TECHNOLOGY SPORTS ARTS MUSIC LIFE SKILLS

# WHAT DO WE OFFER?

At International English School of Castellón we are proud to present our complete program of extracurricular activities. Designed to complement the academic curriculum and foster the students' personal growth, this program offers a wide variety of exciting and enriching options.

## WHO ORGANISES IT:

Our program is organised and coordinated by a team of professionals committed to students' comprehensive development. This team includes teachers, specialists in specific areas, administrative staff and highly trained activity leaders. They all work together to make sure every activity is safe, educational and fun.

## VARIETY OF ACTIVITIES:

We have a wide range of extracurricular activities, adapted to the different interests and talents of our students. These activities cover areas such as sports, arts, music, technology, amongst others.

## HOW TO SIGN UP:

- You can register via the following link: EXTRACURRICULAR ACTIVITIES 26-27 REGISTRATION FORM
- At the end of August and before the new academic year begins we will send out a reminder with the regtistration form.
- Payment terms will be confirmed later on.

# ART CLUB

Children usually live in a world of words that become the main structure of thought. However, they have the natural ability to see and touch, but this ability is often used to identify objects, to translate experience into words. It is essential to stimulate the development of a visual language that allows the development of children's creativity.

Our Art Club allows students to produce original art with an array of different techniques. The main objective is that they enjoy the process of creation. While doing so, they will be exposed to concepts to be further developed, whether they take an art career or continue to be involved in the arts during their soon coming secondary education. Even while having fun on a blank page, concepts such as perspective, tone, colour, volume, texture, pattern are analysed lightly and therefore begin to enter the students mind.

# BALLET

This project is aimed at our youngest Early Years and Primary school students who want to learn to dance. These classes are a very fun introduction to the world of ballet, preparing them for a more comprehensive dance program in the coming years. The activity is led by María José Redelico, who has extensive experience in teaching ballet and has been working with us for 10 years.

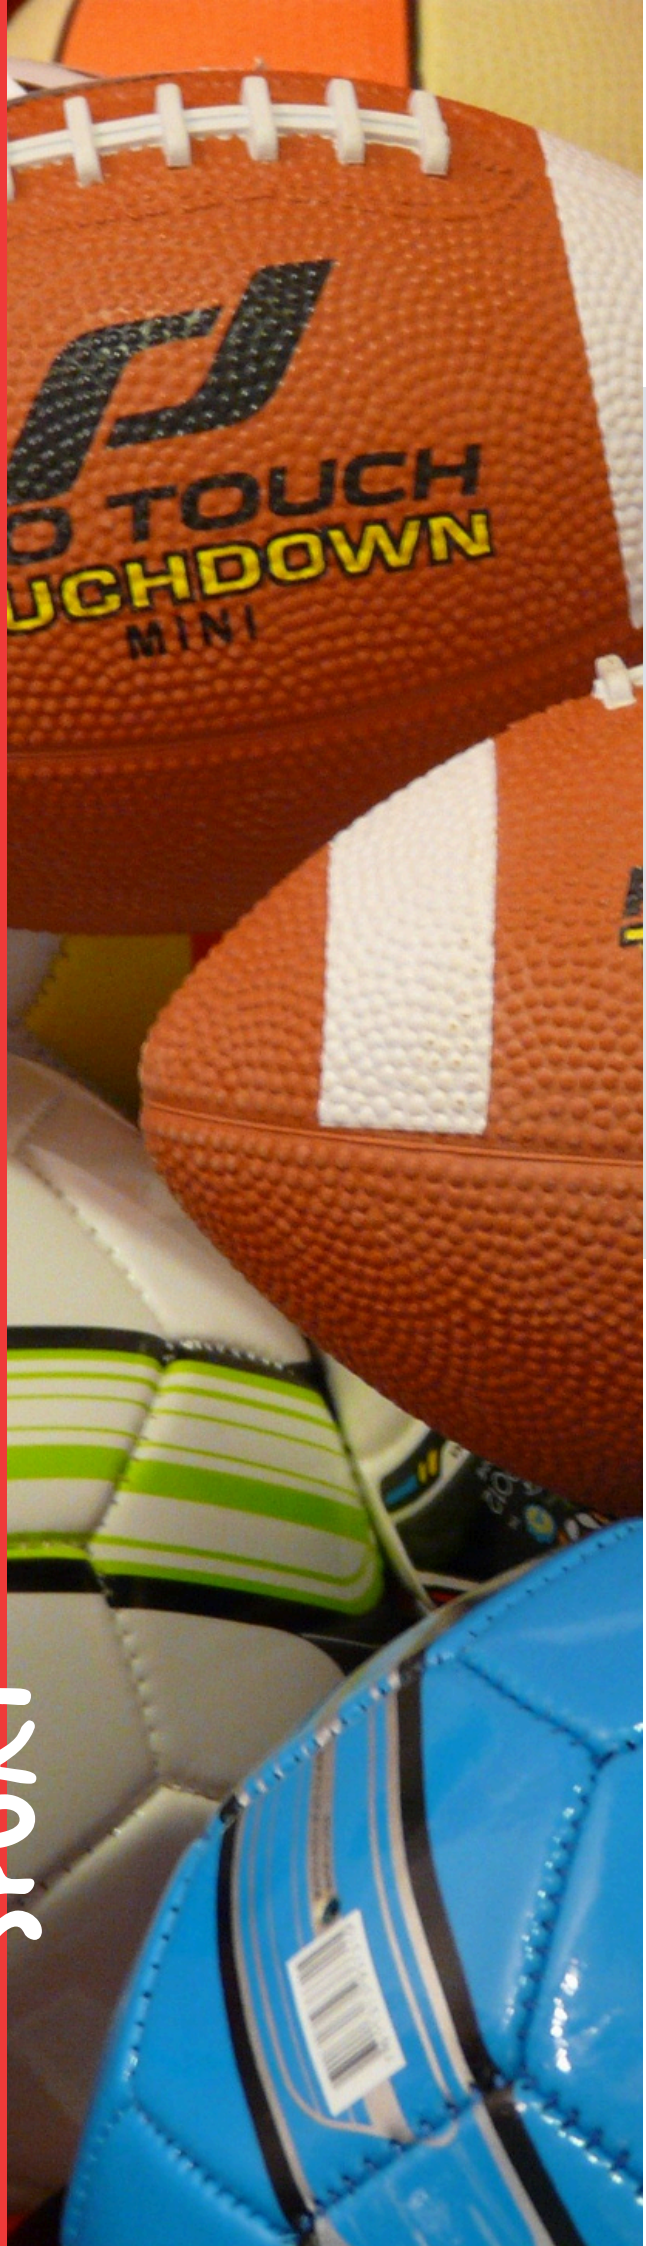

Goals:

- Promote the practice of this artistic discipline and its dissemination to young children.
- Receive adequate practical and theoretical training in weekly classes that allow the student to enjoy and learn to dance this elegant style of classical dance and great body beauty at an elementary level.
- Educate the student for the practice of classical ballet taking into account the group and profile of the student and the time spent in lessons.
- Promote classical ballet through performances, auditions and concerts, where the student enjoys dancing which is the main purpose of this artistic discipline.

FROM 28-09-2026
TO 18-06-2027

SPORT

# MULTISPORTS

This activity provides the opportunity of playing a variety of sports so that students can choose the one that best suits their possibilities and/or interests. In addition, with this activity children acquire motor, expressive and creative skills that can be applied in the student's daily life as well as in sports practice and can be useful for leisure, maintenance or even performance.

The objectives pursued with this activity are mainly to ensure that students acquire a series of basic motor skills through participating in a variety of sports. These basic skills are: movements, jumps, turns, dribbling, passes and receptions, promoting sports as leisure, learning to respect all the components of the game and encouraging teamwork, learning about the materials and the fields of play necessary to carry out the type of sport proposed for each month and acquire knowledge of the body itself: segments, laterality, balance...

TO 18-06-2027

SPORT

# SWIMMING

The swimming sessions are held at Aigua Escola, a family business with a team of trained and experienced professionals that carry out fun and entertaining swimming activities.

At Aigua Escola, professionals and specialists in the aquatic environment offer swimming for children through playful and quality teaching methods, combining learning and fun.

They work from initiation level to high levels of all styles, adjusting to the objectives and content that they have programmed for each group and following a personal assessment of each child in their learning process.

The classes last 45 minutes and are held in their large pool where the water temperature is at 30 degrees and disinfected by means of saline electrolysis (salt water).

The classes are based on a work method in which they seek the progression and improvement of the different swimming styles but always in a fun and playful way.

TO 18-06-2027

SPORT

# FOOTBALL

Our extracurricular football activity is taught by professional coaches from CD Castellón. This is possible thanks to the close relationship we have established with the club, which allows us to offer top-level training and an unbeatable sporting experience for our students.

The activity is an excellent opportunity for children to develop their physical, mental, and social skills in a fun and educational way. The youngest students will be taught the fundamentals of football, coordination, and body control through exercises and ball games. For older students, the focus will be on perfecting techniques and tactics. Additionally, for older students, this activity can be an excellent way to complement the football training they may already be doing outside of school.

All classes will be held comfortably in our school facilities.

TO 18-06-2027

SPORT

# CHESS

Chess is a sport for two players and one of the most popular board games in the world. It is considered not just a game, but an art, a science, and a mental sport. This activity is run by Daniel Vaquer, a highly experienced teacher who has taught chess to young students in many different schools.

Through games and training the student will be able to learn about the development of the game as well as its rules and objectives. Chess also helps boost mathematical development, strategic thinking and concentration.

Some of the objectives that are pursued in this activity are handling the geography of the board, relating and recognising the diagonals and the different sectors, learning about each piece, relating their symbolisms by size and significance in the set and learning to carry out basic opening strategies. In addition, students take part in both internal and external competitions.

SPORT

# BASKETBALL

Looking for an activity where your child can stay active, have fun, and grow? In our basketball activity, learning and enjoyment go hand in hand!

Through dynamic sessions tailored to every age and skill level, students will master the core techniques of the game: dribbling, passing, shooting, and defense. We blend technical drills with fun games and real match situations, ensuring that every player can participate, progress at their own pace, and—most importantly—have a great time.

Beyond the court, basketball is the perfect tool for building life skills. We focus on cultivating essential values that stick with them forever:

- Teamwork: Learning that we achieve more when we work together.
- Respect: For teammates, opponents, and coaches alike.
- Effort & Confidence: Overcoming challenges and believing in their own potential.

TO 18-06-2027

MUSIC

# MUSIC & MOVEMENT

During the extracurricular sessions, activities are carried out combining music with rhythmic movements aimed at developing coordination and rhythmic capacities. This activity is led by our music teacher, Rosa Bellés, who has been successfully running it for several years.

Through this extracurricular activity, the student is given the opportunity to carry out an artistic practice at an early age, which helps their integral development through music, and contributes to the development of all the basic skills established by the Early Years education curriculum.

On the other hand, activities are carried out so that the student learns about and gets to know some small musical instruments such as the piano, drum and xylophone and takes the first steps towards playing them. In addition, group activities promote early socialization and the ability to relate to others.

Some of the activities that are carried out are: playing the maracas and drums to the rhythm of the music, singing easy songs where they learn the musical scale, coordination games with different parts of the body or "interpretation" of very easy songs with instruments.

TO 18-06-2027

# ORCHESTRA

The orchestra, organised and run by David Churcher, is currently formed of string players from the music school but is open to those who have classes with the school and those from outside.

The aim is to give children an opportunity to enrich their musical experience by exploring works for ensembles and playing music together on a regular basis. This hones their listening skills and fosters the skills of cooperation and respect.

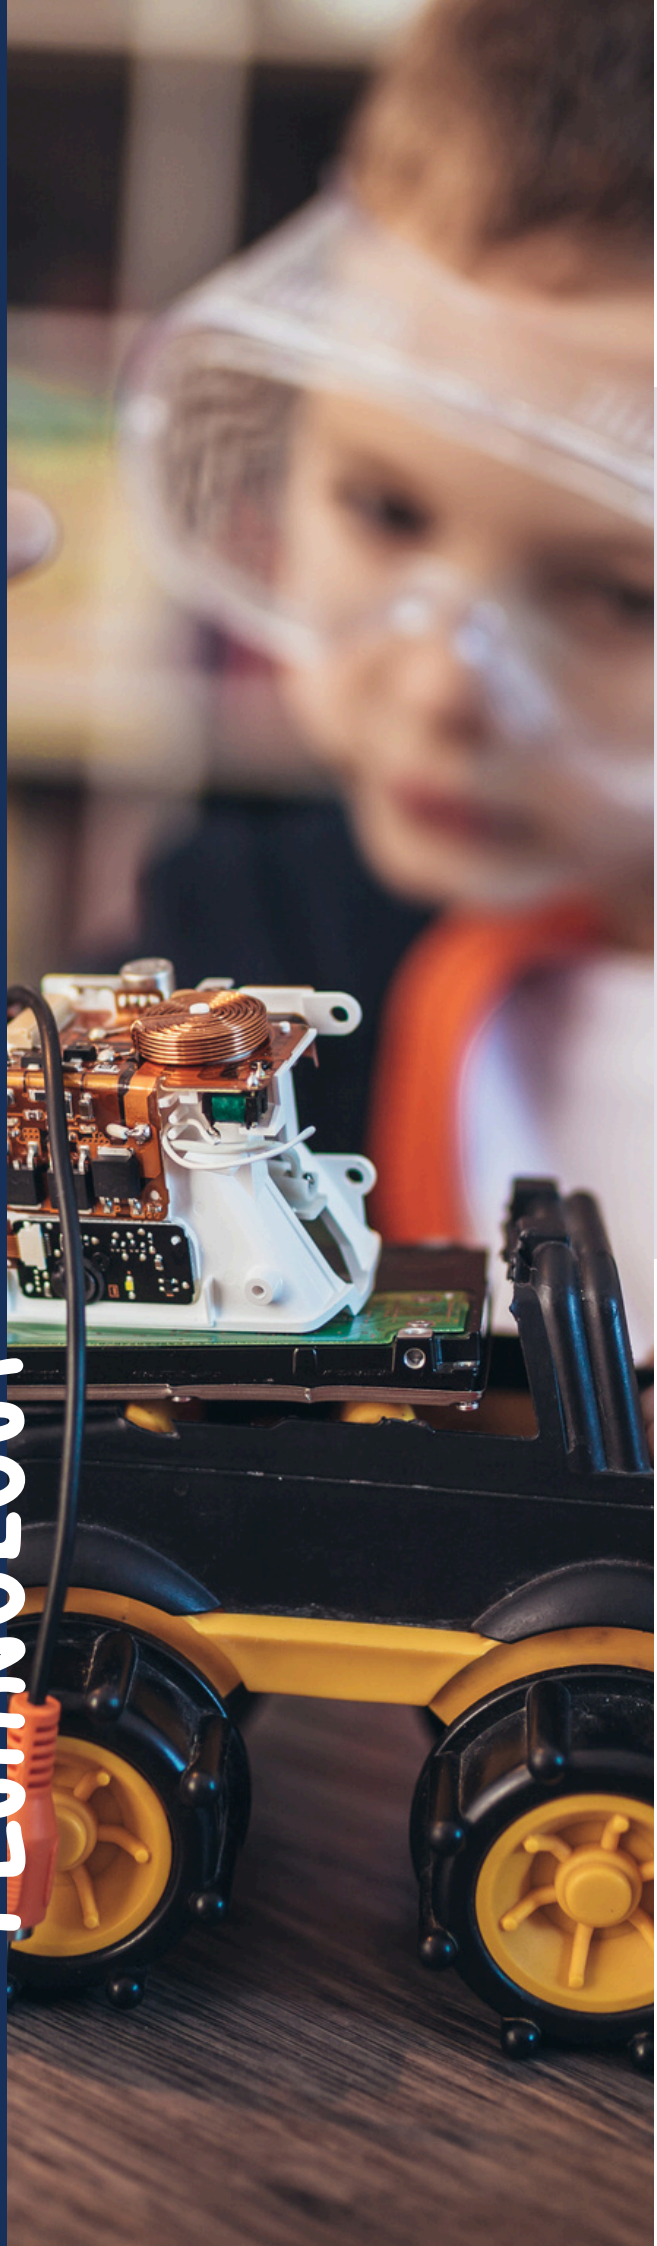

The orchestra is currently open to players from Year 3 upwards. In the future, we aim to open up the orchestra to include other families of instruments.

TECHNOLOGY

# ROBOTIX

Activity designed for young people to develop the skills and competencies of the 21st century through LEGO Education resources, while having fun learning science and technology.

Robotix 0 (3 to 6 years old)
This activity, aimed at the little ones, will be able to enhance their psychomotor and communication and skills in the first stage of childhood as well as their level of mathematics through games provided by LEGO Education resources and tools.

Robotix 1 (6 to 10 years old)
The objective of ROBOTIX I is to arouse the interest of students in science and technology through an educational activity where they build and program robots as a team in a highly motivating and fun environment.

| AGES | TIMES | PRICE |

**DATES**

FROM 28-09-2026
TO 18-06-2027

# CODING

The Creative Coding Club is built around one simple idea: programming is a tool for creation. Rather than offering a traditional coding class, we provide an inspiring space where students experiment, design, solve problems, and learn by making.

Students will discover how code can be used to design games, create digital art, build interactive experiences, and develop exciting projects that seamlessly blend creativity and technology.

Our extracurricular curriculum is centered on four engaging areas of exploration: Scratch, BBC micro:bit, Creative Coding and Robotics.

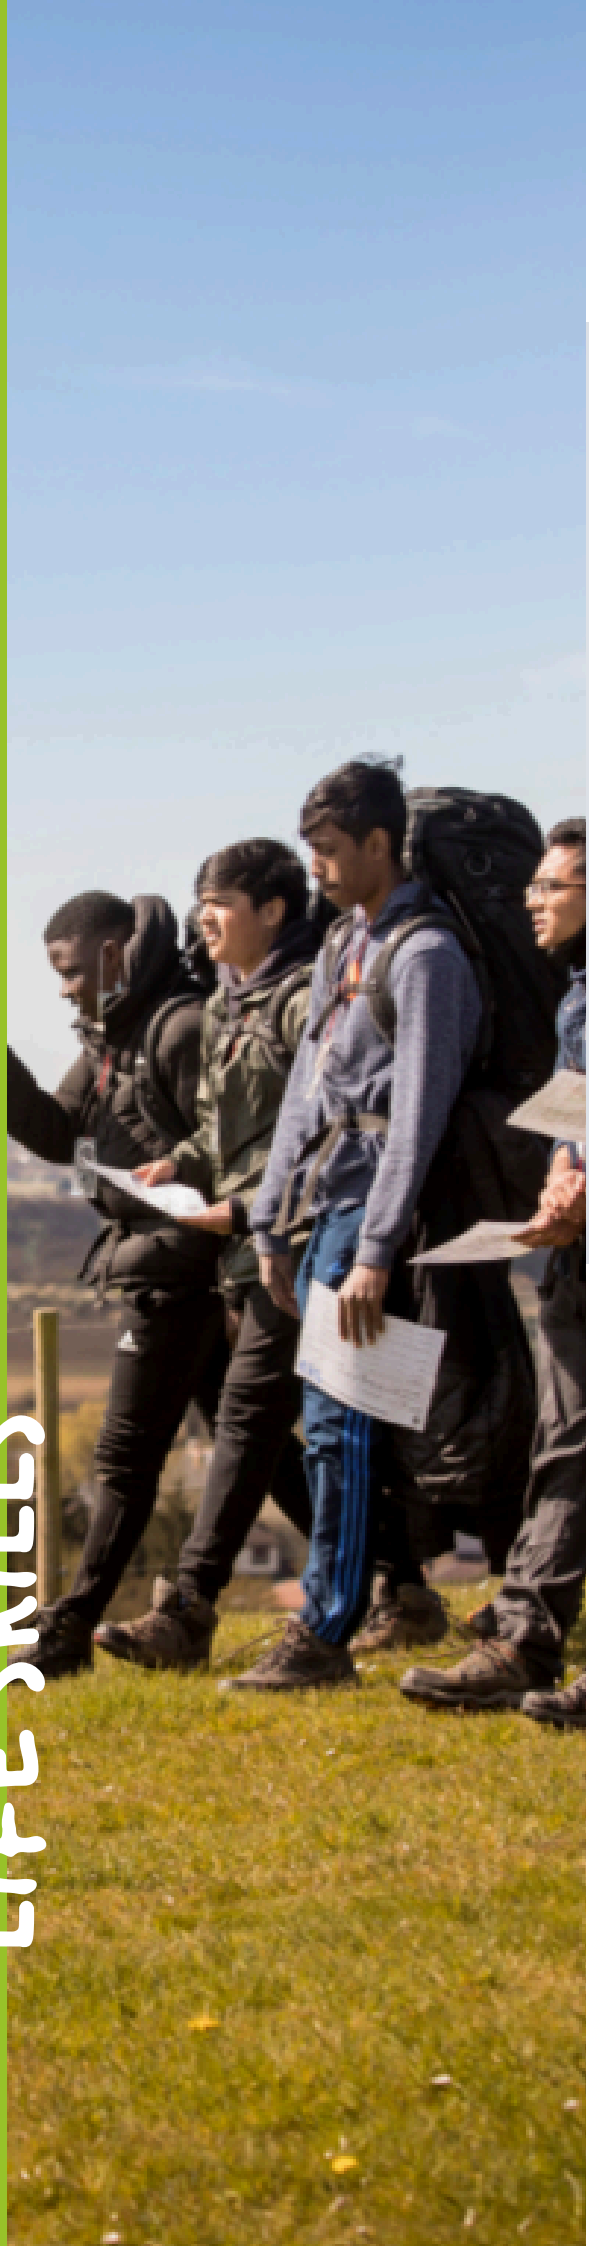

The club is led by Raúl Cano Gómez, a Computer Science and Digital Media teacher at our school and an Associate Lecturer at the Universitat Jaume I, where he teaches the Bachelor's Degree in Video Game Design and Development.

Alongside his academic career, Raúl brings extensive global industry experience in digital design, architectural visualization, 3D modeling, programming, and artificial intelligence—ensuring students learn from a true industry professional.

# DUKE OF EDINBURGH

The Duke of Edinburgh International Award equips young people for life. It is the world's leading youth achievement award. In 2015, more than 1.1 million young people from 140 different countries participated in this programme. Since the programme's launch 60 years ago, it has inspired millions of young people to transform their lives.

The award consists of a programme of challenges that promotes the personal development of the participants. As part of the programme, students must contribute to the community, develop a skill, and practice physical activity on a regular basis.

By creating opportunities for young people to develop skills, be physically active, serve their communities and experience adventure, the Duke of Edinburgh International Award can play a critical role in their development outside of the classroom. It also allows their achievements to be consistently recognised around the world, giving young people a unique international accreditation of their experiences.

# COOKING

The extracurricular cooking course has the objective of creating good eating habits, encouraging food autonomy, stimulating creativity in cooking, encouraging teamwork, knowing and recognising food products, and developing recipes.

We will work in a phased approach:

- First contact with food.
- Identifying and learning different cooking methods.
- Learning to eat a variety of foods in a healthy and balanced way.
- Fun recipes.
- Learning skills to be able to help mom and dad in the kitchen.
