Butler County AVTS
210 Campus Lane
Butler, PA 16001
Attn: Mr. Nick Colonello

Re: Potable Water Lead Screening
Butler County AVTS
Butler, Butler County, Pennsylvania
PSI Project No. 08166803

Dear Mr. Colonello:

In accordance with your request and authorization, Professional Service Industries, Inc. (PSI), an Intertek company, conducted a lead water screening of client-defined potable water sources at the Butler County AVTS facility. PSI's sampling included 45 "first draw" samples on May 15, 2026.

PSI was given authorization to conduct the lead-in-water screening on May 1, 2026, referencing PSI Proposal 0816-473539 dated March 24, 2026.

SCOPE

Water samples were collected from the identified potable water outlets selected by the client. The samples were collected from potable water sources, including faucets, water fountains, and ice machines. Forty-five (45) "first draw" samples were collected on May 15, 2026. A "first draw" sample is defined as the first water to come out of the tap after an 8-hour period of inactivity, but no more than 18-hours. The sample locations were determined by the client.

METHODOLOGY

PSI's inspector collected a total of 45 "first draw" water samples from potable drinking water outlets on May 15, 2026. The "first draw" water samples were collected directly from water fountains, faucets, and ice machines which had been isolated from service for approximately 8-18 hours. The samples were collected directly into laboratory-supplied 250 ml bottles containing a HNO_3 preservative solution.

The samples were packed in a cooler and transmitted under chain of custody to Microbac Laboratories Inc. located at 100 Marshall Drive in Warrendale, Pennsylvania for analysis. This laboratory is a PA certified drinking water laboratory (PA Cert # 02-00257) accredited by the PA Department of Environmental Protection (PA DEP). The samples were analyzed for lead content by laboratory method EPA 200.8.

While the EPA drinking water recommended 'action level' for lead in Schools for drinking water at the tap is 0.020 milligrams per liter (mg/L) or 20 ug/L or 20 ppb. The EPA's "Lead and Copper Rule" (LCR) for Public Water suppliers (5CFR26460-26564) established an Action Level of 0.015 mg/L (15 ug/L or 15 ppb) for lead based on the 90th percentile level of tap water samples (1 L samples). The EPA and PA DEP proposed new Action Level will be 10.0 ppb, effective in November 2026.

Public Water Supply Testing vs. Testing at Schools

- It is important to note that the lead testing protocol used by public water systems is aimed at identifying system-wide problems rather than problems at outlets in individual buildings. Moreover, the protocols for sample size and sampling procedures are different. Under the LCR for public water systems, a lead action level of 15 ppb is established for 1 L samples taken by public water systems at high-risk residences. If more than 10 percent of the samples at residences exceed 15 ppb, system-wide corrosion control treatment may be necessary. The 15-ppb action level for public water systems is therefore a trigger for treatment rather than an exposure level.

- EPA recommends that schools collect 250 ml first-draw samples from water fountains and outlets, and that the water fountains and/or outlets be taken out of service if the lead level exceeds 20 ppb. The sample was designed to pinpoint specific fountains and outlets that require remediation (e.g. water cooler replacement). The school sampling protocol maximizes the likelihood that the highest concentrations of lead are found because the first 250 ml are analyzed for lead after overnight stagnation.

- Some other local, State (such as NY State), and other agencies have adopted the more conservative lead action level of 15 ug/L (ppb).

Of the forty-five (45) samples collected, lead was detected above the analytical detection limit in thirty-five (35) of the samples. Of the 35 samples where lead was detected, one (1) had a lead concentration above the EPA upper limit of 20.0 ppb and one (1) sample was above the EPA and PA DEP Action Level of 10.0 ppb. Sample was BVT-47, which was collected from the Dining Room sink had a reported concentration of 21.0 ppb, and sample, BVT-40, which was collected from the espresso machine had a reported concentration of 10.4 ppb. The Dining Room sink was isolated and removed from service. The espresso machine was also isolated, the filter was replaced, and the outlet will be re-sampled prior to use. Two other samples, BVT-45 (kitchen hose bib 1) and BVT-46 (kitchen hose bib 2) had reported lead concentrations above 5.0 ppb but below the Action Level of 10.0 ppb and will continue to be monitored. Sample BVT-15 (Welding) was damaged in transport to the lab and will also be re-sampled.

CONCLUSIONS

The EPA's "Lead and Copper Rule" (LCR) for Public Water suppliers (5CFR26460-26564) established an Action Level of 0.015 mg/L (15 ug/L or 15 ppb) for lead based on the 90th percentile level of tap water samples (1 L samples). EPA has recommended that schools

collect 250 ml first draw water samples with an action Level of 20 ppb. The EPA and PA DEP proposed new Action Level will be 10.0 ppb, effective in November 2026.

RECOMMENDATIONS

The EPA recommends that "at a minimum, every outlet that is regularly used for cooking and drinking should be sampled." Periodic, routine testing is recommended. Regular testing can be valuable because it establishes a record of the water quality.

If any changes are made in the plumbing system, PSI recommends testing the outlets prior to regular use.

WARRANTY

The field observations, measurements, and research reported herein are considered sufficient in detail and scope to form for the analysis of the selected water quality parameters. The investigation and conclusions presented herein are based upon the subjective evaluation of limited data. They may not represent all conditions at the subject site as they reflect the information gathered from specific locations. PSI warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted environmental investigation methodology and only for the site described in this report.

The water quality sampling and analysis has been developed to provide the client with information regarding select parameter concentrations in the water samples collected at the subject property. It is necessarily limited to the conditions observed and to the information available at the time of the work.

Due to the limited nature of the work, there is a possibility that there may exist conditions which could not be identified within the scope of the assessment or which were not apparent at the time of report preparation. It is also possible that the testing methods employed at the time of the report may later be superseded by other methods. PSI does not accept responsibility for changes in the state of the art, nor for changes in the regulations. PSI believes that the findings and conclusions provided in this report are reasonable. However, no other warranties are implied or expressed.

This report for the above referenced property represents the product of PSI's professional expertise and judgment in the environmental and industrial hygiene consulting industry. This report is certified to, can be relied upon by, and has been prepared for the exclusive use of the client.

PSI appreciates you selecting our services for your needs. Please contact us at 412-922-4001 x 0383 should you have any questions regarding this report.

Respectfully submitted,
PROFESSIONAL SERVICE INDUSTRIES, INC.

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac Laboratories Inc., Pittsburgh Division. If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed above.

I certify that all test results meet all of the requirements of the accrediting authority listed within this report. Analytical results are reported on a 'as received' basis unless specified otherwise. Analytical results for solids with units ending in (dry) are reported on a dry weight basis. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories. The reported results are related only to the samples analyzed as received.

Customer Relationship Specialist

Bridget Gray

Wednesday, May 20, 2026

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac Laboratories Inc., Pittsburgh Division. If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed above.

I certify that all test results meet all of the requirements of the accrediting authority listed within this report. Analytical results are reported on a 'as received' basis unless specified otherwise. Analytical results for solids with units ending in (dry) are reported on a dry weight basis. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories. The reported results are related only to the samples analyzed as received.

PROFESSIONAL SERVICES

ENVIRONMENTAL DEPARTMENT PERSONNEL EXPERIENCE

David Antis

Environmental Technician, Pittsburgh, Pennsylvania

Education

BA/Environmental Studies and History/Washington and Jefferson College/2018

Certifications/Registrations/Technical Training

Pennsylvania Asbestos Building Inspector/Management Planner #063781
West Virginia Asbestos Inspector #AI10856
West Virginia Asbestos Air Clearance Monitor #AA002868
Ohio Asbestos Hazard Evaluation Specialist #ES547739
NIOSH 582E, Sampling and Evaluating Airborne Particulate Matter
OSHA 40 Hour Hazardous Waste Operations & Emergency Response Training

Professional Experience

Mr. Antis has 4 years of professional environmental experience, he started as a Field Chemist performing on-site management of customers hazardous wastes. His desire to continually learn more has helped him gain experience in diverse areas. Mr. Antis has recently performed several asbestos and hazardous materials surveys and abatement monitoring of several school districts and universities across the State of Pennsylvania. He is proficient performing indoor air quality studies as well as preparing technical reports and interpretations.

Representative Project Experience

- West Virginia University, Morgantown, West Virginia
- Turner Construction, Various Sites
- Verizon Central Offices, Various Sites
- Raven Services JV – Morehead Federal Building and Federal Courthouse
- West Liberty University, West Liberty, West Virginia
- Point Park University, Pittsburgh, Pennsylvania
- Carnegie Mellon University, Pittsburgh, Pennsylvania
- Pennsylvania State University, Various Projects
- Catholic Charities, Pittsburgh, Pennsylvania
- North Hills School District, Various Sites
- West Allegheny School District, Various Sites

Years Experience with other firms: **3**

Year started with PSI: **2022**
