RAPTOR TECHNOLOGIES

Raptor StudentSafe™

Putting Student Wellbeing Policies into Action

Raptor StudentSafe helps schools manage their student wellbeing policies effectively, from documenting low-level concerns to operationalizing protocols to managing interventions, all in one secure environment.

Proven behavioral threat assessment models and suicide risk screeners are built into StudentSafe. Districts can easily incorporate their specific policies for other student wellbeing initiatives including bullying, sexual harassment, homelessness and more. Now, schools can eliminate information silos and disjointed systems helping to ensure a more complete view of a student's wellbeing.

Why Do Schools Need StudentSafe?

StudentSafe can help reduce student disciplinary rates, minimize the risks of harm to oneself and others, and promote student success. Schools can support a wide range of student wellbeing initiatives by identifying potential issues further upstream where they are easier to manage. Putting student wellbeing policies into action through StudentSafe provide step-by-step protocols, data consistency, accountability, and fidelity across your campuses.

StudentSafe Benefits

Configurable

Edit existing BTA and suicide screening tools, add guidance tips and links within any policy and incorporate your student wellbeing protocols.

Secure

Four-dimensional provisioning for roles and permissions provides precise control over the information your staff can see and manage.

Mobility of Student Data

When a student is enrolled in more than one school in a district, staff at each school can be provisioned with appropriate access to the student's chronology and take related actions in StudentSafe.

Putting StudentSafe™ to Work

Logging Low-Level Concerns

StudentSafe's detailed provisioning allows all staff to log low-level concerns about a student's behavior into a secure central repository so authorized staff and counselors can connect the dots and intervene much earlier.

Escalating to Policy Review

StudentSafe's patented technology allows authorized staff to escalate any concern into a policy review all within the same system. For example, a concern about a student being withdrawn can be escalated into a suicide screening.

Enacting Policies with Fidelity

Incorporate student wellbeing policy guidelines along with additional checks and balances, such as parental notification and confirmation of mandatory reporting to outside agencies.

Intervening Earlier for Better Outcomes

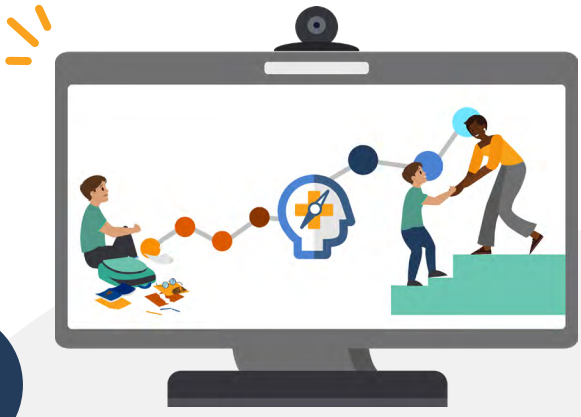

Fully document and manage all aspects of policy reviews and interventions ensuring a defensible approach to prevention and support of the student.

Reporting and Tracking Across Your Schools

Access student wellbeing data from every school building to create custom reports, identify trends, and track open support tasks—all in one place. With district-wide oversight, leaders can monitor wellbeing efforts, assign follow-ups, and help ensure no student falls through the cracks.

About Raptor

For over 20 years, Raptor has been driven by our mission to protect every child, every school, every day. Used by over 60,000 schools worldwide, Raptor is the gold standard in school safety.

"StudentSafe is a tremendous asset. I've been doing threat assessment for about seven years. For me, three key benefits of Raptor StudentSafe is that the organization of the app itself completely walks you through the process, it gives you the ability to collect all that data and analyze it easily, and the ability to collaborate with each other is built in really well."

David Wrzesinski

Director of Safe Schools
Robinson ISD, TX
