Fort Bend ISD Seeks Community Input on Secondary Boundary Scenarios

FORT BEND ISD (August 18, 2026) – Fort Bend Independent School District (FBISD) is inviting families, employees and community members to provide feedback on the draft middle and high school attendance boundary scenarios. Your voice matters. The District encourages families to participate in the survey, which will help shape the future of Fort Bend ISD.

Since May 2026, FBISD and the School Boundary Advisory Committee (SBAC) have been reviewing enrollment projections, campus utilization, student needs and other relevant data to identify potential secondary boundary modifications. Before any recommendations are finalized, FBISD wants to hear directly from the community. An online survey will be available from August 18 through 11:59 PM on August 30, 2026, providing stakeholders with an opportunity to share their feedback regarding the draft boundary scenarios for secondary schools.

All staff and the primary parent/guardian in Skyward will receive an email link from the Fort Bend ISD Organizational Development Department. All other stakeholders can access the survey link on the district website at www.fortbendisd.gov/attendanceboundaries.

“Community feedback is an important part of this process,” said Beth Martinez, Deputy Superintendent Chief of Staff at FBISD. “Once the survey closes, the responses will be reviewed and evaluated to help better understand the community’s feedback and assist in preparing final recommendations for Board consideration.”

FBISD has confirmed that no schools will close as part of the secondary boundary planning process. The planning effort will focus on potential modifications to secondary school attendance boundaries to relieve overutilization at Austin, Elkins and Travis High Schools and align feeder patterns to the extent possible.

Survey results and additional information will be shared with the community as the work progresses.
