Introduction

Point Assignment for Achievement Statistics

A typical achievement measure comprises three metrics. In most measures, there are one status metric and two relative growth metrics; in some others, all three metrics are relative growth metrics. A statistic is produced for each metric using applicable student assessment results from students who meet requirements for inclusion in a teacher's statistics (based on scheduling and attendance) and who have prerequisite test scores, which are required for relative growth statistics.

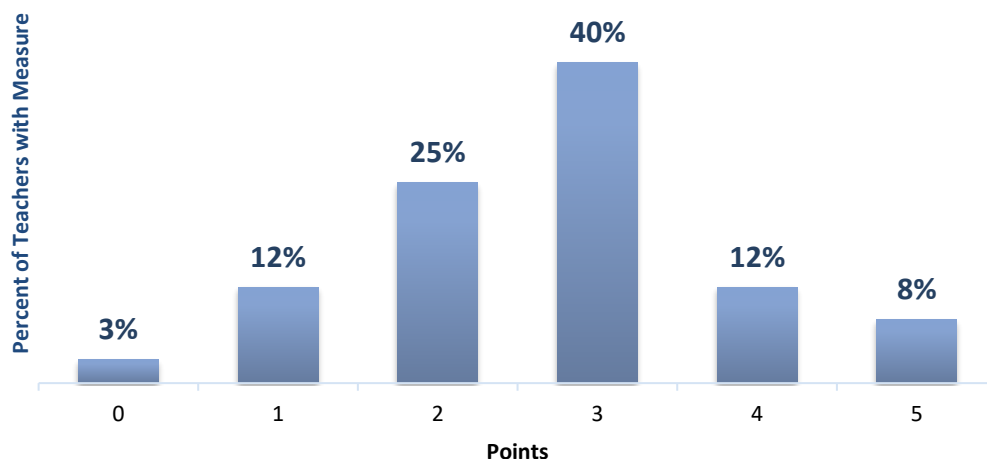

Each statistic is assigned a point value from a set of point ranges that is unique to the achievement measure and the metric. After all metric statistics are assigned a point value, the highest point value from among them is selected as the point value for the achievement measure.

Point ranges are determined from the current year's statistics. They are selected in such a way that the distribution of measure points across all teachers follows a *target distribution*.

Point Assignment for Achievement Measures Worth 0-5 Points

A common range of points for an achievement metric or measure is 0-5, shown below. The graph of the target distribution applied to this point range shows that, for example, 40 percent of teachers with a measure earn three points and 12 percent of teachers earn four points.

Target Distribution: Measures worth 5 points

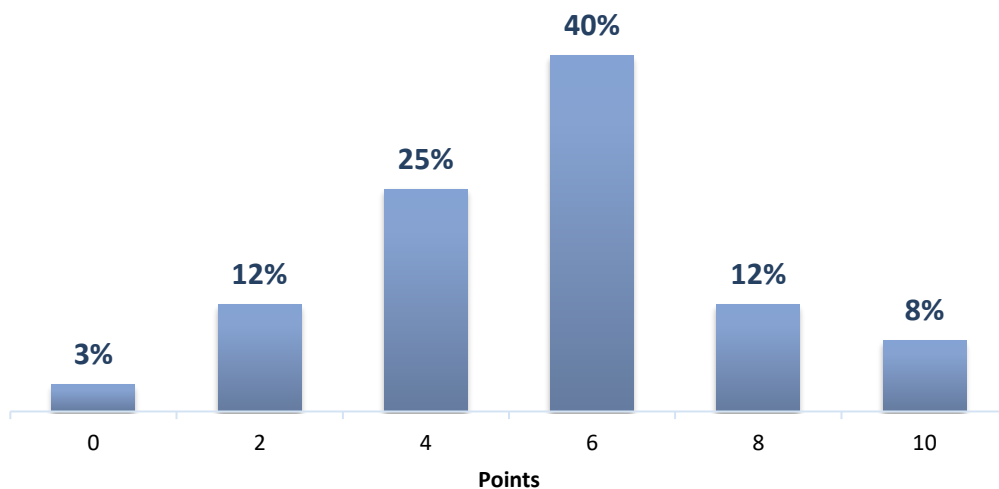

Point Assignment for Measures Worth More Than 5 Points

Most achievement measures are worth more than the minimum, which is five points of the overall TEI evaluation template. An achievement measure can be worth from five to twenty-five percentage points, or one to five weights, with each "weight" being worth five points. The base points (0-5) are increased by the weight assigned to the measure in the template. Thus, if an achievement measure is worth two

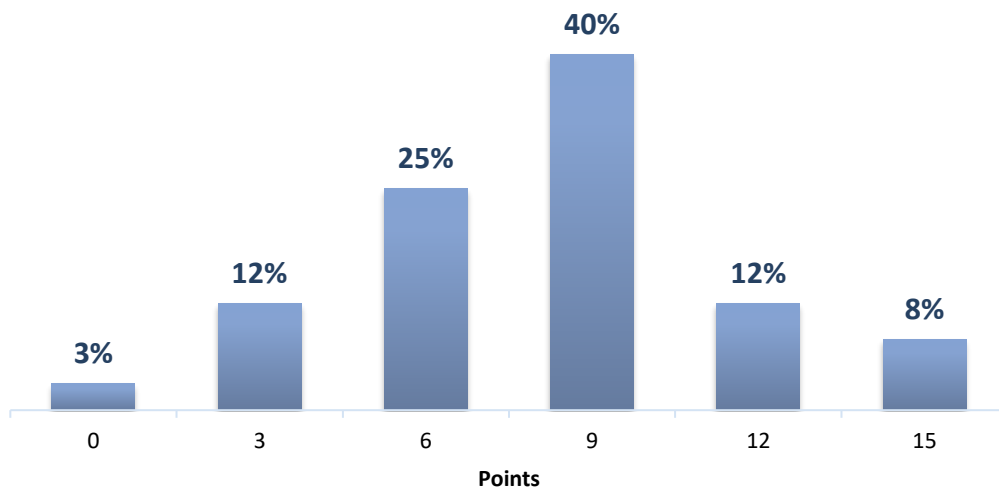

weights (or 10 points), its metrics are assigned points 0, 2, 4, 6, 8, or 10. For a measure worth three weights, its metrics are assigned points 0, 3, 6, 9, 12, or 15.

Measure weights are defined by their achievement template, but sometimes a measure must have its weight increased because other measures on the template did not have any statistics. Base points are multiplied by 2, 3, 4, or 5 to match the weight of the measure as it appears on the teacher's unique version of the template.

Target Distribution: Measures worth 10 points

Target Distribution: Measures worth 15 points

Using this Document

Every statistic earned by a teacher for a particular measure falls in a range identified by the “Low Value” and “High Value.” The number of base points (one weight) is presented first, followed by the numbers of points that may be assigned when measures are worth two or more weights (“wts”). The most common weight, from the original achievement template, is highlighted in green. For some grades or subjects, variations in templates mean that measures have different standard weights, so more than one column may be highlighted. If a teacher did not have statistics for one or more other measures on his achievement template, a measure may be worth additional weights than in the standard version.

Caps on Status Metrics to Reward Student Growth

This section is taken from the document *Defining Excellence in TEI*, commonly referred to as the “TEI Rulebook,” which can be downloaded from the TEI website (<https://tei.dallasisd.org/>) in the *Resources* section.

Types of Student Achievement Metrics

Many achievement measures have a metric that is defined by the percentage of students meeting a static (i.e., “unchanging”) standard, such as the TEA’s grade level standard for *STAAR* assessments or the scaled score of 70 on the district’s *ACPs*. These metrics are referred to as *status* metrics in the Dallas ISD. These contrast with metrics that are defined by statistics measuring improvement in performance or performance in relation to other district students (e.g., CEI, APG).

Limitation on Points for Status Metrics

The value allowed for status metrics is limited to 60 percent of the measure points, or three out of every five points. Other growth metrics for the measure can earn the full measure points. Status metrics are capped in this manner for fairness. Schools or teachers with larger proportions of high-performing students are not automatically granted the highest point values for these measures simply because their students are already performing above the criterion. To earn the top point values for a measure, these schools or teachers must show evidence of value-add for these measures. To ensure fidelity to the overall target distribution, this “cap” on points for status statistics means that point ranges for growth statistics are larger than they would otherwise be, to ensure there are enough schools or teachers earning the top point values. Another way to think of this shift is that it is “easier” to earn 4 or 5 base points on growth statistics than it would be if there were no cap on status statistics.
