What's New?

We're excited to see the project continuing to come together as we get closer to the start of a new school year! A lot of progress has been made throughout the project, and each completed item brings the spaces one step closer to being ready for students, staff, and the community.

Recently completed work includes all epoxy and rubber flooring, bathroom toilet partitions, concrete footings and foundations, new ceiling grid and tiles, wood doors and hardware, casework and finishes, and lighting replacements. These updates are making a noticeable difference throughout the building and are helping transform the spaces into clean, functional, and welcoming areas for the upcoming school year.

There's still plenty of exciting work ahead! The next phase will include the steel structure, exterior CMU block walls, installation of the new lower-level lockers, and underground utilities for the new addition. Our teams are continuing to work hard across the site to keep everything moving forward and prepare the building for the start of school.

New furniture for the new ID/Transitions classroom

North steel structure

DID YOU KNOW?

Modern concrete masonry unit (CMU) walls increasingly utilize advanced geopolymer cements and optimized low-carbon mix designs. These cutting-edge formulations reduce the carbon footprint of traditional Portland cement while achieving high compressive strengths exceeding 4,500 psi
