CAREER PROGRAMS

Architectural Mechanical Drafting & Design - Design like an engineer and build like a pro as you turn ideas into 3D models, blueprints, and real prototypes that solve everyday problems.

AUA+* - Step into scrubs and learn to care for patients with hands-on experience in IVs, EKGs, wound care and more in live and simulated medical settings.

Automotive Collision Repair & Refinishing - Restore rides using real industry tools and skills like welding and painting.

Automotive Service Technology - Get hands-on under the hood. Learn to repair and maintain the brands and models of cars on the road today.

Aviation Maintenance Technology - Conduct pre-flight inspections, perform hands-on maintenance, and learn the art of sheet metal.

Biomedical* - Experience hands-on activities in forensic science, cell biology, disease research, work with laboratory-grown cells, tissues, and organs, and solve medical mysteries.

Carpentry - Work individually and in teams in all aspects of residential and commercial construction, operate a wide range of hand and power tools, and build a modular residential home from the ground up.

Cosmetology - Explore all aspects of quality salon services and management, provide a full range of artistic hair, nail, and skincare services, experience a full-service interactive salon and spa environment.

Cybersecurity Foundations - Learn to secure systems, investigate and respond to security threats, explore key concepts in intrusion detection, malware defense, and disaster recovery planning, gain hands-on experience in computer assembly, repair, and OS installation.

Cybersecurity Professionals* - Protect computers and networks using security software, investigate and eliminate threats to hardware, software, and email, and perform intrusion detection and disaster recovery.

Digital Cinema - Use your creative and artistic talents individually and in crews to write, produce, and direct original short films. Work on a professional sound stage with advanced equipment and methods used in industry.

Electrical Trades - Design, build, and troubleshoot motor control systems, learn residential, commercial, and industrial construction wiring methods while working toward your journeyman license.

Engineering* - Explore, experience, and create innovative projects using advanced math and science to design and build rockets, robots, planes, and architectural models.

Esthetics - Perform professional skincare treatments like custom facials, chemical peels, and dermaplaning, and specialty creative services such as airbrush makeup, spray tans, and brow & lash art.

Classes in green are High School only
* Prerequisite required

Graphic Design - Combine creativity and technology to develop branding, advertising, and visual communication solutions, interpret client needs, solve design problems, and build a professional portfolio.

Health Careers Certifications - Help others with daily living activities in long-term care and home health settings. Perform therapeutic treatments, taking vital signs, assist mobility, and provide compassionate, foundational patient and family care.

HVAC/R - Create comfortable residential and commercial environments by designing, fabricating, installing, and maintaining HVAC and refrigeration systems, learn about torching, brazing, and soldering pipes to install or repair compressors, condensers, chillers, and pumps.

Legal Office Services - Experience trial preparation and case management using advanced legal software, interacting professionally and ethically with attorneys, judges, and clients. Prepare legal documents across diverse specialties.

Medical Assisting* - Join professional healthcare teams in delivering quality patient care, documenting symptoms, taking vitals, drawing blood, giving injections, assisting in minor surgeries, and gaining experience through diverse clinical rotations.

Medical Office Services - Serve as the initial point of contact and be the link between providers, insurance companies, and patients. Use interactive software from consultation to billing.

Nail Care - Express creativity through diverse nail care techniques using the latest technology and trends to create artistic designs, artificial enhancements, and natural nail services. Manage client relationships and recommendations.

Physical Therapy Services - Work with professional physical therapists in diverse settings assisting with customized exercises and therapeutic treatments to improve clients' strength, mobility, and coordination while documenting patient plans and preventing re-injury.

PN Select* - Provide quality patient care as a key healthcare team member building confidence through clinicals and advanced simulation labs. Master medication administration, phlebotomy, infection control, and more.

Programming & Artificial Intelligence - Learn Python programming to solve real-world problems with artificial intelligence. Tackle industry-style challenges in sentiment analysis, computer vision, and text generation within the growing AI and data science field.

Service Careers - Perform building and facilities maintenance, including basic repairs, while creating and maintaining landscapes with diverse plants and design elements. Develop employability, problem-solving, and professional skills through on-site work-based learning.

Veterinary Assisting - Explore veterinary office administration and clinical medicine, assisting with procedures, animal care, handling, grooming, and disease prevention. Work in teams to deliver examinations, illness visits, and routine surgeries.

Welding - Manipulate molten metal and electricity to design and construct everyday products using diverse welding techniques to join, cut, and bend metal. Build and repair projects with professional fabrication equipment.
