

## AP Calculus BC Summer Work

Hello Future AP Calculus BC Students!!

Please click [here](#) to join the Khan Academy Summer Prep. The code is WK9C95S6.

You are required to achieve mastery of each of the topics. To minimize the time you spend and maximize your review of the topics you need more work on, I suggest you take a global-to-local approach to the work. To facilitate this, I suggest that you accomplish this as follows:

1. Take the Course Challenge.
2. Retake the Course Challenge.
3. Take the Unit 1 Test and repeat.
4. Take any quizzes containing topics for which you have not yet achieved mastery.
5. Repeat steps 3-4 with all units until you have completed mastery of every topic.

Please work on a little of this each week. There are nine (9) units, and you have nine (9)-ish weeks to complete the work. If you wait until the end of the summer or the first week of school to attempt this, you will begin the year behind and stressed.

Also, please do not waste time spinning your wheels. If you need help with a topic, please email me, and I will be happy to help!

Best,  
cs
