[Shubhika] Here at LSU Health Shreveport, residents have plenty of research opportunities to get involved depending on their interest and their career goals. We have seen residents being involved in case reports, retrospective studies, quality improvement projects, systematic review, and meta analysis. There are also opportunities to present your work at local and national conferences, and also work towards publication. There are also opportunities to present your work at local and national conferences, and also work towards publication.	Resident at a podium with his presentation title on a huge screen over his shoulder as an audience in a large auditorium listens
Here at LSU, we have plenty of resources available for residents to get started, especially if they have not done much research before residency. We have a research committee that helps connect residents to faculty members and ongoing projects. We also have research education happening throughout the year in form of journal clubs and resident research full sessions happening throughout the year. Residents can develop basic skills like how to come up with a research question, literature review, basic statistics, and also how to write an abstract.	Shubhika on camera
Our annual Research Day is another great resource that helps residents to have a tangible goal that they can work towards, and also have an opportunity to present their work.	Montage of residents in a large open atrium with posters lined up side by side presenting their research posters to other residents, faculty, and students
[Dr. Sachdeva] So during the day, we started with our oral presentations. And after the oral presentations, we had a keynote presentation by our visiting guest speaker.	Montage of resident presenting her research to a large auditorium, people seated in audience listening, keynote presenter at podium
And after that, we started with the poster presentations. In total we had about 63 submissions	Montage of residents in large open atrium lined up in front of the research posters presenting to interested onlookers

and out of those five were selected for oral presentation and rest of them were selected for the poster presentations.	Residents at podium speaking to an audience of their peers in an auditorium and then a different resident talking to a faculty member in front of his poster.
[Shubhika] I think having subspecialty fellowship in house is a huge advantage, especially for a resident who knows what they want to pursue after residency. It gives you an opportunity to directly work with fellows and faculty while you're on rotation. So mentorship develops pretty naturally. You also get a chance to get specialty specific research projects, go to conferences and get career advice. And even if you don't know what you want to do after residency, it is a great opportunity to get the, exposure under all the fields and, seek mentorship as you develop interest.	Shubhika on camera
