

Hello families!

It's almost time to get started with another exciting year of **Hellgate Robotics Club**! We are excited to welcome new and returning students for a season of teamwork, problem-solving, creativity, and, of course, lots of LEGO!

Robotics Club is open to students in **4th–8th grade** and gives students the opportunity to work as a team to design, build, program, and solve challenges through the FIRST LEGO League program. Students will practice teamwork, perseverance, engineering, and communication while preparing for competitions throughout the season.

Robotics Club Applications

There are two different applications:

- **NEW Club Members:** Students who have never participated in Hellgate Robotics Club should complete the New Member Application.
- **RETURNING Club Members:** Students who have participated in Robotics Club in the past should complete the Returning Member Application.

The applications are linked below. Please click on the appropriate link to complete your student's application.

- **NEW** Club Member [Application](#)
- **RETURNING** Club [Member Application](#)

All applications are due by Friday, September 11.

Once the application window closes, we will send out additional information about team placements, the first practice, practice schedules, and what to expect for the upcoming season. Please be patient as we work through all of the applications and build our teams!

We are looking forward to another great robotics season! 

If you have any questions about Robotics Club or the application process, please reach out to
