Remove all obstructions from univents and exhaust vents to facilitate airflow. Close classroom doors to improve air exchange.
5. Remove debris and dust accumulated on the ventilation grilles.
6. Consult a ventilation engineer concerning re-balancing of the ventilation systems and the calibration of univent fresh air control dampers throughout the school. Ventilation industrial standards recommend that mechanical ventilation systems be balanced every five years (SMACNA, 1994).

7. For buildings in New England, periods of low relative humidity during the winter are often unavoidable. Therefore, scrupulous cleaning practices should be adopted to minimize common indoor air contaminants whose irritant effects can be enhanced when the relative humidity is low. To control for dusts, a high efficiency particulate arrestance (HEPA) filter equipped vacuum cleaner in conjunction with wet wiping of all surfaces is recommended. Avoid the use of feather dusters. Drinking water during the day can help ease some symptoms associated with a dry environment (throat and sinus irritations).

8. Examine the feasibility of increasing HVAC filter efficiency. Note that prior to any increase of filtration, each unit should be evaluated by a ventilation engineer as to whether they can maintain function with more efficient filters.

9. Identify and repair sources of water leaks. Replace water-damaged ceiling tiles. These ceiling tiles can be a source of microbial growth. Examine the non-porous surface beneath the removed ceiling tiles and disinfect with an appropriate antimicrobial.

10. For removal of tiles directly adhered to the ceiling, such removal would be considered a renovation activity that can release particulates and spores in particular, if the material is moldy. Replacement of ceiling tiles may also involve glues that contain VOCs. In order to minimize occupant exposure, repairs should be done while the building is unoccupied.

1. Examine plants in classrooms for mold growth in water catch basins. Disinfect water catch basins if necessary. Remove plants from ventilation sources.

2. Remove plants growing against building and its foundation to prevent water intrusion through brickwork.

. Ensure water is flowing in the ramp and crawlspace water channels. Examine and remove any debris that may impede water movement.

14. Operate auxiliary fan in classroom 9 at least 15-20 minutes prior and following any science laboratory projects.

15. Ensure doors leading to the storage and crawlspace remain closed to prevent the movement of odors and materials into occupied areas.

16. Refrain from using food as materials for projects.

17. Relocate or consider reducing the amount of materials stored in classrooms to allow for more thorough cleaning of classrooms. Clean items regularly with a wet cloth or sponge to prevent excessive dust build-up.

18. Consider discontinuing the use of tennis balls on furniture and replacing tennis balls with alternative "glides". Refer to Picture 24 for an example.

19. Extend exhaust pipe above ventilation equipment to prevent entrainment of odors and particles.

20. Consider adopting the US EPA document, *Tools for Schools* (US EPA, 2000b), as a means to maintaining a good indoor air quality environment in the building. This document can be downloaded from the Internet at http://www.epa.gov/iaq/schools/index.html.

21. Refer to resource manuals and other related indoor air quality documents for further building-wide evaluations and advice on maintaining public buildings. Copies of these materials are located on the MDPH's website: http://www.state.ma.us/dph/beha/iaq/iaqhoFtme.htm.

BOARD OF HEALTH

TOWN HALL, 30 MARTIN STREET, ESSEX, MASSACHUSETTS 01929-1219
TELEPHONE (978)768-7614

September 10, 2002

Essex Elementary and Middle School
12 Story Street
Essex, MA 01929
Attn: Principal Eric Gordon

Dear Mr. Gordon,

In August we received an inquiry questioning the water quality at the pond on the school grounds. As a precaution, we sampled the water and had it tested for fecal coliform. This organism is an indicator of other bacterial and viral organisms that could lead to gastrointestinal illnesses. A maximum of 200 colonies/100 ml. sample has been the acceptable limit. The sample tested from the pond was 270 colonies/100 ml. sample. Factors contributing to this count may be the low water elevation of the pond, neighboring failed septic systems, or animal pollution caused by pets and wildlife.

We are aware that these waters are not meant for bathing/swimming, however we do want to draw your attention to the potential impact of these waters on your students and other children who may use the pond. Since the testing, we have heard that the school sometimes uses the pond for school activities. In order to protect the students and the school, you may want to have the water sampled and tested by a DEP certified lab within a week of scheduled activities that require contact with the water (specifically mouth, eye, or ear, or open wound contact). As usual, handwashing is recommended after contact as the best precaution to lessen potential hand to mouth contamination. You may also choose to initiate methods to discourage unauthorized use of this pond by the public and students.

We offer this information to you as an aid. If we can be of service, or if you wish to discuss this further, please contact me at (978) 768 – 7614.

Sincerely,

Elaine Wozny

RE: ANALYSIS OF WATER FOR BACTERIOLOGICAL QUALITY

SAMPLE DESCRIPTION: One sample of water collected by customer on August 14, 2002 at 2:38pm.

FINDINGS:

Sample ID	Sample Location	Fecal Count/100 ml
26570	School Pond	**270**

METHOD: Standard Methods for the Examination of Water & Wastewater, 19th Edition, 1995, method 9222D.

REMARKS: The Commonwealth of Massachusetts Division of Water Pollution Control's 314 CMR 4.03 allows up to 200 fecal coliform/100 mL in Class B waters, and up to 1000 fecal coliform/100 mL in Class C waters. Class B waters are designated as a habitat for fish, other aquatic life and wildlife, and for primary and secondary contact recreation. Class C waters are designated for the uses of protection and propagation of fish, other aquatic life and wildlife, and for secondary contact recreation.

CERTIFICATE OF ANALYSIS

Mr. Paul Pennoyer
Essex Elementary & Middle School
12 Story Street
Essex, MA 01929

Report No.: 28290
June 12, 2003

RE: ANALYSIS OF POND WATER FOR BACTERIOLOGICAL QUALITY

SAMPLE DESCRIPTION: One sample of water taken from the Essex School pond, 12 Story Street, Essex, MA.

SAMPLING: Sample taken by Paul Pennoyer on June 10, 2003.

FINDINGS:

Sample Location	Time Sampled	E. coli/100 ml
Essex School Pond	PM	50

METHOD: EPA Method 1103.1 (modified), March 2000.

REMARKS: E. coli originate solely from intestinal sources as opposed to fecal coliforms and thus are a better indicator of fecal pollution. Mass. Department of Public Health currently accepts an E. coli count of <235/100 ml in fresh water bathing areas.

TOTAL P.01

ESSEX ELEMENTARY SCHOOL

ESSEX, MASSACHUSETTS

DESCRIPTION OF FIELD WORK

August 21, 1974

It is intended to remove the top two feet of sandy loam from the area indicated on the enclosed plot plan within "Limits of Fieldwork". *This material to be disposed of by the Contractor.

The existing system which now drains the area (catch basins with feeder trenches), is to be augmented by porous drain feeder lines laid on the exposed bed. A backfill of approximately 18 inches of bank run sand and gravel, topped by 6 inches of loam, will return the area to the original grades. The field is to be reseeded for an open grassy play area.

It is not planned to change existing grades, except for very minor contour revisions. The only paving planned is to replace that taken by school expansion.

The planned drainage is of minimal depth, with an invert of only two feet; no sub-strata drainage is to be undertaken.

The existing watershed is unchanged.

SEP 25 1997

Dear Mr. Ferris:

In the DEP's correspondence of June 17, 1997, regarding the Elementary School Plan, the DEP requested the Town to submit final recommendations by September 12, 1997, and an NPDES permit application or plans for discharge elimination by November 14, 1997. The Town proposes to make these milestone dates October 17, 1997, and December 17, 1997, respectively. All other milestone/deadline dates will remain as outlined in the DEP's correspondence of June 17, 1997. These changes will not affect the final implementation date of July 1, 1998. Please call me at (978) 768-6921 if you have any questions or need further information.

Sincerely,

David L. Folsom

RE: Elementary School Plan

Dear Mr. Folsom:

The Department offers the following comments related to the elimination or obtaining an NPDES discharge permit for the boiler blowdown from the Essex Elementary School. The information provided indicates the school currently discharges approximately 20 gallons per week of boiler blowdown to a sump in the basement of the school. There are no additives employed in the boiler nor are any added to the boiler make up water. In addition to the boiler blowdown, the sump collects roof and foundation drains prior to discharging to a Town owned stormdrain. The following must be addressed in the final plan for this unpermitted discharge:

1. How often is the entire boiler drained? Is it ever drained for cleaning purposes? If so, what chemicals are used in the cleaning process. If this takes place than composite samples should be taken in order to characterize the discharge during this event.

2. The report mentions foundation drains, how far are those drains from the leaching facility servicing the school? Is there is a potential for sewage to short circuit to these drains? If so, than the effluent from the sump must be tested for the presence of sewage.

3. A pH of 11.01 does not comply with the water quality standards in 314 CMR 4.00. In addition, due to the size of the receiving stream it is not clear at this time whether lead and copper will create a water quality problem in the recieving stream as well. These issues must be addressed during the NPDES permitting process. Any future analysis must include Total Dissolved Solids.

Board of Health
Town of Essex
30 Martin Street
Essex, MA 01929

Dear Essex Board of Health Members,

The Manchester Essex Regional School District is seeking approval of a building permit for the installation of four temporary portable classrooms at the Essex Elementary & Middle School at 12 Story Street. A question has arisen as to whether this construction constitutes an increase in design flow as per Title V. Please be advised that this temporary addition is necessitated by changes in curriculum and state requirements, not an increase in enrollment.

The advent of computer technology requires a computer lab that is currently crowded into our library. Individualized education required by Special Education students, as well as programs aimed at preparing small groups of students for standardized state testing require a different configuration of our teaching spaces. In addition, four new Spanish classes have been introduced for students K-8. Our student population remains fairly stable with little change from year to year. A smaller population in subsequent years usually offsets an occasional increase in a given year. Our current average class size is 21 students, which is substantially smaller than the building was originally designed to accommodate. A recent demographic study performed by the University of Massachusetts projected static student populations for both Essex and Manchester in the foreseeable future.

Given that Title V regulates flow from schools based on pupil count and not square footage or seats as other facilities do, we are confident that our proposed addition of this temporary space does not constitute an increase in design flow.

This addition is temporary. The District's long-range goal is to acquire additional space and combine the middle school students from Manchester and Essex in the same building. When this occurs, two or more classes of students will be served by the new space, thus reducing the student population at EEMS by 100 to 300 students. At that time, the original building will be capable of handling our specialized programs and we will have the portables removed and reconfigure existing spaces to suit our needs.

Please approve our building permit application at your July 30, 2002 meeting so that we can have these portables ready for occupancy by the start of classes in September.

Thank you for your prompt attention to this matter.

Sincerely,

David P. Connolly
Superintendent of Schools

Dear Mr. Waldron,

Atlas Technical, LLC was contracted by Manchester-Essex Regional School District located at 36 Lincoln Street Manchester-by-the-Sea, Massachusetts 01944, to perform the asbestos AHERA 3-year re-inspection and provide this Management Plan for the Essex Elementary School located at 12 Story Street Manchester Massachusetts.

This asbestos three-year re-inspection and management plan was performed in compliance with 454 CMR 28.00. Daniel Roy MADLS Lic # AI900970, a Commonwealth of Massachusetts Department of Labor Standards (DLS) certified Asbestos Inspector, on December 28, 2022. A copy of the appropriate licenses and certifications can be found in Section 9.0.

The enclosed asbestos management plan was completed on January 26, 2023, by Michael Weydt, a Commonwealth of Massachusetts Department of Labor Standards (DLS) certified Asbestos Management Planner. The last 3-year inspection was completed by on January 27, 2020, by Ricardo Nunes MADLS Lic # AI000091.

1. REVIEW OF EXISTING PAPERWORK/RECORD KEEPING

1.1 Response Actions:

Each Local Education Agency (LEA) must keep an updated copy of this management plan in its administrative office for each School under its administrative control or direction. This Plan must be available without restriction to the public-school personnel and their representatives, parents, and representatives of EPA and the State, for inspection during normal business hours.

Section 763.94 (Recordkeeping) of the AHERA Final Rule (40 CFR Part 763, Subpart E) and 454 CMR 28.13(10) requires that the following paperwork be obtained for all abatement activities: copies of all accreditations and licenses, copies of the company's (Abatement Contractor) license, copies of any required notifications, copies of disposal receipts, and records of the particulars of the job as to activity, location, and personnel used with their signatures, where applicable.

1.2 A Summary of Atlas' Record Review Indicated the Following:

- Response Actions Completed by Independent Abatement Contractors.
- No information was available for review.

- Six-Month Periodic Surveillance,
- No information was available for review.

- Three-year inspection reports
- No information was available for review.

- Annual Notifications,
- No information was available for review.

- Current custodial training certificates,
- No information was available for review

- Initial Asbestos inspection report,
- No information was available for review.

1.3 2023 Response Actions Priority List

All identified ACM and suspect materials assumed to be ACM that are not on the Response Actions Priority List should be maintained in accordance with the School's AHERA Management Plan.

2.2 Statement of Compliance

AHERA INSPECTION REPORT FOR MANAGEMENT PLAN

Essex Elementary School
12 Story Street Manchester Massachusetts

This School was inspected to comply with the Asbestos Hazard Emergency Response Act (AHERA), signed into law by President Reagan in 1986. This AHERA Inspection Report is derived from the inspection and classification of asbestos-containing material conducted by an Atlas accredited Asbestos Inspector. Suspected asbestos-containing materials have been previously sampled, analyzed, and assessed in accordance with 454 CMR 28.00.

Asbestos-containing materials were previously classified according to guidelines in the AHERA regulations. Based on a bulk sample's asbestos content and the sample's condition, location, and hazard potential, Atlas' accredited Asbestos Management Planner recommended a response action if deemed necessary, or the material should be maintained in good condition in accordance with the existing AHERA Management Plan.

In the event any of the materials identified in this Plan become damaged (e.g., loose, dislodge, fall apart, etc.), the LEA and designated person shall make a proper determination in making a response, e.g., call a licensed contractor to remove and dispose of the debris and make repairs or re-adhere the material.

Requirements of the Asbestos Hazard Emergency Response Act, Subpart E (Asbestos-containing Materials in Schools) were complied with for the purpose of this Inspection Report.

The following Consultant Accreditation Page identifies the inspectors and management planners who contributed to this Plan. Also provided are the certificate numbers, signatures, and each signature date.

3. ASBESTOS INFORMATION

3.1 General

"Asbestos" is the term used to describe certain fibrous silicate minerals that were formerly widely used for insulating, construction, and other purposes. Asbestos fibers were used throughout the construction industry due to their properties of non-flammability, high tensile strength, and low heat conductance. In the northeast United States, the most commonly encountered types of asbestos are "chrysotile" and "amosite." Other types of asbestos are found in a wide variety of construction materials.

Asbestos poses a health hazard when very small asbestos fibers, approximately five micrometers in length, are released into the air and inhaled into the lungs. Once in the lungs, these fibers can either be expelled or become trapped. If they become trapped, the body cannot break the fibers down, and the lungs try to encase the foreign material with tissue. This process can cause scarring of the lung tissue that may ultimately result in impaired lung elasticity and subsequent chronic dysfunction. This disease is called asbestosis.

Asbestos diseases may manifest in other forms that are equally dangerous, such as mesothelioma, a form of lung cancer. The latency period of these diseases has been determined by medical professionals to be anywhere between ten- and thirty-years following exposure. For additional information regarding the health hazards of asbestos, consult Health Hazards of Asbestos, U.S. Department of Labor, Occupational Safety and Health Administration (OSHA 3040), and Guidance for Controlling Friable Asbestos-Containing Materials in Buildings, U.S. Environmental Protection Agency (EPA 560/5-83-002, March 1983). These documents are available from the regional office of the U.S. Environmental Protection Agency, Federal Office Building, 26 Federal Plaza, New York, New York 10007, 212-264-2525.

Asbestos-containing building materials (ACM) can be categorized into two groups: (1) friable; and (2) non-friable. Friable asbestos-containing material can be crumbled, pulverized, or reduced to dust or powder using hand pressure. The presence of friable ACM creates the need for the most urgent attention. In contrast, the presence of non-friable ACM should be documented, and proper handling procedures established to avoid allowing the material to deteriorate to a friable and potentially hazardous condition. Non-friable ACM and friable ACM must be assessed periodically to determine their potential for fiber release.

3.2 AHERA Classifications

AHERA classifies asbestos-containing materials as thermal system insulation, miscellaneous materials, or surfacing materials.

3.2.1 Thermal System Insulation (TSI)

The most common asbestos-containing thermal system insulation (TSI) is the following: air cell, which is an asbestos-containing paper; calcite and magnesia, which are powdery fibrous silicas; and preformed asbestos lagging or blocks. These types of TSI were used for many years as insulation wrapped around pipes, boilers, ducts, and hot water tanks in order to reduce thermal heat loss and prevent condensation.

When asbestos-containing insulation and its outer wrapping are in good condition, there is a minimal chance that asbestos fibers will become airborne, provided the insulation is not disturbed. Intact insulation may remain in place as long as its location and condition are documented and proper education is provided to individuals who may potentially disturb the insulation, thereby causing a fiber release episode.

If TSI is intact and in good condition, it must be maintained in order to monitor its condition since the physical condition of the insulation may change, thereby increasing the potential for fiber release. A fiber release episode may occur if asbestos insulation is frayed, punctured, ripped, water damaged, or vandalized. Whenever a fiber release occurs, the insulation should be repaired, encapsulated, enclosed, or removed in order to decrease the potential hazard to both human health and the environment.

3.2.2 Miscellaneous Materials

Floor and ceiling tiles are categorized as miscellaneous interior building materials. Of the two, ceiling tiles are the most common friable materials. Ceiling tiles may release asbestos fibers upon the slightest disturbance. Air currents from HVAC systems may also cause erosion of ceiling tiles and subsequent asbestos fiber release. Routine maintenance of pipes above asbestos-containing ceiling tiles can cause some fibers to be released due to disturbance of the tiles. Under normal conditions, non-friable miscellaneous ACM has virtually no potential for fiber release. However, if these materials are sanded, drilled, broken, or otherwise structurally disturbed, they can release fibers into the air and the environment.

3.2.3 Surfacing Materials

Acoustical troweled-on-plaster and sprayed-on fireproofing are categorized as surfacing ACM. Fireproofing insulation was applied as a fluffy coating to provide two to four-hour fire protection, so structural beams would not warp and collapse during a fire. Insulation of this type has a high potential to release fibers into the air upon any physical contact or by the action of air currents. Asbestos-containing plaster was also used for fireproofing and for acoustical purposes. Non-friable surfacing ACM with a low potential for disturbance also presents a low potential for fiber release.

3.3 Methods of Survey Classification and Response Action Determination

This School was inspected for ACM by a trained and licensed Atlas inspector. The inspector assessed the building materials and categorized similar materials into a homogeneous area (HA) group. The HA are listed by number, with a description of the material and a list of areas containing the material, called functional spaces. Bulk samples of each suspect HA were taken according to Section 763.86 of the Rule. Sample locations are described or noted on the building diagrams.

The inspector recorded the following for each HA: the approximate square or linear footage, activity in the area, risk factors, condition of the ACM, type of damage, if any, and the distribution of damage. These factors were considered when developing the response actions presented in this Plan.

These factors, the future building uses, and planned renovations all should be considered when the LEA must choose among the alternative response actions recommended or otherwise available for reducing the hazard to human life and the environment posed by the presence of ACM.

3.4 Asbestos Treatment Methods

Three categories of alternative treatments are available to treat or control asbestos-containing materials. Conditions that must be considered when determining the appropriate treatment method for ACM are location, quantity, physical condition, future uses, renovation or demolition plans, and any social, political, or economic constraints that may apply. The following are brief descriptions of the three categories of alternative treatments.

3.4.1 Repair and Encapsulation

Repair and encapsulation generally offer the least expensive form of treatment. Although this brings the material back to its original and/or non-friable condition, the activity must still be documented in an O&M Program to monitor the future condition of the material and its potential for hazard. This method, however, leaves the ACM in the building, where it will continue to age and deteriorate.

3.4.2 Enclosure

An enclosure offers a more expensive but more secure solution for some ACM. Building an impermeable case around asbestos-containing pipes or plaster can prevent the release of asbestos fibers due to deterioration and physical disturbance. However (as is also true for repair and encapsulation), the NESHAPS legislation requires that if future plans call for renovation, repair, or demolition, the ACM must first be removed. Enclosed ACM must also be included in an O&M Program.

3.4.3 Removal

Although initially the most expensive option, removal is often the most permanent and cost-effective solution. Not only are future potential hazards associated with asbestos-containing materials eliminated, but repair and periodic surveillance and inspection (as required with the options described above) also become unnecessary. Future problems or costs for asbestos control are thus eliminated.

3.5 Response Action Recommendation / Implementation

Regardless of the abatement method chosen, it is important to bear in mind that any disturbance of friable asbestos-containing material can cause fibers to be released if proper procedures and precautions are not observed.

Asbestos abatement workers licensed in Massachusetts must be employed to perform any large-scale operation (one involving greater than three square or three linear feet of asbestos). It is recommended that a Massachusetts DLS-certified asbestos project monitor be employed to ensure the safety of employees and building occupants and that proper work practices and procedures are followed during all phases of an

abatement project. Collecting samples to determine ambient air fiber levels upon project completion is also required. It is also recommended that ambient air fiber levels be measured before and during a project. These added precautionary measures greatly increase a school's ability to document and record pertinent data, thereby reducing its potential liability.

3.6 Risk Assessment and Asbestos Control

Actual risk due to asbestos exposure cannot be quantitatively defined, nor can the relationship between an exposure and its consequential effect be estimated. The only precise quantitative statement that can be made concerning asbestos is that zero exposure will give zero risk. It is generally agreed, however, that the greater the exposure, the greater the risk.

The above consideration, combined with the fact that over time, any building material will decay and eventually most systems will be replaced by newer, more advanced, and efficient systems, is the basis for the recommendation that, whenever possible, all exposed friable asbestos be removed and that any remaining asbestos-containing materials be controlled with an asbestos O&M Program. Recommended control methods are outlined in the Operation and Maintenance Program in Part VII. Appendix B of the Rule should be consulted regularly as a guide for specific work practices for jobs requiring contact with asbestos in a school. Again, remember that NESHAPS regulations currently in force require the proper removal of ACM before any major renovation, repair, or demolition occurs.

4. LOCAL EDUCATION AGENCY (LEA)

4.1 LEA Responsibilities

1. All aspects of the inspection and management plan are carried out in accordance with the Rule.

2. Custodial and maintenance staff receives proper training as required by all federal and state regulations.

3. Workers and building occupants or their legal guardians are informed at least once each school year about all asbestos-related activities that are planned or are in progress.

4. Short-term workers who may come in contact with asbestos are informed about the locations of ACM and assumed ACM.

5. Required warning labels are posted in routine maintenance areas according to 454 CMR 28.12

6. Parent, teacher, and employee organizations are notified yearly of the availability of the Plan. The School maintains a copy of the Plan at the School for an inspection per 454 CMR 28.12(9)(a).

7. Per 454 CMR 28.13(1), the LEA shall designate a person to ensure that requirements under this section are properly implemented and ensure that the designated person receives adequate training as described in 454 CMR 28.05(4)(b).

8. Consider whether any conflict of interest may arise from the interrelationship among accredited personnel and whether that should influence the selection of accredited personnel to perform activities under 454 CMR 28.10 (4)(a) 3 and 29 CFR Part 1926.1101(k)(7) m.

4.2 Confirmation of Designated Person

LEA	Manchester-Essex Regional School District
School	Essex Elementary School
Address	12 Story St Manchester, MA
Telephone	978-768-7324
Designated Person	Mr. Jason Waldron
Title	Facilities Manager
Address	36 Lincoln Street, Manchester, MA 01944
Telephone	Office: 978-526-2055 x 3115 and Cell 978-500-3163
Qualifications:	
Training	MIIA/DLS
Training Facility	College of the Holy Cross
Town, State	Worcester, MA
Certificate Number	N/A
Hours of Training	4 Hours
Date, of Course,	March 7, 2017

4.3 Recommendation to LEA

There is an increasing number of regulations regarding the handling, removal, transportation, and disposal of asbestos-containing materials. The LEA must be kept informed of and perform all response actions and other asbestos-related activities in accordance with all federal, state, and local regulations regarding asbestos. In addition to AHERA 40 CFR Part 763 Subpart E, these regulations include, but are not limited to, 454 CMR 28.00 (Massachusetts DLS); 29 CFR 1926.1101 and 29 CFR 1910.134 (OSHA); 40 CFR Part 763, Subpart G (EPA Worker Protection); 40 CFR Part 61, Subpart M (NESHAPS); 310 CMR 7.15 (Massachusetts DEP); 49 CFR Part 100-177 (DOT); and all amendments and mandatory appendices and regulations cited within these regulations.

The regulations are meant to protect the health and safety of those working with and around asbestos and building occupants. Given the LEA's responsibility to protect both human health and the environment of the school building's occupants, and the high potential liability associated with asbestos remediation projects, the LEA must ensure that the interests of the building's occupants are protected.

All response actions must be designed and conducted by persons accredited and licensed to conduct such activities. Design specifications should be sufficiently explicit to avoid conflicts or confusion that may arise concerning the scope of work and required procedures. It is recommended that the LEA contract a Massachusetts-certified and licensed Asbestos Abatement Project Monitor to help ensure that projects are carried out safely, thoroughly, and in compliance with all applicable laws and regulations. Areas adjacent to the project should be sufficiently monitored throughout the project to provide clear documentation of

project integrity. Final inspection and air clearance must be achieved as required in Section 763.90(i) of the Rule before any response action may be considered successfully completed.

The LEA must consider any conflict of interest that may potentially arise when retaining accredited designers and contractors to perform asbestos-related activities. Generally, it is recommended that the LEA choose separate accredited entities: one for project design (including project oversight, visual clearance inspection, and air monitoring); and another to conduct the asbestos project according to the design. Appendix A of the Rule states that "air sampling operations must be performed by qualified individuals completely independent of the abatement contractor."

5. PUBLIC NOTIFICATION

5.1 Occupant Notification

In accordance with 454 CMR 28.13 3, the LEA will notify in writing, at least once yearly, all relevant occupants of the School of all asbestos-related activities that take place at the School. Relevant occupants include but are not limited to building occupants or their legal guardians; staff, including teaching, administrative, custodial, maintenance, and all other personnel; all parent, teacher, employee, and administrative organizations; and/or any similar organizations at the School which serve similar functions.

Asbestos activities include but are not limited to inspections, response actions, including removal, encapsulation, enclosure, repair, and post-response action activities, including periodic surveillance and re-inspection. In addition, 454 CMR 28.13 requires the LEA to inform occupants at least once per year that the AHERA Management Plan exists and is available for review in the School's Administration Office.

In accordance with the aforementioned 454 CMR 28.13, the LEA must maintain a dated copy of all such notifications. The list of relevant groups to be notified will be added to and updated as necessary and should also be kept on file.

5.2 Plan for Notification

In accordance with 454 CMR 28.13 3, all school building occupants will be informed by written notification about all asbestos-related activities at least once every school year.

Building occupants to be notified include, but are not limited to, all students, their legal guardians, and all staff members and their committees, representatives, and organizations.

As of September 2022, building occupants at the School include the following:

- Students
- Legal guardians of students
- Staff (including teaching, custodian, maintenance,
- Administrative and all other personnel)

The LEA may choose various methods of notification to building occupants. The method of notification, such as written notification via posted notices at the School or through publications such as a legal notice in the local newspaper, must be documented, and details of the new notification methods used must be included in the Management Plan. Copies of the annual public notice must be included in the Management Plan.

5.3 ACM Locations

According to 454 CMR 28.13 4, the LEA must ensure that all short-term workers who may come in contact with asbestos in the School (e.g., telephone, plumbing, HVAC, electrical workers, etc.) are provided information regarding the locations of identified or assumed ACM. In addition, as required by 454 CMR 28.13. 2, all members of the School's maintenance and custodial staff must be informed of the locations of ACM identified throughout each school building in which they work.

5.4 Asbestos Activities

Prior to the start of asbestos abatement and/or associated remediation projects, proper notifications must be made by the appropriate entities to all applicable federal, state, and local agencies and authorities. The local Health, Building, and Fire Departments are often good places to begin researching local regulations and notification requirements. Notifications may include but are not limited to the following.

5.5 National Emissions Standards for Hazardous Air Pollutants (NESHAPS)

NESHAPS requires notification whenever asbestos is being removed according to the quantities involved, as follows:

5.5.1 Demolition

Ten (10) days' notice for any asbestos abatement project. Notification must include friable and potentially friable ACM.

5.5.2 Renovation

Ten (10) days' notice for any asbestos abatement project. Notification must include friable and potentially friable ACM.

NESHAPS notifications are submitted to the EPA Region I Office per 40 CFR Part 61, Subpart M.

5.6 Massachusetts Department of Labor Standards (DLS)

The Massachusetts Department of Labor Standards (DLS) must be given proper notice when any asbestos abatement project or an associated project involving more than three linear or three-square feet is planned. The Commissioner of the DLS must be notified at least ten days prior to the project start date (postmark or hand delivery), or in the case of an emergency, within one working day after the project start date (DLS 454 CMR 28.00).

5.7 Massachusetts Department of Environmental Protection (DEP)

The Massachusetts DEP requires proper notification and ten days prior notice (one-day prior notice in the event of an emergency) before the start date of all asbestos removal projects (310 CMR 6.00, 7.00, and/or 8.00).

*Contact the agencies denoted above or refer to the appropriate regulations for further information requiring proper notification procedures and guidelines.

6. ASBESTOS-CONTAINING MATERIALS RESPONSE ACTIONS

6.1 Response Action Determination Summary

Response Action Determinations were made using the EPA recommended method to determine the risk to human health associated with exposure to asbestos within a given ACM category. Appropriate response actions that are consistent with applicable regulations and protect human health and the environment are then recommended in order to best respond to and/or control ACM.

6.2 Response Action Descriptions

The following is a brief and general description of the Response Actions recommended in the Plan. The Client indicates that the following response actions will only be undertaken by a licensed contractor in accordance with all applicable federal, state, and local regulations governing the handling and disposal of asbestos. Refer to the Table at the end of Part V for a complete list of ACMS and recommended response actions.

6.2.1 Removal

Removal means the complete removal and disposal of designated asbestos-containing material of any kind. If ACM debris is present, the area must be isolated, and the debris cleaned up immediately.

6.2.2 Repair

Repair means restoring a damaged area to its original intact condition. This includes making the damaged area airtight to prevent the release of fibers into the air. If ACM debris is present, the area must be isolated, and the Designated Person and Atlas contacted immediately. A DLS licensed contractor will conduct all related work. Record all repaired ACM in the O&M Program.

6.2.3 Encapsulation

Encapsulation means the application of a material with a bonding or sealing property to prevent the release of airborne fibers. If ACM debris is present, the area must be isolated, and the Designated Person and Atlas contacted immediately. A DLS licensed contractor will conduct all related work. Record encapsulated ACM in the O&M Program.

6.2.4 Enclosure

Enclosure means creating an airtight structure around an affected area to prevent the release of airborne fibers and significantly reduce the possibility of future physical disturbance or damage to the ACM. Any damaged ACM must be repaired prior to the enclosure. If ACM debris is present, the area must be isolated, and the Designated Person and Atlas contacted immediately. A DLS licensed contractor will conduct all related work. Record the enclosed area in the O&M Program.

6.2.5 Operation & Maintenance

An O&M program describes a structured plan of action to maintain ACM in a condition that protects the health and safety of the occupants in a building and provides for remedial action in the event that ACM is disturbed. In an occurrence of damage to ACM, the custodial or maintenance staff will restrict entry into the area by physically isolating the area and notify the Designated Person and Atlas for further direction.

6.3 AHERA Material/Condition Assessment Key for Functional Spaces As found in the School Report

1. Damaged or significantly damaged TSI.
2. Damaged friable surfacing material.
3. Significantly damaged friable surfacing material.
4. Damaged or significantly damaged friable miscellaneous material.
5. ACM with potential for damage.
6. ACM with potential for significant damage.
7. Any remaining friable known or suspect ACM.
8. Damaged or significantly damaged non-friable ACM. Note that this category is not listed in the AHERA regulations but is provided for reference in this report.

6.4 Method of Response Action Determination for Surfacing and Miscellaneous ACM

1. Friable Surfacing or Miscellaneous ACM with Significant Damage

   Response Action 1: Remove

   Immediately isolate the functional space and restrict access unless the licensed management planner determines that isolation is not necessary to protect human health and the environment; and

   Remove the material in the functional space or, depending upon whether the licensed management planner determines that enclosure or encapsulation would be sufficient to protect human health and the environment, enclose or encapsulate.

2. Friable Surfacing or Miscellaneous ACM with Damage and High Potential for Disturbance

   Response Action 1: Remove

   Immediately isolate the area and restrict access if necessary to avoid imminent and substantial endangerment to human health or the environment,

Institute preventive measures appropriate to eliminate the reasonable likelihood that the ACM or its covering will become significantly damaged, deteriorated, or delaminated,

Remove the material as soon as possible if appropriate preventive measures cannot be effectively implemented.

3. Friable Surfacing or Miscellaneous ACM with Damage and Moderate Potential for Disturbance

   Response Action 4: Enclose

   Institute preventive measures. Repair ACM to return to airtight, intact condition, and enclose with an impermeable encasement to prevent physical disturbance. Continue with O&M.

4. Friable Surfacing or Miscellaneous ACM with Damage and Low Potential for Disturbance

   Response Action 3: Encapsulate

   Institute preventive measures. Repair damaged material to return to intact condition and encapsulate to reduce the possibility of fiber release. Continue with O&M.

5. Friable Surfacing or Miscellaneous ACM with No Damage and High Potential for Damage

   Response Action 4: Enclose

   Institute preventive measures. Enclose material to reduce the effects of future disturbance. Continue with O&M.

6. Friable Surfacing or Miscellaneous ACM with No Damage and Moderate Potential for Damage

   Response Action 3: Encapsulate

   Institute preventive measures. Encapsulate material to reduce the possibility of fiber release. Continue with O&M.

7. Friable Surfacing or Miscellaneous ACM with No Damage and Low or no Potential for Damage

   Response Action 5: O&M Program

   Continue with O&M until condition factors change, requiring an additional response.

8. Non-Friable Surfacing or Miscellaneous ACM

   Response Action 5: O&M Program

   Continue with O&M until condition factors change, requiring an additional response.

6.5 Method of Response Action Determination for Thermal System Insulation (TSI) ACM

1. Damaged or significantly damaged thermal system ACM

   Response Action, Isolate the area and restrict access.

   1 Repair the damaged area, or
   2 Remove the damaged material if it is not feasible, due to technological factors, to repair the damage, and
   3 Maintain all thermal system insulation ACM and its covering in an intact state and undamaged condition.

2. Damaged Thermal System Insulation with High Potential for Disturbance

   1 Response Action 1: Remove - Institute preventive measures and remove material as soon as possible.

3. Damaged Thermal System Insulation with Moderate Potential for Disturbance

   1 Response Action 4: Enclosure - Institute preventive measures.
   2 Repair insulation to airtight condition and enclose with an impermeable encasement to protect against further physical damage.
   3 Continue with O&M.

4. Damaged Thermal System Insulation with Low Potential for Disturbance

   1 Response Action 2: Repair - Repair to airtight condition and take preventive measures necessary to eliminate any potential disturbance.
   2 Continue with O&M.

5. Undamaged Thermal System Insulation with High Potential for Disturbance

   1 Response Action 1: Remove - Institute preventive measures. Remove to prevent the high possibility of disturbance to the ACM.

6. Undamaged Thermal System Insulation with Moderate Potential for Disturbance

   1 Response Action 4: Enclose - Institute preventive measures. Enclose the ACM within an airtight barrier to prevent potential disturbance of ACM.
   2 Continue with O&M.

7. Undamaged Thermal System Insulation with Low or No Potential for Disturbance

   1 Response Action 5: O&M - Continue with O&M

Table 1 – Summary Table of Asbestos-Containing Materials
Essex Elementary
12 Story St Manchester Massachusetts

Location	Material	Quantity Reported in 2013 AHERA Inspection	Quantity Observed in 2019 3-Year Re-inspection	Quantity Observed in 2023 3-Year Re-inspection	Friable / Non-Friable	Material/ Condition Assessment Code	Comments	Response Action Recommendation
Principal's Office	12" x 12" Brown Floor Tile	300 SF	150 SF	150 SF	Non-Friable	5	Under Carpeting	Maintain the material in good condition in accordance with the O&M Plan

Material Condition/Assessment Code Definitions: According to the 454 CMR 28.13(5)(c) Assessment, the following categories are provided to assess the ACBM, suspected ACBM, or assumed ACBM in the school building: (1) Damaged or significantly damaged thermal system ACM, (2) Damaged friable surfacing ACM, (3) Significantly damaged friable surfacing ACM, (4) Damaged or significantly damaged friable miscellaneous ACM, (5) ACM with potential for damage, (6) ACBM with potential for significant damage, (7) Any remaining friable ACM or friable suspected ACM. The materials listed above may exist in additional locations within the school building that was inaccessible during this inspection. They should be assumed asbestos-containing wherever they are encountered throughout the building.

7. RESPONSE ACTION DETERMINATION SUMMARY

7.1 RESPONSE ACTION DETERMINATION SUMMARY

In compliance with the AHERA Rule, the LEA must establish and implement an Operation & Maintenance (O&M) and Repair Program for each School that contains ACM. The purpose of an O & M program and its required periodic surveillance and re-inspection is to monitor and control the condition and location of any remaining ACM in the School and to reassess the potential for hazards to human health and the environment that it poses.

The following summary of 454 CMR 28.13(1) highlights the LEA's responsibilities with respect to all ACM that remains in the School.

7.2 LEA Responsibilities

1. Establish and implement an Operation & Maintenance (O & M) and repair program for all material identified or assumed to be ACM, including both friable ACM and non-friable ACM with the potential to become friable due to activities performed.

2. Implement the initial cleaning of any areas containing friable ACM or assumed friable ACM present after the inspection has been completed and before response actions.

3. Implement the following procedural techniques for all O&M activities that involve the disturbance of friable ACM:

    a. Restrict entry into the area by persons other than those necessary to perform the maintenance project, either by physically isolating the area or by scheduling.

    b. Post signs to prevent entry by unauthorized persons.

    c. Shut off or temporarily modify the air handling system and restrict other sources of air movement.

    d. Use work practices or other controls, such as wet methods, protective clothing, HEPA vacuums, mini-enclosures, and glovebags, as necessary to inhibit the dispersal of released fibers.

    e. Clean all fixtures or other components in the immediate work area.

    f. Place asbestos debris and contaminated cleaning materials in a sealed, leak-tight container.

5. Make sure that all response actions involving more than three linear or square feet of ACM will be designed by a Massachusetts-accredited designer and performed by Massachusetts-accredited contractors and consultants. The Commonwealth of Massachusetts requires that proper notifications be made as necessary to the Department of Labor Standards (DLS), the Department of Environmental Protection (DEP), and/or the U.S. EPA (per NESHAPS).

6. Ensure that the following procedures are adhered to in the event of a minor fiber release episode or the falling or dislodging of three linear or square feet or less of friable ACM:

a. Massachusetts accredited contractors will repair the area of damaged ACM with materials such as asbestos-free spackling, plaster, cement, or insulation, seal with latex paint or other encapsulants, or immediately have the appropriate response action implemented as required by 454 CMR 28.02.

7. Make certain that the following procedures in 454 CMR 28.16 (6) (d) are adhered to in the event of a major fiber release episode or the falling or dislodging of more than three linear or square feet of friable ACM:

   a. Restrict entry into the area and post signs to prevent entry by persons other than those necessary to perform the response action.

   b. Shut off or temporarily modify the air-handling system to prevent the distribution of fibers to other areas in the building.

   c. The response action for any major fiber release episode must be designed by persons accredited to conduct response actions.

8. Post warning labels immediately adjacent to all ACM or assumed ACM located in routine maintenance areas as described in 454 CMR 28.13(11).

9. Make certain the designated person and custodial and maintenance staff are properly trained in accordance with the Rule and all other applicable federal, state, and local regulations. Staff members and the building's maintenance staff will not disturb ACM. Outside contractors (plumbers, electricians, installers, etc.) who will be required by the Client to handle or disturb ACM are required by the Massachusetts DLS to be trained by a state-certified training provider regarding proper handling procedures for asbestos.

10. Once the Plan is in effect, the LEA must implement periodic surveillance of all remaining ACM in the facility for changing conditions and hazard assessment every six months after the Plan is in effect. Staff members who have completed the aforementioned sixteen-hour training can perform this.

11. Make certain that re-inspection of all remaining ACM is conducted by an accredited asbestos inspector every three years while ACM remains in the School in accordance with 454 CMR 28.13 (3)

12. Make certain that all short-term workers (generally outside contractors) are provided with information regarding the locations of ACM and assumed ACM, per 454 CMR 28.13 (3).

7.3 Training Requirements and Worker Protection

In compliance with 454 CMR 28.13(8), all maintenance and custodial staff must receive at least two hours of asbestos awareness training before implementing the O & M Program described in this Plan. the Essex Elementary School maintenance personnel training certificates are attached in Section 10.0.

New staff personnel must similarly be trained within sixty days of commencement of employment. personnel who will conduct activities that may result in the disturbance of ACM must receive an additional fourteen hours of training, as required by the Rule. As described in 454 CMR 28.13(8), awareness training must include information regarding: the forms and uses of asbestos; the health effects associated with asbestos exposure; the locations of ACM identified throughout the School; how to recognize damage, deterioration,

and delamination of ACM; the name and telephone number of the person designated by the LEA; and the availability and location of the Plan.

As described in 454 CMNR 28.04 (1), all LEA employees who perform O & M and repair activities involving ACM and who are not covered by OSHA 29 CFR 1926.1101 or are approved by Section 19 of the Occupational Safety and Health Act are extended worker protection provided by the EPA at 40 CFR 763.121. According to the EPA's "AHERA Fact Sheet," the LEA may choose to institute the provisions of Appendix B of the Rule in the case of small-scale, short-duration projects rather than comply with the full EPA Worker Protection Rule.

7.4 Periodic Surveillance & Re- Inspection

The LEA must conduct a periodic surveillance in each building every six months after the Plan is in effect. An assigned person trained in accordance with 454 CMR 28.05(4)(c) or (f) shall visually inspect all areas that are identified in the Plan as ACM or assumed ACM, record the date of the surveillance, his or her name, any changes in the condition of the materials, and submit to the Designated Person a copy of a such record to be included in the Plan, in accordance with 454 CMR 28.05(4)(c) or (f).

At least once every three years after the Plan is in effect, the School must conduct a re-inspection of all friable and non-friable, assumed, and identified ACM. The re-inspection must be conducted by a Massachusetts accredited inspector and performed in accordance with 454 CMR 28.05(4)(c) or (f).

Once the Plan has been approved by the Governor's Designee, the Plan is considered to be "in effect" so that the first periodic surveillance will have to occur before the expiration of six months from the "effective date." Likewise, the first re-inspection will have to take place within three years of the effective date.

It is recommended that the effective date and appropriate periodic surveillance and re-inspection dates be entered into the Plan in tabular form and posted to serve as a frequent schedule reminder.

7.5 Warning Signs

In accordance with 29 CFR Part 1926.1101(k)(7), the LEA is responsible for prominently placing warning signs immediately adjacent to all identified or assumed friable and non-friable ACM located in all routine maintenance areas in the School.

The warning signs must be readily visible and easy to read, with large print and bright color (normally black print on bright yellow background), and read as follows:

CAUTION:
ASBESTOS. HAZARDOUS.
DO NOT DISTURB WITHOUT PROPER
TRAINING AND EQUIPMENT

7.6 Preventive Measures

Preventive measures include any action or actions taken in order to eliminate or reduce the possibility of disturbing ACM. All preventive measures must be appropriately recorded according to 454 CMR 28.13 (7). Examples of precautions to take include the following:

1. Do not cut, sand, drill, break, nail into, or otherwise disturb ACM or create dust.

2. Avoid contact damage to any ACM. Remove any adjacent items that may contact ACM.

3. Keep suspended ceiling tiles in place wherever any ACM exists above them. Do not remove or displace ceiling tiles without taking the proper precautionary measures outlined in 'ACM Above Ceilings' in Part VII below.

4. Do not hang fixtures, wires, etc., from ACM.

5. Prevent water damage to ACM.

6. Do not disturb asbestos-containing materials when replacing lights, etc.

7. Do not allow doors or dividers to rub against ACM.

8. Isolate, redirect, or eliminate direct airflow onto any friable or damaged ACM.

Note: Always take proper precautions when working around ACM. Report any damaged ACM to the Designated Person and Atlas **Immediately.**

7.7 Cleaning

7.7.1 Initial Cleaning

Areas of the school where identified and assumed friable ACM and damaged or significantly damaged Thermal System Insulation ACM are present are required according to Section 763.91(c)(1) of the Rule to be cleaned at least once after the completion of the inspection and before the initiation of any response actions other than O & M.

7.7.2 Additional Cleaning

In addition to initial cleaning and that which is required after any fiber release episode, the LEA is required to perform additional cleaning according to Section 763.91(c)(2) of the Rule. According to Section 763.91(c)(1) of the Rule, additional cleaning recommendations include, but are not limited to, cleaning all proximate surfaces of the areas previously identified:

a. Areas containing ACM where a suspect film or dust occurs.

b. Anytime any friable or non-friable ACM becomes damaged or significantly damaged.

c. Anytime the LEA's Designated Person determines cleaning is necessary to protect the health and environment of the building occupants.
It is important that all cleaning be completed prior to the initiation of other response actions that may be necessary. The initial cleaning will prevent or greatly reduce the possibility of further contamination within an affected area as well as surrounding areas, and reduce the possibility of exposure to school workers and all other building occupants.

7.8 Custodial and Maintenance Procedures:

Personnel conducting custodial or maintenance work shall take extreme care not to disturb or damage ACM. If damage occurs or is discovered the Report of Damaged Asbestos Containing Material (Appendix D) should be completed and sent to the Asbestos Program Manager.

7.8.1 Resilient Flooring Maintenance:

All vinyl and asphalt-based flooring materials (e.g., tiles, sheet flooring) shall be maintained in accordance with these instructions unless the Asbestos Program Manager demonstrates that the flooring does not contain asbestos. The following work practices apply to the handling of asbestos flooring material:

- Sanding of asbestos flooring material is prohibited.
- Stripping of finishes shall be conducted using *low abrasion* pads at machine speeds less than 300 revolutions per minute (rpm) and using wet methods.
- Burnishing or dry buffing may only be performed on asbestos flooring that has sufficient finish so that the pad cannot contact the asbestos flooring material.

  Low speed spray buffing is strongly recommended over the high speed burnishing process. Burnishing has a very strong potential to disturb or release asbestos fibers for reasons beyond the control of the machine operator. Uneven floor surfaces and insufficient thickness of floor finish can cause fiber releases in potentially high concentrations.

7.8.2 Dry or Spray Buffing of Resilient Flooring

Do not buff damaged flooring. Any loose or damaged flooring should be repaired or replaced before buffing is started. This procedure assumes that the floor has adequate coats of polish, and that the flooring itself will not be damaged or contacted by the buffing equipment. If any flooring damage occurs during buffing, stop work and notify DOE or the Asbestos Program Manager.

- Using scraper and water, remove all foreign matter from the finished surface (gum, tar, stickers, etc.).
- Spot or damp mop to remove stains and spills. Mix chemical cleaner or restorer with water and apply according to manufacturer’s recommendations. Spot or damp mop to remove stains and spills. If dry buffing will be performed, apply restorer chemical as required.
- Allow floor to dry thoroughly.
- Spray or dry buff as appropriate:
- To spray-buff, spray small area with spray-buff solution and buff using manufacturer's recommended pad or brush at recommended RPM. Repeat procedure until entire area is spray-buffed.

- To dry buff, buff or dry burnish with manufacturer's recommended pad or brush at recommended RPM.

7.8.3 Cleaning/Polishing of Resilient Flooring

Do not polish loose or damaged resilient flooring. Any damage should be repaired before cleaning begins using the applicable work practice(s). Stop work if any damage occurs and notify the Asbestos Program Manager.

- Mix scrubbing chemical with water as recommended by manufacturer and apply liberal amount (do not flood) using mop. Allow to soak for amount of time recommended by manufacturer. Keep floor adequately wet by reapplying cleaning solution if drying occurs. Work small areas at a time.
- Using floor scrubbing machine, manufacturer's recommended pads and operating speed, clean floor to remove embedded dirt and surface marks.
- Remove spent scrubbing solution with wet vacuum or mop.
- Rinse area using clean mop and clean rinse water. Remove water with wet vacuum or mop. Damp mop area to clean up any remaining water or streaks.

7.8.4 Stripping of Floor Wax from Resilient Flooring

Do not strip damaged flooring. Any loose or damaged flooring should be repaired or replaced before stripping is started. Wet stripping, if performed properly, should not cause damage to resilient flooring. If any flooring damage occurs during stripping, stop work and notify DOE or the Asbestos Program Manager. Do not dry strip, scrape, sand, or grind resilient asbestos flooring to remove any blemishes or imperfections.

- After proper mixing of stripping chemical, adequately wet floor by mop applying liberal amounts of the solution. Allow chemical to soak for amount of time recommended by manufacturer. If areas become dry, reapply solution to keep floor adequately wet.
- After wax or finish has softened, strip flooring using least abrasive pad and low speed setting (300 RPM maximum). Keep floor adequately wet during machine operation. Do not over strip. Stop stripping when the old wax or finish is removed. Work small areas at a time.
- Remove dirty stripping solution with wet vacuum or "strip" mop.
- With "rinse" mop, apply liberal amount of clean water to area stripped and remove water with wet vacuum or mop. Repeat rinse procedures.
- If some spots of wax or finish remain, re-strip those areas.
- When applying new wax or finish, do so according to manufacturer's recommendations.

7.9 ACM Waste

Waste generated from asbestos projects must be properly stored and disposed. A minimum of a half-face negative pressure respirator and disposable clothing, with a hood and booties, are required when handling asbestos-containing materials. The following procedures must be implemented when handling asbestos-containing waste:

1. All waste must be placed in either sealed barrels or two six-mil polyethylene disposal bags. All waste containers must have two labels as required by both OSHA and the U.S. Department of Transportation (DOT). The labels are worded as follows:

OSHA Label:

Danger
Contains Asbestos Fibers
May Cause Cancer
Causes Damage to Lungs
Do Not Breathe Dust
Avoid Creating Dust

DOT Label:

RQ Hazardous
Substance,
Solid, NOS
ORM-E, NA 9188
(Asbestos)

2. Waste must be adequately wet. Once the debris is in the barrel or disposal bag, sufficient water must be added so that there is a noticeable amount.

3. Disposal bags must be sealed to reduce airspace and make them leak-tight. Twisting and sealing with duct tape is one method to prevent leaks at the opening of the bag. All waste must be double-bagged and sealed. In the case of a glove bag, the use of one labeled bag around the glove bag is considered double bagging. If the second bag is used to dispose of other contaminated waste and water, a third labeled bag must then be properly sealed around both.

4. Place the bags into a drum or other rigid container equipped with secure or locking ring lids and label with the same information described above.

5. The drums or container must be secured in a temporary storage area previously identified at your facility. This should be an area with limited access and preferably with a locked entry door.

6. Record the date and amount of waste placed in the temporary storage area. A log sheet should be established for this purpose.

7. Keep the temporary storage area clean by using good work practices. If any bags of waste break, clean the area using the 'Asbestos Debris Cleanup Procedures' in Part VII, and in compliance with all applicable regulations.

8. Before the temporary storage area is full or the expiration of the maximum allowable storage date, make arrangements to have the asbestos waste picked up and delivered to an approved asbestos waste disposal site.

9. Make advance arrangements with the waste disposal facility to ensure that your waste will be accepted.

10. Arrange to have the asbestos waste delivered safely to the previously identified disposal facility.

11. Receipts from both the transporter and landfill for each shipment of waste must be kept on file. Record all dates, destinations, and responsible persons involved in

transporting the waste from the temporary storage area to the disposal facility previously identified in the Plan. For further information concerning storage, transportation, and disposal of asbestos-containing waste, contact the Massachusetts DEP.

8. SAFE WORK PRACTICES & PROCEDURES FOR ASBESTOS-CONTAINING MATERIALS

8.1 Introduction

The following safe work practices and procedures are minimum requirements and/or recommended guidelines for working with or around asbestos-containing materials. School personnel may perform Work involving three linear or square feet or less of ACM and small-scale or short-duration projects, provided they have received the required sixteen-hour asbestos O&M training.

All school employees who perform small-scale or short-duration projects must be provided with appropriate personal protective equipment. This equipment includes, at a minimum, half-face negative-pressure respirators equipped with High Efficiency Particulate Air (HEPA) filters and full-body Tyvek disposable coveralls or their equivalent. The following procedures will be performed only after first donning this minimum personal protective equipment.

Activities that will disturb greater than three linear or three-square feet of ACM must be designed and performed by persons or companies licensed in Massachusetts to perform such activities. All asbestos activities must be performed in compliance with all applicable federal, state, and local regulations. Notifications to appropriate agencies are necessary. Isolation of the affected area is usually required. All asbestos work must also be performed in such a manner as to minimize the release of asbestos fibers and protect the health and environment of all building occupants.

8.2 Equipment

In addition to protective equipment such as disposable clothing and respirators, the following equipment may be necessary to perform work involving asbestos.

1. **DUCT TAPE**

   Heavy-gauge tape is used to seal glove bags and secure adjacent polyethylene sheets.

2. **POLYETHYLENE OR PLASTIC SHEETING**

   Plastic sheeting (6-mil thick) is used to seal off an area where an asbestos project is taking place to prevent contamination of other areas also used to seal the waste.

3. **SURFACTANT**

   A chemical wetting agent added to water improves water's ability to penetrate asbestos-containing material.

4. **DISPOSAL BAGS**

   Six-mil-thick bags are used to dispose of asbestos-containing materials. All bags must be properly labeled according to OSHA and DOT regulations.

5. **RETRACTABLE UTILITY KNIFE**

   They are used to cut asbestos-containing materials or equipment during removal. Always use **retractable** utility knives so as not to risk puncturing glove bags.

6. GLOVE-BAG

A pre-manufactured polyethylene bag is generally used as a containment around asbestos-containing insulation on pipes or valves so that the insulation may be removed without releasing asbestos fibers into the ambient air. The glove bag consists of a 6- to 12-mil-thick polyethylene bag fitted with long-sleeve gloves, a tool pouch, and an opening for a HEPA vacuum hose and garden sprayer wand. The size, quality, style, and cost vary depending on the manufacturer.

7. WARNING SIGNS

Warning signs are posted at the entrance to the work area and a sufficient distance to allow all building occupants adequate forewarning of the occurrence of an asbestos-associated project. The purpose of warning signs is to keep unauthorized personnel away from the work area. The OSHA warning sign is worded as follows:

DANGER
ASBESTOS
CANCER AND LUNG DISEASE HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE
CLOTHING IS REQUIRED IN THIS AREA

8. HEPA VACUUM CLEANER

A High-Efficiency Particulate Air (HEPA) filtered vacuum cleaner capable of trapping and retaining 99.97% of all particles larger than 0.3 microns. The HEPA vacuum cleaner has an extensive filtering system consisting of primary, secondary, and HEPA filters that trap fine particles.

9. RE-WETTABLE FIBERGLASS CLOTH

A canvas-like material impregnated with glue. The cloth is saturated with water, molded over an asbestos-containing pipe and boiler insulation, and hardens as it dries. When completely dry, it is sealed with latex paint. Because the cloth contains fiberglass, it is best to wear gloves when handling this material.

10. GARDEN SPRAYER

A garden sprayer is filled with amended water. It is used to wet asbestos-containing material or lock down fibers remaining on the substrate from which it has been removed. When performing the glove-bag technique, a garden sprayer with a 2-3 gallon capacity is sufficient. It is best to have a hose at least six feet long. If the hose is not sufficiently long, it can be replaced or extended with flexible tubing.

11. ENCAPSULANT

A substance applied to asbestos-containing materials that control the release of asbestos fibers. Encapsulant is applied over re-wettable fiberglass cloth after the cloth has dried. Latex paint is suitable for this purpose. Be sure the encapsulant chosen has a fire rating appropriate to the area where it is used.

12. SPRAY BOTTLE

A spray bottle filled with water is used to wet any suspect debris.

13. SMOKE TUBES AND ASPIRATOR BULB

Used to test glove bags for leaks and respirator fit testing.

14. RE-SEALABLE STORAGE BAGS

If repairs to pipe insulation are completed using the glove-bag technique, the patching material (i.e., re-wettable fiberglass cloth) must remain free of asbestos contamination. Placing the material inside a storage bag will prevent contamination.

15. RAGS, NYLON BRISTLE SCRUB BRUSHES (OR SCRUB PADS)

These items are used to clean the surface of a pipe or valve once asbestos-containing insulation has been removed. The scrub brush or pad is particularly useful when removing debris from threading. These items cannot be decontaminated and must be discarded as asbestos waste.

16. PATCHING COMPOUND (OR CEMENT)

It is used to fill in cracks or holes in pipe or boiler insulation.

17. STAPLE GUN AND STAPLES

They are used to secure polyethylene sheeting and glove bags temporarily.

18. BUCKET

Preferably plastic and washable. Do not use wooden buckets. It is used to catch asbestos debris and to wash equipment following use.

8.3 Pipe Insulation Repair

Pipe insulation, pipe fitting insulation, boiler insulation, or other forms of thermal system insulation are present at The Vogel School. If needed, pipe insulation can often be easily repaired using a patching compound and re-wettable fiberglass cloth. Follow all applicable regulations, including Massachusetts DLS 454 CMR 28.10(5), and proceed as follows.

1. Isolate and seal off the work area, as required in 454 CMR 28.10(4)(a)7. If the repair is to pipe insulation, a glove bag may be used instead.

2. Use duct tape to seal a piece of six-mil polyethylene sheeting to the floor in the immediate work area. If floor debris is present, the first vacuum all visible debris using a HEPA vacuum.

3. Thoroughly wet the damaged area with a light mist of amended water using a spray bottle.

4. Remove any loose debris on the damaged insulation using the HEPA vacuum.

5. Prepare patching compound according to the manufacturer's instructions. Patch the hole or crack.

6. Wet a piece of re-wettable fiberglass cloth thoroughly and place it over the damaged area. Cover all exposed insulation.

7. Properly clean and carefully peel the polyethylene sheeting off the floor, rolling the sheet so that the contaminated side is inward. Place the sheet into a six-mil polyethylene disposal bag.

8. Place all cleanable tools in a re-sealable storage bag and take the bag to a sink to clean the tools.

9. Remove the disposable suit and place it in an asbestos disposal bag. Double-bag all waste and dispose of it according to all applicable regulations.

10. Remove, clean, and store the respirator.

11. When the re-wettable fiberglass cloth has dried, paint with latex (which has an appropriate fire rating) to ensure an airtight seal.

8.4 Asbestos-Containing Ceiling Tiles

Asbestos-containing ceiling tiles or non-asbestos-containing ceiling tiles that physically enclose other ACM (e.g., spray-on fireproofing) require special treatment. Preventive measures must be taken to ensure that the underlying area is not contaminated. Any movement of these tiles can result in the release of asbestos fibers. Any work that will result in disturbance of these tiles must be done after occupied school hours and only by workers that have received proper asbestos training. Plastic sheeting must be placed on the floor to contain falling debris. See the following Section, 'ACM Above Ceilings,' for proper procedural techniques.

After ceiling tile activities are complete, the plastic sheeting must be HEPA-vacuumed and wet-wiped until all visible debris has been removed. Suits and other presumed contaminated equipment and debris must be cleaned or adequately sealed and disposed of according to all applicable regulations.

8.5 ACM Above Suspended Ceilings (e.g., Spray-on Fireproofing)

Based on the information provided to Atlas, no asbestos-containing spray-on fireproofing was located at Manchester Memorial Elementary School

8.6 Non-friable ACM

Asbestos-containing or assumed asbestos-containing materials, such as floor tile, are non-friable in their undamaged state. However, routine maintenance and renovation activities can disturb non-friable ACM and cause it to become friable. When non-friable material is removed, friable asbestos-containing dust and fibers may be released. For this reason, any activities that may break these non-friable materials must be undertaken with care, including applying control methods and preventive measures.
