would like to be a forensic scientist. So pharmacology and toxicology are the most important parts of our department to me and I would like to do some kind of forensic chemistry or forensic toxicology as my ultimate career goal. I'm interested in forensic science because growing up, I loved TV shows like Bones and Forensic Files. They're shows that I watch to this day on repeat all the time. I go to sleep, do Forensic Files almost every night. And I just always wanted to be a part of that crime solving puzzle, especially on the science end. I've always been passionate about science. And so actually discovering Bones when I was in the sixth grade is what made me want to be a forensic scientist. I want to get my PhD because when I decided that I wanted to be a scientist, I knew that I normally like to be the best at whatever I can do and to become the best scientist you can be, the highest degree you can get is a PhD.
