Science Research 3: Summer Assignment – Research Plan

Your summer assignment is to write a detailed research plan for the project you will be working on during the school year. To help guide you through this process, you will receive the rubric that will be used to evaluate it, a research plan outline, and a sample research plan. These materials are designed to give you a clear idea of expectations and structure. Please use them thoughtfully as you complete your assignment.

You are free to explore any research question that interests you, as long as it can be realistically investigated in a classroom or school setting. Keep in mind that *vertebrate animals may not be used unless given special approval ahead of time*, and *human studies are only allowed in limited cases and must be approved ahead of time*.

If you're unsure about your topic or would like help coming up with a viable project idea, feel free to reach out to Mrs. Alaimo or over the summer. I am more than happy to help you get started in the right direction. Don't hesitate to ask questions at any point. I'm excited to see what you come up with!
