[Sherif] One of the best strengths of our program is the sheer number and breadth of procedures that we do. So one of the trends is actually going around in GI fellowship right now is that gastroenterologists in their training are actually losing procedures, primarily because a lot of hospitals are employing specifically advanced fellows and advanced physicians to do all of those procedures. However, one of the greatest strengths of our program is that we're actually doing them as fellows. So from the first day and from your first year of fellowship,	A tan man wearing a purple and gold scrub cap and a white lab coat over green scrubs, is standing on a balcony overlooking a stairwell with a large purple and gold L S U Health Shreveport logo on a curved wall behind him. Text: Sherif Michael, M D Gastroenterology Program Graduate

you're involved in not only just general GI procedures such as EGD's and colonoscopies and all that goes with them, but also with advanced procedures. For example, as a first year fellow, you're involved in ERCP's, you're starting with ERCP's during your first year, which is, an absolute anomaly in these days in GI fellowship. But thankfully in our program, we have hands on experience from our first year. And that's taken as a step, step by step process. You start as a first year fellow, introducing the scope and, and slowly progressing with those procedures as time goes on. In addition, we do a number of those procedures throughout the year. So not only are you involved in those procedures, but you're involved in them regularly. And as a procedural list, it's important not only to do procedures, but do them regularly so that you can improve and hone all of your skills. Aside from ERCP's, we're doing other advanced procedures, such as endoscopic ultrasound. We're also doing other advanced procedures. Of course, we are involved in all motility studies. So manometry PH studies, we're oing Bravo studies, for evaluating PH studies as well. So we're continuously expanding the the variety of advanced procedures that we do. And thankfully for us as fellows, we're involved in all of those procedures from day one.	Sherif addressing camera.
