

## Vision for our Graduates

At the Aerospace/Hydrospace & Physical Science High School, we envision a high school graduate who epitomizes innovation by investigating problems and designing solutions; who thinks critically and creatively; who uses their engineering know-how to better their community; who practices academic rigor while working across disciplines; who can lead and listen; who can communicate their ideas clearly and cogently to a diverse audience; who considers ethical responsibility alongside technological advancement and progress; who can fearlessly navigate the challenges of the present while imagining a future of possibility.

### An Aerospace Graduate is One Who...
