

Pesticide Annual Notification 2026-2027 School Year

The Tukwila School District is committed to the health and safety of its students and staff when using pesticides. Our policy ensures that pest control methods prioritize safety and comply with state laws. The district's integrated pest management program reflects this commitment.

As necessary and in compliance with all state and local regulations, the district uses pesticides or herbicides to control pest vegetation, rodents, or insects. On those occasions, products are applied by Trained District Employees or Commercial Pest Control Applicators.

At least 48 hours before any necessary pesticide/herbicide application inside or outside facilities, a "Pesticide Application" notice will be displayed in the school office and the application area. The notice will list what chemical(s) will be used, when and where it will be applied, why it is being used, and who to call for more information. Any areas treated are marked with signs that include a phone number to call for more details.

Typical pesticide/herbicide annual use includes:

- **First Strike Soft Bait** (10 gm/pouch), applied to exterior bait stations by Western Exterminators
- **Advion Cockroach Gel WDG** for roach control, applied by Western Exterminators
- **Advion Ant Gel** for ant control, applied by Western Exterminators
- **Alpine WSG**, ant control, sprayer applied by Western Exterminators
- **Maxforce Fleet (Envu)** for ant control, applied by Western Exterminators
- **Terminator SC** for ant control, applied by Western Exterminators
- **Onslaught Fast Cap**, for wasp control, applied by Western Exterminators

Tukwila School District maintains records of all such applications. The district can provide notification of impending pesticide applications and information on any emergency applications. For this information, contact the Maintenance Department at 206-901-8020.
