2025-26 Fall Membership Projections Report

Executive Summary Statement

Jeffco Public Schools experienced its 11th consecutive year of enrollment decline in 2025-26, with a decrease of 1.7% (1,281 students) from the 2024-25 school year. Over the last 11 years, enrollment has decreased by 14.4% (12,528 students).

SY2025-26 YoY Summary:

Full Jeffco PreK-12

- Decrease 1,316 (1.7%)

District Managed K-12

- Decrease 1,530 (2.3%)

District Managed PreK

- Increase 127 (5.6%)

Charter PreK-12

- Increase 87 (1%)

Factors Contributing to Enrollment:

The purpose of the Fall enrollment report is primarily to address the current school year enrollment and present a 5-year projection. However, it is important to understand factors that can contribute to enrollment fluctuations. Below are a few key factors that are considered by EFM when evaluating enrollment numbers.

- Births
- Housing Affordability
- Housing Supply
- Demographic changes

In 2020, the pandemic accelerated the district's enrollment losses, resulting in an annual loss of -4.7%. Prior to 2020, the average annual loss was -0.8%. Since 2020, the district's annual loss has been slowing.

2025-26 Fall Membership Projections Report

Impact:

- School Closures: Consistently declining enrollment led to the closure of 18 schools across Jeffco in 2023 and 2024.

Alternative Programs:

- Charter Schools: Enrollment has remained relatively flat over the last 10 years, declining around 1.5% since 2016.
- Option Schools: Enrollment grew by 38% since 2016, increasing from 3,849 in 2016 to 5,348 in 2025.

Population Growth and Live Births

Key Statistics:

- Population Decline: 5,539 people (-0.3% growth rate) since the 2020 Census.
- Median Age:
  - Jefferson County: 40.4 years old
  - Colorado: 37.5 years old
  - U.S.: 39.2 years old
- Average Household Size: Decreased from 2.36 people to 2.32 people per home.
- Average Family Size: Remains unchanged at 3.03 per household

In 2024, the number of live births in Jefferson County increased, with 228 more births compared to 2023.

2025-26 Fall Membership Projections Report

Enrollment Forecasting Overview

The Cohort Survival Method is standard throughout the educational planning industry. The enrollment forecasts provided in this report were primarily developed using this method, with some influences from the other methods.

Grade Progression Method (Cohort Survival Method)

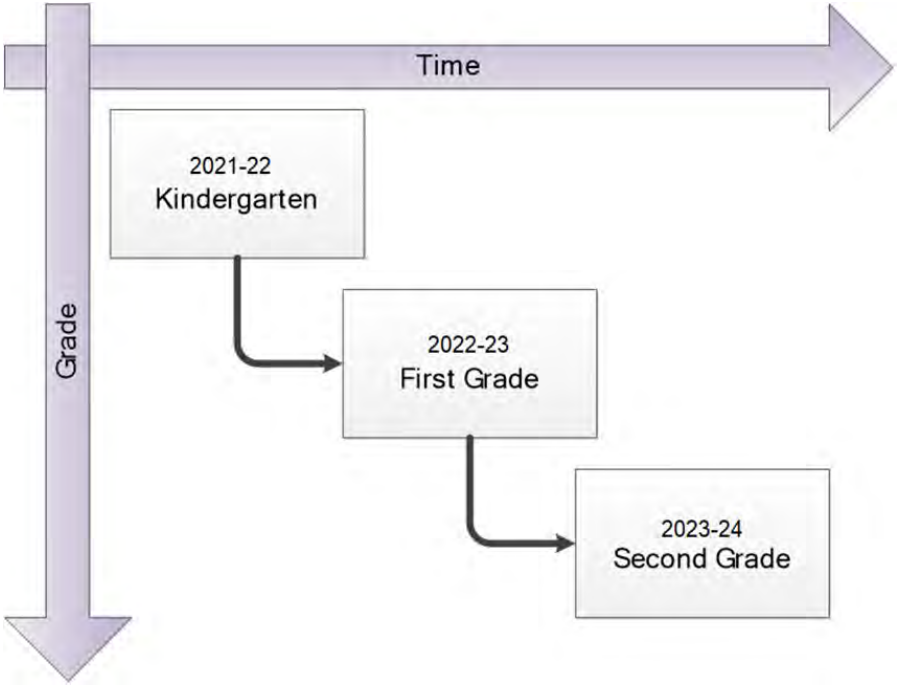

Figure 1: Cohort Survival Methodology Conceptual Diagram

A cohort is a group of students studying in the same course or program. The grade progression forecast methodology uses historic live birth data and historic district enrollment to “age, “or progress, a known population or cohort throughout the school grades. For instance, a cohort begins when a group of children enroll in kindergarten and move to first grade the following year, second grade the next year and so on.

2025-26 Fall Membership Projections Report

A grade progression ratio is developed to track how this group of students grew or shrunk in number as they moved through the grade levels. By developing grade progression ratios for each grade transition (i.e. 2nd to 3rd grade) over a period of time, patterns emerge and can be folded into forecasts by using the grade progression ratios as a multiplier. See **Figure 10** for detailed Jeffco Public Schools' progression ratios.

For example, if student enrollment has consistently increased from the 8th to the 9th grade over the past ten years, the grade progression ratio would be greater than 100% and could be multiplied by the current 8th grade to develop a projection for next year's 9th grade. This methodology can be carried out to develop five years of projection figures. Since there is not a prior grade cohort for students coming into kindergarten, live birth counts are used to develop a progression ratio. Babies born five years before the kindergarten class are compared in number, and a ratio can be developed to help project future kindergarten enrollments.

The grade progression method is useful in areas where population is stable (relatively flat, growing steadily or declining steadily) and where there have been no significant fluctuations in enrollment, births and housing patterns from year to year.

Other Considerations

When projecting future enrollment, there are several broad demographic factors that can be helpful in tracking the progress of future enrollment.

- Live births
- New housing activity
- Changes in household composition (age, income, etc.)

Certain factors can be gauged and planned far better than others. For instance, it may be relatively straightforward to gather housing data from local municipalities and builders regarding the total number of lots in a planned subdivision and calculate the potential student yield. However, planning changes in the unemployment rate and how these may either boost or reduce public school enrollment prove more difficult.

When looking ahead at a school district's enrollment over the next two to five years, it is helpful to approach the process from a global perspective. For example:

- How many new homes have been constructed each year?
- How many births occur each year in relation to the resident population?
- Is housing experiencing a turnover?
- If so, what is the composition of families moving in or out?
- What are the trends in student attendance at private schools, charter schools or home-schooling?

- What has the unemployment rate trend been over the past ten years?
- What new educational policies are in place now that could affect student enrollment figures?

Jeffco Methodology Review

Constructing the 5 Year Projection

The enrollment forecasts provided in this report were developed using a combination of two methods:

1. The cohort survival method was primary for all schools and grades.
2. In cases where the prior cohort was either unavailable or did not adequately describe the population, a regression method was used. Typical cases where this method was used were in the following scenarios:
    a. Births did not show strong correlation to Pre K or Kindergarten populations.
    b. There was no prior year cohort information available, this is most often the case in districtwide schools for entry cohorts.
    c. Areas with complex boundary conditions where clean matriculation patterns could not explain cohort survival rates.

    The cohort-survival method uses a median of historical survival rates to project future survival. Large variances in the historical enrollment data from irregular occurrences, such as the COVID-19 pandemic and unprecedented school closures, led the EFM team to evaluate the amount of historical data to be used in the above methods.

The Enrollment Forecasting and Mapping (EFM) team relies on the above methods to produce repeatable algorithmic baseline forecasts that are transparent to the public. Any changes to these methodologies in the future will be documented, justified and open to suggestions for improvement, feedback and scrutiny from both internal partners and the public.

2025-26 Fall Membership Projections Report

Jeffco Schools Regions

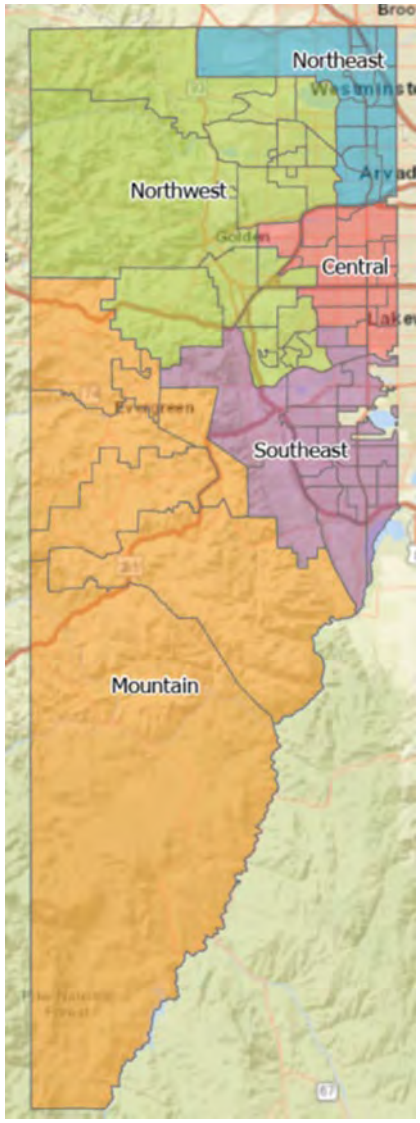

We are piloting to use regions to simplify some of our enrollment analysis.

- **Central Region**: Wheat Ridge, Lakewood, Jefferson, Alameda
- **Northeast Region**: Arvada, Pomona, and Standley Lake.
- **Northwest Region**: Arvada West, Green Mountain, Golden, Ralston Valley
- **Southeast Region**: Bear Creek, Chatfield, Dakota Ridge, Columbine
- **Mountain Region**: Conifer, Evergreen.

Regions were developed using a combination of factors:

1. Geography: We chose areas that were adjacent to each other.
2. Shared characteristic and demographic similarities all factored into to the groupings:
    a. Similarities in housing density.
    b. General population density.
    c. Student age population.
    d. Historic enrollment changes.

For example, Green Mountain Articulation area fits more naturally geographically in the Southeast region but shared more demographic similarities and similarities in student trends with the Golden Articulation area relative to Bear Creek.

2025-26 Fall Membership Projections Report

Key Definitions and Acronyms

Choice – An individual student's decision to attend their neighborhood school or choose to attend a school that is not in their boundary neighborhood. Typically presented as a percentage of the population of students attending a school.

- Live in – Student attends the school of their boundary.
- Choice in – Student lives within Jeffco but attends a school other than their boundary school.
- Out of District – Student choices in to a Jeffco school from out of District.

SPED – Students with IEPs

IEP – Individualized Education Program

MLL – Multilingual Learner

At Risk – Students designated as part of an at-risk population, presented as a ratio (value between 0 and 1) to protect privacy.

FRL – Students qualifying for free or reduced lunch programs.

Capacity – The number of students a school can potentially house based on school type and program availability.

Calculated Utilization – For a facility the utilization is defined as the applied capacity divided by the number of students.

- Utilization below 70% or above 95% will be shown in **Red**.
- Utilization above 70% and below 95% will be shown in **Green**.

Articulation Area – Articulation areas represent feeder areas for neighborhood schools.

Regions – Logical groupings for Articulation areas for used for reporting and planning purposes.

Boundary/Neighborhood School – A Student's default assigned school based on their physical address.

*** If a metric is represented by an Asterix it falls below a threshold and is represented as such to protect privacy.**

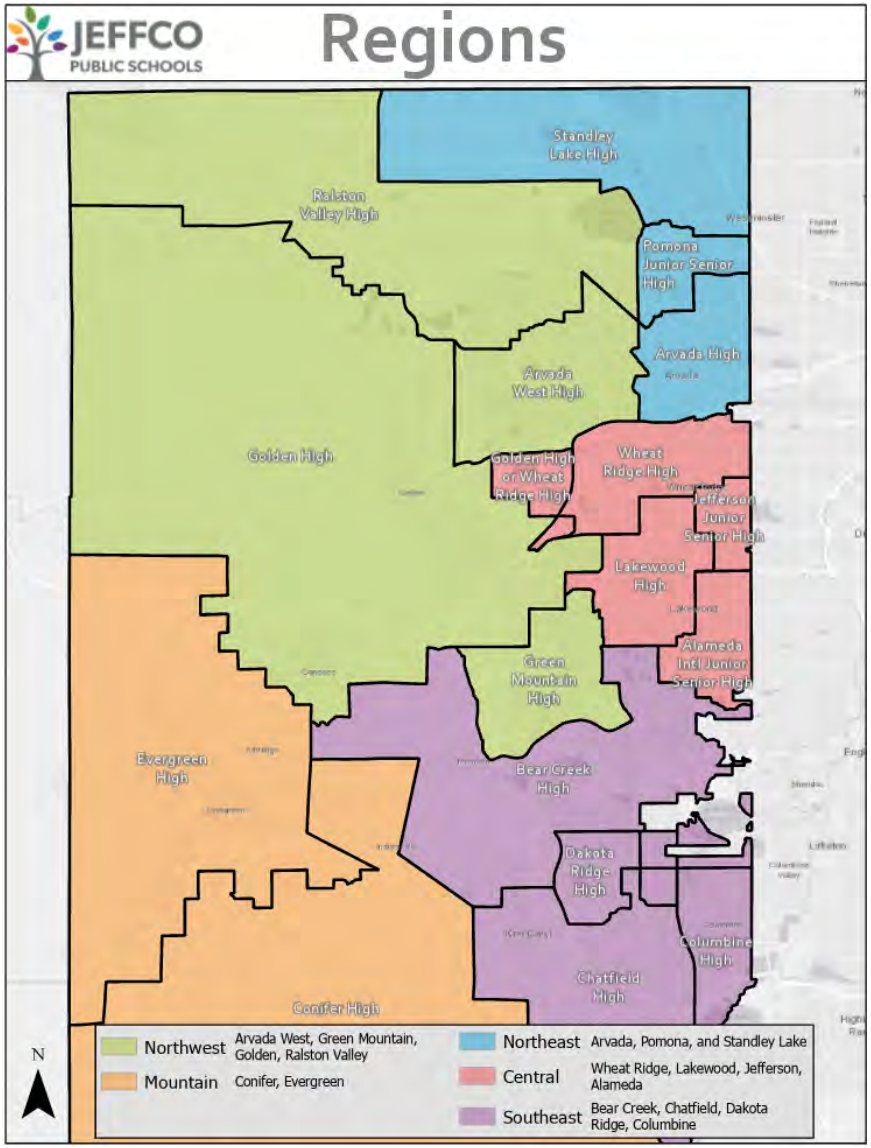

The density color ramp (Heat Map) represents in relative terms where concentrations of students on the map live.
