

Honors Algebra 2 Syllabus

Course Description/Goals:

Honors Algebra II includes the same course of study designed for Algebra II. In addition, students will develop advanced problem solving and symbol manipulation skills. Honors students will be expected to take course concepts to advanced levels of development, understanding, and justification. Honors assignments and assessments will be designed to model AP exam formatting. In Algebra II, students will build on the knowledge and skills for mathematics in Kindergarten Grade 8 and Algebra I. Students will broaden their knowledge of quadratic functions, exponential functions, and systems of equations. Students will study logarithmic, square root, cubic, cube root, absolute value, rational functions, and their related equations. Students will connect functions to their inverses and associated equations and solutions in both mathematical and real-world situations. In addition, students will extend their knowledge of data analysis and numeric and algebraic methods.

Course TEKS/Objectives:

The Algebra 2 TEKS (Texas Essential Knowledge and Skills) are organized into reporting categories, each focusing on a specific area of algebra. These categories include: Absolute Value Functions; Systems of Equations and Inequalities; Quadratic and Square Root Functions; Cube Root, Cubic, and Other Polynomial Functions. Each category contains specific standards (TEKS) that students are expected to master.
