Archbishop Riordan High School Tuberculosis (TB) Response Data summary

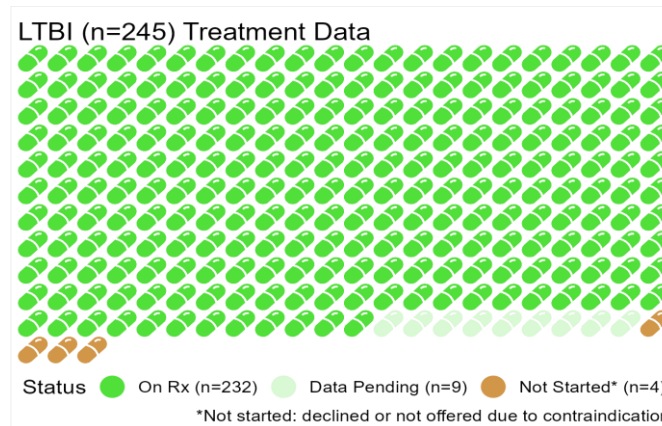

May 20, 2026

From March 9th until April 28th, there have been **1135** people who have TB test results reported, of which **19 (2%)** were positive. For the latest targeted TB screening (April 29 – present), including the most recent onsite testing event on May 6th and 8th, **147** TB tests have been reported so far, of which **2 (1%)** were positive.

For the complete testing period, from 11/10/2025 through 05/20/2026, **1405 (96%)** of the total school population* have had at least one TB test reviewed and validated by SFDPH and are included in this report. Thus, overall, since November 10th 2025:

- **254 (18%)** had a positive TB test
 - **7** confirmed active TB cases diagnosed
 - **0** suspected active TB cases diagnosed
 - **245** confirmed as latent TB+ (LTBI)
 - **2** validations of X-ray results are in process
- Of the 245 individuals with confirmed LTBI to date:
 - **232 (95%)** with LTBI are confirmed to be taking treatment
 - **4 (2%)** with LTBI have not started treatment
 - **9 (4%)** with LTBI have not yet had treatment status validated

LTBI is not contagious
Diagnosis and treatment of LTBI is important to prevent the development of active TB

*All students and staff identified by SFDPH and the school are included in this total. This includes students and staff who have recently joined the school community such as new students, permanent, part-time, contract and coaching staff. Individuals who leave the school community, including graduated students or individuals who leave employment, continue to be included in the total school population.
