EXCUTIVE SUMMARY

F.I.T. Environmental Services (F.I.T. Services) conducted an AHERA re-inspection of Menlo-Atherton High School, located at 1400 Alameda de Las Pulgas Belmont, California. F.I.T. Services Certified Asbestos Consultants conducted the following activities to document the project:

- Visual inspection of known asbestos containing building materials (ACBM), both friable and non-friable.
- Identification of friable and non-friable ACBM.
- Assessment of friable and damaged non-friable ACBM.

All known asbestos containing building materials from the 2004 CTL Environmental Services AHERA 3-year re-inspection that have not been removed, are in good condition and have been assigned a response action priority number of 8. See Appendix A.

RESPONSE ACTIONS

Response Action Priorities

1) Isolate area and restrict access. Immediate removal is mandatory; contact an Accredited Project Designer (APD).

2) Isolate area and restrict access. Repair or Remove Immediately; contact an APD. If ACBM remains following response action, follow up with O&M; restrict access to reduce disturbance potential.

3) Continue O&M. Limit access to reduce disturbance potential. Schedule repair or removal on a priority basis; contact an APD. If ACBM remains following response action, follow up with O&M; limit access to reduce disturbance potential.

4) Continue O&M. Limit access to reduce disturbance potential Schedule repair or removal when practical and cost effective; contact an APD.

Continue O&M. Schedule repair or removal when practical and cost effective; contact an APD.

6) Same as 5 (lower priority basis).

7) Continue O&M. Reduce disturbance potential where practical. Remove when practical and cost effective; contact an APD.

8) Continue O&M until major renovation/demolition requires removal under NESHAPs or until hazard potential changes. Remove when practical and cost effective; contact an APD.

REF.: AHERA Re-inspection
Menlo-Atherton High School
555 Middlefield Road
Atherton, CA 94027

1 PROJECT SUMMARY

F.I.T. Services conducted an AHERA re-inspection of Menlo-Atherton High School located at 1400 Alameda de Las Pulgas Belmont, California. Patrick Garrett, a certified Asbestos Consultant and EPA-accredited Building Inspector, conducted the inspection on February 19, 2020.

2 FIELD AND ANALYTICAL METHODOLOGY

The inspection was conducted in accordance with protocol set forth in the Asbestos Hazard Emergency Response Act (AHERA) *40 CFR 763 Subpart E.*

The re-inspection activities include the following elements:

- Visual inspection of known asbestos containing materials (ACM), both friable and non-friable.
- Identification of friable and non-friable ACM.
- Assessment of friable and damaged non-friable ACM.

3 RECOMMENDATIONS

During the inspection it was observed that new flooring had been installed throughout. With out documentation of abatement of original flooring, it is assumed that the original flooring was covered over with new floor tiles or carpet. ACBM should be monitored and maintained as part of the Carlmont High School's operations and maintenance program until renovations or demolition activities require removal. Prior to removal or demolition activities these materials shall have samples collected by an EPA-accredited building inspector and analyzed via polarized light microscopy (PLM) in accordance with the method specified in appendix A Subpart F 40 CFR part 763, section 1. Remove or repair these materials when practical and cost effective in conjunction with an EPA-accredited Project Designer.

4 ASSUMPTIONS AND LIMITATIONS

This report was prepared exclusively for the use by Sequoia Union High School District and may not be relied upon by any other person or entity without F.I.T. Environmental Services express written permission. The information, conclusions, and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purpose, locations, time frames, and project parameters indicated. F.I.T. Environmental Services cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services,

In performing our professional services, we have applied present engineering and scientific judgement and used a level of effort consistent with current standard of practice for similar types of studies.

As applicable, F.I.T. Environmental Services has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, F.I.T. Environmental Services accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

F.I.T. Environmental Services will not accept any liability for loss, injury claim, or damage arising directly or indirectly from any use or reliance on this report. F.I.T. Services makes no warranty, expressed or implied.

This report is issued with the understanding that the client, the property owner, or its representative is responsible for ensuring that the information, conclusion, and recommendations contained herein are brought to the attention of the appropriate regulatory agencies, as required.

If you have any questions, please do not hesitate to contact the undersigned at 707-205-5706. We appreciate the opportunity to be of service to Sequoia Union High School District.

AHERA INSPECTION REPORT (1989)

SAMPLE / MATERIAL LOCATION DIAGRAMS

As part of the AHERA Asbestos Inspection the locations of samples collected are recorded on building diagrams. In addition to the sample locations, specific damage areas are recorded where found. The following pages provide the sample location diagrams for the School District. These drawings are organized in the same manner as the inspection/management plan data, i.e. campus one building one is first.

The title block contains the specific state, district, campus, and building or code with a 12 digit number. Next is the District Name, the Campus Name, and finally the Building Name. The next block provides the date the drawing was made, the street number, and finally the H-K drawing number.

The drawing uses several symbols and cross-hatching patterns to illustrate the key elements of the survey information.

SAMPLE LOCATION: The specific locations of samples are found on a point on the drawing leading to a symbol indicating the sample number and the Bulk Sample (BS) Code, which represents the type of material sampled. The Bulk Sample Code descriptions used are as follows:

BS CODE	DESCRIPTION	BS CODE	DESCRIPTION
0	Unknown	26	Transite Pipe
1	Acoustical Plaster	27	Transite Hood
2	Acoustical/Thermal Insul	28	Asbestos Pads
3	Hardwall/Ceiling Plaster	29	Asbestos Glove
4	Vinyl Floor Tile	30	Asbestos Rope
5	Pipe Covering	31	Raw Asbestos
6	Corrugated Pipe Covering	32	Electrical Wiring
7	Wrapped Paper Pipe Cover	33	Fire Hose
8	Boiler/Tank Insulation	34	Fire Door
9	Breeching/Exhaust Packing	35	Fire Suit
10	Woven Paper/Tape	36	Fire Brick
11	Drop or Lay-in Panel	37	Lab Counter Top
12	Acoustical Tile (1x1)	38	Fiber Frack Kiln
13	Fire or Stage Curtain	39	Tongs
14	MJP on Non-Suspect Pipe	40	Poured in Insulation
15	MJP on Pipe Covering	41	Contaminated Soil
16	MJP on Corr. Pipe Cover	42	Tectum
17	MJP on Wrapped Pipe Cover	43	Floor Underlayment
18	Fireproofing	44	Hard Grout
19	Vibration Joint Cloth	45	Mortar
20	Interior Duct Insulation	46	Blown or Scratch Coat
21	Exterior Duct Insulation	47	Oven/Autoclave Lining
22	Blown-in Insulation	48	Brake Lining
23	Stored Insulation	49	Theatre Curtain
24	Debris	50	Transite Siding
25	Gasket	99	Other

DAMAGE AREAS: When the inspector encounters a section of material in a Unified Sampling Area (USA) which contains localized damage in worse condition than the remainder of the same material contained in this USA, a Damage Area indicator is placed on the drawing. This symbol contains specific information about the damaged area.

Type of Material - The BS Code of the material is indicated so that the type of material can be determined. See the previous section for the listing of the BS codes used.

Quantity - The quantity of material which was found to be damaged is also indicated.

Location - The location of the localized damage is indicated in the symbol. This provides assistance in identifying where the damage can be found.

Response Action - This is the code for the recommended AHERA response action. The following codes are used:

1. Isolate Area Immediately
2. Gross Removal
3. Glove Bag Removal
4. Encapsulation
5. Enclosure
6. Repair and O&M
7. O&M and Monitor

CROSSHATCHING: Crosshatching patterns are used to detail the location of ceiling and floor material suspected of containing asbestos. There are three patterns used:

Floor Tile - This pattern is used to indicate floor tile and sheet flooring material suspected of containing asbestos.

Drop / Lay-in, Accoustical - This pattern is used to indicate the locations of a variety of ceiling tiles including, but not limited, to 1' x 1' and 2' x 4' lay-in panels.

Spray / Trowel Applied Materials - This pattern is used to indicate the presence of spray and trowel applied materials such as fireproofing and acoustical plaster.

LOCATION of CAUTION LABEL: The AHERA regulations require the use of labels indicating the presence of Asbestos Containing Building Material (ACBM). The label is to be place on or near ACBM in routine maintenance areas in all school buildings. When this label is applied in the field the inspector identifies its' location on the sample location diagram. On the drawing, the label symbol contains information about its placement within the routine maintenance area so that it may be readily found by the LEA. The label states the following.

****

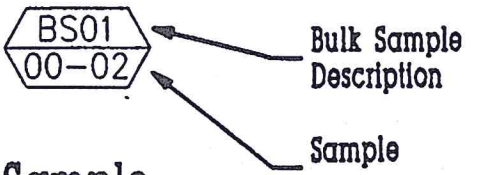

CAUTION
ASBESTOS. HAZARDOUS.
DO NOT DISTURB
WITHOUT PROPER TRAINING
AND EQUIPMENT

****

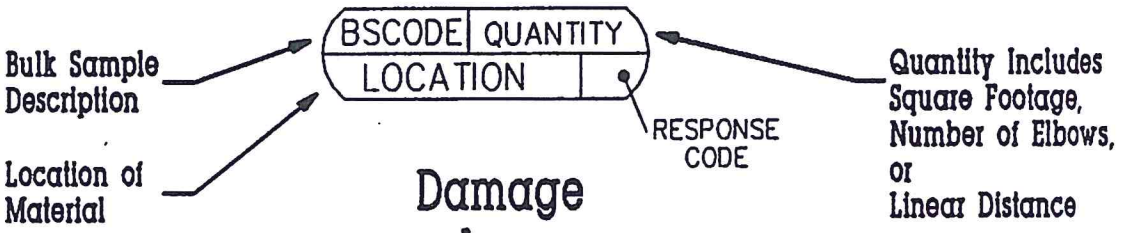

The presence of sample numbers, crosshatching, and damage areas does not mean that all of the areas indicated contain asbestos. These location diagrams are a record of the field inspection only and are meant to show where samples were taken and what areas may be affected if asbestos is present. To determine which areas are affected, a review of the Inspection / Management Plan Data and the Petrographic Results contained in Sections 4 and 5 should be made. If desired, the location diagrams can be highlighted by the school district's asbestos coordinator to indicate the presence of asbestos containing material.
