Mobilise IT

Who we Are

Mobilise IT is Australia's leading provider of mobile computing managed services, delivering seamless solutions that prioritise exceptional end-user and customer experiences. We keep thousands of employees, contractors, and agents connected, productive, and confident by ensuring their mobile computing devices, notebooks, connectivity, and business applications perform flawlessly.

Founded in 2006 in Melbourne Victoria with delivery across Australia and New Zealand, Mobilise IT is a world class technology and managed services company delivering digital workspace solutions that are consumer easy, enterprise secure and optimised for the software defined enterprise of tomorrow.

"Consumer easy and enterprise secure digital workspace solutions people love to use because they are designed with people in mind."

Our solutions deliver customers the following tangible outcomes:

A better employee experience.

A digital workspace solution can help transform the employee experience by enabling a more flexible workstyle, because business processes can be completed from anywhere, employees are able to choose the locations, devices, and times that are most productive for them.

Enhanced security and data breach protection.

The digital workspace improves security by giving IT a complete view into network traffic, users, files, and endpoints, making it easier than ever to stay ahead of both internal and external threats.

Flexibility to choose any technology your organization needs.

A digital workspace makes it easy for organizations to embrace new technologies and the cloud without worrying about security or a compromised user experience. A digital workspace offers one place for people to access any app, whether SaaS, web, mobile, or virtual.

Increased in productivity.

Research and experience has demonstrated that digital workspaces increase productivity and staff performance. Because work can be completed from anywhere, employees are able to choose the locations, devices, and times that are most productive for them.

IEA is partnering with MIT as part of its Digital Transformation plan. MIT will assist in planning a new secure and fast network environment for a Future Focused workspace for all IEA staff and students. This work will extend through 2026 and into 2027 bringing benefits to all our users and stakeholders.
