[Bruno] So we basically have, three days that we start at 8 a.m., so Monday, Wednesday and Friday we'll have, you know, one early morning session and we'll basically mostly focused on case discussions with, with your colleagues. Although Friday we do have kind of more journal clubs and other kind of longer, more in-depth sessions. Then on Tuesdays, we'll have our, department grand rounds in which, you know, faculty will come and, you know, provide expert insights into specific topics. And then Thursdays is kind of our flagship protected time for didactics, in which you guys will get three hours of protected time to really kind of delve deep into, some, American Board of Internal Medicine topics, that we, that we cover. But also that's where we'll have our simulation sessions, as well as resident led initiatives and lectures. [Garett] During your POCUS and your procedure rotations, you can expect to kind of put into real life put in application, some of the things that we've learned about a little bit more formally during didactics. During the POCUS rotation,	Young doctor with short dark hair, wearing a white doctor's coat standing beside a railing with a large purple and gold L S U Health Shreveport logo on a curved wall behind him Text: Garett Malone, M D Chief Resident
not only are you going to be responsible for doing simulations, you're also going to be responsible for using those skills on patients on the inpatient setting.	Residents practicing ultrasound techniques on other residents
Specifically during the procedure rotation, you're going to be responsible for performing the procedures that you've been, taught how to perform. So it's nice to nice to put things into practice.	Garett on camera

Every six weeks, what we're going to do is we're going to focus on the five specific kind of areas point of care ultrasound, bedside medicine,	Bruno in simulation ward, at bedside explaining procedure to residents Text: IMPACT Sessions
rapid response, code blues, and procedures. These are all things that	Residents in simulation lab performing CPR on mannequin as monitors show heartbeat
we're taking care of, day in and day out on the wards. But essentially what we want to do is we want to dedicate some time to, give a little bit more one on one mentorship and help kind of honing and crafting those skills a little bit better to make sure that everybody's comfortable when when it comes time to show up to a rapid response, show up to a code blue. Intubate somebody for maybe the first time.	Garett on camera
[Shubhika] The curriculum Committee is actually one of the things about our program that I really like, because it gives residents a chance of shaping their own educational curriculum. It is a resident led committee that works closely with program leadership and faculty and plans the educational curriculum. We have residents from all the PGY levels involved, so we get input from residents at different levels of training, not just scheduling the lectures, but we also take into consideration resident feedback to identify the areas that need more teaching, topics that need more emphasis, and also the lecture delivery method.	Young doctor with dark hair tucked over her shoulders, wearing a white doctor's coat, standing on a balcony overlooking a stairwell with a large. Purple and gold L S U Health Shreveport Logo lining the stairs Text: Shubhika Jain, M D 3rd Year Resident
For example, we have done simulation based learning, interactive question based learning,	Simulation ward with multiple beds, groups of residents are around each practicing techniques and listening to faculty teach procedures
clinical reasoning, EKG clubs, and not just traditional lectures.	Shubhika on camera
