

As I write this essay I will try to explain to you how I believe Michigan City and the rest of the world will be like in the year of 2026.

Transportation will be a type of car that will hydroplane or travel in the air completely. There will also be buses and taxis as now for people who would not have a car. Also you will be able to buy a power pack just for your enjoyment.

In education there will be no more schools but a computer at everyones house in which you can learn at your own pace. Also will will no longer use English measurements and will use metric.

Our energy will be a completely different source,

probably solar energy or a new energy not yet discovered at this time, as most of our natural resources will have been used.

The government and laws will be just the same as now but everything will be alot more advanced such as weapons and machinery.

Religion will probably be of just one type and everyone will believe in the same God or what ever.

There will still be many sports and recreational games to play, but mostly all of them will be an entirely different game.

The housing will all be automatic appliances but all the houses wont look the same. Most of the items will either fold up into a wall or go underneath the

floor.  
Michigan City itself will  
be entirely different and will  
be joined by another city and  
will probably have a different  
name.
