

AP PRECALCULUS 2026

Mrs. Gildersleeve

Aloha y'all! Welcome to AP Pre Cal! As an AP course, this is a college course! If this is your first AP course, you need to be prepared for the pacing and depth of knowledge that you will experience.

There are concepts that I strongly recommend you learn and/or strengthen prior to the beginning of the course: logarithms and trigonometry. As such, your summer assignment is all in the Khan Academy classroom. Please follow the link below to access it and get started!

In the pursuit of academic success, taking responsibility and embodying the characteristics of a self-starter are indispensable. Responsibility in academic endeavors encompasses more than just completing assignments; it entails a commitment to actively engage with course material, seek clarification when needed, and manage time effectively. Whether it's staying ahead of coursework, seeking additional resources, or collaborating with peers, the combination of responsibility and self-starting ignites a momentum that will propel you towards academic success. In essence, these qualities not only cultivate academic achievement but also instill invaluable life skills that extend far beyond the confines of the classroom.

On that note, this summer assignment is optional. If you would like to have a smoother year, do the assignment. The purpose is not to make you work, the purpose is for you to know the material coming in so you aren't completely lost! Your success or failure is the sum of the choices you make throughout the year, starting with this assignment. I look forward to working with you this year!

The link is also on my page on the VMHS webpage!
