

Lexmark Printer install on Mac

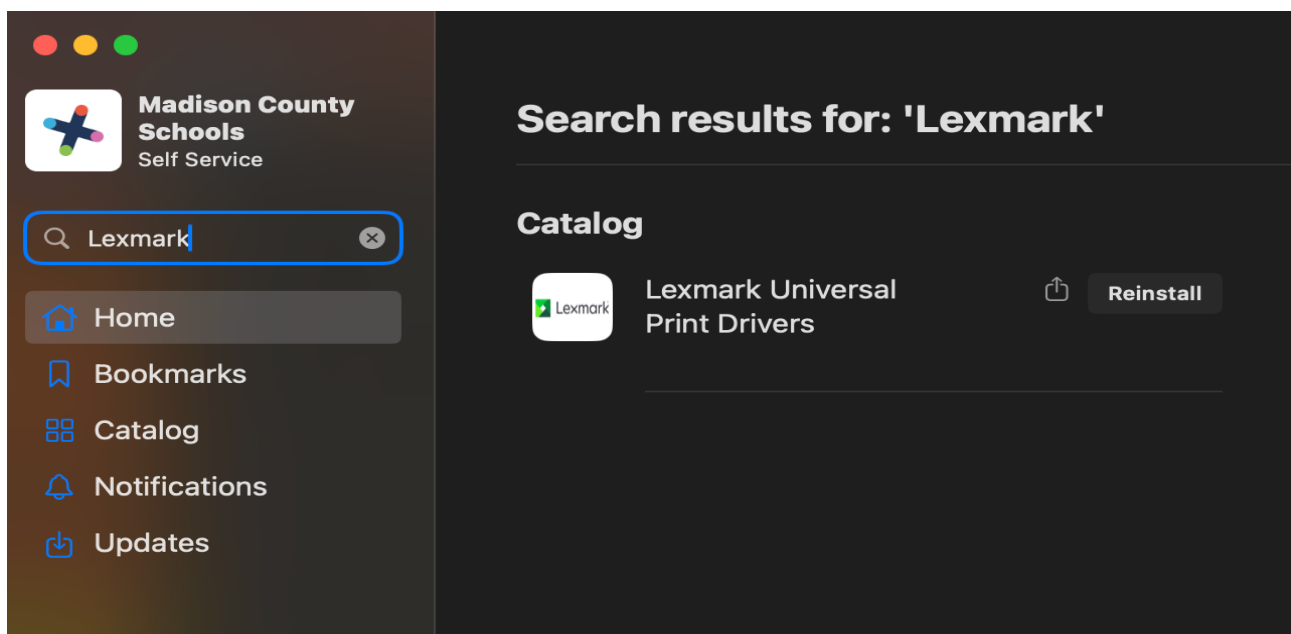

1. Locate “Launchpad” or now called “apps” icon like the one below, from the dock. If you do not see it in your dock at the bottom of the screen, you can press F4 and type launchpad then press return, and that should bring it up as well.

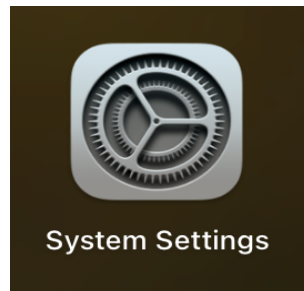

2. Now within Launchpad you will want to locate the “Self Service App” and the new icon looks like the one below.

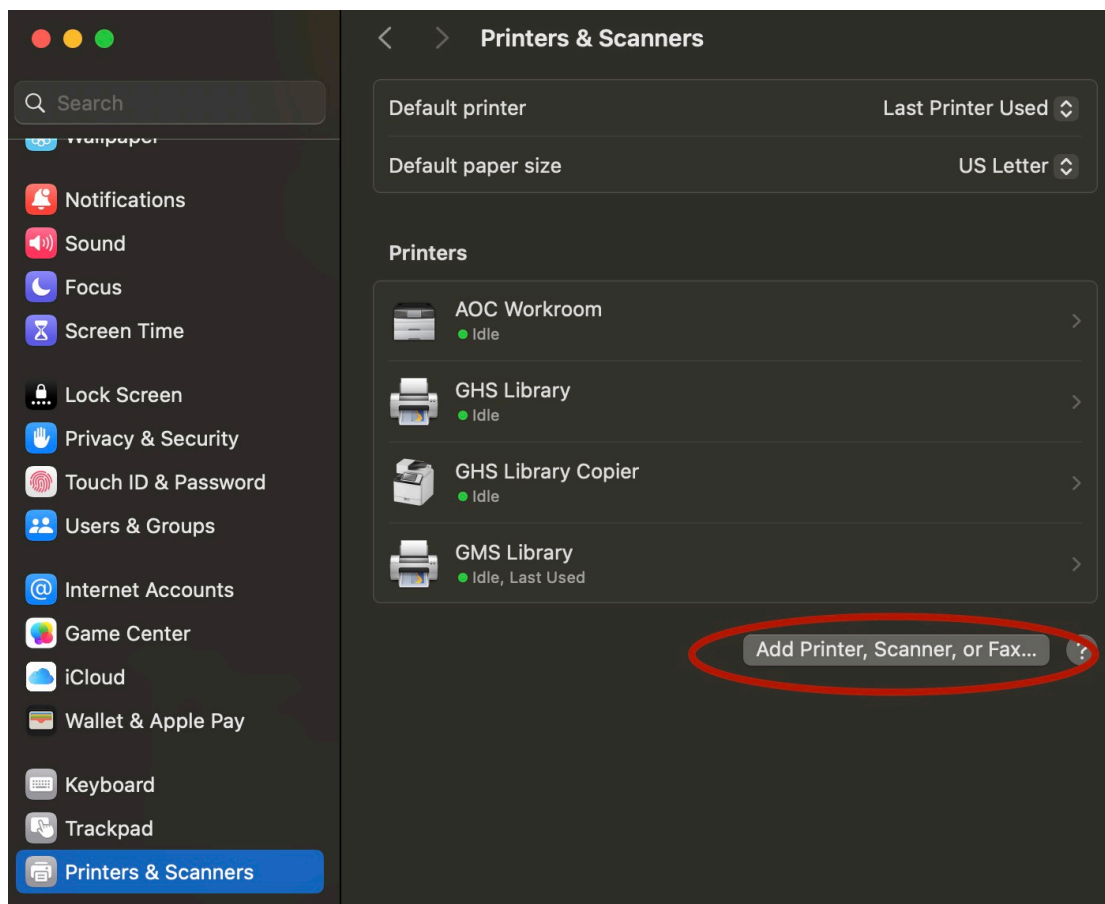

3. Once you open Self Service from the launchpad, type in the search bar “Lexmark”. Now click install and once completed you can close Self Service.

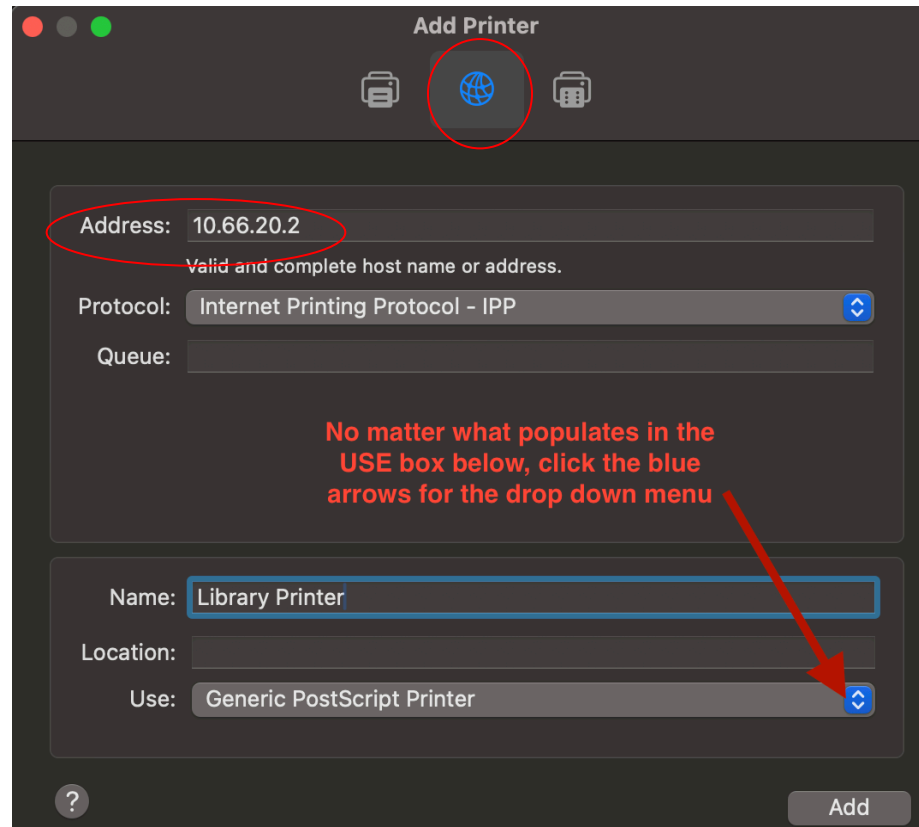

4. Now you will want to go to your Launchpad or dock at the bottom of the screen to look for the System Settings icon and then click on it.

5. Once System Settings is open, scroll to the bottom of the left-hand side and click “Printers and Scanners”. Once you have done so you will see your printers listed on the right side. At this point you will want to click “Add Printer” in the lower right-hand side of the window.

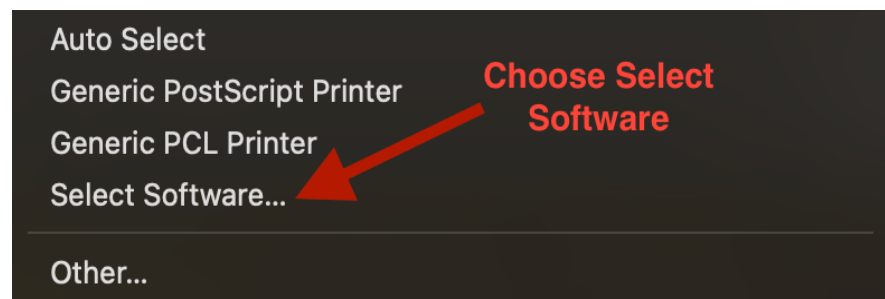

6. After clicking add printer you should see the following window. Here you will select the globe icon in the top center of the window and then type the IP address from the label on the printer in the Address field. You will then want to click the blue drop down arrows in the use box to select the driver.

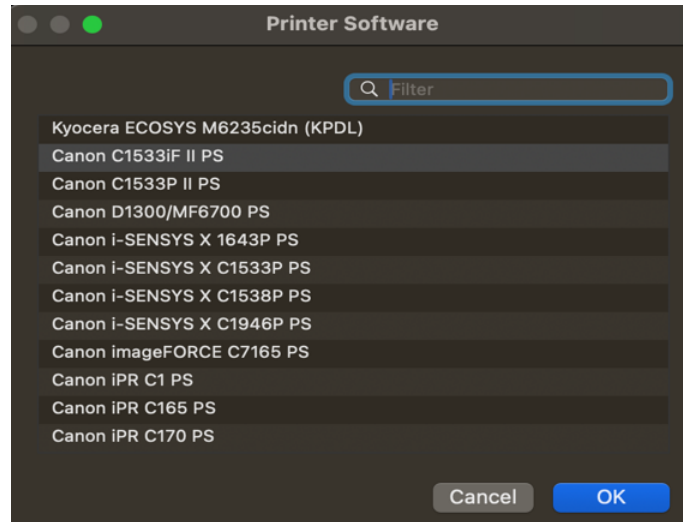

Note: You can name the printer anything you want in the name field

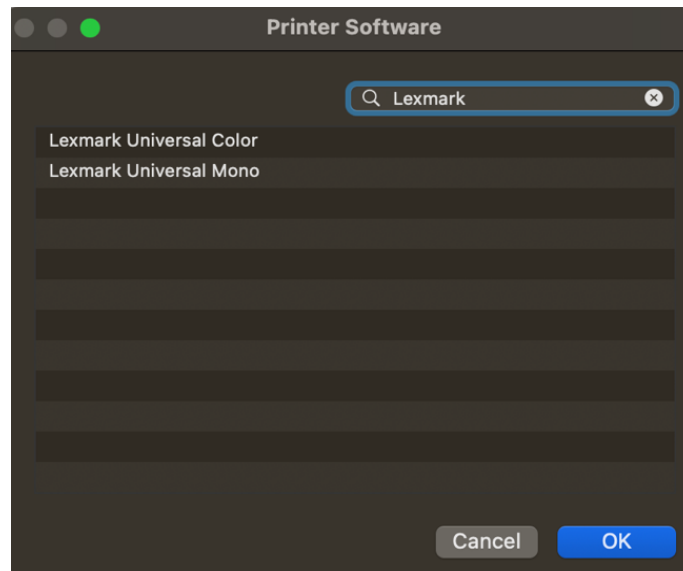

7. After clicking the drop down, you will choose “Select Software”

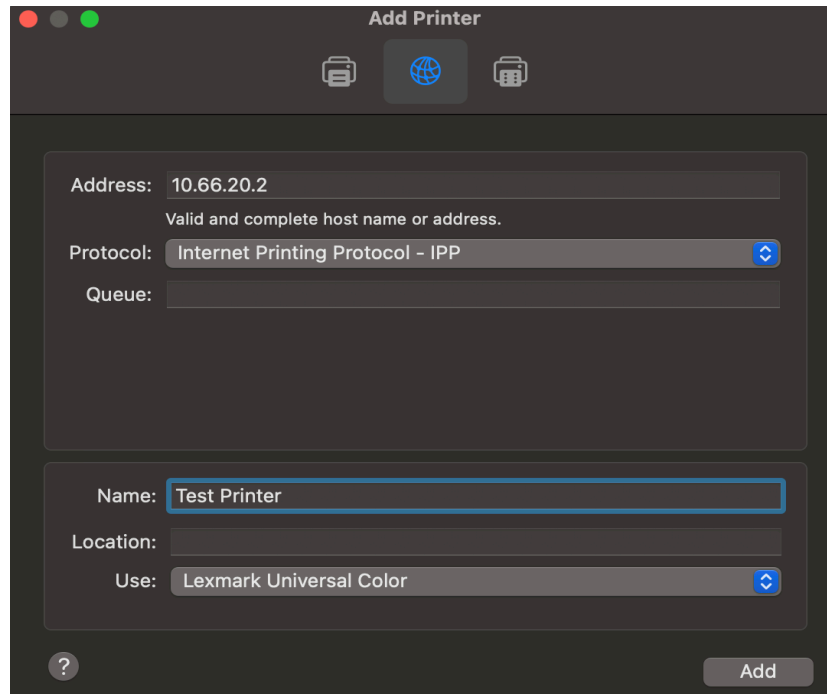

8. After choosing the select software a box with a long list of printer models of all types should pop up like pic below.

9. Now type in the search box "Lexmark" and it will then show two options. Both are universal, but one is for Color printers, and the mono is for the B/W printers. Choose whichever you are installing and click "OK".

10. Once you have selected the correct software you will then see the following screen in which you will click “Add” in the lower right corner.

11. Finally, you will hit “Continue” on the window that comes up saying setting up Printer, and it will take a few seconds and finish up installing the printer. At this point you should be done and ready to print.
