

LSU Health Shreveport Research Expansion Project

Audio	Video
Oren Rom: Welcome to the future of LSU Health Shreveport.	Drone quickly flies towards Mall St. Vincent – Oren Rom opens the door and speaks to the viewer. Montage of Mall Interior
Kevin Flood: We are talking to you right now from the former Sears at Mall Saint Vincent, because the LSU Health Shreveport Foundation purchased the former Sears with big plans in mind to help LSU Shreveport grow its research in order to make our lives better.	Animation of the original Sears Blueprint. Kevin Flood speaks inside the Mall to viewers. Montage of LSUHS Research.
Rom: There's no one more excited about these folks than I am. We are in dire need for space. This is going to be the home for the next 40 new investigators that we are talking about. The best investigators in the nation. We need that space. We need it now. And we don't need just any space. We need class A space for class A scientist. And this facility is going to be a class A state of the art research facility.	Oren Rom, PhD, speaks on camera inside the mall to viewers. Montage of drone shots of LSUHS Properties. Rom speaking on camera. Montage of Mall St. Vincent interior. Animations of architect renderings.
Flood: And so our intention is to transform this wonderful former Sears department store into a state of the art research building that will help us to grow our research, to make new discoveries in both cancer and cardiovascular research, to ultimately help our citizens in North Louisiana.	Animations of architect renderings. Flood, speaking on camera.
Rom: The main mission here is to improve human health and patient care. Our discoveries, whether it's on the cardiovascular side or on the cancer side, the number one goal is to improve patient care and human health. Why should people specifically care and Shreveport that you recruit an investigator. It's basically like opening a small business. Each one of them is coming with a team of at least four and sometimes even 10 or 15 highly skilled individuals. So we are talking about well compensated, well-educated individuals that are coming to this community that not only to going to expand the research extensively, but also to have significant economic impact on this community.
