

Alloy Architecture has been actively developing design concepts for the locker rooms at Campus High School. Representatives from Alloy again toured the facilities on August 14 to gain a clearer understanding of the current conditions and challenges. Their visit will help ensure that the designs meet the needs of our students and staff while aligning with the overall vision for our facilities improvements.

In addition, the district received two proposals to add solar power at both the Glenn Crum Natatorium and the Bob Curless Transportation Building. The Board of Education will review these proposals at its meeting on Monday, August 18, and decide whether to move forward with implementing alternative energy in the district.
