

This week, we continue to see progress across several of our capital improvement projects. The framework for the solar panels at the Transportation Facility has been installed, and the panels will be in place soon! This project is very close to being completed.

At Campus High School, we are preparing for similar work. The district will receive bids today for roof repairs on the natatorium, which need to be completed before solar panels can be installed there. Contractors are finalizing plans to ensure the structure is ready for installation once the roof work is done.

~ Jeff Hersh, Superintendent
