

District Approved/Supported Digital Tools 2026-2027

The following list contains digital tools and web services currently supported by Malden Public Schools for student use. It includes tools for which the district pays a subscription fee and/or are used to support system-wide curriculum implementation. Other applications may also meet the criteria for educational use and be accessible to students through the district's network and devices.*

Please note that artificial intelligence (AI) is becoming an increasingly embedded, often invisible component of many educational tools. AI is frequently not presented as a standalone product, but as a built-in feature shaping how platforms function. Tools below may already have and/or are likely to add AI-powered features in the future.

The district is continually reviewing its use of instructional technology; if you have a specific concern regarding your student's use of any of the digital tools listed below, please contact your school principal.

Achieve	IXL
Amplify	Makecode
Aspen	McGraw Hill
