

Building the Future of Aerospace — Starts in the Classroom

Start the Mission:

The Space Florida Academy Program links career and technical education students already take to stackable industry credentials in six high-growth fields. Students graduate high school with a head start — certificates they can put on a resume, use to apply for college, or take straight into an apprenticeship or aerospace job. For districts, it means connecting existing coursework to a recognized statewide credential pathway, at no cost to add.

Broward County Public Schools now has 9 high schools participating in the Space Florida Academy Program

Blanche Ely High School
Boyd Anderson High School
Coral Glades High School
Coral Springs High School
Charles W. Flanagan High School

Miramar High School
Northeast High School
Piper High School
Plantation 6-12

For School Districts:

Adopt a statewide, industry-vetted credential pathway with no new curriculum required — it layers onto CTE courses your district already runs, backed by Space Florida and Florida's aerospace employers.

For Parents:

Your student can earn real, resume-ready credentials in high school — a head start toward college, an apprenticeship, or a well-paying job in Florida's fastest-growing industry.

For Students:

Choose a path in aerospace, manufacturing, construction, IT, logistics, or semiconductors — and start stacking credentials this fall that employers are actively hiring for.
