

THE H-AI-H FRAMEWORK

The Human-AI-Human model ensures technology amplifies rather than replaces human intelligence and empowerment.

1. HUMAN INPUT

40% — Inquiry & Goal Setting

Starts with human curiosity. Focus on defining specific research questions, setting learning objectives, and outlining the scope of AI assistance.

2. AI PRODUCTION

45% — Generation & Assistance

AI tools generate drafts, search for information, organize data, and provide initial analysis. This step supports, but does not complete, the academic task.

3. HUMAN REFLECTION

15% — Verification & Insight

Human review of AI output. Critical assessment of accuracy, context, and bias. Humans integrate AI findings to develop original conclusions and final analysis.
