Connections ✣ Curriculum ✣ Opportunities

We have an update regarding the Davison High School fire alarm system. In a November publication of "Rumor Has It," we addressed a failed inspection and false speculation that the alarm system was not working. While we had a fully functioning fire alarm system that responded when activated and alerted 911 to dispatch emergency response, inspectors wanted added strobes and alarms in six rooms/spaces, and repairs to the lighting for an exit sign. Additional paperwork was needed and a flow valve on the suppression system also needed to be changed. Those changes were made and we are happy to report that we successfully passed our fire and building inspection on Monday, December 29, at Davison High School. The inspection was required to finalize the process for the upgrade to the new fire alarm system, which totaled around $1.5 million.
