Visit Resolution: 12/6/22 s.d. Worked with Chris and Raquel on control issues with kitchen exhaust fan. Determined that expansion module was causing failure. Raquel to order replacement. Checked operation of new outdoor air dampers on AHU 1-3. Determined that Ahu's 1 and 2 need air flow monitors replaced. The kitchen MUA and exhaust hood's control panel has a bad PCX that is making the other two Controllers lock up and stop
Communicating with each other. This is because of the SA bus and how they talk. PCX-2 SA bus is no longer Plugged in with the other 2. This will Allow the other two controllers to work. We will look into finding a PCX to replace the bad one. 6-27-23 C.C. Kitchen MAU and Exhaust Hood Control Panel Update I wanted to inform you that the issue with the kitchen MAU (Make-Up Air Unit) and the exhaust hood control panel has been successfully resolved. I have replaced the PCG (Primary Control Gateway) along with the 2 PCXs
(Primary Control Extensions). The new controller installed now features a touch pad and a screen display, offering improved functionality. However, I kindly request that nobody tamper with or experiment with this new function, as it is essential to maintain its proper operation. With the controllers replaced, it is advisable to perform a thorough check of all inputs and outputs on the new controllers to ensure everything in the field is functioning correctly. I have already identified one device that requires attention: the cooler temperature.

Problem Description: CHECK OUT RTU'S 5,9,10,13, UNITS NOT OPERATING PROPERLY Visit Resolution: 8/21/23 s.d. Asked to check operation of Rtu's 5,9,10,13 which were not operating properly. Units had tripped out due to previously diagnosed issues. Fan motors,dampers and compressors. Performed power cycle on units to reset safeties. 8/22/23 s.d. Checked on communications errors on Rtu's 5 and 9. Removed and reinstalled communication wire on RTU 9 and was able to get system back on line. Both condenser fan motors were seized. I was able to free up both motors but found bearings badly worn and noisy. Replacement of both motors required. Checked on RTU 5 and was not able to restore communication. Control tech to check after system update. System may have a bad trane controller. This will need to be done by trane technicians. Checked RTU 13 and found error code on main board . Reset and was able to get back on line
