

Wall High School & Wall Intermediate School
Math Assignments
Summer 2026

Engaging in academic activities during the summer break can prevent the summer slide, where students lose knowledge and skills over the extended vacation period. Summer assignments can help students retain what they learned during the school year, ensuring a smoother transition into the next grade.

All math summer assignments, except those for AP high school courses, are provided for practice and are **optional** assignments that can be completed by students during the summer who wish to review various math skills. The concepts included in the assignments focus on essential prerequisite skills required for the upcoming math course.

In early September, students will be assessed on the prerequisite skills presented in the summer assignment. The assessment will not count as a graded assignment; rather, if the students demonstrate understanding of the concepts, they will have the opportunity to earn extra credit, which will be applied during the first marking period.

For any questions regarding the optional math summer assignments, you can contact the Secondary Math Supervisor, Mrs. Laura Kurmin, at lkurmin@wallpublicschools.org.
