Where High School is Personal

Located in one of the most culturally diverse neighborhoods in Indianapolis, George Washington values diversity, community, and connection for the sake of advancing you toward your goals. Our principal and faculty take the time to get to know your personal history, career aspirations, and other memorable facts. Whether you want to go to college, get straight to work, or join the military, advisors and counselors who get you will keep you in touch with the purpose behind the choices you make every day. Corporate partners, who offer paid internships and authentic industry experiences, help make your dreams that much easier to realize.

Enroll in one of George Washington's three Academies and you'll quickly zoom in on one of seven technical education pathways. Each one features corporate partnerships with top Indiana employers and the potential to earn certifications and dual credit. What's more, GW's size ensures you receive personal guidance on how best to connect your high school life to your long-term goals.

Advanced Manufacturing Academy

Students in the **Automation and Robotics Pathway** explore electrical, mechanical, and computer technology and gain hands-on experience as they learn to install, maintain, modify, and repair mechatronic systems, equipment, and parts.

Creative students with a passion for problem solving in teams use the **Design Technology Pathway** to prepare for careers in industries as varied as engineering and fashion. AutoCAD certification is an option.

Work-based learning and industry partnerships may lead to paid internships with top employers such as Eli Lilly & Company and Ascend Indiana, which make it very easy to envision your future self on the job.

Business & Finance Academy

Imagine making business decisions at a major corporation or a company of your own. In partnership with the Indiana Farm Bureau, the **Business Administration Pathway** can help you get there.

Want to apply your math skills to making money grow? The **Banking and Investment Pathway** provides hands-on experiences in partnership with First Financial Bank.

Every manufacturer who moves goods from creation to consumption needs experts to find efficiencies every step of the way. The **Supply Chain Management Pathway** offers logistics certifications that put recent grads a step ahead.

Information Technology Academy

Ever wonder how computers talk to each other? What makes email, social media, multiplayer games, and global information sharing possible? The **Networking Pathway** will stoke your curiosity about the inner workings of computer networks and prepare you for an IT role.

If you want to develop the games, apps, and other software programs that run on desktops, cell phones, and other machines, check out the **Software Development Pathway**. For their capstone experience, students produce a working software product that adheres to industry standards.

"George Washington students come from different sides of the city and different parts of the world, but when I look at them, I see a family."
