

PCCA

Energy Pathway

GET A HEAD START ON A HIGH DEMAND CAREER

Hands-on Learning

The Energy pathway offers a wide variety of opportunities for hands-on learning, including an Outdoor Energy lab with climbing poles and cold lines. Students learn how energy is generated, transmitted, and distributed.

Employability Skills

Students at PCCA are given more than the technical skills they need to be successful in a career. They are given the opportunity to develop employability skills that every employer is looking for in potential candidates.

Partnerships

Active Energy Partners include: GreyStone Power, Carroll EMC, Cobb EMC, Pike, and Georgia Power. Students have the opportunity to apply for internships after graduation to begin careers in the industry.
