

Academic Teams

Academic teams in middle school are designed to foster a collaborative learning environment where students can receive more personalized attention and support. These teams allow teachers to better coordinate their efforts in addressing the diverse educational needs of students, enhancing both academic and social development. Additionally, academic teams help create a sense of community and belonging among students, which can improve engagement and overall school experience. *Teams will meet monthly to discuss interdisciplinary instruction, student academic and social development, and events and celebrations.*
