Prior to the winter break, Campus H.S. staff were provided the opportunity to review and provide input on interior finishes for the high school. Staff reviewed samples of LVT floor tile, ceramic wall tile, rubber base, and epoxy resin flooring to ensure selections align with both functionality and aesthetics for the remodeled spaces. Staff selected their preferred options for each finish (see pictures), which will be considered by the BOE as the project moves forward.

In addition, the Alloy architectural team and Hutton Construction are working on the final design plans for the Career and Technical Education (CTE) building. This phase of work includes refining layouts, finalizing materials, and ensuring the design aligns with instructional needs and project goals as the project moves toward the construction phase.

~ Jeff Hersh, Superintendent
