Control methods to minimize the possibility of creating asbestos dust include using water mist to significantly reduce the release of dust and fibers and isolate the area when disturbing non-friable ACM. Precautions must be taken so as not to allow non-friable materials to become damaged and damaged, thereby causing fibers to be released. Cutting, sanding, abrading, or drilling will promote

fiber release from non-friable ACM. As a further safety measure, personal protective clothing should be worn when disturbing these materials.

Asbestos-containing or assumed asbestos-containing floor tiles are non-friable in their undamaged state. Small-scale (less than three square feet) repair of these floor tiles may be performed, but the control methods described above must be applied. At no time should any amount of floor tiles be sanded, drilled, damaged, or otherwise damaged. Large-scale repair and/or removal of floor tiles will require plans designed by a Massachusetts-licensed designer. In this event, a simplified containment system may be constructed for the ACM locations.
Note: Refer to 'Preventive Measures in Part VII above and Appendix B of the Rule for additional information regarding appropriate work practices.

8.7 Glove-Bag Technique

The glove-bag technique is primarily used to remove or repair asbestos-insulated pipes or valves. This procedure requires two people. Follow all applicable regulations and proceed as follows.

1. MATERIALS NEEDED

a. Glove-bag
b. Two garden sprayers
c. Surfactant
d. Duct tape
e. Disposal bags
f. Retractable utility knife
g. Scrub brush or scrub pad, rags
h. Re-wettable fiberglass cloth
i. Re-sealable storage bags
j. Heavy-duty hand stapler and staples
k. Polyethylene sheeting
l. Asbestos warning signs
m. Smoke tubes
n. Aspirator bulb
o. HEPA vacuum cleaner
p. Bucket of water
q. Disposable clothing
r. Half-face negative pressure respirator
s. Bridging encapsulant
t. Spray bottle

2. TECHNIQUE

Preparation Activities

a. All persons not immediately involved in glove-bag activities must be excluded from the work area. Sufficient physical barriers must be installed to limit access to the work area for the duration of the glove-bag operation.

b. All employees who perform glove-bag operations must be provided with appropriate personal protective equipment, at a minimum, half-face negative pressure respirators equipped with HEPA filters and full-body disposable Tyvek suits or equivalent.

c. All moveable objects must be removed from the work area. Any reusable items that may previously have been contaminated with asbestos must be HEPA-

vacuumed and/or wet-wiped. Non-moveable objects may be sealed with six-mil polyethylene sheeting and duct tape.

d. Check the integrity of the pipe insulation. If the insulation is loose, damaged, or if it is believed that cutting into the insulation will worsen its condition, do not proceed. Old, deteriorated pipe insulation may become loose during the repair or removal process, generating airborne asbestos fibers.

e. Gather all necessary tools and supplies. Use the garden sprayers to mix the surfactant, water, and encapsulant separately according to the manufacturers' guidelines.

f. Cut two pieces of re-wettable fiberglass cloth to cap the ends of the insulation. The inner diameter should be one-half inch smaller than the diameter of the pipe itself (not the insulation). The outer diameter of the cap should be about three inches longer than the diameter of the pipe insulation. Cut a slit through one side of the cap. Cut additional pieces of cloth in strips to be used as a patch if necessary. Place pieces in the re-sealable storage bag.

g. Seal off the work area and post asbestos warning signs, as required by DLS 454 CMR 28.10(4) & (7).

h. Put on the negative pressure respirator and perform negative and positive pressure checks. Put on disposable clothing.

i. Adhere six-mil polyethylene sheeting to the floor in the immediate work area with duct tape.

j. Place two layers of duct tape around the pipe at each end where the glove bag will be attached. Determine the distance by holding the glove bag up to the pipe to determine the length. The duct tape serves two purposes: (1) it provides a good surface on which to seal the ends of the glove bag, and (2) it minimizes the possibility of releasing fibers when the tape is removed.

k. With the retractable utility knife, cut from the top of the glove bag down the side seams to create incisions approximately twelve inches long.

l. Run duct tape horizontally along one of the top flaps for reinforcement.

m. Place the utility knife, rags, nylon scrub brush or scrub pad, and re-wettable fiberglass cloth into a re-sealable storage bag and place them in the tool pouch of the glove bag.

n. Place the glove bag around the section of pipe to be worked on and staple the top with staples approximately one inch apart.

o. Fold the stapled section over and tape it horizontally to the glove bag with short duct tape.

p. Lift the glove bag so that the bottoms of the side incisions are flush against the bottom of the pipe insulation. There should be adequate room at the top of the glove bag to reach over the top of the pipe. If the glove bag is not lifted and taped, there may be insufficient room to cut the top of the pipe insulation. Seal all seams, holes, cracks, etc., securely with duct tape.

q. Poke a hole at the top of the glove bag large enough to allow the end of the smoke tube to be inserted.

r. Pre-cut a few pieces of duct tape and set them aside to seal the holes and any leaks. If a hole is not provided, tape a portion of the bag below the gloves and cut a cross-slit. Insert the HEPA vacuum hose and reseal the bag around the hose securely with duct tape.

s. Holding the smoke tube into a wastebasket, carefully snip off both ends of the smoke tube using a pair of scissors. Eye protection should be worn to protect against stray pieces of glass. Place one end of the smoke tube into the aspirator bulb and insert the other into the glove bag.

t. Squeeze the aspirator bulb until there is adequate smoke. Do not allow too much smoke to enter the bag.

u. Take out the smoke tube, patch the hole and squeeze the bag. Seal any leaks with duct tape. Place the smoke tube in a bucket of water for 5-10 minutes and discard.

v. Insert the wand of the garden sprayer into the same hole used for the smoke tube. Tape the wand securely with duct tape.

Removal and/or Repair Activities

a. If an aluminum jacket is present on the insulation, remove it with tin snips and wire cutters. Fold the sharp edges inward to prevent cutting the waste disposal bag and place gently in the bottom of the bag. Be careful not to cut yourself on the sharp edges. The insulation should now be exposed.

b. Wet the asbestos pipe insulation thoroughly and begin cutting with the retractable utility knife. Water should be sprayed on the cutting area and sides of the bag throughout the process to reduce dust levels in the glove bag. Use a HEPA vacuum to filter air, if necessary. As the material is cut off gently, place the insulation in the bottom of the bag. Wet the material on the bottom of the bag as well as any remaining debris on the pipe.

c. Clean all debris off the pipe with water, scrub brush, and rags. Clean excess debris from the exposed ends remaining on the pipe.

d. Wet the cloth end pieces made from the re-wettable fiberglass cloth and apply them to exposed ends of asbestos.

e. Enclose all visible insulation with patch strips as necessary. Any asbestos that has been exposed as a result of the glove-bag operation must be properly repaired, encapsulated, or enclosed prior to removal of the glove-bag.

Disposal and Cleanup Activities

a. Spray the entire inside of the bag and clean off the retractable utility knife and all cleanable equipment and tools that will be used in the future. The rags and scrub brush should be left in the bag and discarded with the rest of the waste since they cannot be adequately cleaned.

b. With the HEPA vacuum running, carefully remove the clean surfactant sprayer and quickly replace it with an encapsulant sprayer. Use an encapsulant to lock down invisible fibers and respray the entire bag.

c. Grab the cleaned tools with one glove and invert the glove to the outside of the bag. Tie off the glove with string or duct tape in two areas and cut the glove between the two sealed areas. Place the section of the glove containing the tools in the water bucket. Open this glove underwater and re-clean all tools in the water. Remove any gross chunks of debris and place them in a pre-labeled asbestos disposal bag. Dispose of the inverted glove in the disposal bag.

d. Twist the glove-bag several times at the midsection (below the water sprayer hole) and seal it. This will isolate the contained debris in the bottom of the bag while the glove bag is removed from the pipe.

e. With the HEPA vacuum running, carefully remove the encapsulant wand from the bag and tape the hole promptly and securely.

f. With the HEPA vacuum on the low flow setting, gently collapse the glove bag. Carefully remove the vacuum nozzle and seal off the hole with duct tape.

g. Finish twisting the bag to form an airtight constriction. Firmly secure the constriction with duct tape.

h. Slip the disposal bag around the glove bag (still attached to the pipe). Slowly cut open the top of the glove bag and carefully fold it down into the disposal bag. Do not remove the duct tape attached to the pipe.

i. Remove the air from the disposal bag, twist the top of the outer bag, gooseneck the tie and seal securely with duct tape. It is recommended that the disposal bag be double-bagged. Make sure the outside bag is appropriately labeled. All waste must be disposed of properly. Carefully place the bag in a sealed, labeled, leak-tight container for temporary storage until disposal. Dispose of ACM as described in 'ACM Waste' in Part VII.

j. Finish cleaning the tools in the water bucket and carefully pour wash water into the disposal bag, rinse the bucket with a sprayer, and dispose of this water in the disposal bag. Properly clean the floor and, if necessary, polyethylene sheeting, using either HEPA vacuum or wet methods, and fold the polyethylene sheeting inward and place it in a disposal bag. Remove the disposable suits and put them in the disposal bag.

k. Remove the respirator, clean, and store.

l. After re-wettable fiberglass cloth has dried, paint with latex to ensure ACM is sealed airtight.

Additional glove-bag techniques and requirements are described in Appendix B of the Rule, Appendix G of OSHA 29 CFR 1926.1101, and DLS 454 CMR 28.10(5).

8.8 Mini-Enclosure Operations

1. Persons not immediately involved in asbestos-related activities are to be excluded from the work area. Use physical barriers where necessary to limit access to the work area for the duration of the work.

2. Construct airtight barriers to prevent the release of asbestos fibers. Where feasible, glove-bags are permitted in place of barriers to remove insulation on pipes and ducts.

3. Adequately wet the asbestos before disturbing it. Removed asbestos and asbestos-contaminated items will be containerized in two six-mil polyethylene bags or double-wrapped in six-mil polyethylene sheeting. If the material has sharp edges, double-wrap or bag it and then place the material in metal, fiber, or plastic drums that can be sealed.

4. Properly repair, enclose, or encapsulate friable asbestos exposed during asbestos work.

5. HEPA-vacuum and wet-wipe until there is no visible debris or dust.

6. Asbestos-containing waste must be containerized, transported, and disposed of at an approved asbestos landfill in accordance with all applicable regulations.

8.9 Asbestos-Debris Clean up Procedures

Any debris suspected of containing asbestos found on the floor, tops of ceiling tiles, or other building structures should be cleaned up immediately. Asbestos debris is extremely friable. Remember, any suspected debris equal to or greater than three linear or square feet must be cleaned up by an accredited and licensed asbestos abatement contractor according to a plan designed by an accredited and licensed project designer.

1. WHEN ASBESTOS-CONTAINING DEBRIS IS DRY OR DAMP AND SMALL IN SIZE

a. Isolate and seal the work area and post warning signs, as required by DLS 454 CMR 29.10.

b. Thoroughly wet mop, using a bucket of water, rags, and/or mops, all of the structures and items on which the debris has fallen. Be sure all visible debris is removed.

c. Vacuum the floor using a HEPA vacuum. Again, be sure all visible debris is removed.

d. When the area is dry, inspect for any visible asbestos debris. Sometimes wet asbestos debris becomes hidden during the cleanup. If any visible asbestos material is found, repeat the wet-mop or HEPA-vacuuming procedure until no visible asbestos debris is observed.

e. Dispose of the protective clothing, mop heads, and rags into a six-mil polyethylene disposable bag. Pour the water from the bucket into the disposal bag also. Twist the top of the polyethylene bag and seal it with duct tape. Double-bag the waste material with another six-mil polyethylene bag. Dispose of the bagged asbestos waste according to all applicable regulations.

f. Remove the respirator, clean it, and place it in a re-sealable storage bag.

g. Clean the bucket in a sink, if available, and thoroughly rinse the sink used.

h. Remove critical barriers and the posted warning signs.

2. WHEN ASBESTOS DEBRIS IS TOO WET OR TOO LARGE TO BE VACUUMED

a. Isolate and seal the work area and post warning signs as required by DLS 454 CMR 28.10.

b. Thoroughly wet the asbestos material and the surrounding area to a distance of six inches with the garden sprayer. Use a light mist of water when wetting the area and the material, as a heavy stream of water could dislodge and disperse asbestos fibers.

c. If the material is intact and too large to be easily handled with a shovel, pick up the wet material and place it in a six-mil polyethylene disposable bag.

d. Scoop up smaller debris with a shovel, dustpan, or garden trowel and place it in a six-mil polyethylene bag. Use another washable item, such as another garden trowel or ice scraper, to push the material into the shovel, dustpan, or trowel. **DO NOT USE A BROOM OR BRUSH!** A broom or brush cannot be decontaminated, increasing the possibility of dispersing asbestos fibers into the air.

e. Wet mop the entire area and items that the asbestos material contacted, using a bucket of water, rags, and mops. If the floor is carpeted, vacuum the carpet with a HEPA-filtered vacuum cleaner. If the carpet is wet, or the debris is wet, the carpet must be steam-cleaned. A HEPA-filtered vacuum cleaner cannot be used to pick up water or wet material unless the vacuum is designed to do so.

f. Wash the items used in the cleanup, including hands, shovel, ice scraper, etc., by holding items over the six-mil disposal bag and washing them thoroughly with the garden sprayer. Pour the bucket of contaminated water into the disposal bag.

g. Place the protective clothing, mop heads, and rags in a six-mil polyethylene disposable bag and dispose of it as contaminated waste. Twist the top of the polyethylene bag and seal it with duct tape. Double-bag the waste material with another six-mil polyethylene bag.

h. Place the respirator in a re-sealable storage bag and take it to a sink to clean.

i. Clean the respirator, re-clean the bucket, and thoroughly rinse the sink. Store the respirator after cleaning.

j. Remove the barriers and posted warning signs.

8.10 Asbestos Emergency Procedures

An asbestos emergency is one in which there is an unexpected change in the condition of asbestos-containing material that results in the release of asbestos fibers. This is called an asbestos fiber release episode. Fiber release episodes have the potential to contaminate the area and expose the building occupants to asbestos fibers.

The following procedures should be followed in the event of an emergency:

1. Remove occupants from the immediate area and contact the appropriate building supervisor and the School's Designated Person.

1. Isolate the area as described in DLS 454 CMR 28.10.

3. Trained personnel who perform the work should wear the appropriate disposable clothing and respiratory protection.

4. Vents and ducts leading into or out of the emergency area should be shut down and sealed with six-mil polyethylene sheeting and duct tape according to DLS 454 CMR 28.10 (8).

5. If the asbestos debris or material is less than three linear or square feet, continue following the "Asbestos Debris Cleanup Procedures" described above. If the asbestos material is greater than or equal to three square or linear feet, **DO NOT TOUCH OR REMOVE THE ASBESTOS**. Contact a Massachusetts-licensed asbestos abatement contractor and a Massachusetts-accredited project designer.

8.11 HEPA Vacuum

The HEPA vacuum cleaner is the **ONLY** vacuum cleaner designed to clean asbestos debris. Using a household or shop vacuum will contaminate the vacuum cleaner itself and expose the user and the area to high levels of airborne asbestos dust.

It is crucial that personnel read and follow the manufacturer's directions for the proper use and maintenance of the HEPA vacuum. Some HEPA vacuum cleaners cannot pick up wet materials. Consult the manufacturer's directions.

CLEANING AND MAINTENANCE

When the inside of the vacuum cleaner needs to be accessed, whether to change a filter, a bag, or a part, the following procedures must be followed.

1. Gather the necessary equipment required by this section, including:

    a. Half-face negative pressure respirator
    b. Re-sealable storage bag or similar substitute
    c. Disposable clothing
    d. Bucket of water
    e. Sponges or rags
    f. Disposal bags
    g. Duct tape

2. Take the HEPA vacuum cleaner to a location away from non-authorized personnel.

3. Put on the half-face negative pressure respirator and disposable clothing.

4. Perform the necessary maintenance or repair according to the manufacturer's instructions. Place any contaminated, used, or worn parts, bags, and filters in the six-mil polyethylene disposal bag.

5. With a damp rag or sponge, clean visible debris from the interior and exterior of the vacuum cleaner.

6. Pour the bucket of water into the disposal bag. Thoroughly rinse the bucket and pour the rinse water into the disposal bag.

7. Place the sponge or rag in the six-mil polyethylene disposal bag, disposable clothing, and other contaminated items.

8. Seal the six-mil bag securely with duct tape, making sure there are no leaks in the bag. Place the used and sealed disposal bag into a second labeled six-mil polyethylene bag. Twist the top of the bag and seal it with duct tape.

9. Remove, clean, and store the respirator.

10. Store and dispose of the asbestos waste properly.

9. RECORDKEEPING

9.1 Summary

Pursuant to requirements specified in the Rule, the LEA is responsible for maintaining adequate records for all the asbestos activities listed below in two locations: (1) the Local Education Agency office; and (2) the School Administration's offices. Refer to 454 CMR 28.13(10) for the specific items required to be recorded for each activity.

It is recommended that the sample forms included in this section be used to guide the LEA in developing its forms. If the sample forms are chosen to be used, the LEA must ensure they provide a record of all the information required by the Rule and all other applicable regulations. The guidance forms included within this section in no way supersede or replace records that may be necessary to comply with any applicable asbestos regulations. The LEA must remain informed, ensure compliance with all new and existing regulations, and update their recording methods accordingly. This is especially important as long as any ACM remains in the School and building occupants may come in contact with or otherwise handle asbestos-containing materials. It is also recommended that the LEA maintain updated copies of the blank forms it chooses to use in this Recordkeeping section.

The following asbestos activities, projects, and occurrences, and the entities involved in such projects, are to be recorded as required in 454 CMR 28.13(10). The activities to be recorded include, but are not limited to:

1. Preventive Measures
2. Response Actions
3. Contractors or Personnel Involved
4. Air Monitoring and Results
5. Personnel Training
6. Periodic Surveillance
7. Cleaning
8. Operation and Maintenance (O&M) activities only by a MADLS Licensed Contractor
9. Major Asbestos Activities
10. Fiber Release Episodes

Additional records required by OSHA (particularly if negative pressure respirators are used) include those required for but are not limited to, medical surveillance and respiratory protection.

9.2 Sample Record Forms

In order to maintain all proper records required, it is essential to establish an organized format for record keeping. The following record forms and recommended formats are provided as guidance for creating and maintaining adequate records. The information requested in the forms should only be viewed as minimum requirements as stated in the Rule. It is important to be sure that additional records be kept as necessary to fully comply with all applicable regulations.

Additional recordkeeping forms, such as medical surveillance or respiratory protection forms, may be recorded and continued as necessary. Keep a blank copy of the record forms used in the Recordkeeping section and revise as necessary. Copy several blank forms. Keep these blanks and completed forms in the Records section.

Project records may be compiled copied as necessary in the case of repeat records, such as Worker Training and grouped together, project by project, in order of occurrence.

10.3 Additional Training

10.4 Additional Notifications

THE COMMONWEALTH OF MASSACHUSETTS
EXECUTIVE OFFICE OF LABOR AND WORKFORCE DEVELOPMENT
DEPARTMENT OF LABOR STANDARDS

FIBER RELEASE EPISODE
GIUDANCE FOR THE DESIGNATED PERSON

A **fiber release episode**, as defined by the Department of Labor Standards (DLS) at 454 CMR 28.02 and AHERA 40 CFR 763.83, means any uncontrolled or unintentional disturbance of asbestos containing material (ACM) resulting in a visible emission.

The use of best practices when responding to a fiber release episode will ensure that building occupants are protected and that the fiber release episode is promptly and effectively remediated. The minimum requirements for responding to a fiber release episode are set forth in 454 CMR 28.13(7)(e)1 and 2. The Designated Person should assess the situation, implement initial steps to contain the release, and contact their asbestos consultant to assist with a prompt and effective response action.

A **minor** fiber release involves the disturbance of three or fewer square or linear feet of ACM. A **major** fiber release involves the disturbance of greater than three square or linear feet of asbestos. The response action for any **major** fiber release episode requires a project design specifying means and methods, and must be conducted by a licensed asbestos contractor. The Local Education Agency (LEA) must notify DLS of any major fiber release within 24 hours of its occurrence, and if necessary, file written notification to the state [454 CMR 28.13(7)(e)2.d].

The initial steps that the Designated Person must take to protect building occupants include:

1. Isolating the area. Restrict access to the area by the general public. Foot traffic through the area can spread the extent of contamination to clean areas of the building, and expose building occupants to asbestos fibers.
2. Post warning signs at all access points to the area. Signs should be large and readily visible. Signs should indicate: Restricted Area. Asbestos Hazard. No entry without proper training and equipment.
3. Shut down or temporarily modify the air handling system to prevent the distribution of airborne asbestos fibers to unaffected areas of the building.
4. Notify DLS within 24 hours of the release. Submit the standardized reporting form to DLS at Zachariah.Costa@mass.gov.
5. Contact the asbestos consultant to evaluate the situation, develop a project design for a major fiber release, and assist the Designated Person in developing a remediation strategy. The strategy may include bulk sampling, air sampling and/or wipe sampling.
6. Contact the asbestos contractor to clean visible debris, and remove or repair damaged or exposed ACM as a result of a major fiber release.

Keep a record of the event in the AHERA management plan: date & location, description of episode, what interim control measures were used, the project design, contractor information and any air testing reports.

- ☐ Waste shipment record

Update to Asbestos Management Plan After Completing a Response Action

- ☐ Copies of all Response Action Records in both copies of the school's Management Plan, at the LEA administrative office and at the school.
- ☐ Detailed description of the locations of any Asbestos-Containing Building Material (ACM) or suspect ACM which remains in the school once the Response Actions are undertaken.
- ☐ Revisions to the Operations and Maintenance Program if the Response Action results in the removal of asbestos that had required special cleaning, maintenance, or precautions.
- ☐ A re-evaluation of resources needed to manage in place the Asbestos-Containing Material (ACM) that remains in the building.

This checklist is provided as a courtesy by the Massachusetts Department of Labor Standards, to assist a Local Education Agency (LEA) with ensuring that the LEA's records are complete following an AHERA Response Action. This AHERA Response Action Checklist is ***not*** *intended to provide a detailed overview of the AHERA regulations and should not be used as a substitute for such review.*

THE COMMONWEALTH OF MASSACHUSETTS
EXECUTIVE OFFICE OF LABOR AND WORKFORCE DEVELOPMENT
DEPARTMENT OF LABOR STANDARDS

OPERATIONS AND MAINTENANCE
SPECIAL CLEANING ACTIVITIES

DATE COMPLETED: _____ **ROOMS:** _____

DESCRIPTION OF METHOD(S) USED DURING THIS O&M ACTIVITY:

- ☐ HEPA vacuum
- ☐ Wet mop
- ☐ Wet Swiffer
- ☐ Wet rags
- ☐ Other _____

Horizontal Surfaces cleaned:

- ☐ Floors
- ☐ Desks/Chairs
- ☐ Tops of filing cabinets
- ☐ Tops of univents
- ☐ Windowsills
- ☐ Chalk trays
- ☐ _____
- ☐ _____

Waste Disposal:

- ☐ Cleaning rags/cloths bagged while wet
- ☐ HEPA vacuum emptied
- ☐ Waste bags goosenecked with duct tape
- ☐ Waste bags labeled

Cleaning completed by: _____

Date of ACWM collected: _____

Notes:

- Review O&M Plan for specific methods, locations and frequency of cleaning in your school.
- All special cleaning equipment shall be designated only for this cleaning.
- Dirty cleaning rags, etc. shall be picked up monthly by a Massachusetts licensed asbestos contractor. Contractor shall provide a Waste Shipment Record to the LEA.
- Maintain a copy of this form in the AHERA management plan in the O&M activities section.

10.5 Asbestos Activities

194

1. Identification

Product Identity: **2 Multi-Shine**

Recommended Use: Water Based Glass & Surface Cleaner

Producer / Distributor

Multi-Clean
600 Cardigan Road
Shoreview, MN 55126

Telephone Number for Information: 651-481-1900

Emergency Telephone Number: 800-255-3924

2. Hazard Identification

Classification:

Health Class	Physical Class	Environment Class
Mild Skin Irritation Category 3 Eye Irritant Category 2		Acute Aquatic Toxicity Category 3

Label

Symbols

Signal Word Warning

Hazard Statements:

Causes eye and mild skin irritation

Precautionary Statements:

If Skin Irritation Occurs: Get medical advice/attention
Wash hands thoroughly after handling.
If In Eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
If eye irritation persists: Get medical advice/attention

3. Composition/Information on Ingredients

Ingredient	CAS Number	Percent by Weight
Surfactants	Proprietary	20 - 30
Water	7732-18-5	60 - 100

4. First-Aid Measures:

Ingestion: If Swallowed: Drink two glasses of water and call a physician immediately.

Eye Contact: Flush eyes with running water for at least 15 minutes. If irritation persists, obtain medical attention.

Skin Contact: Flush thoroughly with cool water. Remove and wash contaminated clothing before reuse.

Inhalation: Move to fresh air.

5. Fire Fighting Measures:

Suitable Extinguishing Media: Not Applicable

Special Fire Fighting Procedures: Not Applicable

Unusual Fire and Explosion Hazards None are known

6. Accidental Release Measures:

Dike and contain spill with inert material (sand, earth, etc.). Collect spill with a mop, absorbent material (example: floor-dry) or vacuum. Thoroughly rinse affected area with water.

7. Handling and Storage:

Handling: Keep from freezing. Keep out of reach of children.

Storage: Normal care for storage.

8. Exposure Controls / Personal Protection:

Exposure Limits

Ingredients	CAS Number	Osha PEL	ACGIH TLV
None Listed	XXXX	XXX	XXX

Exposure Controls

Engineering Controls: Normal good ventilation is sufficient

Personal Protective Equipment:

Eye Protection: Approved Safety Goggles or Glasses

Skin Protection: Chemical Resistant Rubber Gloves

Respiratory Protection: Not required, Avoid breathing spray mist

9. Physical and Chemical Properties:

Physical State: Liquid

Appearance: Blue

Odor: No Fragrance Added

Solubility: Complete

Evaporation Rate: NA

Vapor Pressure (MM HG): NA

Vapor Density (Air = 1): > 1

pH: 10.5 - 11.5 (Conc.); 10 - 11 (In-Use)

Specific Gravity (H2O = 1): 1.005

Flammability: None

Flash Point: None

Boiling Point: > 212° F (100°C)

%volatile: > 95%

10. Stability and Reactivity:

Chemical Stability: Stable

Possibility of Hazardous Reactions: None are known

Incompatability (Materials to Avoid): Oxidizing Material

Hazardous Decomposition or By-products: None

Hazardous Polymerization: Will not Occur

Conditions to Avoid: None are known

11. Toxicological Information:

Signs and Symptoms of Overexposure: Causes irritation on direct contact

Acute Effects:

Eye Contact: Causes irritation on contact

Skin Contact: Causes mild irritation on prolonged or repeated contact

Inhalation: Breathing mists may be harmful

Ingestion: May be harmful if swallowed

Target Organ Effects: None Known

Chronic Effects: None Known

Acute Toxicity Values:

Oral LD $_{50}$ > 5000 mg/kg

Dermal LD $_{50}$ > 5000 mg/kg

Inhalation (Vapor) LC $_{50}$ > 50 mg/l

12. Ecological Information:

Persistence and Degradability: Product is Readily Biodegradable

Bio Accumulative Potential: Not Available

Mobility in Soil: Not Available

Aquatic Toxicity: Harmful to Aquatic Life

13. Disposal Considerations:

Material that cannot be used during normal use should be disposed of in accordance with all applicable local, state and federal regulations. Waste from normal cleaning procedures may be disposed of in a sanitary sewer depending on the materials and/or contaminants being cleaned as well as local, state and federal sewer regulations.

14. Transportation Information:

UN Number: None

Shipping Name: Cleaning Compound, Liquid

Transport Hazard Class: None

Packing Group: None

Marine Pollutant: NO

15. Regulatory Information:

TSCA Status: All ingredients listed

Clean Water Act: None of the chemicals in this product are listed under the CWA

Clean Air Act: None of the chemicals in this product are listed under the CAA

CERCLA Reportable Quantity: None

SARA Title III Information:

Section 302 Extremely Hazardous Chemicals: None Listed

Section 311 / 312 Hazard Category: Immediate Health, Chronic Health

Section 313 Toxic Chemicals None Listed

State Regulations: Notice State of California; Warning; This product may contain chemicals known to the state of California to cause cancer or reproductive defects as trace impurities in the standard industrial materials used in the manufacture of this product.

International Regulations: None

California Cleaning Product Right to Know Act of 2017 (SB 258)

Raw Material	CAS No	Function	List
Water	7732-18-5	Diluent	Not Applicable
Surfactant	Withheld	Cleaning agent	Not Applicable
Colorant	Withheld	Dye	Not Applicable

Classification:

Health Class | **Physical Class** | **Environment Class**

Product Classified as Non-Hazardous

Label

Symbols

Signal Word

Hazard Statements:

Product Classified as Non-Hazardous

Precautionary Statements:

Read label before use.
Keep out of reach of children.

3. Composition/Information on Ingredients

Ingredient	CAS Number	Percent by Weight
Nonionic Surfactant	Proprietary	5 - 10
Fragrance Oil	Proprietary	0.5 - 1.5
Bacterial Spore Blend	Proprietary	1 - 5
Water	7732-18-5	60 - 100

4. First-Aid Measures:

Ingestion: Clean mouth with water and drink afterwards plenty of water.

Eye Contact: Flush eyes with running water for at least 15 minutes. If irritation persists, obtain medical attention

Skin Contact: If irritation develops, discontinue Use. Rinse with cool water.

Inhalation: Move to fresh air.

5. Fire Fighting Measures:

Suitable Extinguishing Media: Not Applicable

Special Fire Fighting Procedures: Not Applicable

Unusual Fire and Explosion Hazards Not Applicable

6. Accidental Release Measures:

Dike and contain spill with inert material (sand, earth, etc.). Collect spill with a mop, absorbent material (example: floor-dry) or vacuum. Thoroughly rinse affected area with water.

7. Handling and Storage:

Handling: Keep from freezing. Keep out of reach of children.

Storage: Normal care for storage.

8. Exposure Controls / Personal Protection:

Exposure Limits

Ingredients	CAS Number	Osha PEL	ACGIH TLV
None listed	XXXX	XXX	XXX

Exposure Controls

Engineering Controls: Normal good ventilation is sufficient

Personal Protective Equipment:

Eye Protection: Approved Safety Goggles or Glasses

Skin Protection: Not Required

Respiratory Protection: If exposure limits are exceeded or irritation is experienced, NIOSH/MSHA approved respiratory protection should be worn.

9. Physical and Chemical Properties:

Physical State: Liquid
Appearance: Green
Odor: Fresh Mint
Solubility: Complete
Evaporation Rate: NA
Vapor Pressure (MM HG): NA
Vapor Density (Air = 1): NA

pH: 6 - 7 (concentrate), 6 - 7 (in use)
Specific Gravity (H2O = 1): 1.00
Flammability: None
Flash Point: None
Boiling Point: 212° F (100°C)
%volatile: > 85%

10. Stability and Reactivity:

Chemical Stability: Stable
Possibility of Hazardous Reactions: None are known
Incompatability (Materials to Avoid): None are known
Hazardous Decomposition or By-products: None
Hazardous Polymerization: Will not Occur
Conditions to Avoid: None are known

11. Toxicological Information:

Signs and Symptoms of Overexposure: May cause irritation to Eyes on direct contact

Acute Effects:

Eye Contact: Contact with eyes may cause irritation.
Skin Contact: Repeated or prolonged skin contact may cause allergic reactions with susceptible persons.
Inhalation: Inhalation of vapors in high concentration may cause irritation of respiratory system.
Ingestion: May cause gastro intestinal irritation.

Target Organ Effects: None Known
Chronic Effects: None Known
Acute Toxicity Values:

Oral LD_{50} Product Considered Non-Toxic
Dermal LD_{50} Product Considered Non-Toxic
Inhalation (Vapor) LC_{50} Vapors Considered Non-T

12. Ecological Information:

Persistence and Degradability: Not Available
Bio Accumulative Potential: Not Available
Mobility in Soil: Not Available
Aquatic Toxicity: Not Available

13. Disposal Considerations:

Material that cannot be used during normal use should be disposed of in accordance with all applicable local, state and federal regulations. Waste from normal cleaning procedures may be disposed of in a sanitary sewer depending on the materials and/or contaminants being cleaned as well as local, state and federal sewer regulations.

1. Identification:

Product Identity: **128 E-Fecticide**

Recommended Use: Disinfectant cleaner

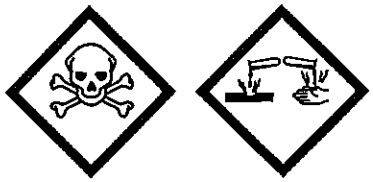
Producer / Distributor

Multi-Clean
600 Cardigan Road
Shoreview, MN 55126

Telephone Number for Information: 651-481-1900

Emergency Telephone Number: 800-255-3924

2. Hazard Identification



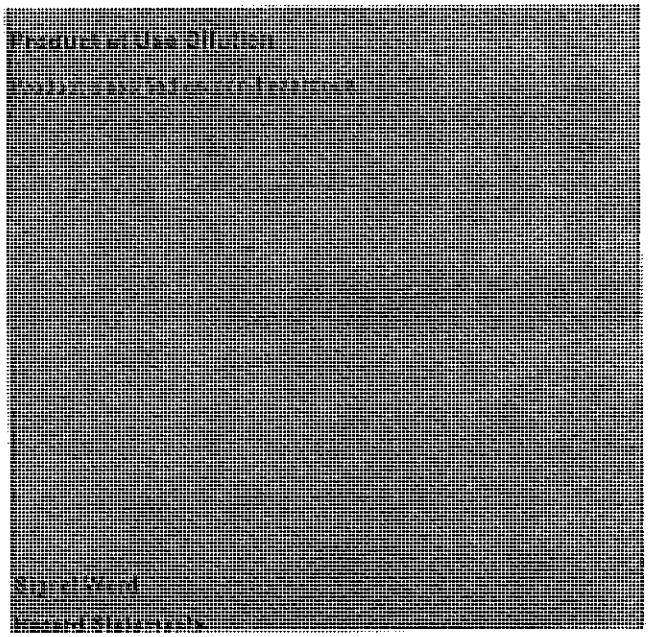
GHS Classification:

Product as Sold

Acute Oral Toxicity Category 4
Acute Dermal Toxicity Category 3
Skin Corrosion Category 1B
Serious Eye Damage Category 1
Short-term Aquatic Hazard Category 1
Long-term Aquatic Hazard Category 2

Label

Symbols



Signal Word Danger

Hazard Statements:

H302 Harmful if swallowed.
H311 Toxic in contact with skin.
H314 Causes severe skin burns and eye damage.
H400 Very toxic to aquatic life.
H411 Toxic to aquatic life with long lasting effects.

Precautionary Statements:

Prevention: P260 Do not breathe mist or vapours.
P264 Wash skin thoroughly after handling.
P270 Do not eat, drink or smoke when using this product.
P273 Avoid release to the environment.
P280 Wear protective gloves/ eye protection/ faca protection.
Response: P301 + P312 + P330 IF SWALLOWED: Call a POISON CENTER/ doctor if you feel unwell. Rinse mouth.
P301 + P330 + P331 IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P303 + P361 + P353 IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water.
P304 + P340 + P310 IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/ doctor.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310 Immediately call a POISON CENTER/ doctor.
P361 + P364 Take off immediately all contaminated clothing and wash it before reuse.
P391 Collect spillage.
Storage: P402 + P404 Store in a dry place. Store in a closed container.
P405 Store locked up.
P410 + P403 Protect from sunlight. Store in a well-ventilated place.
Disposal: P501 Dispose of contents/container in accordance with local regulations.

Product Classified as Non-Hazardous

3. Composition/Information on Ingredients

Ingredient	CAS Number	Percent by Weight: Product as Sold	Product at Use Dilution
Dimethyldioctylammonium Chloride	5538-94-3	10 - 12	
Quaternary Ammonium Compounds, Benzyl-C12-18-alkyldimethyl, chlorides	68391-01-5	6 - 8	
Quaternary ammonium compounds, coco alkyltrimethyl, chlorides	81789-18-2	4 - 6	

4. First-Aid Measures:

Product as Sold

Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CONTROL CENTER AND SEEK MEDICAL ATTENTION

Ingestion: IF SWALLOWED: Call a poison control center or doctor immediately. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor.

Eye Contact: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing at least 15 minutes.

Skin Contact: IF ON SKIN: Immediately take off all contaminated clothing. Wash with plenty of soap and water. Wash contaminated clothing before reuse.

5. Fire Fighting Measures:

	Product as Sold	Product at Use Dilution
Suitable Extinguishing Media:	Water - Foam - Dry Chemical	Not Applicable
Special Fire Fighting Procedures:	Not Applicable	Not Applicable
Unusual Fire and Explosion Hazards	Products of combustion are toxic	None Known

6. Accidental Release Measures:

Contain spillage, and then collect with non-combustible ab-sorbent material, (e.g. sand, earth, diatomaceous earth, ver-miculite) and place in container for disposal according to local / national regulations. Do not flush into surface water or sanitary sewer system.

7. Handling and Storage:

Product as Sold

Handling: Read label before use. Avoid Contact with skin and eyes. Do not breath spray mist. Use only in well ventilated areas. Wash hands thoroughly after handling. Do not eat, drink, or smoke when using this product. Keep out of reach of children. Do not reuse empty container.

Storage: Store locked up. Store in a well ventilated place. Store only in original containers. Do not contaminate food or water by storage or disposal.

8. Exposure Controls / Personal Protection:

Exposure Limits:

Ingredients / Product as Sold	CAS Number	Osha PEL	ACGIH TLV
Ethyl Alcohol	64-17-5	1000 ppm	1000 ppm

	Product AS SOLD	Product at Use Dilution
Exposure Controls:		
Engineering Controls:	Normal good ventilation is sufficient. If exposure levels are exceeded, use local ventillation.	
Personal Protective Equipment:		
Eye Protection:	Approved Safety Goggles or Glasses	
Skin Protection:	Chemical Resistant Rubber Gloves	
Respiratory Protection:	In the case of vapor formation use an approved respirator	

9. Physical and Chemical Properties:

Product as Sold

Physical State: Liquid
Specific Gravity (H2O = 1): 0.98
Solubility: Complete
Flammability: None
Flash Point: None
Boiling Point: > 212° F (100°C)

Appearance: Green
Vapor Pressure (MM HG): Not Available
Vapor Density (Air = 1): Not Available
Auto Ign Temp Not Available
Decomposition Temp Not Available
Freezing Point 32 F

Odor: Fresh Floral
Viscosity <5 centipoise
pH: 7 - 8.5
%volatile: > 75%
LEL / UEL Not Available
Evaporation Rate: Not Available

10. Stability and Reactivity:

Product as Sold

Chemical Stability: Stable
Possibility of Hazardous Reactions: Thermal decomposition may produce toxic vapors/fumes of amines or other organic materials
Incompatability (Materials to Avoid): Other Cleaners or Deodorants
Hazardous Decomposition or By-products: Oxides of carbon and Nitrogen
Hazardous Polymerization: Will not Occur
Conditions to Avoid: None are known

11. Toxicological Information:

Product as Sold

Signs and Symptoms of Overexposure: Causes severe skin burns and eye damage

Acute Effects:
Eye Contact: Causes serious eye damage.
Skin Contact: Causes severe skin burns. Toxic in contact with skin
Inhalation: Toxic if inhaled. Avoid breathing mist and vapor.

Ingestion: Harmful if swallowed
Target Organ Effects: None Known
Chronic Effects: None Known

Acute Toxicity Values:	Product AS SOLD
Oral LD_{50}	LD50 (Rat, male and female): 1,140 mg/kg
Dermal LD_{50}	LD50 (Rat, male and female): > 250 mg/kg
Inhalation (Vapor) LC_{50}	LC50 (Rat, male and female): 0.59 mg/l Test atmosphere: vapour Acute toxicity estimate: 40 mg/l Exposure time: 4 h Test atmosphere: vapour Method: Calculation method

[redacted]

12. Ecological Information:

	Product as Sold	Product at Use Dilution
Persistence and Degradability:	Not Applicable	Product is Readily Biodegradable
Bio Accumulative Potential:	Not Applicable	Not Available
Mobility in Soil:	Not Applicable	Not Available
Aquatic Toxicity:	Not Applicable	Not Available

13. Disposal Considerations:

Product as Sold

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional office for guidance.

Product at Use Dilution

Material that cannot be used during normal use should be disposed of in accordance with all applicable local, state and federal regulations. Waste from normal cleaning procedures may be disposed of in a sanitary sewer depending on the materials and/or contaminants being cleaned as well as local, state and federal sewer regulations.

14. Transportation Information:

	Product as Sold
UN Number:	UN1903
Shipping Name:	Disinfectant, Liquid, Corrosive,N.O.S.(Quaternary Ammonium) Limited Quantity for 1 G container or less.
Transport Hazard Class:	8
Packing Group:	III
Marine Pollutant:	NO

[redacted]

15. Regulatory Information:

TSCA Status: All ingredients listed

Clean Water Act: Edetic Acid (60-00-4) is listed in the Clean Water Act as a Hazardous Substance.

Clean Air Act: None of the chemicals in this product are listed under the CAA

CERCLA Reportable Quantity: Edetic Acid (60-00-4), > 5000 lbs.

SARA Title III Information:

Section 302 Extremely Hazardous Chemicals: None Listed

Section 311 / 312 Hazard Category: Immediate Health

Section 313 Toxic Chemicals None Listed

State Regulations: None

International Regulations: None

California Cleaning Product Right to Know Act of 2017 (SB 258)

Raw Material	CAS No	Function	List
Water	7732-18-5	Diluent	Not Applicable
Quaternary Ammonium Compounds	5538-94-3, 68391-01-5, 61789-18-2	Disinfectant	Not Applicable
Ethylenediamine Tetraacetate	64-02-8	Chelator	Not Applicable
Fragrance	Withheld	Fragrance	Not Applicable
Ethylenediamine Tetraacetic Acid	60-00-4	Chelator	Not Applicable

Colorant	Withheld	Dye	Not Applicable

Safety Data Sheet

1 – PRODUCT IDENTIFICATION

PRODUCT NAME: ..... Ultra Line Stripper
PRODUCT TYPE: ..... Alkaline liquid cleaning compound
PRODUCT NUMBER: ..... UL1100XXX (Last 3 characters vary with the packaging)
CONTROL NUMBER: UL1100XXX

COMPANY: ..... **Simoniz USA, Inc.**
201 Boston Turnpike
Bolton, CT 06043
1-800-227-5536
www.simoniz.com

EMERGENCY PHONE: ..... (800) 255-3924 (CHEM-TEL)

2 – HAZARDS IDENTIFICATION

CLASSIFICATION OF SUBSTANCE/MIXTURE: ....Skin Corrosion (1) Serious Eye Damage (1) Specific Target Organ Toxicity, Single Exposure; Respiratory Tract Irritation (3) Acute Toxicity, Oral (4)

SYMBOLS: .....

SIGNAL WORD: ..... DANGER!
HAZARD STATEMENT: ..... Causes severe skin burns and eye damage. May cause respiratory irritation. Harmful if swallowed.

PRECAUTIONARY STATEMENTS:

PREVENTION: ..... Do not get in eyes, on skin, or on clothing. Wash hands thoroughly after handling. Do not touch eyes. Wear protective gloves / protective clothing / eye protection / face protection. Avoid breathing dust / fume / gas / mist / vapors / spray. Use only outdoors or in a well-ventilated area. Do not eat, drink or smoke when using this product.

RESPONSE: ..... IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Get medical help. IF ON SKIN: Take off immediately all contaminated clothing. Immediately rinse with water for several minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Get emergency medical help immediately. Specific treatment (see First AID section). IF IN EYES: Immediately rinse with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. Get emergency medical help.

STORAGE: ..... Store locked up. Store in a well-ventilated place. Keep container tightly closed.

DISPOSAL: ..... Dispose of container and contents in accordance with local regulations.

3 – COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENT	C.A.S. NUMBER
Water	7732-18-5
2-Butoxy Ethanol	111-76-2
2-Aminoethanol	141-43-5
Potassium Hydroxide	1310-58-3
Sodium Xylenesulfonate	1300-72-7
Alcohols, C_{9-11}, ethoxylated	68439-46-3

Percentages of ingredients are being withheld as trade secret information. This information will be disclosed as necessary to authorized individuals

4 – FIRST-AID MEASURES

BREATHING (INHALATION): Maintain adequate ventilation in work area. If signs of discomfort or irritation occur, remove to fresh air. If symptoms persist or burns occur, get immediate medical attention!

SWALLOWING (INGESTION): DO NOT INDUCE VOMITING! Drink a large quantity of water or milk. Do not attempt to give liquids to an unconscious person. Get immediate medical attention!

EYES: Flush eyes with a large quantity of fresh water for at least 15 minutes. Apply ice compresses and get immediate emergency medical attention by an eye specialist! It may be necessary to bring person to a hospital emergency room.

SKIN (DERMAL): Flush from skin and clothing with large quantity of fresh water for at least 15 minutes. If burns occur or irritation persists, get immediate medical attention! Wash contaminated clothing before reuse.

5 – FIRE-FIGHTING MEASURES

FLASHPOINT: This product is non-flammable.

EXTINGUISHING MEDIA: Use extinguishing media suitable for materials already burning.

SPECIAL FIRE FIGHTING PROCEDURES: Firefighters working in areas where this product is present should be equipped with an approved, fully enclosed SCBA.

UNUSUAL FIRE AND EXPLOSION HAZARDS: Do NOT use water on undiluted product.

6 – ACCIDENTAL RELEASE MEASURES

SPILL PROCEDURES: Dike to prevent spillage into streams or sewer systems. Consult local, state and federal authorities.

WASTE DISPOSAL: As recommended by local, state and federal authorities.

7 – HANDLING and STORAGE

STORAGE: ..... Store in a cool, well-ventilated area. Avoid overheating or freezing. Keep container tightly closed. Store locked up. Do NOT store this product in an unmarked container.

HANDLING: ..... Wear eye and hand protection if product is likely to splash. Do NOT transfer this product to an unmarked container. Spilled material is slippery. Keep away from children!

8 – EXPOSURE CONTROLS / PERSONAL PROTECTION

RESPIRATORY PROTECTION: Not usually needed in well-ventilated areas. If needed, use a NIOSH approved respirator.

PROTECTIVE CLOTHING: ..... Nitrile or PVC gloves, and chemical splash goggles.

ADDITIONAL MEASURES: ..... Under normal use according to label instructions, special protection should not be necessary. Wear eye and hand protection if product is likely to splash. Keep away from children!

INGREDIENT	C.A.S. NUMBER	OSHA PEL*
Water	7732-18-5	No limits established
2-Butoxy Ethanol	111-76-2	50 ppm, 240 mg/m^3
2-Aminoethanol	141-43-5	3 ppm, 6 mg/m^3
Potassium Hydroxide	1310-58-3	NIOSH: 2 mg/m^3 (C)
Sodium Xylenesulfonate	1300-72-7	No limits established
Alcohols, $C_{9\text{-}11}$, ethoxylated	68439-46-3	No limits established

*When OSHA 8-hour TWA; STEL; and Ceiling PEL values are not established, NIOSH REL and ACGIH TLV© values will be shown and indicated as such.

9 – PHYSICAL / CHEMICAL PROPERITES

APPEARANCE & ODOR: ..... Purple transparent liquid, rose scented.
ODOR THRESHOLD: ..... N/A
pH: ..... Greater than 13.4
MELTING POINT: ..... N/A
FREEZING POINT: ..... N/A
BOILING POINT: ..... 210 degrees F.
BOILING POINT RANGE: ..... N/A
FLASHPOINT: ..... This product is non-flammable.
EVAPORATION RATE: ..... N/A
FLAMMABILITY (solid/gas): ..... N/A
EXPLOSION LIMITS: ..... N/A
VAPOR PRESSURE: ..... N/A
VAPOR DENSITY (AIR=1): ..... Greater than 1.
SPECIFIC GRAVITY: 1.01
SOLUBILITY IN WATER: ..... Completely soluble.
PARTITION COEFFICIENT: ..... N/A
AUTO-IGNITION TEMPERATURE: ..... N/A
DECOMPOSITION TEMPERATURE: ..... N/A
VISCOSITY: ..... Water thin

10 – STABILITY and REACTIVITY

STABILITY: ..... Stable under normal conditions.
HAZARDOUS DECOMP.: ..... This product not known to polymerize.
INCOMPATIBILITY: ..... Do not mix with caustic material or other detergents.

11 – TOXICOLOGICAL INFORMATION

ROUTE(S) OF ENTRY: ..... Absorption through skin and eyes. Ingestion. Inhalation.
LISTED CARCINOGEN: ..... None over 0.1%.
MEDICAL CONDITION AGGRAVATED: ..... May aggravate pre-existing dermatitis, and asthama or other respiratory disorders.
INHALATION: ..... Undiluted product can cause irritation and burns to mouth, nose, throat and respiratory tract if inhaled. Prolonged or significant exposure to fumes may result in asthama-like symptoms.
INGESTION: ..... Undiluted product can be harmful to health if ingested, and can cause irritation, burns and other serious damage to mouth, esophagus and stomach if swallowed.
EYES: ..... Undiluted product can cause serious irritation, redness, burns, blindness or other permanent damage if not immediately flushed from eyes.
SKIN (DERMAL): ..... Undiluted product can cause severe irritation, redness and burns to the exposed area if not immediately flushed from skin.
ACUTE TOXICITY* (ORAL): ..... 1,831.72 mg/kg
ACUTE TOXICITY* (DERMAL): ..... >5,000 mg/kg
ACUTE TOXCITY* (INHALATION): ..... >20,000 ppm V (Gas), >20 mg/l (Vapor), >5 mg/l (Dust)

*Determined using the additivity formula for mixtures (GHS Purple Book, 3.1.3.6)

12 – ECOLOGICAL INFORMATION

ENVIRONMENTAL FATE AND DISTRIBUTION: N/A

13 – DISPOSAL CONSIDERATIONS

WASTE DISPOSAL: ..... As recommended by local, state and federal authorities.

14 – TRANSPORTATION INFORMATION

DOT:
PROPER SHIPPING NAME: ..... Compounds, cleaning liquid (contains Ethanolamine, Potassium hydroxide)
HAZARD CLASS: 8
UN/NA NUMBER: ..... NA 1760
PACKAGING GROUP : II

IMDG CODE:
PROPER SHIPPING NAME:..... CORROSIVE LIQUID, N.O.S. (ETHANOLAMINE, POTASSIUM HYDROXIDE)
HAZARD CLASS:..... 8
UN/NA NUMBER:..... UN 1760
PACKAGING GROUP :..... II

15 – REGULATIONS

California Proposition 65:..... ⚠ **WARNING:** This product can expose you to chemicals including Diethanolamine, which are known to the State of California to cause cancer, and Ethylene Oxide, which are known to cause birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

INGREDIENT	C.A.S. NUMBER	Listed Date
Ethylene Oxide	100-41-4	07/01/1987 (Cancer) 08/07/2009 (Developmental Toxicity & Male Reproductive Toxicity) 02/27/1987 (Female Reproductive Toxicity)
Diethanolamine	111-42-2	06/22/2012 (Cancer)
Nitrilotriacetic Acid, Trisodium Salt Monohydrate	18662-53-8	04/01/1989 (Cancer)
Ethylbenzene	100-41-4	06/11/2004 (Cancer)

Contents of this SDS comply with the OSHA Hazard Communication Standard 29CFR 1910.1200

16 – OTHER INFORMATION

NFPA HEALTH:..... 3
NFPA FLAMMABILITY:..... 1
NFPA REACTIVITY:..... 1
NFPA OTHER:..... Alkali

ADDITIONAL:..... The information contained in this SDS is based on the data available to us from sources we believe to be reliable. No warranty or guaranty expressed or implied is made regarding the accuracy of this data or the results obtained from the reliance on this data. The manufacturer assumes no responsibility for injury from the use of this product. Be safe–read this product safety information and pass it on to all persons who may be exposed to this product. Federal law requires it. This product and/or all of its components are either included on or exempt from the TSCA Inventory of Chemical Substances.

REVISION DATE:..... 12/11/2023

Safety Data Sheet

1 – PRODUCT IDENTIFICATION

PRODUCT NAME: ..... Wet Look Plus
PRODUCT TYPE: ..... Liquid Acrylic Floor Finish
PRODUCT NUMBER: ..... CS0750XXX (Last 3 characters vary with the packaging)
CONTROL NUMBER: CS0750XXX
PRODUCT TYPE: ..... Liquid Acrylic Floor Finish

COMPANY: ..... **Simoniz USA, Inc.**
201 Boston Turnpike
Bolton, CT 06043
1-800-227-5536
www.simoniz.com
EMERGENCY PHONE: ..... (800) 255-3924 (CHEM-TEL)

2 – HAZARDS IDENTIFICATION

CLASSIFICATION OF SUBSTANCE/MIXTURE: ..... Skin Irritation (2) Eye Irritation (2B) Skin Sensitizer (1B)

SYMBOLS: .....

SIGNAL WORD: ..... WARNING!
HAZARD STATEMENT: ..... Causes skin irritation. Causes eye irritation. May cause an allergic skin reaction.
PRECAUTIONARY STATEMENTS:
PREVENTION: ..... Wash hands thoroughly after handling. Wear protective gloves/protective clothing/eye protection/face protection. Avoid breathing dust/fume/gas/mist/vapours/spray. Contaminated work clothing should not be allowed out of the workplace.
RESPONSE: ..... IF ON SKIN: Wash with plenty of water and soap. Specific treatment (see First AID Section on this label). If skin irritation occurs: Get medical advice/attention. Take off contaminated clothing and wash before reuse. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do – continue rinsing. If skin irritation or a rash occurs: Get medical advice/attention.
STORAGE: ..... Store in a dry place. Store in a closed container.
DISPOSAL: ..... Dispose of container and contents in accordance with local regulations.

3 – COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENT	C.A.S. NUMBER
Water	7732-18-5
Acrylate Copolymer	Trade Secret
Diethylene Glycol Ethyl Ether	111-90-0
Tributoxy Ethyl Phosphate	78-51-3

Percentages of ingredients are being withheld as trade secret information. This information will be disclosed as necessary to authorized individuals

4 – FIRST-AID MEASURES

BREATHING (INHALATION): ... If victim shows signs of discomfort or irritation, remove to fresh air. If symptoms persist, get immediate medical attention.

SWALLOWING (INGESTION): . DO NOT INDUCE VOMITING! Drink a large quantity of water or milk. Do not attempt to give liquids to an unconscious person. Get immediate medical attention!

EYES: ..... Flush eyes with a large quantity of fresh water for at least 15 minutes. If irritation persists, consult a physician..

SKIN (DERMAL): ..... Flush from skin and clothing with large amounts of fresh water. If irritation persists, consult physician. Wash contaminated clothing before wearing.

5 – FIRE-FIGHTING MEASURES

FLASHPOINT:..... This product is non-flammable.

EXTINGUISHING MEDIA:..... This product is non-flammable. Use extinguishing media suitable for materials already burning.

SPECIAL FIRE FIGHTING PROCEDURES: .....Firefighters working in areas where this product is present should be equipped with an approved, fully enclosed SCBA.

UNUSUAL FIRE AND EXPLOSION HAZARDS:.....None known.

6 – ACCIDENTAL RELEASE MEASURES

SPILL PROCEDURES: ..... Dike to prevent spillage into streams or sewer systems. Consult local, state and federal authorities.

WASTE DISPOSAL: ..... As recommended by local, state and federal authorities.

7 – HANDLING and STORAGE

STORAGE:..... Store in a cool, well ventilated area. Avoid overheating or freezing.

HANDLING:..... Do not place this product in an unmarked container. Avoid eye contact. Spilled material is slippery.

8 – EXPOSURE CONTROLS / PERSONAL PROTECTION

RESPIRATORY PROTECTION: Not usually needed. Vapors not normally harmful.
PROTECTIVE CLOTHING:..... Special protection not usually needed. Wear eye protection if product is likely to splash.
ADDITIONAL MEASURES: ..... Do not place this product in an unmarked container. Avoid eye contact. Spilled material is slippery.

INGREDIENT	C.A.S. NUMBER	PEL
Water	7732-18-5	No limits established
Acrylate Copolymer	Trade Secret	No limits established
Diethylene Glycol Ethyl Ether	111-90-0	No limits established
Tributoxy Ethyl Phosphate	78-51-3	0.5mg/m3 TWA

9 – PHYSICAL / CHEMICAL PROPERITES

APPEARANCE & ODOR: ..... White opaque liquid. No significant odor.
ODOR THRESHOLD: ..... N/A
pH:..... 8.0-9.0
MELTING POINT: ..... 210 degrees F.
FREEZING POINT: ..... N/A
BOILING POINT:..... 210 degrees F.
BOILING POINT RANGE:..... N/A
FLASHPOINT:..... This product is non-flammable.
EVAPORATION RATE:..... N/A
FLAMMABILITY (solid/gas):.... N/A
EXPLOSION LIMITS:..... N/A
VAPOR PRESSURE: ..... N/A
VAPOR DENSITY (AIR=1):..... Greater than 1.
SPECIFIC GRAVITY: 1.02
SOLUBILITY IN WATER: ..... Completely soluble.
PARTITION COEFFICIENT: ..... N/A
AUTO-IGNITION TEMPERATURE:.....N/A
DECOMPOSITION TEMPERATURE: .....N/A
VISCOSITY: ..... Water thin

10 – STABILITY and REACTIVITY

STABILITY:..... Stable under normal conditions.
HAZARDOUS DECOMP.:..... This product not known to polymerize.
INCOMPATIBILITY:..... Do not mix with other chemicals.

11 – TOXICOLOGICAL INFORMATION

ROUTE(S) OF ENTRY:..... Ingestion. Not likely to be inhaled in dangerous amounts.
LISTED CARCINOGEN: ..... None over 0.1%. Not listed by IARC, NTP or OSHA.
MEDICAL CONDITION AGGRAVATED:.....May aggravate pre-existing dermatitis.
INHALATION:..... Not likely to be inhaled in hazardous amounts. Maintain adequate ventilation in the work area.
INGESTION:..... This material can cause irritation to the stomach and esophagus if ingested.
EYES: ..... May cause eye irritation.
SKIN (DERMAL): ..... Not likely to irritate. Prolonged exposure to undiluted product may cause irritation.
ACUTE TOXICITY* (ORAL):..... .....>5000 mg/kg
ACUTE TOXICITY* (DERMAL):.. .....>5000 mg/kg
ACUTE TOXCITY* (INHALATION):.....>20,000 ppm V (Gas), >20 mg/l (Vapor), >5 mg/l (Dust)

*Determined using the additivity formula for mixtures (GHS Purple Book, 3.1.3.6)

12 – ECOLOGICAL INFORMATION

ENVIRONMENTAL FATE AND DISTRIBUTION: N/A

13 –DISPOSAL CONSIDERATIONS

WASTE DISPOSAL: ..... As recommended by local, state and federal authorities.

14 – TRANSPORTATION INFORMATION

PROPER SHIPPING NAME:..... Not D.O.T. regulated.
HAZARD CLASS:.....
UN/NA NUMBER: .....
PACKAGING GROUP :.....

15 - REGULATIONS

Contents of this MSDS comply with the OSHA Hazard Communication Standard 29CFR 1910.1200

16 – OTHER INFORMATION

NFPA HEALTH: 1
NFPA FLAMMABILITY:..... 0
NFPA REACTIVITY:..... 0
NFPA OTHER: ..... None

ADDITIONAL:..... The information contained in this SDS is based on the data available to us from sources we believe to be reliable. No warranty or guaranty expressed or implied is made regarding the accuracy of this data or the results obtained from the reliance on this data. The manufacturer assumes no responsibility for injury from the use of this product. Be safe- read this product safety information and pass it on to all persons who may be exposed to this product. Federal law requires it. This product and/or all of its components are either included on or exempt from the TSCA Inventory of Chemical Substances.

REVISION DATE:..... 07/01/2022

Diversey
A SOLENIS COMPANY

FINAL STEP® 512 Sanitizer

Revision: 2024-07-31

Version: 03.0

1. IDENTIFICATION

Product name: FINAL STEP® 512 Sanitizer
SDS #: MS0800593
Recommended use:
- Industrial/Institutional
- Sanitizer
- This product is intended to be diluted prior to use

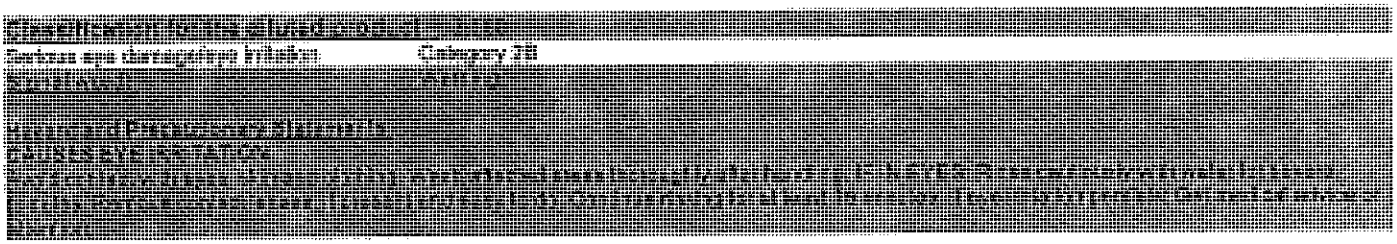
Uses advised against: Uses other than those identified are not recommended

Manufacturer, importer, supplier:
US Headquarters
Diversey, Inc.
1300 Altura Rd., Suite 125
Fort Mill, SC 29708
Phone: 1-888-352-2249
SDS Internet Address: https://sds.diversey.com

Emergency telephone number: 1-800-851-7145; 1-651-917-6133 (Int'l)

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
Skin corrosion, Category 1C
Serious eye damage, Category 1



Signal word: Danger.

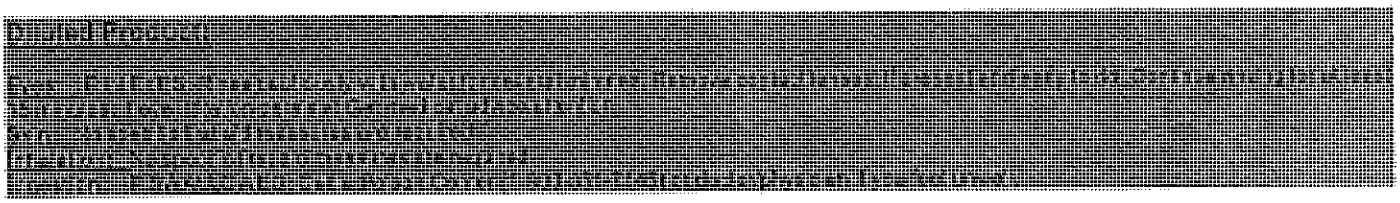
Hazard Statements
CAUSES SEVERE SKIN BURNS AND SERIOUS EYE DAMAGE.

Precautionary Statements
Causes burns/ serious damage to mouth, throat and stomach. Keep container tightly closed. Avoid contact with eyes, skin and clothing. Wash affected areas thoroughly after handling. Wear protective gloves, protective clothing and eye or face protection. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes. Immediately call a Poison Center (1-800-851-7145) or physician. Dispose of in accordance with all federal, state and local applicable regulations. SUPPLEMENTAL INFORMATION:. Mix only with water. DO NOT MIX WITH BLEACH OR ANY OTHER PRODUCT OR CHEMICAL. Can react to release chlorine gas.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients



Ingredient(s)	CAS #	Weight %
n-Alkyl (68% C12, 32% C14) dimethyl ethylbenzyl ammonium chloride	68956-79-6	3 - 7%
n-Alkyl (60% C14, 30% C16, 5% C12, 5% C18) dimethyl benzyl ammonium chloride	68391-01-5	3 - 7%
Ethyl alcohol	64-17-5	0.5 - 1.5%
Amines, C12-18-alkyldimethyl	68391-04-8	> 0.1 - < 1%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes.
Skin: IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash with plenty of water for at least 15 minutes.
Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing.
Ingestion: IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.
Aggravated Medical Conditions: Individuals with chronic respiratory disorders such as asthma, chronic bronchitis, emphysema, etc., may be more susceptible to irritating effects.

5. FIRE-FIGHTING MEASURES

Specific methods: No special methods required
Suitable extinguishing media: The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards: Corrosive material (See sections 8 and 10).

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

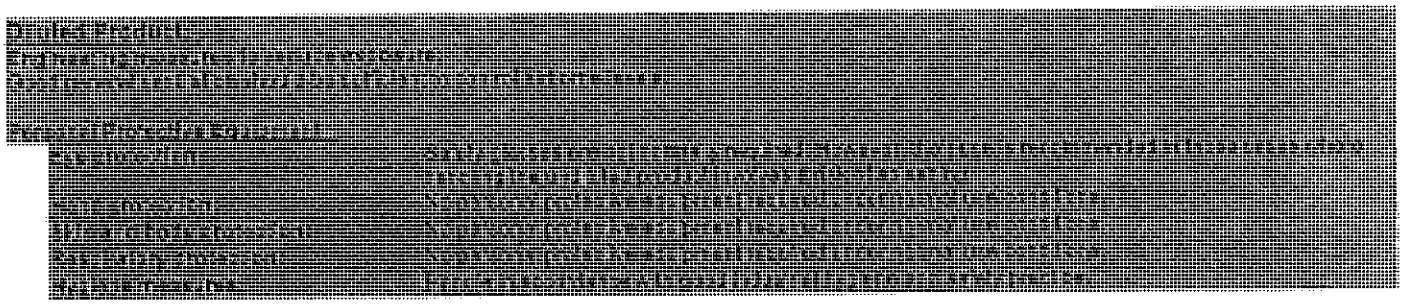
Personal precautions: Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods: Clean-up methods - large spillage. Material is toxic to fish. Do not discharge into lakes, streams, ponds, or public water unless in accordance with an NPDES permit. Prevent product from entering drains. Water runoff can cause environmental damage. Soak up with inert absorbent material. Sweep up and shovel into suitable containers for disposal. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Avoid contact with skin, eyes and clothing. Wash thoroughly after handling. Do not taste or swallow. Product residue may remain on/in empty containers. All precautions for handling the product must be used in handling the empty container and residue. Avoid breathing vapors or mists. Use only with adequate ventilation. Remove and wash contaminated clothing and footwear before re-use. Mix only with water. DO NOT MIX WITH BLEACH OR ANY OTHER PRODUCT OR CHEMICAL. Can react to release chlorine gas. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Keep tightly closed in a dry, cool and well-ventilated place.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines:



Ingredient(s)	ACGIH	OSHA
Ethyl alcohol	1000 ppm (STEL)	1000 ppm (TWA) 1900 mg/m³ (TWA)

Undiluted Product:

Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	Chemical-splash goggles.
Hand protection:	Chemical-resistant gloves.
Skin and body protection:	Protective footwear. Wear suitable protective clothing.
Respiratory protection:	No special requirements under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 0.99 Kg/L
Bulk density: No information available
Flash point (°F): > 200 °F > 93 °C
Kinematic viscosity mPa.s
0
VOC: 1.3 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: The product does not sustain combustion
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , Red
Odor: Quaternary
Boiling point/range: Not determined
Decomposition temperature: Not determined
Solubility: Completely Soluble
Relative Density (relative to water): 0.99
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.

pH: ≈ 7.9
Corrosion to metals: Not corrosive to metals

Dilution pH: ≈ 7
Dilution Flash Point (°F): > 200 °F > 93.4 °C
VOC % by wt. at use dilution: 0.008 %

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products, Sections 94508

10. STABILITY AND REACTIVITY

Reactivity:	Not Applicable
Stability:	The product is stable
Possibility of hazardous reactions:	None known
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Oxidizing agents. Anionic surfactant. Do not mix with chlorinated products (such as bleach).
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Ingestion, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: Corrosive. Causes severe burns. Symptoms may include burns, blisters, redness and pain (which may be delayed).
Eye contact: Corrosive. Causes serious eye damage. Symptoms may include pain, burning sensation, redness, watering, blurred vision or loss of vision.
Ingestion: Causes burns/ serious damage to mouth, throat and stomach. Symptoms may include stomach pain and nausea.
Inhalation: May cause irritation and corrosive effects to nose, throat and respiratory tract. Symptoms may include coughing and difficulty breathing.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

Numerical measures of toxicity

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.

Bioaccumulation: No information available.

Mobility: No information available.

Other adverse effects No other adverse effects known.

13. DISPOSAL CONSIDERATIONS

Do not contaminate water, food, or feed by storage or disposal.

Waste from residues / unused products (undiluted product):
This product, as sold, if discarded or disposed, is not a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and regulations.

Pesticide Storage:
Refer to product label.

Pesticide Disposal:
Refer to product label.

Container Disposal:
Refer to product label.

RCRA Hazard Class (undiluted product): Not Regulated.
RCRA Hazard Class (diluted product): Not Regulated.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: The information provided below is the full transportation classification for this product. This description does not account for the package size(s) of this product, that may fall under a quantity exception, according to the applicable transportation regulations. When shipping dangerous goods, please consult with your internal, certified hazardous materials specialist to determine if any exceptions can be applied to your shipment.

DOT (Ground) Bill of Lading Description: UN3267, CORROSIVE LIQUID, BASIC, ORGANIC, N.O.S., (quaternary ammonium compounds), 8, III

IMDG (Ocean) Bill of Lading Description: UN3267, CORROSIVE LIQUID, BASIC, ORGANIC, N.O.S., (quaternary ammonium compounds), 8, III

15. REGULATORY INFORMATION

International Inventories at CAS# Level

TSCA	All components are listed or otherwise exempt
DSL	All components are listed or otherwise exempt

EPA Reg. No. : 70627-63
This chemical is a pesticide product registered by the United States Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law. These requirements differ from the classification criteria and hazard information required for safety data sheets (SDS), and for workplace labels of non-pesticide chemicals. The hazard information required on the pesticide label is reproduced below. The pesticide label also includes other important information, including directions for use.

DANGER: CORROSIVE. Causes irreversible eye damage and skin burns. Harmful if swallowed or absorbed through the skin. Do not get into eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves and protective clothing when handling. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove contaminated clothing and wash clothing before reuse. PHYSICAL OR CHEMICAL HAZARDS: Do not use or store near heat or open flame. Do not mix with oxidizers, anionic soaps and detergents. ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish and aquatic invertebrates. For Institutional Use.

Ingredient(s)	CAS #	Weight %	CERCLA/SARA RQ (lbs)	Section 302 TPQ (lbs)	Section 313

Diversey
A SOLENIS COMPANY

Safety Data Sheet

According to Regulation (EC) No 1907/2006

Suma Calc D5

Revision: 2025-05-19 **Version:** 05.0

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier
Trade name: Suma Calc D5

UFI: 1YRK-219H-500X-YN78

1.2 Relevant identified uses of the substance or mixture and uses advised against

Product use:	Descaling agent. For professional use only.
Uses advised against:	Uses other than those identified are not recommended.

SWED - Sector-specific worker exposure description :
AISE_SWED_PW_8a_1
AISE_SWED_PW_4_1
AISE_SWED_PW_10_1
AISE_SWED_PW_11_1
AISE_SWED_PW_19_1

1.3 Details of the supplier of the safety data sheet
Diversey Europe Operations BV, De Corridor 4, 3621ZB Breukelen (Maarssenbroeksedijk 2, 3542DN Utrecht), The Netherlands

Contact details
Diversey Ltd
Weston Favell Centre, Northampton NN3 8PD, United Kingdom
Tel: 01604 405311, Fax: 01604 406809
Regulatory Email: customerservice.uk@solenis.com

1.4 Emergency telephone number
Seek medical advice (show the label or safety data sheet where possible)
For medical or environmental emergency only:
call 0800 052 0185

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Skin corrosion, Category 1B (H314)
Serious eye damage, Category 1 (H318)
Corrosive to metals, Category 1 (H290)

2.2 Label elements

Signal word: Danger.

Contains phosphoric acid (Phosphoric Acid)

Hazard statements:
H290 - May be corrosive to metals.
H314 - Causes severe skin burns and eye damage.

Precautionary statements:
P280 - Wear protective gloves, protective clothing and eye or face protection.
P303 + P361 + P353 - IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower.
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310 - Immediately call a POISON CENTRE, doctor or physician.

2.3 Other hazards
No other hazards known.

Regulated explosives precursor - Control of Poisons and Explosives Precursors Regulations 2015

SECTION 3: Composition/information on ingredients

3.2 Mixtures

Ingredient(s)	EC number	CAS number	REACH number	Classification	Notes	Weight percent
phosphoric acid	231-633-2	7664-38-2	01-2119485924-24	Skin corrosion, Category 1B (H314) Acute toxicity - Oral, Category 4 (H302) Serious eye damage, Category 1 (H318) Corrosive to metals, Category 1 (H290)		30-50

Specific concentration limits
phosphoric acid:
- Serious eye damage, Category 1 (H318) >= 25% > Eye irritation, Category 2 (H319) >= 10%
- Skin corrosion, Category 1B (H314) >= 25% > Skin irritation, Category 2 (H315) >= 10%

Workplace exposure limit(s), if available, are listed in subsection 8.1.
ATE, if available, are listed in section 11.
[4] Exempted: polymer. See Article 2(9) of Regulation (EC) No 1907/2006.
For the full text of the H and EUH phrases mentioned in this Section, see Section 16..

SECTION 4: First aid measures

4.1 Description of first aid measures

General information: If unconscious place in recovery position and seek medical advice. Provide fresh air. If breathing is irregular or stopped, administer artificial respiration. No mouth-to-mouth or mouth-to-nose resuscitation. Use Ambu bag or ventilator.

Inhalation: Remove person to fresh air and keep comfortable for breathing. Get medical attention or advice if you feel unwell.

Skin contact: Wash skin with plenty of lukewarm, gently flowing water for at least 30 minutes. Take off immediately all contaminated clothing and wash it before reuse. Immediately call a POISON CENTRE, doctor or physician.

Eye contact: Hold eyelids apart and flush eyes with plenty of lukewarm water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTRE, doctor or physician.

Ingestion: Rinse mouth. Immediately drink 1 glass of water. Never give anything by mouth to an unconscious person. Do NOT induce vomiting. Keep at rest. Immediately call a POISON CENTRE, doctor or physician.

Self-protection of first aider: Consider personal protective equipment as indicated in subsection 8.2.

4.2 Most important symptoms and effects, both acute and delayed

Inhalation: No known effects or symptoms in normal use.

Skin contact: Causes severe burns.

Eye contact: Causes severe or permanent damage.

Ingestion: Ingestion will lead to a strong caustic effect on mouth and throat and to the danger of perforation of oesophagus and stomach.

4.3 Indication of any immediate medical attention and special treatment needed
No information available on clinical testing and medical monitoring. Specific toxicological information on substances, if available, can be found in section 11.

SECTION 5: Firefighting measures

5.1 Extinguishing media
Carbon dioxide. Dry powder. Water spray jet. Fight larger fires with water spray jet or alcohol-resistant foam.

5.2 Special hazards arising from the substance or mixture
No special hazards known.

5.3 Advice for firefighters
As in any fire, wear self contained breathing apparatus and suitable protective clothing including gloves and eye/face protection.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures
Wear suitable protective clothing. Wear eye/face protection. Wear suitable gloves.

6.2 Environmental precautions
Dilute with plenty of water. Do not allow to enter drainage system, surface or ground water.

6.3 Methods and material for containment and cleaning up
Dyke to collect large liquid spills. Use neutralising agent. Absorb with liquid-binding material (sand, diatomite, universal binders). Do not place spilled materials back into the original container. Collect in closed and suitable containers for disposal.

6.4 Reference to other sections
For personal protective equipment see subsection 8.2. For disposal considerations see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling
Measures to prevent fire and explosions:
No special precautions required.
Measures required to protect the environment:
For environmental exposure controls see subsection 8.2.
Advice on general occupational hygiene:
Handle in accordance with good industrial hygiene and safety practice. Keep away from food, drink and animal feeding stuffs. Do not mix with other products unless advised by Diversey. Wash face, hands and any exposed skin thoroughly after handling. Take off immediately all contaminated clothing. Wash contaminated clothing before reuse. Avoid contact with skin and eyes. Do not breathe spray. Use only with adequate ventilation. See chapter 8.2, Exposure controls / Personal protection.

7.2 Conditions for safe storage, including any incompatibilities
Store in accordance with local and national regulations. Store in a closed container. Keep only in original packaging.
For conditions to avoid see subsection 10.4. For incompatible materials see subsection 10.5.

7.3 Specific end use(s)
No specific advice for end use available.

SECTION 8: Exposure controls/personal protection

8.1 Control parameters
Workplace exposure limits

Environmental exposure

Environmental exposure - PNEC

Ingredient(s)	Surface water, fresh (mg/l)	Surface water, marine (mg/l)	Intermittent (mg/l)	Sewage treatment plant (mg/l)
phosphoric acid	-	-	-	-

Environmental exposure - PNEC, continued

Ingredient(s)	Sediment, freshwater (mg/kg)	Sediment, marine (mg/kg)	Soil (mg/kg)	Air (mg/m³)
phosphoric acid	-	-	-	-

8.2 Exposure controls

The following information applies for the uses indicated in subsection 1.2 of the Safety Data Sheet.
If available, please refer to the product information sheet for application and handling instructions.
Normal use conditions are assumed for this section.

Recommended safety measures for handling the undiluted product:

Appropriate engineering controls: If the product is diluted by using specific dosing systems with no risk of splashes or direct skin contact, the personal protection equipment as described in this section is not required.

Appropriate organisational controls: Avoid direct contact and/or splashes where possible. Train personnel.

REACH use scenarios considered for the undiluted product:

	SWED - Sector-specific worker exposure description	LCS	PROC	Duration (min)	ERC
Manual transfer and dilution	AISE_SWED_PW_8a_1	PW	PROC 8a	60	ERC8a

Personal protective equipment

Eye / face protection: Safety glasses or goggles (EN 16321). The use of a full-face shield or other full-face protection is strongly recommended when handling open containers or if splashes may occur.

Hand protection: Chemical-resistant protective gloves (EN 374). Verify instructions regarding permeability and breakthrough time, as provided by the gloves supplier. Consider specific local use conditions, such as risk of splashes, cuts, contact time and temperature.
Suggested gloves for prolonged contact: Material: butyl rubber Penetration time: ≥ 480 min Material thickness: ≥ 0.7 mm
Suggested gloves for protection against splashes: Material: nitrile rubber Penetration time: ≥ 30 min Material thickness: ≥ 0.4 mm
In consultation with the supplier of protective gloves a different type providing similar protection may be chosen.

Body protection: Wear chemical-resistant clothing and boots in case direct dermal exposure and/or splashes may occur (EN 14605).

Respiratory protection: If exposure to liquid particles or splashes cannot be avoided use: half mask (EN 140) or full-face mask (EN 136) with particle filter P2 (EN 143) Consider specific local use conditions. In consultation with the supplier of respiratory protection equipment a different type providing similar protection may be chosen. Specific applications tools may be available to limit exposure. Please refer to the product information sheet for the possibilities. Apply technical measures to comply with the occupational exposure limits, if available.

Environmental exposure controls: Should not reach sewage water or drainage ditch undiluted or unneutralised.

Recommended safety measures for handling the diluted product:

Recommended maximum concentration (% w/w): 20

Appropriate engineering controls: Provide a good standard of general ventilation.

Appropriate organisational controls: Users are advised to consider national Occupational Exposure Limits or other equivalent values, if available.

REACH use scenarios considered for the diluted product:

	SWED	LCS	PROC	Duration (min)	ERC
Machine application Manual application by brushing, wiping or mopping	AISE_SWED_PW_10_1	PW	PROC 10	480	ERC8a
Spray application	AISE_SWED_PW_11_1	PW	PROC 11	60	ERC8a

Manual application	AISE_SWED_PW_19_1	PW	PROC 19	480	ERC8a
Automatic application in a dedicated system	AISE_SWED_PW_4_1	PW	PROC 4	480	ERC8a

Personal protective equipment
Eye / face protection: No special requirements under normal use conditions.
Hand protection: Rinse and dry hands after use. For prolonged contact protection for the skin may be necessary.
Body protection: No special requirements under normal use conditions.
Respiratory protection: Trigger spray bottle application: No special requirements under normal use conditions. Apply technical measures to comply with the occupational exposure limits, if available.

Environmental exposure controls: No special requirements under normal use conditions.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties
Information in this section refers to the product, unless it is specifically stated that substance data is listed

Method / remark

Physical state: Liquid
Colour: Clear , Colourless
Odour: Product specific
Odour threshold: Not applicable
Melting point/freezing point (°C): Not determined — Not relevant to classification of this product
Initial boiling point and boiling range (°C): Not determined — See substance data

Substance data, boiling point

Ingredient(s)	Value (°C)	Method	Atmospheric pressure (hPa)
phosphoric acid	158	Method not given	1013

Method / remark

Flammability (solid, gas): Not applicable to liquids
Flammability (liquid): Not flammable.
Flash point (°C): Not determined
Sustained combustion: Not applicable.
(UN Manual of Tests and Criteria, section 32, L.2)
Lower and upper explosion limit/flammability limit (%): Not determined

Substance data, flammability or explosive limits, if available:

Method / remark

Autoignition temperature: Not determined
Decomposition temperature: Not applicable.
pH: =< 2 (neat) — ISO 4316
Dilution pH: < 2 (20 %) — ISO 4316
Kinematic viscosity: Not determined
Solubility in / Miscibility with water: Fully miscible

Substance data, solubility in water

Ingredient(s)	Value (g/l)	Method	Temperature (°C)
phosphoric acid	Soluble		

Substance data, partition coefficient n-octanol/water (log Kow): see subsection 12.3

Method / remark

Vapour pressure: Not determined — See substance data

Substance data, vapour pressure

Ingredient(s)	Value (Pa)	Method	Temperature (°C)
phosphoric acid	4	Method not given	20

Method / remark

Relative density: ≈ 1.20 (20 °C) — OECD 109 (EU A.3)
Relative vapour density: No data available. — Not relevant to classification of this product
Particle characteristics: No data available. — Not applicable to liquids.

9.2 Other information
9.2.1 Information with regard to physical hazard classes
Explosive properties: Not explosive.
Oxidising properties: Not oxidising.

Corrosion to metals: Corrosive

9.2.2 Other safety characteristics
Acid reserve: ≈ -13.8 (g NaOH / 100g; pH=4)

SECTION 10: Stability and reactivity

10.1 Reactivity
No reactivity hazards known under normal storage and use conditions.

10.2 Chemical stability
Stable under normal storage and use conditions.

10.3 Possibility of hazardous reactions
No hazardous reactions known under normal storage and use conditions.

10.4 Conditions to avoid
None known under normal storage and use conditions.

10.5 Incompatible materials
May be corrosive to metals. Reacts with alkali. Keep away from products containing chlorine-based bleaching agents or sulphites.

10.6 Hazardous decomposition products
None known under normal storage and use conditions.

SECTION 11: Toxicological information

11.1 Information on hazard classes as defined in Regulation (EC) No 1272/2008

Mixture data: .

Relevant calculated ATE(s):
ATE - Oral (mg/kg): >2000

Substance data, where relevant and available, are listed below:.

Acute toxicity
Acute oral toxicity

Ingredient(s)	Endpoint	Value (mg/kg)	Species	Method	Exposure time (h)	ATE Oral (mg/kg)
phosphoric acid	LD_{50}	> 300-5000	Rat	OECD 423 (EU B.1 tris)		2600

Acute dermal toxicity

Ingredient(s)	Endpoint	Value (mg/kg)	Species	Method	Exposure time (h)	ATE Dermal (mg/kg)
phosphoric acid	LD_{50}	2740	Rabbit	Method not given		Not established

Acute inhalative toxicity

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	LC_{50}	850	Rat	Method not given	2

Acute inhalative toxicity, continued

Ingredient(s)	ATE - Inhalation, dust (mg/l)	ATE - Inhalation, mist (mg/l)	ATE - Inhalation, vapour (mg/l)	ATE - Inhalation, gas (mg/l)
phosphoric acid	Not established	Not established	Not established	Not established

Irritation and corrosivity
Skin irritation and corrosivity

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	Corrosive	Rabbit	OECD 404 (EU B.4)	

Eye irritation and corrosivity

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	Severe damage	Rabbit	Method not given	

Respiratory tract irritation and corrosivity

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	No data available			

Sensitisation

Sensitisation by skin contact

Ingredient(s)	Result	Species	Method	Exposure time (h)
phosphoric acid	Not sensitising	Human	Human experience	

Sensitisation by inhalation

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	No data available			

CMR effects (carcinogenicity, mutagenicity and toxicity for reproduction)

Mutagenicity

Ingredient(s)	Result (in-vitro)	Method (in-vitro)	Result (in-vivo)	Method (in-vivo)
phosphoric acid	No evidence for mutagenicity, negative test results	OECD 471 (EU B.12/13) OECD 473 OECD 476 (Mouse lymphoma)	No data available	

Carcinogenicity

Ingredient(s)	Effect
phosphoric acid	No data available

Toxicity for reproduction

Ingredient(s)	Endpoint	Specific effect	Value (mg/kg bw/d)	Species	Method	Exposure time	Remarks and other effects reported
phosphoric acid	NOAEL	Developmental toxicity	410	Rat	OECD 422, oral	10 day(s)	No evidence for reproductive toxicity No evidence for developmental toxicity

Repeated dose toxicity

Sub-acute or sub-chronic oral toxicity

Ingredient(s)	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time (days)	Specific effects and organs affected
phosphoric acid	NOAEL	250	Rat	OECD 422, oral		

Sub-chronic dermal toxicity

Ingredient(s)	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time (days)	Specific effects and organs affected
phosphoric acid		No data available				

Sub-chronic inhalation toxicity

Ingredient(s)	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time (days)	Specific effects and organs affected
phosphoric acid		No data available				

Chronic toxicity

Ingredient(s)	Exposure route	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time	Specific effects and organs affected	Remark
phosphoric acid			No data available					

STOT-single exposure

Ingredient(s)	Affected organ(s)
phosphoric acid	No data available

STOT-repeated exposure

Ingredient(s)	Affected organ(s)
phosphoric acid	No data available

Aspiration hazard

Substances with an aspiration hazard (H304), if any, are listed in section 3.

Potential adverse health effects and symptoms
Effects and symptoms related to the product, if any, are listed in subsection 4.2.

11.2 Information on other hazards
11.2.1 Endocrine disrupting properties
Endocrine disrupting properties - Human data, if available:

11.2.2 Other information
No other relevant information available.

SECTION 12: Ecological information

12.1 Toxicity

No data is available on the mixture .

Substance data, where relevant and available, are listed below:

Aquatic short-term toxicity
Aquatic short-term toxicity - fish

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	LC_{50}	138	*Gambusia affinis*	Method not given	96

Aquatic short-term toxicity - crustacea

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	EC_{50}	> 100	*Daphnia magna Straus*	OECD 202 (EU C.2)	48

Aquatic short-term toxicity - algae

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	EC_{50}	> 100	*Desmodesmus subspicatus*	OECD 201 (EU C.3)	72

Aquatic short-term toxicity - marine species

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (days)
phosphoric acid		No data available			

Impact on sewage plants - toxicity to bacteria

Ingredient(s)	Endpoint	Value (mg/l)	Inoculum	Method	Exposure time
phosphoric acid	EC_{50}	270	*Activated sludge*	Method not given	

Aquatic long-term toxicity
Aquatic long-term toxicity - fish

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time	Effects observed
phosphoric acid		No data available				

Aquatic long-term toxicity - crustacea

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time	Effects observed
phosphoric acid		No data available				

Aquatic toxicity to other aquatic benthic organisms, including sediment-dwelling organisms, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw sediment)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity
Terrestrial toxicity - soil invertebrates, including earthworms, if available:

Ingredient(s)	Endpoint	Value	Species	Method	Exposure	Effects observed

		(mg/kg dw soil)			time (days)	
phosphoric acid		No data available				

Terrestrial toxicity - plants, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw soil)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity - birds, if available:

Ingredient(s)	Endpoint	Value	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity - beneficial insects, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw soil)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity - soil bacteria, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw soil)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

12.2 Persistence and degradability

Abiotic degradation

Abiotic degradation - photodegradation in air, if available:

Ingredient(s)	Half-life time	Method	Evaluation	Remark
phosphoric acid	No data available			

Abiotic degradation - hydrolysis, if available:

Ingredient(s)	Half-life time in fresh water	Method	Evaluation	Remark
phosphoric acid	No data available			

Abiotic degradation - other processes, if available:

Ingredient(s)	Type	Half-life time	Method	Evaluation	Remark
phosphoric acid		No data available			

Biodegradation

Ready biodegradability - aerobic conditions

Ingredient(s)	Inoculum	Analytical method	DT 50	Method	Evaluation
phosphoric acid					Not applicable (inorganic substance)

Ready biodegradability - anaerobic and marine conditions, if available:

Ingredient(s)	Medium & Type	Analytical method	DT 50	Method	Evaluation
phosphoric acid					No data available

Degradation in relevant environmental compartments, if available:

Ingredient(s)	Medium & Type	Analytical method	DT 50	Method	Evaluation
phosphoric acid					No data available

12.3 Bioaccumulative potential

Partition coefficient n-octanol/water (log Kow)

Ingredient(s)	Value	Method	Evaluation	Remark
phosphoric acid	No data available		No bioaccumulation expected	

Bioconcentration factor (BCF)

Ingredient(s)	Value	Species	Method	Evaluation	Remark

phosphoric acid	No data available			No bioaccumulation expected	

12.4 Mobility in soil
Adsorption/Desorption to soil or sediment

Ingredient(s)	Adsorption coefficient Log Koc	Desorption coefficient Log Koc(des)	Method	Soil/sediment type	Evaluation
phosphoric acid	No data available				Potential for mobility in soil, soluble in water

12.5 Results of PBT and vPvB assessment
Substances that fulfill the criteria for PBT/vPvB, if any, are listed in section 3.

12.6 Endocrine disrupting properties
Endocrine disrupting properties - Environmental effects, if available:

12.7 Other adverse effects
No other adverse effects known.

SECTION 13: Disposal considerations

13.1 Waste treatment methods

Waste from residues / unused products: The concentrated contents or contaminated packaging should be disposed of by a certified handler or according to the site permit. Release of waste to sewers is discouraged. The cleaned packaging material is suitable for energy recovery or recycling in line with local legislation.

European Waste Catalogue: 20 01 14* - acids.

Empty packaging Recommendation: Dispose of observing national or local regulations.

Suitable cleaning agents: Water, if necessary with cleaning agent.

SECTION 14: Transport information

Land transport (ADR/RID), Sea transport (IMDG), Air transport (ICAO-TI / IATA-DGR)

14.1 UN number or ID number: 1805

14.2 UN proper shipping name:
Phosphoric acid, solution

14.3 Transport hazard class(es):
Transport hazard class (and subsidiary risks): 8

14.4 Packing group: III

14.5 Environmental hazards:
Environmentally hazardous: No
Marine pollutant: No

14.6 Special precautions for user: None known.

14.7 Maritime transport in bulk according to IMO instruments: The product is not transported in bulk tankers.

Other relevant information:

ADR
Classification code: C1
Tunnel restriction code: (E)
Hazard identification number: 80

IMO/IMDG
EmS: F-A, S-B

The product has been classified, labelled and packaged in accordance with the requirements of ADR and the provisions of the IMDG Code
Transport regulations include special provisions for certain classes of dangerous goods packed in limited quantities.

SECTION 15: Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

National regulations :
- Control of Poisons and Explosives Precursors Regulations 2015
- Regulation (EC) 1907/2006 - REACH (UK amended)
- Regulation (EC) 1272/2008 - CLP (UK amended)
- Regulation (EC) 648/2004 - Detergents regulation (UK amended)
- Delegated Regulation (EU) 2017/2100 and Regulation (EU) 2018/605 (UK amended)
- Agreement concerning the International Carriage of Dangerous Goods by Road (ADR)
- International Maritime Dangerous Goods (IMDG) Code

Authorisations or restrictions (Regulation (EC) No 1907/2006, Title VII respectively Title VIII): Not applicable.

Ingredients according to Detergents Regulation
non-ionic surfactants < 5 %

The surfactant(s) contained in this preparation complies(comply) with the biodegradability criteria as laid down in Regulation (EC) 648/2004 on detergents (UK amended). Data to support this assertion are held at the disposal of the competent authorities of the UK and will be made available to them, at their direct request or at the request of a detergent manufacturer.

Comah - classification: Not classified

15.2 Chemical safety assessment
A chemical safety assessment has not been carried out on the mixture

SECTION 16: Other Information

The information in this document is based on our best present knowledge. However, it does not constitute a guarantee for any specific product features and does not establish a legally binding contract

SDS code: MSDS1826 **Version:** 05.0 **Revision:** 2025-05-19

Reason for revision:
This data sheet contains changes from the previous version in section(s):, 1, 9, 16

Classification procedure
The classification of the mixture is in general besed on calculation methods using substance data, as required by Regulation (EC) No 1272/2008. If for certain classifications data on the mixture is available or for example bridging principles or weight of evidence can be used for classification, this will be indicated in the relevant sections of the Safety Data Sheet. See section 9 for physical chemical properties, section 11 for toxicological information and section 12 for ecological information.

Abbreviations and acronyms:
- AISE - The International Association for Soaps, Detergents and Maintenance Products
- ATE - Acute Toxicity Estimate
- DNEL - Derived No Effect Limit
- EC50 - effective concentration, 50%
- ERC - Environmentel release categories
- EUH - CLP Specific hezard statement
- LC50 - Lethal Concentration, 50% / Median Lethal Concentration
- LCS - Life cycle stage
- LD50 - Lethal Dose, 50% / Median Lethal dose
- NOAEL - No observed adverse effect level
- NOEL - No observed effect level
- OECD - Organisation for Economic Cooperation and Development
- PBT - Persistent, Bioaccumulative and Toxic
- PNEC - Predicted No Effect Concentration
- PROC - Process categories
- REACH number - REACH registration number, without supplier specific part
- vPvB - very Persistent and very Bioaccumulative
- H290 - May be corrosive to metals.
- H302 - Harmful if swallowed.
- H314 - Ceuses severe skin burns and eye damage.
- H318 - Causes serious eye damage.

End of Safety Data Sheet

Diversey
A SOLENIS COMPANY

Suma® Select
Rinse Aid

Revision: 2024-07-31

Version: 03.0

1. IDENTIFICATION

Product name: Suma® Select
Rinse Aid

SDS #: MS0800353

Recommended use:
- Industrial/Institutional
- Warewashing product
- This product is intended to be diluted prior to use

Uses advised against: Uses other than those identified are not recommended

Manufacturer, importer, supplier:
US Headquarters
Diversey, Inc.
1300 Altura Rd., Suite 125
Fort Mill, SC 29708
Phone: 1-888-352-2249
SDS Internet Address: https://sds.diversey.com

Canadian Headquarters
Diversey Canada, Inc.
6150 Kennedy Road Unit 3
Mississauga, Ontario L5T 2J4
Phone: 1-800-668-7171

Emergency telephone number: 1-800-851-7145; 1-651-917-6133 (Int'l)

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
This product is not classified as hazardous according to OSHA 29CFR 1910.1200 (HazCom 2012-GHS) and Canadian Hazardous Products Regulations (HPR) (WHMIS 2015-GHS).
Not classified

Hazard Statements
None required.
Precautionary Statements
None required.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients

Ingredient(s)	CAS #	Weight %
Proprietary	Proprietary	3 - 7%
Alcohols, C6-C10, ethoxylated propoxylated	68987-81-5	3 - 7%
Sodium xylene sulfonate	1300-72-7	0.5 - 1.5%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: Rinse with plenty of water. If irritation occurs and persists, get medical attention.
Skin: Rinse with plenty of water. Wash with plenty of water for at least 15 minutes.
Inhalation: No specific first aid measures are required.
Ingestion: IF SWALLOWED: Call a Poison Center (1-800-851-7145) or doctor/physician if you feel unwell.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.

[redacted]

5. FIRE-FIGHTING MEASURES

Specific methods:	No special methods required
Suitable extinguishing media:	The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards:	None known.

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions:	Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods:	Clean-up methods - large spillage. Absorb spill with inert material (e.g. dry sand or earth), then place in a chemical waste container. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Avoid contact with skin and eyes. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Keep tightly closed in a dry, cool and well-ventilated place.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines:

Undiluted Product:

Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	No personal protective equipment required under normal use conditions.
Hand protection:	No personal protective equipment required under normal use conditions.
Skin and body protection:	No personal protective equipment required under normal use conditions.
Respiratory protection:	No personal protective equipment required under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

[redacted]

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 1.02 Kg/L
Bulk density: No information available
Flash point (°F): > 200.12 °F > 93.4 °C
Kinematic viscosity No information available
VOC: 0 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: Not applicable
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , Blue
Odor: Surfactant
Boiling point/range: Not determined
Decomposition temperature: Not determined
Solubility: Completely Soluble
Relative Density (relative to water): 1.02
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.
pH: ≈ 8
Corrosion to metals: Not corrosive to metals

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products; Sections 94508

10. STABILITY AND REACTIVITY

Reactivity:	Not Applicable
Stability:	The product is stable
Possibility of hazardous reactions:	None known
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Do not mix with any other product or chemical unless specified in the use directions.
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: May be mildly irritating to skin. Symptoms may include redness and/or transient discomfort.
Eye contact: May be mildly irritating to eyes.
Ingestion: No information available.
Inhalation: No information available.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

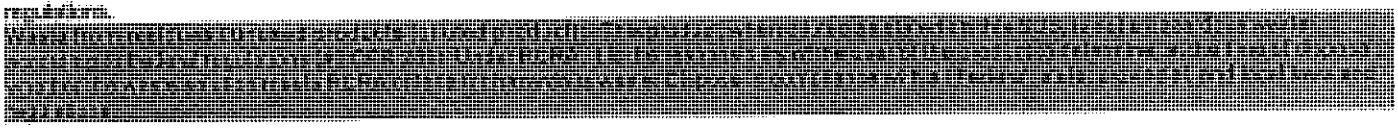
Numerical measures of toxicity

ATE - Oral (mg/kg):	>2000
ATE - Dermal (mg/kg):	>2000
ATE - Inhalatory, gases (mg/l):	>20000
ATE - Inhalatory, mists (mg/l):	>5
ATE - Inhalatory, vapors (mg/l):	>20

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.



Bioaccumulation: No information available.

Mobility: No information available.

Other adverse effects No information available.

13. DISPOSAL CONSIDERATIONS

Waste from residues / unused products (undiluted product): This product, as sold, if discarded or disposed, is not a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and regulations.

RCRA Hazard Class (undiluted product): Not Regulated
RCRA Hazard Class (diluted product): Not Regulated
Contaminated Packaging: Do not re-use empty containers.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: This product is not regulated for transport.

DOT (Ground) Bill of Lading Description: NOT REGULATED

IMDG (Ocean) Bill of Lading Description: NOT REGULATED

15. REGULATORY INFORMATION

International Inventories at CAS# Level

TSCA	All components are listed or otherwise exempt
DSL	All components are listed or otherwise exempt

WARNING: This product can expose you to chemicals including Ethylene oxide which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
Skin corrosion, Category 1B
Serious eye damage, Category 1
Corrosive to metals, Category 1

Signal word: **Danger.**

Hazard Statements
CAUSES SEVERE SKIN BURNS AND SERIOUS EYE DAMAGE. MAY BE CORROSIVE TO METALS.

Precautionary Statements
Causes burns/ serious damage to mouth, throat and stomach. Keep container tightly closed. Keep only in original container. Avoid contact with eyes, skin and clothing. Wash affected areas thoroughly after handling. Wear protective gloves, protective clothing and eye or face protection. IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes. Immediately call a Poison Center (1-800-851-7145) or physician. Absorb spillage to prevent material damage. Store locked up. Store in corrosive-resistant container with a resistant inner liner. Dispose of in accordance with all federal, state and local applicable regulations. SUPPLEMENTAL INFORMATION:. DO NOT MIX WITH AMMONIA, BLEACH OR OTHER CHLORINATED COMPOUNDS. Mix only with water. Can react to release hazardous gases. May vigorously react with strong alkaline products resulting in spattering and excessive heat.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

Classification for the diluted product 1:400
This product, when diluted as stated on the label, is not classified as hazardous according to OSHA 29CFR 1910.1200 (HazCom 2012-GHS) and Canadian Hazardous Products Regulations (HPR) (WHMIS 2015-GHS).

Hazard and Precautionary Statements
None required.

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients

Ingredient(s)	CAS #	Weight %
Sodium hydroxide	1310-73-2	7 - 13%
Sodium polyacrylate	9003-04-7	1 - 5%
Trisodium citrate	68-04-2	1 - 5%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes.
Skin: IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash with plenty of water for at least 15 minutes.
Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing.
Ingestion: IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.

Diluted Product:

5. FIRE-FIGHTING MEASURES

Specific methods: No special methods required
Suitable extinguishing media: The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards: Corrosive material (See sections 8 and 10).

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

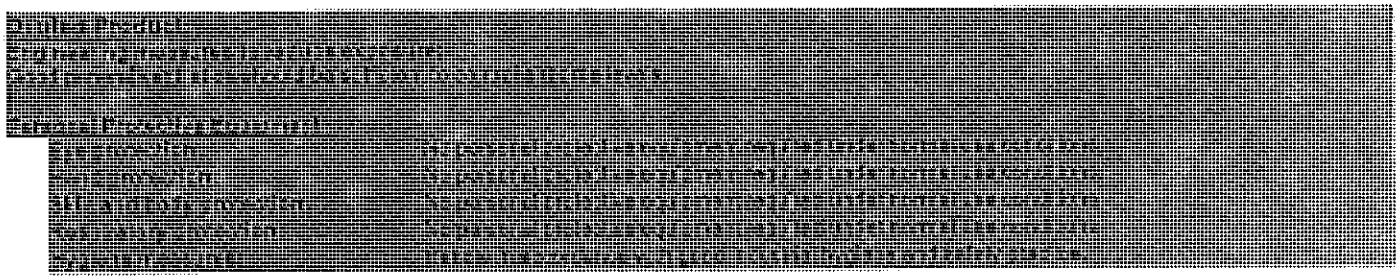
Personal precautions: Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods: Clean-up methods - large spillage. Absorb spill with inert material (e.g. dry sand or earth), then place in a chemical waste container. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Can react to release hazardous gases. May vigorously react with acids resulting in spattering and excessive heat. Do not mix with other products or chemicals except as directed on the label. Mix only with water. Avoid contact with skin, eyes and clothing. Wash thoroughly after handling. Do not taste or swallow. Product residue may remain on/in empty containers. All precautions for handling the product must be used in handling the empty container and residue. Avoid breathing vapors or mists. Use only with adequate ventilation. Remove and wash contaminated clothing and footwear before re-use. Absorb spillage to prevent material damage. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Store in corrosive-resistant container with a resistant inner liner.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines:



Ingredient(s)	ACGIH	OSHA
Sodium hydroxide	2 mg/m³ (Ceiling)	2 mg/m³ (TWA)

Undiluted Product:

Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	Chemical-splash goggles.
Hand protection:	Chemical-resistant gloves.
Skin and body protection:	Protective footwear. Wear suitable protective clothing.
Respiratory protection:	No personal protective equipment required under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 1.237 Kg/L
Bulk density: No information available
Flash point (°F): > 200.1 °F > 93.4 °C
Kinematic viscosity mPa.s
10
VOC: 0 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: Not applicable
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , Red
Odor: Product specific
Boiling point/range: Not determined
Decomposition temperature: Not determined
Solubility: Completely Soluble
Relative Density (relative to water): 1.24
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.

pH: 13.9
Corrosion to metals: Metal corrosive

Dilution pH: 11.5
Dilution Flash Point (°F): > 200.1 °F > 93.4 °C
VOC % by wt. at use dilution: 0 %

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products, Sections 94508

10. STABILITY AND REACTIVITY

Reactivity:	Not Applicable
Stability:	The product is stable
Possibility of hazardous reactions:	May vigorously react with acids resulting in spattering and excessive heat.
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Acids. Strong acids. Do not mix with any other product or chemical unless specified in the use directions.
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Ingestion, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: Corrosive. Causes severe burns. Symptoms may include burns, blisters, redness and pain (which may be delayed).
Eye contact: Corrosive. Causes serious eye damage. Symptoms may include pain, burning sensation, redness, watering, blurred vision or loss of vision.
Ingestion: Causes burns/ serious damage to mouth, throat and stomach. Symptoms may include stomach pain and nausea.
Inhalation: May cause irritation and corrosive effects to nose, throat and respiratory tract. Symptoms may include coughing and difficulty breathing.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

Numerical measures of toxicity

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.

Bioaccumulation: No information available.

Mobility: No information available.

Other adverse effects No information available.

13. DISPOSAL CONSIDERATIONS

Waste from residues / unused products (undiluted product): This product, as sold, if discarded or disposed, is a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and

RCRA Hazard Class (undiluted product): D002 Corrosive Waste
RCRA Hazard Class (diluted product): Not Regulated
Contaminated Packaging: Do not re-use empty containers.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: The information provided below is the full transportation classification for this product. This description does not account for the package size(s) of this product, that may fall under a quantity exception, according to the applicable transportation regulations. When shipping dangerous goods, please consult with your internal, certified hazardous materials specialist to determine if any exceptions can be applied to your shipment.

Mississauga, Ontario L5T 2J4
Phone: 1-800-668-7171

Emergency telephone number: 1-800-851-7145; 1-651-917-6133 (Int'l)

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
Skin corrosion, Category 1C
Serious eye damage, Category 1
Corrosive to metals, Category 1

Signal word: **Danger.**

Hazard Statements
CAUSES SEVERE SKIN BURNS AND SERIOUS EYE DAMAGE. MAY BE CORROSIVE TO METALS.

Precautionary Statements
Causes burns/ serious damage to mouth, throat and stomach. Keep container tightly closed. Keep only in original container. Do not breathe vapors. Avoid contact with eyes, skin and clothing. Wash affected areas thoroughly after handling. Wear protective gloves, protective clothing and eye or face protection. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes. Immediately call e Poison Center (1-800-851-7145) or physician. Absorb spillage to prevent material damage. Store in corrosive-resistant container with a resistant inner liner. Dispose of in accordance with all federal, state and local applicable regulations. SUPPLEMENTAL INFORMATION:. DO NOT MIX WITH AMMONIA, BLEACH OR OTHER CHLORINATED COMPOUNDS. Mix only with water. Can react to release hazardous gases. May vigorously react with strong alkaline products resulting in spattering and excessive heat. DO NOT MIX WITH ACIDS, TOILET BOWL CLEANER, AMMONIA OR ANY OTHER CHEMICAL.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

Classification for the diluted product 1:256
This product, when diluted as stated on the label, is not classified as hazardous according to OSHA 29CFR 1910.1200 (HazCom 2012-GHS) and Canadian Hazardous Products Regulations (HPR) (WHMIS 2015-GHS).

Hazard and Precautionary Statements
None required

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients

Ingredient(s)	CAS #	Weight %
Sodium hypochlorite	7681-52-9	3 - 7%
Sodium chloride	7647-14-5	3 - 7%
Sodium hydroxide	1310-73-2	> 0.1 - < 1%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes.
Skin: IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash with plenty of water for at least 15 minutes.
Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing.
Ingestion: IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water.
Notes to physician: Probable mucosal damage may contraindicate the use of gastric lavage. Measures against circulatory shock, respiratory depression and convulsion may be needed.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.
Aggravated Medical Conditions: Individuals with chronic respiratory disorders such as asthma, chronic bronchitis, emphysema, etc., may be more susceptible to irritating effects.

[redacted]

5. FIRE-FIGHTING MEASURES

Specific methods: No special methods required
Suitable extinguishing media: The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards: Corrosive material (See sections 8 and 10).

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

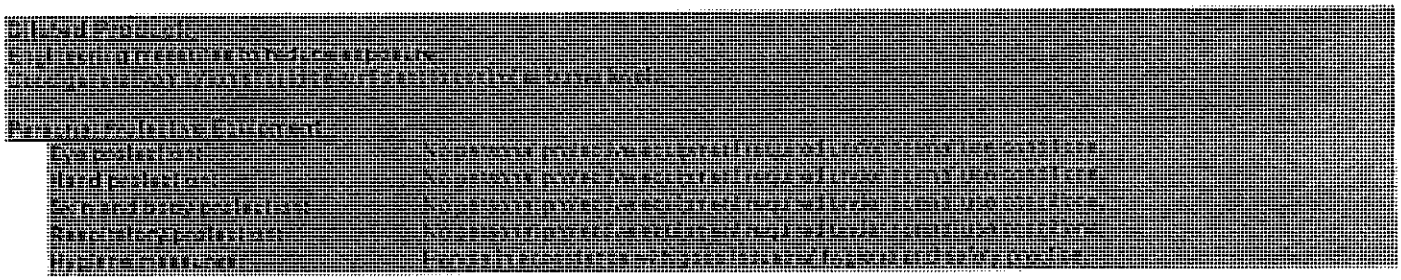
Personal precautions: Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods: Clean-up methods - large spillage. Material is toxic to fish. Do not discharge into lakes, streams, ponds, or public water unless in accordance with an NPDES permit. Prevent product from entering drains. Water runoff can cause environmental damage. Soak up with inert absorbent material. Sweep up and shovel into suitable containers for disposal. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Can react to release hazardous gases. May vigorously react with acids resulting in spattering and excessive heat. Do not mix with other products or chemicals except as directed on the label. Mix only with water. Avoid contact with skin, eyes and clothing. Wash thoroughly after handling. Do not taste or swallow. Product residue may remain on/in empty containers. All precautions for handling the product must be used in handling the empty container and residue. Avoid breathing vapors or mists. Use only with adequate ventilation. Remove and wash contaminated clothing and footwear before re-use. Absorb spillage to prevent material damage. DO NOT MIX WITH ACIDS, TOILET BOWL CLEANERS,

AMMONIA, OR ANY OTHER CHEMICAL. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Store in corrosive-resistant container with a resistant inner liner.
Aerosol Level (if applicable) : Not applicable.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION



Exposure Guidelines:

Ingredient(s)	ACGIH	OSHA
Sodium hydroxide	2 mg/m³ (Ceiling)	2 mg/m³ (TWA)

Undiluted Product:
Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	Chemical-splash goggles.
Hand protection:	Chemical-resistant gloves.
Skin and body protection:	Protective footwear. Wear suitable protective clothing.
Respiratory protection:	No personal protective equipment required under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 1.08 Kg/L
Bulk density: No information available
Flash point (°F): > 200.12 °F > 93.4 °C
Kinematic viscosity No information available
VOC: 0 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: Not applicable
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , from Yellow to Green
Odor: Chlorine
Boiling point/range: Not determined
Decomposition temperature: Not determined Not applicable
Solubility: Completely Soluble
Relative Density (relative to water): 1.08
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.
pH: 12.20
Corrosion to metals: Metal corrosive

Dilution pH: 11.20
Dilution Flash Point (°F): > 200.12 °F > 93.4 °C
VOC % by wt. at use dilution: 0 %

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products, Sections 94508

10. STABILITY AND REACTIVITY

Reactivity: Not Applicable

Stability:	The product is stable
Possibility of hazardous reactions:	May vigorously react with acids resulting in spattering and excessive heat.
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Acids. Strong acids. Do not mix with any other product or chemical unless specified in the use directions. Ammonia.
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Ingestion, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: Corrosive. Causes severe burns. Symptoms may include burns, blisters, redness and pain (which may be delayed).
Eye contact: Corrosive. Causes serious eye damage. Symptoms may include pain, burning sensation, redness, watering, blurred vision or loss of vision.
Ingestion: Causes burns/ serious damage to mouth, throat and stomach. Symptoms may include stomach pain and nausea.
Inhalation: May cause irritation and corrosive effects to nose, throat and respiratory tract. Symptoms may include coughing and difficulty breathing.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

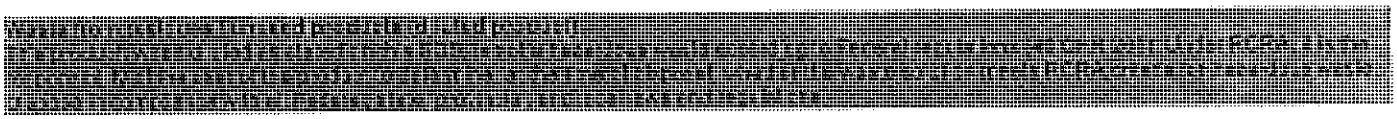
Numerical measures of toxicity
ATE - Oral (mg/kg): >5000

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.

Bioaccumulation: No information available.



Mobility: No information available.

Other adverse effects No other adverse effects known.

13. DISPOSAL CONSIDERATIONS

Do not contaminate water, food, or feed by storage or disposal.

Waste from residues / unused products (undiluted product):
This product, as sold, if discarded or disposed, is a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and regulations.

Pesticide Storage:
Refer to product label.

Pesticide Disposal:
Refer to product label.

Container Disposal:
Refer to product label.

RCRA Hazard Class (undiluted product): D002 Corrosive Waste.
RCRA Hazard Class (diluted product): Not Regulated.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: The information provided below is the full transportation classification for this product. This description does not account for the package size(s) of this product, that may fall under a quantity exception, according to the applicable transportation regulations. When shipping dangerous goods, please consult with your internal, certified hazardous materials specialist to determine if any exceptions can be applied to your shipment.

DOT (Ground) Bill of Lading Description: UN1791, HYPOCHLORITE SOLUTION, 8, III

IMDG (Ocean) Bill of Lading Description: UN1791, HYPOCHLORITE SOLUTION, 8, III, MARINE POLLUTANT

15. REGULATORY INFORMATION

International Inventories at CAS# Level

TSCA	All components are listed or otherwise exempt
DSL	All components are listed or otherwise exempt

EPA Reg. No. : 875-190
This chemical is a pesticide product registered by the United States Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law. These requirements differ from the classification criteria and hazard information required for safety data sheets (SDS), and for workplace labels of non-pesticide chemicals. The hazard information required on the pesticide label is reproduced below. The pesticide label also includes other important information, including directions for use.

DANGER: CORROSIVE. May cause severe skin and eye irritation or chemical burns to broken skin. Causes eye damage. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves when handling this product. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove contaminated clothing and wash clothing before reuse. Avoid breathing vapors. Vacate poorly ventilated areas as soon as possible. Do not return until odors have dissipated. PHYSICAL AND CHEMICAL HAZARDS: STRONG OXIDIZING AGENT. Mix only with water according to label directions. Mixing this product with gross filth such as feces, urine, etc., or with ammonia, acids, detergents or other chemicals may release hazardous gases, which are irritating to eyes, lungs and mucous membranes. ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish and aquatic organisms.

Floor drains observed in the bathroom of the Essex Elementary School gymnasium bathroom.

Grease traps observed in the Essex Elementary School cafeteria.

APPENDIX C

ENVIRONMENTAL SITE ASSESSMENT OWNER QUESTIONNAIRE

Environmental Questionnaire

This questionnaire is to be completed by the site owner or representative with direct knowledge of the property.

Site name:	**Essex Elementary School**
Street	12 Story Street
City, State, Zip	Essex Ma,01929

This questionnaire was completed by:

Name:	Steve Hunt
Title:	Maintenance Supervisor
Organization:	Manchester Essex Regional School District
Address:	36 Lincoln street Manchester Ma
Telephone:	9783251110
Email:	Hunts@mersd.org
Date completed:	9/23/25
Relationship to site:	Maintenance Supervisor for school district

	QUESTION	RESPONSE
1.	Is the *property* or any *adjoining property* used for an industrial use?	Yes No x Unknown ____ Explanation:
2.	To the best of your knowledge, has the *property* or any *adjoining property* been used for an industrial use in the past?	Yes _____ No x Unknown ____ Explanation:
3.	Is the *property* or any *adjoining property* used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Yes _____ No x Unknown ____ Explanation:
4.	To the best of your knowledge has the *property* or any *adjoining property* been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Yes _____ No x Unknown ____ Explanation:
5.	Are there currently, or to the best of your knowledge have there been previously, any damaged or discarded automobile or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the *property* or at the facility?	Yes _____ No x Unknown ____ Explanation:
6.	Are there currently, or to the best of your knowledge have there been previously, any industrial *drums* (typically 55 gal [208 L]) or sacks of chemicals located on the property or at the facility?	Yes _____ No x Unknown ____ Explanation:

	QUESTION	RESPONSE
7.	Has *fill dirt* been brought onto the property that originated from a contaminated site or that is of an unknown origin?	Yes _____ No x Unknown ____ Explanation:
8.	Are there currently, or to the best of your knowledge have there been previously, any *pits, ponds, or lagoons* located on the *property* in connection with waste treatment or waste disposal?	Yes _____ No x Unknown ____ Explanation:
9.	Is there currently, or to the best of your knowledge have there been previously, any stained soil on the *property*?	Yes _____ No x Unknown ____ Explanation:
10.	Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	Yes x_____ No Unknown ____ Explanation Septic tank and oil storage tank removed
11.	Are there currently, or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* adjacent to any structure located on the *property*?	Yes _____ No x Unknown ____ Explanation:
12.	Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	Yes x No _____ Unknown ____ Explanation: Regular use of cleaning products in drain lines. Organic stains located in crawl spaces and boiler room from minerals in ground water.
13.	If the *property* is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated contaminated by any government environmental/health agency?	Yes _____ No x Unknown ____ Explanation:
14.	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?	Yes x No _____ Unknown ____ Explanation: a.) Prior to the construction of the school building in 1957, the land was purchased in parts starting in 1947 from the previous land owners. There is no available information to suggest it was used for any commercial or industrial purposes.

	QUESTION	RESPONSE
		b, d) I am unaware of any chemical releases or environmental cleanups that have taken place on the property
15.	Does the *owner* or *occupant* of the *property* have any knowledge of *environmental liens* or governmental notification relating to the past or recurrent violations of environmental laws with respect to the *property* or any facility located on the *property*?	Yes _____ No x Unknown ____ Explanation:
16.	Has the *owner* or *occupant* of the *property* been informed of the past or current existence of *hazardous substances* or petroleum *products* or environmental violations with respect to the *property* or any facility located on the *property*?	Yes x No _____ Unknown ____ Explanation: AHERA 3 year inspection report provided by Atlas
17.	Does the *owner* or *occupant* of the property have any knowledge of any environmental site assessment of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	Yes x No _____ Unknown ____ Explanation: AHERA 3 year inspection report provided by Atlas
18.	Does the *owner* or *occupant* of the *property* know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property* by any owner or occupant of the *property*?	Yes _____ No x Unknown ____ Explanation:
19.	Does the *property* discharge wastewater on or adjacent to the *property* other than stormwater into a sanitary sewer system?	Yes _____ No x Unknown ____ Explanation:
20.	To the best of your knowledge, have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the *property*?	Yes _____ No x Unknown ____ Explanation:
21.	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs on the *property*?	Yes _____ No Unknown x Explanation: Transformer owned by national grid, located in locked cabinet with no current access available to school staff.
22.	Are there any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls in place at the site and/or have they been filed or recorded in a registry under federal, tribal, state, or local law?	Yes _____ No x Unknown Explanation:
23.	As part of this study, can you provide any of the following? • Previous environmental site assessment reports	If yes, please highlight which and provide Mabbett with a copy of said report.

	QUESTION	RESPONSE
	• Environmental compliance audit reports • Environmental permits (including but not limited to solid waste disposal, hazardous waste disposal, NPDES, underground injection permits) • Registrations for aboveground and underground storage tanks • Registrations for underground injection systems • Material safety data sheets (MSDS) • Community right-to-know plan • Safety plans, preparedness and prevention plans, spill prevention, countermeasure and control plans • Reports regarding hydraulic conditions at the property and surrounding area • Hazardous waste generator notices or reports • Geotechnical studies • Risk assessments • Reports regarding any self-directed or other cleanup activities conducted at the property	Will include copies of chemical MSDS and AHERA 3 year inspection report.

Preparer represents that to the best of the preparer's knowledge the above statements and facts are true and correct and to the best of the preparer's actual knowledge, no material facts have been suppressed or misstated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/26/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ESSEX RIVER Site ID: 0102693 EPA Id: MAD985318559	ROUTE 133	E 1/4 - 1/2 (0.441 mi.)	F21	73

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state and tribal brownfield sites

MA BROWNFIELDS: Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

A review of the MA BROWNFIELDS list, as provided by EDR, has revealed that there is 1 MA BROWNFIELDS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

EXECUTIVE SUMMARY

Local Lists of Landfill / Solid Waste Disposal Sites

ODI: An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

A review of the ODI list, as provided by EDR, and dated 06/30/1985 has revealed that there is 1 ODI site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ESSEX SANITARY LANDF	OFF LANDING ROAD	SSE 1/4 - 1/2 (0.267 mi.)	10	37

Other Ascertainable Records

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NO LOCATION AID	8 MAIN ST	ENE 1/4 - 1/2 (0.373 mi.)	E16	59
ERNIE'S SERVICE STAT	8 MAIN STREET	ENE 1/4 - 1/2 (0.373 mi.)	E17	60

MA HW GEN: Permanent generator identification numbers for all Massachusetts generators of hazardous waste and waste oil that have registered with or notified MassDEP of their hazardous waste activities.

A review of the MA HW GEN list, as provided by EDR, and dated 06/04/2025 has revealed that there is 1 MA HW GEN site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEAL AUTOMOTIVE State Generator Status: VQG-MA EPA Id: MAD985266402	15 WESTERN AVE	NE 1/8 - 1/4 (0.185 mi.)	B8	24

RI MANIFEST: Hazardous waste manifest information

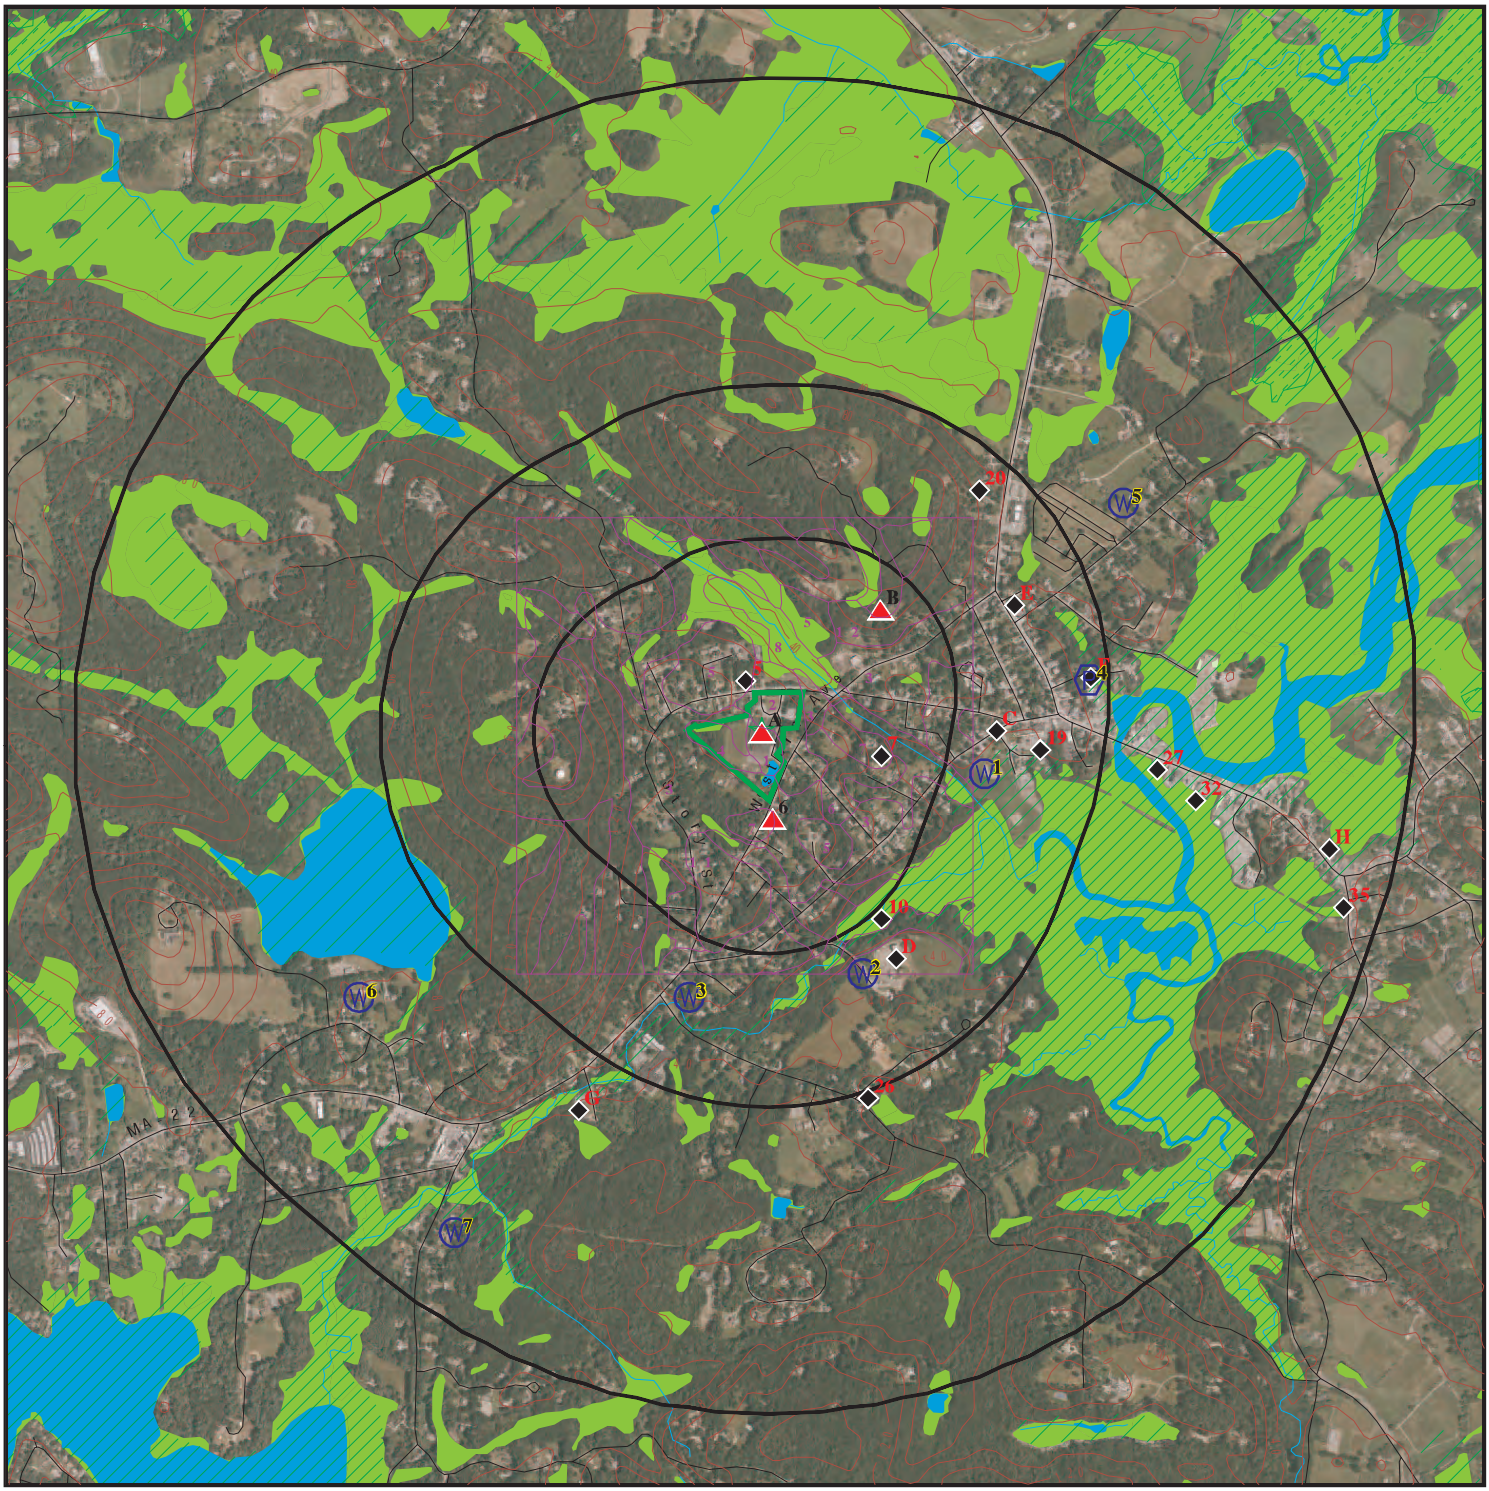
A review of the RI MANIFEST list, as provided by EDR, and dated 12/31/2020 has revealed that there is 1 RI MANIFEST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEAL AUTOMOTIVE EPA Id: MAD985266402 Manifest Document Number: RIG0251040	***15 WESTERN AVE***	***NE 1/8 - 1/4 (0.185 mi.)***	***B9***	***25***

EXECUTIVE SUMMARY

MA MERCURY: A listing of locations, collecting and recycling for mercury-added products. Mercury is toxic to the human nervous system, as well as fish and animals. Mercury can enter the body either through skin absorption or through inhalation of mercury vapors. At room temperature, small beads of mercury will vaporize.

A review of the MA MERCURY list, as provided by EDR, and dated 04/02/2025 has revealed that there is 1 MA MERCURY site within approximately 0.5 miles of the target property.



Lower Elevation	Address	Direction / Distance	Map ID	Page

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).

ESSEX ELEMENTARY (Continued) **1008331072**

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
The Massachusetts - Environmental Protection Integrated Computer System (MA-EPICS) is the central repository for all environmental protection data for the State of Massachusetts.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

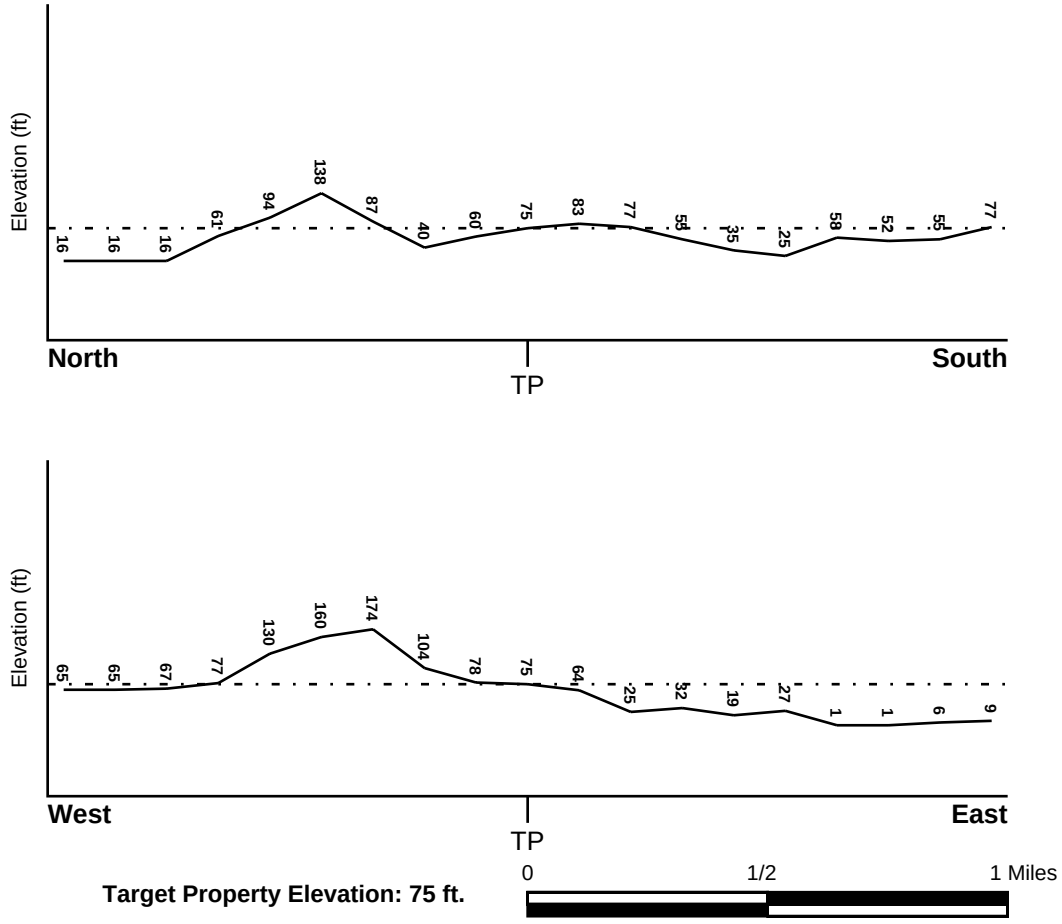
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 75 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
25009C0293G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
25009C0294G	FEMA FIRM Flood data
25009C0431G	FEMA FIRM Flood data
25009C0432G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EAST HALF OF IPSWICH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

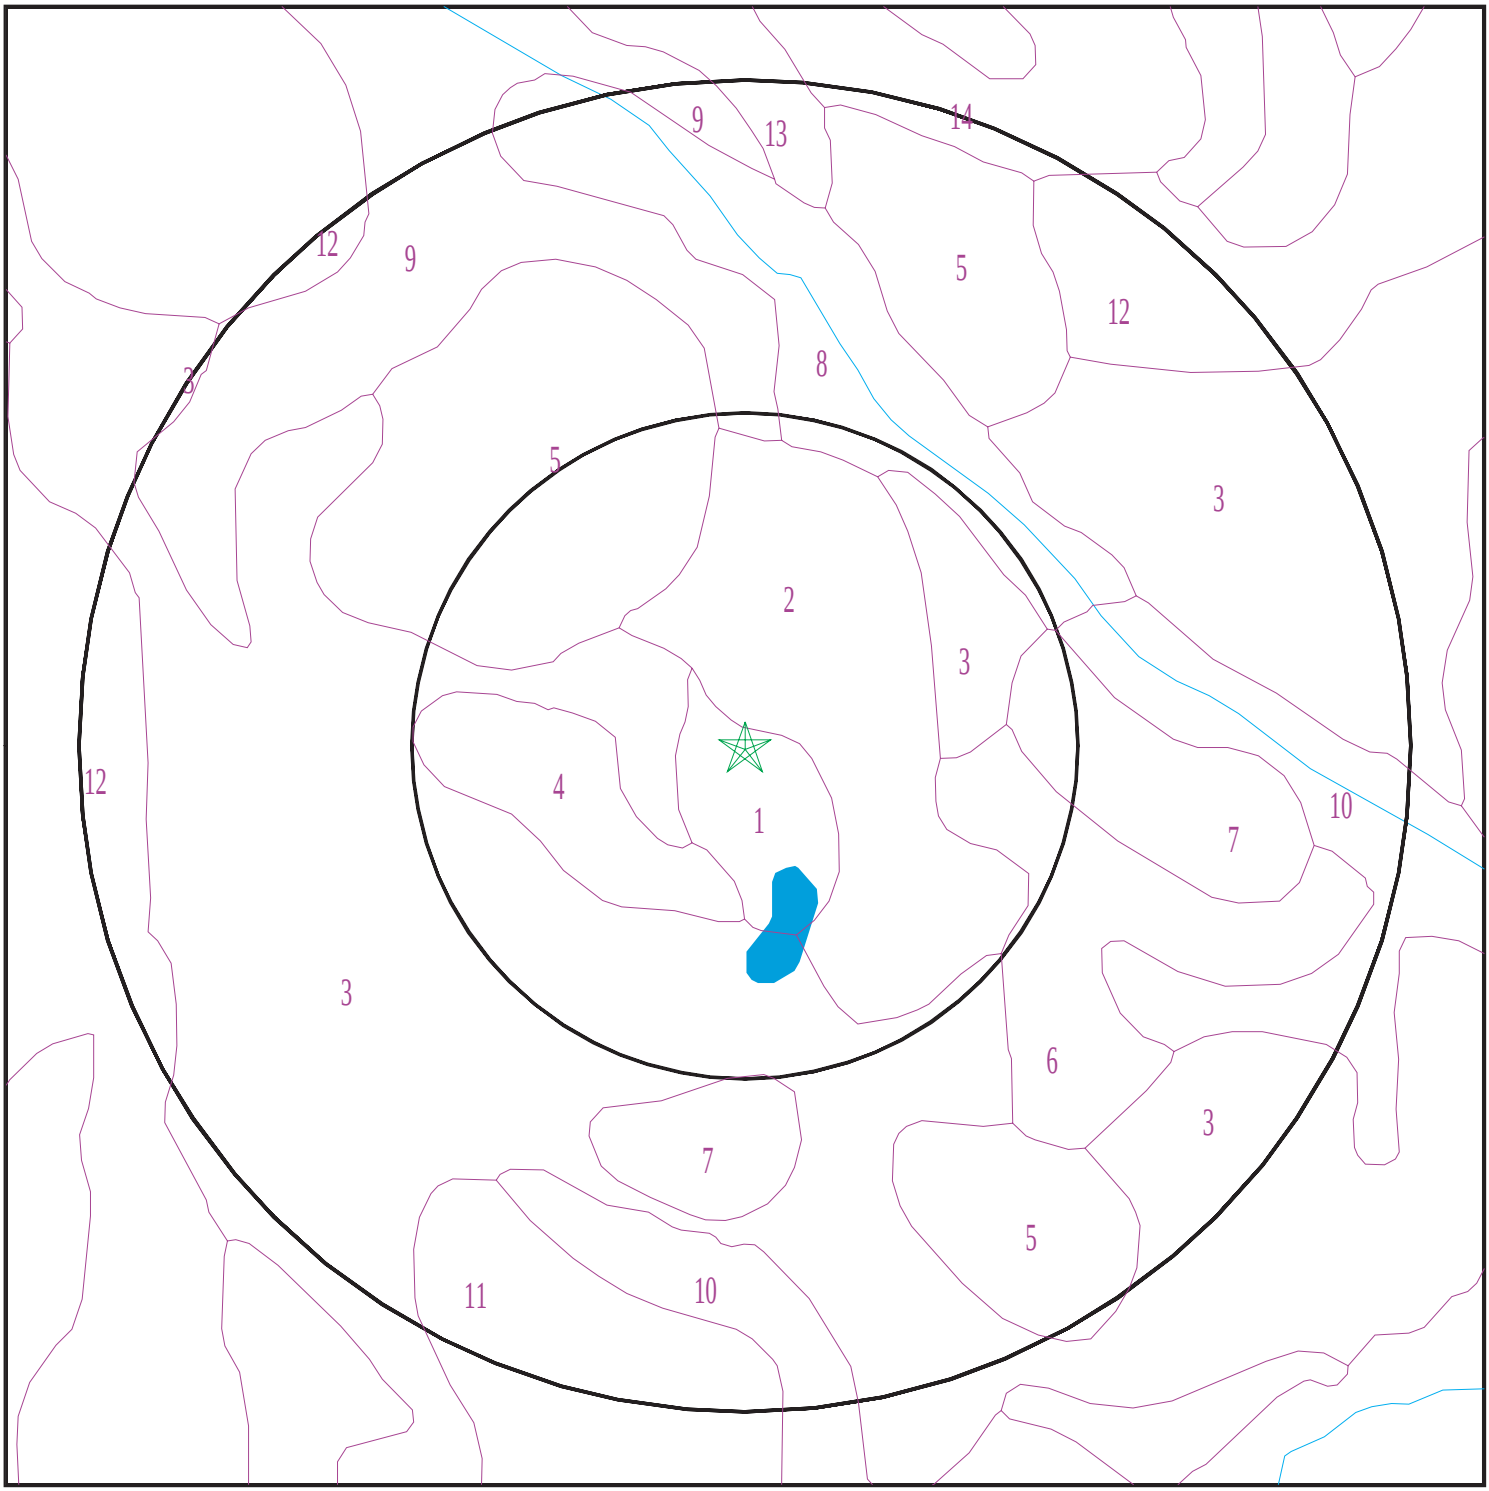
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Paleozoic
System:	Ordovian
Series:	Lower Paleozoic granitic rocks
Code:	Pzg1 *(decoded above as Era, System & Series)*

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Canton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
2	7 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
3	27 inches	59 inches	gravelly loamy sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6

Soil Map ID: 3

Soil Component Name: Scituate

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 6 Min: 4.5
2	9 inches	33 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 6 Min: 4.5
3	33 inches	59 inches	gravelly loamy sand	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 6 Min: 4.5

Soil Map ID: 4

Soil Component Name: Ridgebury

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 23 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6.5 Min: 4.5
2	9 inches	20 inches	gravelly sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6.5 Min: 4.5
3	20 inches	59 inches	gravelly sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6.5 Min: 4.5

Soil Map ID: 5

Soil Component Name: Chatfield

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sandy loam	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:
2	5 inches	33 inches	gravelly very fine sandy loam	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:
3	33 inches	59 inches	unweathered bedrock	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 6

Soil Component Name: Elmridge

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.8 Min: 5.6
2	7 inches	22 inches	fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.8 Min: 5.6
3	22 inches	59 inches	silty clay	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.8 Min: 5.6

Soil Map ID: 7

Soil Component Name: Canton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
2	3 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
3	27 inches	59 inches	gravelly loamy sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6

Soil Map ID: 8

Soil Component Name: Scarboro

Soil Surface Texture: mucky loamy fine sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	mucky loamy fine sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 4.5

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: MassDEP
Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers
Source: Executive Office of Environmental Affairs
Telephone:

Public Water Supply Database

Telephone:
The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

Areas of Critical Environmental Concern

Telephone:
The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers

Telephone:
The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by an EPA hydrogeologist.

Aquifers

Telephone:
MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas

Telephone:
Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

DEP Approved Zone IIs

Telephone:
The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is 'that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary).' These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.\n - Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line. \n- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.\n - Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

OTHER STATE DATABASE INFORMATION

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Mabbett & Assoc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Contact: Cassidy Way

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Mabbett & Assoc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 6708-4B6F-954F

PO # NA

Project P2025201

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 6708-4B6F-954F

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Mabbett & Assoc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

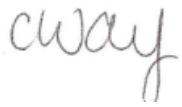
© 2025, Mabbett & Associates, Inc.

ACKNOWLEDGEMENT



Mabbett & Associates, Inc. (Mabbett®) prepared this ASTM International *Standard Practice for Phase I Environmental Site Assessments E1527-21* Phase I Environmental Site Assessment (Phase I ESA) of the approximately 11.31-acre subject property identified as the Manchester Memorial Elementary School addressed 43 Lincoln Street in Manchester-by-the-Sea, Essex County, Massachusetts. Mabbett prepared this report under subcontract to JCJ Architecture (JCJ) for the Essex Elementary School Architectural Feasibility Study.

This Phase I ESA has been prepared for use by JCJ and the Manchester Essex Regional School District. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; Mabbett does not accept any responsibility for the consequences of such use(s). Furthermore, reliance by any party not identified in the agreement, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to Mabbett.

Mabbett prepared this Phase I ESA report using reasonable efforts to identify Recognized Environmental Conditions (RECs) associated with hazardous substances or petroleum products in, on, or at the subject property. Findings contained within this report are based on information collected from observations made on the day of the subject property reconnaissance and from reasonably ascertainable information obtained from selected public agencies and other referenced sources.

Mabbett declares that, to the best of our professional knowledge and belief, the Mabbett staff who performed this Phase I ESA meet the definition of *Environmental Professional* as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and these Mabbett staff have the specific qualifications based on education, training, and experience to assess a *property* of its nature, history, and setting. Mabbett has developed and performed all of the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This Phase I ESA Report has been prepared by:

Mabbett & Associates, Inc.
Cassidy Way, QEP, CHMM
Project Environmental Scientist/Project Manager

This Phase I ESA Report has been internally reviewed and approved for submittal by:

Mabbett & Associates, Inc.
Michael L. Bloom, PG, CPG
Practice Lead, Site Assessment & Restoration, Northeast

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett & Associates, Inc. (Mabbett) on behalf of JCJ Architecture (JCJ) to support the Manchester Essex Regional School District decision making regarding capital investments at Essex Elementary School. The subject property for this Phase I ESA is the Manchester Memorial Elementary School (MMES) addressed 43 Lincoln Street, which encompasses approximately 11.31 acres of land in Manchester-by-the-Sea, Massachusetts.

Subject Property Description

MMES contains one main 91,450 square foot school building constructed in 2019. The site is owned by Manchester Memorial School, and the subject property is developed with athletic fields and playground in addition to the school.

Subject Property History

The subject property was undeveloped land between at least 1888 and 1893. By 1915, Lincoln Street had been constructed, along with at least one two-story dwelling located on the Summer Street side of the subject property.

The subject property was developed with the original 66,573 square foot school building in 1951, with additions having been added in 1954 and 1965. The subject property remained predominantly unchanged between 1966 and 2019, when it was redeveloped with the current MMES.

Surrounding Areas

The area surrounding the subject property is predominantly composed of residential and educational use lands and athletic fields.

Conclusions

The Phase I ESA included a reconnaissance at the subject property by Mabbett on September 24, 2025. Mabbett obtained information about environmental conditions that could potentially be considered a Recognized Environmental Condition (REC); reviewed historical maps of the subject property and vicinity; interviewed the maintenance supervisor for the school district Steve Hunt, who was familiar with current and recent environmental history at the subject property; reviewed environmental database listings for the subject property and vicinity; performed a review of available files from the Massachusetts Department of Environmental Protection (MassDEP); and reviewed documents provided by MMES. This information was used to develop an opinion with regard to the presence or absence of RECs at the subject property.

The Phase I ESA findings are summarized in the following list:

- **RECs**

  No RECS were identified on or affecting the subject property.

- **Historical Recognized Environmental Conditions (HRECs)**

  The south adjacent property addressed 76 Summer Street was identified as a State Hazardous Waste Site (SHWS) under release tracking numbers (RTNs) 3-2657 in 1990 and 3-21362 in 2001 for contamination resulting from leaking underground storage tanks (LUSTs). The property was formerly used as a gas station. RTN 3-21362 was later linked to RTN 3-2657. MassDEP received a Partial Class A-2 Response Action Outcome (RAO) Statement (now referred to as a Permanent Solution) for RTN 3-21362 on June 5,

2003 for the 74 Summer Street portion of the site. The remainder of the site was closed under a Class C RAO (now called a Temporary Solution).

The subject property was historically mapped within the groundwater contaminant plume at this release site. As many as 18 groundwater monitoring wells were historically installed at this property that were reportedly destroyed during the redevelopment of the subject property in 2019. No petroleum constituents had been detected in the subject property wells since the late 1990s. As RTNs 3-2657 and 3-21362 have achieved regulatory closure under the MCP, the historical extension of this contaminant plume onto the subject property represents an HREC.

- **Controlled Recognized Environmental Conditions (CRECs)**

  No CRECs were identified on or affecting the subject property.

- **Data Gaps**

  No significant data gaps were identified during this Phase I ESA.

- **Business Environmental Risks (BERs)**

  No BERs were identified on or affecting the subject property.

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (ESA) report presents the results of non-intrusive environmental due diligence activities performed according to the ASTM International *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) at the subject property, identified as the approximately 11.31-acre property at 43 Lincoln Street in Manchester-by-the-Sea, Essex County, Massachusetts. A Subject Property Locus Map is provided as Figure 1-1. A Subject Property Plan is provided as Figure 1-2.

1.1 Purpose

The purpose of performing a Phase I ESA is to render an opinion, to the extent practical, as to whether current or historical evidence indicates the presence of Recognized Environmental Conditions (RECs) at the subject property. The Phase I ESA findings are intended to help KBA with decision making regarding potential environmental liabilities at the subject property. The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The following paragraphs describe the different types of RECs defined by ASTM E1527-21.

ASTM E1527-21 defines a REC as:

- the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;
- the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or
- the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The term REC is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

ASTM E1527-21 defines a Historical REC as:

> *"A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (i.e., activity and use limitations or other property use limitations)."*

ASTM E1527-21 defines a Controlled REC as:

> *"A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (i.e., activity and use limitations or other property use limitations)."*

ASTM E1527-21 defines a Business Environmental Risk (BER) as:

> *"A risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations."*

Although the subject property is not considered "commercial real estate," the identification of BERs is considered relevant to this assessment because non-scope environmental concerns at the subject property could have cost implications on potential future development efforts by the Manchester Essex Regional School District.

1.2 Detailed Scope of Services

This Phase I ESA was completed with a level of care and skill ordinarily practiced by the environmental consulting professional currently providing similar services under comparable circumstances in accordance with the provisions of ASTM E1527-21. Any significant additions, deletions, or exceptions to ASTM E1527-21 are noted below, or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the subject property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports;
- Use of the subject property, adjoining properties, and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports, and interviews;
- Observations regarding current usage and conditions include: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes, and wastewater;
- Use of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on, or at the property;
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the subject property;
- Potential for subsurface vapor migration in, on, or at the subject property; and
- Potential PFAS at the subject property.

1.3 Significant Assumptions

No significant assumptions were made during the preparation of this Phase I ESA.

1.4 Limitations and Exceptions

Mabbett prepared this Phase I ESA report using reasonable efforts to identify RECs associated with hazardous substances or petroleum products in, on, or at the subject property. Findings contained within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from selected public agencies and other referenced sources.

No exceptions to ASTM E1527-21 were noted during this assessment.

The ASTM E1527-21 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- Uncertainty Not Eliminated: A Phase I ESA cannot wholly eliminate uncertainty regarding the potential for RECs associated with a property since no actual environmental samples are collected for analysis.
- Not Exhaustive: A Phase I ESA is not an exhaustive assessment of the environmental conditions on a property.
- Past Uses of the Property: A Phase I ESA does not require review of standard historical sources at less than five-year intervals. Therefore, past uses of the property may not be discovered.

Other limitations are as follows:

- The observations described in this report were made under the conditions stated herein. Observations were based solely upon the non-intrusive services described herein.

Users of this report may refer to ASTM E1527-21 for further information regarding these and other limitations.

Mabbett makes no representation or warranty that the past or current operations at the subject property are, or have been, in compliance with all applicable federal, state, and local laws, regulations, and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, Mabbett is not responsible for consequences or conditions arising from facts not fully disclosed to Mabbett during the assessment.

Per ASTM E1527-21, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of RECs associated with the subject property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for Landowner Liability Protections under the Comprehensive Environmental Response, Compensation, and Liability Act. Mabbett makes no representations or warranties regarding a User's qualification for liability protection under any federal, state, or local laws or regulations.

In accordance with ASTM E1527-21, this report is presumed to be valid for a 6-month period. If the report is older than 6 months, the following information must be updated for the report to be valid: (1) regulatory review, (2) subject property reconnaissance, (3) interviews, (4) specialized knowledge, and (5) environmental liens. Reports older than one year may not meet ASTM E1527-21 requirements and, therefore, the report must be updated to reflect current conditions and property-specific information. Other limitations and exceptions that are specific to the scope of this report may be found in the corresponding sections.

1.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of and may be relied upon by the JCJ, the Manchester Essex Regional School District, or third parties authorized in writing by JCJ. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual subject property conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of the JCJ, is at the sole risk and expense of such third party.

Mabbett makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied.

2.0 SUBJECT PROPERTY DESCRIPTION

The subject property description was researched and developed by Mabbett representative Cassidy Way, QEP, CHMM, who meets ASTM's *Environmental Professional* qualification as defined in ASTM E1527-21 and who performed a site reconnaissance of the subject property on September 24, 2025. A Subject Property Locus map is provided as Figure 1-1. A detailed Subject Property Map depicting current subject property features is provided as Figure 1-2.

2.1 Location and Legal Description

43 Lincoln Street (the subject property) was identified by the Town of Manchester-by-the-Sea Assessor as Parcel 47-0-6 and encompassed approximately 11.31 acres owned by the Manchester Memorial School. The subject property was zoned within a Zona G (General District) within the Town of Manchester-by-the-Sea.

2.2 Current Use and Improvements at the Subject Property

The subject property was developed with a 91,450 square foot elementary school that was constructed in 2019. Other features of the subject property included paved driveways and tennis courts. The subject property was accessible from Lincoln Street to the northeast and Summer Street to the south.

2.3 Surrounding Area General Characteristics

The subject property was in a suburban area that was developed with residential neighborhoods, a conservation area, and a golf course. The land use adjacent to the subject property included the following:

North/Northeast: Manchester Essex Regional Middle High School and the Essex Country Club

East: Residential and Manchester Gas and Service Station

South: Residential neighborhoods and conservation land

West: Sports facilities and residential neighborhoods.

2.4 Physical Setting

2.4.1 Topography

Based on the U.S. Geological Survey (USGS) 7.5-Minute Series Marblehead North Topographic Quadrangle map, dated 2024, the elevation of the ground surface at the subject property is approximately 10 to 40 feet above mean sea level. The subject property was sloped downwards toward the northwest. This information was confirmed during Mabbett's site reconnaissance on September 24, 2025.

2.4.2 Geology

According to the USGS Bedrock Geologic Map of Massachusetts, bedrock underlying the general area of the subject property was characterized Cape Ann Complex. No bedrock outcrops were observed at the subject property during Mabbett's site reconnaissance on September 24, 2025.

2.4.3 Wetlands and Surface Water

According to the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) Map Viewer, freshwater emergent wetland was present on the southernmost portion of the subject property. Additionally, riverine was located on the northern portion of the subject property. The wetlands map is included in Appendix A. This information was confirmed during Mabbett's site reconnaissance on September 24, 2025.

According to the MassDEP Phase I Site Assessment Map, the subject property is mapped within a Zone II Protection Area and Medium Yield Non-Potential Drinking Water Source Area. This map is included in Appendix A.

2.4.4 Groundwater

Based on a Phase II Limited Subsurface Investigation, Performed by CDW Consultants on behalf of JCJ Architects in March 2019, Groundwater is located approximately 13-21 feet below ground surface. A groundwater elevation survey was performed as part of this assessment that determined groundwater flows in a northerly direction on the subject property.

Actual groundwater flow direction underlying the subject property may vary due to the topography, presence of underground utilities such as sewers, storm drains, and heterogeneous subsurface soil conditions. Measuring the actual depth to groundwater and flow direction is beyond the scope of an ASTM E1527-21 Phase I ESA.

2.4.5 Flood Zone

The subject property was located on the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map FIRMette panel 25009C0434H dated July 8, 2025. According to FEMA, the subject property was located primarily within an area of minimal flood hazard (Zone X), but the north/northwestern portions of the subject property were mapped within a flood zone (Zone A). The flood zones on the subject property were adjacent to the Sawmill Brook/Causeway Brook. A copy of the FIRMette is provided in Appendix A.

2.4.6 Soils

The soil at the subject property underlying the buildings were classified by the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service as Scitico silt loam (14B), Udorthents smoothed (651), Boxford silt loam (220B), and Sudbury fine sandy loam (260B). The Udorthents was mapped beneath the school building. A copy of the USDA soil map is provided in Appendix A.

Subject property soils that were not covered with hardscape were vegetated with grass, shrubs, and trees. No significant soil erosion or stained soil was noted during the site reconnaissance.

3.0 SITE RECONNAISSANCE

A site reconnaissance was performed to obtain information about environmental conditions at the subject property and at adjacent properties that could impact the subject property.

3.1 Methodology

On September 24, 2025, Mabbett representative Cassidy Way, QEP, CHMM, who meets the ASTM's *Environmental Professional* qualification, met with Steve Hunt, Maintenance Supervisor at Manchester Essex Schools. Mr. Hunt answered questions from Mabbett prior to Mabbett's site reconnaissance. Mabbett was unescorted during the site reconnaissance, which did not include the interiors of the schools, apart from select common areas. Information provided by Mr. Hunt is incorporated throughout this report.

Mabbett walked the subject property with the purpose of assessing potential RECs, BERs, and *de minimis* conditions. The site reconnaissance efforts consisted of making visual observations of conditions on the ground surface, building exteriors, and select building interiors at the subject property. The focus of the site reconnaissance was on areas where hazardous substances or petroleum products are or may have been stored, used, treated, discharged, or disposed. Mabbett toured the exterior grounds, observing all sides of the building. Mabbett also observed the adjoining properties from public thoroughfares. No intrusive activities were performed during the site reconnaissance.

The following sections present a summary of observations made during the site reconnaissance. Representative photographs are provided in Appendix B.

3.2 Observations of Subject Property Improvements

3.2.1 Buildings

The subject property contains one main 91,450 square foot school building constructed in 2019. The school grounds consisted of playgrounds, tennis courts, and paved driveways. Wetlands and the Sawmill/Causeway Brook were observed on the northern portion of the subject property.

According to Mr. Hunt, the subject property was heated via natural gas and hot water boilers. Air chillers to cool the school were present on the roof.

3.2.2 Stormwater

There are several storm drain catch basins and drainage swales noted around the subject property.

3.2.3 Water Supply

MMES obtained its potable water from Town of Manchester-by-the-Sea, who obtains its water from Gravelly Pond, a surface water reservoir, in Hamilton, as well as the Lincoln Street Well located next to the Manchester Essex Regional Middle High School to the north of the subject property, and Round Pond in Hamilton. Water is then treated at the Gravelly Pond Water Treatment Facility.

No potable water wells were observed on the subject property during the site reconnaissance. According to the Massachusetts Department of Environmental Protection (MassDEP) well database, monitoring wells were installed in 2019 at the subject property.

3.3 Underground Storage Tanks

According to records uncovered during a 2017 Phase I ESA, two 10,000 gallon fuel oil USTs were removed from the property in July 1991. No UST closure sampling information was found, and a Phase II was conducted within the vicinity of the former USTs. No contamination was found during the Phase II ESA. Of note, Mabbett was unable to locate these records at the Manchester Fire Department.

No USTs are currently present at the subject property.

3.4 Aboveground Storage Tanks

No evidence of aboveground storage tanks (ASTs) was observed nor historically recorded for the subject property.

3.5 Hazardous Substance Use, Storage, and Disposal

According to Mr. Hunt, the subject property did not maintain a designated hazardous waste storage area to temporarily store waste. Chemicals at the subject property consisted of cleaning chemicals.

No improperly used, stored, or disposed of hazardous substances were observed during the site reconnaissance.

3.6 Non-Hazardous Solid Wastes and Disposal

Non-hazardous solid waste generated during routine MMES operations was contained in dumpsters on the subject property. According to Mr. Hunt, these receptacles are emptied weekly or as needed. No improper handling of non-hazardous solid waste was observed during Mabbett's site reconnaissance.

3.7 Electrical Equipment and Polychlorinated Biphenyls (PCBs)

Electrical transformers and hydraulic reservoirs observed at the subject property visually appeared to be in good condition with no signs of leakage. Based on their suspected age due to the recent redevelopment of the subject property, these transformers are not anticipated to contain PCBs.

3.8 Stained Surfaces and Distressed Vegetation

Mabbett did not observe any stained or distressed vegetation at the subject property.

3.9 Underground Structures

Mabbett did not observe any underground structures at the subject property.

3.10 Per- and Poly-fluoroalkyl Substances (PFAS)

Mabbett conducted an assessment of potential sources of PFAS at or near the subject property. PFAS environmental contamination may come from a number of sources; including, but not limited to firefighting foam, waterproofing materials, wetting agents, and other industrial and consumer products. Department of Defense (DoD) facilities have also been associated with high levels of PFAS in groundwater due to training and firefighting activities, as well as other facility activities that are part of the DoD's mission. As a result, PFAS are nearly ubiquitous and have been found in rainwater and encountered in many environments and media including groundwater, soils, surface water, sediment, and human and animal tissues.

Mabbett found no reference to the use of PFAS-containing materials, historical fires, or firefighting responses at the subject property or adjacent properties. Mabbett found no specific potential sources of PFAS at the subject property or adjacent properties, or indications of past property uses associated with PFAS use from the historical data as summarized in Section 5.1.4 through 5.1.6 of this report. PFAS have historically been detected at the

Manchester-by-the-Sea Department of Public Works between 2021 and 2025. The available information reviewed by Mabbett did not identify historical releases of PFAS at the subject property.

4.0 USER PROVIDED INFORMATION

The following section summarizes the Phase I ESA User Questionnaire completed by the MMES maintenance supervisor for the school district Steve Hunt (Mr. Hunt). The completed User Questionnaire is provided in Appendix C.

4.1 Owner, Property Manager, and Occupant Information

The subject property is owned and managed by the TMS and occupied by the Manchester Memorial High School High School.

4.2 Title Records

Mr. Hunt was not aware of any deed restrictions, environmental land use restrictions, environmental liens, or activity and use limitations on file for the subject property.

4.3 Environmental Permits and/or Violations

Mr. Hunt was not aware of any state- or municipal-issued violations for the subject property.

4.4 Specialized Knowledge or Experience of the Owner

Mr. Hunt did not have any specialized knowledge of the subject property.

4.5 Significant Valuation Reduction for Environmental Issues

Mr. Hunt was not aware of significant valuation reduction due to environmental issues at the subject property.

4.6 Reason for Performing Phase I ESA

This Phase I ESA is being completed in support of Manchester Essex Schools feasibility studies for the Essex Elementary School.

4.7 Other Owner-Provided Documents

Mabbett was provided with a Phase I ESA performed by CDW Consultants, Inc. (CDW) in October 2017 and a Phase II ESA that was performed by CDW in March 2019.

According to the Phase I ESA, the subject property had one main 66,573 square foot school building constructed in 1951 with two additions – one in 1954 and 1965. The subject property was owned by the Town of Manchester-by-the-Sea. The Phase I ESA identified the following RECs and HREC:

- Potential contamination from the two 10,000 gallon fuel oil USTs removed in 1997 represented an HREC.
- Potential contamination from the old transformer removed from the electric room in the basement may have had PCBs in the transformer fluids, representing an HREC.
- Potential contamination from the exterior pad mounted transformer as it was unknown whether PCBs were in the transformer fluids represented a REC.
- The potential dumping of ash from an incinerator represented a REC.
- Potential asbestos debris within the dirt floor portion of the crawlspace represented a REC.

Based on these findings, CDW recommended a Phase II investigation including Soil borings, soil sampling and analysis, the installation of four groundwater monitoring wells, and groundwater sampling and analysis. The investigation was conducted February to March 2019. Four monitoring wells (MW-1 to MW-4) were installed using

a hollow stem auger drill rig. MW-1 was drilled on the eastern portion of the site building, MW-2 was installed on the northern portion of the site, MW-3 was installed on the western part of the alcove, and MW-4 was installed on the northern part between MW-1 and MW-2. Wells were installed to a depth of 20 feet below ground surface (bgs). Depth to water was measured approximately 14 feet bgs.

Soils from each boring were submitted for laboratory analysis of extractable petroleum hydrocarbons (EPH), volatile organic compounds (VOCs), volatile petroleum hydrocarbons (VPH), semi volatile organic compounds (SVOCs), and priority pollutant 13 (PP13) metals.

Groundwater samples were collected from each well and submitted for laboratory analysis of EPH, VOCs, SVOCs, and dissolved PP13 metals. All detected compounds were below Massachusetts Contingency Plan (MCP) RCS-1 Reportable Concentrations.

No VPH, EPH or VOCs were detected in groundwater above laboratory detection limits. SVOC compounds benzo(b)fluoranthene, chrysene, fluoranthene, phenanthrene and pyrene were detected above laboratory detection limits, but below MCP GW-1 Reportable Concentrations. The dissolved metals arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, thallium and zinc were detected in all four groundwater samples. The detected concentrations of metals are above the applicable Reportable Concentration for GW-1 classified groundwater. The detection of metals exceeding GW-1 Reportable Concentrations represented a 120-day reporting condition to MassDEP. However, due to the high levels of turbidity encountered in the groundwater, CDW recommended resampling the four monitoring wells within the 120-day reporting window to determine if the metals concentrations were an anomaly due to high turbidity.

In April 2019, CDW returned to resample MW-1 through MW-4. Groundwater samples exhibited less turbidity than during the original sampling event. Samples were submitted for laboratory analysis of dissolved metals and one sample was collected for total metals (not field filtered). In April 2019, no metals were detected exceeding MCP GW-1 Reportable Concentrations. CDW opined that the initial groundwater concentrations were an anomaly due to the turbidity and that there was no MCP reporting requirement based upon the results of the resample.

The aforementioned reports provided to Mabbett by JCJ are included in Appendix A.

5.0 RECORDS AND DATABASE REVIEW

Mabbett obtained and reviewed available environmental records for the subject property and adjoining properties. The records were reviewed to identify properties where chemical releases were reported to have occurred and to assess whether those releases create a REC at the subject property.

5.1 Standard Environmental Records

Mabbett contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut, to conduct a search for available federal and state environmental records in compliance with ASTM E152721. EDR provided Mabbett with the database search results in an EDR Radius Report on September 22, 2025. EDR searched federal and state databases for records of properties with a history of a chemical release or chemical storage and located within the minimum search distance from the subject property as required by ASTM E1527-21. Records identified within these search distances from the subject property are summarized in Table 5-2. The databases for which no records were identified are presented in the full EDR report in Appendix D. The EDR report identified 5 "orphan" listings.

TABLE 5-1
Summary of Environmental Records Identified in the EDR Radius Report

Database	Records for the Subject Property	Search Distance (miles from the subject property)	Number of records within the search distance					Total Records Identified
			<1/8 mile	1/8 – 1/4 mile	1/4 – 1/2 mile	1/2 – 1 mile	>1 miles

NOTES:
TP = Target Property (the *subject property* per ASTM E1527-21)
NR = Not Required by ASTM E1527-21

5.1.1 Findings for the Subject Property

The subject property was identified within the asbestos, Facility Index System (FINDS), and Enforcement and Compliance History Online (ECHO) databases. Permits for at least 32,000 linear feet (LF) of asbestos containing materials (ACM) was removed from the subject property between 2017 and 2021 during the redevelopment of the property with its current structure. ACM included floor tile, mastic, fire doors, glazing, flue, interior boiler, roofing materials, and pipe insulation.

The subject property was listed in the FINDS and ECHO databases for National pollutant Discharge Elimination System (NPDES) permits at the property for stormwater construction in 2019. This permit was terminated in 2022.

5.1.2 Findings for Adjoining and Surrounding Properties

Table 5-2 below describes properties identified in the EDR federal or state databases that are located within the ASTM E1527-21 search distances from the subject property. Table 5-2 organizes findings by the EDR Map ID number within 0.25 miles of the subject property.

As previously described in Section 2.4.3, groundwater flow at the subject property and immediate vicinity is inferred generally flow towards the north. Based on this groundwater flow direction, Mabbett was able to categorize the following properties identified in EDR databases as likely to be hydrologically upgradient, cross-gradient, or downgradient from the subject property. Contaminants released at upgradient or cross-gradient properties, and where the contaminants have reached groundwater, could have the potential to migrate in groundwater beyond the boundary of that property to reach the subject property. Contaminated groundwater that migrates beneath the subject property has the potential to impact environmental conditions.

Contaminants released to soil at upgradient or cross-gradient properties may migrate beyond the adjoining/surrounding property boundaries in sediment-laden stormwater. However, stormwater from these properties would not likely reach the subject property because of the many physical obstructions between the properties and the subject property; these obstacles include but are not limited to roads, curbs, and stormwater catch basins.

Contaminants released to groundwater at downgradient properties are assumed not to be a threat to environmental conditions at the subject property because the groundwater beneath these properties flows away from, and would not reach, the subject property.

TABLE 5-2
Records Identified in the EDR Radius Report

EDR Map ID(s)	Property Name(s) and Address	Database Listing(s)	Distance from Subject Property (feet)	Direction from Subject Property	Gradient Relative to Groundwater Flow in Area	REC? (Y/N)	Basis for REC Conclusion
3-4, 9	Texaco Station FMR 76 Summer Street	UST FINDER RELEASE, LUST, RELEASE, ENF	Adjacent	S	Upgradient	N	Temporary Solution in place that includes a portion of the subject property. No groundwater contamination found on the subject property in many years, and no contamination was encountered during the construction of the new school. This represents an HREC.
5-8	Manchester Gas and Service 96 Summer Street	UST FINDER, EDR HIST AUTO, UST, RCRA NonGen/NLR, E-MANIFEST	165 ft	E	Crossgradient	N	No reported releases.
10	AT Summer St 50 Brook Street	SHWS, RELEASE	421 ft	WSW	Upgradient	N	Release originated from 76 Summer Street; Temporary Solution in place for release.
11-12	Verizon Massachusetts 52 Summer Street	UST FINDER, LUST, UST, AST, RELEASE, TIER 2	659 ft	SSW	Upgradient		Contamination was localized; Closure achieved for this release.
13-14	Manchester Essex Regional Schools 36 Lincoln Street	E-MANIFEST, HW GEN	742 ft	NNW	Downgradient	N	No reported releases.

TABLE 5-2
Records Identified in the EDR Radius Report

EDR Map ID(s)	Property Name(s) and Address	Database Listing(s)	Distance from Subject Property (feet)	Direction from Subject Property	Gradient Relative to Groundwater Flow in Area	REC? (Y/N)	Basis for REC Conclusion
15-17	Various Owners 50 Summer Street	SHWS, LUST, RELEASE, HW GEN, TIER 2, PFAS ECHO, RCRA NonGen/NLR, US AIRS, FINDS, ECHO, E-MANIFEST	807 ft	SSW	Up-/ Crossgradient	N	Permanent Solution without Conditions submitted in 2020.
18	Mass Electric Company 20 Desmond Ave	E-MANIFEST	1,101 ft	WSW	Crossgradient	N	No reported releases.
19	Mass Electric Company Corner of School & Vine	E-MANIFEST	1,131 ft	W	Crossgradient	N	No reported releases.
20	Sacred Heart Church	LUST, RELEASE, SPILLS, ASBESTOS	1,254 ft	W	Crossgradient	N	Class A-2 RAO submitted in 1994.
21	Mass Electric Company 12 Desmond Ave	E-MANIFEST	1,261 ft	WSW	Upgradient	N	No reported releases.
22	Mass Electric Company 170 44 Summer Street	E-MANIFEST	1,266 ft	WSW	Crossgradient	N	No reported releases.

5.1.3 Aerial Photographs

Mabbett reviewed aerial photographs provided by EDR of the subject property and surrounding area. Aerial photographs were available for the years 1938, 1952, 1965, 1969, 1972, 1978, 1986, 1995, 2010, 2014, 2018, and 2023. Historical Aerial Photographs are provided in Appendix E. Certain details of the aerial photographs were difficult to ascertain due to the resolution and/or wide scale of the aerial photographs.

In the earliest aerial photograph dated 1938, the subject property was developed with a building located centrally on the property and appeared to be used for agricultural purposes. A stream was present on the northern portion of the subject property. Nearby land uses included residential dwellings, a baseball field, and a gold course.

Between 1995 and 2010, the Manchester Essex Regional Middle High School had been reconstructed to the north of the subject property. By 2010, a football field had been constructed to the west of the subject property, replacing the baseball fields. By 2014, three tennis courts had been added to the subject property.

By 2023, the subject property had been completely redeveloped with the current school building, playgrounds, and parking areas.

The review of aerial photographs did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.4 Historical USGS Topographic Maps

Historical USGS topographic maps provided by EDR were available for the subject property, adjoining areas, and the surrounding area for the years 1888, 1893, 1915, 1919, 1943, 1945, 1949, 1956, 1970, 1977, 1984, 2005, 2012, 2015, 2018, and 2021. The Historical Topo Map Report is included in Appendix E.

In the earliest topographic maps dated 1888 and 1893, the subject property was depicted as undeveloped with the Sawmill/Causeway Brook on the northern portion of the property. Lincoln Street had not yet been constructed at this time. Train tracks were present to the south of the subject property.

No significant changes were noted on the subject property and in its vicinity until 1945, when a structure was depicted centrally on the subject property.

By 1956, the Memorial School and High School was depicted on the subject property. By 1970, a new High School was present to the north of the subject property. The western portion of the Memorial Elementary School had also been expanded by 1970. No other significant changes were noted in the remaining topographic maps.

The review of historical USGS topographic maps did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.5 Historical City Directories

Historical City Directories provided by EDR were available for the subject property and for select addresses within the surrounding area for the years 1970, 1975, 1984, 1989, 1992, 1995, 2000, 2005, 2010, 2014, and 2022. A copy of the City Directory search is provided in Appendix E.

The subject property (43 Lincoln Street) was listed with the following occupants:

- 1970, 1975, 1984, 1989: Unlisted; Identified as a school with no street number
- 1992, 1995, 2000, 2005: Unlisted
- 2010, 2014, 2022: Memorial School

Notable nearby listings included the following:

- 96 Summer Street: Manchester Gas and Service – 2022; Baileys Service Station – 2000, 1992, 1989, 1984, 1975, 1970
- 76 Summer St: Motz Motors – 1975, 1970
- 76/77 Summer Street: Manchester Texaco – 1975, 1970

The Historical City Directory information did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.6 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were requested for the subject property from EDR but were not available for the subject property and surrounding areas. The Sanborn “Unmapped Property” document provided by EDR is provided in Appendix E.

5.1.7 Municipal Records

Mabbett requested current and historical environmentally pertinent information associated with the subject property from the Town of Manchester-by-the-Sea in September 2025. Departments contacted included the Fire Department, Town Clerk, Board of Heath, and the Building Department.

Permits available for 43 Lincoln Street included food establishment permits, road opening permits, gas permits, and building/electrical/plumbing permits from the construction of the new school in 2019. No other municipal records were readily available for review.

5.1.8 Other Historical Sources

No other readily available historical sources were available for review.

6.0 SUBSURFACE VAPOR MIGRATION

Mabbett conducted a qualitative screening for potential Vapor Encroachment Conditions (VEC) that may affect the subject property. The screening used information about the current and historical usage of the subject property available from the EDR Radius Report to evaluate Chemicals of Concern (COCs), including petroleum hydrocarbons and non-petroleum chemicals. A copy of the EDR report is provided in Appendix D.

ASTM E 2600-10 defines an area of concern (AOC) with a minimum search radius of 1,760 feet (0.3 mile) from the subject property boundary when identifying properties contaminated with non-petroleum COCs that could potentially present a vapor intrusion risk at the subject property. For sites contaminated with petroleum hydrocarbon COCs, the AOC minimum search radius is 528 feet (0.1 mile) from the subject property boundary.

Mabbett considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the subject property, the physical setting, and the regulatory agency database information (summarized in Section 5.0). To pose a vapor encroachment risk, releases must have contaminants that have migrated to groundwater, and the groundwater must have the potential to flow beneath the subject property. Additionally, the contaminant released must have the potential to migrate upward from groundwater to soil gas and then to the atmosphere.

Neither the subject property nor hydrologically upgradient or cross-gradient properties were identified as having releases of petroleum and non-petroleum COCs meeting these criteria within proximity to the MMES building, apart from the south adjacent property addressed 76 Summer Street. However, no contaminants had been detected in on-site wells in the years prior to its redevelopment. Thus, the risk of subsurface vapor intrusion at the subject property is considered low.

7.0 INTERVIEWS

Mabbett interviewed the individuals listed in Table 7-1 for information regarding environmental conditions at the subject property. Information from the interview is incorporated throughout this Phase I ESA.

TABLE 7-1
Interviews Completed for this Phase I ESA

Role	Name	Title/Company	Years in Current Role	Interview Type
Maintenance Supervisor	Steve Hunt	Manchester Essex Schools	19+ years	User questionnaire

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 Lead Based Paint

Lead-based paint (LBP) was commonly used prior to their ban in 1978. As such, it is possible that LBP is present on surfaces that were painted prior to 1978. No suspected LBP was observed during Mabbett's site reconnaissance.

8.2 Asbestos Containing Materials

Asbestos has historically been used in a wide range of building materials, including roofing shingles, ceiling and floor tiles, paper products, pipe insulation, asbestos cement products, and more. No suspected ACM was observed during Mabbett's site reconnaissance.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Mabbett performed a Phase I ESA of the subject property at 43 Lincoln Street in Manchester-by-the-Sea, Essex County, Massachusetts in conformance with the scope and limitations of ASTM E1527-21. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This Phase I ESA Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett on behalf of the JCJ and the Manchester Essex Regional School District to support decision making about architectural feasibility at Essex Elementary School. The subject property for this Phase I ESA encompasses approximately 11.31 acres of land.

The Phase I ESA findings are summarized as follows:

- **Recognized Environmental Conditions (RECs)**

  No RECs were identified on or affecting the subject property.

- **Historical Recognized Environmental Conditions (HRECs)**

  The south adjacent property addressed 76 Summer Street was identified as a State Hazardous Waste Site (SHWS) under release tracking numbers (RTNs) 3-2657 in 1990 and 3-21362 in 2001 for contamination resulting from leaking underground storage tanks (LUSTs). The property was formerly used as a gas station. RTN 3-21362 was later linked to RTN 3-2657. MassDEP received a Partial Class A-2 Response Action Outcome (RAO) Statement (now referred to as a Permanent Solution) for RTN 3-21362 on June 5, 2003 for the 74 Summer Street portion of the site. The remainder of the site was closed under a Class C RAO (now called a Temporary Solution).

  The subject property was historically mapped within the groundwater contaminant plume at this release site. As many as 18 groundwater monitoring wells were historically installed at this property that were destroyed during the redevelopment of the subject property in 2019. No petroleum constituents had been detected in the subject property wells since the late 1990s. As such, the historical presence of this contaminant plume on the subject property represents an HREC.

- **Controlled Recognized Environmental Conditions (CRECs)**

  No CRECs were identified on or affecting the subject property.

- **Data Gaps**

  No significant data gaps were identified during this Phase I ESA.

- **Business Environmental Risks (BERs)**

  No BERs were identified on or affecting the subject property.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 10/6/2025 at 3:46 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Essex County, Massachusetts, Southern Part
Survey Area Data: Version 22, Sep 8, 2025

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 22, 2022—Jun 5, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

I EXECUTIVE SUMMARY

CDW Consultants, Inc. (CDW) conducted an investigation of the Manchester Memorial Elementary School located at 43 Lincoln Street, Manchester by the Sea, Massachusetts (the Site; Figure 1). The Site includes 11.31 acres of land. The Site contains one main 66,573 square foot school building constructed in the 1951 with two additions, one in 1954 and 1965. The site is owned by the Town of Manchester by the Sea, and is listed as Book 3507-137, Page 138.

The Site investigation was conducted in September 2017 in accordance with the ASTM International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13) and the Massachusetts General Laws (MGL) Part I, Title II, Chapter 21E: Massachusetts Oil and Hazardous Material Release Prevention and Response Act.

CDW personnel performed a Site reconnaissance to conduct a general visual inspection of the Site, observe the interior of the Site building, and document existing and observable uses of the Site and adjacent properties.

The investigation conducted by CDW personnel included a review of available federal, state, and local environmental agency records to identify the presence or likely presence of Recognized Environmental Conditions (RECs), Historical Recognized Environmental Condition (HRECs) and Controlled Recognized Environmental Condition (CRECs).

No CRECs were identified during the assessment. RECs and HRECs were identified during the assessment. They were:

- Potential contamination from the two 10,000-gallon fuel oil underground storage tanks removed in 1991. This represents a HREC.
- Potential Contamination from the old transformer removed from the electric room in the basement. It is unknown if polychlorinated biphenyls (PCBs) were in the transformer fluids. This represents a HREC.
- Potential contamination from the exterior pad mounted transformer. It is unknown if PCBs are in the transformer fluids.
- Potential dumping of ash from incinerator.
- Potential asbestos debris within the dirt floor portion of the crawlspace.

An asbestos survey was beyond the scope of this Phase 1 assessment. Due to the dates of construction, asbestos containing materials (ACM) may be located on the property. Suspect ACM

observed within the building included flooring, mastics, interior window glazing, pipe insulation, door caulk and window caulk. It is recommended that an ACM sampling and abatement plan be implemented prior to demolition, renovation or construction activities at the subject property.

II SITE DESCRIPTION

CDW conducted an investigation of the Manchester Memorial Elementary School located at 43 Lincoln Street, Manchester by the Sea, Massachusetts (the Site; Figure 1). The property is currently occupied by the Manchester Memorial Elementary School. The Site contains one main 66,573 square foot school building constructed in the 1951 with two additions, one in 1954 and 1965. The site is owned by the Town of Manchester by the Sea, and is listed as Book 3507-137, Page 138.

The Site is defined as the land and improvements within property boundaries, including the Site building. The Site building is connected to municipal water and sewer. The Site building is heated with natural gas. The Site is bound by athletic fields and causeway brook aqueduct to the north, Summer Street to the south with residential properties beyond, Lincoln Street to the east, and north and to the west by residential properties.

CDW personnel performed a Site reconnaissance to observe the interior of the existing building, conduct a visual inspection of the Site, and document existing and observable land uses of the Site and adjacent properties. The Site is located on the United States Geological Survey (USGS) Marblehead North 2012 Quadrangle Map at the following approximate location and elevation:

Universal Transverse Mercator (UTM) Zone 19 Coordinates	
4715387.5	UTM Y (Meters)
4715387.5	UTM X (Meters)
Latitude/Longitude	
42.5792560 - 42° 34’ 45.32’’	Latitude (North)
70.7642750 - 70° 55’ 51.39’’	Longitude (West)
Elevation	
32	Feet above sea level

III USER-PROVIDED INFORMATION

Mr. Jay Pagliarulo, Facilities Manager, provided the following information in a questionnaire (Appendix A).

- Mr. Pagliarulo reported no knowledge of contaminated fill bought to the site.
- Mr. Pagliarulo reported no knowledge of hazardous substances, petroleum products, or other chemicals dumped at the property.
- Mr. Pagliarulo reported that there is a nearby property that is used a gas station, known as Manchester Gas and Service Station, that had a spill in 1990. The spill attained regulatory closure with a response action outcome (RAO).
- Mr. Pagliarulo reported no knowledge of past or current spills or releases that have taken occurred at the property.
- Mr. Pagliarulo reported no knowledge of recorded environmental cleanup liens or violations that have occurred at the property.
- Mr. Pagliarulo reported no knowledge of contaminated fill being used at the Site.
- Mr. Pagliarulo reported no knowledge of pits, ponds or lagoons for waste treatment at the Site, nor any hazardous waste/landfill disposal.
- Mr. Pagliarulo reported no knowledge of Activity and Use Limitations on the Site.
- Mr. Pagliarulo reported that an oil storage tank was removed when the school converted from oil fired to natural gas fired boilers in 1991.
- Mr. Pagliarulo reported that there are ACM materials at the Site and are managed under an Asbestos Hazardous Emergency Response Action (AHERA) Management Plan.

IV SITE RECONNAISSANCE

On August 28, 2017, Susan Cahalan of CDW performed a walking inspection of the Site. CDW was provided access by the head custodian. The weather conditions were warm (80s (F)) and clear at the time of the Site inspection. Access was provided to about 90% of the Site building.

1.0 General Exterior Observations

The Site Building is a school with exterior brick and block masonry (original building) and brick veneer on block (additions) and are in good condition. Roofing is constructed out of single-ply fully adhered membrane with rigid insulation. Painted wood-framed window walls at the building are single glazed and in fair to poor condition with peeling paint.

The Site building is surrounded by paved parking areas, tennis court and play fields. Mature and young trees are located adjacent to the school. Gardens and shrubs are in the front and courtyard. A small portion of the school's north side parking lot is within Zone One for Saw Mill Brook, a water supply for Manchester by the Sea. The Memorial School is connected to the Manchester Essex Regional Middle High School by a footbridge and there are two recently constructed secondary school athletics facilities (outdoor tennis courts and a turf field) surrounding the elementary school to the east and west, respectively.

Gas, water, sewer and communications manholes are located around the Site building. Two solid waste dumpsters and one pad mounted transformer are located outside of the kitchen area. The transformer does not contain a no-PCB sticker.

No evidence of suspect waste disposal pits, waste lagoons or ASTs was observed during the Site inspection. The vegetation, appeared healthy and did not appear stressed.

2.0 General Interior Observations of Building

The basement consists of a janitorial storage room, boiler room, transformer room, fire suppression room, and heating ventilation air conditioning (HVAC) mechanical room. The janitorial storage room contains fluorescent light tubes and cleaning products. All of these items were properly stored. The crawlspace contains several pipe runs, covered with ACM insulation. The crawlspace is primarily used for storage of old school supplies and desks etc. The school has two gas-fired, hot water boilers that are approximately 25 years old. The units were converted from an original oil and steam system.

The boiler room also contains a groundwater sump pump, hot water heaters, expansion tanks and an incinerator in the chimney. Off the boiler room are HVAC units constructed of newer aluminum with rubber flex connectors. The pipes in the HVAC room are insulated with fiberglass. The electrical

room formally contained an original transformer which has since been removed. There is a small generator room with an older generator with battery backups. There was no sheen or odor from the water in the sump pump or no staining around the condensate drains on the day of inspection.

The main floor contains 26 classrooms, administrative offices, nurse's office, cafeteria, kitchen, auditorium, library and gym. There are no science laboratories. The floors are concrete slab-on grade and reinforced framed slab above crawl spaces. Flooring finishes are vinyl composition tile in corridors, classrooms and cafeteria, wood flooring in gym, ceramic tiles in bathrooms, quarry tile in lobby, terrazzo in Side C corridors and bathrooms. Walls are primarily painted concrete block. Glazed block is located in some bathrooms and corridors. Ceilings consist of exposed Tectum panel deck in gym, and curvilinear wood ceiling in Auditorium. The corridors, lobby and cafeteria have 2x2 acoustic tile ceilings. Most staff areas, side C classrooms and sloped roof decks of side A and B have 1x1 acoustic tile ceilings. Tiles in main entrance and lobby and splined acoustical ceiling.

3.0 Observations by Focus Area

Petroleum Products
There are no underground storage tanks (USTs) or above ground storage tanks (ASTs) in use at the Site. Natural gas supplies the building for the kitchens and boilers.

Hazardous Materials
Cleaning supplies are properly stored in the boiler room, kitchen and janitorial closets. Also, present but not directly observed are refrigerants for kitchens, water fountains, and HVAC systems.

Drums or Containers
There are no indications of other drums or containers of oil or hazardous materials located on the subject property.

Underground Storage Tanks/Aboveground Storage Tanks
At the date of this report there are no active USTs or ASTs. Two 10,000-gallon #2 fuel oil UST were removed on July 23, 1991. A copy of the Fire Department documentation is provided in Appendix B.

Intermodal Shipping Containers
There were no current indications of intermodal shipping containers at the subject property.

Indications of Polychlorinated Biphenyls
PCBs are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to 1979. It is not known if PCBs are associated with the transformer. PCB light ballasts were not directly observed, but may be located above ceilings in some areas.

Pits, Ponds & Lagoons
No evidence of waste pits, ponds and/or lagoons were noted on the subject property.

Odors
No significant odors were noted on the subject property.

Stained Soil or Pavement
No evidence of significantly stained soil or pavement was noted on the subject property.

Pools of Liquid
No unidentified pools of liquid were noted on the subject property.

Stressed Vegetation
No evidence of stressed vegetation, anticipated to be caused by contamination was noted on the subject property.

Solid Waste Disposal
No solid waste concerns were noted on the subject property.

Medical/biological wastes/X-ray or other radioactive activities
No medical or biological wastes were observed.

Drains and Sumps
There are several storm drain catch basins noted around the subject property. According to the Town of Manchester, catch basins discharge to a 12-inch line located in Lincoln and Summer Streets and discharge to Manchester Harbor. A sump pit for groundwater is located in the boiler room, which discharge into the subsurface. It is unknown if the discharge is tied into the drain line, however.

Septic Systems
No septic systems are in use on the subject property. The property is currently serviced by the Town of Manchester sewer system. An 8-inch diameter sewer main runs through the north side of the property.

Storm/Waste Water
Wastewater generated at the Site is limited to sinks and toilets and is disposed of via the municipal sewer system. Stormwater drainage is directed to the on-site catch basins.

Wells
No evidence of drinking water wells or dry wells was noted on the subject property.

4.0 Records Review

4.1 Standard Environmental Record Sources

Relevant, readily available and practically reviewable documents, records, and other information were obtained and reviewed as part of this Phase I ESA. This chapter provides a list of sources of information and supporting documents.

Federal Source Records and Information

- Environmental Data Resources (EDR), Inc. federal environmental record databases search report prepared for CDW. The EDR Executive Summary is provided in Appendix C.
- U.S. Geological Survey (USGS), Topographic Map of Marblehead North, Massachusetts, 7.5-minute series quadrangle

Commonwealth of Massachusetts Source Records and Information

- EDR, Inc. state environmental record databases search report prepared for CDW
- Records maintained by the Massachusetts Department of Environmental Protection; online database accessed at http://mass.gov/edep

Local (County and Municipal) Records and Information

- Assessor's parcel information
- Town of Manchester by the Sea Fire Prevention Division
- Town of Manchester by the Sea Board of Health
- Historical aerial photographs of the subject property and vicinity obtained from EDR, Inc.
- Historical Sanborn Fire Insurance maps of the subject property and vicinity researched by EDR Inc.

CDW engaged EDR, Inc. to scan both federal and state environmental record databases and provide a summary of facilities that are identified on any of the lists searched are as follows:

List	Standard Search Radius (Miles)
Federal National Priority List (NPL)	1.0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List	0.5
CERCLIS No Further Remedial Action Planned (NFRAP) List	0.5
Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS)	0.5
RCRA Non-CORRACTS	0.5
RCRA Generators	0.25
State-Equivalent NPL	1.0
State Landfill and/or Solid Waste Disposal Site Lists	0.5
State Leaking Underground Storage Tank (UST) Lists	0.5
State Registered UST Lists	0.25

4.1 Federal CERCLIS List

Superfund or Comprehensive Environmental Response, Compensation, and Liability Act of 1980 is a United States federal law designed to clean up sites contaminated with hazardous substances as well as broadly defined as pollutants or contaminants. There are no CERCLIS sites located within 0.5 miles of the Site.

4.2 State-and tribal-equivalent- CERCLIS

State/Tribal Sites are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund or NPL) are identified along with sites where cleanup will be paid for by potentially responsible parties. Four (4) State hazardous waste sites were identified within ½ miles of the Site. Information regarding hazardous waste sites, including associated Massachusetts Department of Environmental Protection (MassDEP) release tracking numbers (RTNs), is summarized below:

Name	Address	RTN/Status	Dist. (mi)/ Direction	Relative Elevation
Summer Street	50 Brook Street	3-0014131/DPS	0.101/SSW	Higher
Manchester Number 23 Substation	23 Summer Street	3-0031289/TIERII	0.0357/SSW	Lower

Name	Address	RTN/Status	Dist. (mi)/ Direction	Relative Elevation
Seabreeze Variety	8 Beach Street	3-0028168/RAO	0.422/SW	Lower
Town Hall Parking Lot	10 Central Street	3-0033184/TIERII	0.500/SW	Lower

- RAO (Response Action Outcome): A site/release where an RAO Statement was submitted to achieve regulatory closure. An RAO Statement asserts that response actions were sufficient to achieve a level of no significant risk or at least ensure that all substantial hazards were eliminated.
- RAONR: Response Action Outcome Not Required
- DPS (Downgradient Property Status): A site where a DPS Submittal to DEP has stated that contamination on the property is coming from an upgradient property.
- TIER 2: Site has been classified as Tier 2

Based on regulatory status and/or gradient from the Site, none of the above listed sites are considered a REC for the Site.

4.3 State and tribal leaking storage tank lists

The Leaking Aboveground Storage Tank (LAST) database is a list of confirmed or suspected releases from aboveground storage tanks that have been reported to the state. The state AST database is an inventory of all regulated ASTs. There is one (1) LAST located within a 0.5-miles of the Site. The LASTs are summarized below:

Name	Address	RTN/Status	Dist. (mi)/ Direction	Relative Elevation
Residence	24 Forest Street	3-0029448/RAO	0.462/ENE	Higher

The Leaking Underground Storage Tank (LUST) database is a listing of confirmed or suspected releases from underground storage tanks that have been reported to the state. The state UST database is an inventory of all regulated USTs. There are five (5) LUST Sites located within a 0.5-miles of the Site. The LUSTs are summarized below:

Name	Address	RTN/Status	Dist. (mi)/ Direction	Relative Elevation
Former Texaco Station	74-76 Summer Street	3-0021362/RAONR	0.091/S	Higher
Former Texaco Station	76 Summer Street	3-0002657/RAO	0.091/S	Higher

Name	Address	RTN/Status	Dist. (mi)/ Direction	Relative Elevation
Verizon Massachusetts	52 Summer Street	3-0011714/RAO	0.202/SSW	Higher
Sacred Heart Church	62 School Street	3-0004415/RAO	0.324/W	Higher
Property	1-3 Powder House Lane	3-0004233/RAO	0.478/WSW	Higher

Based on regulatory status and/or gradient from the Site, none of the above listed sites are considered a REC for the Site.

4.4 State and tribal registered storage tank lists

The Underground Storage Tank database contains registered USTs. USTs are registered under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Protection's Summary Listing of all the Tanks Registered in the State of Massachusetts. There are two (2) USTs located within a 0.25-miles of the Site. The USTs are summarized below:

Name	Address	Tank Status	Dist. (mi)/ Direction	Relative Elevation
Manchester Gas and Service	96 Summer Street	Tanks 1-4: Tanks Removed Tanks 5-6: In Use	0.115/ESE	Higher
Verizon Massachusetts	52 Summer Street	Tank Removed	0.202/SSW	Higher

The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Protection's Summary Listing of all the tanks registered in the State of Massachusetts. There is one (1) AST located within a 0.25-miles of the Site. The AST is summarized below:

Name	Address	RTN/Status	Dist. (mi)/ Direction	Relative Elevation
Verizon Massachusetts	52 Summer Street	5487	0.202/SSW	Higher

4.5 State and tribal institutional control / engineering control registries

Institutional Control: Activity and Use Limitations establish limits and conditions on the future use of contaminated property, and therefore allow cleanups to be tailored to these uses. A review of the Institutional Control List, as provided by EDR, has revealed that there are no Institutional Control sites within approximately 0.5 miles of the target property.

4.6 EDR High Risk Historical Records

EDR US Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, Laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as High Risk Historical Records, or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. There are no historical cleaner sites located within 0.5 miles of the Site.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as High Risk Historical Records, or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are two (2) EDR Hist Auto sites within approximately 0.125 miles of the target property. The EDR Hist Auto Sites are summarized below:

Name	Address	Dist. (mi)/ Direction	Relative Elevation
Hotz Motor Company	76 Summer Street	0.091/S	Higher
Bailey Guy	96 Summer Street	0.113/ESE	Higher

4.7 Other Databases

NPL, Delisted NPL, CERCLIS & NFRAP Sites

The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. The Delisted NPL is the database of delisted Superfund sites. The Comprehensive Environmental Response List contains sites which are either proposed to be or on the NPL, and sites which are in the screening and assessment phase for possible inclusion on the NPL. No Further Remedial Action Planned (NFRAP) sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

No NPL, delisted NPL, CERCLIS or NFRAP sites were identified within the study radii.

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. A review of the FUSRAP list, as provided by EDR, has revealed that there are no FUSRAP sites within approximately 1 miles of the target property.

Mercury: A listing of locations, collecting and recycling for mercury-added products. Mercury is toxic to the human nervous system, as well as fish and animals. Mercury can enter the body either through absorption or through inhalation of mercury vapors. At room temperature, small beads of mercury will vaporize. A review of the mercury list, as provided by EDR, and dated 01/31/2017 has revealed that there is one (1) mercury sites within approximately 0.5 miles of the target property. The mercury site is summarized below:

Name	Address	Dist. (mi)/ Direction	Relative Elevation
Manchester Hardware	35 Beach Street	0.493/SW	Lower

RCRA Facilities

Regulated hazardous waste activity is tracked under the information system as defined by RCRA. Facilities that treat, store or dispose of hazardous waste are listed in the RCRA TSD database. Facilities that generate hazardous wastes are listed in the RCRA Generators (RCRA GEN) database. This database includes facilities that generate at least 1,000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste, referred to as large-quantity generators, and those that generate less than 1,000 kg/month of non-acutely hazardous waste, referred to as small-quantity

generators. RCRA facilities which have had a release of hazardous waste or constituents to the environment, for which the government is requiring corrective action, are tracked in the Corrective Action Tracking System (RCRA COR) database, while generators that are known to have violated RCRA regulations are tracked in the RCRA violations and enforcement (RCRA Viol). These violations can be the result of paperwork problems and are not necessarily related to releases of hazardous material.

RCRA NonGen/NLR: RCRAInfo is EPA's comprehensive information system. Providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes sensitive information on sites which generate, transport, store, treat and/or dispose of hazardous waste a defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. A review of the RCRA NonGEN/NLR list, as provided by EDR, and stated 06/21/2016 has revealed that there are two (2) RCRA NonGen/NLR sites within approximately 0.25 miles of the target property. The RCRA NonGen/NLR sites are summarized below:

Name	Address	Dist. (mi)/ Direction	Relative Elevation
Baileys Service Station, INC.	96 Summer Street	0.115/ESE	Higher
Cricket Press, INC.	50 Summer Street	0.227/SSW	Higher

Hazardous Waste Generator Database and Sites

Permanent generator identification numbers for all Massachusetts generators of hazardous waste and waste oil that have registered with or notified MassDEP of their hazardous waste activities. A review of the HW GEN list, as provided by EDR, has revealed that there are two (2) HW GEN site within approximately 0.25 miles of the target property.

Name	Address	EPA ID Number/State Generator Status	Dist. (mi)/ Direction	Relative Elevation
Cricket Press, INC.	50 Summer Street	MAR000007039 SQG-MA	0.227/SSW	Higher
Manchester Essex Regional Schools	36 Lincoln Street	MV9785262055	0.155/NW	Lower

FINDS & TRIS Database Sites

The Facility Index System (FINDS) report is a computerized inventory of all facilities that are regulated or tracked by the USEPA. These facilities are assigned an identification number that serves as a cross-reference for other databases in the USEPA's program system. The Toxic Inventory Information System (TRIS) report contains information concerning the industrial release and/or transfer of toxic chemicals, as reportable under Title III of the Superfund Amendments and Re-authorization Act of 1986 (Sara Title III). Inclusion on this database is required for facilities which release reportable amounts of chemicals into the environment.

No FINDS sites were found within a quarter mile of the target property.

No TRIS sites were found within a quarter mile of the target property.

The Site is not listed on any other databases. Due to the distance and regulatory status of the identified Sites that are not the subject Site, within the search radius, are not considered RECs at the time of this report.

4.8 Additional Environmental Record Sources

CDW contacted the following local agencies for information regarding any hazardous materials response incidents, chemical storage or releases, or notices of environmental violations at the subject property.

4.8.1 Town of Manchester by the Sea Fire Department

Records of two 10,000-gallon #2 fuel oil USTs removed on July 23, 1991 were provided by the fire department. The removal documentation is provided in Appendix B.

4.8.2 Town of Manchester by the Sea Water and Sewer

The Site is serviced by municipal water and sewer. Water service enters the building from Lincoln Street. Water is supplied by Gravelly Pond, a surface water reservoir, which is located off Chebacco Road in Hamilton. The second water source is the Lincoln Street Well, located next to the Manchester/Essex Regional Junior/ Senior High School on Lincoln Street in Manchester.

Sewage from the Site building is discharged through an 8-inch main to a main in Lincoln Street. Sewage enters the headworks building for treatment. Grit is separated from the raw sewage and is dewatered by a grit screw and accumulated for disposal. The raw sewage is pumped from the influent wet well to the aeration tanks where the biological treatment occurs. Sewage exiting the aeration tanks flows to two 48-foot diameter clarifiers where the sludge is settled out. Effluent from the clarifiers is chlorinated and discharged through the outfall pipe into outer Manchester Harbor.

4.8.3 Massachusetts Department of Environmental Protection

The Site is not located in the MassDEP database. The closest MassDEP Site, the Former Texaco Station, located at 76 Summer Street is 0.11 miles upgradient from the Site. The RTN for this property had been closed with a RAO.

4.9 Physical Setting Sources

CDW reviewed several sources of publications including the USGS, the Federal Emergency Management Agency (FEMA) Maps, the United States Department of Agriculture (USDA) Soil Survey, MassGIS and EDR, Inc. to gather information pertaining to the subject property and the physical setting source.

According to the Massachusetts 21E Map, there are zero (0) MassDEP AUL sites within ½-mile. There are also two (2) MassDEP Tier II Classified sites within a ½-mile radius of the study Site. These sites are located to the south and southwest (Figure 2).

According to available information, the site is located within an Interim Wellhead Protection Area (IWPA) and a Zone II of a public water supply well (Figure 3).

According to MassGIS the nearest establish wetland resource areas are located to the south, east, and west of the Site (Figure 4).

The Site is not located within any FEMA Flood Zones (MassGIS) (Figure 5).

The Site is not considered an Open Space area. Open Spaces are located within 0.5-miles of the Site to the north, south, east and west and are defined as municipal parks or private open space (Figure 6).

There are no Natural Heritage mapped areas, Priority or Rare Species Habitats, or Areas of Critical Environmental Concern (ACEC) mapped on the Site. There are no vernal pools within 0.5 miles of the Site (Figure 7).

The Site is located 32 feet above sea level, and the topography is level. The bedrock at the Site consists of Cape Ann Granite (Zen et. al. 1983). There are no bedrock outcrops at the Site.

Surface soils at the Site consist of Udorthents Silty Loam per the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) (USDA 2014).

4.10 Other Historical Use Information

CDW researched sources of historical information to identify the approximate year of development of the subject property and to determine the past use of the subject property since its initial

development. Such sources included, but were not limited to, the research and review of tax assessor records, historical aerial photographs, historical Sanborn Maps, and topographic maps.

Sanborn Maps

Sanborn Fire Insurance Maps were obtained from EDR. Based on a map from 1958, the Site is shown as a school. The 1941 and 1921 map does not show the Site because the property was either undeveloped or not studied at that time. Sanborn maps are provided in Appendix D.

Aerial photographs

Aerial photographs were obtained from EDR. Based on aerial photography from 1952, 1955, 1960, 1969, 1972, 1978, 1986, 1991, 1995, 2008, 2010, and 2012 the Site remains in the same location and the surrounding properties remain consistent. Aerial Photographs are provided in Appendix E.

Based on historical data reviewed, it is CDW's opinion that a full title search would not have provided any significant additional information.

V FINDINGS

CDW has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13 of 43 Lincoln Street in Manchester by the Sea, Massachusetts. This assessment assessed the presence or absence of RECs, HRECs and CRECs in connection with the Site.

No CRECs were identified during the assessment. RECs and HRECs were identified during the assessment. They were:

- Potential contamination from the two 10,000-gallon fuel oil underground storage tanks removed in 1991. This represents a HREC.
- Potential Contamination from the old transformer removed from the electric room in the basement. It is unknown if PCBs were in the transformer fluids. This represents a HREC.
- Potential contamination from the exterior pad mounted transformer. It is unknown if PCBs are in the transformer fluids.
- Potential dumping of ash from incinerator.
- Potential asbestos debris within the dirt floor portion of the crawlspace.

No evidence of inappropriate waste-dumping or suspect waste disposal pits was observed during the Site inspection. No areas of distressed vegetation were observed on the Site. No visible evidence of releases of oil or hazardous materials was observed at the Site.

VI CONCLUSIONS

CDW has completed Phase I Environmental Site Assessment in conformance to the scope and limitations of ASTM Practice E 1527-13 of the Site at 43 Lincoln Street in Manchester by the Sea, Massachusetts. As of the date of this report, there are RECs and HRECs in connection with the Site.

There are no CRECs in connection with the Site. There are no AULs or engineering controls with respect to the historical release(s).

Data Gaps
Based on the information obtained during this ESA, it is the professional opinion of CDW Consultants that historical data failures, as defined in the ASTM guidelines, has occurred as follows:

- Potential contamination from the two 10,000-gallon fuel oil underground storage tanks removed in 1991. This represents a HREC.
- Potential Contamination from the old transformer removed from the electric room in the basement. It is unknown if PCBs were in the transformer fluids. This represents a HREC.
- Potential contamination from the exterior pad mounted transformer. It is unknown if PCBs are in the transformer fluids.
- Potential dumping of ash from incinerator.
- Potential asbestos debris within the dirt floor portion of the crawlspace.

These data gaps cannot be resolved without subsurface exploration and land disturbance. Furthermore, no definitive conclusions can be made regarding any subsurface conditions at the Site without the completion of soil and groundwater sampling and analysis which were outside of the scope of this Phase 1 ESA.

Recommendations

No conclusions or opinions can be made regarding the subsurface conditions at the Site without the completion of soil and groundwater sampling and analysis. CDW recommends the following to further investigate the environmental condition of the Site:

CDW recommends that a Phase II subsurface investigation be conducted including the installation of additional monitoring wells, and comprehensive soil and groundwater analysis. The wells should be installed in areas to investigate the possible on-site presence of contaminants from former USTs, substandard fill, and other historic activities that may have impacted the site.

The results of the soil and groundwater analytical results should be compared with applicable

standards under the Massachusetts Contingency Plan for notification and/or mitigation requirements. The outcome of the initial sampling efforts can be used to determine whether further investigation and/or remediation is warranted to mitigate potential environmental impacts prior to or during construction.

During any future excavation of the subsurface, there is potential for encountering isolated areas of suspect oil or hazardous materials. CDW recommends that a soil management plan be incorporated into future construction documents to provide guidance on the types of conditions requiring special management or mitigating measures.

National Emission Standards for Hazardous Air Pollutants (NESHAP) regulations require sampling potential ACM prior to demolition or extensive renovation, regardless of the date of construction; therefore, if such activities are planned, it may be required to conduct a survey of the entire facility, or that portion slated for renovation or demolition, before initiating such destructive activities. That survey should include an assessment of all subject building materials, including those in areas which are normally inaccessible. Any material found to be ACM should be handled in accordance with applicable regulations.

VII LIMITATIONS

1.1 Purpose

CDW performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of the ASTM E1527-13 Standard. The purpose of the assessment was to evaluate the Site history, observable conditions, and current Site use to identify potential presence of RECs at or associated with the Site. RECs are defined by ASTM as:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

HRECs are defined by ASTM as:

"A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls). Before calling the past release an HREC, the EP must determine whether the past release is a REC at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria). If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC."

CRECs are defined by ASTM as:

"A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

The conclusions are intended to help the user evaluate the "business environmental risk" associated with the Site, defined by ASTM as:

"A risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations."

1.2 Detailed Scope of Services

The CDW investigation consisted of the following elements: a Site reconnaissance, a review of available historical documents associated with the Site; a review of local, state, and federal environmental databases; and interviews with the Site owner, city officials, and agency employees.

1.3 Significant Assumptions

CDW assumes that all available Site information has been provided by the owner or its representative, that the information reviewed and provided by the owner, the City, and information databases are accurate, current, and complete. Where portions of the Site were inaccessible, CDW assumes that Site conditions in those areas would not contradict any observations made herein.

There is a possibility that even with the proper application of these methodologies that there may be conditions that exist on the subject property that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. CDW believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, CDW Consultants cannot and does not warrant or guarantee that the information provided by these sources is accurate or complete. The methodologies of this assessment are not intended to produce all-inclusive or comprehensive results, but rather to provide the Client with information relating to the subject property.

1.4 Limitations and Exceptions

The conclusions of this report are limited to the information available at the time of the investigation and the scope of services as defined. No subsurface exploration was performed on this Site; therefore, no conclusions can be made relative to subsurface conditions or the presence or absence of soil or groundwater contamination from either on-Site or off-Site sources.

Where access to portions of the Site was unavailable or limited, CDW renders no opinion as to the presence of oil or hazardous material or the presence of indirect evidence related to oil or hazardous material in that portion of the Site.

No other conclusions, interpretations, or recommendations are contained or implied in this report other than those expressed. CDW makes no warranty, expressed or implied, on the accuracy of the work and information completed by others and upon which CDW has relied to prepare this report. No other use of this report is warranted without the written consent of CDW.

Events occurring on the subject property after August 28, 2017, the date of the inspection, are beyond the scope of this report. CDW makes no expressed or implied representations or warranties regarding any changes in the condition of the premises after this date from on-site or off-site sources.

1.5 Special Terms and Conditions

This Phase I ESA was conducted as part of a feasibility study for future construction. There were no other specific Terms or Conditions.

1.6 User Reliance

This report is intended for the use of the entities listed below, and may be relied upon for up to one year after the date issued. No other individuals or entities may rely upon the report contents, in part or in whole.

Owner: Manchester By the Sea School District

Architect: JCJ Architecture

1.7 Additional Services

No soil, groundwater, surface water or other media testing was conducted as part of this assessment. A wetlands survey was not performed. A comprehensive asbestos and hazardous building material survey was not included. A professional title search was not included.

IX SIGNATURE AND QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

The investigation of the Site described in the report was performed by Ms. Susan Cahalan, Senior Project Manager, who is qualified to make investigations and formulate the opinions herein set forth. Ms. Cahalan has 20 years of experience performing environmental site assessments. She has a Bachelors of Science in Geology from Northeastern University in Boston, Massachusetts and a Masters of Liberal arts in Sustainability and Environmental Management from Harvard University in Cambridge, Massachusetts.

The Site Investigator is knowledgeable regarding the type of industrial, manufacturing, commercial or other processes or operations which might reasonably be expected to generate, use, treat, store or dispose of oil or hazardous material. The Site Investigator has reviewed the recent history of the Site and has considered the potential for the generation, use, treatment, storage or disposal of oil or hazardous material by (a) the uses presently associated with the Site and (b) to the extent ascertainable by inquiry, the uses previously associated with the Site.

This report is dated October 10, 2017, and is signed by individuals who are duly authorized to do so.

Susan Cahalan, PG, ISSP-SA
Senior Environmental Scientist

GENERAL INFORMATION

Property Name: Manchester Memorial Elementary School

Address: 43 Lincoln St, Manchester-by-the-Sea, MA 01944

PROPERTY INFORMATION

Property Size (in acres): **11.31 acres**
# of Buildings: 2

Gross Building Square feet: 66, 573

Date of Construction: School Opened 1951; 1954 Addition (8 classrooms, 2 rest rooms); 1965 Addition (13 classrooms, 4 rest rooms).

The questionnaire information was provided by:

Name: Jay Pagliarulo

Title: Facilities Manager

Signature: _____

Date: September 21, 2017

ENVIRONMENTAL INFORMATION

PREVIOUS REPORTS, DOCUMENTS AND OWNERS

1. Are you aware if a previous Environmental Assessment has ever been performed on the subject property?

Yes No (Do not Know)

If yes, are you aware of the recommendations made in the report or please provide a copy of the report?

Still Researching

2. Do you have any other environmentally associated documents, such as compliance audits, environmental permits (such as an NPDES permit, **boiler permit**, wastewater permit), registrations (such as for an underground storage tank)? If yes, please provide a copy of the document(s)

(Yes) No Do not Know

HISTORICAL & PRESENT USAGE/SITE CONDITIONS – SUBJECT AND ADJOINING PROPERTIES

1. Are you aware of the prior use of the subject property, i.e., any previous development, undeveloped? If so, please describe.

Still Researching

2. Has fill dirt ever been brought onto the subject property that originated from a contaminated site or from an unknown source?

Yes (No) Do not Know

3. Are there currently or have there ever been any pits, ponds or lagoons on the subject property utilized in connection with waste treatment or waste disposal?

Yes (No) Do not Know

4. Are you currently aware of or have there ever been any hazardous substances, petroleum products, tires, car or industrial batteries, pesticides or other chemicals or waste materials that have been dumped, buried or burned on the subject property?

Yes (No) Do not Know

5. Have any of the adjoining properties ever been used for industrial purposes? (including but not limited to a gas station, dry cleaner, auto repair facility, landfill, waste treatment, printing facility etc.)? If yes, please describe.

(Yes) No Do not Know

QUESTION 5 NARRATIVE

Manchester Gas and Service Station, 96 Summer St, while not directly adjoining the property is located east of Memorial at the corner of Lincoln and Summer Streets. Additionally, 76 Summer St., located south of, and adjacent to, the Memorial property was formerly a Texaco Station. A search of the Mass DEP indicates a small gasoline spill here on 1/2/1990 with response action and follow up through 3/20/208. Copy of records can be found at http://public.dep.state.ma.us/fileviewer/Scanned.aspx?id=144582

6. If the subject property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system or that the well has been designated as contaminated by any government environmental/health agency? If an on-site well is present, please attach a copy of the most recent water quality testing report.

Yes (No) Do not Know

AAI and REGULATORY QUESTIONS

1. Are you aware of any past or current existence of hazardous substances, specific chemicals, or petroleum products on the subject property or any facility located on the property?

Yes (No) Do not Know

2. Are you aware of any past or current spills or other chemical releases that have taken place at the property?

Yes (No) Do not Know

3. Do you know of any clean ups (with respect to hazardous substances, specific chemicals, or petroleum products) that have occurred at the property?

Yes (No) Do not Know

4. Are you aware, based on your knowledge of the property, if there are any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes (No) Do not Know

5. Do you have any knowledge of filed or recorded environmental cleanup liens under federals, state or local law or governmental notification relating to past or recurrent violations of environmental laws with respect to the subject property or any facility located on the property?

Yes (No) Do not Know

6. Are there any potential or pending lawsuits or administrative actions concerning a release or threatened release of hazardous substances or petroleum product involving the subject property or any facility located on the property?

Yes (No) Do not Know

7. Are you aware of any areas of activity or use limitations (AULs) such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been recorded or filed in a registry under federal, state or tribal law?

Yes (No) Do not Know

STORAGE TANKS AND DRAINS

1. Are there currently or are you aware if there have ever previously been any registered or unregistered storage tanks, aboveground or underground, located on the subject property? If so, please attach copies of documentation such as tank closure/removal reports, tank tightness tests or registration/regulatory information.

(Yes) No Do not Know

An oil storage tank was removed from Memorial when the school converted from oil fired to natural gas fired boilers. Confirmation of removal date attached. Disposal manifest attached.

2. Are there currently or are you aware if there have ever previously been any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the subject property?

(Yes) No Do not Know

3. Are there currently or are you aware if there has ever previously been any current evidence of leaks, spills, or staining by substances other than water, or foul odors, associated with any flooring, drains, walls, ceilings, or exposed grounds on the subject property?

Yes (No) Do not Know

TRANSFORMERS AND HYDRAULIC EQUIPMENT

1. Are there are any transformers, capacitors, and/or hydraulic equipment on the subject property?

(Yes) No Do not Know

2. If yes, are there any records indicating the presence or absence of PCBs in this equipment. If so, please attach copies of this documentation.

Yes (No) Do not Know

3. Are the transformers owned by the subject property or by the local utility? If owned by the utility, please note the name of the utility. **Owned by National Grid.**

_____

_____

ASBESTOS CONTAINING MATERIALS

1. Has the subject property ever been tested for the presence of asbestos containing materials (ACM)?

(Yes) No Do not Know

2. If yes, are you aware if asbestos containing materials were identified? If so, please note what asbestos containing materials were identified and their locations or please attach a copy of the test results?

(Yes) No Not applicable

A copy of test results will be attached.

3. Is there an Asbestos Operations and Maintenance Program in place at the subject property?

Yes No Do not Know

RADON

1. Has the subject property ever been tested for the presence of radon?

Yes No Do not Know

2. If yes, do you have the results of the testing? Please attach.

Yes No Do not Know

LEAD BASED PAINT

1. Has the subject property ever been tested for the presence of lead based paint (LBP)?

Yes No Do not Know

2. If yes, are you aware if lead based paint was identified? If so, please note where it was identified or please attach a copy of the test results?

Yes No Not applicable

MOLD

1. Is there any evidence of mold and/or mildew on the subject property? If yes, please provide information as to the location, extent and the cause of the mold/mildew. Please note what actions are currently or have formerly been taken to address this concern.

Yes No

There is a minimal amount of mildew on some exterior painted surfaces. This is caused by moisture and minimal exposure to sunlight. Some areas have been washed with a 10% bleach solution, but there are other areas on roof fascia boards that we have not disturbed due to the belief that the fascia contains lead paint.

2. Is there a Mold and Moisture Minimization Program in place at the subject property?

Yes No Do not Know

COMMENTS/ADDITIONAL INFORMATION (If necessary, please provide any additional relevant environmental information that has not been discussed above.)

Currently researching whether formal testing has been done for lead paint. The wood fascias, soffits, and frieze boards are all believed to contain lead paint (visual inspection). Seeking records of a previous Environmental Assessment. Researching prior land use.

NAME AND ADDRESS OF APPROVED TANK YARD: JAMES G. GRANT CO., INC. R. 28 WOLCOTT ST. READVILLE, MA 02137

APPROVED TANK YARD NO. 03501

Tank Yard Ledger 502 CMR 3.03(4) Number: 9106826

I certify under penalty of law I have personally examined the underground steel storage tank delivered to this "approved tank yard" by firm, corporation or partnership J. G. Grant and accepted same in conformance with Massachusetts Fire Prevention Regulation 502 CMR 3.00 Provisions for Approving Underground Steel Storage Tank dismantling yards. A valid permit was issued by LOCAL Head of Fire Department FDID# 09165 to transport this tank to this yard.

Name and official title of approved tank yard owner or owners authorized representative:

David Grant (SIGNATURE) Pres. (TITLE) 7-23-91 (DATE SIGNED)

This signed receipt of disposal must be returned to the local head of the fire department FDID# 09165 pursuant to 502 CMR 3:00. (EACH TANK MUST HAVE A RECEIPT OF DISPOSAL)

FORM F.P. 291 (rev. 9/88) (OVER) MASSACHUSETTS STATE FIRE MARSHAL'S OFFICE

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

SHWS: Contains information on releases of oil and hazardous materials that have been reported to DEP.

A review of the SHWS list, as provided by EDR, and dated 06/06/2017 has revealed that there are 11 SHWS sites within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

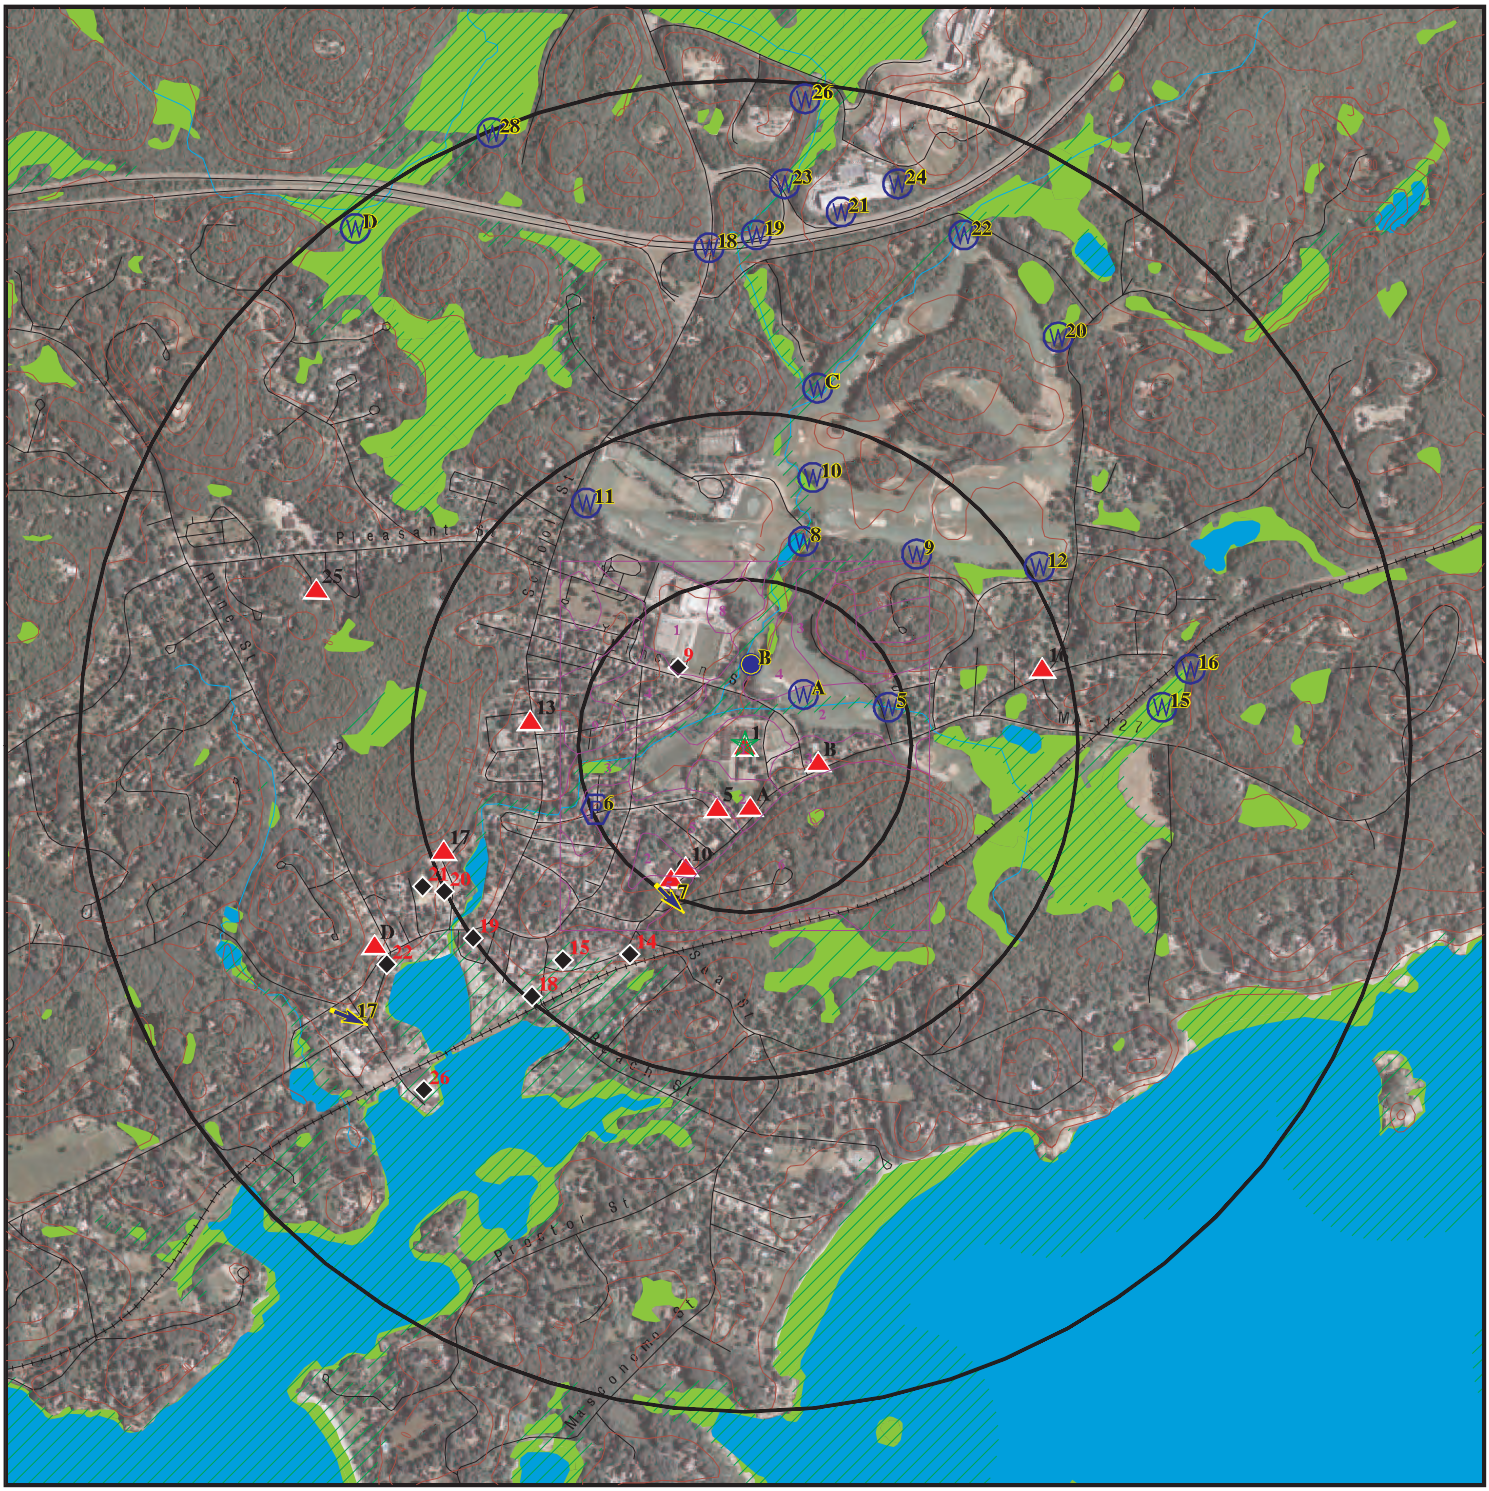
EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.



Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
HOTZ MOTOR CO	76 SUMMER ST	S 0 - 1/8 (0.091 mi.)	A4	20

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by CDW Consultants Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

1.0 INTRODUCTION

CDW Consultants, Inc. (CDW), on behalf of our client, JCJ Architects, has conducted a limited subsurface investigation on the Site which is located at 43 Lincoln Street, Manchester-by-the-Sea Massachusetts (Figure 1). The investigation included the advancement of soil borings, soil sampling and analysis, installation of four monitoring wells and groundwater sampling and analysis. This investigation was conducted in February-March 2019. The investigation was conducted in order to determine the presence or likely presence of hazardous substances or petroleum products on the property in areas of concern identified in CDW's Phase I Environmental Site Assessment report from November 2017.

1.1 Purpose

The purpose of the investigation was to evaluate subsurface conditions at the Site in specific areas that will be undergoing Site and/or building demolition and new construction that may have been impacted by identified potential sources of contamination at the Site. This investigation was performed in accordance with Massachusetts General Law (MGL) Chapter 21E.

1.2 Site & Surrounding Area Description

The Site includes 11.31 acres of land. The Site contains one main 66,573 square foot school building constructed in the 1951 with two additions, one in 1954 and 1965. The site is owned by the Town of Manchester by the Sea, and is listed as Book 3507-137, Page 138.

The Site building is connected to municipal water and sewer. The Site building is heated with natural gas. The Site is bound by athletic fields and causeway brook aqueduct to the north, Summer Street to the south with residential properties beyond, Lincoln Street to the east, and north and to the west by residential properties. The Site is located on the United States Geological Survey (USGS) Marblehead North 2012 Quadrangle Map at the following approximate location and elevation:

Universal Transverse Mercator (UTM) Zone 19 Coordinates	
4715387.5	UTM Y (Meters)
4715387.5	UTM X (Meters)
Latitude/Longitude	
42.5792560 - 42° 34' 45.32''	Latitude (North)
70.7642750 - 70° 55' 51.39''	Longitude (West)
Elevation	
32	Feet above sea level

2.0 SUMMARY OF PHASE I SITE ASSESSMENT

CDW completed a Phase I Environmental Site Assessment in October 2017. The investigation conducted by CDW personnel included a review of available federal, state, and local environmental agency records to identify the presence or likely presence of Recognized Environmental Conditions (RECs), Historical Recognized Environmental Condition (HRECs) and Controlled Recognized Environmental Condition (CRECs). No CRECs were identified during the assessment. RECs and HRECs were identified during the assessment. They were:

- Potential contamination from the two 10,000-gallon fuel oil underground storage tanks removed in 1991. This represents a HREC.
- Potential Contamination from the old transformer removed from the electric room in the basement. It is unknown if what chemicals were in the transformer fluids. This represents a HREC.
- Potential contamination from the exterior pad mounted transformer. It is unknown what chemicals were in the transformer fluids.
- Potential dumping of ash from incinerator.

3.0 LIMITED SUBSURFACE INVESTIGATION

3.1 Topography and Hydrogeologic Features

The Site is located 32 feet above sea level, and the topography is level. The bedrock at the Site consists of Cape Ann Granite (Zen et. al. 1983). There are no bedrock outcrops at the Site. According to available information, the site is located within an Interim Wellhead Protection Area (IWPA) and a Zone II of a public water supply well. According to MassGIS the nearest establish wetland resource areas are located to the south, east, and west of the Site. The Site is not located within any FEMA Flood Zones (MassGIS). Surface soils at the Site consist of Udorthents Silty Loam per the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS). Groundwater is located approximately 13-21 feet below ground surface. A groundwater elevation survey was performed. Groundwater gauging data points to flow in a northern direction.

3.1 Soil Borings and Monitoring Wells

On February 22, 2019, CDW advanced four (4) soil borings (MW-1, MW2, MW-3, MW-4) at the Site. The soil borings were advanced using a hollow stem auger drill rig. Soil samples were collected continuously in split spoon samples to a depth of 20 feet and classified on-site. CDW's subcontractor, Technical Drilling Services, Inc, of Sterling, MA completed the advancement of the

soil borings. CDW's subcontractor, Eurofins Spectrum Analytical, Inc. of Agawam, Massachusetts, completed the laboratory sample analyses.

The selection of the locations of the borings was based upon the potential source of contamination due to possible onsite presence of contaminants RECs and HRECs at the Site, which may be encountered during construction. The boring locations were chosen to provide coverage surrounding the most probable location of contamination on the Site. This was determined to be the basement boiler room below the kitchen where two 10,000-gallon fuel oil underground storage tanks were removed in 1991 and the old transformer. Soil boring MW-1 was drilled on the eastern part of the building, boring MW-2 on the norther part, near the transformer, MW-3 on the western part of the alcove, and MW-4 on the northern part between 1 and 2.

A two-inch diameter monitoring well was installed to a depth of 20 feet in all four borings. The wells were constructed of a 10-foot length of two-inch diameter slotted polyvinyl chloride (PVC) well screen and a solid PVC riser. Uniformly graded sand was placed around the well screen up to one foot above the screen. One foot of bentonite grout was placed above the sand, followed by native fill to grade. A protective roadway box was installed at grade. The boring/groundwater monitoring well locations are depicted on Figure 2. The soil boring logs are depicted in Appendix A.

3.2 Soil Screening and Laboratory Samples

Soil samples were collected continuously from samples from each boring and field-screened with a photoionization detector (PID) using the headspace method. The soil headspace screening results are provided on the boring logs in Appendix A. The PID is an instrument used to quantify total organic volatiles (TOVs) that ionized at or below 10.6 electron volts (a range which includes gasoline and some fuel oil organics). The detection limit for the instrument is 1 parts per million (ppm). One soil sample from each of four (4) borings was selected and submitted for laboratory analysis for extractable petroleum hydrocarbons (EPH), volatile organic compounds (VOCs), volatile petroleum hydrocarbons (VPH), semi volatile organic compounds (SVOCs) and priority pollutant 13 (PP13) metals. One soil sample from each boring at the depth that exhibited the highest field screening reading or field evidence of contamination was collected. If no field instrumentation readings were registered during drilling, the soil sample was collected from the vadose zone. The samples were preserved by ice, refrigeration and methanol, as appropriate, prior to laboratory analysis, and delivered to the laboratory accompanied by an appropriate chain of custody record.

The field-screening results indicated detectable levels of TOVs in both borings ranging from non-detect to 0.2 ppmv. These detections are very low and were not consistently detected in any area of the borings. The PID headspace analysis results are summarized in the boring logs in Appendix A.

3.3 Groundwater Sampling

On March 1, 2019, CDW collected groundwater samples from the newly installed monitoring wells (MW-1, MW2, MW-3, MW-4). All wells were allowed to equilibrate for at least one week prior to sampling. The wells were purged and sampled using a disposable polyethylene bailers. At least three well volumes were purged from the well prior to collecting the samples. The groundwater collected was turbid with an abundance of silt. The samples were submitted to CDW's subcontractor, Spectrum Analytical, for analysis for EPH, VOCs, VPH, SVOCs and dissolved PP13. The samples for metals analyses were filtered in the field prior to preservation.

3.4 Groundwater Gauging

On March 1, 2019, newly installed monitoring wells were gauged for depth to groundwater and the presence of non-aqueous phase liquid (NAPL) using an oil/water interface probe. Measurements were made to the top of the PVC riser. No NAPL was observed in the well. Depth to groundwater was measured at approximately 14 feet below the ground surface. Groundwater from all four monitoring wells was observed to flow directly downgradient to the Causeway Brook which flows through the north edge of the Site. Depth to groundwater measurements are provided in Table 2.

4.0 NATURE AND EXTENT OF CONTAMINATION

4.1 Soil and Groundwater Classifications

The selection of a soil classification of RCS-1, as defined in the Massachusetts Contingency Plan (MCP), 310 CMR 40.0361(1)(a), for the comparison of Reportable Concentrations, is applicable to the Site because:

- All the soil sample locations are on an elementary school property.

The selection of a groundwater classification of RCGW-1, as defined in the MCP, 310 CMR 40.0362, for the purpose of identifying Reportable Concentrations, was based upon the following criterion:

- Groundwater at the northern part of the Site where all four wells are located, is in a MassDEP Wellhead protection area (Zone I) because of its proximity to a public water supply and recharge area.

4.2 Soil Sample Analysis Results

Laboratory analysis of soil samples revealed detectable concentrations of EPH compounds, SVOCs, VOCs and metals. All compounds detected are reported below MCP RCS-1 Reportable Concentrations. It is important to note that the laboratory detection limits for VOC analytes and one metal were above the MCP RCS-1 standard. The following analytes were affected: bromodichloromethane, bromoform, bromomethane, chloroform, chloromethane, cis-1,2-dichloroethene, cis-1,3-dichloropropene, dibromochloromethane, 1,4-dioxane, 1,2-dichloroethane, 1,2-dichloropropane, 4-methyl-2-pentanone, 1,1,1,2-tetrachloroethane, 1,1,1-trichloroethane, 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane and thallium. The reporting limit (RL) for an individual compound using WSC-CAM-II A is dependent on the concentration of the lowest non-zero standard in the initial calibration, analyzed under identical conditions as the sample, with adjustments made for the sample size, extraction concentration factor, percent solids, dilution factors, etc., as required. The CAM RLs for WSC-CAM-II target analytes are 100-200 µg/kg (wet weight) for high-level soil/sediment samples. Therefore, the above listed compounds RLs are below the target RL. Since no other VOCs were detected in soil and there is no source on property, it is reasonable to assume that these compounds are not likely to be present. Furthermore, there were no PID readings, or olfactory-visual indication of contamination. Analytical test results from all other compounds were below their respective laboratory detection limits. None of these results exceeded the applicable MCP Reportable Concentrations. The results of all soil analyses are summarized in Table 1. A copy of the laboratory analytical report are included in Appendix B.

4.3 Groundwater Sample Analysis Results

Groundwater samples were analyzed for EPH, VPH, VOCs, SVOCs and PP13 metals. No VPH, EPH or VOCs were detected in groundwater above laboratory detection limits. SVOC compounds benzo (b) fluoranthene, chrysene, floranthene, phenanthrene and pyrene were detected above laboratory detection limits, but below MCP GW-1 Reportable Concentrations. The dissolved metals arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, thallium and zinc were detected in all four groundwater samples. The detected concentrations of metals are above the applicable Reportable Concentration for GW-1 classified groundwater. The results of groundwater analyses are included in Table 2. The laboratory analytical report is included in Appendix C.

5.0 CONSLUSIONS AND RECOMMENDATIONS

The Site study area for this Phase II Investigation consists of a portion of the Manchester Memorial Elementary School in Manchester by the Sea, Massachusetts. This investigation focused on subsurface testing in areas of the school property that are proposed for new construction. Based upon the results of subsurface soil and groundwater testing and site observations, CDW is presenting our

conclusions and a summary of the key observations upon which these conclusions are based. Based upon our research, subsurface testing, and site observations, CDW is presenting our conclusions and a summary of the key observations upon which these conclusions are based. From this study, CDW has made the following observations:

On February 22, 2019, CDW advanced four (4) soil borings (MW-1, MW2, MW-3, MW-4) at the Site. A two-inch diameter monitoring well was installed to a depth of 20 feet in all four borings. Soil samples were collected continuously from samples from each boring and field-screened with a PID for TOVs. One soil sample from each of four (4) borings was selected and submitted for laboratory analysis for EPH, VOCs, VPH, SVOCs and PP13. Laboratory analysis of soil samples revealed detectable concentrations of EPH compounds, SVOCs, VOCs and metals. All compounds detected are reported below MCP RCS-1 Reportable Concentrations.

On March 1, 2019, CDW collected groundwater samples from the newly installed monitoring wells (MW-1, MW2, MW-3, MW-4). The samples were submitted for laboratory analysis of EPH, VOCs, VPH, SVOCs and dissolved PP13. No VPH, EPH, VOCs or SVOCs were detected in groundwater above MCP GW-1 Reportable Concentrations. The detected concentrations of metals in all four wells are above the applicable Reportable Concentration for GW-1 classified groundwater.

Based upon the Phase II Investigation, CDW has the following recommendations:

Soil

The soils on the site contain low levels of EPH compounds, SVOCs, VOCs and metals. All compounds detected are reported below MCP RCS-1 Reportable Concentrations. These soils are therefore not regulated by the MCP, and are not considered a remediation waste once excavated. The soils may be re-used on-site without restriction. However, reuse of these soils off-site needs to be evaluated such that the quality of the exported Site soils is acceptable to the destination site pursuant to MassDEP regulations and policies.

The sampling and analytical program was specific to one or more areas of the Site where potential contamination could or occur. As such, contingency plans should be in place to manage any potentially contaminated soil that may be encountered during building demolition or new construction. CDW recommends that a contingency be factored into soil excavation planning to allow for evaluation, testing and disposal of any impacted soils discovered during construction that were not discovered during these limited investigation activities. Historical research does not guarantee that all former Site use, storage and disposal practices have been properly recorded and/or are presently known. If evidence of a release to soil and/or groundwater is encountered, measures must be conducted to properly manage those conditions.

Groundwater

The detected concentrations of metals in all four wells are above the applicable Reportable Concentration for GW-1 classified groundwater, and represent a 120-day reporting condition to the Massachusetts Department of Environmental Protection (MassDEP). However, due to the high levels of turbidity encountered in the groundwater, CDW recommends resampling the four monitoring wells within the 120 day reporting window, to determine if the metals concentrations are an anomaly due to turbidity.

6.0 LIMITATIONS

This investigation was intended to provide a general assessment of current subsurface conditions and was limited in nature and scope. The findings are limited to the information available at the time of the investigation and the scope of services as defined. The results of the limited subsurface exploration performed on this Site provide the basis for the findings and are representative of conditions at the time of the investigation. No other conclusions, interpretations, or recommendations are contained or implied in this report other than those expressed. Also, CDW makes no warranty, expressed or implied, on the accuracy of the work and information completed by others and upon which CDW has relied to prepare this report. No other use of this report is warranted without the written consent of CDW Consultants, Inc.

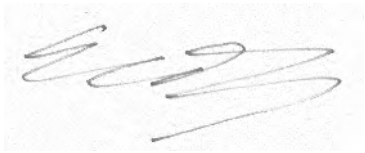
Laboratory Report
SC53666

CDW Consultants, Inc.
6 Huron Drive
Natick, MA 01760
Attn: Susan Cahalan-Roach



Project: Manchester Memorial School - MA
Project #: [none]

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. These results relate only to the sample(s) as received.
All applicable NELAC requirements have been met.

Massachusetts # M-MA138/MA1110
Connecticut # PH-0777
Florida # E87936
Maine # MA138
New Hampshire # 2972/2538
New Jersey # MA011
New York # 11393
Pennsylvania # 68-04426/68-02924
Rhode Island # LAO00348
USDA # P330-15-00375
Vermont # VT-11393

Erica Troy
Quality Services Manager

Eurofins Spectrum Analytical holds primary certification in the State of Massachusetts for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of Massachusetts does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 56 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Eurofins Spectrum Analytical, Inc. is currently accredited for the specific method or analyte indicated. Please refer to our 'Quality' web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Eurofins Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

Sample Summary

Work Order: SC53666

Project: Manchester Memorial School - MA

Project Number: [none]

Laboratory ID	Client Sample ID	Matrix	Date Sampled	Date Received
SC53666-01	CDW-MW-1	Soil	22-Feb-19 09:00	26-Feb-19 15:59

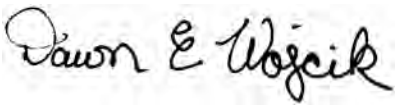
The following outlines the condition of all VPH samples contained within this report upon laboratory receipt.

Matrices	Soil		
Containers	✓ Satisfactory		
Sample Preservative	**Aqueous** (acid preserved)	✓ N/A pH≤2 pH>2	
	Soil or Sediment	N/A Samples not received in Methanol	ml Methanol/g soil 1:1 +/-25% Other
		Samples received in Methanol: covering soil/sediment not covering soil/sediment	
		Samples received in air-tight container	
Temperature	Received on ice ✓ Received at 4 ± 2 ºC		

Were all QA/QC procedures followed as required by the VPH method? *Yes*
Were any significant modifications made to the VPH method as specified in section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*



The following outlines the condition of all EPH samples contained within this report upon laboratory receipt.

Matrices	Soil
Containers	✓ Satisfactory
Aqueous Preservative	✓ N/A pH≤2 pH>2 pH adjusted to <2 in lab
Temperature	Received on ice ✓ Received at 4 ± 2 ºC

Were all QA/QC procedures followed as required by the EPH method? *Yes*
Were any significant modifications made to the EPH method as specified in Section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*

I attest that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Eurofins Spectrum Analytical, Inc.	**Project #:** [none]
Project Location: Manchester Memorial School - MA	**RTN:**
This form provides certifications for the following data set:	SC53666-01 through SC53666-05
Matrices: Soil Trip Blank	

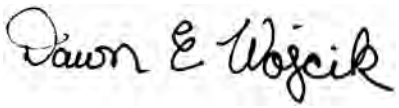
CAM Protocol

✓ 8260 VOC CAM II A	✓ 7470/7471 Hg CAM III B	✓ MassDEP VPH CAM IV A	8081 Pesticides CAM V B	7196 Hex Cr CAM VI B	MassDEP APH CAM IX A
✓ 8270 SVOC CAM II B	7010 Metals CAM III C	✓ MassDEP EPH CAM IV B	8151 Herbicides CAM V C	8330 Explosives CAM VIII A	TO-15 VOC CAM IX B
✓ 6010 Metals CAM III A	6020 Metals CAM III D	8082 PCB CAM V A	9012 Total Cyanide/PAC CAM VI A	9014 Total Cyanide/PAC CAM VI A	6860 Perchlorate CAM VIII B

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain of Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	✓ Yes No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes ✓ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	✓ Yes No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	✓ Yes No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	✓ Yes No Yes No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to questions A through E)?	✓ Yes No

Responses to questions G, H and I below are required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	Yes ✓ No

***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	Yes ✓ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ✓ No

All negative responses are addressed in a case narrative on the cover page of this report.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Dawn E. Wojcik
Laboratory Director
Date: 3/13/2019

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 2.6 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group. If method or program required MS/MSD/Dup were not performed, sufficient sample was not provided to the laboratory.

MADEP has published a list of analytical methods (CAM) which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of MCP decisions. "Presumptive Certainty" can be established only for those methods published by the MADEP in the MCP CAM. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

According to WSC-CAM 5/2009 Rev.1, Table 11 A-1, recovery for some VOC analytes have been deemed potentially difficult. Although they may still be within the recommended recovery range, a range has been set based on historical control limits.

Some target analytes which are not listed as exceptions in the Summary of CAM Reporting Limits may exceed the recommended RL based on sample initial volume or weight provided, % moisture content, or responsiveness of a particular analyte to purge and trap instrumentation.

All VOC soils samples submitted and analyzed in methanol will have a minimum dilution factor of 50. This is the minimum amount of solvent allowed on the instrumentation without causing interference. Soils are run on a manual load instrument. 100ug of sample (MEOH) is spiked into 5ml DI water along with the surrogate and added directly onto the instrument. Additional dilution factors may be required to keep analyte concentration within instrument calibration range.

General Comments:
See the Laboratory Sample Analysis Record section of the Analysis Report for the method references .
All QC met criteria unless otherwise noted in an Analysis Specific Comment below .
Refer to the QC Summary for specific values and acceptance criteria.
Project specific QC samples are not included in this data set.
Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.
Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below .
The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.
Analysis Specific Comments:
SW-846 8260C, GC/MS Volatiles
Sample #s: 9993886, 9993887, 9993888, 9993889
The MA MCP required reporting limit could not be
attained using the laboratory LOQ.
Batch #: Q190641AA (Sample number(s): 9993886-9993889)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD exceeded the acceptance window indicating a positive bias: Acetone
SW-846 8270D, GC/MS Semivolatiles
Sample #s: 9993886, 9993887, 9993888, 9993889
The project QA/QC requirements were not met. The percent recovery
for 4-Chloroaniline was outside of the acceptance limits in the
LCS/LCSD associated with this sample as noted on the QC summary.
The failure is within the 20% failure rate allowed by CT RCP,
therefore the data is reported.
Batch #: 19063SLC026 (Sample number(s): 9993886-9993889)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window:
4-Chloroaniline
MA EPH 5/04, GC Petroleum Hydrocarbons
Sample #s: 9993886, 9993887, 9993888, 9993889
Target analytes were detected in the method blank associated with the
samples as noted on the QC Summary.
The recovery for a target analyte(s) in the Laboratory Control Spike(s) is
outside the QC acceptance limits as noted on the QC Summary. The following
action was taken:
The sample was re-extracted and the LCSD is again outside of the
acceptance limits. The data is reported from both trials.
Batch #: 190590017A (Sample number(s): 9993886-9993889)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD exceeded the acceptance window indicating a positive bias: C19 to C36 Aliphatics
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window:
Naphthalene
Batch #: 190640020A (Sample number(s): 9993886-9993889 UNSPK: 9993887)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window:
Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene,
Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene,
Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene, 2-Methylnaphthalene, C9 to C18
Aliphatics, C19 to C36 Aliphatics, Unadjusted C11 - C22 Aromatics
The relative percent difference(s) for the following analyte(s) in the LCS/LCSD were outside acceptance windows: Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene,
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene,
2-Methylnaphthalene, C9 to C18 Aliphatics, C19 to C36 Aliphatics, Unadjusted C11 - C22 Aromatics
The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window:
Naphthalene
The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) LCSD
SW-846 6010C, Metals
Sample #s: 9993886, 9993887, 9993888, 9993889
The MA MCP analyte list requirement was not met for metals .

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

CDW-MW-2
CDW-MW-3
CDW-MW-4

Sample Acceptance Check Form

Client:	CDW Consultants, Inc.
Project:	Manchester Memorial School - MA / [none]
Work Order:	SC53666
Sample(s) received on:	2/26/2019

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☐	☑	☐
Were custody seals intact?	☐	☐	☑
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples refrigerated upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☑	☐	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☑	☐	☐

Notes and Definitions

*	Outside of specification
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Authorized by:

Andrew Fenton
Quality Services Manager

Eurofins Spectrum Analytical holds primary certification in the State of Massachusetts for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of Massachusetts does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 40 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Eurofins Spectrum Analytical, Inc. is currently accredited for the specific method or analyte indicated. Please refer to our 'Quality' web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Eurofins Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

Sample Summary

Work Order: SC53767

Project: Manchester Memorial School - MA

Project Number: [none]

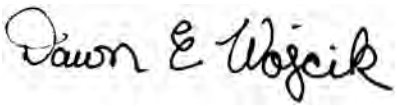
The following outlines the condition of all VPH samples contained within this report upon laboratory receipt.

Matrices	Ground Water		
Containers	✓ Satisfactory		
Sample Preservative	**Aqueous** (acid preserved)	✓ N/A pH≤2 pH>2	
	Soil or Sediment	N/A Samples not received in Methanol	ml Methanol/g soil 1:1 +/-25% Other
		Samples received in Methanol: covering soil/sediment not covering soil/sediment	
		Samples received in air-tight container	
Temperature	Received on ice ✓ Received at 4 ± 2 ºC		

Were all QA/QC procedures followed as required by the VPH method? *Yes*
Were any significant modifications made to the VPH method as specified in section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*



The following outlines the condition of all EPH samples contained within this report upon laboratory receipt.

Matrices	Ground Water
Containers	✓ Satisfactory
Aqueous Preservative	✓ N/A pH≤2 pH>2 pH adjusted to <2 in lab
Temperature	Received on ice ✓ Received at 4 ± 2 ºC

Were all QA/QC procedures followed as required by the EPH method? *Yes*
Were any significant modifications made to the EPH method as specified in Section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*

I attest that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

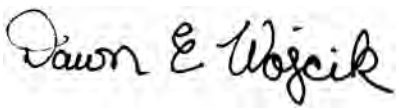
Affirmative responses to questions A through F are required for Presumptive Certainty status

A	Were all samples received in a condition consistent with those described on the Chain of Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	✓ Yes No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	✓ Yes No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	✓ Yes No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	✓ Yes No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	✓ Yes No Yes No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to questions A through E)?	✓ Yes No

Responses to questions G, H and I below are required for Presumptive Certainty status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	✓ Yes No

***Data User Note:* Data that achieve Presumptive Certainty status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	Yes ✓ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ✓ No

All negative responses are addressed in a case narrative on the cover page of this report.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Dawn E. Wojcik
Laboratory Director
Date: 3/18/2019

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 2.0 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group. If method or program required MS/MSD/Dup were not performed, sufficient sample was not provided to the laboratory.

MADEP has published a list of analytical methods (CAM) which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of MCP decisions. "Presumptive Certainty" can be established only for those methods published by the MADEP in the MCP CAM. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

According to WSC-CAM 5/2009 Rev.1, Table 11 A-1, recovery for some VOC analytes have been deemed potentially difficult. Although they may still be within the recommended recovery range, a range has been set based on historical control limits.

Some target analytes which are not listed as exceptions in the Summary of CAM Reporting Limits may exceed the recommended RL based on sample initial volume or weight provided, % moisture content, or responsiveness of a particular analyte to purge and trap instrumentation.

SW-846 8260C, GC/MS Volatiles
Sample #s: 1001627, 1001628, 1001629, 1001630, 1001631
The percent drift for the following is >20% in the continuing calibration verification standard associated with this sample: 2-Butanone, Tetrahydrofuran, 2-Hexanone and trans-1,2-Dichloro-2-Butene.
A Method Detection Limit (MDL) standard is analyzed to confirm sensitivity of the instrument for samples with non-detect analytes associated with a continuing calibration verification standard exhibiting low response (outside the 20%D criteria). The MDL standard shows adequate sensitivity at or below the reporting limit.
The MA MCP required reporting limit could not be attained using the laboratory LOQ.
Batch #: L190704AA (Sample number(s): 1001627-1001631)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD exceeded the acceptance window indicating a positive bias: Ethanol
The relative percent difference(s) for the following analyte(s) in the LCS/LCSD were outside acceptance windows: Ethanol
SW-846 8270D SIM, GC/MS Semivolatiles
Sample #s: 1001627, 1001628, 1001629, 1001630
Reporting limits were raised due to interference from the sample matrix.
The MA MCP analyte list requirement was not met for Method 8270D.
The client specified list is reported.
MA EPH 5/04, GC Petroleum Hydrocarbons
Sample #s: 1001627, 1001628, 1001629, 1001630
The surrogate data is outside the QC limits due to unresolvable matrix problems evident during the sample preparation.
Reporting limits were raised due to interference from the sample matrix.
Batch #: 190660020A (Sample number(s): 1001627-1001630)
The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) 1001627, 1001628, 1001629, 1001630
SW-846 6020A, Metals
Sample #s: 1001627, 1001628, 1001629, 1001630
The MA MCP analyte list requirement was not met for Metals.
Batch #: 190661404704A (Sample number(s): 1001627-1001630 UNSPK: 1001628 BKG: 1001628)
The recovery(ies) for the following analyte(s) in the MS and/or MSD exceeded the acceptance window indicating a positive bias: Arsenic, Beryllium, Cadmium, Chromium, Copper, Lead, Nickel, Thallium, Zinc
The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window: Antimony, Arsenic
The duplicate RPD for the following analyte(s) exceeded the acceptance window: Arsenic, Beryllium, Chromium, Copper, Lead, Nickel, Thallium, Zinc
Batch #: 190661404704B (Sample number(s): 1001627-1001630 UNSPK: 1001628 BKG: 1001628)
The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window: Selenium
The duplicate RPD for the following analyte(s) exceeded the acceptance window: Selenium
SW-846 7470A, Metals
Batch #: 190660571304 (Sample number(s): 1001627-1001630 UNSPK: 1001630 BKG: 1001630)
The recovery(ies) for the following analyte(s) in the MS and/or MSD exceeded the acceptance window indicating a positive bias: Mercury
The duplicate RPD for the following analyte(s) exceeded the acceptance window: Mercury

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

Sample Acceptance Check Form

Client:	CDW Consultants, Inc.
Project:	Manchester Memorial School - MA / [none]
Work Order:	SC53767
Sample(s) received on:	3/5/2019

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☐	☑	☐
Were custody seals intact?	☐	☐	☑
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples refrigerated upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☑	☐	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☑	☐	☐

Notes and Definitions

*	Outside of specification
K3	ICAL Verification & CCAL Verification are above QC limits; Sample result is ND
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

1.0 INTRODUCTION

CDW Consultants, Inc. (CDW), on behalf of our client, JCJ Architects, has conducted a limited subsurface investigation on the Site which is located at 43 Lincoln Street, Manchester-by-the-Sea Massachusetts (Figure 1). The investigation included the advancement of soil borings, soil sampling and analysis, installation of four monitoring wells and groundwater sampling and analysis. This investigation was conducted in February-March 2019. The investigation was conducted in order to determine the presence or likely presence of hazardous substances or petroleum products on the property in areas of concern identified in CDW's Phase I Environmental Site Assessment report from November 2017.

1.1 Purpose

The purpose of the investigation was to evaluate subsurface conditions at the Site in specific areas that will be undergoing Site and/or building demolition and new construction that may have been impacted by identified potential sources of contamination at the Site. This investigation was performed in accordance with Massachusetts General Law (MGL) Chapter 21E.

1.2 Site & Surrounding Area Description

The Site includes 11.31 acres of land. The Site contains one main 66,573 square foot school building constructed in the 1951 with two additions, one in 1954 and 1965. The site is owned by the Town of Manchester by the Sea, and is listed as Book 3507-137, Page 138.

The Site building is connected to municipal water and sewer. The Site building is heated with natural gas. The Site is bound by athletic fields and causeway brook aqueduct to the north, Summer Street to the south with residential properties beyond, Lincoln Street to the east, and north and to the west by residential properties. The Site is located on the United States Geological Survey (USGS) Marblehead North 2012 Quadrangle Map at the following approximate location and elevation:

Universal Transverse Mercator (UTM) Zone 19 Coordinates	
4715387.5	UTM Y (Meters)
4715387.5	UTM X (Meters)
Latitude/Longitude	
42.5792560 - 42° 34' 45.32''	Latitude (North)
70.7642750 - 70° 55' 51.39''	Longitude (West)
Elevation	
32	Feet above sea level

2.0 SUMMARY OF PHASE I SITE ASSESSMENT

CDW completed a Phase I Environmental Site Assessment in October 2017. The investigation conducted by CDW personnel included a review of available federal, state, and local environmental agency records to identify the presence or likely presence of Recognized Environmental Conditions (RECs), Historical Recognized Environmental Condition (HRECs) and Controlled Recognized Environmental Condition (CRECs). No CRECs were identified during the assessment. RECs and HRECs were identified during the assessment. They were:

- Potential contamination from the two 10,000-gallon fuel oil underground storage tanks removed in 1991. This represents a HREC.
- Potential Contamination from the old transformer removed from the electric room in the basement. It is unknown if what chemicals were in the transformer fluids. This represents a HREC.
- Potential contamination from the exterior pad mounted transformer. It is unknown what chemicals were in the transformer fluids.
- Potential dumping of ash from incinerator.

3.0 LIMITED SUBSURFACE INVESTIGATION

3.1 Topography and Hydrogeologic Features

The Site is located 32 feet above sea level, and the topography is level. The bedrock at the Site consists of Cape Ann Granite (Zen et. al. 1983). There are no bedrock outcrops at the Site. According to available information, the site is located within an Interim Wellhead Protection Area (IWPA) and a Zone II of a public water supply well. According to MassGIS the nearest establish wetland resource areas are located to the south, east, and west of the Site. The Site is not located within any FEMA Flood Zones (MassGIS). Surface soils at the Site consist of Udorthents Silty Loam per the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS). Groundwater is located approximately 13-21 feet below ground surface. A groundwater elevation survey was performed. Groundwater gauging data points to flow in a northern direction.

3.1 Soil Borings and Monitoring Wells

On February 22, 2019, CDW advanced four (4) soil borings (MW-1, MW2, MW-3, MW-4) at the Site. The soil borings were advanced using a hollow stem auger drill rig. Soil samples were collected continuously in split spoon samples to a depth of 20 feet and classified on-site. CDW's subcontractor, Technical Drilling Services, Inc, of Sterling, MA completed the advancement of the

soil borings. CDW's subcontractor, Eurofins Spectrum Analytical, Inc. of Agawam, Massachusetts, completed the laboratory sample analyses.

The selection of the locations of the borings was based upon the potential source of contamination due to possible onsite presence of contaminants RECs and HRECs at the Site, which may be encountered during construction. The boring locations were chosen to provide coverage surrounding the most probable location of contamination on the Site. This was determined to be the basement boiler room below the kitchen where two 10,000-gallon fuel oil underground storage tanks were removed in 1991 and the old transformer. Soil boring MW-1 was drilled on the eastern part of the building, boring MW-2 on the norther part, near the transformer, MW-3 on the western part of the alcove, and MW-4 on the northern part between 1 and 2.

A two-inch diameter monitoring well was installed to a depth of 20 feet in all four borings. The wells were constructed of a 10-foot length of two-inch diameter slotted polyvinyl chloride (PVC) well screen and a solid PVC riser. Uniformly graded sand was placed around the well screen up to one foot above the screen. One foot of bentonite grout was placed above the sand, followed by native fill to grade. A protective roadway box was installed at grade. The boring/groundwater monitoring well locations are depicted on Figure 2. The soil boring logs are depicted in Appendix A.

3.2 Soil Screening and Laboratory Samples

Soil samples were collected continuously from samples from each boring and field-screened with a photoionization detector (PID) using the headspace method. The soil headspace screening results are provided on the boring logs in Appendix A. The PID is an instrument used to quantify total organic volatiles (TOVs) that ionized at or below 10.6 electron volts (a range which includes gasoline and some fuel oil organics). The detection limit for the instrument is 1 parts per million (ppm). One soil sample from each of four (4) borings was selected and submitted for laboratory analysis for extractable petroleum hydrocarbons (EPH), volatile organic compounds (VOCs), volatile petroleum hydrocarbons (VPH), semi volatile organic compounds (SVOCs) and priority pollutant 13 (PP13) metals. One soil sample from each boring at the depth that exhibited the highest field screening reading or field evidence of contamination was collected. If no field instrumentation readings were registered during drilling, the soil sample was collected from the vadose zone. The samples were preserved by ice, refrigeration and methanol, as appropriate, prior to laboratory analysis, and delivered to the laboratory accompanied by an appropriate chain of custody record.

The field-screening results indicated detectable levels of TOVs in both borings ranging from non-detect to 0.2 ppmv. These detections are very low and were not consistently detected in any area of the borings. The PID headspace analysis results are summarized in the boring logs in Appendix A.

3.3 Groundwater Sampling

On March 1, 2019, CDW collected groundwater samples from the newly installed monitoring wells (MW-1, MW2, MW-3, MW-4). All wells were allowed to equilibrate for at least one week prior to sampling. The wells were purged and sampled using a disposable polyethylene bailers. At least three well volumes were purged from the well prior to collecting the samples. The groundwater collected was turbid with an abundance of silt. The samples were submitted to CDW's subcontractor, Spectrum Analytical, for analysis for EPH, VOCs, VPH, SVOCs and dissolved PP13. The samples for metals analyses were filtered in the field prior to preservation.

3.4 Groundwater Gauging

On March 1, 2019, newly installed monitoring wells were gauged for depth to groundwater and the presence of non-aqueous phase liquid (NAPL) using an oil/water interface probe. Measurements were made to the top of the PVC riser. No NAPL was observed in the well. Depth to groundwater was measured at approximately 14 feet below the ground surface. Groundwater from all four monitoring wells was observed to flow directly downgradient to the Causeway Brook which flows through the north edge of the Site. Depth to groundwater measurements are provided in Table 2.

4.0 NATURE AND EXTENT OF CONTAMINATION

4.1 Soil and Groundwater Classifications

The selection of a soil classification of RCS-1, as defined in the Massachusetts Contingency Plan (MCP), 310 CMR 40.0361(1)(a), for the comparison of Reportable Concentrations, is applicable to the Site because:

- All the soil sample locations are on an elementary school property.

The selection of a groundwater classification of RCGW-1, as defined in the MCP, 310 CMR 40.0362, for the purpose of identifying Reportable Concentrations, was based upon the following criterion:

- Groundwater at the northern part of the Site where all four wells are located, is in a MassDEP Wellhead protection area (Zone I) because of its proximity to a public water supply and recharge area.

4.2 Soil Sample Analysis Results

Laboratory analysis of soil samples revealed detectable concentrations of EPH compounds, SVOCs, VOCs and metals. All compounds detected are reported below MCP RCS-1 Reportable Concentrations. It is important to note that the laboratory detection limits for VOC analytes and one metal were above the MCP RCS-1 standard. The following analytes were affected: bromodichloromethane, bromoform, bromomethane, chloroform, chloromethane, cis-1,2-dichloroethene, cis-1,3-dichloropropene, dibromochloromethane, 1,4-dioxane, 1,2-dichloroethane, 1,2-dichloropropane, 4-methyl-2-pentanone, 1,1,1,2-tetrachloroethane, 1,1,1-trichloroethane, 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane and thallium. The reporting limit (RL) for an individual compound using WSC-CAM-II A is dependent on the concentration of the lowest non-zero standard in the initial calibration, analyzed under identical conditions as the sample, with adjustments made for the sample size, extraction concentration factor, percent solids, dilution factors, etc., as required. The CAM RLs for WSC-CAM-II target analytes are 100-200 µg/kg (wet weight) for high-level soil/sediment samples. Therefore, the above listed compounds RLs are below the target RL. Since no other VOCs were detected in soil and there is no source on property, it is reasonable to assume that these compounds are not likely to be present. Furthermore, there were no PID readings, or olfactory-visual indication of contamination. Analytical test results from all other compounds were below their respective laboratory detection limits. None of these results exceeded the applicable MCP Reportable Concentrations. The results of all soil analyses are summarized in Table 1. A copy of the laboratory analytical report are included in Appendix B.

4.3 Groundwater Sample Analysis Results

Groundwater samples were analyzed for EPH, VPH, VOCs, SVOCs and PP13 metals. No VPH, EPH or VOCs were detected in groundwater above laboratory detection limits. SVOC compounds benzo (b) fluoranthene, chrysene, floranthene, phenanthrene and pyrene were detected above laboratory detection limits, but below MCP GW-1 Reportable Concentrations. The dissolved metals arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, thallium and zinc were detected in all four groundwater samples. The detected concentrations of metals are above the applicable Reportable Concentration for GW-1 classified groundwater. The results of groundwater analyses are included in Table 2. The laboratory analytical report is included in Appendix C.

5.0 CONSLUSIONS AND RECOMMENDATIONS

The Site study area for this Phase II Investigation consists of a portion of the Manchester Memorial Elementary School in Manchester by the Sea, Massachusetts. This investigation focused on subsurface testing in areas of the school property that are proposed for new construction. Based upon the results of subsurface soil and groundwater testing and site observations, CDW is presenting our

conclusions and a summary of the key observations upon which these conclusions are based. Based upon our research, subsurface testing, and site observations, CDW is presenting our conclusions and a summary of the key observations upon which these conclusions are based. From this study, CDW has made the following observations:

On February 22, 2019, CDW advanced four (4) soil borings (MW-1, MW2, MW-3, MW-4) at the Site. A two-inch diameter monitoring well was installed to a depth of 20 feet in all four borings. Soil samples were collected continuously from samples from each boring and field-screened with a PID for TOVs. One soil sample from each of four (4) borings was selected and submitted for laboratory analysis for EPH, VOCs, VPH, SVOCs and PP13. Laboratory analysis of soil samples revealed detectable concentrations of EPH compounds, SVOCs, VOCs and metals. All compounds detected are reported below MCP RCS-1 Reportable Concentrations.

On March 1, 2019, CDW collected groundwater samples from the newly installed monitoring wells (MW-1, MW2, MW-3, MW-4). The samples were submitted for laboratory analysis of EPH, VOCs, VPH, SVOCs and dissolved PP13. No VPH, EPH, VOCs or SVOCs were detected in groundwater above MCP GW-1 Reportable Concentrations. The detected concentrations of metals in all four wells are above the applicable Reportable Concentration for GW-1 classified groundwater.

Based upon the Phase II Investigation, CDW has the following recommendations:

Soil

The soils on the site contain low levels of EPH compounds, SVOCs, VOCs and metals. All compounds detected are reported below MCP RCS-1 Reportable Concentrations. These soils are therefore not regulated by the MCP, and are not considered a remediation waste once excavated. The soils may be re-used on-site without restriction. However, reuse of these soils off-site needs to be evaluated such that the quality of the exported Site soils is acceptable to the destination site pursuant to MassDEP regulations and policies.

The sampling and analytical program was specific to one or more areas of the Site where potential contamination could or occur. As such, contingency plans should be in place to manage any potentially contaminated soil that may be encountered during building demolition or new construction. CDW recommends that a contingency be factored into soil excavation planning to allow for evaluation, testing and disposal of any impacted soils discovered during construction that were not discovered during these limited investigation activities. Historical research does not guarantee that all former Site use, storage and disposal practices have been properly recorded and/or are presently known. If evidence of a release to soil and/or groundwater is encountered, measures must be conducted to properly manage those conditions.

Groundwater

The detected concentrations of metals in all four wells are above the applicable Reportable Concentration for GW-1 classified groundwater, and represent a 120-day reporting condition to the Massachusetts Department of Environmental Protection (MassDEP). However, due to the high levels of turbidity encountered in the groundwater, CDW recommends resampling the four monitoring wells within the 120 day reporting window, to determine if the metals concentrations are an anomaly due to turbidity.

6.0 LIMITATIONS

This investigation was intended to provide a general assessment of current subsurface conditions and was limited in nature and scope. The findings are limited to the information available at the time of the investigation and the scope of services as defined. The results of the limited subsurface exploration performed on this Site provide the basis for the findings and are representative of conditions at the time of the investigation. No other conclusions, interpretations, or recommendations are contained or implied in this report other than those expressed. Also, CDW makes no warranty, expressed or implied, on the accuracy of the work and information completed by others and upon which CDW has relied to prepare this report. No other use of this report is warranted without the written consent of CDW Consultants, Inc.

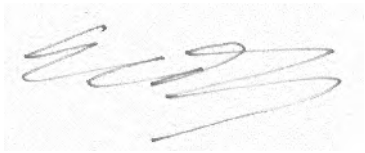
Laboratory Report
SC53666

CDW Consultants, Inc.
6 Huron Drive
Natick, MA 01760
Attn: Susan Cahalan-Roach



Project: Manchester Memorial School - MA
Project #: [none]

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. These results relate only to the sample(s) as received.
All applicable NELAC requirements have been met.

Massachusetts # M-MA138/MA1110
Connecticut # PH-0777
Florida # E87936
Maine # MA138
New Hampshire # 2972/2538
New Jersey # MA011
New York # 11393
Pennsylvania # 68-04426/68-02924
Rhode Island # LAO00348
USDA # P330-15-00375
Vermont # VT-11393

Authorized by:

Erica Troy
Quality Services Manager

Eurofins Spectrum Analytical holds primary certification in the State of Massachusetts for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of Massachusetts does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 56 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Eurofins Spectrum Analytical, Inc. is currently accredited for the specific method or analyte indicated. Please refer to our 'Quality' web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Eurofins Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

Sample Summary

Work Order: SC53666

Project: Manchester Memorial School - MA

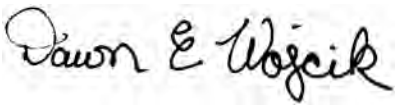
Project Number: [none]

Laboratory ID	Client Sample ID	Matrix	Date Sampled	Date Received
SC53666-01	CDW-MW-1	Soil	22-Feb-19 09:00	26-Feb-19 15:59
SC53666-02	CDW-MW-2	Soil	22-Feb-19 10:00	26-Feb-19 15:59
SC53666-03	CDW-MW-3	Soil	22-Feb-19 11:30	26-Feb-19 15:59
SC53666-04	CDW-MW-4	Soil	22-Feb-19 13:30	26-Feb-19 15:59
SC53666-05	Trip Blank	Trip Blank	25-Feb-19 00:00	26-Feb-19 15:59

The following outlines the condition of all VPH samples contained within this report upon laboratory receipt.

Matrices	Soil		
Containers	✓ Satisfactory		
Sample Preservative	**Aqueous** (acid preserved)	✓ N/A pH≤2 pH>2	
	Soil or Sediment	N/A Samples not received in Methanol	ml Methanol/g soil 1:1 +/-25% Other
		Samples received in Methanol: covering soil/sediment not covering soil/sediment	
		Samples received in air-tight container	
Temperature	Received on ice ✓ Received at 4 ± 2 ºC		

Were all QA/QC procedures followed as required by the VPH method? *Yes*
Were any significant modifications made to the VPH method as specified in section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*



The following outlines the condition of all EPH samples contained within this report upon laboratory receipt.

Matrices	Soil
Containers	✓ Satisfactory
Aqueous Preservative	✓ N/A pH≤2 pH>2 pH adjusted to <2 in lab
Temperature	Received on ice ✓ Received at 4 ± 2 ºC

Were all QA/QC procedures followed as required by the EPH method? *Yes*
Were any significant modifications made to the EPH method as specified in Section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*

I attest that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Eurofins Spectrum Analytical, Inc.	**Project #:** [none]
Project Location: Manchester Memorial School - MA	**RTN:**
This form provides certifications for the following data set:	SC53666-01 through SC53666-05
Matrices: Soil Trip Blank	

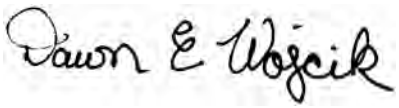
CAM Protocol

✓ 8260 VOC CAM II A	✓ 7470/7471 Hg CAM III B	✓ MassDEP VPH CAM IV A	8081 Pesticides CAM V B	7196 Hex Cr CAM VI B	MassDEP APH CAM IX A
✓ 8270 SVOC CAM II B	7010 Metals CAM III C	✓ MassDEP EPH CAM IV B	8151 Herbicides CAM V C	8330 Explosives CAM VIII A	TO-15 VOC CAM IX B
✓ 6010 Metals CAM III A	6020 Metals CAM III D	8082 PCB CAM V A	9012 Total Cyanide/PAC CAM VI A	9014 Total Cyanide/PAC CAM VI A	6860 Perchlorate CAM VIII B

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain of Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	✓ Yes No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes ✓ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	✓ Yes No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	✓ Yes No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	✓ Yes No Yes No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to questions A through E)?	✓ Yes No

Responses to questions G, H and I below are required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	Yes ✓ No

***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	Yes ✓ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ✓ No

All negative responses are addressed in a case narrative on the cover page of this report.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Dawn E. Wojcik
Laboratory Director
Date: 3/13/2019

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 2.6 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group. If method or program required MS/MSD/Dup were not performed, sufficient sample was not provided to the laboratory.

MADEP has published a list of analytical methods (CAM) which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of MCP decisions. "Presumptive Certainty" can be established only for those methods published by the MADEP in the MCP CAM. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

According to WSC-CAM 5/2009 Rev.1, Table 11 A-1, recovery for some VOC analytes have been deemed potentially difficult. Although they may still be within the recommended recovery range, a range has been set based on historical control limits.

Some target analytes which are not listed as exceptions in the Summary of CAM Reporting Limits may exceed the recommended RL based on sample initial volume or weight provided, % moisture content, or responsiveness of a particular analyte to purge and trap instrumentation.

All VOC soils samples submitted and analyzed in methanol will have a minimum dilution factor of 50. This is the minimum amount of solvent allowed on the instrumentation without causing interference. Soils are run on a manual load instrument. 100ug of sample (MEOH) is spiked into 5ml DI water along with the surrogate and added directly onto the instrument. Additional dilution factors may be required to keep analyte concentration within instrument calibration range.

General Comments:
See the Laboratory Sample Analysis Record section of the Analysis Report for the method references .
All QC met criteria unless otherwise noted in an Analysis Specific Comment below .
Refer to the QC Summary for specific values and acceptance criteria.
Project specific QC samples are not included in this data set.
Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.
Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below .
The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.
Analysis Specific Comments:
SW-846 8260C, GC/MS Volatiles
Sample #s: 9993886, 9993887, 9993888, 9993889
The MA MCP required reporting limit could not be
attained using the laboratory LOQ.
Batch #: Q190641AA (Sample number(s): 9993886-9993889)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD exceeded the acceptance window indicating a positive bias: Acetone
SW-846 8270D, GC/MS Semivolatiles
Sample #s: 9993886, 9993887, 9993888, 9993889
The project QA/QC requirements were not met. The percent recovery
for 4-Chloroaniline was outside of the acceptance limits in the
LCS/LCSD associated with this sample as noted on the QC summary.
The failure is within the 20% failure rate allowed by CT RCP,
therefore the data is reported.
Batch #: 19063SLC026 (Sample number(s): 9993886-9993889)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window:
4-Chloroaniline
MA EPH 5/04, GC Petroleum Hydrocarbons
Sample #s: 9993886, 9993887, 9993888, 9993889
Target analytes were detected in the method blank associated with the
samples as noted on the QC Summary.
The recovery for a target analyte(s) in the Laboratory Control Spike(s) is
outside the QC acceptance limits as noted on the QC Summary. The following
action was taken:
The sample was re-extracted and the LCSD is again outside of the
acceptance limits. The data is reported from both trials.
Batch #: 190590017A (Sample number(s): 9993886-9993889)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD exceeded the acceptance window indicating a positive bias: C19 to C36 Aliphatics
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window:
Naphthalene
Batch #: 190640020A (Sample number(s): 9993886-9993889 UNSPK: 9993887)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window:
Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene,
Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene,
Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene, 2-Methylnaphthalene, C9 to C18
Aliphatics, C19 to C36 Aliphatics, Unadjusted C11 - C22 Aromatics
The relative percent difference(s) for the following analyte(s) in the LCS/LCSD were outside acceptance windows: Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene,
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene,
2-Methylnaphthalene, C9 to C18 Aliphatics, C19 to C36 Aliphatics, Unadjusted C11 - C22 Aromatics
The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window:
Naphthalene
The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) LCSD
SW-846 6010C, Metals
Sample #s: 9993886, 9993887, 9993888, 9993889
The MA MCP analyte list requirement was not met for metals .

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

4-Chloroaniline

19063SLC026 BS

4-Chloroaniline percent recovery 32 (40-140) is outside individual acceptance criteria, but within overall method allowances. All reported results of the following samples are considered to have a potentially low bias:

CDW-MW-1
CDW-MW-2
CDW-MW-3
CDW-MW-4

Sample Acceptance Check Form

Client:	CDW Consultants, Inc.
Project:	Manchester Memorial School - MA / [none]
Work Order:	SC53666
Sample(s) received on:	2/26/2019

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☐	☑	☐
Were custody seals intact?	☐	☐	☑
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples refrigerated upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☑	☐	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☑	☐	☐

Notes and Definitions

*	Outside of specification
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Andrew Fenton
Quality Services Manager

Eurofins Spectrum Analytical holds primary certification in the State of Massachusetts for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of Massachusetts does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 40 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Eurofins Spectrum Analytical, Inc. is currently accredited for the specific method or analyte indicated. Please refer to our 'Quality' web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Eurofins Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

Sample Summary

Work Order: SC53767

Project: Manchester Memorial School - MA

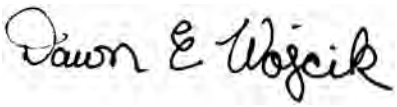
Project Number: [none]

Laboratory ID	Client Sample ID	Matrix	Date Sampled	Date Received
SC53767-01	CDW-MW-1	Ground Water	01-Mar-19 14:00	05-Mar-19 15:20
SC53767-02	CDW-MW-2	Ground Water	01-Mar-19 10:00	05-Mar-19 15:20
SC53767-03	CDW-MW-3	Ground Water	01-Mar-19 11:30	05-Mar-19 15:20
SC53767-04	CDW-MW-4	Ground Water	01-Mar-19 13:00	05-Mar-19 15:20
SC53767-05	Trip Blank	Trip Blank	01-Mar-19 00:00	05-Mar-19 15:20

The following outlines the condition of all VPH samples contained within this report upon laboratory receipt.

Matrices	Ground Water		
Containers	✓ Satisfactory		
Sample Preservative	**Aqueous** (acid preserved)	✓ N/A pH≤2 pH>2	
	Soil or Sediment	N/A Samples not received in Methanol	ml Methanol/g soil 1:1 +/-25% Other
		Samples received in Methanol: covering soil/sediment not covering soil/sediment	
		Samples received in air-tight container	
Temperature	Received on ice ✓ Received at 4 ± 2 ºC		

Were all QA/QC procedures followed as required by the VPH method? *Yes*
Were any significant modifications made to the VPH method as specified in section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*



The following outlines the condition of all EPH samples contained within this report upon laboratory receipt.

Matrices	Ground Water
Containers	✓ Satisfactory
Aqueous Preservative	✓ N/A pH≤2 pH>2 pH adjusted to <2 in lab
Temperature	Received on ice ✓ Received at 4 ± 2 ºC

Were all QA/QC procedures followed as required by the EPH method? *Yes*
Were any significant modifications made to the EPH method as specified in Section 11.3? *No*
Were all performance/acceptance standards for required QA/QC procedures achieved? *Yes*

I attest that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Eurofins Spectrum Analytical, Inc.	**Project #:** [none]
Project Location: Manchester Memorial School - MA	**RTN:**
This form provides certifications for the following data set:	SC53767-01 through SC53767-05
Matrices: Ground Water Trip Blank	

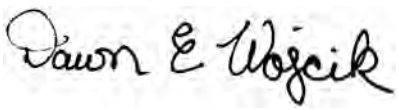
CAM Protocol

✓ 8260 VOC CAM II A	✓ 7470/7471 Hg CAM III B	✓ MassDEP VPH CAM IV A	8081 Pesticides CAM V B	7196 Hex Cr CAM VI B	MassDEP APH CAM IX A
✓ 8270 SVOC CAM II B	7010 Metals CAM III C	✓ MassDEP EPH CAM IV B	8151 Herbicides CAM V C	8330 Explosives CAM VIII A	TO-15 VOC CAM IX B
✓ 6010 Metals CAM III A	✓ 6020 Metals CAM III D	8082 PCB CAM V A	9012 Total Cyanide/PAC CAM VI A	9014 Total Cyanide/PAC CAM VI A	6860 Perchlorate CAM VIII B

Affirmative responses to questions A through F are required for Presumptive Certainty status

A	Were all samples received in a condition consistent with those described on the Chain of Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	✓ Yes No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	✓ Yes No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	✓ Yes No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	✓ Yes No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	✓ Yes No Yes No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to questions A through E)?	✓ Yes No

Responses to questions G, H and I below are required for Presumptive Certainty status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	✓ Yes No

***Data User Note:* Data that achieve Presumptive Certainty status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	Yes ✓ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ✓ No

All negative responses are addressed in a case narrative on the cover page of this report.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Dawn E. Wojcik
Laboratory Director
Date: 3/18/2019

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 2.0 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group. If method or program required MS/MSD/Dup were not performed, sufficient sample was not provided to the laboratory.

MADEP has published a list of analytical methods (CAM) which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of MCP decisions. "Presumptive Certainty" can be established only for those methods published by the MADEP in the MCP CAM. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

According to WSC-CAM 5/2009 Rev.1, Table 11 A-1, recovery for some VOC analytes have been deemed potentially difficult. Although they may still be within the recommended recovery range, a range has been set based on historical control limits.

Some target analytes which are not listed as exceptions in the Summary of CAM Reporting Limits may exceed the recommended RL based on sample initial volume or weight provided, % moisture content, or responsiveness of a particular analyte to purge and trap instrumentation.

SW-846 8260C, GC/MS Volatiles
Sample #s: 1001627, 1001628, 1001629, 1001630, 1001631
The percent drift for the following is >20% in the continuing calibration verification standard associated with this sample: 2-Butanone, Tetrahydrofuran, 2-Hexanone and trans-1,2-Dichloro-2-Butene.
A Method Detection Limit (MDL) standard is analyzed to confirm sensitivity of the instrument for samples with non-detect analytes associated with a continuing calibration verification standard exhibiting low response (outside the 20%D criteria). The MDL standard shows adequate sensitivity at or below the reporting limit.
The MA MCP required reporting limit could not be attained using the laboratory LOQ.
Batch #: L190704AA (Sample number(s): 1001627-1001631)
The recovery(ies) for the following analyte(s) in the LCS and/or LCSD exceeded the acceptance window indicating a positive bias: Ethanol
The relative percent difference(s) for the following analyte(s) in the LCS/LCSD were outside acceptance windows: Ethanol
SW-846 8270D SIM, GC/MS Semivolatiles
Sample #s: 1001627, 1001628, 1001629, 1001630
Reporting limits were raised due to interference from the sample matrix.
The MA MCP analyte list requirement was not met for Method 8270D.
The client specified list is reported.
MA EPH 5/04, GC Petroleum Hydrocarbons
Sample #s: 1001627, 1001628, 1001629, 1001630
The surrogate data is outside the QC limits due to unresolvable matrix problems evident during the sample preparation.
Reporting limits were raised due to interference from the sample matrix.
Batch #: 190660020A (Sample number(s): 1001627-1001630)
The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) 1001627, 1001628, 1001629, 1001630
SW-846 6020A, Metals
Sample #s: 1001627, 1001628, 1001629, 1001630
The MA MCP analyte list requirement was not met for Metals.
Batch #: 190661404704A (Sample number(s): 1001627-1001630 UNSPK: 1001628 BKG: 1001628)
The recovery(ies) for the following analyte(s) in the MS and/or MSD exceeded the acceptance window indicating a positive bias: Arsenic, Beryllium, Cadmium, Chromium, Copper, Lead, Nickel, Thallium, Zinc
The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window: Antimony, Arsenic
The duplicate RPD for the following analyte(s) exceeded the acceptance window: Arsenic, Beryllium, Chromium, Copper, Lead, Nickel, Thallium, Zinc
Batch #: 190661404704B (Sample number(s): 1001627-1001630 UNSPK: 1001628 BKG: 1001628)
The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window: Selenium
The duplicate RPD for the following analyte(s) exceeded the acceptance window: Selenium
SW-846 7470A, Metals
Batch #: 190660571304 (Sample number(s): 1001627-1001630 UNSPK: 1001630 BKG: 1001630)
The recovery(ies) for the following analyte(s) in the MS and/or MSD exceeded the acceptance window indicating a positive bias: Mercury
The duplicate RPD for the following analyte(s) exceeded the acceptance window: Mercury

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

Sample Acceptance Check Form

Client:	CDW Consultants, Inc.
Project:	Manchester Memorial School - MA / [none]
Work Order:	SC53767
Sample(s) received on:	3/5/2019

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☐	☑	☐
Were custody seals intact?	☐	☐	☑
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples refrigerated upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☑	☐	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☑	☐	☐

Notes and Definitions

*	Outside of specification
K3	ICAL Verification & CCAL Verification are above QC limits; Sample result is ND
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

RE: Groundwater Resampling
Manchester Memorial Elementary School
43 Lincoln Street
Manchester by the Sea, Massachusetts

Dear Ms. McDonald:

During the Phase II subsurface investigation at the Manchester Memorial Elementary School, in Manchester by the Sea, Massachusetts (Site), dissolved metals; arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, thallium and zinc were detected in groundwater samples. The detected concentrations of metals in all four wells were above the applicable Massachusetts Contingency Plan (MCP) Reportable Concentration for GW-1 classified groundwater, and represented a 120-day reporting condition to the Massachusetts Department of Environmental Protection (MassDEP). However, due to the high levels of turbidity encountered in the groundwater, CDW recommended resampling the four monitoring wells within the 120-day reporting window, to determine if the metals concentrations were an anomaly due to turbidity.

On April 4, 2019, CDW collected groundwater samples from monitoring wells (MW-1, MW2, MW-3, MW-4). At least three well volumes were purged from the well prior to collecting the samples. The groundwater collected exhibited minor turbidity as compared to the initial sampling event. The groundwater samples were collected via peristaltic pump with an inline filter. The samples were submitted to CDW's subcontractor, Con-Test Analytical Laboratory for analysis of dissolved metals. An additional unfiltered sample was also collected for total metals.

None of the metals detected in groundwater are at concentrations above the applicable MCP Reportable Concentrations for groundwater. Therefore, in CDW's opinion, the initial groundwater analytical results are an anomaly due to excess turbidity, and there is no MCP reporting requirement based upon the resampling and analysis of groundwater. The groundwater analytical results are located in Table 1, and the laboratory analytical report is attached.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CHAIN OF CUSTODY RECORD

Page 1 of 1

Special Handling:
- ☐ Standard TAT - 7 to 10 business days
- ☐ Rush TAT - Date Needed: _____

All TATs subject to laboratory approval
Min. 24-hr notification needed for rushes
Samples disposed after 30 days unless otherwise instructed.

1. Identification

Product Identity: **2 Multi-Shine**

Recommended Use: Water Based Glass & Surface Cleaner

Producer / Distributor

Multi-Clean
600 Cardigan Road
Shoreview, MN 55126

Telephone Number for Information: 651-481-1900

Emergency Telephone Number: 800-255-3924

2. Hazard Identification

Classification:

Health Class	Physical Class	Environment Class
Mild Skin Irritation Category 3 Eye Irritant Category 2		Acute Aquatic Toxicity Category 3

Label

Symbols

Signal Word Warning

Hazard Statements:

Causes eye and mild skin irritation

Precautionary Statements:

If Skin Irritation Occurs: Get medical advice/attention
Wash hands thoroughly after handling.
If In Eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
If eye irritation persists: Get medical advice/attention

3. Composition/Information on Ingredients

Ingredient	CAS Number	Percent by Weight
Surfactants	Proprietary	20 - 30
Water	7732-18-5	60 - 100

4. First-Aid Measures:

Ingestion: If Swallowed: Drink two glasses of water and call a physician immediately.

Eye Contact: Flush eyes with running water for at least 15 minutes. If irritation persists, obtain medical attention.

Skin Contact: Flush thoroughly with cool water. Remove and wash contaminated clothing before reuse.

Inhalation: Move to fresh air.

5. Fire Fighting Measures:

Suitable Extinguishing Media: Not Applicable

Special Fire Fighting Procedures: Not Applicable

Unusual Fire and Explosion Hazards None are known

6. Accidental Release Measures:

Dike and contain spill with inert material (sand, earth, etc.). Collect spill with a mop, absorbent material (example: floor-dry) or vacuum. Thoroughly rinse affected area with water.

7. Handling and Storage:

Handling: Keep from freezing. Keep out of reach of children.

Storage: Normal care for storage.

8. Exposure Controls / Personal Protection:

Exposure Limits

Ingredients	CAS Number	Osha PEL	ACGIH TLV
None Listed	XXXX	XXX	XXX

Exposure Controls

Engineering Controls: Normal good ventilation is sufficient

Personal Protective Equipment:

Eye Protection: Approved Safety Goggles or Glasses

Skin Protection: Chemical Resistant Rubber Gloves

Respiratory Protection: Not required, Avoid breathing spray mist

9. Physical and Chemical Properties:

Physical State: Liquid

Appearance: Blue

Odor: No Fragrance Added

Solubility: Complete

Evaporation Rate: NA

Vapor Pressure (MM HG): NA

Vapor Density (Air = 1): > 1

pH: 10.5 - 11.5 (Conc.); 10 - 11 (In-Use)

Specific Gravity (H2O = 1): 1.005

Flammability: None

Flash Point: None

Boiling Point: > 212° F (100°C)

%volatile: > 95%

10. Stability and Reactivity:

Chemical Stability: Stable

Possibility of Hazardous Reactions: None are known

Incompatability (Materials to Avoid): Oxidizing Material

Hazardous Decomposition or By-products: None

Hazardous Polymerization: Will not Occur

Conditions to Avoid: None are known

11. Toxicological Information:

Signs and Symptoms of Overexposure: Causes irritation on direct contact

Acute Effects:

Eye Contact: Causes irritation on contact

Skin Contact: Causes mild irritation on prolonged or repeated contact

Inhalation: Breathing mists may be harmful

Ingestion: May be harmful if swallowed

Target Organ Effects: None Known

Chronic Effects: None Known

Acute Toxicity Values:

Oral LD $_{50}$ > 5000 mg/kg

Dermal LD $_{50}$ > 5000 mg/kg

Inhalation (Vapor) LC $_{50}$ > 50 mg/l

12. Ecological Information:

Persistence and Degradability: Product is Readily Biodegradable

Bio Accumulative Potential: Not Available

Mobility in Soil: Not Available

Aquatic Toxicity: Harmful to Aquatic Life

13. Disposal Considerations:

Material that cannot be used during normal use should be disposed of in accordance with all applicable local, state and federal regulations. Waste from normal cleaning procedures may be disposed of in a sanitary sewer depending on the materials and/or contaminants being cleaned as well as local, state and federal sewer regulations.

14. Transportation Information:

UN Number: None

Shipping Name: Cleaning Compound, Liquid

Transport Hazard Class: None

Packing Group: None

Marine Pollutant: NO

15. Regulatory Information:

TSCA Status: All ingredients listed

Clean Water Act: None of the chemicals in this product are listed under the CWA

Clean Air Act: None of the chemicals in this product are listed under the CAA

CERCLA Reportable Quantity: None

SARA Title III Information:

Section 302 Extremely Hazardous Chemicals: None Listed

Section 311 / 312 Hazard Category: Immediate Health, Chronic Health

Section 313 Toxic Chemicals None Listed

State Regulations: Notice State of California; Warning; This product may contain chemicals known to the state of California to cause cancer or reproductive defects as trace impurities in the standard industrial materials used in the manufacture of this product.

International Regulations: None

Signal Word Danger

Hazard Statements:

H302 Harmful if swallowed.
H311 Toxic in contact with skin.
H314 Causes severe skin burns and eye damage.
H400 Very toxic to aquatic life.
H411 Toxic to aquatic life with long lasting effects.

Precautionary Statements:

Prevention: P260 Do not breathe mist or vapours.
P264 Wash skin thoroughly after handling.
P270 Do not eat, drink or smoke when using this product.
P273 Avoid release to the environment.
P280 Wear protective gloves/ eye protection/ faca protection.
Response: P301 + P312 + P330 IF SWALLOWED: Call a POISON CENTER/ doctor if you feel unwell. Rinse mouth.
P301 + P330 + P331 IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P303 + P361 + P353 IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water.
P304 + P340 + P310 IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/ doctor.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310 Immediately call a POISON CENTER/ doctor.
P361 + P364 Take off immediately all contaminated clothing and wash it before reuse.
P391 Collect spillage.
Storage: P402 + P404 Store in a dry place. Store in a closed container.
P405 Store locked up.
P410 + P403 Protect from sunlight. Store in a well-ventilated place.
Disposal: P501 Dispose of contents/container in accordance with local regulations.

Product Classified as Non-Hazardous

3. Composition/Information on Ingredients

Ingredient	CAS Number	Percent by Weight: Product as Sold	Product at Use Dilution
Dimethyldioctylammonium Chloride	5538-94-3	10 - 12	
Quaternary Ammonium Compounds, Benzyl-C12-18-alkyldimethyl, chlorides	68391-01-5	6 - 8	
Quaternary ammonium compounds, coco alkyltrimethyl, chlorides	81789-18-2	4 - 6	

4. First-Aid Measures:

Product as Sold

Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CONTROL CENTER AND SEEK MEDICAL ATTENTION

Ingestion: IF SWALLOWED: Call a poison control center or doctor immediately. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor.

Eye Contact: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing at least 15 minutes.

Skin Contact: IF ON SKIN: Immediately take off all contaminated clothing. Wash with plenty of soap and water. Wash contaminated clothing before reuse.

5. Fire Fighting Measures:

	Product as Sold	Product at Use Dilution
Suitable Extinguishing Media:	Water - Foam - Dry Chemical	Not Applicable
Special Fire Fighting Procedures:	Not Applicable	Not Applicable
Unusual Fire and Explosion Hazards	Products of combustion are toxic	None Known

6. Accidental Release Measures:

Contain spillage, and then collect with non-combustible ab-sorbent material, (e.g. sand, earth, diatomaceous earth, ver-miculite) and place in container for disposal according to local / national regulations. Do not flush into surface water or sanitary sewer system.

7. Handling and Storage:

Product as Sold

Handling: Read label before use. Avoid Contact with skin and eyes. Do not breath spray mist. Use only in well ventilated areas. Wash hands thoroughly after handling. Do not eat, drink, or smoke when using this product. Keep out of reach of children. Do not reuse empty container.

Storage: Store locked up. Store in a well ventilated place. Store only in original containers. Do not contaminate food or water by storage or disposal.

8. Exposure Controls / Personal Protection:

Exposure Limits:

Ingredients / Product as Sold	CAS Number	Osha PEL	ACGIH TLV
Ethyl Alcohol	64-17-5	1000 ppm	1000 ppm

	Product AS SOLD	Product at Use Dilution
Exposure Controls:		
Engineering Controls:	Normal good ventilation is sufficient. If exposure levels are exceeded, use local ventillation.	
Personal Protective Equipment:		
Eye Protection:	Approved Safety Goggles or Glasses	
Skin Protection:	Chemical Resistant Rubber Gloves	
Respiratory Protection:	In the case of vapor formation use an approved respirator	

9. Physical and Chemical Properties:

Product as Sold

Physical State: Liquid
Specific Gravity (H2O = 1): 0.98
Solubility: Complete
Flammability: None
Flash Point: None
Boiling Point: > 212° F (100°C)

Appearance: Green
Vapor Pressure (MM HG): Not Available
Vapor Density (Air = 1): Not Available
Auto Ign Temp Not Available
Decomposition Temp Not Available
Freezing Point 32 F

Odor: Fresh Floral
Viscosity <5 centipoise
pH: 7 - 8.5
%volatile: > 75%
LEL / UEL Not Available
Evaporation Rate: Not Available

10. Stability and Reactivity:

Product as Sold

Chemical Stability: Stable
Possibility of Hazardous Reactions: Thermal decomposition may produce toxic vapors/fumes of amines or other organic materials
Incompatability (Materials to Avoid): Other Cleaners or Deodorants
Hazardous Decomposition or By-products: Oxides of carbon and Nitrogen
Hazardous Polymerization: Will not Occur
Conditions to Avoid: None are known

11. Toxicological Information:

Product as Sold

Signs and Symptoms of Overexposure: Causes severe skin burns and eye damage

Acute Effects:
Eye Contact: Causes serious eye damage.
Skin Contact: Causes severe skin burns. Toxic in contact with skin
Inhalation: Toxic if inhaled. Avoid breathing mist and vapor.

Ingestion: Harmful if swallowed
Target Organ Effects: None Known
Chronic Effects: None Known

Acute Toxicity Values:	Product AS SOLD
Oral LD_{50}	LD50 (Rat, male and female): 1,140 mg/kg
Dermal LD_{50}	LD50 (Rat, male and female): > 250 mg/kg
Inhalation (Vapor) LC_{50}	LC50 (Rat, male and female): 0.59 mg/l Test atmosphere: vapour Acute toxicity estimate: 40 mg/l Exposure time: 4 h Test atmosphere: vapour Method: Calculation method

[redacted]

12. Ecological Information:

	Product as Sold	Product at Use Dilution
Persistence and Degradability:	Not Applicable	Product is Readily Biodegradable
Bio Accumulative Potential:	Not Applicable	Not Available
Mobility in Soil:	Not Applicable	Not Available
Aquatic Toxicity:	Not Applicable	Not Available

13. Disposal Considerations:

Product as Sold

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional office for guidance.

Product at Use Dilution

Material that cannot be used during normal use should be disposed of in accordance with all applicable local, state and federal regulations. Waste from normal cleaning procedures may be disposed of in a sanitary sewer depending on the materials and/or contaminants being cleaned as well as local, state and federal sewer regulations.

14. Transportation Information:

	Product as Sold

Safety Data Sheet

1 – PRODUCT IDENTIFICATION

PRODUCT NAME: ..... Ultra Line Stripper
PRODUCT TYPE: ..... Alkaline liquid cleaning compound
PRODUCT NUMBER: ..... UL1100XXX (Last 3 characters vary with the packaging)
CONTROL NUMBER: UL1100XXX

COMPANY: ..... **Simoniz USA, Inc.**
201 Boston Turnpike
Bolton, CT 06043
1-800-227-5536
www.simoniz.com

EMERGENCY PHONE: ..... (800) 255-3924 (CHEM-TEL)

2 – HAZARDS IDENTIFICATION

CLASSIFICATION OF SUBSTANCE/MIXTURE: ....Skin Corrosion (1) Serious Eye Damage (1) Specific Target Organ Toxicity, Single Exposure; Respiratory Tract Irritation (3) Acute Toxicity, Oral (4)

SYMBOLS: .....

SIGNAL WORD: ..... DANGER!
HAZARD STATEMENT: ..... Causes severe skin burns and eye damage. May cause respiratory irritation. Harmful if swallowed.

PRECAUTIONARY STATEMENTS:

PREVENTION: ..... Do not get in eyes, on skin, or on clothing. Wash hands thoroughly after handling. Do not touch eyes. Wear protective gloves / protective clothing / eye protection / face protection. Avoid breathing dust / fume / gas / mist / vapors / spray. Use only outdoors or in a well-ventilated area. Do not eat, drink or smoke when using this product.

RESPONSE: ..... IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Get medical help. IF ON SKIN: Take off immediately all contaminated clothing. Immediately rinse with water for several minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Get emergency medical help immediately. Specific treatment (see First AID section). IF IN EYES: Immediately rinse with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. Get emergency medical help.

STORAGE: ..... Store locked up. Store in a well-ventilated place. Keep container tightly closed.

DISPOSAL: ..... Dispose of container and contents in accordance with local regulations.

3 – COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENT	C.A.S. NUMBER
Water	7732-18-5
2-Butoxy Ethanol	111-76-2
2-Aminoethanol	141-43-5
Potassium Hydroxide	1310-58-3
Sodium Xylenesulfonate	1300-72-7
Alcohols, C_{9-11}, ethoxylated	68439-46-3

Percentages of ingredients are being withheld as trade secret information. This information will be disclosed as necessary to authorized individuals

4 – FIRST-AID MEASURES

BREATHING (INHALATION): Maintain adequate ventilation in work area. If signs of discomfort or irritation occur, remove to fresh air. If symptoms persist or burns occur, get immediate medical attention!

SWALLOWING (INGESTION): DO NOT INDUCE VOMITING! Drink a large quantity of water or milk. Do not attempt to give liquids to an unconscious person. Get immediate medical attention!

EYES: Flush eyes with a large quantity of fresh water for at least 15 minutes. Apply ice compresses and get immediate emergency medical attention by an eye specialist! It may be necessary to bring person to a hospital emergency room.

SKIN (DERMAL): Flush from skin and clothing with large quantity of fresh water for at least 15 minutes. If burns occur or irritation persists, get immediate medical attention! Wash contaminated clothing before reuse.

5 – FIRE-FIGHTING MEASURES

FLASHPOINT: This product is non-flammable.

EXTINGUISHING MEDIA: Use extinguishing media suitable for materials already burning.

SPECIAL FIRE FIGHTING PROCEDURES: Firefighters working in areas where this product is present should be equipped with an approved, fully enclosed SCBA.

UNUSUAL FIRE AND EXPLOSION HAZARDS: Do NOT use water on undiluted product.

6 – ACCIDENTAL RELEASE MEASURES

SPILL PROCEDURES: Dike to prevent spillage into streams or sewer systems. Consult local, state and federal authorities.

WASTE DISPOSAL: As recommended by local, state and federal authorities.

7 – HANDLING and STORAGE

STORAGE: ..... Store in a cool, well-ventilated area. Avoid overheating or freezing. Keep container tightly closed. Store locked up. Do NOT store this product in an unmarked container.

HANDLING: ..... Wear eye and hand protection if product is likely to splash. Do NOT transfer this product to an unmarked container. Spilled material is slippery. Keep away from children!

8 – EXPOSURE CONTROLS / PERSONAL PROTECTION

RESPIRATORY PROTECTION: Not usually needed in well-ventilated areas. If needed, use a NIOSH approved respirator.

PROTECTIVE CLOTHING: ..... Nitrile or PVC gloves, and chemical splash goggles.

ADDITIONAL MEASURES: ..... Under normal use according to label instructions, special protection should not be necessary. Wear eye and hand protection if product is likely to splash. Keep away from children!

INGREDIENT	C.A.S. NUMBER	OSHA PEL*
Water	7732-18-5	No limits established
2-Butoxy Ethanol	111-76-2	50 ppm, 240 mg/m^3
2-Aminoethanol	141-43-5	3 ppm, 6 mg/m^3
Potassium Hydroxide	1310-58-3	NIOSH: 2 mg/m^3 (C)
Sodium Xylenesulfonate	1300-72-7	No limits established
Alcohols, $C_{9\text{-}11}$, ethoxylated	68439-46-3	No limits established

*When OSHA 8-hour TWA; STEL; and Ceiling PEL values are not established, NIOSH REL and ACGIH TLV© values will be shown and indicated as such.

9 – PHYSICAL / CHEMICAL PROPERITES

APPEARANCE & ODOR: ..... Purple transparent liquid, rose scented.
ODOR THRESHOLD: ..... N/A
pH: ..... Greater than 13.4
MELTING POINT: ..... N/A
FREEZING POINT: ..... N/A
BOILING POINT: ..... 210 degrees F.
BOILING POINT RANGE: ..... N/A
FLASHPOINT: ..... This product is non-flammable.
EVAPORATION RATE: ..... N/A
FLAMMABILITY (solid/gas): ..... N/A
EXPLOSION LIMITS: ..... N/A
VAPOR PRESSURE: ..... N/A
VAPOR DENSITY (AIR=1): ..... Greater than 1.
SPECIFIC GRAVITY: 1.01
SOLUBILITY IN WATER: ..... Completely soluble.
PARTITION COEFFICIENT: ..... N/A
AUTO-IGNITION TEMPERATURE: ..... N/A
DECOMPOSITION TEMPERATURE: ..... N/A
VISCOSITY: ..... Water thin

10 – STABILITY and REACTIVITY

STABILITY: ..... Stable under normal conditions.
HAZARDOUS DECOMP.: ..... This product not known to polymerize.
INCOMPATIBILITY: ..... Do not mix with caustic material or other detergents.

11 – TOXICOLOGICAL INFORMATION

ROUTE(S) OF ENTRY: ..... Absorption through skin and eyes. Ingestion. Inhalation.
LISTED CARCINOGEN: ..... None over 0.1%.
MEDICAL CONDITION AGGRAVATED: ..... May aggravate pre-existing dermatitis, and asthama or other respiratory disorders.
INHALATION: ..... Undiluted product can cause irritation and burns to mouth, nose, throat and respiratory tract if inhaled. Prolonged or significant exposure to fumes may result in asthama-like symptoms.
INGESTION: ..... Undiluted product can be harmful to health if ingested, and can cause irritation, burns and other serious damage to mouth, esophagus and stomach if swallowed.
EYES: ..... Undiluted product can cause serious irritation, redness, burns, blindness or other permanent damage if not immediately flushed from eyes.
SKIN (DERMAL): ..... Undiluted product can cause severe irritation, redness and burns to the exposed area if not immediately flushed from skin.
ACUTE TOXICITY* (ORAL): ..... 1,831.72 mg/kg
ACUTE TOXICITY* (DERMAL): ..... >5,000 mg/kg
ACUTE TOXCITY* (INHALATION): ..... >20,000 ppm V (Gas), >20 mg/l (Vapor), >5 mg/l (Dust)

*Determined using the additivity formula for mixtures (GHS Purple Book, 3.1.3.6)

12 – ECOLOGICAL INFORMATION

ENVIRONMENTAL FATE AND DISTRIBUTION: N/A

13 – DISPOSAL CONSIDERATIONS

WASTE DISPOSAL: ..... As recommended by local, state and federal authorities.

14 – TRANSPORTATION INFORMATION

DOT:
PROPER SHIPPING NAME: ..... Compounds, cleaning liquid (contains Ethanolamine, Potassium hydroxide)
HAZARD CLASS: 8
UN/NA NUMBER: ..... NA 1760
PACKAGING GROUP : II

IMDG CODE:
PROPER SHIPPING NAME:..... CORROSIVE LIQUID, N.O.S. (ETHANOLAMINE, POTASSIUM HYDROXIDE)
HAZARD CLASS:..... 8

Safety Data Sheet

1 – PRODUCT IDENTIFICATION

PRODUCT NAME: ..... Wet Look Plus
PRODUCT TYPE: ..... Liquid Acrylic Floor Finish
PRODUCT NUMBER: ..... CS0750XXX (Last 3 characters vary with the packaging)
CONTROL NUMBER: CS0750XXX
PRODUCT TYPE: ..... Liquid Acrylic Floor Finish

COMPANY: ..... **Simoniz USA, Inc.**
201 Boston Turnpike
Bolton, CT 06043
1-800-227-5536
www.simoniz.com
EMERGENCY PHONE: ..... (800) 255-3924 (CHEM-TEL)

2 – HAZARDS IDENTIFICATION

CLASSIFICATION OF SUBSTANCE/MIXTURE: ..... Skin Irritation (2) Eye Irritation (2B) Skin Sensitizer (1B)

SYMBOLS: .....

SIGNAL WORD: ..... WARNING!
HAZARD STATEMENT: ..... Causes skin irritation. Causes eye irritation. May cause an allergic skin reaction.
PRECAUTIONARY STATEMENTS:
PREVENTION: ..... Wash hands thoroughly after handling. Wear protective gloves/protective clothing/eye protection/face protection. Avoid breathing dust/fume/gas/mist/vapours/spray. Contaminated work clothing should not be allowed out of the workplace.
RESPONSE: ..... IF ON SKIN: Wash with plenty of water and soap. Specific treatment (see First AID Section on this label). If skin irritation occurs: Get medical advice/attention. Take off contaminated clothing and wash before reuse. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do – continue rinsing. If skin irritation or a rash occurs: Get medical advice/attention.
STORAGE: ..... Store in a dry place. Store in a closed container.
DISPOSAL: ..... Dispose of container and contents in accordance with local regulations.

3 – COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENT	C.A.S. NUMBER
Water	7732-18-5
Acrylate Copolymer	Trade Secret
Diethylene Glycol Ethyl Ether	111-90-0
Tributoxy Ethyl Phosphate	78-51-3

Percentages of ingredients are being withheld as trade secret information. This information will be disclosed as necessary to authorized individuals

4 – FIRST-AID MEASURES

BREATHING (INHALATION): ... If victim shows signs of discomfort or irritation, remove to fresh air. If symptoms persist, get immediate medical attention.

SWALLOWING (INGESTION): . DO NOT INDUCE VOMITING! Drink a large quantity of water or milk. Do not attempt to give liquids to an unconscious person. Get immediate medical attention!

EYES: ..... Flush eyes with a large quantity of fresh water for at least 15 minutes. If irritation persists, consult a physician..

SKIN (DERMAL): ..... Flush from skin and clothing with large amounts of fresh water. If irritation persists, consult physician. Wash contaminated clothing before wearing.

5 – FIRE-FIGHTING MEASURES

FLASHPOINT:..... This product is non-flammable.

EXTINGUISHING MEDIA:..... This product is non-flammable. Use extinguishing media suitable for materials already burning.

SPECIAL FIRE FIGHTING PROCEDURES: .....Firefighters working in areas where this product is present should be equipped with an approved, fully enclosed SCBA.

UNUSUAL FIRE AND EXPLOSION HAZARDS:.....None known.

6 – ACCIDENTAL RELEASE MEASURES

SPILL PROCEDURES: ..... Dike to prevent spillage into streams or sewer systems. Consult local, state and federal authorities.

WASTE DISPOSAL: ..... As recommended by local, state and federal authorities.

7 – HANDLING and STORAGE

STORAGE:..... Store in a cool, well ventilated area. Avoid overheating or freezing.

HANDLING:..... Do not place this product in an unmarked container. Avoid eye contact. Spilled material is slippery.

8 – EXPOSURE CONTROLS / PERSONAL PROTECTION

RESPIRATORY PROTECTION: Not usually needed. Vapors not normally harmful.
PROTECTIVE CLOTHING:..... Special protection not usually needed. Wear eye protection if product is likely to splash.
ADDITIONAL MEASURES: ..... Do not place this product in an unmarked container. Avoid eye contact. Spilled material is slippery.

INGREDIENT	C.A.S. NUMBER	PEL
Water	7732-18-5	No limits established
Acrylate Copolymer	Trade Secret	No limits established
Diethylene Glycol Ethyl Ether	111-90-0	No limits established
Tributoxy Ethyl Phosphate	78-51-3	0.5mg/m3 TWA

9 – PHYSICAL / CHEMICAL PROPERITES

APPEARANCE & ODOR: ..... White opaque liquid. No significant odor.
ODOR THRESHOLD: ..... N/A
pH:..... 8.0-9.0
MELTING POINT: ..... 210 degrees F.
FREEZING POINT: ..... N/A
BOILING POINT:..... 210 degrees F.
BOILING POINT RANGE:..... N/A
FLASHPOINT:..... This product is non-flammable.
EVAPORATION RATE:..... N/A
FLAMMABILITY (solid/gas):.... N/A
EXPLOSION LIMITS:..... N/A
VAPOR PRESSURE: ..... N/A
VAPOR DENSITY (AIR=1):..... Greater than 1.
SPECIFIC GRAVITY: 1.02
SOLUBILITY IN WATER: ..... Completely soluble.
PARTITION COEFFICIENT: ..... N/A
AUTO-IGNITION TEMPERATURE:.....N/A
DECOMPOSITION TEMPERATURE: .....N/A
VISCOSITY: ..... Water thin

10 – STABILITY and REACTIVITY

STABILITY:..... Stable under normal conditions.
HAZARDOUS DECOMP.:..... This product not known to polymerize.
INCOMPATIBILITY:..... Do not mix with other chemicals.

11 – TOXICOLOGICAL INFORMATION

ROUTE(S) OF ENTRY:..... Ingestion. Not likely to be inhaled in dangerous amounts.
LISTED CARCINOGEN: ..... None over 0.1%. Not listed by IARC, NTP or OSHA.
MEDICAL CONDITION AGGRAVATED:.....May aggravate pre-existing dermatitis.
INHALATION:..... Not likely to be inhaled in hazardous amounts. Maintain adequate ventilation in the work area.
INGESTION:..... This material can cause irritation to the stomach and esophagus if ingested.
EYES: ..... May cause eye irritation.
SKIN (DERMAL): ..... Not likely to irritate. Prolonged exposure to undiluted product may cause irritation.
ACUTE TOXICITY* (ORAL):..... .....>5000 mg/kg
ACUTE TOXICITY* (DERMAL):.. .....>5000 mg/kg
ACUTE TOXCITY* (INHALATION):.....>20,000 ppm V (Gas), >20 mg/l (Vapor), >5 mg/l (Dust)

*Determined using the additivity formula for mixtures (GHS Purple Book, 3.1.3.6)

12 – ECOLOGICAL INFORMATION

ENVIRONMENTAL FATE AND DISTRIBUTION: N/A

13 –DISPOSAL CONSIDERATIONS

WASTE DISPOSAL: ..... As recommended by local, state and federal authorities.

14 – TRANSPORTATION INFORMATION

PROPER SHIPPING NAME:..... Not D.O.T. regulated.
HAZARD CLASS:.....
UN/NA NUMBER: .....
PACKAGING GROUP :.....

Diversey
A SOLENIS COMPANY

FINAL STEP® 512 Sanitizer

Revision: 2024-07-31

Version: 03.0

1. IDENTIFICATION

Product name: FINAL STEP® 512 Sanitizer
SDS #: MS0800593
Recommended use:
- Industrial/Institutional
- Sanitizer
- This product is intended to be diluted prior to use

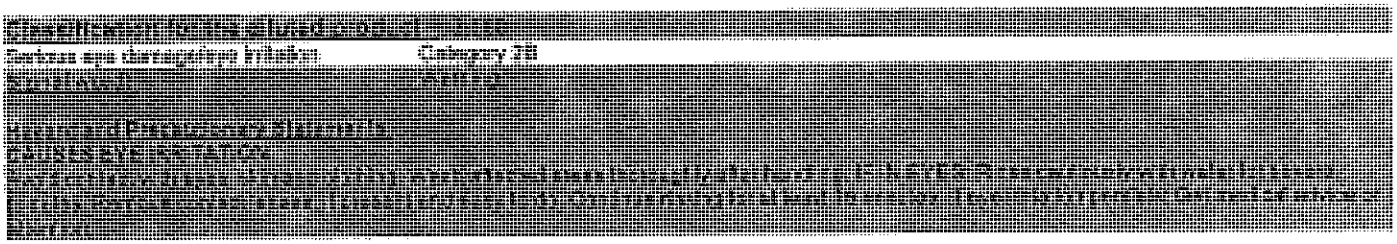
Uses advised against: Uses other than those identified are not recommended

Manufacturer, importer, supplier:
US Headquarters
Diversey, Inc.
1300 Altura Rd., Suite 125
Fort Mill, SC 29708
Phone: 1-888-352-2249
SDS Internet Address: https://sds.diversey.com

Emergency telephone number: 1-800-851-7145; 1-651-917-6133 (Int'l)

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
Skin corrosion, Category 1C
Serious eye damage, Category 1



Signal word: Danger.

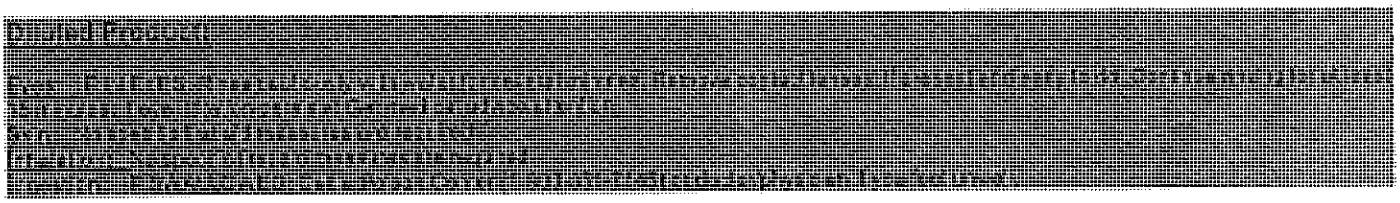
Hazard Statements
CAUSES SEVERE SKIN BURNS AND SERIOUS EYE DAMAGE.

Precautionary Statements
Causes burns/ serious damage to mouth, throat and stomach. Keep container tightly closed. Avoid contact with eyes, skin and clothing. Wash affected areas thoroughly after handling. Wear protective gloves, protective clothing and eye or face protection. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes. Immediately call a Poison Center (1-800-851-7145) or physician. Dispose of in accordance with all federal, state and local applicable regulations. SUPPLEMENTAL INFORMATION:. Mix only with water. DO NOT MIX WITH BLEACH OR ANY OTHER PRODUCT OR CHEMICAL. Can react to release chlorine gas.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients



Ingredient(s)	CAS #	Weight %
n-Alkyl (68% C12, 32% C14) dimethyl ethylbenzyl ammonium chloride	68956-79-6	3 - 7%
n-Alkyl (60% C14, 30% C16, 5% C12, 5% C18) dimethyl benzyl ammonium chloride	68391-01-5	3 - 7%
Ethyl alcohol	64-17-5	0.5 - 1.5%
Amines, C12-18-alkyldimethyl	68391-04-8	> 0.1 - < 1%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes.
Skin: IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash with plenty of water for at least 15 minutes.
Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing.
Ingestion: IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.
Aggravated Medical Conditions: Individuals with chronic respiratory disorders such as asthma, chronic bronchitis, emphysema, etc., may be more susceptible to irritating effects.

5. FIRE-FIGHTING MEASURES

Specific methods: No special methods required
Suitable extinguishing media: The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards: Corrosive material (See sections 8 and 10).

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

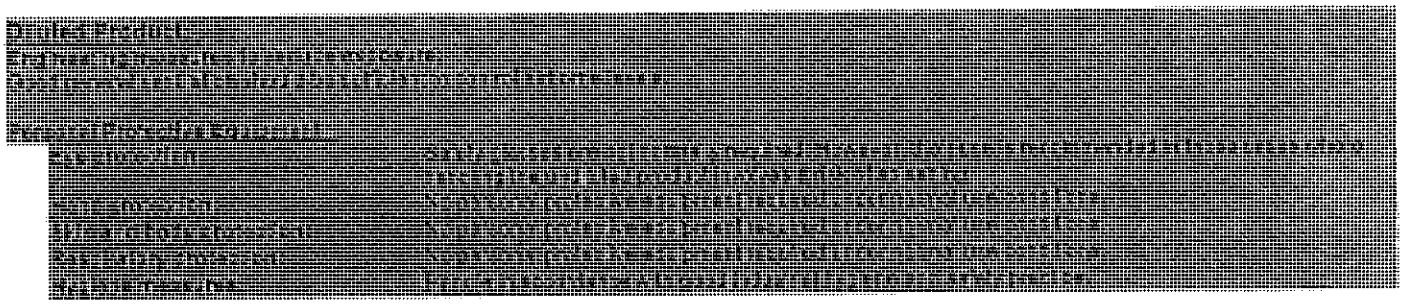
Personal precautions: Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods: Clean-up methods - large spillage. Material is toxic to fish. Do not discharge into lakes, streams, ponds, or public water unless in accordance with an NPDES permit. Prevent product from entering drains. Water runoff can cause environmental damage. Soak up with inert absorbent material. Sweep up and shovel into suitable containers for disposal. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Avoid contact with skin, eyes and clothing. Wash thoroughly after handling. Do not taste or swallow. Product residue may remain on/in empty containers. All precautions for handling the product must be used in handling the empty container and residue. Avoid breathing vapors or mists. Use only with adequate ventilation. Remove and wash contaminated clothing and footwear before re-use. Mix only with water. DO NOT MIX WITH BLEACH OR ANY OTHER PRODUCT OR CHEMICAL. Can react to release chlorine gas. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Keep tightly closed in a dry, cool and well-ventilated place.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines:



Ingredient(s)	ACGIH	OSHA
Ethyl alcohol	1000 ppm (STEL)	1000 ppm (TWA) 1900 mg/m³ (TWA)

Undiluted Product:

Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	Chemical-splash goggles.
Hand protection:	Chemical-resistant gloves.
Skin and body protection:	Protective footwear. Wear suitable protective clothing.
Respiratory protection:	No special requirements under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 0.99 Kg/L
Bulk density: No information available
Flash point (°F): > 200 °F > 93 °C
Kinematic viscosity mPa.s
0
VOC: 1.3 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: The product does not sustain combustion
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , Red
Odor: Quaternary
Boiling point/range: Not determined
Decomposition temperature: Not determined
Solubility: Completely Soluble
Relative Density (relative to water): 0.99
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.

pH: ≈ 7.9
Corrosion to metals: Not corrosive to metals

Dilution pH: ≈ 7
Dilution Flash Point (°F): > 200 °F > 93.4 °C
VOC % by wt. at use dilution: 0.008 %

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products, Sections 94508

10. STABILITY AND REACTIVITY

Reactivity:	Not Applicable
Stability:	The product is stable
Possibility of hazardous reactions:	None known
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Oxidizing agents. Anionic surfactant. Do not mix with chlorinated products (such as bleach).
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Ingestion, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: Corrosive. Causes severe burns. Symptoms may include burns, blisters, redness and pain (which may be delayed).
Eye contact: Corrosive. Causes serious eye damage. Symptoms may include pain, burning sensation, redness, watering, blurred vision or loss of vision.
Ingestion: Causes burns/ serious damage to mouth, throat and stomach. Symptoms may include stomach pain and nausea.
Inhalation: May cause irritation and corrosive effects to nose, throat and respiratory tract. Symptoms may include coughing and difficulty breathing.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

Numerical measures of toxicity

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.

Bioaccumulation: No information available.

Mobility: No information available.

Other adverse effects No other adverse effects known.

13. DISPOSAL CONSIDERATIONS

Do not contaminate water, food, or feed by storage or disposal.

Waste from residues / unused products (undiluted product):
This product, as sold, if discarded or disposed, is not a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and regulations.

Pesticide Storage:
Refer to product label.

Pesticide Disposal:
Refer to product label.

Container Disposal:
Refer to product label.

RCRA Hazard Class (undiluted product): Not Regulated.
RCRA Hazard Class (diluted product): Not Regulated.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: The information provided below is the full transportation classification for this product. This description does not account for the package size(s) of this product, that may fall under a quantity exception, according to the applicable transportation regulations. When shipping dangerous goods, please consult with your internal, certified hazardous materials specialist to determine if any exceptions can be applied to your shipment.

DOT (Ground) Bill of Lading Description: UN3267, CORROSIVE LIQUID, BASIC, ORGANIC, N.O.S., (quaternary ammonium compounds), 8, III

IMDG (Ocean) Bill of Lading Description: UN3267, CORROSIVE LIQUID, BASIC, ORGANIC, N.O.S., (quaternary ammonium compounds), 8, III

15. REGULATORY INFORMATION

International Inventories at CAS# Level

TSCA	All components are listed or otherwise exempt
DSL	All components are listed or otherwise exempt

EPA Reg. No. : 70627-63
This chemical is a pesticide product registered by the United States Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law. These requirements differ from the classification criteria and hazard information required for safety data sheets (SDS), and for workplace labels of non-pesticide chemicals. The hazard information required on the pesticide label is reproduced below. The pesticide label also includes other important information, including directions for use.

DANGER: CORROSIVE. Causes irreversible eye damage and skin burns. Harmful if swallowed or absorbed through the skin. Do not get into eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves and protective clothing when handling. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove contaminated clothing and wash clothing before reuse. PHYSICAL OR CHEMICAL HAZARDS: Do not use or store near heat or open flame. Do not mix with oxidizers, anionic soaps and detergents. ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish and aquatic invertebrates. For Institutional Use.

Ingredient(s)	CAS #	Weight %	CERCLA/SARA RQ (lbs)	Section 302 TPQ (lbs)	Section 313
n-Alkyl (68% C12, 32% C14) dimethyl ethylbenzyl ammonium chloride	68956-79-6	3 - 7%			
n-Alkyl (60% C14, 30% C16, 5% C12, 5% C18) dimethyl benzyl ammonium chloride	68391-01-5	3 - 7%			
Ethyl alcohol	64-17-5	0.5 - 1.5%			
Amines, C12-18-alkyldimethyl	68391-04-8	> 0.1 - < 1%

1.4 Emergency telephone number
Seek medical advice (show the label or safety data sheet where possible)
For medical or environmental emergency only:
call 0800 052 0185

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Skin corrosion, Category 1B (H314)
Serious eye damage, Category 1 (H318)
Corrosive to metals, Category 1 (H290)

2.2 Label elements

Signal word: Danger.

Contains phosphoric acid (Phosphoric Acid)

Hazard statements:
H290 - May be corrosive to metals.
H314 - Causes severe skin burns and eye damage.

Precautionary statements:
P280 - Wear protective gloves, protective clothing and eye or face protection.
P303 + P361 + P353 - IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower.
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310 - Immediately call a POISON CENTRE, doctor or physician.

2.3 Other hazards
No other hazards known.

Regulated explosives precursor - Control of Poisons and Explosives Precursors Regulations 2015

SECTION 3: Composition/information on ingredients

3.2 Mixtures

Ingredient(s)	EC number	CAS number	REACH number	Classification	Notes	Weight percent
phosphoric acid	231-633-2	7664-38-2	01-2119485924-24	Skin corrosion, Category 1B (H314) Acute toxicity - Oral, Category 4 (H302) Serious eye damage, Category 1 (H318) Corrosive to metals, Category 1 (H290)		30-50

Specific concentration limits
phosphoric acid:
- Serious eye damage, Category 1 (H318) >= 25% > Eye irritation, Category 2 (H319) >= 10%
- Skin corrosion, Category 1B (H314) >= 25% > Skin irritation, Category 2 (H315) >= 10%

Workplace exposure limit(s), if available, are listed in subsection 8.1.
ATE, if available, are listed in section 11.
[4] Exempted: polymer. See Article 2(9) of Regulation (EC) No 1907/2006.
For the full text of the H and EUH phrases mentioned in this Section, see Section 16..

SECTION 4: First aid measures

4.1 Description of first aid measures

General information: If unconscious place in recovery position and seek medical advice. Provide fresh air. If breathing is irregular or stopped, administer artificial respiration. No mouth-to-mouth or mouth-to-nose resuscitation. Use Ambu bag or ventilator.

Inhalation: Remove person to fresh air and keep comfortable for breathing. Get medical attention or advice if you feel unwell.

Skin contact: Wash skin with plenty of lukewarm, gently flowing water for at least 30 minutes. Take off immediately all contaminated clothing and wash it before reuse. Immediately call a POISON CENTRE, doctor or physician.

Eye contact: Hold eyelids apart and flush eyes with plenty of lukewarm water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTRE, doctor or physician.

Ingestion: Rinse mouth. Immediately drink 1 glass of water. Never give anything by mouth to an unconscious person. Do NOT induce vomiting. Keep at rest. Immediately call a POISON CENTRE, doctor or physician.

Self-protection of first aider: Consider personal protective equipment as indicated in subsection 8.2.

4.2 Most important symptoms and effects, both acute and delayed

Inhalation: No known effects or symptoms in normal use.

Skin contact: Causes severe burns.

Eye contact: Causes severe or permanent damage.

Ingestion: Ingestion will lead to a strong caustic effect on mouth and throat and to the danger of perforation of oesophagus and stomach.

4.3 Indication of any immediate medical attention and special treatment needed
No information available on clinical testing and medical monitoring. Specific toxicological information on substances, if available, can be found in section 11.

SECTION 5: Firefighting measures

5.1 Extinguishing media
Carbon dioxide. Dry powder. Water spray jet. Fight larger fires with water spray jet or alcohol-resistant foam.

5.2 Special hazards arising from the substance or mixture
No special hazards known.

5.3 Advice for firefighters
As in any fire, wear self contained breathing apparatus and suitable protective clothing including gloves and eye/face protection.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures
Wear suitable protective clothing. Wear eye/face protection. Wear suitable gloves.

6.2 Environmental precautions
Dilute with plenty of water. Do not allow to enter drainage system, surface or ground water.

6.3 Methods and material for containment and cleaning up
Dyke to collect large liquid spills. Use neutralising agent. Absorb with liquid-binding material (sand, diatomite, universal binders). Do not place spilled materials back into the original container. Collect in closed and suitable containers for disposal.

6.4 Reference to other sections
For personal protective equipment see subsection 8.2. For disposal considerations see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling
Measures to prevent fire and explosions:
No special precautions required.
Measures required to protect the environment:
For environmental exposure controls see subsection 8.2.
Advice on general occupational hygiene:
Handle in accordance with good industrial hygiene and safety practice. Keep away from food, drink and animal feeding stuffs. Do not mix with other products unless advised by Diversey. Wash face, hands and any exposed skin thoroughly after handling. Take off immediately all contaminated clothing. Wash contaminated clothing before reuse. Avoid contact with skin and eyes. Do not breathe spray. Use only with adequate ventilation. See chapter 8.2, Exposure controls / Personal protection.

7.2 Conditions for safe storage, including any incompatibilities
Store in accordance with local and national regulations. Store in a closed container. Keep only in original packaging.
For conditions to avoid see subsection 10.4. For incompatible materials see subsection 10.5.

7.3 Specific end use(s)
No specific advice for end use available.

SECTION 8: Exposure controls/personal protection

8.1 Control parameters
Workplace exposure limits

Air limit values, if available:

Ingredient(s)	UK - Long term value(s)	UK - Short term value(s)
phosphoric acid	1 mg/m³	2 mg/m³

Biological limit values, if available:

Recommended monitoring procedures, if available:

Additional exposure limits under the conditions of use, if available:

DNEL/DMEL and PNEC values
Human exposure
DNEL/DMEL oral exposure - Consumer (mg/kg bw)

Ingredient(s)	Short term - Local effects	Short term - Systemic effects	Long term - Local effects	Long term - Systemic effects
phosphoric acid	-	-	-	0.1

DNEL/DMEL dermal exposure - Worker

Ingredient(s)	Short term - Local effects	Short term - Systemic effects (mg/kg bw)	Long term - Local effects	Long term - Systemic effects (mg/kg bw)
phosphoric acid	No data available	-	No data available	-

DNEL/DMEL dermal exposure - Consumer

Ingredient(s)	Short term - Local effects	Short term - Systemic effects (mg/kg bw)	Long term - Local effects	Long term - Systemic effects (mg/kg bw)
phosphoric acid	No data available	-	No data available	-

DNEL/DMEL inhalatory exposure - Worker (mg/m³)

Ingredient(s)	Short term - Local effects	Short term - Systemic effects	Long term - Local effects	Long term - Systemic effects
phosphoric acid	-	-	2.92	1

DNEL/DMEL Inhalatory exposure - Consumer (mg/m³)

Ingredient(s)	Short term - Local effects	Short term - Systemic effects	Long term - Local effects	Long term - Systemic effects
phosphoric acid	-	-	0.73	-

Environmental exposure

Environmental exposure - PNEC

Ingredient(s)	Surface water, fresh (mg/l)	Surface water, marine (mg/l)	Intermittent (mg/l)	Sewage treatment plant (mg/l)
phosphoric acid	-	-	-	-

Environmental exposure - PNEC, continued

Ingredient(s)	Sediment, freshwater (mg/kg)	Sediment, marine (mg/kg)	Soil (mg/kg)	Air (mg/m³)
phosphoric acid	-	-	-	-

8.2 Exposure controls

The following information applies for the uses indicated in subsection 1.2 of the Safety Data Sheet.
If available, please refer to the product information sheet for application and handling instructions.
Normal use conditions are assumed for this section.

Recommended safety measures for handling the undiluted product:

Appropriate engineering controls: If the product is diluted by using specific dosing systems with no risk of splashes or direct skin contact, the personal protection equipment as described in this section is not required.

Appropriate organisational controls: Avoid direct contact and/or splashes where possible. Train personnel.

REACH use scenarios considered for the undiluted product:

	SWED - Sector-specific worker exposure description	LCS	PROC	Duration (min)	ERC
Manual transfer and dilution	AISE_SWED_PW_8a_1	PW	PROC 8a	60	ERC8a

Personal protective equipment

Eye / face protection: Safety glasses or goggles (EN 16321). The use of a full-face shield or other full-face protection is strongly recommended when handling open containers or if splashes may occur.

Hand protection: Chemical-resistant protective gloves (EN 374). Verify instructions regarding permeability and breakthrough time, as provided by the gloves supplier. Consider specific local use conditions, such as risk of splashes, cuts, contact time and temperature.
Suggested gloves for prolonged contact: Material: butyl rubber Penetration time: ≥ 480 min Material thickness: ≥ 0.7 mm
Suggested gloves for protection against splashes: Material: nitrile rubber Penetration time: ≥ 30 min Material thickness: ≥ 0.4 mm
In consultation with the supplier of protective gloves a different type providing similar protection may be chosen.

Body protection: Wear chemical-resistant clothing and boots in case direct dermal exposure and/or splashes may occur (EN 14605).

Respiratory protection: If exposure to liquid particles or splashes cannot be avoided use: half mask (EN 140) or full-face mask (EN 136) with particle filter P2 (EN 143) Consider specific local use conditions. In consultation with the supplier of respiratory protection equipment a different type providing similar protection may be chosen. Specific applications tools may be available to limit exposure. Please refer to the product information sheet for the possibilities. Apply technical measures to comply with the occupational exposure limits, if available.

Environmental exposure controls: Should not reach sewage water or drainage ditch undiluted or unneutralised.

Recommended safety measures for handling the diluted product:

Recommended maximum concentration (% w/w): 20

Appropriate engineering controls: Provide a good standard of general ventilation.

Appropriate organisational controls: Users are advised to consider national Occupational Exposure Limits or other equivalent values, if available.

REACH use scenarios considered for the diluted product:

	SWED	LCS	PROC	Duration (min)	ERC
Machine application Manual application by brushing, wiping or mopping	AISE_SWED_PW_10_1	PW	PROC 10	480	ERC8a
Spray application	AISE_SWED_PW_11_1	PW	PROC 11	60	ERC8a

Manual application	AISE_SWED_PW_19_1	PW	PROC 19	480	ERC8a
Automatic application in a dedicated system	AISE_SWED_PW_4_1	PW	PROC 4	480	ERC8a

Personal protective equipment
Eye / face protection: No special requirements under normal use conditions.
Hand protection: Rinse and dry hands after use. For prolonged contact protection for the skin may be necessary.
Body protection: No special requirements under normal use conditions.
Respiratory protection: Trigger spray bottle application: No special requirements under normal use conditions. Apply technical measures to comply with the occupational exposure limits, if available.

Environmental exposure controls: No special requirements under normal use conditions.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties
Information in this section refers to the product, unless it is specifically stated that substance data is listed

Method / remark

Physical state: Liquid
Colour: Clear , Colourless
Odour: Product specific
Odour threshold: Not applicable
Melting point/freezing point (°C): Not determined — Not relevant to classification of this product
Initial boiling point and boiling range (°C): Not determined — See substance data

Substance data, boiling point

Ingredient(s)	Value (°C)	Method	Atmospheric pressure (hPa)
phosphoric acid	158	Method not given	1013

Method / remark

Flammability (solid, gas): Not applicable to liquids
Flammability (liquid): Not flammable.
Flash point (°C): Not determined
Sustained combustion: Not applicable.
(UN Manual of Tests and Criteria, section 32, L.2)
Lower and upper explosion limit/flammability limit (%): Not determined

Substance data, flammability or explosive limits, if available:

Method / remark

Autoignition temperature: Not determined
Decomposition temperature: Not applicable.
pH: =< 2 (neat) — ISO 4316
Dilution pH: < 2 (20 %) — ISO 4316
Kinematic viscosity: Not determined
Solubility in / Miscibility with water: Fully miscible

Substance data, solubility in water

Ingredient(s)	Value (g/l)	Method	Temperature (°C)
phosphoric acid	Soluble		

Substance data, partition coefficient n-octanol/water (log Kow): see subsection 12.3

Method / remark

Vapour pressure: Not determined — See substance data

Substance data, vapour pressure

Ingredient(s)	Value (Pa)	Method	Temperature (°C)
phosphoric acid	4	Method not given	20

Method / remark

Relative density: ≈ 1.20 (20 °C) — OECD 109 (EU A.3)
Relative vapour density: No data available. — Not relevant to classification of this product
Particle characteristics: No data available. — Not applicable to liquids.

9.2 Other information
9.2.1 Information with regard to physical hazard classes
Explosive properties: Not explosive.
Oxidising properties: Not oxidising.

Corrosion to metals: Corrosive

9.2.2 Other safety characteristics
Acid reserve: ≈ -13.8 (g NaOH / 100g; pH=4)

SECTION 10: Stability and reactivity

10.1 Reactivity
No reactivity hazards known under normal storage and use conditions.

10.2 Chemical stability
Stable under normal storage and use conditions.

10.3 Possibility of hazardous reactions
No hazardous reactions known under normal storage and use conditions.

10.4 Conditions to avoid
None known under normal storage and use conditions.

10.5 Incompatible materials
May be corrosive to metals. Reacts with alkali. Keep away from products containing chlorine-based bleaching agents or sulphites.

10.6 Hazardous decomposition products
None known under normal storage and use conditions.

SECTION 11: Toxicological information

11.1 Information on hazard classes as defined in Regulation (EC) No 1272/2008

Mixture data: .

Relevant calculated ATE(s):
ATE - Oral (mg/kg): >2000

Substance data, where relevant and available, are listed below:.

Acute toxicity
Acute oral toxicity

Ingredient(s)	Endpoint	Value (mg/kg)	Species	Method	Exposure time (h)	ATE Oral (mg/kg)
phosphoric acid	LD_{50}	> 300-5000	Rat	OECD 423 (EU B.1 tris)		2600

Acute dermal toxicity

Ingredient(s)	Endpoint	Value (mg/kg)	Species	Method	Exposure time (h)	ATE Dermal (mg/kg)
phosphoric acid	LD_{50}	2740	Rabbit	Method not given		Not established

Acute inhalative toxicity

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	LC_{50}	850	Rat	Method not given	2

Acute inhalative toxicity, continued

Ingredient(s)	ATE - Inhalation, dust (mg/l)	ATE - Inhalation, mist (mg/l)	ATE - Inhalation, vapour (mg/l)	ATE - Inhalation, gas (mg/l)
phosphoric acid	Not established	Not established	Not established	Not established

Irritation and corrosivity
Skin irritation and corrosivity

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	Corrosive	Rabbit	OECD 404 (EU B.4)	

Eye irritation and corrosivity

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	Severe damage	Rabbit	Method not given	

Respiratory tract irritation and corrosivity

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	No data available			

Sensitisation

Sensitisation by skin contact

Ingredient(s)	Result	Species	Method	Exposure time (h)
phosphoric acid	Not sensitising	Human	Human experience	

Sensitisation by inhalation

Ingredient(s)	Result	Species	Method	Exposure time
phosphoric acid	No data available			

CMR effects (carcinogenicity, mutagenicity and toxicity for reproduction)

Mutagenicity

Ingredient(s)	Result (in-vitro)	Method (in-vitro)	Result (in-vivo)	Method (in-vivo)
phosphoric acid	No evidence for mutagenicity, negative test results	OECD 471 (EU B.12/13) OECD 473 OECD 476 (Mouse lymphoma)	No data available	

Carcinogenicity

Ingredient(s)	Effect
phosphoric acid	No data available

Toxicity for reproduction

Ingredient(s)	Endpoint	Specific effect	Value (mg/kg bw/d)	Species	Method	Exposure time	Remarks and other effects reported
phosphoric acid	NOAEL	Developmental toxicity	410	Rat	OECD 422, oral	10 day(s)	No evidence for reproductive toxicity No evidence for developmental toxicity

Repeated dose toxicity

Sub-acute or sub-chronic oral toxicity

Ingredient(s)	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time (days)	Specific effects and organs affected
phosphoric acid	NOAEL	250	Rat	OECD 422, oral		

Sub-chronic dermal toxicity

Ingredient(s)	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time (days)	Specific effects and organs affected
phosphoric acid		No data available				

Sub-chronic inhalation toxicity

Ingredient(s)	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time (days)	Specific effects and organs affected
phosphoric acid		No data available				

Chronic toxicity

Ingredient(s)	Exposure route	Endpoint	Value (mg/kg bw/d)	Species	Method	Exposure time	Specific effects and organs affected	Remark
phosphoric acid			No data available					

STOT-single exposure

Ingredient(s)	Affected organ(s)
phosphoric acid	No data available

STOT-repeated exposure

Ingredient(s)	Affected organ(s)
phosphoric acid	No data available

Aspiration hazard

Substances with an aspiration hazard (H304), if any, are listed in section 3.

Potential adverse health effects and symptoms
Effects and symptoms related to the product, if any, are listed in subsection 4.2.

11.2 Information on other hazards
11.2.1 Endocrine disrupting properties
Endocrine disrupting properties - Human data, if available:

11.2.2 Other information
No other relevant information available.

SECTION 12: Ecological information

12.1 Toxicity

No data is available on the mixture .

Substance data, where relevant and available, are listed below:

Aquatic short-term toxicity
Aquatic short-term toxicity - fish

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	LC_{50}	138	*Gambusia affinis*	Method not given	96

Aquatic short-term toxicity - crustacea

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	EC_{50}	> 100	*Daphnia magna Straus*	OECD 202 (EU C.2)	48

Aquatic short-term toxicity - algae

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (h)
phosphoric acid	EC_{50}	> 100	*Desmodesmus subspicatus*	OECD 201 (EU C.3)	72

Aquatic short-term toxicity - marine species

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time (days)
phosphoric acid		No data available			

Impact on sewage plants - toxicity to bacteria

Ingredient(s)	Endpoint	Value (mg/l)	Inoculum	Method	Exposure time
phosphoric acid	EC_{50}	270	*Activated sludge*	Method not given	

Aquatic long-term toxicity
Aquatic long-term toxicity - fish

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time	Effects observed
phosphoric acid		No data available				

Aquatic long-term toxicity - crustacea

Ingredient(s)	Endpoint	Value (mg/l)	Species	Method	Exposure time	Effects observed
phosphoric acid		No data available				

Aquatic toxicity to other aquatic benthic organisms, including sediment-dwelling organisms, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw sediment)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity
Terrestrial toxicity - soil invertebrates, including earthworms, if available:

Ingredient(s)	Endpoint	Value	Species	Method	Exposure	Effects observed

		(mg/kg dw soil)			time (days)	
phosphoric acid		No data available				

Terrestrial toxicity - plants, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw soil)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity - birds, if available:

Ingredient(s)	Endpoint	Value	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity - beneficial insects, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw soil)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

Terrestrial toxicity - soil bacteria, if available:

Ingredient(s)	Endpoint	Value (mg/kg dw soil)	Species	Method	Exposure time (days)	Effects observed
phosphoric acid		No data available				

12.2 Persistence and degradability

Abiotic degradation

Abiotic degradation - photodegradation in air, if available:

Ingredient(s)	Half-life time	Method	Evaluation	Remark
phosphoric acid	No data available			

Abiotic degradation - hydrolysis, if available:

Ingredient(s)	Half-life time in fresh water	Method	Evaluation	Remark
phosphoric acid	No data available			

Abiotic degradation - other processes, if available:

Ingredient(s)	Type	Half-life time	Method	Evaluation	Remark
phosphoric acid		No data available			

Biodegradation

Ready biodegradability - aerobic conditions

Ingredient(s)	Inoculum	Analytical method	DT 50	Method	Evaluation
phosphoric acid					Not applicable (inorganic substance)

Ready biodegradability - anaerobic and marine conditions, if available:

Ingredient(s)	Medium & Type	Analytical method	DT 50	Method	Evaluation
phosphoric acid					No data available

Degradation in relevant environmental compartments, if available:

Ingredient(s)	Medium & Type	Analytical method	DT 50	Method	Evaluation
phosphoric acid					No data available

12.3 Bioaccumulative potential

Partition coefficient n-octanol/water (log Kow)

Ingredient(s)	Value	Method	Evaluation	Remark
phosphoric acid	No data available		No bioaccumulation expected	

Bioconcentration factor (BCF)

Ingredient(s)	Value	Species	Method	Evaluation	Remark

phosphoric acid	No data available			No bioaccumulation expected	

12.4 Mobility in soil
Adsorption/Desorption to soil or sediment

Ingredient(s)	Adsorption coefficient Log Koc	Desorption coefficient Log Koc(des)	Method	Soil/sediment type	Evaluation
phosphoric acid	No data available				Potential for mobility in soil, soluble in water

12.5 Results of PBT and vPvB assessment
Substances that fulfill the criteria for PBT/vPvB, if any, are listed in section 3.

12.6 Endocrine disrupting properties
Endocrine disrupting properties - Environmental effects, if available:

12.7 Other adverse effects
No other adverse effects known.

SECTION 13: Disposal considerations

13.1 Waste treatment methods

Waste from residues / unused products: The concentrated contents or contaminated packaging should be disposed of by a certified handler or according to the site permit. Release of waste to sewers is discouraged. The cleaned packaging material is suitable for energy recovery or recycling in line with local legislation.

European Waste Catalogue: 20 01 14* - acids.

Empty packaging Recommendation: Dispose of observing national or local regulations.

Suitable cleaning agents: Water, if necessary with cleaning agent.

SECTION 14: Transport information

Land transport (ADR/RID), Sea transport (IMDG), Air transport (ICAO-TI / IATA-DGR)

14.1 UN number or ID number: 1805

14.2 UN proper shipping name:
Phosphoric acid, solution

14.3 Transport hazard class(es):
Transport hazard class (and subsidiary risks): 8

14.4 Packing group: III

14.5 Environmental hazards:
Environmentally hazardous: No
Marine pollutant: No

14.6 Special precautions for user: None known.

14.7 Maritime transport in bulk according to IMO instruments: The product is not transported in bulk tankers.

Other relevant information:

ADR
Classification code: C1
Tunnel restriction code: (E)
Hazard identification number: 80

IMO/IMDG
EmS: F-A, S-B

The product has been classified, labelled and packaged in accordance with the requirements of ADR and the provisions of the IMDG Code
Transport regulations include special provisions for certain classes of dangerous goods packed in limited quantities.

SECTION 15: Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

National regulations :
- Control of Poisons and Explosives Precursors Regulations 2015
- Regulation (EC) 1907/2006 - REACH (UK amended)
- Regulation (EC) 1272/2008 - CLP (UK amended)
- Regulation (EC) 648/2004 - Detergents regulation (UK amended)
- Delegated Regulation (EU) 2017/2100 and Regulation (EU) 2018/605 (UK amended)
- Agreement concerning the International Carriage of Dangerous Goods by Road (ADR)
- International Maritime Dangerous Goods (IMDG) Code

Authorisations or restrictions (Regulation (EC) No 1907/2006, Title VII respectively Title VIII): Not applicable.

Ingredients according to Detergents Regulation
non-ionic surfactants < 5 %

The surfactant(s) contained in this preparation complies(comply) with the biodegradability criteria as laid down in Regulation (EC) 648/2004 on detergents (UK amended). Data to support this assertion are held at the disposal of the competent authorities of the UK and will be made available to them, at their direct request or at the request of a detergent manufacturer.

Comah - classification: Not classified

15.2 Chemical safety assessment
A chemical safety assessment has not been carried out on the mixture

SECTION 16: Other Information

The information in this document is based on our best present knowledge. However, it does not constitute a guarantee for any specific product features and does not establish a legally binding contract

SDS code: MSDS1826 **Version:** 05.0 **Revision:** 2025-05-19

Reason for revision:
This data sheet contains changes from the previous version in section(s):, 1, 9, 16

Classification procedure
The classification of the mixture is in general besed on calculation methods using substance data, as required by Regulation (EC) No 1272/2008. If for certain classifications data on the mixture is available or for example bridging principles or weight of evidence can be used for classification, this will be indicated in the relevant sections of the Safety Data Sheet. See section 9 for physical chemical properties, section 11 for toxicological information and section 12 for ecological information.

Abbreviations and acronyms:
- AISE - The International Association for Soaps, Detergents and Maintenance Products
- ATE - Acute Toxicity Estimate
- DNEL - Derived No Effect Limit
- EC50 - effective concentration, 50%
- ERC - Environmentel release categories
- EUH - CLP Specific hezard statement
- LC50 - Lethal Concentration, 50% / Median Lethal Concentration
- LCS - Life cycle stage
- LD50 - Lethal Dose, 50% / Median Lethal dose
- NOAEL - No observed adverse effect level
- NOEL - No observed effect level
- OECD - Organisation for Economic Cooperation and Development
- PBT - Persistent, Bioaccumulative and Toxic
- PNEC - Predicted No Effect Concentration
- PROC - Process categories
- REACH number - REACH registration number, without supplier specific part
- vPvB - very Persistent and very Bioaccumulative
- H290 - May be corrosive to metals.
- H302 - Harmful if swallowed.
- H314 - Ceuses severe skin burns and eye damage.
- H318 - Causes serious eye damage.

End of Safety Data Sheet

Diversey
A SOLENIS COMPANY

Suma® Select
Rinse Aid

Revision: 2024-07-31

Version: 03.0

1. IDENTIFICATION

Product name: Suma® Select
Rinse Aid

SDS #: MS0800353

Recommended use:
- Industrial/Institutional
- Warewashing product
- This product is intended to be diluted prior to use

Uses advised against: Uses other than those identified are not recommended

Manufacturer, importer, supplier:
US Headquarters
Diversey, Inc.
1300 Altura Rd., Suite 125
Fort Mill, SC 29708
Phone: 1-888-352-2249
SDS Internet Address: https://sds.diversey.com

Canadian Headquarters
Diversey Canada, Inc.
6150 Kennedy Road Unit 3
Mississauga, Ontario L5T 2J4
Phone: 1-800-668-7171

Emergency telephone number: 1-800-851-7145; 1-651-917-6133 (Int'l)

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
This product is not classified as hazardous according to OSHA 29CFR 1910.1200 (HazCom 2012-GHS) and Canadian Hazardous Products Regulations (HPR) (WHMIS 2015-GHS).
Not classified

Hazard Statements
None required.
Precautionary Statements
None required.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients

Ingredient(s)	CAS #	Weight %
Proprietary	Proprietary	3 - 7%
Alcohols, C6-C10, ethoxylated propoxylated	68987-81-5	3 - 7%
Sodium xylene sulfonate	1300-72-7	0.5 - 1.5%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: Rinse with plenty of water. If irritation occurs and persists, get medical attention.
Skin: Rinse with plenty of water. Wash with plenty of water for at least 15 minutes.
Inhalation: No specific first aid measures are required.
Ingestion: IF SWALLOWED: Call a Poison Center (1-800-851-7145) or doctor/physician if you feel unwell.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.

[redacted]

5. FIRE-FIGHTING MEASURES

Specific methods:	No special methods required
Suitable extinguishing media:	The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards:	None known.

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions:	Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods:	Clean-up methods - large spillage. Absorb spill with inert material (e.g. dry sand or earth), then place in a chemical waste container. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Avoid contact with skin and eyes. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Keep tightly closed in a dry, cool and well-ventilated place.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines:

Undiluted Product:

Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	No personal protective equipment required under normal use conditions.
Hand protection:	No personal protective equipment required under normal use conditions.
Skin and body protection:	No personal protective equipment required under normal use conditions.
Respiratory protection:	No personal protective equipment required under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

[redacted]

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 1.02 Kg/L
Bulk density: No information available
Flash point (°F): > 200.12 °F > 93.4 °C
Kinematic viscosity No information available
VOC: 0 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: Not applicable
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , Blue
Odor: Surfactant
Boiling point/range: Not determined
Decomposition temperature: Not determined
Solubility: Completely Soluble
Relative Density (relative to water): 1.02
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.
pH: ≈ 8
Corrosion to metals: Not corrosive to metals

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products; Sections 94508

10. STABILITY AND REACTIVITY

Reactivity:	Not Applicable
Stability:	The product is stable
Possibility of hazardous reactions:	None known
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Do not mix with any other product or chemical unless specified in the use directions.
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: May be mildly irritating to skin. Symptoms may include redness and/or transient discomfort.
Eye contact: May be mildly irritating to eyes.
Ingestion: No information available.
Inhalation: No information available.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

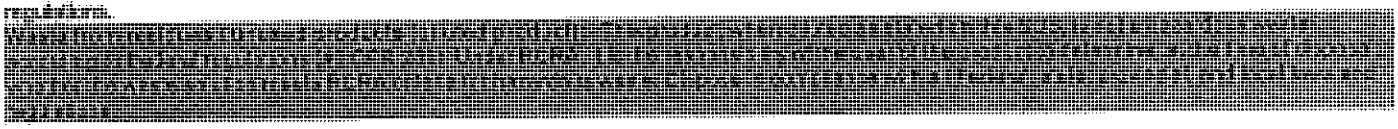
Numerical measures of toxicity

ATE - Oral (mg/kg):	>2000
ATE - Dermal (mg/kg):	>2000
ATE - Inhalatory, gases (mg/l):	>20000
ATE - Inhalatory, mists (mg/l):	>5
ATE - Inhalatory, vapors (mg/l):	>20

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.



Bioaccumulation: No information available.

Mobility: No information available.

Other adverse effects No information available.

13. DISPOSAL CONSIDERATIONS

Waste from residues / unused products (undiluted product): This product, as sold, if discarded or disposed, is not a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and regulations.

RCRA Hazard Class (undiluted product): Not Regulated
RCRA Hazard Class (diluted product): Not Regulated
Contaminated Packaging: Do not re-use empty containers.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: This product is not regulated for transport.

Suma® Nova
Mechanical Dish Detergent

Revision: 2024-08-05 **Version:** 02.0

1. IDENTIFICATION

Product name: Suma® Nova
Mechanical Dish Detergent

SDS #: MS0801038

Recommended use:
- Dishmachine Detergent
- This product is intended to be diluted prior to use
- Industrial/Institutional

Uses advised against: Uses other than those identified are not recommended

Manufacturer, Importer, supplier:
US Headquarters
Diversey, Inc.
1300 Altura Rd., Suite 125
Fort Mill, SC 29708
Phone: 1-888-352-2249
SDS Internet Address: https://sds.diversey.com

Canadian Headquarters
Diversey Canada, Inc.
6150 Kennedy Road Unit 3
Mississauga, Ontario L5T 2J4
Phone: 1-800-668-7171

Emergency telephone number: 1-800-851-7145; 1-651-917-6133 (Int'l)

2. HAZARDS IDENTIFICATION

Classification for the undiluted product
Skin corrosion, Category 1B
Serious eye damage, Category 1
Corrosive to metals, Category 1

Signal word: **Danger.**

Hazard Statements
CAUSES SEVERE SKIN BURNS AND SERIOUS EYE DAMAGE. MAY BE CORROSIVE TO METALS.

Precautionary Statements
Causes burns/ serious damage to mouth, throat and stomach. Keep container tightly closed. Keep only in original container. Avoid contact with eyes, skin and clothing. Wash affected areas thoroughly after handling. Wear protective gloves, protective clothing and eye or face protection. IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes. Immediately call a Poison Center (1-800-851-7145) or physician. Absorb spillage to prevent material damage. Store locked up. Store in corrosive-resistant container with a resistant inner liner. Dispose of in accordance with all federal, state and local applicable regulations. SUPPLEMENTAL INFORMATION:. DO NOT MIX WITH AMMONIA, BLEACH OR OTHER CHLORINATED COMPOUNDS. Mix only with water. Can react to release hazardous gases. May vigorously react with strong alkaline products resulting in spattering and excessive heat.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

Classification for the diluted product 1:400
This product, when diluted as stated on the label, is not classified as hazardous according to OSHA 29CFR 1910.1200 (HazCom 2012-GHS) and Canadian Hazardous Products Regulations (HPR) (WHMIS 2015-GHS).

Hazard and Precautionary Statements
None required.

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients

Ingredient(s)	CAS #	Weight %
Sodium hydroxide	1310-73-2	7 - 13%
Sodium polyacrylate	9003-04-7	1 - 5%
Trisodium citrate	68-04-2	1 - 5%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes.
Skin: IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash with plenty of water for at least 15 minutes.
Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing.
Ingestion: IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.

Diluted Product:

5. FIRE-FIGHTING MEASURES

Specific methods: No special methods required
Suitable extinguishing media: The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards: Corrosive material (See sections 8 and 10).

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

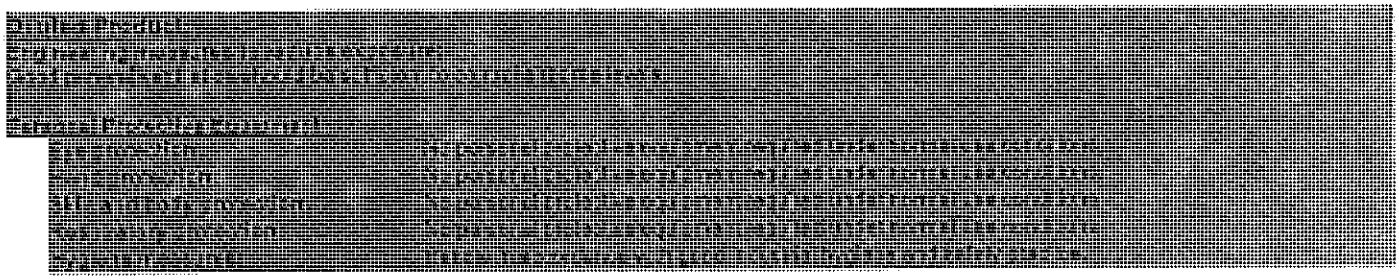
Personal precautions: Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods: Clean-up methods - large spillage. Absorb spill with inert material (e.g. dry sand or earth), then place in a chemical waste container. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Can react to release hazardous gases. May vigorously react with acids resulting in spattering and excessive heat. Do not mix with other products or chemicals except as directed on the label. Mix only with water. Avoid contact with skin, eyes and clothing. Wash thoroughly after handling. Do not taste or swallow. Product residue may remain on/in empty containers. All precautions for handling the product must be used in handling the empty container and residue. Avoid breathing vapors or mists. Use only with adequate ventilation. Remove and wash contaminated clothing and footwear before re-use. Absorb spillage to prevent material damage. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Store in corrosive-resistant container with a resistant inner liner.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines:



Ingredient(s)	ACGIH	OSHA
Sodium hydroxide	2 mg/m³ (Ceiling)	2 mg/m³ (TWA)

Undiluted Product:

Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	Chemical-splash goggles.
Hand protection:	Chemical-resistant gloves.
Skin and body protection:	Protective footwear. Wear suitable protective clothing.
Respiratory protection:	No personal protective equipment required under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State Liquid
Evaporation Rate: No information available
Odor threshold: No information available.
Melting point/freezing point (°C): Not determined
Autoignition temperature: No information available
Solubility in other solvents: No information available
Density: 1.237 Kg/L
Bulk density: No information available
Flash point (°F): > 200.1 °F > 93.4 °C
Kinematic viscosity mPa.s
10
VOC: 0 % *
Flammability (Solid or Gas): Not applicable
Sustained combustion: Not applicable
Explosion limits: - upper: Not determined **- lower:** Not determined

Color: Clear , Red
Odor: Product specific
Boiling point/range: Not determined
Decomposition temperature: Not determined
Solubility: Completely Soluble
Relative Density (relative to water): 1.24
Vapor density: No information available
Vapor pressure: No information available.
Partition coefficient (n-octanol/water): No information available
Elemental Phosphorus: 0.00 % by wt.

pH: 13.9
Corrosion to metals: Metal corrosive

Dilution pH: 11.5
Dilution Flash Point (°F): > 200.1 °F > 93.4 °C
VOC % by wt. at use dilution: 0 %

* - Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 8.5, Article 2, Consumer Products, Sections 94508

10. STABILITY AND REACTIVITY

Reactivity:	Not Applicable
Stability:	The product is stable
Possibility of hazardous reactions:	May vigorously react with acids resulting in spattering and excessive heat.
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Acids. Strong acids. Do not mix with any other product or chemical unless specified in the use directions.
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Ingestion, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: Corrosive. Causes severe burns. Symptoms may include burns, blisters, redness and pain (which may be delayed).
Eye contact: Corrosive. Causes serious eye damage. Symptoms may include pain, burning sensation, redness, watering, blurred vision or loss of vision.
Ingestion: Causes burns/ serious damage to mouth, throat and stomach. Symptoms may include stomach pain and nausea.
Inhalation: May cause irritation and corrosive effects to nose, throat and respiratory tract. Symptoms may include coughing and difficulty breathing.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

Numerical measures of toxicity

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.

Bioaccumulation: No information available.

Mobility: No information available.

Other adverse effects No information available.

13. DISPOSAL CONSIDERATIONS

Waste from residues / unused products (undiluted product): This product, as sold, if discarded or disposed, is a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and

RCRA Hazard Class (undiluted product): D002 Corrosive Waste
RCRA Hazard Class (diluted product): Not Regulated
Contaminated Packaging: Do not re-use empty containers.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: The information provided below is the full transportation classification for this product. This description does not account for the package size(s) of this product, that may fall under a quantity exception, according to the applicable transportation regulations. When shipping dangerous goods, please consult with your internal, certified hazardous materials specialist to determine if any exceptions can be applied to your shipment.

Dispose of in accordance with all federal, state and local applicable regulations. SUPPLEMENTAL INFORMATION:. DO NOT MIX WITH AMMONIA, BLEACH OR OTHER CHLORINATED COMPOUNDS. Mix only with water. Can react to release hazardous gases. May vigorously react with strong alkaline products resulting in spattering and excessive heat. DO NOT MIX WITH ACIDS, TOILET BOWL CLEANER, AMMONIA OR ANY OTHER CHEMICAL.

Health hazards not otherwise classified (HHNOC) - Not applicable
Physical hazards not otherwise classified (PHNOC) - Not applicable

Classification for the diluted product 1:256
This product, when diluted as stated on the label, is not classified as hazardous according to OSHA 29CFR 1910.1200 (HazCom 2012-GHS) and Canadian Hazardous Products Regulations (HPR) (WHMIS 2015-GHS).

Hazard and Precautionary Statements
None required

3. COMPOSITION/INFORMATION ON INGREDIENTS

Classified Ingredients

Ingredient(s)	CAS #	Weight %
Sodium hypochlorite	7681-52-9	3 - 7%
Sodium chloride	7647-14-5	3 - 7%
Sodium hydroxide	1310-73-2	> 0.1 - < 1%

4. FIRST AID MEASURES

Undiluted Product:

Eyes: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 15 minutes.
Skin: IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water for at least 15 minutes. Wash with plenty of water for at least 15 minutes.
Inhalation: IF INHALED: Remove person to fresh air and keep comfortable for breathing.
Ingestion: IF SWALLOWED: Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Drink a cupful of milk or water.
Notes to physician: Probable mucosal damage may contraindicate the use of gastric lavage. Measures against circulatory shock, respiratory depression and convulsion may be needed.

Most Important Symptoms/Effects: No information available.
Immediate medical attention and special treatment needed Not applicable.
Aggravated Medical Conditions: Individuals with chronic respiratory disorders such as asthma, chronic bronchitis, emphysema, etc., may be more susceptible to irritating effects.

[redacted]

5. FIRE-FIGHTING MEASURES

Specific methods: No special methods required
Suitable extinguishing media: The product is not flammable. Extinguish fire using agent suitable for surrounding fire.
Specific hazards: Corrosive material (See sections 8 and 10).

Special protective equipment for firefighters: As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.
Extinguishing media which must not be used for safety reasons: No information available.

6. ACCIDENTAL RELEASE MEASURES

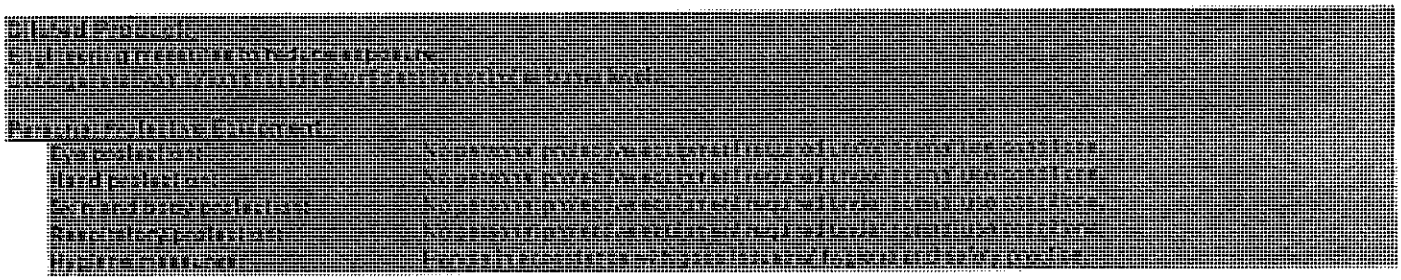
Personal precautions: Put on appropriate personal protective equipment (see Section 8.).
Environmental precautions and clean-up methods: Clean-up methods - large spillage. Material is toxic to fish. Do not discharge into lakes, streams, ponds, or public water unless in accordance with an NPDES permit. Prevent product from entering drains. Water runoff can cause environmental damage. Soak up with inert absorbent material. Sweep up and shovel into suitable containers for disposal. Use a water rinse for final clean-up.

7. HANDLING AND STORAGE

Handling: Can react to release hazardous gases. May vigorously react with acids resulting in spattering and excessive heat. Do not mix with other products or chemicals except as directed on the label. Mix only with water. Avoid contact with skin, eyes and clothing. Wash thoroughly after handling. Do not taste or swallow. Product residue may remain on/in empty containers. All precautions for handling the product must be used in handling the empty container and residue. Avoid breathing vapors or mists. Use only with adequate ventilation. Remove and wash contaminated clothing and footwear before re-use. Absorb spillage to prevent material damage. DO NOT MIX WITH ACIDS, TOILET BOWL CLEANERS,

AMMONIA, OR ANY OTHER CHEMICAL. FOR COMMERCIAL AND INDUSTRIAL USE ONLY.
Storage: Store in corrosive-resistant container with a resistant inner liner.
Aerosol Level (if applicable) : Not applicable.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION



Exposure Guidelines:

Ingredient(s)	ACGIH	OSHA
Sodium hydroxide	2 mg/m³ (Ceiling)	2 mg/m³ (TWA)

Undiluted Product:
Engineering measures to reduce exposure:
Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment
It is the responsibility of the employer to determine the potential risk of exposure to hazardous chemicals for employees in the workplace in order to determine the necessity, selection, and use of personal protective equipment.

Eye protection:	Chemical-splash goggles.
Hand protection:	Chemical-resistant gloves.
Skin and body protection:	Protective footwear. Wear suitable protective clothing.
Respiratory protection:	No personal protective equipment required under normal use conditions. If aerosols, mists, or vapors are not adequately controlled by ventilation, use appropriate respiratory protection to avoid over-exposure.
Hygiene measures:	Handle in accordance with good industrial hygiene and safety practice.

10. STABILITY AND REACTIVITY

Reactivity: Not Applicable

Stability:	The product is stable
Possibility of hazardous reactions:	May vigorously react with acids resulting in spattering and excessive heat.
Hazardous decomposition products:	None reasonably foreseeable.
Materials to avoid:	Acids. Strong acids. Do not mix with any other product or chemical unless specified in the use directions. Ammonia.
Conditions to avoid:	None known.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure:
Skin contact, Inhalation, Ingestion, Eye contact

Delayed, immediate, or chronic effects and symptoms from short and long-term exposure
Skin contact: Corrosive. Causes severe burns. Symptoms may include burns, blisters, redness and pain (which may be delayed).
Eye contact: Corrosive. Causes serious eye damage. Symptoms may include pain, burning sensation, redness, watering, blurred vision or loss of vision.
Ingestion: Causes burns/ serious damage to mouth, throat and stomach. Symptoms may include stomach pain and nausea.
Inhalation: May cause irritation and corrosive effects to nose, throat and respiratory tract. Symptoms may include coughing and difficulty breathing.
Sensitization: No known effects.
Target Organs (SE): None known
Target Organs (RE):

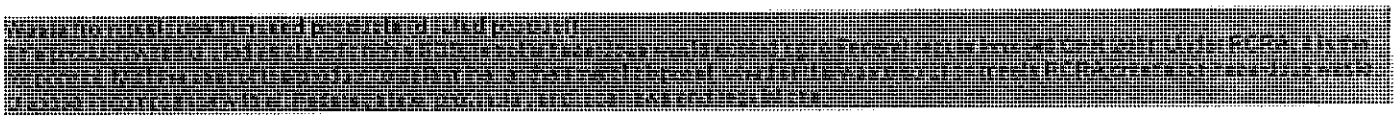
Numerical measures of toxicity
ATE - Oral (mg/kg): >5000

12. ECOLOGICAL INFORMATION

Ecotoxicity: No information available.

Persistence and Degradability: No information available.

Bioaccumulation: No information available.



Mobility: No information available.

Other adverse effects No other adverse effects known.

13. DISPOSAL CONSIDERATIONS

Do not contaminate water, food, or feed by storage or disposal.

Waste from residues / unused products (undiluted product):
This product, as sold, if discarded or disposed, is a hazardous waste according to Federal regulations (40 CFR 261). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the waste solution meets RCRA criteria for hazardous waste. Dispose in compliance with all Federal, state, provincial, and local laws and regulations.

Pesticide Storage:
Refer to product label.

Pesticide Disposal:
Refer to product label.

Container Disposal:
Refer to product label.

RCRA Hazard Class (undiluted product): D002 Corrosive Waste.
RCRA Hazard Class (diluted product): Not Regulated.

14. TRANSPORT INFORMATION

DOT/TDG/IMDG: The information provided below is the full transportation classification for this product. This description does not account for the package size(s) of this product, that may fall under a quantity exception, according to the applicable transportation regulations. When shipping dangerous goods, please consult with your internal, certified hazardous materials specialist to determine if any exceptions can be applied to your shipment.

IMDG (Ocean) Bill of Lading Description: UN1791, HYPOCHLORITE SOLUTION, 8, III, MARINE POLLUTANT

15. REGULATORY INFORMATION

International Inventories at CAS# Level

TSCA	All components are listed or otherwise exempt
DSL	All components are listed or otherwise exempt

EPA Reg. No. : 875-190
This chemical is a pesticide product registered by the United States Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law. These requirements differ from the classification criteria and hazard information required for safety data sheets (SDS), and for workplace labels of non-pesticide chemicals. The hazard information required on the pesticide label is reproduced below. The pesticide label also includes other important information, including directions for use.

DANGER: CORROSIVE. May cause severe skin and eye irritation or chemical burns to broken skin. Causes eye damage. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves when handling this product. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove contaminated clothing and wash clothing before reuse. Avoid breathing vapors. Vacate poorly ventilated areas as soon as possible. Do not return until odors have dissipated. PHYSICAL AND CHEMICAL HAZARDS: STRONG OXIDIZING AGENT. Mix only with water according to label directions. Mixing this product with gross filth such as feces, urine, etc., or with ammonia, acids, detergents or other chemicals may release hazardous gases, which are irritating to eyes, lungs and mucous membranes. ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish and aquatic organisms.

Relationship to site:	Maintenance Supervisor for the school district

	QUESTION	RESPONSE
1.	Is the *property* or any *adjoining property* used for an industrial use?	Yes _____ No x Unknown ____ Explanation:
2.	To the best of your knowledge, has the *property* or any *adjoining property* been used for an industrial use in the past?	Yes _____ No x Unknown ____ Explanation:
3.	Is the *property* or any *adjoining property* used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Yes _____ No x Unknown ____ Explanation:
4.	To the best of your knowledge has the *property* or any *adjoining property* been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Yes _____ No x Unknown ____ Explanation:
5.	Are there currently, or to the best of your knowledge have there been previously, any damaged or discarded automobile or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the *property* or at the facility?	Yes _____ No x Unknown ____ Explanation:
6.	Are there currently, or to the best of your knowledge have there been previously, any industrial *drums* (typically 55 gal [208 L]) or sacks of chemicals located on the property or at the facility?	Yes _____ No x Unknown ____ Explanation:

	QUESTION	RESPONSE
7.	Has *fill dirt* been brought onto the property that originated from a contaminated site or that is of an unknown origin?	Yes _____ No x Unknown ____ Explanation:
8.	Are there currently, or to the best of your knowledge have there been previously, any *pits, ponds, or lagoons* located on the *property* in connection with waste treatment or waste disposal?	Yes _____ No x Unknown ____ Explanation:
9.	Is there currently, or to the best of your knowledge have there been previously, any stained soil on the *property*?	Yes _____ No x Unknown ____ Explanation:
10.	Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	Yes _____ No x Unknown ____ Explanation:
11.	Are there currently, or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* adjacent to any structure located on the *property*?	Yes _____ No x Unknown ____ Explanation:
12.	Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	Yes _____ No x Unknown ____ Explanation:
13.	If the *property* is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated contaminated by any government environmental/health agency?	Yes _____ No x Unknown ____ Explanation:
14.	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?	Yes x No _____ Unknown ____ Explanation: a.) New memorial school is located within the same property boundaries as the previous elementary school. b, d.) I am unaware of any chemical releases or environmental cleanups that have taken place on the property.
15.	Does the *owner* or *occupant* of the *property* have any knowledge of *environmental liens* or governmental notification relating to the past or recurrent violations of environmental laws with respect to the *property* or any facility located on the *property*?	Yes _____ No x Unknown ____ Explanation:
16.	Has the *owner* or *occupant* of the *property* been informed of the past or current existence of *hazardous substances* or petroleum	Yes _____ No x Unknown ____

	QUESTION	RESPONSE
	products or environmental violations with respect to the *property* or any facility located on the *property*?	Explanation:
17.	Does the *owner* or *occupant* of the property have any knowledge of any environmental site assessment of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	Yes _____ No x Unknown ____ Explanation:
18.	Does the *owner* or *occupant* of the *property* know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property* by any owner or occupant of the *property*?	Yes _____ No x Unknown ____ Explanation:
19.	Does the *property* discharge wastewater on or adjacent to the *property* other than stormwater into a sanitary sewer system?	Yes _____ No x Unknown ____ Explanation:
20.	To the best of your knowledge, have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the *property*?	Yes _____ No x Unknown ____ Explanation:
21.	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs on the *property*?	Yes _____ No x Unknown ____ Explanation:
22.	Are there any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls in place at the site and/or have they been filed or recorded in a registry under federal, tribal, state, or local law?	Yes x No Unknown ____ Explanation: Unused/Unlandscaped Wetland area located behind school building and drinking water protection area adjacent to school parking lot.
23.	As part of this study, can you provide any of the following? • Previous environmental site assessment reports • Environmental compliance audit reports • Environmental permits (including but not limited to solid waste disposal, hazardous waste disposal, NPDES, underground injection permits) • Registrations for aboveground and underground storage tanks • Registrations for underground injection systems • Material safety data sheets (MSDS) • Community right-to-know plan • Safety plans, preparedness and prevention plans, spill prevention, countermeasure and control plans • Reports regarding hydraulic conditions at the property and surrounding area	If yes, please highlight which and provide Mabbett with a copy of said report. Will attach copies of MSDS with survey.

	QUESTION	RESPONSE
	• Hazardous waste generator notices or reports • Geotechnical studies • Risk assessments • Reports regarding any self-directed or other cleanup activities conducted at the property	

Preparer represents that to the best of the preparer's knowledge the above statements and facts are true and correct and to the best of the preparer's actual knowledge, no material facts have been suppressed or misstated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

SHWS: Contains information on releases of oil and hazardous materials that have been reported to DEP.

A review of the SHWS list, as provided by EDR, and dated 06/30/2025 has revealed that there are 21 SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Protection's Summary Listing of all the Tanks Registered in the State of Massachusetts.

A review of the UST list, as provided by EDR, and dated 02/26/2025 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Release Tracking Number: 5487

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 06/23/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

CRICKET PRESS	50 SUMMER STREET	SSW 1/8 - 1/4 (0.153 mi.)	D16	96

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 4 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 06/02/2025 has revealed that there are 7 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

MANCHESTER MEMORIAL ELEMENTARY SCHOOL (Continued) **1016392394**

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Massachusetts - Environmental Protection Integrated Computer System (MA-EPICS) is the central repository for all environmental protection data for the State of Massachusetts.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

East Map:	19019789 GLOUCESTER, MA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

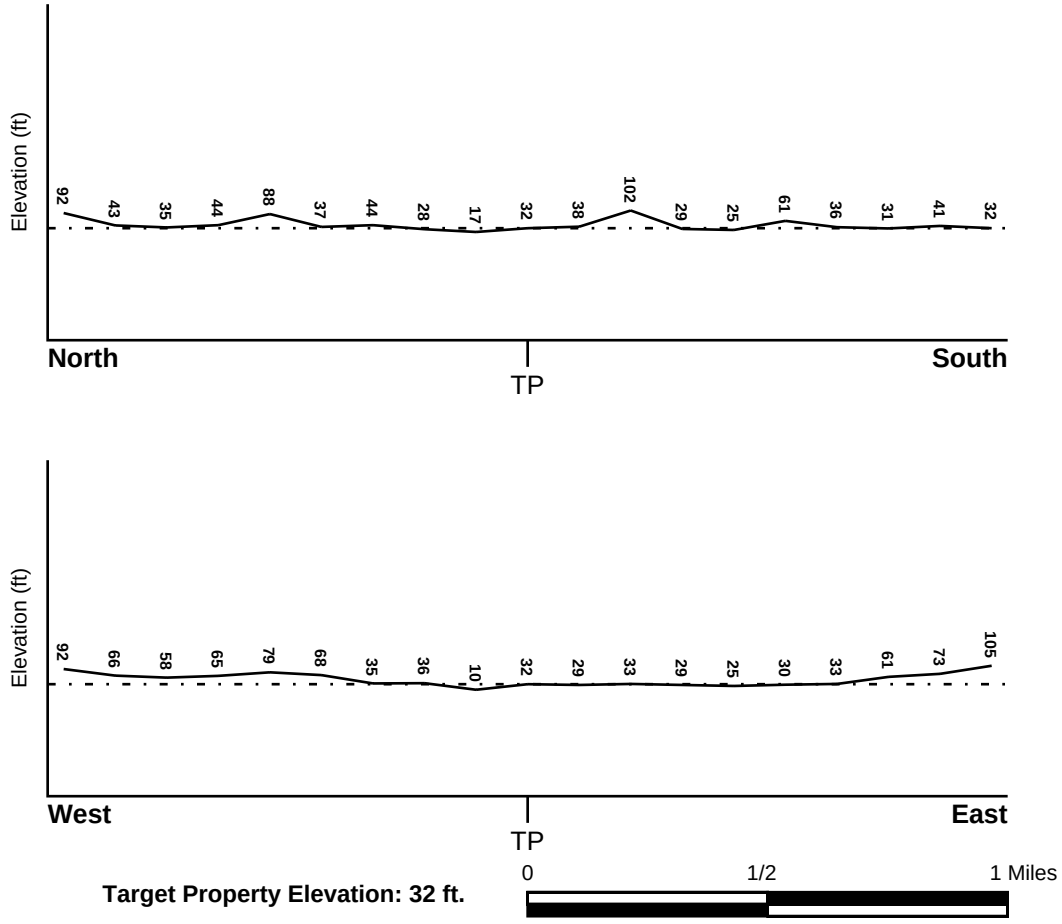
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 32 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
25009C0434G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
25009C0433G	FEMA FIRM Flood data
25009C0453G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EAST HALF OF SALEM	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
7	1/4 - 1/2 Mile SSW	SE
17	1/2 - 1 Mile SW	ESE
1G	1/4 - 1/2 Mile SSW	SE
2G	1/2 - 1 Mile SW	ESE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	Udorthents
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Unknown	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name:	Scitico
Soil Surface Texture:	silt loam
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Poorly drained
Hydric Status: Partially hydric	
Corrosion Potential - Uncoated Steel:	High
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 15 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 7.8 Min: 5.6
2	7 inches	42 inches	silty clay loam	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 7.8 Min: 5.6
3	42 inches	57 inches	silty clay loam	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 7.8 Min: 5.6
4	57 inches	70 inches	silty clay	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 7.8 Min: 5.6

Soil Map ID: 3

Soil Component Name: Boxford

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1
2	9 inches	16 inches	silt loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1
3	16 inches	44 inches	silty clay loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1
4	44 inches	59 inches	silty clay loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1

Soil Map ID: 4

Soil Component Name: Sudbury

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
2	12 inches	18 inches	sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
3	18 inches	25 inches	gravelly coarse sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
4	25 inches	59 inches	stratified very gravelly coarse sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6

Soil Map ID: 5

Soil Component Name: Montauk

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 68 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sandy loam	Not reported	Not reported	Max: 4.23 Min: 0.42	Max: 6 Min: 3.6
2	3 inches	25 inches	fine sandy loam	Not reported	Not reported	Max: 4.23 Min: 0.42	Max: 6 Min: 3.6
3	25 inches	59 inches	gravelly loamy sand	Not reported	Not reported	Max: 4.23 Min: 0.42	Max: 6 Min: 3.6

Soil Map ID: 6

Soil Component Name: Chatfield

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: MassDEP
Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers
Source: Executive Office of Environmental Affairs
Telephone:

Public Water Supply Database

Telephone:
The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

Areas of Critical Environmental Concern

Telephone:
The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers

Telephone:
The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by an EPA hydrogeologist.

Aquifers

Telephone:
MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas

Telephone:
Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

DEP Approved Zone IIs

Telephone:
The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is 'that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary).' These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.\n - Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line. \n- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.\n - Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

OTHER STATE DATABASE INFORMATION

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Mabbett & Assoc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Mabbett & Assoc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

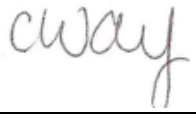
ACKNOWLEDGEMENT



Mabbett & Associates, Inc. (Mabbett®) prepared this ASTM International *Standard Practice for Phase I Environmental Site Assessments E1527-21* Phase I Environmental Site Assessment (Phase I ESA) of the approximately 11.5-acre subject property identified as 30 Apple Street in Essex, Essex County, Massachusetts. Mabbett prepared this report under subcontract to JCJ Architecture (JCJ) for the Essex Elementary School Architectural Feasibility Study .

This Phase I ESA has been prepared for use by JCJ and the Manchester Essex Regional School District. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; Mabbett does not accept any responsibility for the consequences of such use(s). Furthermore, reliance by any party not identified in the agreement, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to Mabbett.

Mabbett prepared this Phase I ESA report using reasonable efforts to identify Recognized Environmental Conditions (RECs) associated with hazardous substances or petroleum products in, on, or at the subject property. Findings contained within this report are based on information collected from observations made on the day of the subject property reconnaissance and from reasonably ascertainable information obtained from selected public agencies and other referenced sources.

Mabbett declares that, to the best of our professional knowledge and belief, the Mabbett staff who performed this Phase I ESA meet the definition of *Environmental Professional* as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and these Mabbett staff have the specific qualifications based on education, training, and experience to assess a *property* of its nature, history, and setting. Mabbett has developed and performed all of the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This Phase I ESA Report has been prepared by:

Mabbett & Associates, Inc.
Cassidy Way, QEP, CHMM
Project Environmental Scientist/Project Manager

This Phase I ESA Report has been internally reviewed and approved for submittal by:

Mabbett & Associates, Inc.

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett & Associates, Inc. (Mabbett) on behalf of JCJ Architecture (JCJ) to support the Manchester Essex Regional School District decision making regarding capital investments at Essex Elementary School. The subject property for this Phase I ESA is 30 Apple Street, which encompasses approximately 11.5 acres of land in Essex, Massachusetts.

Subject Property History and Description

The subject property is undeveloped and was used as agricultural land for many decades, including as a flower field. The subject property is currently a vacant, partially mowed field.

Surrounding Areas

The area surrounding the subject property consisted of primarily residential use land, but the northeast adjacent property consisted of the Essex Transfer Station and the former Essex Landing Landfill. According to the Essex Town Administrator, a new aboveground municipal fuel depot is planned to be installed on this property in the fall of 2025. Alewife Brook was present to the northwest of the subject property.

Conclusions

The Phase I ESA included a reconnaissance at the subject property by Mabbett on September 24, 2025. Mabbett obtained information about environmental conditions that could potentially be considered a Recognized Environmental Condition (REC); reviewed historical maps of the subject property and vicinity; interviewed Town Administrator Brendhan Zubricki, who was familiar with current and recent environmental history at the subject property; reviewed environmental database listings for the subject property and vicinity; performed a review of available files from the Massachusetts Department of Environmental Protection (MassDEP); and reviewed documents provided by the Town of Essex. This information was used to develop an opinion with regard to the presence or absence of RECs at the subject property.

The Phase I ESA findings are summarized in the following list:

- **RECs**

  The northeast adjacent property was identified as a municipal waste transfer station. According to historical information available, the Essex Landing landfill has historically been located at 30 Landing Road and encompasses approximately 14 acres of land. It was an unlined landfill with an incomplete cap status. A post-closure permit was issued in August 2004, and the post-closure use of the property as a DPW garage was approved. The Essex Landing landfill was identified within the MassDEP *Inactive & Closed Landfills & Dumping Grounds* document dated July 2025.

  According to Adam Sandahl of CMA Engineers, Inc., the town's landfill monitoring contractor, landfill inspections and landfill gas monitoring are performed at the landfill regularly, but there is no groundwater monitoring program for the landfill, and no groundwater monitoring wells have been installed at the landfill. Based on 2004 test pit logs that were reviewed, buried waste included wood, tires, stumps, glass, plastic, and other debris.

  It is unknown whether hazardous materials may also have been placed within this landfill and leeched into groundwater that flowed radially onto the subject property. As such, the historical presence of the Essex Landing landfill and its proximity to the subject property represents a REC.

© 2025, Mabbett & Associates, Inc.

- **Historical Recognized Environmental Conditions (HRECs)**

  No HRECS were identified on or affecting the subject property.

- **Controlled Recognized Environmental Conditions (CRECs)**

  No Controlled RECs were identified on or affecting the subject property.

- **Data Gaps**

  No significant data gaps were identified on or affecting the subject property.

- **Business Environmental Risks (BERs)**

  Pesticides: The subject property has been used for agricultural purposes for decades. According to the Essex Town Administrator, the subject property was a former flower field. As such, soil may have been impacted by the application of pesticides. Although pesticides do not constitute a REC under ASTM E1527-21 Section X1.1.4.3(4), the potential presence of pesticides in soils represents a BER due to the potential increased cost of soil management during future redevelopment of the subject property.

© 2025, Mabbett & Associates, Inc.

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (ESA) report presents the results of non-intrusive environmental due diligence activities performed according to the ASTM International *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) at the subject property, identified as the approximately 11.5-acre property at 30 Apple Street in Essex, Essex County, Massachusetts. A Subject Property Locus Map is provided as Figure 1-1. A Subject Property Plan is provided as Figure 1-2.

1.1 Purpose

The purpose of performing a Phase I ESA is to render an opinion, to the extent practical, as to whether current or historical evidence indicates the presence of Recognized Environmental Conditions (RECs) at the subject property. The Phase I ESA findings are intended to help KBA with decision making regarding potential environmental liabilities at the subject property. The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The following paragraphs describe the different types of RECs defined by ASTM E1527-21.

ASTM E1527-21 defines a REC as:

- the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;
- the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or
- the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The term REC is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

ASTM E1527-21 defines a Historical REC as:

> *"A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (i.e., activity and use limitations or other property use limitations)."*

ASTM E1527-21 defines a Controlled REC as:

> *"A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (i.e., activity and use limitations or other property use limitations)."*

ASTM E1527-21 defines a Business Environmental Risk (BER) as:

> *"A risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations."*

Although the subject property is not considered "commercial real estate," the identification of BERs is considered relevant to this assessment because non-scope environmental concerns at the subject property could have cost implications on potential future development efforts by the Manchester Essex Regional School District.

1.2 Detailed Scope of Services

This Phase I ESA was completed with a level of care and skill ordinarily practiced by the environmental consulting professional currently providing similar services under comparable circumstances in accordance with the provisions of ASTM E1527-21. Any significant additions, deletions, or exceptions to ASTM E1527-21 are noted below, or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the subject property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports;
- Use of the subject property, adjoining properties, and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports, and interviews;
- Observations regarding current usage and conditions include: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes, and wastewater;
- Use of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on, or at the property;
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the subject property;
- Potential for subsurface vapor migration in, on, or at the subject property; and
- Potential PFAS at the subject property.

1.3 Significant Assumptions

No significant assumptions were made during the preparation of this Phase I ESA.

1.4 Limitations and Exceptions

Mabbett prepared this Phase I ESA report using reasonable efforts to identify RECs associated with hazardous substances or petroleum products in, on, or at the subject property. Findings contained within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from selected public agencies and other referenced sources.

No exceptions to ASTM E1527-21 were noted during this assessment.

The ASTM E1527-21 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- Uncertainty Not Eliminated: A Phase I ESA cannot wholly eliminate uncertainty regarding the potential for RECs associated with a property since no actual environmental samples are collected for analysis.
- Not Exhaustive: A Phase I ESA is not an exhaustive assessment of the environmental conditions on a property.
- Past Uses of the Property: A Phase I ESA does not require review of standard historical sources at less than five-year intervals. Therefore, past uses of the property may not be discovered.

Other limitations are as follows:

- The observations described in this report were made under the conditions stated herein. Observations were based solely upon the non-intrusive services described herein.

Users of this report may refer to ASTM E1527-21 for further information regarding these and other limitations.

Mabbett makes no representation or warranty that the past or current operations at the subject property are, or have been, in compliance with all applicable federal, state, and local laws, regulations, and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, Mabbett is not responsible for consequences or conditions arising from facts not fully disclosed to Mabbett during the assessment.

Per ASTM E1527-21, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of RECs associated with the subject property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for Landowner Liability Protections under the Comprehensive Environmental Response, Compensation, and Liability Act. Mabbett makes no representations or warranties regarding a User's qualification for liability protection under any federal, state, or local laws or regulations.

In accordance with ASTM E1527-21, this report is presumed to be valid for a 6-month period. If the report is older than 6 months, the following information must be updated for the report to be valid: (1) regulatory review, (2) subject property reconnaissance, (3) interviews, (4) specialized knowledge, and (5) environmental liens. Reports older than one year may not meet ASTM E1527-21 requirements and, therefore, the report must be updated to reflect current conditions and property-specific information. Other limitations and exceptions that are specific to the scope of this report may be found in the corresponding sections.

1.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of and may be relied upon by the JCJ, the Manchester Essex Regional School District, or third parties authorized in writing by JCJ. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual subject property conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of the JCJ, is at the sole risk and expense of such third party.

Mabbett makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied.

2.0 SUBJECT PROPERTY DESCRIPTION

The subject property description was researched and developed by Mabbett representative Cassidy Way, QEP, CHMM, who meets ASTM's *Environmental Professional* qualification as defined in ASTM E1527-21 and who performed a site reconnaissance of the subject property on September 24, 2025. A Subject Property Locus map is provided as Figure 1-1. A detailed Subject Property Map depicting current subject property features is provided as Figure 1-2.

2.1 Location and Legal Description

30 Apple Street (the subject property) was identified by the Town of Essex Assessor as Parcel 142-8 and encompassed approximately 11.5 acres owned by the Town of Essex. The subject property was described as municipal vacant land by the Town of Essex.

2.2 Current Use and Improvements at the Subject Property

The subject property was undeveloped and consisted of grassy land that was mowed, a wooded area leading to Alewife Brook, and a wooden car port.

The subject property was accessible from Apple Street to the South and Landing Street to the north. Access to the subject property was not controlled, but access was restricted to the east and west via thick forested trees and shrubs.

2.3 Surrounding Area General Characteristics

The subject property was located in a rural area that was developed with farmland, residential neighborhoods, and the Essex Transfer Station. The land use adjacent to the subject property included the following:

North/Northeast: Essex Transfer Station, residential neighborhoods, and the Alewife Brook.

East: Residential.

South: Apple Street Farm and Residential neighborhoods.

West: Residential and the Alewife Brook.

2.4 Physical Setting

2.4.1 Topography

Based on the U.S. Geological Survey (USGS) 7.5-Minute Series Marblehead North Topographic Quadrangle map, dated 2024, the elevation of the ground surface at the subject property is approximately 10 to 50 feet above mean sea level. The subject property was sloped downwards toward the northwest. This information was confirmed during Mabbett's site reconnaissance on September 24, 2025.

2.4.2 Geology

According to the USGS Bedrock Geologic Map of Massachusetts, bedrock underlying the general area of the subject property was characterized as Beverly Syenite (SOcb), consisting of quartz-poor facies. No bedrock outcrops were observed at the subject property during Mabbett's site reconnaissance on September 24, 2025.

2.4.3 Wetlands and Surface Water

According to the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) Map Viewer, accessed on September 17, 2025, wetlands were located on the northwestern portion of subject property. The wetlands map is included in Appendix A.

The NWI map showed the northwestern portion of the subject property included riverine habitat (Alewife Brook) and freshwater forested/shrub wetlands.

This information was confirmed during Mabbett's site reconnaissance on September 24, 2025.

2.4.4 Groundwater

Based on the elevation contour maps, regional topography, and the location of nearby water bodies, groundwater underlying the subject property is inferred to likely flow to the northwest towards Alewife Brook. Depth to groundwater at the subject property was approximately 6 feet below ground surface (bgs) at the subject property soil testing for a potential septic system in 2022.

Actual groundwater flow direction underlying the subject property may vary due to the topography, presence of underground utilities such as sewers, storm drains, and heterogeneous subsurface soil conditions. Measuring the actual depth to groundwater and flow direction is beyond the scope of an ASTM E1527-21 Phase I ESA.

2.4.5 Flood Zone

The subject property was located on the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map FIRMette panels 25009C0293H and 25009CO431H dated July 8, 2025. According to FEMA, the northwestern corner of subject property where Alewife Brook was mapped was located within a special flood hazard area, or area with a one percent annual chance of flooding (Zone A/AE). This flood zone was Alewife Brook. The remainder of the subject property was located within an area of minimal flood hazard (Zone X). A copy of the FIRMette is provided in Appendix A.

2.4.6 Soils

The soil at the subject property underlying the buildings were classified by the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service as Chatfield-Hollis Rock outcrop complex with 0 to 15 percent slopes (102C), Belgrade very fine sandy loam with 0 to 8 percent slopes (225B), Merrimac fine sandy loam with 0 to 3 percent slopes (254A), Fluvaquents, frequently flooded with 0 to 3 percent slopes (616A), Udorthents refuse substratum (652), and Melrose fine sandy loam with 3 to 8 percent slopes (714B). A copy of the USDA soil map is provided in Appendix A.

Subject property soils were covered with grass, brush, and trees during the site reconnaissance. No significant soil erosion or staining was noted during the site reconnaissance.

3.0 SITE RECONNAISSANCE

A site reconnaissance was performed to obtain information about environmental conditions at the subject property and at adjacent properties that could impact the subject property.

3.1 Methodology

On September 24, 2025, Mabbett representative Cassidy Way, QEP, CHMM, who meets the ASTM's *Environmental Professional* qualification, performed the site reconnaissance. Mabbett was given permission to walk the subject property unescorted.

Mabbett walked the subject property with the purpose of assessing potential RECs, BERs, and *de minimis* conditions. The site reconnaissance efforts consisted of making visual observations of conditions on the ground surface with a focus on identifying sumps, drains, improperly stored chemicals, and signs of chemical spills that may serve as a conduit between a future building and the environment or a potential environmental hazard. The methodology involved walking the entirety of the subject property. The focus of the site reconnaissance was on areas where hazardous substances or petroleum products are or may have been stored, used, treated, discharged, or disposed. Mabbett also observed the adjoining properties from public thoroughfares. No intrusive activities were performed during the site reconnaissance.

The following sections present a summary of observations made during the site reconnaissance. Representative photographs are provided in Appendix B.

3.2 Observations of Subject Property Improvements

3.2.1 Exterior Observations

The subject property consisted of undeveloped land that was formerly used as a flower farm. The subject property consisted of a mowed grass field, wooded areas on the sites of the parcel, and a small portion of the Alewife Brook. The subject property was heavily wooded towards the northwestern boundary that approached Alewife Brook, and around the boundary of the subject property. The subject property sloped steeply down towards the brook.

The only structure on the subject property was a car port located off of Apple Street. This carport stored a car, kayaks, a bicycle, and two ATVs. It was not ascertained who owned these vehicles. The Town of Essex was unaware of the presence of this car port and who was using it. Two trailers were also observed towards the Apple Street site entrance.

During the site reconnaissance, Mabbett encountered two individuals with metal detectors on the property. According to one of the men, they were looking for "artifacts." Previously found artifacts included objects such as coins and belt buckles. He was unaware of any improperly dumped objects at the subject property.

3.2.2 Stormwater

Stormwater was not managed onsite. Stormwater at the subject property is anticipated to infiltrate the subsurface or run off towards the roadways or Alewife Brook.

No pooling was observed at the subject property despite recent rainfall.

3.2.3 Roads/Parking

The subject property was accessible from Apple Street to the South (and Landing Street to the north?). No roadways or parking areas were present at the subject property.

3.2.4 Heating and Cooling Sources

The subject property was undeveloped and there was no historical evidence of heating and cooling systems at the subject property.

3.2.5 Sanitary Sewerage

The subject property was not connected to the municipal sewerage system. In May 2022, a *Soil Suitability Assessment for On-Site Sewage Disposal* was submitted to the Essex Board of Health. Groundwater was observed approximately 6 feet below grade surface in test pits. No evidence of an installed septic system was observed at the subject property.

3.2.6 Water Supply

The subject property was not connected to the municipal water supply system. Additionally, no potable water wells, irrigation wells, or monitoring wells were observed during the site reconnaissance.

3.3 Underground Storage Tanks

No evidence of underground storage tanks (USTs) was observed nor historically recorded for the subject property.

3.4 Aboveground Storage Tanks

No evidence of aboveground storage tanks (ASTs) was observed nor historically recorded for the subject property.

3.5 Hazardous Substance Use, Storage, and Disposal

The subject property did not maintain a designated hazardous waste storage area to temporarily store waste. No hazardous substances were observed during the site reconnaissance.

3.6 Non-Hazardous Solid Wastes and Disposal

No non-hazardous solid waste was generated nor improperly disposed of at the subject property during the site reconnaissance.

3.7 Electrical Equipment and Polychlorinated Biphenyls (PCBs)

Three pole mounted transformers were observed on Landing Road along the northern property boundary. These transformers were noted to be in good condition with no visible signs of leakage. Mabbett was unable to ascertain whether these transformers may have contained PCBs.

3.8 Stained Surfaces and Distressed Vegetation

Mabbett did not observe any stained surfaces or distressed vegetation during the site reconnaissance.

3.9 Underground Structures

Mabbett did not observe any underground structures at the subject property.

3.10 Per- and Poly-fluoroalkyl Substances (PFAS)

Mabbett conducted an assessment of potential sources of PFAS at or near the subject property. PFAS environmental contamination may come from a number of sources; including, but not limited to firefighting foam, waterproofing materials, wetting agents, and other industrial and consumer products. Department of Defense (DoD) facilities have also been associated with high levels of PFAS in groundwater due to training and firefighting activities, as well as other facility activities that are part of the DoD's mission. As a result, PFAS are nearly

ubiquitous and have been found in rainwater and encountered in many environments and media including groundwater, soils, surface water, sediment, and human and animal tissues.

Mabbett searched USEPA, and other sources for identified PFAS sites within and in vicinity of the subject property (USEPA, 2025; EWG, 2025; Northeastern, 2025). The closest known PFAS sites was the Essex Water Department (EWG). According to the Essex Water Quality Report, no PFAS were detected during quarterly 2024 sampling.

Mabbett found no reference to the use of PFAS-containing materials, historical fires, or firefighting responses at the subject property or adjacent properties. Mabbett found no specific potential sources of PFAS at the subject property or adjacent properties, or indications of past property uses associated with PFAS use from the historical data as summarized in Section 5.1.4 through 5.1.6 of this report. However, as it is unknown what was buried within the landfill north of the subject property, the former landfill can be considered a potential source of PFAS.

The available information reviewed by Mabbett did not identify historical releases of PFAS at the subject property; however, the presence of PFAS in soils and groundwater cannot be ruled out due to the potential presence of PFAS in the landfill north of the subject property.

4.0 USER PROVIDED INFORMATION

The following section summarizes the Phase I ESA User Questionnaire completed by the Essex Town Administrator, Brendhan Zubricki. The completed User Questionnaire is provided in Appendix C.

4.1 Owner, Property Manager, and Occupant Information

The subject property is owned and managed by the Town of Essex and is unoccupied.

4.2 Title Records

The Town Administrator was not aware of any deed restrictions, environmental land use restrictions, environmental liens, or activity and use limitations on file for the subject property.

4.3 Environmental Permits and/or Violations

The Town Administrator was not aware of any state- or municipal-issued violations for the subject property.

4.4 Specialized Knowledge or Experience of the Owner

The Town Administrator did not have any specialized knowledge of the subject property, apart from that the subject property was formerly a flower field and was used agriculturally for decades. Mr. Zubricki had no knowledge of the car port on the subject property, not who was actively using it.

Mr. Zubricki also indicated that the town DPW yard and transfer station abuts the property to the north and that a new aboveground municipal fuel depot is planned to be installed fall of 2025. This property had solid waste and recycling, as well as former landfill facilities.

4.5 Significant Valuation Reduction for Environmental Issues

The Town Administrator was not aware of significant valuation reduction due to environmental issues at the subject property, which is owned by the Town of Essex.

4.6 Reason for Performing Phase I ESA

This Phase I ESA is being completed in support of Manchester Essex Regional School District's study for the potential relocation of the elementary school to this property.

4.7 Other Owner-Provided Documents

No other owner-provided documents were available for Mabbett review.

5.0 RECORDS AND DATABASE REVIEW

Mabbett obtained and reviewed available environmental records for the subject property and adjoining properties. The records were reviewed to identify properties where chemical releases were reported to have occurred and to assess whether those releases create a REC at the subject property.

5.1 Standard Environmental Records

Mabbett contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut, to conduct a search for available federal and state environmental records in compliance with ASTM E152721. EDR provided Mabbett with the database search results in an EDR Radius Report on September 17, 2025. EDR searched federal and state databases for records of properties with a history of a chemical release or chemical storage and located within the minimum search distance from the subject property as required by ASTM E1527-21. Records identified within these search distances from the subject property are summarized in Table 5-2. The databases for which no records were identified are presented in the full EDR report in Appendix D. The EDR report identified 3 "orphan" listings.

TABLE 5-1
Summary of Environmental Records Identified in the EDR Radius Report

Database	Records for the Subject Property	Search Distance (miles from the subject property)	Number of records within the search distance					Total Records Identified
			<1/8 mile	1/8 – 1/4 mile	1/4 – 1/2 mile	1/2 – 1 mile	>1 miles

NOTES:
TP = Target Property (the *subject property* per ASTM E1527-21)
NR = Not Required by ASTM E1527-21

5.1.1 Findings for the Subject Property

The subject property was not identified within the EDR report.

5.1.2 Findings for Adjoining and Surrounding Properties

Table 5-2 below describes properties identified in the EDR federal or state databases that are located within the ASTM E1527-21 search distances from the subject property or within a quarter mile of the subject property. Table 5-2 organizes findings by the EDR Map ID number.

As previously described in Section 2.4.3, groundwater flow at the subject property and immediate vicinity is inferred generally flow towards the northwest. Based on this groundwater flow direction, Mabbett was able to categorize the following properties identified in EDR databases as likely to be hydrologically upgradient, cross-gradient, or downgradient from the subject property. Contaminants released at upgradient or cross-gradient properties, and where the contaminants have reached groundwater, could have the potential to migrate in groundwater beyond the boundary of that property to reach the subject property. Contaminated groundwater that migrates beneath the subject property has the potential to impact environmental conditions.

Contaminants released to soil at upgradient or cross-gradient properties may migrate beyond the adjoining/surrounding property boundaries in sediment-laden stormwater. However, stormwater from these properties would not likely reach the subject property because of the many physical obstructions between the properties and the subject property; these obstacles include but are not limited to roads, curbs, and stormwater catch basins.

Contaminants released to groundwater at downgradient properties are assumed not to be a threat to environmental conditions at the subject property because the groundwater beneath these properties flows away from, and would not reach, the subject property.

TABLE 5-2
Records Identified in the EDR Radius Report

EDR Map ID(s)	Property Name(s) and Address	Database Listing(s)	Distance from Subject Property (feet)	Direction from Subject Property	Gradient Relative to Groundwater Flow in Area	REC? (Y/N)	Basis for REC Conclusion
1, 2	Essex DPW 27 Landing Road	HW GEN, RCRA-VSQG	Adjacent	NE	Upgradient	N	Wastes included ignitable waste; no violations found.
3, 4	Massachusetts Electric Company 42 Apple Street	E MANIFEST, SHWS, RELEASE	250 ft	SSE	Upgradient	N	Release of non-PCB mineral oil from transformer; Permanent Solution with No Conditions (PSNC) submitted July 2021.
5, 6, 7	Transfer Station 30 Landing Road	MERCURY, E MANIFEST	340 ft	NE	Downgradient	N	For collection and disposal of wastes.

TABLE 5-2
Records Identified in the EDR Radius Report

EDR Map ID(s)	Property Name(s) and Address	Database Listing(s)	Distance from Subject Property (feet)	Direction from Subject Property	Gradient Relative to Groundwater Flow in Area	REC? (Y/N)	Basis for REC Conclusion
8	Bothway Farm Southern Ave	SHWS, SWF/LF, INST CONTROL, RELEASE, ASBESTOS	340 ft	NE	Downgradient	N/Y	Release is associated with property approximately 4,500 feet SW. LF associated with north adjacent property is REC (see paragraphs below table).
9	Essex Sanitary Landfill Off Landing Road	ODI	480 ft	NNE	Downgradient	Y	See paragraphs below table.
10-15	Paul Russell & Co./Stephen Terhune Woodworking/Gullwing Service Co. Inc./Mark Richey Woodworking 106 Western Ave	MANIFEST, RCRA-SQG, US AIRS, FINDS, ECHO, E MANIFEST, HW GEN, RCRA NonGEN/NLR	1,081 ft	WSW	Upgradient	N	No reported releases.
16	60 Western Ave	SHWS, RELEASE	1,282 ft	NNW	Downgradient	N	Class A-2 RAO submitted for fuel oil release in 2001.

The north adjacent property was identified as a municipal waste transfer station. According to historical information available, the Essex Landing landfill has historically been located on this property and encompasses approximately 14 acres of land. It was an unlined landfill with an incomplete cap status. A post-closure permit was issued in August 2004, and the post-closure use of the property as a DPW garage was approved. The landfill was identified within the MassDEP *Inactive & Closed Landfills & Dumping Grounds* document dated July 2025.

According to Adam Sandahl of CMA Engineers, Inc., the town's landfill monitoring contractor, landfill inspections and landfill gas monitoring are performed at the landfill regularly, but there is no groundwater monitoring program for the landfill, and no groundwater monitoring wells have been installed at the landfill. Based on 2004 test pit logs that were reviewed, buried waste included wood, tires, stumps, glass, plastic, and other debris.

It is unknown whether hazardous materials may also have been placed within this landfill and leeched into groundwater that may have flowed radially onto the subject property. As such, the historical presence of the Essex Landing landfill represents a REC.

5.1.3 Aerial Photographs

Mabbett reviewed aerial photographs provided by EDR of the subject property and surrounding area. Aerial photographs were available for the years 1938, 1952, 1965, 1969, 1972, 1978, 1986, 1995, 2010, 2014, 2018, and 2023. Historical Aerial Photographs are provided in Appendix E. Certain details of the aerial photographs were difficult to ascertain due to the resolution and/or wide scale of the aerial photographs.

In the earliest aerial photograph dated 1938, the subject property was undeveloped farmland. Alewife Brook was present in the northwestern portion of the subject property. The portion of the subject property not used for farmland was covered with trees. Nearby land uses included farmland and residential dwellings.

By 1952, a dirt road had been constructed through the subject property connecting Apple Street and Landing Road, which was under construction at this time. By 1965, the north adjacent property appeared to have been altered and land moved, possibly for a landfill.

By 1986, a structure had been constructed northeast adjacent to the subject property. By 2010, additional structures had been built north of the subject property to be used as the Town of Essex Transfer Station.

The review of aerial photographs did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area, apart from the presence of the former landfill.

5.1.4 Historical USGS Topographic Maps

Historical USGS topographic maps provided by EDR were available for the subject property, adjoining areas, and the surrounding area for the years 1888, 1893, 1915, 1919, 1943, 1945, 1950, 1956, 1966, 1985, 1997, 2005, 2012, 2015, 2018, and 2021. The Historical Topo Map Report is included in Appendix E.

In the earliest topographic maps dated 1888 and 1893, the subject property was depicted as undeveloped with the Alewife Brook and wetlands mapped to the north. A railroad was present to the northwest of the subject property on the far side of Alewife Brook. No significant changes were noted at the subject property in the remaining topographic maps.

Changes noted in the vicinity of the subject property included residential development and the Construction of Landing Road to the north and Loland Farm Road to the southeast of the subject property. The railroad northwest of the subject property was no longer depicted by 1945.

The review of historical USGS topographic maps did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.5 Historical City Directories

Historical City Directories provided by EDR were available for the subject property and for select addresses within the surrounding area for the years 191988, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020. A copy of the City Directory search is provided in Appendix E.

The subject property was unlisted in all available directories.

The Historical City Directory information did not definitively identify past uses indicating RECs in, on, or at the subject property or surrounding area.

5.1.6 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were requested for the subject property from EDR but were not available for the subject property and surrounding areas. The Sanborn "Unmapped Property" document provided by EDR is provided in Appendix E.

5.1.7 Municipal Records

Mabbett requested current and historical environmentally pertinent information associated with the subject property from the Town of Essex in September 2025. Departments contacted included the Fire Department, Town Clerk, Board of Health, Assessor, and the Building Department.

In May 2022, a *Soil Suitability Assessment for On-Site Sewage Disposal* was submitted to the Essex Board of Health. Groundwater was observed approximately 6 feet below grade surface in test pits. No evidence of an installed septic system was observed at the subject property.

According to historical assessor's records, the subject property was previously owned by Elisabeth Frye. The property was identified as having a car port that was constructed in 1978 or 1979.

Files reviewed from the Board of Health and Town Assessor are included in Appendix A.

5.1.8 Other Historical Sources

Mabbett reviewed a historical atlas map of the Site published by Walker Lithograph & Publishing Co. in 1910. In 1910, the subject property also consisted of the land north of the subject property. It was reportedly owned by J.O. Low Est. Marshland was indicated as on the subject property or nearby, and the Boston & Maine Railroad was present northwest of the subject property.

No useful information was obtained from other historical atlases dated 1872 and 1884, where the subject property was depicted as undeveloped.

No other readily available historical sources were available for review.

6.0 SUBSURFACE VAPOR MIGRATION

Mabbett conducted a qualitative screening for potential Vapor Encroachment Conditions (VEC) that may affect the subject property. The screening used information about the current and historical usage of the subject property available from the EDR Radius Report to evaluate Chemicals of Concern (COCs), including petroleum hydrocarbons and non-petroleum chemicals. A copy of the EDR report is provided in Appendix D.

ASTM E 2600-10 defines an area of concern (AOC) with a minimum search radius of 1,760 feet (0.3 mile) from the subject property boundary when identifying properties contaminated with non-petroleum COCs that could potentially present a vapor intrusion risk at the subject property. For sites contaminated with petroleum hydrocarbon COCs, the AOC minimum search radius is 528 feet (0.1 mile) from the subject property boundary.

Mabbett considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the subject property, the physical setting, and the regulatory agency database information (summarized in Section 5.0). To pose a vapor encroachment risk, releases must have contaminants that have migrated to groundwater, and the groundwater must have the potential to flow beneath the subject property. Additionally, the contaminant released must have the potential to migrate upward from groundwater to soil gas and then to the atmosphere.

Neither the subject property nor hydrologically upgradient or cross-gradient properties were identified as having releases of petroleum and non-petroleum COCs meeting these criteria within proximity to subject property. As such, the risk of vapor encroachment conditions existing at the subject property is considered low.

7.0 INTERVIEWS

Mabbett interviewed the individuals listed in Table 7-1 for information regarding environmental conditions at the subject property. Information from the interview is incorporated throughout this Phase I ESA.

TABLE 7-1
Interviews Completed for this Phase I ESA

Role	Name	Title/Company	Years in Current Role	Interview Type
Town Administrator	Brendhan Zubricki	Town of Essex	Unknown	Email correspondence, user questionnaire

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 Lead Based Paint

Lead-based paint (LBP) was commonly used prior to their ban in 1978. As such, it is possible that LBP is present on surfaces that were painted prior to 1978. No painted surfaces were observed during Mabbett's site reconnaissance.

8.2 Asbestos Containing Materials

Asbestos has historically been used in a wide range of building materials, including roofing shingles, ceiling and floor tiles, paper products, pipe insulation, asbestos cement products, and more. No suspected ACM was observed during Mabbett's site reconnaissance.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Mabbett performed a Phase I ESA of the subject property at 30 Apple Street in Essex, Essex County, Massachusetts in conformance with the scope and limitations of ASTM E1527-21. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This Phase I ESA Report presents the results of non-intrusive environmental due diligence activities performed by Mabbett on behalf of the JCJ and the Town of Essex to support decision making about architectural feasibility at Essex Elementary School. The subject property for this Phase I ESA encompasses approximately 11.5 acres of land.

The Phase I ESA findings are summarized as follows:

- **Recognized Environmental Conditions (RECs)**

  The northeast adjacent property was identified as a municipal waste transfer station. According to historical information available, the Essex Landing landfill has historically been located at 30 Landing Road and encompasses approximately 14 acres of land. It was an unlined landfill with an incomplete cap status. A post-closure permit was issued in August 2004, and the post-closure use of the property as a DPW garage was approved. The Essex Landing landfill was identified within the MassDEP *Inactive & Closed Landfills & Dumping Grounds* document dated July 2025.

  According to Adam Sandahl of CMA Engineers, Inc., the town's landfill monitoring contractor, landfill inspections and landfill gas monitoring are performed at the landfill regularly, but there is no groundwater monitoring program for the landfill, and no groundwater monitoring wells have been installed at the landfill. Based on 2004 test pit logs that were reviewed, buried waste included wood, tires, stumps, glass, plastic, and other debris.

  It is unknown whether hazardous materials may also have been placed within this landfill and leeched into groundwater that flowed radially onto the subject property. As such, the historical presence of the Essex Landing landfill and its proximity to the subject property represents a REC.

- **Historical Recognized Environmental Conditions (HRECs)**

  No HRECS were identified on or affecting the subject property.

- **Controlled Recognized Environmental Conditions (CRECs)**

  No CRECs were identified on or affecting the subject property.

- **Data Gaps**

  No significant data gaps were identified during the completion of this Phase I ESA.

- **Business Environmental Risks (BERs)**

  Pesticides: The subject property has been used for agricultural purposes for decades. According to the Essex Town Administrator, the subject property was a former flower field. As such, soil may have been impacted by the application of pesticides. Although pesticides do not constitute a REC under ASTM E1527-21 Section X1.1.4.3(4), the potential presence of pesticides in soils represents a BER due to the potential increased cost of soil management during future redevelopment of the subject property.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/17/2025 at 2:38 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Essex County, Massachusetts, Southern Part
Survey Area Data: Version 21, Aug 27, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 22, 2022—Jun 5, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Re: NOTICE OF INTENT TO SELL AND CONVERT THE USEUNDER MGL Ch. 61A
Assessor's Map 142, Lot 8; 11.5 acres, more or less; situated on the northerly side of Apple Street, Essex, Massachusetts, and known and numbered as 30 Apple Street, Essex, Massachusetts

Dear Members of the Board:

This office represents H. WHITNEY WAGNER, Trustee of Bothsides Realty Trust, PETER M. SHERWOOD, Trustee of the Lyndia C.F. Sherwood 2000 Revocable Trust, and H. WHITNEY WAGNER, Personal Representative of the Estate of Minot A. Frye, owners of the above-referenced property with a mailing address c/o Donald M. Greenough, Esquire, Glovsky & Glovsky, 8 Washington Street, Beverly, Massachusetts 01915 (dgreenough@glovsky.com) and telephone number 978-356-1040 (the "Sellers"). This notice is given on their behalf.

All of the above captioned land at 30 Apple Street, Essex, has been valued, assessed and classified pursuant to the provisions of Massachusetts General Laws Chapter 61A.

Please consider this letter as formal written notice to the Town, in accordance with MGL Chapter 61A, Section 14, which addresses, among other matters, certain rights of first refusal running in favor of the Town of lands which are valued, assessed and taxed under Chapter 61A.

The Town is hereby formally notified as follows:

1. The Sellers intend to sell the parcel pursuant to a Purchase and Sale Agreement ("Agreement") dated September 18, 2022, for a sales price of One Million One Hundred Fifty Thousand and 00/100 ($1,150,000.00) Dollars. I certify that the copy of the Agreement attached hereto as Exhibit "A" is a true and exact copy.

F. Certification

I certify that I am currently approved by the Department of Environmental Protection pursuant to 310 CMR 15.017 to conduct soil evaluations and that the above analysis has been performed by me consistent with the required training, expertise and experience described in 310 CMR 15.017. I further certify that the results of my soil evaluation, as indicated in the attached Soil Evaluation Form, are accurate and in accordance with 310 CMR 15.100 through 15.107.

RE: 2025 Q3 Landfill Gas Monitoring Summary
Essex Landfill, Essex, MA
SMS #: 39261
CMA #1372

Dear Mr. Fairbrother:

On behalf of the Town of Essex (Essex or Town) and in conformance with the requirements of 310 CMR 19.000, this report summarizes the 2025 third quarter landfill gas testing round at the Essex Landfill, located off Landing Road in Essex. Five landfill gas wells and the passive gas vent in the Department of Public Works (DPW) garage were screened for landfill gas by Eurofins Environment Testing Eastern Analytical (Eurofins) of Concord, New Hampshire on August 5, 2025. Landfill gas was not detected at any monitored location this round.

The gas testing program at the landfill is currently performed on a quarterly basis and consists of screening the gas for % methane (and % LEL [lower explosive limit] of methane), % oxygen, and % carbon dioxide. The laboratory report from the testing is provided in Appendix A and a summary table of the data is attached as Appendix B. A site plan depicting the location of the landfill gas monitoring locations relative to the landfill and transfer station/DPW area is provided as Appendix C.

BACKGROUND

The Town solid waste site consists of a closed landfill, operating transfer station, and DPW facilities including an 80' x 80' garage, 40' x 50' salt shed, and DPW laydown/storage areas. The landfill does not have a formal cap and there are no passive gas vents installed in the landfill cover. Flatter areas of the landfill are vegetated with grass and steeper areas are generally wooded. The Town maintains the grass areas of the landfill and subcontracts vegetation removal in steeper areas.

The landfill is bounded by the Town Transfer Station and DPW facilities to the west, the Alewife Brook and associated wetlands to the north and east, and a residential neighborhood to the south (Lowland Farm Road). There is not currently landfill gas testing between the landfill and the neighborhood, which is approximately 200 feet to the south of the landfill.

There are no drainage benches on the landfill side slopes and stormwater sheet flows off the landfill cap to apparent wetlands to the north, east, and south and towards the transfer station to the west. There are no stormwater ponds associated with the site. Access to the site is restricted by gates and fencing to the west along Landing Road.

Landfill gas is monitored between the landfill and transfer station/DPW area by five wells identified as LFG-1 through LFG-5 and depicted on the site plan provided in Appendix C. Gas wells are approximately spaced along the boundary every 100 feet. Gas is also screened through an access port in the PVC passive gas vent pipe in the DPW garage. The pipe vents gravels beneath the slab through the roof of the structure via the PVC pipe. This test location is identified as PGV on the enclosed table and site plan.

LANDFILL GAS SUMMARY

Screening for landfill gas was performed using a Landtec GEM 5000 non-consumptive landfill gas analyzer. The instrument was calibrated on the day of use and operated in accordance with the manufacturer's specifications. At the time of the gas screening, barometric pressure was 30.3 in Hg and the temperature was 75 degrees F. Winds were around 3 mph out of the west according to the Weather Underground website (Weather Station KMAESSEX31).

The five gas wells and the passive gas vent were screened for landfill gas including % methane, % oxygen, and % carbon dioxide. Methane was not detected at any location during this round.

CONCLUSIONS AND RECOMMENDATIONS

The results of the Q3 testing round indicate no detections of methane in the monitored locations. No changes to the monitoring program for the site are currently recommended.

The top of PVC for gas wells LFG-3, 4, and 5 are being reset so that they can be locked and covered. This work is expected to be completed before the end of 2025 and has been reported to MassDEP-NERO in the 2025 Third Party Inspection report for the landfill submitted to your attention on August 11th.

Should you have any questions, please feel free to contact us.

Very truly yours,

CMA ENGINEERS, INC.

Adam J. Sandahl, P.E., BCEE
Project Manager

Job Notes

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Authorization

Case Narrative

Client: CMA Engineers Inc
Project: Essex, MA Landfill Gas

Job ID: 475-9577-1

Job ID: 475-9577-1 — Eurofins Concord

Job Narrative
475-9577-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
All analyses performed in the field. The COC was received on 8/5/2025 1:55 PM.

Field Service / Mobile Lab
Analyses performed using a Landtec GEM 5000 non-consumptive landfill gas analyzer. The instrument was calibrated on the day of use and operated in accordance with manufacturer's specifications. Ambient temperature 75F and barometric pressure 30.3"Hg.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Field Sampling		Air	% LEL
Field Sampling		Air	Carbon dioxide
Field Sampling		Air	Methane
Field Sampling		Air	Oxygen

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
MRL	Method Reporting Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
SDL	Sample Detection Limit
SDL	Sample Detection Limit
SDL	Sample Detection Limit
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Re: Biennial Operation & Maintenance Third Party Inspection - 2025
Essex Landfill, Essex, MA
SMS# 39261
CMA #1372

Dear MassDEP NERO Office:

On behalf of the Town of Essex, CMA Engineers, Inc. is submitting the enclosed Operation and Maintenance Third Party Inspection Report, in conformance with the requirements of Massachusetts Solid Waste Management Regulations 310 CMR 19.018(8). The Third-Party Inspection (TPI) was performed by Adam Sandahl (TPI ID# SW48-0000065) on July 1st at 10:30 AM. The weather on this date was clear with a breeze and temperatures around 80 degrees F.

Enclosed is the Operation & Maintenance TPI inspection report which summarizes the results of the inspection. The report also includes a site plan and photographs. In general, the inspection concludes that the landfill cover system is in good condition.

A Corrective Action Plan & Schedule form is provided with this inspection to address repair work for some of the landfill gas wells. The gas wells are all able to be sampled, but three of the five wells need to be adjusted for them to be covered and locked. This work is expected to be completed in 2025.

Please feel free to contact me at (603) 627-0708 (or asandahl@cmaengineers.com) if you have any questions regarding the inspection.

Very truly yours,

CMA ENGINEERS, INC.

Third-Party Inspection Report – 310 CMR 19.018(8)
Operation & Maintenance

Important: When completing this form on a computer, use only the Tab key to move your cursor – not the Return key.

Instructions

Use this form to record and report the results of a Third-Party Operation and Maintenance Inspection conducted pursuant to 310 CMR 19.018. Be sure to obtain the most recent version of this form. All applicable sections of the submitted form must be completed to be accepted by MassDEP.

Pursuant to 310 CMR 19.018(8)(a), the third-party inspector and facility owner/operator must sign this Third-Party Inspection Report form and submit the completed report to the appropriate MassDEP regional office and one copy of each completed report to the board of health of the municipality in which the facility is located.

In the event that this inspection report contains a recommendation for corrective action(s), the owner/operator shall also submit the information required by 310 CMR 19.018(8)(c)2.

Forms and instructions are available online:
http://www.mass.gov/eea/agencies/massdep/recycle/approvals/solid-waste-applications-and-forms.html#8

Note: This form does not identify all of the requirements applicable to each solid waste management facility; other requirements and/or policies may apply to the operation, maintenance and monitoring for each facility.

MassDEP Use Only

IV. Pre-Inspection Preparation

A. FACILITY-SPECIFIC O&M REQUIREMENTS

During each third-party inspection, the third-party inspector shall examine and evaluate the facility's solid waste activities, equipment, operations, practices, procedures, and records relevant to the type of third-party inspection being conducted in order to determine the facility's compliance with all applicable requirements as set forth in 310 CMR 19.018(6)(a)1.

Therefore, pursuant to 310 CMR 19.018(6)(a)1, prior to conducting a third-party facility operation and maintenance inspection, the third-party inspector shall, without limitation, complete all of the following:

☒ Review and become familiar with the regulations set forth at 310 CMR 19.000 – *Massachusetts Solid Waste Regulations.*

☒ Identify, review and become familiar with all solid waste permits, plans, approvals, and orders (or other enforcement documents issued to the facility by the Department), and the solid waste requirements applicable to the operation and maintenance of the facility.

Relevant requirements may include, without limitation, specific practices and procedures for the operation, maintenance and monitoring of the facility, waste acceptance/storage limits, and other requirements related to the facility's solid waste activities. Without limitation, these facility-specific requirements may be contained in the Facility Permit, Authorization to Construct, Authorization to Operate, Operation and Maintenance Plan, Closure/Post-Closure Plans and Approvals, Facility Modification Approvals, Beneficial Use Determinations, Administrative Consent Orders, and other determinations, authorizations or enforcement actions issued by the Department.

I, Adam Sandahl **, have identified, reviewed and understand all of the aforementioned requirements that are applicable to this facility and the following are my observations and recommendations related to the facility-specific requirements.**

► AJS
Inspector Initials

B. SOLID WASTE PERMITS, PLANS, APPROVALS & ORDERS

List all relevant solid waste permits, plans, approvals, orders or other enforcement actions issued to the facility by the Department that contain specific practices, procedures and other requirements still in effect for the operation, maintenance and monitoring or closure/post-closure of the facility. Where applicable, provide the plan or issue date for each item. For enforcement actions, include the document number, effective date, and status of implementation by the facility.

Discussion: Former solid waste ID# SL0092.001

BWP SW 37 Post Closure Use - DPW Garage and Salt Shed Conditional Approval (File #W045592) dated July 19, 2004

V. Performance Standards

Examine and evaluate the facility's solid waste activities, equipment, operations, practices, procedures and records relevant to the type of solid waste facility.

Using the tables below, identify all areas evaluated by the inspector during the inspection by checking the box in the first column. Describe all deviations noted during the inspection in the third column. Provide recommendations for corrective action to return to compliance with the applicable performance standard in the fourth column.

Facility Type	Performance Standards
Transfer Station/Handling Facility (Including C&D Facility)	Complete Section A. If C&D Handling/ Processing Facility, then also complete Section B.
Municipal Waste Combustor	Complete Section A.
Active Landfill	Complete Sections C. and F. If active ash landfill, then also complete Section D.
Closed Landfill	Complete Sections E. and F.

A. TRANSFER STATION, HANDLING FACILITY, OR MUNICIPAL WASTE COMBUSTOR (INCLUDING C&D FACILITY)

Evaluated	Performance Standard	Deviation(s)	Comments/Observations and Recommended Corrective Action(s)
☐	19.205(1) Storm Water Controls.		
☐	19.205(2) Equipment.		
☐	19.205(3) Weighing Facilities.		
☐	19.207(1) General.	Discuss in Section VI.	Discuss in Section VI.
☐	19.207(2) Supervision of Operation.		
☐	19.207(3) Access to Facilities.		
☐	19.207(4) Security.		
☐	19.207(5) Posting of Handling Facility.		
☐	19.207(6) Unloading of Refuse.

☐	19.130(29) Household Hazardous Waste Collections at Landfills.		
☐	19.130(30) Leachate Collection, Treatment and Disposal.		
☐	19.130(31) Phase Completion of the Landfill.		
☐	19.130(32) Disruption of Landfilled Areas.		
☐	19.130(33) Construction of Buildings.		
☐	19.130(34) Records for Operational and Plan Execution.		
☐	19.130(35) Inspections.		
☐	19.130(36) Re-circulation of Leachate.		
☐	19.130(37) End-of-Life Mercury-added Products.		

D. ASH LANDFILL

Evaluated	Performance Standard	Deviation(s)	Comments/Observations and Recommended Corrective Action(s)
☐	19.131(1) General.	Discuss in Section VI.	Discuss in Section VI.
☐	19.131(2) Fugitive Emissions.		
☐	19.131(3) Ash Moisture Content.		
☐	19.131(4) Spreading/Compacting of Ash.		
☐	19.131(5) Vehicle Washdown / Wheelwash / Other Measures.		

E. CLOSED LANDFILL

Evaluated	Performance Standard	Deviation(s)	Comments/Observations and Recommended Corrective Action(s)
☒	19.016 Post-closure Use.	N/A	The landfill does not have a final cap. The landfill surface is predominantly vegetated with grass, with trees growing in the steeper slopes.
☒	19.142(1) General.	Discuss in Section VI.	Discuss in Section VI.
☒	19.142(2) Post-closure Period.	N/A	N/A
☒	19.142(3) Post-closure Period Waiver.	N/A	N/A
☒	19.142(4) Post-closure Period Extension.	N/A	N/A
☒	19.142(5) Post-closure Requirements.	N/A	N/A
☒	19.142(6) Inspection Requirements.	N/A	Inspections of the landfill are completed on a biennial basis.
☒	19.142(7) Additional Measures.	N/A	No additional measures are being undertaken at this time.
☒	19.142(8) Termination of the Post-Closure Period.	N/A	N/A
☒	19.143(1) Applicability.	N/A	The landfill surface has a vegetative cover and is not being utilized for other purposes.
☒	19.143(2) Submission of Post-closure Use Plans.	N/A	No post closure uses are planned at this time.
☒	19.143(3) Criteria for Approval of Post-closure Use.	N/A	N/A
☒	19.143(4) Post-closure Construction.	N/A	N/A

F. ADDITIONAL LANDFILL REQUIREMENTS

Evaluated	Performance Standard	Comments/Observations and Recommended Corrective Action(s)
☒	19.132 Environmental Monitoring Requirements. Is the monitoring of surface water, ground water, landfill gas and any other media as determined by the Department, including without limitation, soil and sediment, being conducted on the schedule established in the permit or as otherwise required by the Department? ☒ YES ☐ NO Are the analytical results of the environmental monitoring submitted to the Department within 60 days after the date of sample collection or as otherwise specified by the Department? ☒ YES ☐ NO	Landfill gas screening at the landfill is performed by Eurofins Environment Testing Concord of Concord, NH under agreement with CMA Engineers on a quarterly basis. The gas monitoring program consists of 5 landfill gas wells and one vent pipe beneath the slab of the DPW building. The five wells are located between the landfill and Town transfer station/DPW garage.
☒	19.133 Maintenance of Environmental Control and Monitoring Systems. Are the facility operations conducted in a manner which protects all environmental control systems as approved in the Operation and Maintenance plan and monitoring systems as approved in the Operation and Maintenance plan or permit? ☒ YES ☐ NO Is regular maintenance of all landfill environmental control systems performed as approved in the Operation and Maintenance plan or permit? ☒ YES ☐ NO Has the Department been notified of the existence and extent of damaged or destroyed environmental control systems, monitoring devices, or surface water sampling location markers in accordance with 310 CMR 19.133(1)(c) and/or 19.133(1)(e)? ☐ N/A (if no damage to report) ☒ YES ☐ NO	Landfill gas wells were observed by CMA Engineers during the July 1, 2025 inspection. Most of the wells were observed to be unlocked. Eurofins reported the following during the August 2025 (Q3) monitoring round: LFG-1: In good condition and has an expansion plug and WB lock on the cover. No repair recommendations LFG-2: Had a master lock that DPW staff did not have a key for. The lock was cut off and replaced it with an ABUS lock. A set of keys was provided to the DPW staff to keep on site. No further repair recommended LFG-3: The PVC has heaved up and is above the standpipe, so the cover will not sit flush and the well cannot be locked. There is no expansion plug, but the standpipe cover is covering most of the well. Recommend resetting the standpipe so the well can be fully covered and locked. LFG-4: The PVC has heaved up and is above the standpipe. There is no cover on the standpipe but there is an expansion plug in the well. Recommend resetting the standpipe so the well

Evaluated	Performance Standard	Comments/Observations and Recommended Corrective Action(s)
		can be fully covered and locked. LFG 5: The PVC has heaved up and is above the standpipe, so the cover will not sit flush and the well cannot be locked. The well has duct tape on the top of it acting as a plug and the standpipe cover is covering most of the well. Recommend resetting the standpipe so the well can be fully covered and locked. Eurofins is praparing a quote to complete the repairs in 2025 which are expected to include: - Cutting PVC so a height that will fit inside the casing and allow it to close and lock. - Install expansion plugs where needed. - Install new covers and locks where needed (keys for locks are to be provided to Town DPW staff). Eurofins did not report issues sampling the gas wells during Q3. There are no groundwater monitoring wells or gas vents that are part of the monitoring program for the site.

Continue to Next Page ►

F. ADDITIONAL LANDFILL REQUIREMENTS – Continued

Evaluated	Performance Standard	Comments/Observations and Recommended Corrective Action(s)
☐	19.121(4) Landfill Gas Recovery Operation and Maintenance Requirements.	N/A - No active landfill gas recovery system in place at the landfill.
	Is condensate generation kept to a minimum and condensate recirculation, if proposed, performed in accordance with the permit? ☐ YES ☐ NO	
	Are the sampling and analysis of condensate conducted on the schedule established in the permit or as otherwise required by the Department? ☐ YES ☐ NO	
	Are the analytical results of condensate monitoring reported to the Department as established in the permit or as otherwise required by the Department? ☐ YES ☐ NO	
	Is an annual report on the operation of the landfill gas recovery facility submitted to the Department as specified in the permit? ☐ YES ☐ NO	

VI. Inspection Observations

A. FACILITY CONDITION AND OPERATIONS

Examine and evaluate the facility condition and operations as observed during the inspection, including the following:

☒ Describe any evidence of the following conditions observed at the time of the inspection:
- Unpermitted discharges to air, water, land or other natural resources of the Commonwealth; and
- Dust, odors, litter, and/or other nuisance conditions.

☒ Document and discuss all deviations from any specific requirements for the facility that are not addressed in the previous section (*Section V. – Performance Standards*), including without limitation, the requirements set forth in the facility's operation and maintenance plan, orders or other enforcement documents, and other solid waste permits, approvals, and authorizations issued to the facility by MassDEP.

☐ List the types and estimated quantities of all waste and materials stored at the facility at the time of the inspection.

☒ Provide a narrative that describes the overall status of the general condition, operation and performance of the facility as observed at the time of the inspection.

⇨Attach photographs taken during the inspection that depict the general condition and operation of the facility. At a minimum, include photographs, as applicable, of the waste unloading (tipping) area, waste storage areas, recyclable material storage and, for transfer stations, the waste reloading activity.

Discussion:

No unpermitted discharges to air, water, land, or other natural resources were observed during the inspection. Additionally, no dust, significant litter or other nuisance conditions were observed. Some minor amounts of litter were observed along the east face of the landfill and along the eastern toe of slope.

The landfill has not received final cap. The current cover of the landfill consists of grass over the plateau area and wooded surfaces on the steeper sideslopes on the south, east, and north. The Town operates Transfer Station and Public Works facilities to the west of the landfill.

There are no passive landfill gas vents in the landfill or stormwater swales on the landfill and no stormwater ponds associated with the landfill/transfer station/DPW facilities. Water quality, including groundwater and surface water is not currently monitored at the site. Five landfill gas wells between the landfill and transfer station/public works area are screened on a quarterly basis. Landfill gas is typically not detected.

The landfill is bounded by the Town transfer station and public works facilities to the west, the Alewife Brook and associated wetlands to the north and east, and a residential neighborhood to the south (Lowland Farm Road). Town public works facilities consist of an 80' x 80' public works garage, 40' x 50' salt shed, concrete waste block bunkers for storing soil and stone, and laydown areas.

Access to the site is restricted to the landfill by gates/fencing associated with the Transfer Station/DPW to the west and apparent wetland areas to the north, east, and south.

Overall, the surface of the landfill is in good condition with established vegetation and no observations of erosion. The grassed areas of the landfill appear to have been recently mowed. We understand that the Town subcontracts mowing of the steeper slopes, which is expected to be performed later this year.

B. RECORD REVIEW

Examine and evaluate the facility's record-keeping. Without limitation, document the status of the facility's compliance with, and any deviations from, the record-keeping required by 310 MCR 19.000; the facility's operation and maintenance plan; orders or other

enforcement documents issued to the facility; and other solid waste permits, approvals, determinations and authorizations issued to the facility by the Department, including the following:

☐ Discuss the evaluation of the Facility's "daily log" such as, daily tonnage records.

☐ List and discuss any special incidents that have occurred since the previous inspection such as exceedances of the facility's permitted waste acceptance limits, nature and outcome of complaints reported to the facility operator (including the identity of the complainant, if known), fires, emergencies, or other disruptions to the routine operation of the facility.

Discussion:

VII. Summary and Recommendations

Pursuant to 310 CMR 19.018(6)(a)4., where a third-party inspector observes that the operation or maintenance of the facility deviates from the aforementioned applicable requirements, he or she shall document all such deviations and recommend corrective actions for the facility to take to return to compliance.

A. INSPECTION RESULTS

Based on the examinations and evaluations conducted in Sections V. and VI., please summarize the inspection results by checking one of the following determinations:

☐ **No deviations from the applicable performance standards or additional requirements listed at 310 CMR 19.018(6) were identified during this inspection.**
If no deviations were identified during the inspection, check this box and proceed to Section VII.B.

☒ **Deviations from the applicable performance standards or additional requirements listed at 310 CMR 19.018(6) were identified during this inspection and are discussed further in this report.**
If deviations were identified during the inspection, check this box and ensure that each deviation and the recommended corrective actions are discussed in the applicable section(s) below.

B. STATUS OF PREVIOUS RECOMMENDATIONS FOR CORRECTIVE ACTION

If a previous inspection report identified deviations with recommendations for corrective action, please describe the action(s) taken since the last inspection to return the facility to compliance with the applicable requirements.

Discussion:

C. RECOMMENDATIONS FOR CORRECTIVE ACTION

Based on the results of this inspection, please list all deviations noted during the inspection and provide recommendations for corrective action to return to compliance with the applicable requirement.

Recommendations: Complete repairs to gas monitoring wells in 2025 as described in Section F of this inspection report.

D. ADDITIONAL COMMENTS

Comments:

VIII. Additional Information Checklist

Attach the following additional information, as applicable, to complete the inspection report.*

☒ Attach photographs taken during the inspection that depict the general condition and operation of the facility, as required in Section VI.A.

☐ For C&D Waste facilities only, attach the analytical results, as required in Section V.B.

**Note: Pursuant to 310 CMR 19.018(8), MassDEP may request additional information.*

IX. Certification – THIRD-PARTY INSPECTOR

"I attest under the pains and penalty of perjury that:

1. I have personally examined and am familiar with the information contained in this submittal, including any and all documents accompanying this certification statement;
2. Based on my inquiry of those persons responsible for obtaining the information, the information contained in this submittal is, to the best of my knowledge, true, accurate and complete;
3. I have been able to conduct the third-party inspection and prepare the third-party inspection report without being influenced by the facility owner or operator and, (if I am a municipal employee) without being influenced by my municipal employer, by any coworker or by any elected or appointed official of the municipality; and
4. I am aware that there are significant penalties, including, but not limited to, possible administrative and civil penalties for submitting false, inaccurate, or incomplete information and possible fines and imprisonment for knowingly submitting false, inaccurate, or incomplete information."

Date (MM/DD/YYYY)

X. Certification – FACILITY OWNER/OPERATOR

Does the facility maintain a Financial Assurance Mechanism (FAM) pursuant to 310 CMR 19.051? ☐ YES ☒ NO

If yes:
- Enter the amount of the current FAM: $
- Enter the date of the last revision of the FAM amount, pursuant to 310 CMR 19.051(6):

As a reminder, pursuant to 310 CMR 19.051(6), the estimate of the cost of closure and post-closure maintenance must be revised every year, and every second year shall be submitted to the Department.

"I certify under the penalty of law:

1. That I have personally examined and am familiar with the information submitted in this third-party inspection report, including but not limited to the statements above concerning the financial assurance mechanism in place in accordance with any facility permit and 310 CMR 19.051, and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate and complete. I am aware that there are significant penalties both civil and criminal for submitting false information including possible fines and imprisonment.
2. That, in the event that this inspection report contains a recommendation for corrective action(s), I have completed and attached to this report a Corrective Action Plan and Schedule*, pursuant to 310 CMR 19.018(8)(c)2."

**Note: The owner or operator may elect to correct deviations identified in the Third-Party Inspection Report in a manner that is different than that recommended by the Third-Party Inspector, so long as the facility is brought back into compliance with applicable requirements.*

Instructions

In the event that a third-party inspection report prepared in accordance with 310 CMR 19.018(8) contains a recommendation for corrective action(s) at a Solid Waste Management Facility, the owner or operator shall complete and sign **Section IV. Certification** of this form. Pursuant to 310 CMR 19.018(8)(c), the owner or operator shall submit the completed Corrective Action Plan and Schedule form, along with the third-party inspection report with attachments to the appropriate MassDEP Regional Office, and a copy of this form and each completed inspection report with attachments to the board of health of the municipality in which the facility is located. Be sure to obtain the most recent version of this form. All applicable sections of the submitted form must be completed to be accepted by MassDEP. Blank forms and additional instructions on using this form are available online:

Important: When completing this form on a computer, use only the Tab key to move your cursor – not the Return key.

III. Plan & Schedule for Corrective Action

Pursuant to 310 CMR 19.018(8)(c)2., the owner or operator shall provide the following:

a. A written report documenting the completion of the corrective action(s) [recommended in the report];
b. Documentation or explanation why corrective action is not needed; or
c. A plan and schedule for completing the corrective action(s).

Note: The owner or operator may elect to correct deviations identified in the inspection report in a manner that is different than that recommended by the third-party inspector, so long as the facility is brought back into compliance with applicable requirements.

Discuss the status of the corrective actions recommended in the third-party inspection report. For each deviation documented in the inspection report, describe the corrective action(s) that have been taken, or that will be taken, by the owner or operator to return the facility to compliance with the applicable requirements. Provide the schedule for completing each corrective action, or, as applicable, provide the date the corrective action was completed. If the facility owner/operator intends to submit a permit application in order to complete the corrective action(s), please identify the permit type and anticipated submittal schedule. Contact MassDEP (Regional Office) if you are not sure the corrective action(s) will require a filing to MassDEP prior to implementation.

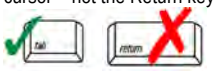
The following corrective actions are being recommend at this time, which are planned for implementation in 2025. These corrective actions are documented in the inspection report.

1. Complete repairs to gas monitoring wells:

LFG-3: Reset PVC, install new expansion plug and provide new lock.

LFG-4: Reset PVC and provide new lock.

LFG-5: Reset PVC, install new expansion plug and provide new lock.



Keys to new locks are to be provided to DPW staff.

	QUESTION	RESPONSE
1.	Is the *property* or any *adjoining property* used for an industrial use?	Yes __X__ No _____ Unknown ____ Explanation: Town DPW yard and transfer station abuts.
2.	To the best of your knowledge, has the *property* or any *adjoining property* been used for an industrial use in the past?	Yes __X__ No _____ Unknown ____ Explanation: See above. Also, former Town landfill abuts.
3.	Is the *property* or any *adjoining property* used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Yes __X__ No _____ Unknown ____ Explanation: New municipal fuel depot (aboveground) to be installed on abutting property this fall. Solid waste, recycling, and former landfill facilities on abutting property.
4.	To the best of your knowledge has the *property* or any *adjoining property* been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Yes __X__ No _____ Unknown ____ Explanation: See answer to 3.
5.	Are there currently, or to the best of your knowledge have there been previously, any damaged or discarded automobile or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the *property* or at the facility?	Yes _____ No __X__ Unknown ____ Explanation:

	QUESTION	RESPONSE
6.	Are there currently, or to the best of your knowledge have there been previously, any industrial *drums* (typically 55 gal [208 L]) or sacks of chemicals located on the property or at the facility?	Yes _____ No __X__ Unknown ____ Explanation:
7.	Has *fill dirt* been brought onto the property that originated from a contaminated site or that is of an unknown origin?	Yes _____ No __X__ Unknown ____ Explanation:
8.	Are there currently, or to the best of your knowledge have there been previously, any *pits, ponds, or lagoons* located on the *property* in connection with waste treatment or waste disposal?	Yes _____ No __X__ Unknown ____ Explanation:
9.	Is there currently, or to the best of your knowledge have there been previously, any stained soil on the *property*?	Yes _____ No __X__ Unknown ____ Explanation:
10.	Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	Yes _____ No __X__ Unknown ____ Explanation:
11.	Are there currently, or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* adjacent to any structure located on the *property*?	Yes _____ No __X__ Unknown ____ Explanation:
12.	Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	Yes _____ No __X__ Unknown ____ Explanation:
13.	If the *property* is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated contaminated by any government environmental/health agency?	Yes _____ No __X__ Unknown ____ Explanation:
14.	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?	Yes __X__ No _____ Unknown ____ Explanation: Property is a former flower field and has been in agricultural use for decades.
15.	Does the *owner* or *occupant* of the *property* have any knowledge of *environmental liens* or governmental notification relating to the past or recurrent violations of environmental laws with respect to the *property* or any facility located on the *property*?	Yes _____ No __X__ Unknown ____ Explanation:

	QUESTION	RESPONSE
16.	Has the *owner* or *occupant* of the *property* been informed of the past or current existence of *hazardous substances* or petroleum *products* or environmental violations with respect to the *property* or any facility located on the *property*?	Yes _____ No ___X___ Unknown ____ Explanation:
17.	Does the *owner* or *occupant* of the property have any knowledge of any environmental site assessment of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	Yes _____ No ___X___ Unknown ____ Explanation:
18.	Does the *owner* or *occupant* of the *property* know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property* by any owner or occupant of the *property*?	Yes _____ No ___X___ Unknown ____ Explanation:
19.	Does the *property* discharge wastewater on or adjacent to the *property* other than stormwater into a sanitary sewer system?	Yes _____ No ___X___ Unknown ____ Explanation:
20.	To the best of your knowledge, have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the *property*?	Yes _____ No ___X___ Unknown ____ Explanation:
21.	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs on the *property*?	Yes _____ No ___X___ Unknown ____ Explanation:
22.	Are there any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls in place at the site and/or have they been filed or recorded in a registry under federal, tribal, state, or local law?	Yes _____ No ___X___ Unknown ____ Explanation:
23.	As part of this study, can you provide any of the following? • Previous environmental site assessment reports • Environmental compliance audit reports • Environmental permits (including but not limited to solid waste disposal, hazardous waste disposal, NPDES, underground injection permits) • Registrations for aboveground and underground storage tanks • Registrations for underground injection systems • Material safety data sheets (MSDS) • Community right-to-know plan • Safety plans, preparedness and prevention plans, spill prevention, countermeasure and control plans • Reports regarding hydraulic conditions at the property and surrounding area • Hazardous waste generator notices or reports	If yes, please highlight which and provide Mabbett with a copy of said report. **No, none of these items are applicable.**

	QUESTION	RESPONSE
	• Geotechnical studies • Risk assessments • Reports regarding any self-directed or other cleanup activities conducted at the property	

Preparer represents that to the best of the preparer's knowledge the above statements and facts are true and correct and to the best of the preparer's actual knowledge, no material facts have been suppressed or misstated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PAUL RUSSELL & CO. EPA ID:: MAD981064009	***106 WESTERN AVE***	***WSW 1/8 - 1/4 (0.205 mi.)***	***D11***	***36***

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ESSEX DPW EPA ID:: MAR000606491	27 LANDING RD	0 - 1/8 (0.000 mi.)	A2	8

Lists of state- and tribal hazardous waste facilities

MA SHWS: Contains information on releases of oil and hazardous materials that have been reported to DEP.

A review of the MA SHWS list, as provided by EDR, and dated 06/30/2025 has revealed that there are 23 MA SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

MA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Solid Waste Facility Database/Transfer Stations.

A review of the MA SWF/LF list, as provided by EDR, has revealed that there is 1 MA SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

ODI: An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

A review of the ODI list, as provided by EDR, and dated 06/30/1985 has revealed that there is 1 ODI site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY

PAUL RUSSELL & CO. (Continued) **1000293176**

INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Massachusetts - Environmental Protection Integrated Computer System (MA-EPICS) is the central repository for all environmental protection data for the State of Massachusetts.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Registry ID: 110009589917

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/26/2025

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/05/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/02/2025

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Quarterly

MA SPILLS: Historical Spill List

The Spills Database was the release notification tracking system for spills that occurred prior to October 1, 1993. This information should be considered to be primarily of historical interest since all of the listed spills have either been cleaned up or assigned new tracking numbers and moved to the Reportable Releases or Sites Transition List databases.

Date of Government Version: 09/30/1993

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

MERCURY: Mercury Product Recyling Drop-Off Locations Listing

A listing of locations, collecting and recycling for mercury-added products. Mercury is toxic to the human nervous system, as well as fish and animals. Mercury can enter the body either through skin absorption or through inhalation of mercury vapors. At room temperature, small beads of mercury will vaporize.

Date of Government Version: 04/02/2025

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/04/2025
Date Data Arrived at EDR: 05/06/2025
Date Made Active in Reports: 07/21/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

South Map:	19019793 MARBLEHEAD NORTH, MA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

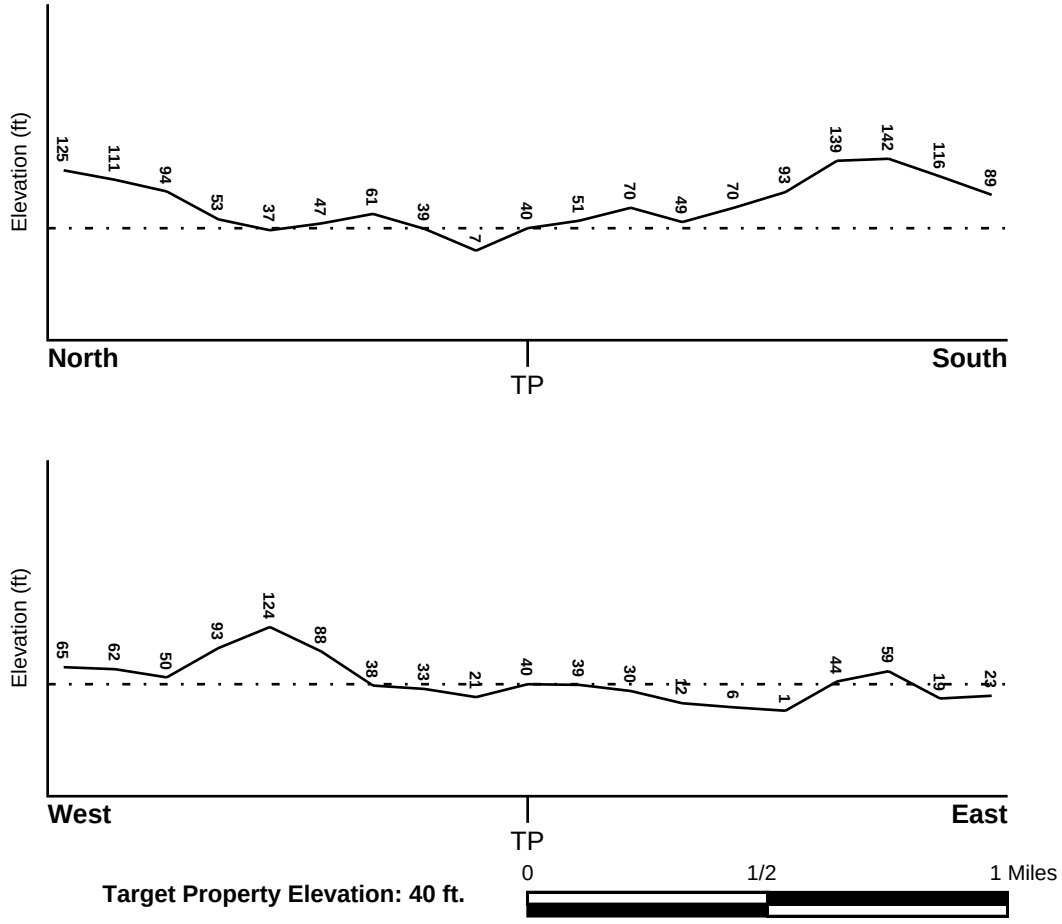
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 40 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
25009C0293G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
25009C0294G	FEMA FIRM Flood data

25009C0432G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EAST HALF OF IPSWICH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Merrimac

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
2	9 inches	14 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
3	14 inches	22 inches	gravelly sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
4	22 inches	59 inches	stratified very gravelly coarse sand to sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6

Soil Map ID: 2

Soil Component Name: Belgrade

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 77 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	very fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 0.42	Max: 7.8 Min: 6.1
2	9 inches	42 inches	very fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 0.42	Max: 7.8 Min: 6.1
3	42 inches	59 inches	silt loam	Not reported	Not reported	Max: 42.34 Min: 0.42	Max: 7.8 Min: 6.1

Soil Map ID: 3

Soil Component Name: Melrose

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1
2	9 inches	29 inches	fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	29 inches	59 inches	silty clay	Not reported	Not reported	Max: 1.41 Min: 0	Max: 7.3 Min: 5.1

Soil Map ID: 4

Soil Component Name: Fluvaquents

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

No Layer Information available.

Soil Map ID: 5

Soil Component Name: Chatfield

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sandy loam	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:
2	5 inches	33 inches	gravelly very fine sandy loam	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:
3	33 inches	59 inches	unweathered bedrock	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 6

Soil Component Name: Pollux

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 4.23 Min: 0.42	Max: 7.3 Min: 4.5
2	9 inches	35 inches	fine sandy loam	Not reported	Not reported	Max: 4.23 Min: 0.42	Max: 7.3 Min: 4.5
3	35 inches	59 inches	stratified very fine sand to silt loam	Not reported	Not reported	Max: 4.23 Min: 0.42	Max: 7.3 Min: 4.5

Soil Map ID: 7

Soil Component Name: Boxford

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

Soil Map ID: 8

Soil Component Name: Dumps

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 9

Soil Component Name: Merrimac

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: MassDEP
Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers
Source: Executive Office of Environmental Affairs
Telephone:

Public Water Supply Database

Telephone:
The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

Areas of Critical Environmental Concern

Telephone:
The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers

Telephone:
The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by an EPA hydrogeologist.

Aquifers

Telephone:
MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas

Telephone:
Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

DEP Approved Zone IIs

Telephone:
The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is 'that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary).' These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.\n - Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line. \n- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.\n - Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

OTHER STATE DATABASE INFORMATION

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Mabbett & Assoc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Mabbett & Assoc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 9077-4F76-9D71

PO # NA

Project P2025201

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 9077-4F76-9D71

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Mabbett & Assoc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

FEASIBILITY STUDY AGREEMENT

SECTION 3.1.8.15

District: Manchester-Essex Regional School District
School: Essex Elementary School
Project ID: 202306980020

MASSACHUSETTS SCHOOL BUILDING AUTHORITY
FEASIBILITY STUDY AGREEMENT

This Feasibility Study Agreement, dated the 4th day of February, 2025 (the "Agreement") is between the Massachusetts School Building Authority (the "**Authority**"), a public instrumentality of the Commonwealth of Massachusetts established by Chapter 70B of the Massachusetts General Laws and Chapters 208 & 210 of the Acts of 2004 of the Commonwealth, in each case as amended from time to time, and the Manchester-Essex Regional School District (the "**District**").

WHEREAS, the District submitted a Statement of Interest to the Authority for the Essex Elementary School (hereinafter "**School**"), and the District prioritized this Statement of Interest as its priority to receive any potential funding from the Authority;

WHEREAS, on December 13, 2023, the Board of Directors of the Authority voted to invite the District to the MSBA's Eligibility Period, and on March 4, 2024, the Board of Directors of the Authority voted to invite the District to commence the Eligibility Period, and the District has completed all applicable preliminary requirements to the satisfaction of the MSBA;

WHEREAS, on December 13, 2024, the Board of Directors of the Authority shall have voted to authorize the Parties to enter into this Agreement upon the terms and conditions stated herein.

WHEREAS, the Feasibility Study is one step in the multi-step process of the Authority's grant program for school building construction and renovation projects, and the invitation to collaborate on conducting and/or reviewing a Feasibility Study is not approval of a project or any funding by the Authority, except as expressly provided in this Agreement;

WHEREAS, the Authority's grant program for school building renovation and construction projects is a non-entitlement, discretionary program based on need, as determined by the Authority;

WHEREAS, the District has submitted a signed Initial Compliance Certification, as described in 963 CMR 2.02, 2.03 & 2.10(2), in the form prescribed by the Authority, and it has been accepted by the Authority;

WHEREAS, the District has formed a School Building Committee to monitor the Feasibility Study and advise the District during the study;

WHEREAS, the Authority may reimburse the District for a portion of eligible, approved costs incurred in connection with the Feasibility Study undertaken by the District for the School under certain terms and conditions, hereinafter provided, and subject to the provisions of M.G.L. c. 70B, 963 CMR 2.00 *et seq.* and all applicable policies and guidelines of the Authority.

NOW THEREFORE, in consideration of the promises and the agreements, provisions and covenants contained in this Agreement, and for other good and valuable

consideration, the receipt and sufficiency of which are hereby acknowledged, the Authority and the District (together, the "Parties") agree as follows:

SECTION 1
DEFINITIONS

1.1 Capitalized terms not specifically defined in this Definitions section shall have the meanings ascribed to them in either M.G.L. c. 70B or 963 CMR 2.00 *et seq*.

"Budget" shall mean a complete and full enumeration of all costs, including both hard costs and soft costs, so-called, that the District reasonably estimates, to the best of its knowledge and belief, will be incurred in connection with the planning, development, and the completion of the Feasibility Study, which Budget shall be approved by the Authority and attached hereto as **Exhibit A**, as it may be updated from time to time.

"Design Contract" shall mean the standard design contract developed and prescribed by the Authority, as it may be amended by the Authority from time to time that shall be executed by the District and the Designer for design services related to the Proposed Project.

"Designer" shall mean the individual, corporation, partnership, sole proprietorship, joint stock company, joint venture, or other entity engaged in the practice of architecture, landscape architecture, or engineering that meets the requirements of M.G.L. c. 7C, § 44 and has been procured and contracted by the District to conduct a Feasibility Study, in accordance with the provisions of Sections 2.1(a)(i) and 2.1(a)(ii) of this Agreement.

"Excusable Delay" shall mean a delay of the Feasibility Study that either (a) is solely because of a natural event, such as flood, storms, or lightning, that is not preventable by any human agency, or (b) is reasonably determined by the Authority to be excusable, provided that the failure of the District to have exclusive ownership, control and use of site will not extend the "Term of the Agreement" established in Section 2.2.

"Feasibility Study" shall mean a study as described in 963 CMR 2.10(8) and in any applicable policies and guidelines of the Authority and, in relation to a Major Reconstruction Project or Repair Project, as described in M.G.L. c. 70B, 963 CMR 2.00 *et seq.* and any applicable policies and guidelines of the Authority, shall also include an engineering study, in a format prescribed by or otherwise acceptable to the Authority, to investigate potential options and solutions, including cost estimates, for the deficiencies and issues identified in the Statement of Interest or as otherwise determined by the Authority.

"Owner's Project Manager" shall mean the individual corporation, partnership, sole proprietorship, joint stock company, joint venture, or other entity under contract with, designated, or assigned by the District and approved by the Authority, to fully and completely manage and coordinate administration of the Project to completion.

The Owner's Project Manager must meet the qualifications set forth in M.G.L. c. 149, § 44A ½, 963 CMR 2.00 *et seq.*, and all applicable policies and guidelines of the Authority.

"Scope" shall mean the scope of the Feasibility Study as described in 963 CMR 2.10(8) and any applicable policies and guidelines of the Authority or as otherwise determined in writing by the Authority and as more fully described in **Exhibit B** attached hereto, as it may be updated from time to time as mutually agreed upon by the District and the Authority.

"Schedule" shall mean the schedule for the Feasibility Study, which schedule shall be updated from time to time and approved by the Authority.

"School" shall mean the Essex Elementary School located in the District.

"Statement of Interest" shall mean the Statement of Interest, as defined in 963 CMR 2.09 and all applicable policies and guidelines of the Authority, submitted to the Authority by the District for the School.

SECTION 2
FEASIBILITY STUDY

Subject to the terms and conditions of this Agreement, and in reliance on the representations, warranties and covenants contained herein, the Parties hereby agree as follows:

2.1 Feasibility Study.

- (a.) The Parties hereby agree that the District shall undertake a Feasibility Study to investigate potential options and solutions, including cost estimates, to the School's deficiencies and issues as identified in the Statement of Interest or as otherwise determined by the Authority and in accordance with the Scope, Budget, and Schedule approved by the Authority, provided that the Authority has the unconditional unilateral right to alter that approved Scope, Budget, and/or Schedule for the Authority's convenience and the Authority will not be liable to the District for any loss and/or damage that arises, in whole or in part, out of any such alteration. The adequacy, sufficiency and/or acceptability of a Feasibility Study or a Prior Study, as defined in Section 2.1(c) of this Agreement, for the purposes of the Authority's grant program shall be determined by the Authority within its sole discretion. Any determination by the Authority that a Feasibility Study or Prior Study is adequate, sufficient or acceptable for the Authority's purposes shall not be construed as a certification or approval by the Authority of the studies, plans, drawings, designs, cost estimates, specifications or any other information or materials contained therein and no MSBA requirement that the District study a particular Option shall constitute an MSBA approval of that Option, in whole or in part. The District, its officials, employees and agents are and shall remain

DRAFT COPY

responsible for the Feasibility Study and/or Prior Study and the building designs, site plans, drawings, cost estimates, specifications and other materials and information relative thereto that the District submits to the Authority. The Authority's review of the Feasibility Study and/or Prior Study and any studies, plans, drawings, designs, cost estimates, specifications or any other information or materials contained therein or related thereto is solely for the purpose of determining whether they meet the provisions of this Agreement and the Authority's regulations, standards, policies, guidelines and other requirements and whether the District will be eligible for potential funding from the Authority for the Proposed Project. Approval of a Proposed Project shall only be determined by a vote of the Authority's Board in accordance with 963 CMR 2.00 et seq. and the applicable policies and guidelines of the Authority.

(i.) The District shall procure a Designer to conduct the Feasibility Study pursuant to the provisions of M.G.L. c. 7C, § 44 through 58, 963 CMR 2.10(8), 963 CMR 2.12, and any other applicable laws and regulations; provided, however, that if the estimated construction cost of the Proposed Project is determined to be more than five million dollars ($5,000,000), then the District shall select the Feasibility Study Designer using the Authority's Designer Selection Panel in accordance with 963 CMR 2.00 *et seq.* and all applicable policies and guidelines of the Authority. The District shall not use a Designer who was procured by the District prior to July 1, 2007, to conduct the Feasibility Study, unless the Designer is acceptable to the Authority. It is further provided that, if said Designer who was procured by the District prior to July 1, 2007, is unacceptable to the Authority, the District shall conduct a new procurement for a Feasibility Study Designer pursuant to the applicable provisions of M.G.L. c. 7C, § 44 through 58, 963 CMR 2.10(8), 963 CMR 2.12, and any rules, regulations, policies and guidelines of the Authority.

(ii.) The District shall use the Authority's Design Contract to contract with the Designer for the Feasibility Study. The District shall monitor the performance of the Designer and shall require the Designer to fully comply with all provisions of the Design Contract, including, but not limited to, all provisions affecting the interests of the Authority.

EXECUTION COPY

(iii.) If, at any time, the construction cost of the Proposed Project is estimated to be more than one million five hundred thousand dollars ($1,500,000), or if the construction cost of the Proposed Project is estimated to be equal to or less than one million five hundred thousand dollars ($1,500,000) and the Authority so requires, at any time, as a condition to qualify for funding by the Authority, the District shall procure and maintain under contract, or otherwise assign, an Owner's Project Manager, pursuant to M.G.L. c. 149, § 44A ½ , 963 CMR 2.00, *et seq.* and any applicable policies and guidelines of the Authority. The selection of an Owner's Project Manager shall be subject to the review and approval of the Authority as required by M.G.L. 70B, 963 CMR 2.00, *et seq.*, and any applicable policies and guidelines of the Authority. Any costs associated with an Owner's Project Manager who is not approved by the Authority shall not be eligible for reimbursement.

(iv.) Where applicable, the District shall use the Authority's model request for services and standard contract to procure and contract with any Owner's Project Manager for the Proposed Project, including the Feasibility Study stage of the Proposed Project. The District shall monitor the performance of the Owner's Project Manager and shall require the Owner's Project Manager to fully comply with all provisions of the contract between the District and the Owner's Project Manager including, but not limited to, all provisions affecting the interests of the Authority.

(b.) Subject to the satisfaction of or compliance with, as reasonably determined by the Authority, all of the terms and conditions of this Agreement, the applicable provisions of M.G.L. c. 70B, Chapters 208 and 210 of the Acts of 2004, and 963 CMR 2.00 *et seq.* and any other rule, regulation, policy or guideline of the Authority, and further subject to the Authority's approval of the Scope, Budget and Schedule and the District's approval, authorization and appropriation for the Feasibility Study using forms prescribed by or otherwise acceptable to the Authority, the Authority hereby agrees to pay to the District an amount that shall under no circumstances exceed the lesser of (i) 31.00% of the eligible, approved costs of the Feasibility Study, as determined by the Authority, or (ii) $465,000.00. The Parties hereby acknowledge and agree that $465,000.00 is the maximum amount of funding that the District may receive from the Authority for the Feasibility Study, and that the final amount of eligible

EXECUTED

Feasibility Study costs approved by the Authority may equal an amount less than $465,000.00, as determined by an audit or audits conducted by the Authority. Any costs and expenditures that are determined by the Authority to be either in excess of the $465,000.00 or ineligible for payment by the Authority shall be the sole responsibility of the District. The reimbursement rate set forth above, and as more fully described in the Reimbursement Rate Summary, attached hereto as **Exhibit "C"**, is the rate at which the District may be reimbursed for the eligible, approved costs of the Feasibility Study.

In the event that the Authority reasonably determines that the Feasibility Study is not in accordance or compliance with the Scope, Schedule, Budget, all of the terms and conditions of this Agreement, the provisions of M.G.L. c. 70B, Chapters 208 and 210 of the Acts of 2004, 963 CMR 2.00 *et seq*. and any other rule, regulation, policy or guideline of the Authority, or is delayed (other than an Excusable Delay) or is not duly authorized, approved and funded by the District in accordance with applicable law and as required by the Authority, then the Authority may temporarily and/or permanently withhold payments to the District for any eligible, approved costs of the Feasibility Study, provided that the Authority shall not unreasonably withhold any such payments and further provided that the Authority shall give written notice to the District of any such withholding. Notwithstanding the foregoing, failure by the Authority to provide such written notice timely shall not create or result in any entitlement to payment for the District. In the event that the Authority either temporarily or permanently withholds payment for the Feasibility Study, the District hereby agrees and acknowledges that the Authority shall have no liability for any such withholding of payment or any loss that may occur as a result of any such withholding of payment.

The District shall not be eligible to receive any funding for the Authority's share of the eligible, approved Feasibility Study costs, or any portion thereof, unless and until the Authority has approved the Scope, Budget, and Schedule. The Authority shall reimburse the District only for costs incurred by the District in connection with the Feasibility Study that are timely submitted to the Authority, eligible for reimbursement pursuant to Authority policies, procedures, and guidelines, and audited and approved by the Authority.

(c) Notwithstanding any provision of this Agreement, a District will not be eligible for reimbursement for costs that arise out of any study of the deficiencies and issues identified in the Statement of Interest to the extent that those costs were incurred by the District prior to the date of the Execution of this Agreement.

2.2 Term of Agreement.

No Project Scope and Budget Agreement for a Proposed Project, which arises out of the provisions of this Agreement will be approved by the Authority's Board until on or after July 1, 2026. Subject to that limitation, the Agreement will terminate upon (1) the approval of a Project Scope and Budget Agreement for a Proposed Project by the Authority's Board and the (2) execution of a Project Scope and Budget Agreement by the Authority and the District for that Proposed Project or (2) Nine Hundred and Thirteen (913) Days after the date upon which the Authority's Board votes to invite the District into Feasibility Study, whichever occurs sooner.

SECTION 3
COVENANTS

The District covenants and agrees that as long as this Agreement is in effect, the District shall and shall cause its employees, officers, agents, and representatives to perform and comply with all covenants of this Agreement.

3.1 The District hereby agrees that it shall make available for inspection by, and submit to, the Authority any and all information and documentation related to the Feasibility Study, including, but not limited to budget information, progress reports, and draft copies that may be requested by the Authority, promptly and in no event later than the deadline stated in any such request.

3.2 The District hereby agrees that it shall work with the Authority in developing the Scope, Budget and Schedule for the Feasibility Study and it acknowledges and agrees that the Authority's funding for the Feasibility Study is subject to the Authority's approval of the Scope, Budget and Schedule.

3.3 The District hereby acknowledges and agrees that the Authority shall not provide any amounts in excess of the amount determined under Section 2.1(b) of this Agreement.

3.4 The District hereby acknowledges and agrees that the Authority may, in its sole discretion, determine that certain costs incurred by the District in connection with the Feasibility Study are not eligible for reimbursement by the Authority, pursuant to any applicable provisions of M.G.L. c. 70B, 963 CMR 2.00 *et seq.*, including, but not limited to, sections 2.10 & 2.16(5), and any other policies and guidelines of the Authority.

3.5 The District shall comply with all provisions of this Agreement; the provisions of all other agreements between the Authority and the District that relate to the Feasibility Study; the provisions of M.G.L. c. 70B, 963 CMR 2.00 *et seq.*, and all policies and guidelines of the Authority; and all provisions of law applicable to the Feasibility Study, this Agreement, and any other agreements and documents related to the Feasibility Study, and shall take all action necessary to fulfill its obligations under this Agreement.

3.6 The District hereby acknowledges and agrees that the Authority shall not be required or obligated to make any payment for any eligible Feasibility Study costs while an Event of Default, as defined in section 8 of this Agreement, shall have occurred.

3.7 The District shall, and shall cause any Owner's Project Manager and Designer and their employees, subconsultants and agents to, keep adequate records of the Feasibility Study and make all Feasibility Study records and the Feasibility Study site(s) available to the Authority or representatives of the Authority for review during the course of the Feasibility Study.

3.8 The District hereby acknowledges and agrees that the duties of any Owner's Project Manager hired by and/or assigned to the Proposed Project by the District shall include, but not be limited to, fully and completely managing and coordinating on behalf of the District the administration of the Feasibility Study to completion. Any Owner's Project Manager hired by and/or assigned to the Proposed Project by the District shall be responsible for overseeing, tracking, and managing the Budget and Schedule. In the event that an Owner's Project Manager is not required for the Proposed Project, the District shall have the aforesaid duties and responsibilities in addition to any others imposed by M.G.L. c. 70B, 963 CMR, et seq., the policies and guidelines of the Authority, and any other applicable provisions of law.

3.9 The District hereby agrees that the Authority shall have free access to, and open communication with, any Owner's Project Manager hired by and/or assigned to the Proposed Project by the District and that the Authority shall have full and complete access to all information and documentation relating to the Proposed Project to the same extent that the District has such access. The District agrees that it shall require any such Owner's Project Manager to fully cooperate with the Authority in all matters related to the Proposed Project; to promptly communicate, transmit, and/or make available for inspection and copying any and all information and documentation requested by the Authority; to fully, accurately and promptly complete all forms and writings requested by the Authority; and to give complete, accurate, and prompt responses to any and all questions, inquiries and requests for information posed by the Authority. The District agrees that it shall not in any way, directly or indirectly, limit, obstruct, censor, hinder or otherwise interfere with the free flow of communication and information between the Owner's Project Manager and the Authority in all matters related to the Proposed Project and as provided herein; that it shall not suffer the same to occur by the act or omission of any other person or entity; and that it shall not retaliate against the Owner's Project Manager for communicating information to the Authority as provided herein. The District agrees to execute, deliver and/or communicate to the Owner's Project Manager any and all authorizations, approvals, waivers, agreements, directives, and actions that are necessary to fulfill its obligations under this paragraph. The District further agrees that the Authority shall bear no liability whatsoever arising out of the Authority's knowledge or receipt of information communicated to the Authority by the Owner's Project Manager and that the District shall remain responsible for the management and completion of the Proposed Project.

3.10 The District hereby acknowledges and agrees that the duties of the Designer shall include, but not be limited to, those described in this Agreement, including, but not limited to, the Scope attached hereto as Exhibit B; 963 CMR 2.10(8); any applicable rules, regulations, policies and guidelines of the Authority; and any standard scope of services and the Design Contract prescribed by the Authority.

3.11 The District hereby acknowledges and agrees that neither the District nor any of its employees, officials, agents, consultants or contractors shall submit any false or intentionally misleading information or documentation to the Authority in connection with this Feasibility Study Agreement or the Feasibility Study, and further acknowledges and agrees that the submission of any such information or documentation may cause the Authority to suspend, revoke or terminate any and all payments otherwise due to the District and/or recover any previous payments made to the District, and the District may be ineligible for any funding from the Authority. The District hereby further agrees that it shall have a continuing obligation to update and notify the Authority in writing when it knows or has any reason to know that any information or documentation submitted to the Authority contains false, misleading or incorrect information.

3.12 The District hereby acknowledges and agrees that the Authority shall bear no responsibility or liability of any sort for the results of any Feasibility Study, environmental assessment, geotechnical site testing, any necessary site remediation, clean-up, or other site remediation services.

3.13 The District hereby acknowledges and agrees that it shall provide a final Feasibility Study report to the Authority, which shall be in a format that is prescribed by or otherwise acceptable to the Authority.

3.14 The District hereby acknowledges and agrees that the Authority's grant program is a non-entitlement, discretionary program based on need, and the Feasibility Study may not result in a school construction, renovation or repair project that is eligible for funding by the Authority.

3.15 The District shall not combine, consolidate, or conjoin in any way the procurement, pre-qualification or selection of an Owner's Project Manager or Designer for the Proposed Project with the procurement, pre-qualification or selection of an Owner's Project Manager or Designer for any other construction, repair or renovation project without the express prior written approval of a duly authorized representative of the Authority. Any costs incurred by the District that relate to, or arise out of, the use of a combined, consolidated or conjoined procurement, pre-qualification or selection process as proscribed above, including, but not limited to, the preparation of bid documents, requests for services, and requests for qualifications, without the express prior written approval of a duly authorized representative of the Authority shall not be eligible for reimbursement.

SECTION 4
PAYMENTS AND AUDIT

4.1 Subject to the terms and conditions of the Agreement, the Authority shall reimburse the District for eligible, approved costs incurred in connection with the Feasibility Study in accordance with the following:

(a) Using the Authority's Pro-Pay system, the District shall submit requests for reimbursement on a monthly basis to the Authority in a format prescribed by the Authority. Each monthly request for reimbursement

shall be approved locally by a duly authorized representative of the District, shall be in a form acceptable to the Authority, shall include reasonable detail, including, but not limited to (1) the amount of funding requested, (2) the nature of the materials or property or services received, (3) the total value of the work performed and materials furnished by the Owner's Project Manager, if any, the Designer, and each consultant, subconsultant or vendor to date, and (4) the value of the work completed during the Feasibility Study. The District agrees that each request for reimbursement shall be accompanied by the invoices for each of the amounts requisitioned and any other supporting documentation and information substantiating the District's request for reimbursement, as the Authority may request, in a form satisfactory to the Authority.

(b) Each request for reimbursement shall include a written certification signed by a duly authorized representative of the District stating that: (1) such request for reimbursement is solely for Feasibility Study costs, (2) the obligations itemized in the request for reimbursement have not been the basis for a prior request for reimbursement submitted by the District that has been paid or rejected by the Authority, (3) the reimbursement requested is due for work actually and properly performed or materials or property actually supplied prior to the date of the requisition, (4) the reimbursement requested is for costs that already have been duly paid by the District, and (5) such reimbursement requested is within the Budget approved by the Authority.

(c) The Authority shall review all requests for reimbursement properly submitted pursuant to this Agreement as soon as reasonably possible. The Authority shall not consider requests for reimbursement that are not, as reasonably determined by the Authority, (1) timely and properly submitted, (2) in accordance with the most recent Budget approved by the Authority, and (3) for eligible Feasibility Study costs incurred by the District. The District understands and agrees that no reimbursement shall be made by the Authority unless the District has complied with all of the terms and conditions of this Agreement, the applicable provisions of M.G.L. c. 70B, chapters 208 and 210 of the Acts of 2004, 963 CMR 2.00 *et seq.*, and all policies and guidelines of the Authority.

(d) After receipt from the District of a timely and properly submitted request for reimbursement pursuant to this Agreement, the Authority shall make payment to the District of the Authority's share of approved, eligible Feasibility Study costs, subject to the terms and conditions of this Agreement. The District hereby agrees and acknowledges that the amount of approved, eligible Feasibility Study costs reimbursed by the Authority may be subject to change, pending audit, including but not limited to an audit pursuant to Section 4.2 of this Agreement and the final close-out audit pursuant to Section 4.3 of this Agreement.

EXECUTED COPY

4.2 The Authority may review and perform a preliminary audit on each request for reimbursement submitted pursuant to this Agreement to ensure that only eligible costs of the Feasibility Study are approved and paid by the Authority. Any such preliminary audits shall be conducted in accordance with 963 CMR 2.16 and other policies and guidelines of the Authority. In the event that the Authority determines that an item contained in a request for reimbursement submitted by the District pursuant to this Agreement is not eligible for reimbursement by the Authority, the Authority shall adjust a subsequent reimbursement to the District to account for the ineligible costs. The District hereby acknowledges and agrees that each audit conducted pursuant to this Section 4.2 is preliminary, and the Authority may further adjust and alter the results of a preliminary audit after it conducts subsequent audits or a final close-out audit of the Feasibility Study.

4.3 The District hereby acknowledges and agrees that a final, close-out audit of the Feasibility Study by the Authority shall include an audit of all requests for reimbursement submitted and all reimbursements made by the Authority. The final, close-out audit shall be conducted in accordance with 963 CMR 2.16 and any other applicable regulations, policies and guidelines of the Authority. The District shall make all documents and materials requested by the Authority or its representatives available in a timely manner. The District further acknowledges and agrees that the final, close-out audit of the Feasibility Study may not occur until such time as the Authority conducts its final, close-out audit of the project that may result from the Feasibility Study, should the District be approved for any such project. Any adjustments applicable as a result of the final, close-out audit may be made in the final amount of the Total Facilities Grant, as determined by the Authority.

SECTION 5
REPRESENTATIONS AND WARRANTIES

The District hereby warrants and represents that each of the following statements is true, correct and complete:

5.1 The District is validly organized and existing under and by virtue of the laws of the Commonwealth, has full power and authority to own its properties and carry on its business as now conducted, and has full power and authority to execute, deliver and perform its obligations under this Agreement and all other documents related to the Feasibility Study.

5.2 The District is duly authorized to execute and deliver this Agreement and has taken all necessary steps to authorize the execution and delivery of this Agreement, to undertake the Feasibility Study and to perform and consummate all transactions contemplated by this Agreement.

5.3 The undersigned has the full legal authority to execute this Agreement on behalf of the District and to bind the District to its provisions.

5.4 This Agreement does not and will not, to any material extent, conflict with, or result in violation of any applicable provisions of law, including, but not limited to, any statute, charter, by-law, ordinance, rule or regulation, or any judgment, order, rule or regulation of any court or other agency of government.

5.5 The District has all requisite legal power and authority to own and operate the School that is the subject of the Feasibility Study and to undertake and oversee the Feasibility Study or, in the case of a school facility that is leased by the District, the District has all of the requisite legal power and authority to control and operate the School that is the subject of the Feasibility Study and to undertake and oversee the Feasibility Study pursuant to a lease which assures that the District has exclusive jurisdiction and control of the School and the land upon which it is situated for the anticipated useful life of the Proposed Project.

5.6 No information furnished by or on behalf of the District to the Authority in this Agreement, the Budget, the Initial Compliance Certification, or any other document, certificate or written statement furnished to the Authority in connection with the Feasibility Study contains any untrue statement of a material fact or omitted, omits or will omit to state a material fact necessary in order to make the statements contained in this Agreement or therein not misleading in light of the circumstances in which the same were made.

5.7 The District has duly obtained all necessary votes, resolutions, authorizations, appropriations and local approvals, in accordance with formats prescribed by or otherwise acceptable to the Authority, and has taken all actions necessary or required by law to enable it to enter into this Agreement and to fund and perform its obligations hereunder, in accordance with the Authority's guidelines, regulations, policies and standards. This Agreement constitutes a valid and binding obligation of the District, enforceable in accordance with its terms, except as such enforceability may be limited by bankruptcy, insolvency, moratorium, reorganization or other laws heretofore or hereafter enacted and general equity principles.

5.8 No litigation before or by any court, public board or body is pending or threatened against the District or the Authority seeking to restrain or enjoin the execution and delivery of this Agreement or the Feasibility Study, or contesting or affecting the validity of this Agreement or the power of the District to pay its share of the Feasibility Study.

5.9 The District has implemented policies and procedures to prevent and eliminate fraud, waste and abuse of public funds in connection with the Feasibility Study and any future construction or renovation projects that may be forthcoming as a result of the Feasibility Study.

5.10 The District has submitted all audit materials requested by the Authority in connection with any project for which the District has received or anticipates receiving funding from the Authority.

5.11 All meetings of all public bodies in the District that relate in any way to the Proposed Project, including, but not limited to, the meetings of the District's school

building committee, have been conducted, and shall be conducted, in compliance with the provisions of G.L. c. 30A, §§ 18 – 25, 940 CMR 29.00 *et seq.*, the so-called Open Meeting Law, and all other applicable law.

SECTION 6
INSURANCE

6.1 The District shall obtain and maintain all insurance required by law and insurance of such types and limits and upon such terms and conditions as may be required by, or as may be acceptable to, the Authority.

6.2 The District shall require by contractual obligation, and shall also ensure by the exercise of due diligence, that any Designer hired by the District in connection with the Feasibility Study obtain and maintain, at a minimum, insurance of such types and limits and upon such terms and conditions as may be required by law and as may be prescribed by the Authority in the Design Contract between the Designer and the District.

6.3 Except where the Owner's Project Manager is an existing employee of the District, the District shall require by contractual obligation, and shall also ensure by the exercise of due diligence, that any Owner's Project Manager hired by the District obtain and maintain, at a minimum, insurance of such types and limits and upon such terms and conditions as may be required by law and as may be prescribed by the Authority in its standard contract for Owner's Project Manager services which is incorporated by reference herein.

SECTION 7
COMPLIANCE WITH CONTRACT DOCUMENTS, PROJECT PERMITS AND OTHER APPLICABLE LAW

7.1 The District shall take all reasonable actions designed to ensure that the Feasibility Study complies with all applicable contract documents, building codes, laws, rules and regulations and to ensure that all necessary project permits have been obtained. Notwithstanding any right of approval or review held or exercised by the Authority in connection with this Agreement or the Feasibility Study, the District shall be responsible for the successful performance and completion of the Feasibility Study in accordance with this Agreement, the Design Contract, design documents and project permits, if any, and for the economical and efficient operation and administration of the Feasibility Study.

SECTION 8
DEFAULTS AND REMEDIES

8.1 The occurrence of any of the following events shall constitute, and is herein defined to be, an Event of Default under this Agreement:

(a) If the District shall fail to perform and observe any covenant, agreement or condition on its part provided in this Agreement and such failure shall continue

for a period of thirty (30) days after written notice thereof shall be given to the District by the Authority; provided if such failure cannot be remedied within such thirty (30) day period, it shall not constitute an Event of Default hereunder if corrective action satisfactory to the Authority, as determined by the Authority in writing, is instituted by the District within such period and diligently pursued until the failure is remedied. Any forbearance or failure of the Authority in giving such written notice shall not amount to any waiver of the Authority's rights under this Agreement as to the same or subsequent breaches and shall not preclude the Authority from pursuing any of its rights or remedies provided under this Agreement or as otherwise provided by law.

(b) If any representation or warranty made by the District in this Agreement or in any other agreement entered into by the District with the Authority shall prove to have been incorrect or to be misleading in any material respect.

8.2 If any Event of Default hereunder shall occur and be continuing, the Authority may proceed to protect its rights under this Agreement, and may: (a) terminate this Agreement, (b) permanently withhold or temporarily suspend payment of any eligible, approved costs to the District, (c) recover any payments of eligible, approved costs previously made to the District, and/or (d) exercise any other right or remedy upon such default as may be granted to the Authority under this Agreement or under any other applicable provision of law.

8.3 No remedy conferred upon or reserved to the Authority is intended to be exclusive and every such remedy shall be cumulative and shall be in addition to every other remedy given under this Agreement or now or hereafter existing at law or in equity. No delay or omission to exercise any right, remedy or power accruing upon any Event of Default shall impair any such right, remedy or power or shall be construed to be a waiver thereof, but any such right, remedy or power may be exercised from time to time and as often as the Authority may deem expedient.

SECTION 9
OTHER TERMS

9.1 Governing Law. This Agreement shall be governed by, construed, and enforced in accordance with, the laws of the Commonwealth of Massachusetts.

9.2 Venue. Any civil action brought against the Authority by the District, or any person or entity claiming by, through or under it, that arises out of the provisions of this Agreement, shall only be brought in the Superior Court for Suffolk County, Massachusetts. The District, for itself and for any person or entity claiming by, through or under it, hereby waives any defenses that it may have as to the venue to which it has agreed herein, including, but not limited to, any claim that this venue is improper or that the forum is inconvenient. The District for itself and for any person or entity claiming by, through or under it, hereby waives all rights, if any, to a jury trial in any such civil action that may arise out of the provisions of this Agreement.

9.3 Indemnification of the Authority by the District. To the fullest extent permitted by law, the District shall indemnify and hold harmless the Authority and its officers, agents and employees from and against any and all claims, actions, damages, liabilities, injuries, costs, fees, expenses, or losses, including, without limitation, reasonable attorney's fees and costs of investigation and litigation, whatsoever which may be incurred by, or for which liability may be asserted against, the Authority or any of its officers, agents or employees arising out of any activities undertaken by, for, or on behalf of the District in the execution or implementation of this Agreement or with respect to the Feasibility Study, including, but not limited to, the performance of any contract or obligation directly or indirectly related to the Feasibility Study. Such obligation shall not be construed to negate or abridge any other obligation of indemnification running to the Authority which would otherwise exist.

9.4 Members, Employees Not Liable. No member or employee of the Authority shall be charged or held personally or contractually liable by or to the District under any term or provision of this Agreement or because of any breach thereof or because of its execution or attempted execution.

9.5 Assignability. The District shall not assign any interest, in whole or in part, in this Agreement and shall not transfer any interest in the same, whether by assignment or novation, without the prior written approval of the Authority.

9.6 Payment Not A Waiver.

The Authority's payment(s) to the District under this Agreement or its review, approval or acceptance of any actions by the District under this Agreement shall not operate as a waiver of any rights under this Agreement and the District shall remain liable to the Authority for all damages incurred by the Authority as a result of the District's failure to perform in accordance with the terms and conditions of this Agreement.

The rights and remedies of the Authority provided for under this Agreement are in addition to any other rights or remedies provided by law. The Authority may assert a right to recover damages by any appropriate means, including, but not limited to, set-off, suit, withholding, recoupment, or counterclaim either during or after performance of this Agreement.

9.7 Notices. Any notices required or permitted to be given by either of the Parties hereunder shall be given in writing and shall be delivered to the addressee (a) in-hand (b) by certified mail, postage prepaid, return receipt requested; (c) by facsimile; or (d) by a commercial overnight courier that guarantees next day delivery and provides a receipt, and such notices shall be addressed as follows:

If to the Authority:

Massachusetts School Building Authority
40 Broad Street, Suite 500
Boston, MA 02109
Attention: Director of Capital Planning
Facsimile: (617) 720-8460

If to the District:

Manchester-Essex Regional School District
Ms. Pamela Beaudoin
36 Lincoln Street
Manchester-by-the-Sea, MA 01944
Attention: Superintendent

or to such other address or addressee as the District and the Authority may from time to time specify in writing. Any notice shall be effective only upon receipt, which for any notice given by facsimile shall mean notice that has been received by the party to whom it is sent as evidenced by a confirmation slip that bears the time and date of receipt.

9.8 Severability. If any provisions of this Agreement shall for any reason be held to be invalid or unenforceable, the invalidity or unenforceability of such provision shall not affect any of the remaining provisions of this Agreement, and this Agreement shall be construed and enforced as if such invalid or unenforceable provision had not been contained herein.

9.9 Counterparts. This Agreement may be executed in one or more counterparts, any of which shall be regarded for all purposes as an original and all of which constitute but one and the same instrument. Each party agrees that it will execute any and all documents or other instruments, and take such other actions as may be necessary to give effect to the terms of this Agreement.

9.10 No Waiver. No waiver by either party of any term or conditions of this Agreement shall be deemed or construed as a waiver of any other terms or conditions, nor shall a waiver of any breach be deemed to constitute a waiver of any subsequent breach, whether of the same or of a different section, subsection, paragraph, clause, phrase, or other provision of this Agreement.

9.11 Integration. This Agreement merges and supersedes all prior negotiations, representations, and agreements between the Parties hereto relating to the Feasibility Study and constitutes the entire agreement between the Parties hereto with respect to the Feasibility Study and the Authority's funding of a portion of the eligible, approved costs of the Feasibility Study.

9.12 Amendments. This Feasibility Study Agreement may be amended only through a written amendment signed by duly authorized representatives of the District and the Authority.

IN WITNESS WHEREOF, the Parties have executed this Agreement on this 4th day of February, 2025

FEASIBILITY STUDY BUDGET

Manchester-Essex Regional School District
Essex Elementary School

The total Budget for the Feasibility Study conducted pursuant to this Agreement, which is attached hereto and incorporated by reference herein, shall be no more than $1,500,000 based upon the following estimates:

Owner's Project Manager:	$ 300,000
Designer:	$ 930,000
Environmental and Site Testing:	$ 225,000
Other:	$ 45,000

EXHIBIT B

SCOPE OF THE FEASIBILITY STUDY

Manchester-Essex Regional School District
Essex Elementary School

The Scope of the Feasibility Study conducted under this Agreement, which is attached hereto and incorporated by reference herein, shall consist of the development of a Feasibility Study/Schematic Design for the evaluation of a renovation of the existing school, a renovation of and addition to the existing school and/or new construction for the Essex Elementary School (the "Proposed Project") in the Manchester-Essex Regional School District (the "District"). Pursuant to the Massachusetts School Building Authority's (the "MSBA") regulations, 963 CMR 2.06, the space allowance for the Proposed Project shall meet all applicable MSBA regulations and guidelines.

The Feasibility Study shall contain all information required by 963 CMR 2.10(8) and any other applicable rules, regulations, policies, guidelines and directives of the MSBA including, but not limited to, a final design program, educational space summary, budget statement for preferred educational objectives, and a proposed total project budget. The Feasibility Study for this Proposed Project will examine the following enrollment options.

Town of Essex Grade K-3 Enrollment (plus Pre-K)	Town of Essex Grade K-5 Enrollment (plus Pre-K)	District-wide Grade K-5 Enrollment (plus Pre-K)
165 students	250 students	515 students

The District will prepare and submit to the MSBA the educational space summaries for all options in the table above, for review and acceptance. Upon acceptance of the educational space summaries, the District will commence with the evaluation of options. The Schematic Design that is developed pursuant to this Agreement shall be based upon the final design enrollment, which shall be subject to the written approval of the MSBA. The Schematic Design shall include, but not be limited to, the information required by the MSBA's Feasibility Study Guidelines, including, but not limited to, a site development plan, environmental assessment, geotechnical assessment, geotechnical analysis, code analysis, utility analysis, schematic building floor plans, schematic exterior building elevations, narrative building systems descriptions, NE-CHPS scorecard or LEED for Schools checklist, outline specifications, cost estimates, project schedule and proposed total project budget.

In conducting the Feasibility Study and developing the Schematic Design, the District shall, in a sufficient and timely manner as determined by the MSBA, initiate such notification procedures, undertake such review processes, and obtain such determinations and approvals as may be required by 963 CMR 2.03(2)(h) & (i), including, but not limited to, such procedures, reviews, determinations, and approvals as may be required by the Massachusetts Historical Commission (the "MHC") and/or the Massachusetts Environmental Policy Act. At its earliest opportunity, the District shall seek a written determination from the MHC as to whether the MHC intends to undertake a review of the Proposed Project.

The District shall be responsible for conducting such geotechnical evaluations, site investigations, soils explorations and environmental assessments as are reasonable and necessary to determine whether any significant environmental, geotechnical or other physical conditions exist that may have an impact upon eventual construction on the proposed site. The MSBA may require the District to fully fund certain environmental or geotechnical site testing beyond initial investigatory costs. The MSBA shall bear no responsibility or liability of any sort for the results of any geotechnical evaluations or site testing, soils explorations, environmental assessments, nor for any site remediation, clean-up, or other site remediation services.

The development of the Schematic Design shall be subject to continuing review by the MSBA in accordance with the provisions of this Agreement, the MSBA's Feasibility Study guidelines and any other applicable rule, regulation, policy, guideline or directive of the MSBA. The District shall be responsible for submitting to the MSBA all documentation that is required to complete the Feasibility Study and Schematic Design and to support the preparation of a Project Scope and Budget Agreement.
