

4-20-76

The kinds of energy that is used to heat homes probably won't change much either.

Our form of government will be the same. As for laws there will be a few added and changes will also be made.

The Religions in Michigan City will be the same, for once you are born to one faith, you keep this faith.

By the year 2026 I think there will be some type of sports arena in this area. As for sports, they will be much the same. There will always be some type of recreation because of the lake such as fishing, boating, swimming and other water sports.

Housing will be much the same as in 1976 but a few more apartments will be added.

In the year 2026 I will be 66 years of age. In this span of time I will have seen many changes in Michigan City and in the world. Some of the things that might change I will cover in this essay.

Transportation will probably not have changed much but a different type of fuel will be used such as solar power, or they might put coal to use in some cars, hovercrafts might be used.

Education will be much different because the teacher is going to be a machine, such as a television and tapes that will show the students instead of the student reading about the subject. This will keep the student more interested in his study.

The energy Michigan City has will not change to any other type, it will always be electricity.

Michigan City will have  
expanded south and west  
as far as it possibly can.  
These are my predictions  
for the year 2026
