June 15, 2026

Dear Lakeview Community,

As a part of Lakeview School District's effort to provide students and staff with safe and accessible drinking water, 10 water outlets at your school were tested for lead on April 24, 2026. A trained technician collected samples from water outlets and the samples were sent to an accredited Pennsylvania laboratory for analysis. All test results are attached below.

Test results showed two outlets at Oakview Elementary and two outlets at the Middle-High School to have lead in water at concentrations above the action limit of five (5) parts per billion (ppb) and these outlets were immediately shut-off. The District's action plan included replacement of old/outdated fixtures as well as the installation of a lead removal certified filtration system. These upgrades have been completed.

The testing company assured the District there is no immediate cause for concern.

If you have any questions about lead in drinking water and impacts to children's health visit www.pennvestleadtestingprogram.com or you may contact Mr. Mark Kinney, Buildings and Grounds Supervisor, at m_kinney@lakeview.k12.pa.us. Other resources at your disposal are the Department of Health (DOH) Lead Information Line, 1-800-440-LEAD and the Department of Environmental Protection (DEP), Bureau of Safe Drinking Water (BSDW), Resource account, RA-EPWIINLEAD@pa.gov and phone number: 717-787-9633.

Sincerely,

Mr. Mark Kinney
Buildings and Grounds Supervisor
